I am not homophobic nor am I close-minded. Why did I vote no to the LGBT seat on student government because what does sexual preference have to do with student government. Why is there not a heterosexual seat or a female and male seat if there has to be a transgendered seat. There is a minority seat on the student senate and gays and lesbians are a minority on this campus thus encompassing them into the minority seat. Not to mention that students are allowed to come to senate meetings and voice their opinion- they are not outcasted because of their sexual preference whatsoever. Honestly, I could care less whether you like boys or girls or if you want to be a male or a female but how is your vote going to be different because of those facts?

Sincerely,
Malynda Johnson, '07

P.S. I'm not trying to start trouble or a fight I just want to let my opinion be known for why I did not vote yes on this subject and let everyone know that it is not because I am homophobic.

In memory: April 16, 2007

Chris Shannon/ Juniatian

This space is reserved for the people who were not all that dissimilar from us. Their lives revolved around midterms and finals, term papers and presentations. They were students. They were professors. They were all of us.

As a result of Monday's tragedy, 33 people lost their lives and dozens more were injured in the deadliest mass shooting in the history of this country.

We know a great deal about the shootings. We know the times and the locations, the people and the faces, but we may never know the answer to one question: "Why?"

We may never know why Cho Seung-hui chose to murder his fellow collegians, but we know one thing for certain: our thoughts and our prayers are with all of those he affected.

So we dedicate this space here for our fellow academics at Virginia Tech, and we hope for peace.

Ask the Administration

Some students have complained about entering their dorm rooms to find a Facilities staff member at work within. While these students had submitted a work order for help from Facilities, they were startled. What is the Facilities policy about employees entering a dorm room when a student is not there?

The housing contract that the students sign clearly states that the College respects the basic rights to privacy of students, but reserves the right, under provisions of the Pathfinder, to enter rooms as needed for such reasons as safety, security or maintenance concerns. Before any Facilities Services staff enters a resident's room, they always knock on the door and announce who they are. If there is no response, they announce that they will be entering the room. Finally, Facilities Services staff always lock the door behind them upon leaving the room.

-Tristan delGiudice, director of Facilities Services

How does Juniata choose its commencement speaker? Who is involved in the process, and does the senior class have a say in it?

"The Honorary Degree Committee—made up of students (selected by student government), faculty and staff—review nominations from the community for honorary degrees. The process for next year begins shortly after graduation. Nominations are welcome and can be sent to the president's office at any time.

While there is no universal standard for selecting individuals to be honored, the generally accepted criteria for the College's highest award include: individuals who have led a honorable life reflecting the values of the College; an individual who has had a noteworthy career; or sometimes, a substantial donor with the preceding qualities; or a Juniata employee for exceptional service and leadership.

Finally the speaker is selected because we believe he or she will deliver an important message to our graduates. This one doesn't always work out!

The committee recommends its choice to the Juniata board of trustees who awards the degree. We are always working on the selection since many of those we would like to have as a speaker are also very much in demand.

Honorary degrees are not always given at graduation. For example, we gave an honorary degree to Mary Robinson, the former President of Ireland, on her visit to Juniata in the fall of 2003 and to noted international author Walter Kempowski in Germany in 2004.

So yes, the senior class can have a say in the selection by nominating persons who fit the criteria and through the student representatives on the committee.

If you wish to be on the committee you should contact the new student government officers."

-President Dr. Thomas Kepple

Is Juniata prepared for an emergency?

In light of the horrible tragedy that occurred April 16 at Virginia Tech University, the Juniatian encourages the administration and security staff to reevaluate and assess Juniata's existing security and emergency measures.

Currently, three emergency phones are located around campus—one behind Good Hall, one near East Towers and one near the College Avenue parking lot. JCPD officers patrol in vehicles, on foot and in golf carts. Lesher Hall, the all-female dorm, is locked in the evening, but no other residence halls are. Off-campus, college-owned apartment buildings require visitors to call the party they wish to see before entering.

On the online Forums, students have been asking if this is enough.

President Thomas Kepple was unable to submit answers to the below questions posed to him by the Juniatian before the press deadline.

However, in a phone conversation on the evening of April 17, Kepple said: "While there are policies that need to be revisited, we still want to know exactly what happened at Virginia Tech, and it will help us find out what's needed at Juniata…Obviously, it's a complicated topic." JCPD officers do not currently carry guns. When asked if Juniata will consider changing this policy, Kepple said: "We will revisit Security's gun policy, but I think it is unlikely that we will arm our officers with that kind of weapon." He explained that JCPD has a close relationship with the nearby Huntingdon Borough Police Department, which does arm officers with guns. The chances of JCPD officers normally needing a weapon are small, he said.

The editors encourage students to press the administration for answers to the following pertinent questions:

1. In the hours following the Virginia Tech shooting, people began to question the University's preparedness for dealing with such an incident. Does Juniata have clear, well-established strategies for dealing with crimes or disasters of a large magnitude?
   - If so, what offices have roles in those procedures?
   - If so, where can students go to find out the steps to take in life-threatening situations?
   - If not, do you plan to coordinate efforts to create such procedures for this campus in the near future?
2. In the event of a hostage or shooting situation, how would students be informed of safety measures to take?
3. While many students feel that Juniata is extremely safe, the VA Tech mass murder has Juniatians questioning what new safety mechanisms will be put in place on campus. Does the administration have plans to add things like card access to buildings, surveillance cameras or additional security officers?

Campus reacts to new senate seat

In the days since the student body approved a student government representative position for sexual and gender minority students on April 4, many students have expressed outrage, confusion, happiness and apathy at the outcome.

One discussion thread about the senate seat on the online Forums, started by junior John Lash, had 98 replies and 3,197 views as of press time.

During the open floor portion of April 12's student government meeting, Lash expressed his concern with the newly created representative seat on the senate.

Lash asked what steps could be taken to repeal the seat. He also asked how he could go about adding an additional senate seat. He made the point that as a male at Juniata, he technically is a minority. If the lesbian, gay, bisexual and transgender (LGBT) community deserves a seat, he said, males do as well.

A half hour of the hour-long meeting was devoted to this discussion. There was no motion to vote on any of Lash's propositions.

If a senator motions for a vote at the next student government senate meeting on April 26, the senate will cast votes to determine whether the student body should vote on a constitutional amendment that would repeal the LGBT seat's creation.

The student body voted with a 51.8 percent majority and 17-vote margin to create the LGBT representative seat.

Lash and his allies repeatedly questioned the idea that the LGBT community is not already represented on the senate. They also wondered what the LGBT position would possibly achieve. They wanted to know what issues in particular that the senate discusses that the LGBT representative would be specifically affected by.

Brandyn Lau, who led the LGBT representation movement, was not present at the April 12 meeting because he was attending the National Conference on Undergraduate Research.

However, those defending Lau's position countered Lash's points by emphasizing that the purpose of the seat is to increase visibility of the LGBT community.

"There were many misconceptions of why Brandyn proposed the seat in the first place," said senator sophomore Sebastian Brown.

The meeting ended with one senator making the point that the discussion could only make progress once Lau presented his position, preferably through his Powerpoint presentation, to the student body, just as he presented his stance to the senate two months ago.

The meeting on April 26 is from 8 to 9 p.m. and is open to everyone.

Realpolitik: Cirincione discusses U.S.-Iran deadlock

James Trent

This past Monday, April 12, Joseph Cirincione, a leading nonproliferation expert from the Center for American Progress, visited Juniata to speak about the fate of nuclear weapons, the security of the world and Iran.

Currently, Iran has the beginnings of a nuclear energy program, yet most nations believe that it will produce nuclear weapons in the future. The U.S. believes that Iran will threaten regional security, while Iran believes that its program is necessary to fend off U.S. hostility.

The U.S. is acting as if Iran is an enemy, and Iran is continuing to develop nuclear weapons as a response.

The heart of the issue, according to Cirincione, is that the U.S. has not proven to Iran that it can be secure without nuclear weapons. Once security is established, much of the desire for nuclear weapons will fade away.

Currently, Iran views the U.S. stance as one of aggression. The U.S. has aircraft carriers within striking range of Iran, has delivered patriot missile batteries to the area and has captured several Iranian officials in Iraq.

As U.S. economic and political pressure reaches its limit in the near future, something has to give

In addition, the U.S. is trying to isolate Iran, like a diplomatic cold shoulder, in an effort to pressure them to change their nuclear policy.

According to Cirincione, this policy is like a game of "whack-a-mole." If one option doesn't work, the administration moves on to another, from an "axis of evil" speech to economic sanctions.

The result we see today is a diplomatic deadlock. Iran continues to develop their nuclear program and the Bush administration is running out of options. U.S. economic and political pressure is at its height, and any further measures may threaten the flow of Iran's oil.

Cirincione proposes "a way out" of this deadlock. The proposal, published by the Center for American Progress and the focus of his visit, is to "contain and engage" Iran.

To solve the problem of fundamental mistrust, the administration must balance out what seems like U.S. aggression with goodwill. In addition to imposing select economic sanctions, the U.S. could promote regional nuclear energy initiatives.

This will "offer Iran a backdoor," said Cirincione. Iran can be the regional leader on the issue, while also obtaining a new sense of security from the change of U.S. policy. This will also satisfy the U.S., which will be seen as a protagonist in the crisis resolution and will have relieved fear of a nuclearized Iran.

The desired result of the proposal is a nuclear weapons free zone in the Middle East, with a regional fuel bank to distribute uranium to each nation for nuclear energy.

As far as policy options go, this one is reasonable. Most other proposals maintain or escalate the current aggression with Iran, and create serious drawbacks. One proposal is to use air strikes, which has gained media attention in the past few months.

Air strikes might destroy most of the facilities initially, but would be equivalent to an act of war against Iran. It would be within Iran's reach to shut down international oil tanker routes, which would raise the price of oil worldwide. Iran could also unleash havoc in the region through riling Hezbollah and Shiite militias.

From a simple student's perspective, the "contain and engage" proposal provides a reasonable course of policy. If other issues are resolved, it can lead to a realization of the U.S.' highest priorities in the area, namely nonproliferation, relative stability and the flow of natural resources.

As U.S. economic and political pressure reaches its limit in the near future, something has to give. And with the way things are going, it won't be Iran. As Cirincione put it, applying pressure to Iran isn't a "magic bullet," meaning that our current policy isn't the solution.

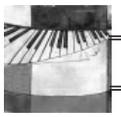
It's good advice, because with nuclear proliferation, we can't afford to shoot ourselves in the foot.

Thumbs Up, Thumbs Down

to the Juniatian editors for the $2 versus $2 million blunder in the April 10 issue's Good Hall article. A goldfish will be joining the editorial staff next semester specifically to watch for numerical errors.

to "The Simpsons." America's most beloved cartoon family aired for the first time 20 years ago as a short on "The Tracy Ullman Show." This summer they'll make the jump from the small screen to a theater near you. We just hope the movie is as good as we hope it will be, otherwise we'll have to point at them and say "Ha ha!"

to the hired bus driver at Pig Roast who ran over a student's leg at the end of the day. Who knew the only traffic accident linked to the event would be committed by the only sober person there?



to the days that we have chicken noodle soup in Baker. Come on, Hal McLaughlin, serve it up every day. "It's Mmm, Mmm Good!"

Huntingdon junk week. Combine mountains of questionable garbage with Category 5 winds and Moore Street becomes a varitable wind-powered blunder.

to Trustees. Nothing says love like a scholarship and some new buildings on campus (although a ping pong table would be nice, too).

to the Pasadena, CA police department for its arrest of Snoop Dogg last week. Celebrating finding Snoop with drugs and a gun? That isn't an investigation. That's not even tough enough for a Blue's Clues episode.

to everyone who is being a good sport about being a paper doll on the back page. You know you're only on there because we love you, right? ...Right?

The Rhyme, Rhythm and Reason

Rant, rock and roll

Lisa Detweiler

We all know that recording artists do more than compose catchy love ballads. They are responsible for forming the stereotypes of all male and female musicians in the world, whether they are signed with Virgin Records or playing barefoot beneath an oak tree. Guitar players in particular tend to shape certain a look, and more importantly, a persona. Yet, this persona changes according to gender. Male or female, if you play a guitar, people think they already have you figured out.

Ladies, put on your thinking caps and imagine. You are walking down the street, and you see a skinny guy with longer hair. His hair is falling in his face, and he is sporting a vintage t-shirt. You may think he needs to shower. Or, you may be distracted by his tight jeans, wondering if his backside is suffocating. He may or may not be your type.

Now that we have crafted this image, I want you to place a guitar in his hands. It is an acoustic guitar that he swings over his shoulder. He ambles along nonchalantly with his hands deep in his pockets. Guess what. He has suddenly become your type! Admit it! Just like that, the skinny guy with untamed hair has become a grunge god.

You become convinced he wrote that song he's playing specifically for you. Sally, Sue and Betty, you were not the bubbly toes that inspired Jack Johnson to write that song. Please don't be offended; I am sure you have lovely digits. However, this reversal does prove that guitars increase sex appeal. This reversal is not limited to men who fit the mold of either hippies or rockers. Pop stars are subject as well.

Wouldn't Justin Timberlake be hotter with a guitar? He could twirl it around like a dance partner and comment on its curves

For example, wouldn't Justin Timberlake be hotter with a guitar? He could twirl it around like a dance partner and comment on its curves. (Actually, no. I am sorry Justin, but it will take more than a guitar to bring your sexy back).

Need more proof of guitar-shaped identities? Strangely enough, although "emo" guitar-playing gentlemen catch the interest of many girls, they do not strike us as players. We imagine this type of musician in a committed relationship. He is that sensitive, mysterious man, wandering the streets at night with his guitar. He is on the life-long search for the words to describe his muse girlfriend.

Now that we have established that guitars make men seem hotter and more committed, let's shift to females with guitars. I like to imagine the raw voices of Grace Slick, Patti Smith and Janis Joplin. There they are with their long hippie hair, strumming their female anthems for the world on Fenders and Gibsons.

They were notorious for their inviting lyrics like, "Don't you want somebody to love," a popular song from Jefferson Airplane. Now, I am sure Grace had her meaningful flings, but I wouldn't exactly call her a sex symbol chased by worthy suitors.

Why? Guitars and women translate to feminism, self-discovery and independence. That's why. Guitars make women seem unapproachable. Let's be honest. The guitar is traditionally the instrument of males. Some men are

Caution: objects are less hot than they appear.

MY TAKE

"Grindhouse:" A tale of two movies

Christopher Burlingame

Writhing bodies, squishing blood, splattering pustules and screen-consuming explosions leave the moviegoer amazed by the visuals and confused by their meanings. And, that's just the first 15 minutes of the three hour and ten minute double feature. "Grindhouse" is the collective title for two movies and a series of short mock previews.

The new feature from directors Robert Rodriguez ("Sin City") and Quentin Tarantino ("Pulp Fiction") is reminiscent of seedy B-movies from the 1970s. Rodriguez wrote and directed the first film, "Planet Terror." Tarantino wrote and directed the second film, "Death Proof."

These two movies recreate a vintage look. They also meld zombie exploitation, low-grade horror and car chase film genres together. The movie is complete with cheesy effects and fake previews, which separate the films.

"Planet Terror," revolves around zombies taking over a small Texas town. The movie toes the line and then kicks it in the face as zombies snarl and go-go dancer, Cherry Darling (Rose McGowan of "Jawbreaker" and "The Black Dahlia"), has her leg eaten away. Her ex-boyfriend El Wray (Freddy Rodriguez of "Can't Hardly Wait" and "Dead Presidents") comes to her rescue, and the two reunite in a zombie-slaying extravaganza.

Complete with gruff-voiced dialogue and melodramatic pauses, "Planet Terror" adheres to the campy style of 70's zombie exploitation films. All of the characters are utterly unbelievable (because they are supposed to be) and realism is tossed aside.

The movie is overflowing with CGI, slime and gore. Excessive violence and ridiculous situations add to the hilarity and satire of the flicks. Most notably, Cherry takes revenge when she has a machine gun placed on the leg that she ate away and then leads the charge against the evil zombie forces. Bodies explode left and right. The gore is relentless, but it cannot be taken seriously. It's used for both shock value and comic relief.

Rodriguez's piece is entertaining in a mind-numbingly horrific way. It is worth it to see how the way humor, horror and action are interwoven. With that said, do not go into the movie to have an intellectual epiphany, because it will be drowned in the blood bath.

Whereas "Planet Terror" is action-packed and plot-driven, Tarantino's directorial contribution, "Death Proof" drags the audience down with its dialogue-heavy sequences and boring characters.

"Death Proof" combines the slasher and car chase genres. It features two almost completely unrelated stories that aren't worth watching until halfway through.

The movie picks up its pace when a sociopath stunt man runs down and dismembers young attractive girls with his jet-black muscle car. Stuntman Mike (Kurt Russell of "Stargate" and "Poseidon") is introduced in the first half of "Death Proof." But, his character only becomes intriguing once his motivation, or lack thereof, is laid out.

The result of "Death Proof" is one of the most impressive and intense car chase scenes I have ever seen. Two muscle cars battle on a country road as a young woman hangs onto the hood for dear life. The tension will leave you biting your nails and shouting, "Just hang on!"

After lolling me to sleep with the first 45 minutes of dialogue, Tarantino pulled me to the edge of my seat until the movie's end with the car chase. However, a few of my fellow moviegoers actually missed out on the

continued page 14

Giant Monopoly returns

Staff

Midday exercisers should walk into Kennedy Sports and Recreation Center with caution this Saturday, taking particular care to avoid any errant, flying dice. The massive foam cubes will be tossed from the pillars that flank Detwiler Plaza as part of a student-organized, life-size Monopoly game.

The game is one of Juniata's lesser-known traditions, played once every 20 years.

"This is the kind of event that could only be possible on a campus like Juniata. It's great...because it's very zany like Juniata's other traditions," said senior Kathleen Candando, event chair. "It's easier to drum up student interest because this whole thing is so uniquely Juniata."

Originally organized by alumnus William "Toby" Dills when he was a senior in 1967, the 2007 game will take over the campus between 10 a.m. and 4 p.m. with teams beginning their capitalist quest on "Go" at the corner of Scott and 17th Streets.

The board then runs down Scott Street, up 19th Street, down Moore Street and down 17th Street. While the game is running, on-campus traffic on these roads will be one-way in the direction of game play.

The Monopoly jail will be in the tennis courts on 19th Street, which is slightly different from where the space is on a traditionally scaled board.

The game board will section off pieces of campus with colored tape, and each space will be 47.5 feet in length. About a dozen local businesses will set up shop in the spaces to increase community participation.

"There will be radio communication between the teams," said Candando, who explained that there will be a smaller game of Monopoly kept at the "command center" on Detwiler Plaza that mirrors the larger game. "The teams will have to play in shifts because it will be such a long game."

About 90 participants, making up three teams, will compete for economic superiority as they move their large game pieces between squares.

The teams were instructed to make non-mechanized game pieces inspired by one of the actual Monopoly ones. "The bigger the better!" said senior Audrey Fry, volunteer chair.

The first team, comprised of freshmen and sophomores, will use the horse piece.

The underclassmen's pre-game message for the other teams is: "Eat our dust. Our team is the best in the West. Yee-haw!"

Freshman participant Kristie Hilliard said that the underclassmen decided that, "The dice will be rolled by a lot of different people because there are three different shifts," allowing more participants to lay their hands on the giant dice.

The juniors and seniors will push a giant battleship around campus, symbolizing their strength and fortitude.

Upperclassman team member Malynda Johnson is confident that her team will win. "The senior class got over 2,000 points, out of 100, at All Class Night," she said. "The other teams have no chance. Not to mention that we graduate in three weeks; what else do we have to do but strategize to win Monopoly?"

As of press time, the faculty, staff and alumni team had not yet chosen a piece. However, they do feel confident that their knowledge will bring them to victory. "We will win because faculty players have a crystal clear analysis of the hegemony of corporate capitalism and the legitimacy processes that perpetuate the inequalities that it renders," said Assistant Professor of Sociology Daniel Welliver.

In the 1967 game, one team pushed an actual Volkswagon Beetle around the board as its game piece.

Each property card is the size of a poster board, and the Monopoly money will be the size of a large envelope. Chance and community chest cards are the size of half poster board, and the dice will be two-foot cubes each made of "really" heavy furniture foam, according to Candando. The dice are so large and heavy that only one can be held at a time, she said.

In previous games, the dice were thrown from elevated structures, and organizers for the 2007 game originally wanted to toss them from the roof of von Liebig Center for Science. However, due to liability reasons, the toss was moved to the steps of Detwiler.

Dills and his classmates created the original 1967 game as a joke.

"In our senior year we got to thinking, and I can't remember who suggested it," Dills said in a telephone interview. "Someone said, 'Well, if we can't play the longest game, we can at least play the biggest!'"

Dills and his classmates had a long history of record-break-

continued page 15

Alumni reflect on giant Monopoly's beginnings in 1967

Juniata trustee Dr. Jodie Monger Gray '88 publishes a weekly alumni newsletter, the Juniata NewsGroup, to 6,000 subscribers via the Internet. When Gray announced the return of Giant Monopoly, several alumni sent her their fond memories that the original life-sized game and Monopoly marathon created, both on and off campus. Some of those memories appear below.

How fun to hear about the upcoming Giant Monopoly game on campus. That was such fun when we did it years ago. I can remember transferring the ongoing games to reach records. People would be carrying the board so carefully so nothing would fall off, and [would be] playing while walking.

We had such a chuckle about "jail" being outside Lesher Hall (the conservative girls) and Free Parking being placed near South Hall.

Each class had [its] own huge game piece on the day the large one was played. We threw the giant dice off the fire escape of the old class Hall that is now gone…Toby Dills was my hero, too. He was always creating some fun project while maintaining extremely high grades in some science...Chem or Physics. [He was a] very bright young man and very outgoing. [He] befriended everyone on campus alike.

-Reba Clymer, '70

Much of the cold winter, I can recall seeing Toby work on property deed cards at the side of Totem Inn, which was then in the basement of the Women's Gym. Each card was made to duplicate the game cards with the exception that the size was expanded a bit! To the size of full-size sheet or poster board! Colors were mixed to absolutely match the game colors and once the deeds were done, then he, and by that time his willing helpers, began to build green houses and red hotels (also on an expanded scale).

The campus was a buzz with curiosity and enthusiasm as the actual board was painted on the sidewalks. Yes, Reba Clymer is correct; the Styrofoam dice were tossed form the third floor of the Old Student's Hall, at the corner of 18th and Moore Streets where the nice JC sign now holds a place of importance.

As the dice were tossed, each class had a marker that was moved by wheelbarrow or some wheeled device around on the squares.

The "players" on the full sized version learned what the roll was via walkie-talkies and the game was maintained up on the third floor of Student's Hall so that a small "normal" scale version would always be accurate to match what was happening outside.

Once the event was over it was Juniata's time to gain recognition in Sports Illustrated magazine as accomplishing a record breaking feat.

-Richard Smith, '70

Students roll the giant dice at Juniata's first Giant Monopoly game in 1967.

Springfest 2007

Games, music and fun!

A game-themed two-day extravaganza is planned to take students' minds off of those pesky finals looming ahead. Check out the activities being offered this weekend around campus.

Friday, April 20

Mud Volleyball & Music

Springfest starts off dirty with the traditional mud volleyball at 6 p.m. Students can make teams ahead of time and sign up when they hit the courts behind Ellis.

The evening will end a bit classier and cleaner with a performance by Hedwig and the Angry Inch in the Ellis Ballroom.

"I don't want to tell you much about it because it would ruin it. Just [know] that you should come see it, because it's going to be good," said junior Rachel Domoff, co-chair on the Springfest committee.

Saturday, April 21

Relay for Life

The American Cancer Society (ACS) Relay for Life begins at 11 a.m. It will continue until 11 a.m., Sunday April 22. Relay for Life will be held in the track area of Knox Stadium.

Students, faculty and staff have been organized into teams of four to six participants. One or more of the members must walk the track at all times. To keep going throughout the night, teams will camp out at the track. To keep the long walk fun, there are specially themed laps like a disco lap and a hopping lap.

"We hope to raise $18,000 this year for the ACS, which might be possible, as we raised about $15,000 last year," said Shauna Morin, community service and service learning coordinator. Morin also said that, even though the teams have already been determined, money can still be donated at www.acsevents.org/juniatacollegerelay.

Giant Monopoly

Dice will roll as Juniata's Giant Monopoly kicks off at 10 a.m. at the quad between Founder's Hall and the Halbritter Center for Performing Arts. This will be third time that Juniata has played this game (1967, 1987 previously). Battling for the big win in 2007 will be three teams: alumni/faculty/staff, upperclassmen and underclassmen. The game, which is being organized by senior Kathleen Candando, ends at 5 p.m. For more information see story on page 13.

Daytime Activities

The day will really begin to bounce at 4 p.m. when giant inflatables arrive, featuring a jousting arena and an obstacle course. Springfest will also feature a wax modeler, who will make wax models of individuals' hands. Both events, and more, will be set up in Knox Stadium.

"Springfest starts off at 4 [p.m.] because we didn't want to interfere with the life-size Monopoly game. We want students to enjoy as much of the day as they can," said Domoff.

Picnic Dinner

At 4:30 p.m. dinner will be served behind Founder's Hall along 17th Street instead of at Baker, where the entertainment and Relay for Life in Knox Stadium will still be in sight. The dinner includes barbecue chicken, grilled corncobs, pasta salad, traditional salad, watermelon slices and blueberry cobbler.

Live Music & Club Tables

At 6 p.m., the band More than Me, which has a power pop/rock/reggae sound, will perform in Knox Stadium.

Club tables will also be set up at that time. Each of the tables will have a game-themed activity.

Around 8 p.m., More than Me will be followed by the band Reed Waddle. Reed Waddle has a sound that fuses rock, blues and jazz. The band will play until 9:30 p.m.

Starting at 9:30 p.m. Bridges and a Bottle, a rock band, will close the night, playing until midnight. "Springfest is all set for fun, and all it needs is students to enjoy it," said Domoff.

Rant, rock and roll

continued from page 12

afraid that a girl can rock those frets better than he can. Smaller fingers can do amazing things, gentlemen. It is a legitimate threat to some egos.

Guys shy away from dating a chick with a guitar. They think that she will completely dominate them like she does her strings. They will be nothing more to her than another E chord on her newest album, "I Eat Men for Breakfast."

We have Alanis Morissette to blame for perpetuating this image, with her album, "Jagged Little Pill." But even Alanis released a happy song after meditating about her life. Am I saying that women with guitars are not crazed manhaters, but secretly weak? No. I am just saying that they are human.

Feminism has done a great deal to contribute to this "unapproachable" image. As a way of banding together to redefine this image, women are strapping on a hot new set of strings. A company called Daisy Rock has recently made millions off guitars targeting women consumers. They feature vibrant colors, like pink, with extra accents, such as feathers. Whether or not pink is your color, it introduces more young women to music. Rock on.

The fact is that the implications of guitars are tremendous. If you are a guy with one, you are hot, committed and sensitive. If you are a girl with a guitar, you are an independent, dominating feminist.

But we can not let ourselves be the victims of stereotypes. Musician should want to be recognized for their ability to create, not their ability to attract or repel the opposite sex. The fact is the music should speak for itself.

There is a strange sense of satisfaction when you put your guitar down after hours of playing and your fingers feel calloused. What about the moment when you realized that those three notes you put together just dissolved all your worries? Yes, to some this may sound dramatic, but music is the great equalizer.

Just think about how many people around the world have all shared in enjoying Zepplin, Jefferson Airplane, Jack Johnson or Jewel. Music is about your ears, not your eyes. So whether you see the guitar or not, those strings have a story and so does that artist.

So this is my plea; dump the stereotypes and pick up a guitar. Do it because no one really cares if you are hot but you. Do it because you love the feel of steel and nylon and because everyone needs a good story. Remember, you can trust your ears more than your eyes.

"Grindhouse:" A tale of two movies

continued from page 12

final chase scene because, at two hours and 25 minutes, they couldn't take any more inaction.

The real highlight of "Grindhouse" was the faux previews. With titles like "Machete" and "Thanksgiving," these mock previews poke fun at exploitation action films and old school slasher flicks like "Halloween." These trailers have a life of their own and will leave the audience nearly rolling in the aisles.

Another clever nuance from the 70s was "the missing reel." At the most climactic sex scenes or integral points in plot progression, the movie would seemingly stop as directors inserted grainy clips that apologized for a missing reel. They would then return to the feature film. The audience couldn't help laughing.

"Grindhouse" is an experience like no other. I came out the movie theater dazed, wondering what had just happened. This collaboration was like an amusement park ride. It leaves you feeling a little queasy and disoriented, but wanting more.

"Grindhouse" is playing in State College and Altoona. It is rated R for strong graphics, bloody violence and gore, terror, pervasive language, some sexuality, nudity and drug use.

Final Take:

★★★

"Grindhouse" is a rollercoaster that would have benefited from a shorter dip into Tarantino-land. It will not offer enlightenment, but the experience is worth the three-plus hours of seat time. Its strength lies in the humor

In the Name of Fashion

Spring brings fresh air and fresh fashion

Kelly Popernik

Winter seems to be endless. However, the temperature will eventually start to rise, and bring with it the new fashion trends. With the new season comes new "must haves." Spring has never been so chic and breezy. This year springtime fashion is light and airy. It also includes intricate details, new colors and a touch of shininess.

There is not enough time to go inside every store to figure out what's hot on the racks. But here is a list of springtime's coolest trends.

Flowers, stripes and polka-dots: Details galore

Spring fashion is detail oriented. Flowers, stripes and polka-dots have found their ways back to the racks. The last time we saw prints like this was in the 60s and 70s! Dresses are vintage inspired, and they are on every manikin in the storefronts.

Oversized flower prints can be spotted on dresses, shirts, skirts and handbags. Flower prints range from abstract daisies to roses that look like they were picked straight from a garden.

If you think that flowers are a little too girly, try polka-dots or stripes. Both prints are modern and can make an outfit pop. Throw on a polka-dot belt or headband if you want to liven up a neutral shirt, or if an entire shirt of colorful dots seems like too much for you to handle.

Black and White: Chic

Nothing is more classic than black and white. It's like the yin-yang. They work together to create harmony. These two colors can also be worn as separates. The black and white look takes little effort to wear and can be paired with any vibrant color or pattern to create a funky outfit with little effort.

Black and white is fabulous for spring and every other season, no matter what.

Metallics: No longer gaudy

Metallics are the new "it girl" of the fashion world. We can't stop staring, and we all want a piece.

Small accessories on things like clutches and belts started off in just gold and silver. We thought our eyes couldn't handle the shininess of other metals. Wrong! Gold and silver wasn't enough, so bronze and copper have joined the team.

Wearing metallics is tricky though. Too much of a metal could make an ensemble look cheap and gaudy. The maximum amount of shininess to one outfit is two pieces, like a gold headband paired with a belt. But for a night on the town, wearing metallics head to toe is fun and eye-catching. For example, weat a skirt with gold embellishments paired with a gold handbag.

For daytime shine, a metallic belt, shoes or handbag looks best.

Nautical: All aboard!

Nautical is the biggest trend to watch out for. It doesn't just mean wearing navy, white and red. The "sailor look" ranges from stripes to rope details. Nautically-inspired clothes can keep you looking and feeling cool during warm spring days.

Espadrilles are back and have a nautical feel to them. Espadrilles are canvas sandals that have a sole designed to look like rope. The sole is the defining characteristic that makes it seaworthy.

Anchors don't just come in handy if you are sailing. They are one of the biggest fashion statements for spring. They have made their way onto tee shirts, handbags and jewelry.

Sailor pants are also trendy. They typically have six buttons down the front and are straight legged. But they are not always flattering. If straight leg pants don't work for you, look for sailor pants with a boot cut or wide leg. If worn the right way, they make quite a statement.

Look forward to the new spring fashions. The bold prints, charming colors and inspiring trends will liven up a wardrobe. Lastly, an oversized handbag will have room for an umbrella in it. We all know how unpredictable spring weather is!

Juniata students pass 'Go,' collect $200

continued from page 13

ing games. In the class's freshman year, they set the record for the longest Monopoly game ever played. The record was quickly broken, but the class went on to set other records including the longest played touch football and softball games. Both records were later broken.

The juniors and seniors did not fair well in the 1967 game. The juniors were sent to jail at least six times, and the seniors nearly went bankrupt.

Dills had several tips for the new generation of players.

"Successful players, they take chances, they get a monopoly early on," Dills said. "But for giant Monopoly, make sure that everyone gets around the board at least once so there are plenty of pictures. I think the few that [my classmates and I] took and the ones in the College archives are the only ones in existence, and there were so many people there that day."

The Naked Truth:
Stupid sexual acts

Rebecca

There are more reasons to call a person stupid than for having sex without a love glove. I started thinking about stupidity and the Darwin Awards naturally came to mind. According to their Web site, these honors "named for the father of evolution, …commemorate those who improve our gene pool by removing themselves from it."

I had a feeling that one or two of those awards probably involved a catastrophic twist-and-shout. I couldn't have been more right. Take a look at some of the scenarios that took home Darwin's hardware this year.

You wouldn't want your rodent crushed. One man died after he willingly let his wife run him over with her SUV. To defend herself, she showed the police a video where she is stomping rodents and rabbits to death, as a form of sexual excitement. Although police reports were vague, I assume her husband was found in a pit with a board smashed over his nude crushed body, clinging to a wheel of cheddar cheese. He was nicknamed "Stuart Little."

Hearses are definitely for the dead. A funeral home employee planned to meet his girlfriend in an old warehouse, where he arrived with his hearse. Due to her hotness, he left car on to run the air conditioning while they got busy in the caboose and they later died from carbon monoxide poisoning. After missing person reports were filed, the man's family reluctantly had an open coffin viewing because they couldn't get the lid to shut.

S&M means minding your Ps&Qs. After a long day's work, one businessman just needed to be whipped back into shape for the next day. He arranged for a dominatrix to help him unwind by binding him to his bed at a high-end hotel in Germany. Unfortunately, a fire broke out in the room next-door and the dominatrix ran out, leaving the man with the only beam left standing in the room. The businessman survived the fire and went on record as saying, "I did not have sexual relations with that woman." Coincidentally, Bill Clinton attended an E-8 Elite Summit conference and stayed at the same hotel a few months later. Guess which room he was given?

If you can't get it up, don't cut it off. One man was found on his brother's front lawn, with his third eye chopped off at the base. He blamed the attack on a woman, but then disappeared after his best feature couldn't be reattached. When found, a voice stress analyzer proved that the man actually maimed himself. The Darwin Awards website also mentions that he's making a living as a pipe fitter. The only thing he's fitting his pipe in is a box. And not a nice box like J. Timberlake sings about.

Some dorks aren't worth the trouble. After abstaining for a month in a Hare Krishna temple, one guy decided he wanted to take a swim on the wild side… at SeaWorld. He hid until after hours and dove into a killer whale's tank. While it is unclear exactly what the guy planned on doing to the whale, it was crystal clear that the whale knew what to do with him. The guy's naked body was found dead, clinging to the whale's dorsal fin and his swimming trunks were found in the pool with teeth marks, indicating that the whale had ripped the trunks off. The man had a record of "communing with sea animals." I guess he went in looking for a humpback and ended up with a killer.

Yes, vacuums are for sucking. We were taught as children never to put a plastic bag over our heads, right? One man forgot about this life-saving logic. The man decided to put a plastic bag over his head to enjoy a lack of air while enjoying himself. But that wasn't enough. To top it off, he took a vacuum cleaner and sucked all of the remaining air out of the bag. The dude was found dead with the vacuum still running.

Remember folks: friends don't let friends play with their plugs unless they are sure they can pull them out of the wall in time. Only YOU can prevent autoerotic asphyxiation.

80 miles per breath is risqué. Two young adults were discovered fatally naked after their car accident. They were geared up and adding friction by driving over 80 mph on bumpy back roads, when they took a wrong turn. Had they survived the crash, the boy would have been cited with driving under the combined influence of his girlfriend's orality and his stick's morality.

I always suggest gearing up for battle Trojan-style, but after reading the above situations I think we need a little more than armor. While many ideas sound good in the heat of the moment, they might be really bad ones in the end. Just remember, you want to make someone lose his or her breath...but you don't have to use an SUV or a vacuum to do it.

Men's volleyball wins fourth consecutive Molten national championship

Brian Spinazzola

"JU-NI-A-TA!!!!! JU-NI-A-TA!!!!! JU-NI-A-TA!!!!!"

Then silence. Carthage serves. Steve Yeager passes. Matt Werle sets the ball to the outside. Jeremy Barndt drives a kill home for the victory. Fans explode with cheers.

This scene played out on Saturday, April 14 as the men's volleyball team captured its fourth consecutive Molten Division III National Championship.

The Eagles claimed the five game victory (3-2) after roaring back from a two-games-to-none deficit in front of a packed house at the Memorial Gymnasium.

Senior Jeremy Barndt led all players in the match with 22 kills. Sophomore Matt Werle matched his career high in assists, dishing out 71 on the night.

After the match, a short awards ceremony was set up, where the championship trophy and the individual awards were presented. Barndt and fellow senior Nate Ocasio were named to the All-Tournament Team. Werle was named the tournament's MVP.

"It feels great. It's a great honor. I'd say there were a couple other people on our team that played great, and I didn't expect it at all. I was just happy to come out with the win," Werle said.

For the seven seniors on this year's team, winning a fourth consecutive Molten national championship has a special meaning.

"It shows a lot about our team's character. Our team is willing to work hard, and we come through when we need to come through," Barndt said.

Of the career that he and his fellow seniors shared, Barndt said, "Volleyball is what most of us came here for, and it's what we're gonna look back on. We've all been together since day one. Winning and just being together has made being at Juniata all the better," Barndt said.

Next year, many players will have to step up and try to fill the shoes left by this year's seniors. However, Werle has a positive outlook for the 2008 squad.

"Matt Fritz is going to be our big gun coming back next year, along with Dan Powers and Chris Gass. We've got some freshmen that will need to step it up next year, and I think they can. We've also got great recruits coming in as

(Left to right): Seniors Steve Yeager, Nate Ocasio, Jeremy Barndt, Glenn DeHaven, Casey Dale, Ryan McGinley (behind Dale) and Derek Stanley pose with the Molten Division III championship trophy on April 14 after Juniata won its record fourth straight title. The Eagles overcame a two-game-to-none deficit to defeat number one seed Carthage 3-2 to win the championship.

Christopher Shannon / Juniatian

Sophomore outfielder Dane Ott (27) and freshman outfielder Jordan Reitz (5) congratulate junior first baseman Dan Kauffman (25) as he crosses home plate after hitting a homerun in the first inning against Messiah on April 10. Kauffman leads the Eagles with four homeruns on the season.

Tough luck on the diamond

Derek Stanley

Only nine games remain on the schedule for the Juniata baseball squad (14-12-1) this season, with seven slated against conference foes. With such a high number of conference games still on the schedule, the team's playoff hopes are still in question. Currently the Eagles sit in fifth place, in league standings.

On April 13-14, the Eagles dropped two of three games to Elizabethtown College by scores of 15-6 and 11-0. Juniata's lone win in the series came in the final game, 3-1.

In other conference play, Juniata fell to Messiah College in both games of a double header on April 10 by scores of 8-5 and 4-3. Juniata had beaten up on the Falcons in their only other meeting this season 9-1; however a consistent offensive output and a late rally gave Messiah the edge.

In the game, senior co-captain and first baseman Dan Kauffman gave the Eagles first inning lead by stroking a two run homerun, after freshman outfielder Jordan Reitz led off the inning with a single. This would be the only lead Juniata would possess, as Messiah plated at least one runner in each of the next five innings.

Freshman second baseman,

continued page 19

National Championship

continued from page 16

well," said Werle.

The Eagles' 3-1 victory in the first round of the Molten Invitational over Springfield College on April 13 avenged their loss in the EIVA Division III Championship game earlier this month. The theme for the weeked continued to be the stellar play of Ocasio. For the third straight game, he led all players in kills with 21.

"Just gotta step it up, simple as that. It's playoff time," Ocasio said of his outstanding performance over the past several games.

Along with Ocasio, three other players for the Eagles reached double figures in kills against Springfield—Barndt (16), Gass (14) and Fritz (11). Defensively, Gass notched a team high six blocks, and Werle contributed four of his own. Yeager led the Blue and Gold with 11 digs, Glenn DeHaven had eight, and Werle added four.

After suffering a two game losing streak, the Eagles capped off the regular season the right way with a 3-1 win over EIVA Tait rival Saint Francis on April 10. After losing the first game, Juniata came back to control the rest of the match, winning the last three games by no less than five points.

Once again, Ocasio led all players in the match in kills, pounding out 20 for the Eagles, while also recording eight digs. Juniata's Barndt (17) and Fritz (11) also reached double figures in kills. Barndt also led the team in blocks with seven.

Juniata's first loss to a Division III team since 2004 could not have come at a worse time, as the Eagles fell to Springfield College 3-0 in the EIVA Division III Championship on April 7. This loss snapped a 32 game winning streak against Division III opponents, as the Eagles lost by scores of 25-30, 36-38, 25-30.

"We didn't come to play, simple as that. We got a little lackadaisical and lazy, and we thought they would roll over with no problem, but that wasn't the way it went," Ocasio said.

Ocasio led the Blue and Gold in kills with 17. Only one other player hit in double figures for Juniata, as Barndt posted 11 kills. Barndt also led all players in blocks, registering eight. Defensively, Steve Yeager led the Eagles with 17 digs.

With all the different tournaments and championships that the men's volleyball team has played in the past two weeks, it can be confusing trying to understand just exactly what titles the Eagles won, and what they lost. Head coach Jeremy Price did give some clarification on the issue. "The EIVA Division III Championship is the conference championship, and the Molten Championship is the Division III national championship. It's the equivalent, if you will, in college basketball of an ACC or Big Ten tournament, and then that's followed up by the NCAA tournament. However, since the EIVA contains both Division I and Division III schools, we will play for the overall [EIVA] conference championship next week."

The EIVA championships began last evening. Results from Juniata's game against Springfield were not available as of press time. The EIVAs continue with quarterfinal action on April 21. Game sites and match-ups were undetermined as of press time. Visit Juniata's athletics homepage at www.juniata.edu for more details.

Men's tennis earns berth into playoffs

Derek Stanley

After suffering their first two-match skid of the season, the Juniata men's tennis team (5-3) has bounced back with a two-match winning streak. The Eagles lost to both Elizabethtown College and Messiah College by scores of 6-3 and 9-0, respectively and rebounded by downing Susquehanna University 7-2 and Moravian College 6-3.

With the win against Susquehanna on April 13, the Eagles secured a spot in the Commonwealth Conference playoffs for the second time in two years.

Juniata's next victory against Moravian moved the Eagles into the third seed, and will force Moravian to play top-ranked Messiah in the first round of the playoffs.

Juniata go on the road to face Elizabethtown in the conference semi-finals on Friday, April 21.

"We are really excited. It was one of our main goals to reach the playoffs this season. Going into the Moravian match we knew we could increase our seed and we wanted to be as high as possible. Now we have a revenge match set up against E-town that we are really looking forward to," said senior captain Brandon Long.

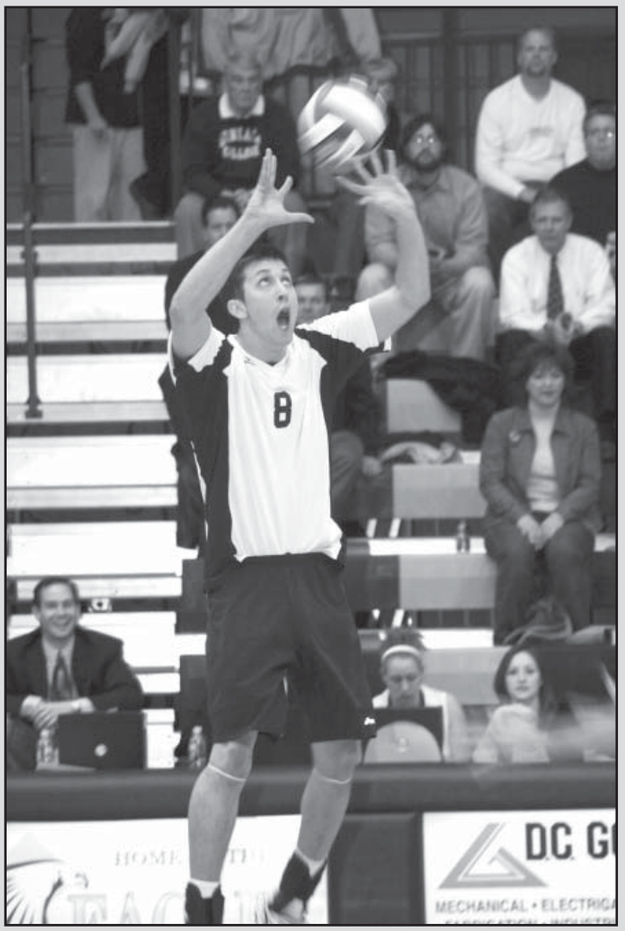
Against Moravian, the Eagles claimed two of the three doubles matches and then won four of the singles contests. Sophomore Ryan Navarro captured his singles victory by scores of 6-2 and 7-6 (after winning the second set tiebreaker 9-7). Long and sophomores Aaron Rhodes and Casey Chew also claimed victories on the day.

Long is enjoying a stellar season, tallying a 6-1 record overall in singles.

"My experience has helped me a lot. Having been in the same position now for four years I am not nervous. I've been in all these situations before. I also know a lot of the guys I am playing against. I know their tendencies. So I'm not just out there hitting the ball; instead I'm taking my time and using everything I've learned to win," said Long.

In previous action against Elizabethtown Long enjoyed a solid performance, winning both his singles and doubles matches. At fourth singles Long downed his opponent 6-3, 6-4. At first doubles, Long paired with freshman Jarrad Silver to win the match 8-6.

Juniata was able to take two of the three doubles matches as senior Jau Feixas and sophomore Jonathan Skoner won their match 8-2 at second doubles.



Skoner and Feixas put forth their best effort at third doubles against Messiah, falling 9-7 in the most competitive match of the day. In singles, Skoner was the lone Juniata player to force a third set. He fell in that set 6-4, 4-6, 6-2.

Scores were unavailable as of press time for matches against St. Francis University.

The Eagles will return to non-conference action April 24 against Goucher College and will return home on April 26 to face Gettysburg College.

MAC Individual Tournaments will be played on April 28-29. Times, sites, and match-ups are to be determined.

Matt Werle named the AVCA Division III Men's Volleyball Player of the Year

Christopher Shannon / Juniatian

Brian Spinazzola

Four Juniata men's volleyball players were named to the American Volleyball Coaches Association (AVCA) Division III All-America Team. Seniors Nate Ocasio, Jeremy Barndt, junior Matt Fritz, and sophomore Matt Werle were all named to the 10-player first team. This is the second time that Juniata placed four players on the first team.

"It's pretty exciting. It's the third time I was named to the team. Last year I was named to the second team, and I think it motivated me to play a little better this year. I'm happy that I got first team this year, but I [was] more motivated for winning the Molten tournament than winning any accolades," Barndt said. Barndt and his team accomplished that Molten title goal on April 14 (see story at left).

Along with being named to the All-America first team, Werle was also named the AVCA Division III Men's Volleyball Player of the Year. The AVCA All-America program is only in its fourth year, and yet Werle is the third Juniata player to win Player of the Year (Kenny Eiser '04, Ricky Ziegler '05). Werle is the second Juniata setter, but the first sophomore ever to win the award.

"It's a great honor, but there's a bunch of other teammates of mine that I think deserve the honor as well. Either way, it feels great," Werle said.

Softball plays close conference games

Driscoll hits walk off RBI

Jeremy Barndt

Juniata (8-12) went 2-4 in conference play in the early part of April, splitting doubleheaders against Messiah College and Susquehanna University and dropping a pair of games to Elizabethtown College. Three of the games came down to scores of 3-2. Juniata took two for wins, the most exciting being the victory over Messiah.

The score was 2-2 in the bottom of the ninth. Freshman designated hitter Sarah Eckard was on second base after a double and freshman third baseman Rachel Nagy was walked with two outs. Junior outfielder Kaleigh Driscoll singled to centerfield driving in Eckard and the game winning run for the Eagles.

"I was very, very nervous when I came to the plate, but once I stepped into the box I got in the zone. I swung at the first pitch, made contact, and I don't really know what happened after that. It was indescribable," said Driscoll.

After the exciting hit, the team swarmed Driscoll at first base.

Freshman pitcher Alyssa Erb pitched all nine innings against Messiah, surrendering only two runs while recording nine strikeouts.

In the second game of the double header, the Eagles fell 7-0 as they could only muster one hit off Messiah's dominating pitching staff.

"Something we need to improve on is playing a clean game for all seven innings. Right now we are very inconsistent. We are either hitting the ball well or striking out a lot. In some games we play great defense and in others we do not. These mental lapses cost our team runs and games," said Driscoll.

In Juniata's doubleheader on April 10, it took on Susquehanna in a pair of 3-2 games.

In the opening game, Juniata put up three runs in the first two innings on RBI singles by Nagy, sophomore second baseman Tara Carl, and sophomore centerfielder Kaylee Kachik. Erb and the defense did the rest. She gave up only two runs and the defense had no errors. This marked Erb's seventh win on the season.

"Right now we are improving with each outing. With fielding five to six freshmen, we are learning from every mistake and using every positive to make our team better. With our strong team unity we never get down on each other," said Driscoll.

The second half of the doubleheader against Susquehanna was a hard fought game. Sophomore pitcher Elsann Machotka started the contest and yielded only one earned run but was replaced by Erb in the third inning. Erb pitched through extra innings as Susquehanna finally scored in the top of the ninth. Erb did not relinquish one earned run. Susquehanna's final two runs resulted from three Juniata errors.

The team suffered two difficult losses against Elizabethtown on April 14. In the opening game, Elizabethtown put up four runs in the bottom of the first inning and never looked back, winning 6-1. An untimely error cost the Eagles. Three of the Blue Jays' runs came across the plate unearned. Juniata's lone run came off of a solo homerun by sophomore outfielder Liz Schmitt in the top of the seventh.

In the second game of the doubleheader, Juniata enjoyed a 3-1 lead in the third inning. The Blue and Gold strung together four hits, including a two run double by sophomore outfielder Jackie Morley. Elizabethtown responded, scoring five runs in the bottom of the third. The Blue Jays added another two runs in the bottom of the fourth. Juniata fell by a final score of 8-3.

The Eagles return to action today at Penn State–Altoona. Juniata will play 12 games in the next 10 days to finish the season.

Cold weather, D-I competition cannot slow track and field team down

Eagles puts forth solid effort at the Bucknell Bison Classic

Photo courtesy of Cailtin Hinson

Freshman Melissa Johnson runs the 400 meter hurdles at Bucknell University.

Christopher Burlingame

With misting rain and temperatures that would make anyone feel rheumatic, the Juniata track and field team put together a solid performance at the two-day Bucknell Bison Classic on April 13-14. The Eagles put together several solid performances and junior Kyle Mazur qualified for the NCAA Championships with his fifth-place finish in the javelin.

Mazur's throw of 57.42 meters earned him just enough for the NCAA Championships, which require a throw of 57.30 meters to qualify.

"It looked good as I was releasing it. I could tell by everyone's faces that it was a solid throw, but I didn't know it would be enough to qualify," Mazur said.

Key performers for the Eagles included senior Randy Anderson's two third-place finishes in the 100 and 200-meter dashes and sophomore Kelsey Buffenmyer's first-place finish in the high jump.

JC freshmen had an impressive showing at the meet. TJ Breya contributed 14th and 17th place finishes in the 400 and 110-meter hurdles respectively. Maggie Wolenter earned the only other top ten finish for the JC women, placing eighth in the javelin.

"Our throwing team has been really motivated by our coach. We try to get angry and go out and perform to the best of our abilities on the weekends," Mazur said.

The Classic was a non-scored meet for the Eagles who faced some fierce Division I competition. But the Eagles managed to hold their own. The women contributed eight top-25 finishes and the men added six more.

The Blue and Gold will return to action on April 21 at the Moravian Greyhound Invitational.

Eagles fall in battle of the birds

continued from page 16

Anthony Trutt turned in a solid offensive performance in the loss. He went 2-for-3 with an RBI and a run scored.

However, Kauffman stole the show at the plate, going 3-for-4 with four RBIs and a run scored.

“So far this year I have tried to stay focused and relaxed at the plate. I know that I am not going see the pitches that I did last year, so I have just tried to make that adjustment mentally and react to any mistake the pitcher makes,” said Kauffman.

In the second stanza of the doubleheader, Messiah pulled away with the lead in the top of the first, 1-0. But in the bottom of the second Reitz knocked in freshman shortstop Andrew Kriss on a sacrifice fly, and junior catcher Shawn McDonald scored on a throwing error.

The Eagles maintained the lead with each team recording a run in the fourth. However, Messiah took control with a late rally. The Falcons defeated the Eagles 4-3 by scoring two runs in the seventh inning.

Kauffman said, “That’s baseball. We did the same thing to them last year at our place when [Steve] Wilk hit a walk-off [homerun] in the bottom of the seventh [inning]. We just try to put it past us and focus on this weekend.”

Juniata received a solid pitching performance from freshman Tyler Clifford. The righty threw 5 2/3 innings, giving up just two runs on four hits, while striking out six Falcons. Offensively, McDonald led the way, going 1-for-2 with an RBI, a run scored and a walk.

“I was seeing the ball really well against Messiah and I knew each at bat was big. Plus, I hate Messiah and they are one of our biggest rivals, so that helped,” said McDonald.

Scores for the Eagles’ latest doubleheaders with Penn State Altoona and Widener University, were unavailable as of press time.

The Eagles will face Lebanon Valley College (LVC) for a three game series this weekend. LVC sits just ahead of Juniata in the conference playoff race, in the fourth spot. Juniata travels to Annville, PA to play one game against the Dutchmen on April 20. The teams finish the series in a double header in Huntingdon on Saturday at 12 and 2:30 p.m.

Baseball coach runs for public office

George Zanic, Juniata’s head baseball coach since 2001, will run for district attorney of Huntingdon County this year.

Zanic said that he will be able to continue coaching at Juniata should he win the election.

"The administration at Juniata has been very supportive, and I have three phenomenal assistant coaches," said Zanic.

It was not until he talked to the players that he entered the race, however.

"It was their support that sealed the deal," he said.

Zanic currently works as a criminal defense attorney. He decided to run for the district attorney’s office because many of his friends who work in the court system and law enforcement have encouraged him to do so. He considered pursuing the spot in the past, but it only became feasible last year when the office was changed to a full time position.

The primary elections for district attorney will take place in May. Zanic will run against one other candidate for the Republican nomination. There are currently no Democrats running for the party’s seat.

TKep's Tie of the Issue

The ever-jolly President Kepple has blessed us this issue with a Christmas-themed tie. While the average style guru might see this as a potential fashion gaff, we can assure you that Kepple's candy cane-patterned, ho-ho-ho-adorned neckware is nothing short of genius! With the trustees on campus this weekend, what better to get them in the mood to give back to students than a tie that evokes memories of the season of giving?

So if you're bored...

We thought we would go out with some class for this, our final issue of the academic year, and give everyone something to do in between those last-minute papers and final exams. So break out the glue, tape and scissors and enjoy creating a Juniata-themed paper doll. You can choose from any one of six familiar Juniatians, ranging from Ryan Conrad to Hal McLaughlin. Please feel free to dress them with any of the outfits and accessories we have provided. (May we suggest dressing PKep in the poodle skirt?) Good luck on finals, everybody!

The Rookery

by Brock Eastman

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

SEPTEMBER 27, 2007 | JUNIATA COLLEGE | VOLUME 89, ISSUE 1

Increased security: A Juniata priority

Christopher Shannon / Juniatian

On September 11, workers installed new locks on Tussey and Terrace and Sherwood dorms. It is planned that eventually all dorms will receive the new locks, TnT and Sherwood got the locks early as part of trial program.

Christina Gongaware

In the wake of several school shootings and increased security awareness across the country, Juniata is making several security changes on campus.

Residence halls are undergoing several major changes. While Lesher is currently the only dorm to lock at 10 p.m., all halls will soon require a card swipe to gain access, 24 hours a day.

Installation of new card swipe units was completed at Tussey and Terrace Halls this month. Tim Launtz, the director of residential life, said that his office is awaiting the proper training from manufacturers to make the full switch.

Launtz also said that the new system will be running on a "pilot program." Therefore only when all issues with the new procedure are worked out will any other buildings be converted.

It remains unclear what will happen when a student may not have his or her ID card and needs to enter a building. "There are several different options that we've kicked around, but some of the details are still being worked out right now," Launtz said.

As for using the electronic keypad on the newly installed locks as an alternative way of entry, Launtz said, "We are not going to utilize that option." He believes that swiping an identification card will be the most effective method.

Although security will be increased with this development, one of the concerns of the administration in locking all residence halls was that fewer students would be inclined to lock their individual room doors. Director of Security Rocco Panosetti Jr. said not to do so is simply "inviting people into the rooms."

Panosetti also said, "Students need to understand that even though outside doors may be secured, individual room doors need to be secured as well. Students have to take charge of their own security first. Security is everyone's responsibility."

Student Government

New elections, new plans

Claire Williams

Many read announcements for student government meetings and wonder what the group does. Others wonder how they can become involved. Student government represents the student voice and interests to other, higher boards on campus. Student government also gives clubs the money they need to run events.

There are 36 senators who have 26 votes between them and a five-member executive board who only votes in the case of a tie. Most senators are elected by the communities they represent. For example, each class elects its own officials. The JAB and RA seat representatives are also chosen in elections conducted within those groups.

The president, vice president and secretary of the executive board are elected by voters in the general student body. The treasurer and the IT positions are appointed and approved by the Senate. The gender ratio of senators is near 50:50.

Any student can bring an issue to the Senate. When asked how to contact student government, Shawn Rumery, president of the

Founder's Hall renovations begin early next year

M. Piazza

Starting in February 2008, Founder's Hall will be completely renovated. The final result will be a fully functional four story building. The new main entrance will face the campus quad, like the von Liebig Center for Science.

New classrooms and offices will be constructed, while still retaining elements of the building's original design, including the bell tower.

The entire project will cost eight million dollars. Four million will come from a loan, the other half from alumni and other donations.

The south part of Founder's that is attached to the tower will only have its interior renovated. Changes include new energy conserving paint, lighting, heating and flooring.

The east side will be torn down and replaced with conference rooms and gathering spaces.

The north wing, currently containing the Registrar's office will also be demolished and rebuilt.

"Areas that are now not functioning properly will be renovated and enhanced to allow the building to once again be the center of campus," said President Thomas Kepple.

During the renovations, all the offices will be moved out of Founders and into other buildings around campus. The president will move into the first floor of the Baker House on 17th Street. The provost's office will move into the second floor of Beeghly Library. The registrar, academic support services and the dean of students offices will all move to the basement of von Liebig.

None of the people moving are complaining though. Instead, they are excited about the changes that

Increased technology appearing on campus

Sara Cieslewicz

The Computer Network Services (CNS) has incorporated several changes and updates to the campus' network this year including the Client Assessment Tool Professional (CATPro), laptops for all faculty, a Help Desk Online Work Order system, Microsoft Office 2007 and tweaks to the Mailbox system.

Appserver

The grumble amongst students a few weeks ago was that signing on and off the appserver took an exceptionally long time. At times many thought that it was quicker to just shut down the computer entirely.

"The library was where most of the complaints came from. For some accounts it was taking forever, literally going for hours and not logging off. We found some configuration settings on the appserver environment that have been corrected, fixing the problem," said David Fusco, director of technology operations.

The main reason behind the problems was that people were not logging out of the system, especially people on their own personal machines.

Jigar Patel, the student manager of the Teaching, Learning and Technology center (TLT), explained further that the appserver is made up of four servers. One server used to be able to load one profile (a username and password) 60 times before it killed the connection. Each time a user signed on, it routed her to a different server depending upon load balance. Now it has been cut down to loading a profile only two times. If a student tries to log in again after not logging out, a message will be sent warning them to log off the next time they use the appserver.

This change results in a speedier log in and out times each, about 30 seconds. A user that is still logged onto a computer cannot log onto a different one. If tried, the computer will freeze.

Fusco said, "Basically it hangs your session, making the memory being held by the computer clog the server. If enough people do this, the server runs out of memory."

"Everything seems to be fixed," said Fusco. Students should not hit the X to log off the appserver. They should log off each and every time to ensure speedy access to their fellow students.

The Mobility Initiative

Fusco also addressed the campus' new "mobility initiative." He explained that in general, the College wants to move toward a more mobile computing environment. This will affect classrooms, workspaces, labs, etc.

To begin the initiative, CNS recommended to this year's incoming first-year students that they should bring laptops to campus. "I am comfortable saying that out of the students who brought computers this fall over 90 percent brought laptops," said Fusco.

Administration is discussing whether the College will make it mandatory for the next incoming class to bring laptops.

Fusco said that he assures the campus that alternative solutions will be available for those who, due to financial or other constraints, cannot bring one. Low interest lease options are also being researched for those who meet certain financial aid requirements. The help desk owns 10 PCs and five Macs. Though it is a limited supply, if the students are encouraged/made to bring laptops, there will be less of a need to rent computers on campus.

Another step in the initiative began with all faculty members receiving a personal laptop this summer. The computer towers and podiums currently in many classrooms will eventually be removed.

The faculty will tote their personal laptops to classrooms in place of using the current towers. The towers will be recycled. They will be re-distributed to staff members that need newer technology. Or the towers will become fundamental machines for the appserver.

The mobility initiative is a gradual process. Towers have not yet been removed in any of the classrooms. Professors have started using their laptops in classrooms. In a month, they will be asked for feedback thus leading to the next step. It is tentative that some podium machines will be removed over Christmas Break.

If students wish to practice for presentations and the computer towers are not available to them in classrooms, they can rent laptops from the help desk in the Brumbaugh Academic Center.
Even with the new laptop plans, there will be at least one public lab in each building Brumbaugh will have three public labs, Patel said.

The mobility initiative presents one severe disadvantage; there are not enough physical power ports around campus. If a student attends a nearly two hour course on a Tuesday or Thursday for example, her computer battery may not last without having access to a power jack to plug into. The solution would require a campus wide renovation project partnered with maintenance.

Some professors do not want their students to bring laptops for fear of the easily distracting opportunities it presents. Fusco said, "If they don't want to pay attention, that's their choice regardless if a computer is in the room."

CATPro

CATPro is a program used to control network access by connecting students to a registration server. Without registration, Internet and network access are severely limited.

A week prior to the start of classes, hardware malfunctioning and configuration problems involving the way the network works affected the initial use of CATPro. All Secure Networks, Inc., the creator of CATPro, visited the campus during move-in weekend to make sure it was working properly after it was fixed.

CATPro checks to see if a personal computer is registered and up to date. If it is not, it "quarantines" the user. A little square box will pop up in the bottom right hand corner of the user's screen, alerting him of a necessary update.

Students have complained about the alert's repeated appearance. "The quarantine box pops up every five seconds and it is the most annoying thing in the world," said sophomore Gillian Thomas.

If not updated within 24 hours, the user will be quarantined. The quarantined user will not be taken off the network and can still access the necessary update sites to regain full access. Quarantine is simply a safety precaution.

The benefits of the program are that it prevents the computer from getting viruses, keeps Windows up to date and updates anti-virus software. Patel said that these prevent virus attacks from spreading to the entire network.

"If they [students] don't update, it will keep nagging them to update. That is all it takes. Just update and restart your computer," said Patel.

Fusco said, "If you have a legit copy of Windows, keep up on your updates. Update your anti-virus package, then there should be no way you shouldn't pass."

Fusco said that last year Juniata did not have the capabilities to run

continued page 5

"First Friends" builds relationships between international and domestic students

Kazia Eastep

"When you go to a new place, the first friends you make are the most difficult," said Keith Blankenship, Tussey and Terrace resident director and international services coordinator. This statement about friendship is the foundation for First Friends, a program designed by the International Programs office to help better incorporate international students into the Juniata College community. Blankenship is one of several staff members responsible for making this "old" program seem so new.

First Friends stemmed from a pre-existing program that matched international students studying in Juniata's Intensive English Program with a domestic Juniatian as an assigned conversation partner. After weighing the pros and cons of this partnership structure, the International Programs Office came up with an ingenious transitional idea. The office decided to link international and domestic students in activities they would naturally like to participate in, but that they might be intimidated to do in a study-abroad setting.

First Friends provides a great solution with a new group set-up. Group configuration is based on student hobbies. There are now six subcategories including conversational partners, sports and outdoors, food and cooking, community service, music and dance and books, film and art.

The program as a whole plans on meeting the first Friday of every month. The subgroups will also have their own individual get-togethers throughout the year.

The overall program meetings will probably take place in the form of off-campus outings. These events will likely be planned based on American culture and current events at the same time. For example, in October, there might be a Halloween activity or a fall-themed hayride.

Proposed future activities for the sub-groups include a soccer game outing for the sports and outdoors group, an international film viewing for the books, film and art group, and small group salsa lessons for the dance group.

Ultimately, Blankenship hopes that the subcategories could be introduced to the pre-existing activity groups on campus. For example, the sports and outdoors group might be introduced to the RSO of the same genre, Laughing Bush.

When interviewed, participating students, both international and domestic, were open-minded and enthusiastic about potential First Friends activities. There was a common consensus that the program will be hugely beneficial to all students involved.

The last meeting of First Friends had nearly 50 to 60 students in attendance. Nearly all international students on campus are currently involved. Program coordinators say that ideally, there would be a one-to one1ratio of international and domestic members.

Those interested in becoming involved with the program should e-mail Blankenship at Blankek@juniata.edu.

Tightened precautions on campus

continued from page 1

Freshman Jennifer Wright feels that these changes are in alignment with what is happening around the country. "We have a safe campus, but why not make it even safer? Nobody is going to be at a disadvantage as long as they have their ID cards with them, which most people have anyway," she said.

Senior Nicole Fabo agreed. It will definitely be hard to get used to, but it is probably for the best because of everything that has happened, like Virginia Tech," she said.

Campus officials are also updating security policies. Beginning with the "Virginia Tech Committee," created by Juniata shortly after the incident, College officials met to rethink and revise the current "Emergency Operations Plan."

According to Panosetti, an "active shooter policy" is just one of the latest steps taken by the school. The policy would inform faculty and staff of the steps needed in such an emergency situation to ensure that no one is left uninformed.

An electronic notification system has also been established. The system would send text messages to registered cell phones to alert the campus community of any dangers on site. Students received an e-mail in late August with a link to a Web site that would register their numbers. A test will be run at least once every semester and the program has already begun.

A campus-wide alarm system has similarly been installed to ensure that even those on campus without cell phones will be aware of an emergency situation.

Students have to take charge of their own security first. Security is everyone's responsibility.

These alterations have all been put into place with the hope that communication will be as organized and efficient as possible, using all of the resources available, according to Panosetti.

Tightening precautions in academic buildings have also become a priority. Panosetti said that although "everything is motivated by funding,… we do the best with the resources we have."

Panosetti believes that, in the future, an electronic locking system in academic buildings that would lock and open doors at a certain times each day will be the key to increased productivity for the Juniata College Police Department (JCPD). He said that sort of system would work to "deter crime" and protect the student body.

"It is a tremendous responsibility to be opening buildings. [The task] takes officers off of the streets where they should be," he said. "If you're not out there patrolling, things just may happen."

When asked one thing that he would change about security at Juniata, Panosetti said that he would love to modify the complacency in community members who believe that a large-scale tragedy could never happen at such a small, quiet school.

Panosetti said, "Look at Columbine. [It's] not too different from Huntingdon. The Amish schoolhouse shooting--who would have thought that something like that could have happened?"

To prevent such events from occurring, Juniata's "Virginia Tech Committee" discussed many options, including arming the JCPD. Panosetti says that a final decision has not been made, and that it would most likely be a judgment made by the board of trustees.

Panosetti said, "Every college and university is going through the same process right now. It may seem like a hassle now, but in the long run the results will be great."

Emergency notification system

We would like to notify you that Juniata will be providing an Emergency Notification System that is done over your cell phone via a text message.

The Emergency Notification System will be utilized only in the case of a campus or personal emergency, important alerts will be sent to the cell phone number you have provided us with. This number will ONLY be used for this purpose and does not imply permission to use this contact source for any other purpose.

To sign up for the Emergency Notification System , we ask that you go to https://secureweb.juniata.edu/forms/datasheet.html and provide the information as asked for in the first two questions of the "Emergency Information" section.

~E-mail from Office of Residential Life, Aug. 27

Early preparation for Empty Bowls event

Christopher Shannon / Juniatian

Celina Isenberg throws a bowl at the "pot shop" during an Empty Bowls preparation event on Sept. 14. Volunteers began stockpiling bowls now to ensure that they have enough for the spring's Empty Bowls charity event.

Storming the Arch

One man debunks the myth

Laura Hess

According to campus legend, and the Juniata homepage, no student has ever successfully stormed the arch.

Daniel Kraft ('76) disputes those claims. Kraft, maintains that during his freshman year, in 1972, a small group of freshmen, including himself, did make it through the arch.

When interviewed, Kraft described everything like it was something that happened just a few days ago, not 35 years in the past. He told his story to let Juniata know that storming the arch isn't impossible.

They saw a huge kid, known only as "The Freak," run around the corner of Cloister carrying a flaming American flag.

Kraft said that the 1972 Storming began like most. The first three runs were disastrous for the new freshmen. Bodies were bruised and battered. He said that the freshmen's hopes were diminishing.

Then, out of nowhere, onlookers heard someone scream at the top of his lungs. Next, they saw a huge kid, known only by the nickname, "The Freak," run around the corner of Cloister carrying a flaming American flag.

Several freshmen fell in behind "The Freak" and his burning flag. They plowed through the unsuspecting, completely astonished upperclassman defenders.

Kraft said that the run ended on the other side of the arch and screams of victory and anger erupted from everyone at the event.

A fellow classmate, John Casp, corroborated Kraft's story. Casp admitted that the memory of his freshman Storming is a little fuzzy, because he had a "few beers that day before the Storming." Casp was only a bystander by a friend's suggestion, but he remembers the burning flag, the guys charging through successfully, and a few others being hurt.

Other members of Kraft's class don't remember all details of their freshmen storming for a number of reasons, including that it was 35 years ago. Most of those interviewed recalled *someone* storming successfully while they were here. Many remembered their class specifically being the rebels that actually did it.

Classmates of 1976 also recall a very different Storming compared to today's version of the tradition. They said that then, Storming was no small feat.

From the 1940s to 1972, Storming the Arch was not an

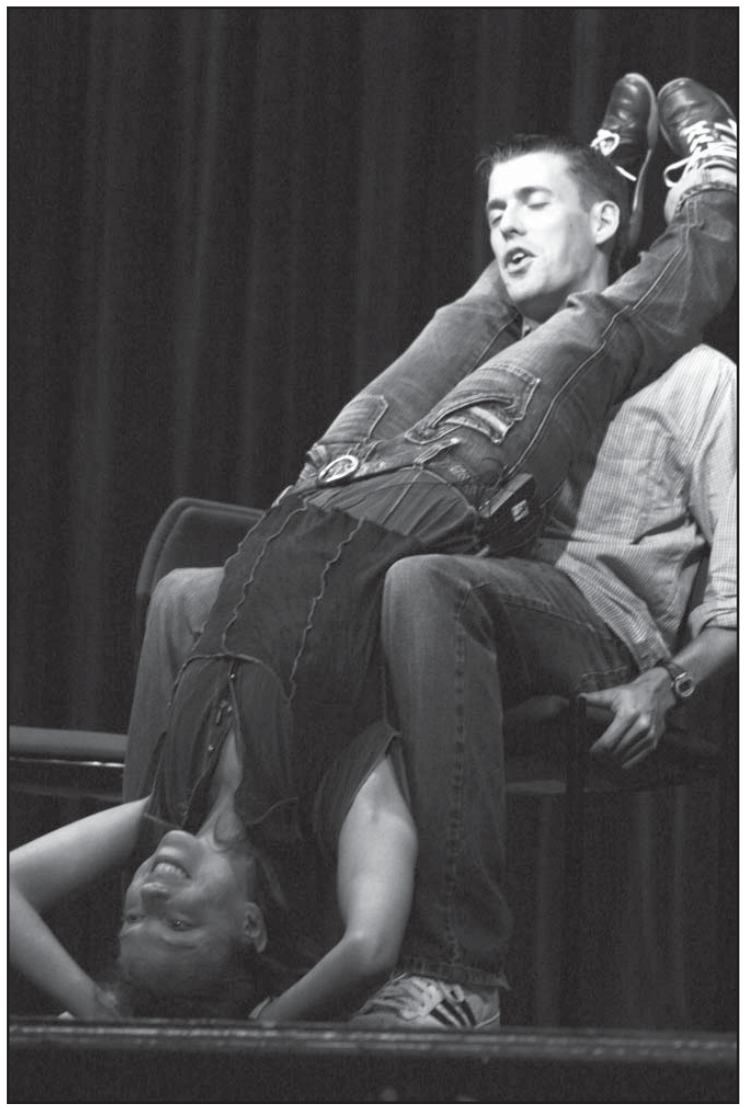
continued page 4

Sex Signals: which ones are you sending?

Performance discusses the college dating scene and how easily amicable situations turn uncomfortable

Sarah Ruggiero

On Saturday, Sept. 15, Sex Signals, the performance, opened to a full house in the Halbritter Center for Performing Arts. This two person performance employed humorous improvisation and created realistic dialogue between students. By educating while entertaining, Sex Signals engaged the audience in discussions concerning dating and serious life issues. It also illustrated how certain playful acts that regularly occur on college campuses can lead to assault.



Basically, the performance began with a candid conversation between a male and female. "They kept it on a college level that we could totally relate to," said freshman attendee, Laura Fisher.

Equipped with personal, hand held stop signs, individual audience members were able to hold up stop signs when they personally felt that the performers were going too far.

"It was really nice that they had the student body interact the entire time with the 'stop' cards, asking for pick up lines and asking what they should do in the situation. They were really funny and interesting to learn from," Health and Wellness Center intern, Heather McMinn.

Juniata's Health and Wellness Center scheduled the performance in an effort to make campus more aware of how sexual assault can be defined. Sex Signals defined assault as conduct of a sexual or indecent nature toward another person that is accompanied by actual or threatened physical force or that induces fear, shame, or mental suffering. Contradicting what many people think, assault does not have to include physical harm. It can be mental or social as well.

McMinn said, "Most people probably do not report assault because they are embarrassed, may not remember it, may not know if it is actually considered assault; or may think they are over-analyzing the situation. Also, they usually know the person they were assaulted by or raped by, so they are less likely to say anything because they don't want their peers to turn on them."

Christopher Shannon / Juniatian

On September 15 the Health and Wellness Center brought Sex Signals to Juniata in order to educate students about sexual assault. The show has been performed over 1000 times at over 400 different locations. Pictured above, Amber Kelly and John Mallory illustrate how easily the sexes get their signals crossed! Both Kelly and Mallory have extensive training in interactive theatre and sexual assault education.

In the past, the Health and Wellness Center provided students with a sexual assault information session, usually geared toward freshmen. Every year the session showed a low attendance rate.

The program was organized by Denise Showalter and Pat Hunter. Showalter is a sexual assault counselor who helps local victims through her work at Huntingdon House, the local nonprofit domestic violence shelter for women and children of Huntingdon County., , Hunters is a Health and Wellness Center counselor.

"These are very important issues and the campus needs to be aware of how important it is to attend these things," said Showalter.

According to Hunter, the first weekend on campus is the most crucial. Therefore the talk was held as early as possible in the semester in order to prepare students for being on their own.

McMinn said, "Everyone is ready to go out and experience something new without parents around and no supervision. They are hell bent on meeting new people no matter what it takes. Although we do have call boxes and security that walk and drive around to make sure everything is okay, I think assault occurs on campus here and pretty much everywhere else. People would be surprised."

Shockingly, one in four college women are victims of rape or attempted rape. The majority of reported victims and offenders are of college age. Rape victimization is highest among 16-19 year olds. 85% of these rapes on campus are acquaintance rapes, meaning, the victims knew their attackers. The risk of rape is four times higher for women aged 16-24 than for any other age group. College students falls directly into this category and need to be aware of the possibilities of assault, no matter how awkward the subject.

According to Hunter, these topics are typically avoided. She feels that since it was put out there on a nonthreatening environment at Sex Signals, people came and learned.

"I believe this is a strong issue on every college campus. Statistically speaking, these things are happening. This proved as a positive way for students to be engaged about being educated on a difficult topic," said Hunter."We need to work on prevention so that is it not an issue."

The Health and Wellness Center provides services to people who have been assaulted. There is free, individual counseling where students can confide in private counselors during private sessions.

Showalter's affiliation with Huntingdon House also provides an off campus outlet as well. "Students who don't wish to go through the school for help can feel safe in coming off campus and keeping their issues private," said Showalter.

The Health and Wellness Center was pleased with this production and its attendance. "We had over 300 'stop' signs that were taped to the bottom of chairs… and still did not enough have enough for everyone due to the positive response," said Hunter.

Alumnus claims storming victory... 35 years later

continued from page 3

organized event. It was not a supervised one either. The day of storming was chosen randomly. Not one female student defended or stormed. There were essentially no rules. Stormers were not on the grassy lawn that cushions the unsuccessful who are thrown to the ground today. Then students stormed the arch from the opposite side, fighting up the Cloister steps and landing on concrete.

At the time, all residence halls on campus were single gender dorms. Cloister was an all-male dorm. According to Kraft, those who lived there defended the arch "with their lives." Defenders were all upperclassmen (the only criteria for participation). The only official group involved was the football team, and even that was not really a full team effort said Kraft.

Storming was not the campus-wide big deal it is today, but it was 10 times more dangerous. Defenders did more than just tackle the freshmen before throwing them off Cloister's brick walls. They used super-rigged shaving cream guns and high pressure water sprayers to fire at the freshmen. They threw eggs, water and other items from the windows.

The offense was "freshmen only." It was not a huge group of guys, and there was not any pre-game planning.

Libby Beiler, ('76) described Storming in 1972 as, "a very scary and brutal event. My friends and I watched the whole thing in horror from the back of the Swigart music building."

Beiler said, "Here's to hoping that particular tradition is long gone!"

The tradition may not be gone, but if Dan Kraft's story holds, perhaps the myth around it will be.

Do you know a secret Juniata story that others should know about? E-mail us at juniatian@juniata.edu for more information!

Student government plans for the academic year

continued from page 1

executive board, recommended stopping by the office in Ellis or e-mailing your senators or the members of the board.

The student government Web site (http://clubs.juniata.edu/studgov/) has a link for comments. concerns or issues can be posted on the forums.

There is also an open floor section at each Senate meeting where students can freely voice their issues. All students are welcome and encouraged to attend Senate meetings. Meeting dates are available on the student government Web site. The next Senate meeting will be on Oct. 4 at 8 p.m. in Neff Lecture Hall.

Student government ran elections for the Sexual and Gender Minority seat, the Domestic Minority seats and the International Student seats on Sept. 13, and the freshman elections on Sept. 18. To run for any senate seat a signed petition was required, the number of signatures varying depending on the seat. This year four people ran for the Domestic Minority seat, one for the Gender Minority seat and two for the International seat.

In the freshman election, 11 people vied for the four seats, numbers, Rumery said, that were higher than average. All elections were conducted using closed ballots. In the minority elections, candidates were given a chance to state their positions, and conduct a brief Q&A section before the vote

The freshman elections were conducted without controversy. The minority seats, however, raised questions and caused confusion. Both could have been caused by several sources. Some were due to confusion from the wording of an e-mail sent out on Sept. 1.That e-mail stipulated that students could vote in minority elections "only if they [were] members of the community."

Due to the e-mail, allies of the LGBT community were confused over whether or not they were allowed to vote in the Sexual and Gender minority election.

Rumery explained that only members of the LGBT community were allowed to vote, in order to insure those voting were those being represented by the senators in question. To explain, Rumery used an analogy of class elections. He said that a senior who is friends with many juniors may understand their issues but is still not allowed to vote in the junior election.

The voting confusion was caused in part by the newness of the position, and in part by the constitution and bylaws' lack of definition for the process. Rumery said that this is an issue student government will discuss during the reconfiguration of the Senate.

Lack of a definition also caused a problem in the Domestic Minority elections. Since student government did not state who falls under this category, it wasn't clear who could run for the seats. Some questioned whether or not international students should be allowed to run for the domestic seat if they were a religious minority. Since restrictions were not officially defined, the person in this situation was allowed to run.

A possible suggestion for eliminating this particular confusion in the future is to divide the domestic minority seats into one religious minority and one racial/ethnic minority seat.

Rumery said there is some concern with creating a definition for these seats. Student government does not wish to accidentally exclude someone who fits into the categories. However, the Senate plans to either produce definitions of the seats this year or expressly state why it does not have them.

Student government has other plans for improvements as well. Working together with Residential Life, the executive board hopes to make the transition to the new key card entry system in residence halls as smooth as possible.

Along with the plans for the key cards, student government plans to increase the uses for the Gold Cards, such as laundry use in all dorms, use in vending machines and stores in town. When asked about replacement of card worn out from use, Rumery said this had yet to be discussed with the board.

Other plans include revamping the system for selecting commencement speakers. This year a committee has been formed to find a speaker. "We are looking for someone who can connect with the students as well as give good advice and make the class laugh a little," said Justine Kobeski, chair of the committee and executive board vice-president. The committee will make a list that will be presented to the honorary degree committee and then the board of trustees. Before the list goes to the trustees, the committee hopes to gather input from the class using a poll. The list of possible speakers is due Oct. 1.

This year changes were made to Block Party; instead of it being off campus, students invited Huntingdon residents to the football game. Community members were given dollar vouchers for the concession stand as well as free admission to the game. This event was put together in conjunction with J-Crew.

Rumery said that, in the future, student government hopes to move away from planning events such as homecoming and Block Party, but keeping All Class Night. The group wants to be a governance organization instead of event planners.

Winners for the elections were Gerald Prosser, Sexual and Gender Minorities seat, Stu McHenry and Sophia Suarez, Domestic Minority seats and Subhi AbuAbbas and Bouchra Kachoub, International Student seats . Results of the freshman election were Linden Will, president, Blake Colaianne, vice president, Megan McQuillan, secretary and Zach Gordon, treasurer.

Technology changes

continued from page 2

continual update checks with the previous program. Once all students were online and registered, it was not necessary to update again for the rest of the semester.

Online Work Order System

The Help Desk Online Work Order system was implemented to replace an older internal system that had been in use for seven to eight years.

"The goal was to find one [system] that would allow self-submitted work orders," said Fusco.

In the system, a user goes to the site to submit a 'ticket' or work order. The user gains access to the system via the Arch, or by typing "help" into the Internet address bar. To submit a 'ticket,' one must use the password "JChelp."

This way the user can check the status of the ticket every day. A help desk technician updates or completes the work order and then can track and record it for future use.

Another benefit is that the system can be used to assess the computer equipment on campus. For example, it will be able to tell how many computers are running on certain amounts of memory.

The help desk asks the campus to submit an order in non-emergency situations.

"You have to make a judgment call— is this prohibiting me from doing my job or learning? If so, pick up the phone," said Fusco.

If AIM isn't working, or if a user cannot get a new Play Station to connect to the network, he should use the online work order system.

For orders that do not have a time constraint use the system, but do not expect to get a problem addressed in a timely manner.

Users should contact the help desk via phone in emergency situations only.

The Help Desk has processed approximately 1500 to 1600 work orders in the last six weeks with the new system. A drawback is that everybody loves to call the help extension and to speak with Heather Bumbarger, the help desk's coordinator.

"They love the personal connection. It has been the only complaint so to speak. We had to do something though; the volume of calls were enormous," said Fusco.

Microsoft Office 2007

The new Microsoft Office 2007 has been installed to replace Microsoft Office 2003 on all campus computers.

File compatibility issues arose, but have been addressed. A document created in Office 2007 cannot be read in Office 2003.

There are two solutions. One is to use the appserver. The other is to download the Microsoft compatibility pack from Microsoft.. Type in "Compatability Pack for Office" using Google search and the link should pop right up. This strategy worked for Juniatian staff members.

Patel and Fusco also said that students can buy the ultimate version of Microsoft Office 2007 for only $60.00, a product that normally costs around $500.00 for non-students.

Interested users should visit www.theultimatesteal.com to check out the offer.

Web-mail

New web-mail features have been installed this semester with more to come.

CNS installed a new spam filter right before school started that should have lowered the amount of spam significantly.

All campus mailboxes have also been made larger this semester, with room for 500 mega-bytes worth of e-mail.

Patel divulged a few upcoming items for the campus. On the Web-mail interface there will be one more tab that will post the Baker menu every day. Patel also recommends checking the Tips tab for periodically. It explains common computer problems, such as how to map drives.

The Help Desk Online Work Order System link:

Debt drives JC yearbook out of print, new format to be decided

Juniatian Staff

As a result of diminishing sales and growing debt, Juniata's yearbook, The Alfarata, will no longer be published in a traditional printed and bound form.

According to Amy Mathur, the Alfarata's faculty advisor, recent yearbook staffs have worked to make The Alfarata more modern and appealing, yet sales have not improved. In 2006-2007, the staff created a 200 page, all-color, comprehensive yearbook and sold it for $65. Of the 1460 students enrolled, 105 bought books.

Considering those sales numbers and the annual publishing cost of $28,000 or more, the College could lose more than $20,000 per year to publish a traditional yearbook. This prompted administrators and faculty to discuss alternative ways to preserve Juniata history.

Mathur said that the administration and faculty involved in the project have discussed two possible formats for future yearbooks. The student body is encouraged to visit the Arch forum discussion board to offer feedback on the options listed below. The thread to visit is, "Future of Juniata's Yearbook." Private reactions and/or suggestions may be e-mailed to alfarata@juniata.edu.

Option 1: DVD Yearbook

In this format, the yearbook staff would collect candid photos from various students, departments, clubs, teams and offices on campus throughout the year. The staff would ensure complete coverage of traditions, residence hall life, athletics, academic events and various student activities.

The collected photos would then be set to music. The story of the year would be told in voiceovers from campus leaders, seniors or yearbook staff members.

The DVD would run much like a slide show in its first year. But future editions would likely include video clips from important events on campus, like Mountain Day or Mr. Juniata.

Other possibilities for the DVD yearbook include adding options on the main menu for the year's collection of articles from www.juniata.edu's main page and athletics pages. The year's Juniatian newspapers could also be accessed in .pdf form.

The DVD yearbook could eventually present a given academic year in a truly multi-media format.

Option 2: The Juniata Wiki

In this format, Juniata students would control the content of each year's historical preservation via a Web site much like a Wikipedia page.

Students, alumni, faculty, staff and administrators would log onto the site through the "My Juniata" page.

Once logged on, Juniatians could upload photos, articles, comments, videos, art or other material to the page on pre-determined channels. The College would also post official material from various offices on the site.

Administrators likened this option to a "Facebook exclusive to Juniata." Groups would exist that represented various clubs, sports teams, residence halls or POEs. Group members would be able to write the story of the year from their own unique perspectives. Users could also link to friends' profiles and photos.

Individuals could update contact information in their profiles long after graduation in order to create a more connected alumni base.

The administration would need to work with the Computer Network Services to ensure server space would allow the continued maintenance of each year's wiki so that the pages would never expire.

This option allows each member of the Juniata community to contribute to the historical preservation of each academic year at the College.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. The winner will be named in the Juniatian's next issue.

What's in your wallet?

Juniata upgrades Gold Card IDs, considers future uses for plastic

• The new gold cards have more material in them.This allows the IDs to last longer and resist more damage.

• The cards will eventually be needed to gain entry into all residence halls on campus, 24 hours a day. Work started on September 10 on a door lock system in TnT.

• Administration has talked with Continental, the current supplier of the laundry machines at Juniata, concerning the use of the gold cards for laundry. No decision has been made at this time.

• JCEL is trying to find out if any retailers in town would be willing to start using JC gold cards as credit cards. This is a costly project for the local stores and restaurants. Many businesses will only consider this new addition if the students can somehow guarantee a rise in business in Huntingdon.

Founder's Hall renovations

continued from page 1

are going to occur to Founder's.

"The only thing we're worried about is whether students will be able to find us," said Registrar Athena Frederick.. "We're moving last, but still there might be some confusion until everyone gets used to our new place on campus."

No problems with registration or similar services should be created by the move, and the office will still be fully functional.

"We're not anticipating any trouble, but I would ask that students be understanding and patient with the period. There may be some wrinkles, but we want [to] and will work to make the transition as seamless as possible," said Sarah May Clarkson, director of academic support services.

The renovations are scheduled to be completed by June 2009. Once the renovations are finished, the top two floors will be used by the English and History departments. The English and history professors will no longer be scattered throughout campus, but instead located only in Founders.

According to professor of history, David Sowell, the move is because of the department's size and is an effort to bring back humanities to the core of campus.

Founder's will once again have classes held in it as the renovations will include one seminar room and four classrooms on the third and fourth floors.

The first and second floors will be used for offices for the president, dean, registrar, academic support and institutional research.

"The second floor is great, designed like a one stop shopping spot for students where they can hit all the important administrative functions at once," said Sowell.

The building will be completely handicap accessible. Two large ramps at the main entrance and an elevator that services all four floors are included in the design.

The current porch, facing Moore St., will be kept, although it will not be the main entrance.

The project was designed by the architectural company Street Dixon Rick Architecture. A committee comprised of staff, faculty, administration and students worked with the firm to create the renovation plans.

"We wanted our new space to be a comfortable and welcoming area for students where they are not afraid to come in and talk with us," said Clarkson. "So when we spoke to the architect we stressed that we didn't want a desk directly in front of the entryway acting as a barrier…[We did want] comfy furniture instead of hard chairs in our office space."

The building will reflect Juniata's sustainability program. The entire building has been designed as "green" as possible. Consideration was given to everything from the type of paint used to the type of energy installed.

The mud and holes that have surrounded Founder's for the last several weeks were successful tests to see if the ground could be used to power the building using a geothermal approach.

For Founder's, it's not completely out with the old and in with the new. Instead the building will be a combination of 19th century and 21st century architecture that will bring Founder's Hall back into the center of campus. Robert Yelnosky, vice president for finance and operations said, "Hopefully [it will] last for the next 125 years and become something truly part of every student's experience here at Juniata."

Kevin Dundore / Juniatian

Founders Hall, historically the most recognizable building on campus, will undergo major renovations in 2008-2009. Throughout its 129 year history, Founders has housed the College's chapel, cafeteria, library, dorm rooms, classrooms and administrative offices.

Community Service Corner

According to its Web page, Juniata's Community Service Office (CSO) "is dedicated to promoting civic engagement and social responsibility through service learning."

Community Service and Service Learning Coordinator Shauna Morin and Community Outreach Coordinator Anna Elias, work with the campus and Huntingdon communities to create positive changes in our local and national environments.

The CSO provides numerous opportunities for students to participate in service experiences. Interested individuals should visit the CSO in the basement of Ellis Hall.

Upcoming Community Service Events:

Mr. Juniata Competition
Friday, Sept. 28
7:30 p.m.
Rosenberger Auditorium
Sponsored by Circle K

Special Olympics, Fall Sectional
October 7
Events held throughout the day across campus.

Sponsored by JAVA
To volunteer, contact event coordinators at java@juniata.edu.

Nasty trend of professor turnover in art department

EDITORIAL

Two summers ago, 2-D design instructor Bruce Erikson left Juniata after only one year of teaching. Last summer, 3-D design instructor Gwendolyn Yoppolo left Juniata after only one year of teaching.

In both cases I was left without a professor, and without a class (the Human Head and Kiln Building, respectively) that I had wholeheartedly anticipated. In neither case was I aware that my instructor would not be here the following fall until a midsummer e-mail informed me of such.

My question is this: why can't we keep professors in the art department? For my answer, I went straight to the head of the department, Nancy Siegel. She said that Erikson and Yoppolo's reasons for leaving "had nothing to do with the program." They both left for "personal reasons."

That answer contains both good and bad news. The good news is that it is not our fault that they left us. The bad news is that it is not our fault that they left us.

There is no greater feeling than the one you get after you've been shafted and know you can't do a thing about it. (Well, you can always write a snarky editorial for catharsis, but that's beside the point.) I particularly love it when I'm not only being ill-used as a student but as a highly paying customer of the College. That's my favorite.

Clearly, I am not flinching away from expressing my most serious displeasure by this unwelcome trend of temporary professors. My upset stems beyond the consequential schedule reshuffling that has to happen with little time or resources at my disposal. What I think is forgotten in this mess is that it's not so easy to replace an art class like The Human Head or Kiln Building with another art class of equal or greater value. No student wants to downgrade. Why should they have to?

The good news is that it is not our fault that they left. The bad news is that it is not our fault that they left.

In all fairness, the department is trying to make itself more attractive to potential students and professors (and to current students). Siegel said, "We're working on increasing the visibility of the fine arts program through wider course offerings. . . in ceramics and advanced clay work in addition to 3-D design, sculpture and fiber arts classes." There has also been some talk of melding science and art courses to bring the non-usual suspects into the art fold.

Some brave attempts are being made on the part of the administration. But will they work for more than one year at a time?

And what about the students? What do we do to sustain the art program while the College is forced to recycle professors?

The art students--and art student sympathizers--can and should take steps to bolster the popularity of the fine arts on campus. Get involved with the art clubs, Art Alliance and Mud Junkies. Call your alumni friends and con them into doling out the dough for the department. Tell them $5 million would be ideal. Submit your art work at every opportunity. If you're really feeling inspired, set up an installation on the lawn. While there might not be a way to guarantee professors' retention, we are able to guarantee the visibility of the fine arts--to what degree is up to us.

Life on the Lake

Brittany Moyer

On Aug. 26, as most Juniata students moved back to campus, my parents and I skipped the turn up towards the College and instead continued straight in our minivan on Route 26 south. We weren't heading to Wal-Mart. Our destination was Raystown Field Station (RFS), Juniata's little fort on the big Raystown Lake, where nine other students and I are living for the semester.

You've probably heard about RFS, since it's one of the things the Marketing Department loves to tout, (with good reason). I like to call it "domestic study abroad;" we're only a 30-minute drive from main campus, but it feels like we're a world away. The beauty of the lake and the wildlife (I've already seen several out-of-this-world sunsets and soaring bald eagles) are really breath-taking.

So far, there are two semester-long programs slated to take place here: the current "Sense of Place" semester with an environmental science emphasis, and the "Humanities in the Woods" semester with an English and history emphasis, to premiere in the spring.

As a nature-lover with an environmental studies POE, I jumped at the opportunity to make the lake my habitat for a semester. The LEED-certified Shuster Hall, a beautiful lakeside building constructed with green technologies, has become our classroom, dining hall and hang-out spot. Managing the composting toilets has become our favorite chore to hate. And the lake itself has become the centerpiece of our interdisciplinary studies.

The five classes that make up our full, 16-credit course load use the lake and the surrounding land to anchor the academics. Field visits are the name of the game; it's rare that we spend a whole class period at a desk indoors.

While our explorations on the lake and in the woods make college feel like summer camp, I've learned an impressive amount here in just my first month. I think it's because of the power of immersion: living and breathing your studies and never separating yourself from the land you're studying.

Of our five classes, is our capstone course, taught by Dr. Chuck Yohn, who is also the director of the field station. Yohn, who insists we call him Chuck, is walking bird encyclopedia. He's one of those people who seem to know a bit about everything, but his specialty is birds. Bird calls, bird wing types, bird overhead identification. It's amazing.

Brittany Moyer / Juniatian

Juniors Peter McLean and Brittany Moyer are two of 10 students studying for the semester at Juniata's Raystown Field Station. Here they celebrate the catch of a lake trout from Raystown Lake on Sept. 15. The fishing trip, during which the students learned the fishing methodology of two local fishermen, was part of their Field Research Methods class.

Last week, he took our class outside to practice identifying birds in preparation for our visit to Hawk Mountain Sanctuary in Kempton, PA. As we ambled through the forest, Chuck found an opportunity to show us the warbler birds of the region. He gathered us together, quieted us and began to spit a repeating "pshh, pshh, pshh" sound. From seemingly nowhere, small, yellow-breasted warblers flew onto the tree branches overhead, followed by blue jays, vireos and wrens. We flung our binoculars up to our eyes in hopes of catching glimpses at the beautiful flying creatures. When we returned to the classroom an hour or so later, we looked up the birds in our field guides and added them to our working list of spotted birds.

We're studying this land in a variety of ways, through such bird and tree identification, stream mapping, water quality testing and other individual research projects for our field research methods class.

In addition to our personal research, our group conducts re-

continued page 10

Thinking about thinking

Ryan Hamillton

The desire for knowledge is a significant part of our human nature. Children are never satisfied with answers like, "I'll tell you when you're older." They don't accept, "Because that's just how it is." The search for knowledge is driven by a curious desire to understand the world we inhabit. Like inquisitive nine-year-olds with a hammer and the family stereo, we are all pounding away at the world, taking it apart, and occasionally learning something.

If it is accepted that a desire for knowledge is part of our human nature, then in many ways we are all philosophers.

I will soon graduate with a degree in philosophy, and my grandfather still slyly hints that he would be getting into the health profession himself. But it is a misconception to think that philosophy is a theoretical study of abstract ideas with no application to practical life.

Ethical concerns, such as euthanasia, abortion and even justifications for war, are all founded in philosophical problems. I think most scientists would agree that the debate between evolution and creation is not so much a scientific argument as it is a philosophical debate about the nature of the scientific method. This misunderstanding has caused passionate, but basically unwarranted, controversy in high school biology classes across America.

In Chinese Philosophy, a course offered at Juniata, students learn that the foundation for ancient Chinese government was very often linked to the philosophical discussion of human nature. The same thought can be applied to government in the United States today. Considering human nature, to what extent should national government be involved in our personal lives?

If human nature is inherently malicious, then it seems that the government should have more control to keep society in balance. In fact, maybe the general public should not be consulted at all and strict laws need to be enforced for the general good.

On the other hand, if human nature is inherently positive and good, then we could conclude that there is no need for the government's hand in personal matters. The public would be able to make the right choices on individual levels. Excessive control would be an unnecessary waste of time and money.

Like inquisitive nine-year-olds with a hammer and the family stereo, we are all pounding away at the world, and occassionally learning something

So what does current government in the United States say about human nature? And more importantly, is it right? The study of philosophy encourages analytic thinking by proposing these kinds of questions.

The notion of 'analytic thinking' has almost become a cliché catchphrase for any respectable liberal arts education. However, this is not to say there is nothing behind the idea. Analytic thinking involves breaking down ideas and arguments to understand each piece and how they contribute to the whole. Philosophy is largely analytical in that it advances by assessing an argument, finding weaknesses and constructing a new argument with fresh ideas.

Thinking analytically is not only applicable to philosophy or philosophical issues, but is well suited to prepare the student for any endeavor they may undertake. One example is the Graduate Record Examination (GRE). This is a test often required for students applying to graduate school. It includes an analytic writing section a student must analyze the reasoning behind one argument and present his/her perspective on a given issue.

Aristotle, a famous ancient Greek philosopher wrote, "It is the mark of an educated mind to be able to entertain a thought without accepting it." The study of philosophy requires the ability to entertain ideas that are drastically different from your own. The student is forced to view the world from a different perspective.

Philosophy utilizes an analytic mode of inquiry to undermine the foundations of all that we know. It also builds new foundations for that which we do not yet understand.

Philosophy is simply thinking about thinking. An education involving philosophy can lead to a fulfilling life and has many practical applications. Most importantly, though, it will prepare students to think for themselves.

Presidential Perspective

Thomas R. Kepple, Jr. is the eleventh president in Juniata College's 132 history. Kepple took office on July 1, 1998.

Welcome Juniatians! This promises to be a very interesting year for us. Here's why.

Our athletic teams are competing in two new conferences which should add to the fun of athletic action this year. Participating in the Landmark and the Centennial conferences means trips to new places such as New York City, Washington, DC, and Baltimore. Schedules also include contests against traditional rivals such as Moravian and Susquehanna.

Already our teams are off to great starts. The women's volleyball, field hockey, and women's soccer teams are ranked in various national and regional polls.

Renovations, refurbishments and renewals are plentiful on campus. The Good Hall refurbishments are now more than 50% complete. We plan to complete the work next summer.

Over Christmas, Founders Hall will be vacated to prepare for the renovation of our campus' most historic building. Every student in Juniata's history has touched this building, making its restoration a very important project on both emotional and functional levels. We especially look forward to moving the history and English departments into Founders so that they are more prominently located on campus.

In other projects, new dugouts for the softball field will soon be a reality; Ellis Lobby will be improved during Christmas break; and next summer we will renovate the track and continue with renovations on Dale Hall in the Brumbaugh Academic Center.

We are also receiving much attention in college rankings. This fall we moved up from 82nd to 60th in the "Washington Monthly" rankings of national liberal arts colleges (colleges with great student outcomes). Juniata will also be included in the next summer's new edition of the "Fiske Guide."

Juniata was recently selected for two new rankings. We were named in the "College Access and Opportunity Guidebook," which lists 300 colleges and universities that have demonstrated "excellence in access, diversity and success" for first generation and minority college students. And "Cosmo-Girl Magazine" named Juniata in its "Top 100 Colleges and Universities," based on the success of our female students.

What appeals to me is not so much being listed as being listed in very diverse rankings. We would not be in these rankings without the good work of our students and faculty. Of course when Juniata is ranked nationally it is certainly a good thing for our students as they apply for jobs and for graduate school.

Enjoy the ride through the year!

We're asking the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective" (see above). Though he has plans for his column this semester, the president welcomes topic suggestions.

For the "Ask the Administration" feature (see page 10), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwared to administrators via the Juniatian's e-mail account.

Ask the Administration

Recently student vehicles have been ticketed on College Avenue by the JCPD. How is it legal for Juniata's security office to ticket on a street owned by the Huntingdon Borough?

Our neighbors and the Huntingdon Police Department have asked for our cooperation in regulating street parking near the campus. If a vehicle is damaged or vandalized, or if a vehicle is parked in a manner that obstructs traffic (such as a truck trying to make a tight turn), it is helpful to know if that vehicle belongs to a Juniata College student.

All Juniata College students who have vehicles in the Huntingdon area are expected to register the vehicle with College Police/ Safety and Security – regardless of whether or not you intend to park in college parking lots or on borough streets.

My friends and I (all freshmen) would like to know how Juniata really decided who our roommates would be. We were told that the Residential Life staff used our responses on the survey we filled out this summer. But based on how little we all have in common with our assigned roommates, we're skeptical. Can you explain how pairing really works?

The Office of Residential Life does utilize the information from Roommate Preference Forms, but please realize that matching students is a balancing act. The perfect match does not always exist for every student, no matter how much information is provided and how much analysis is done during the assignment process.

Basically, we (the Residential Life staff) do the best we can while using the information provided by students to make room assignments.

Tim Launtz
Director of Residential Life

Thumbs Up, Thumbs Down

to the Cream Room ping pong table equipment. There are about three paddles left, and two are missing their rubber covers. Come on, Student Government, hook us up. Don't you know that it's never safe for us to play one-on-one without our rubbers?

to the Rugby team's bachelor auction (aka "man market") coming up on Oct. 6. It's one of the few times in the year when people actually fight over what's being served up in Baker. That's right, ladies…it's time to grab some protein!

to the Arch forum discussion boards this semester. Once they engaged us in some of the most important and contentious debates on campus. Now they are a virtual bulletin board used to find lost cell phones and rides to State College. They used to have logical battles and low blows. Now they just blow.

to the new Spam filter on the Juniata e-mail system. Viagra ads are on the way down. Fusco's approval rating is on the way up.

to the Arch channel that is supposed to reveal Baker's menu each day but rarely does. What gives? The suspense, like the food, is killing us.

to O.J. Simpson. Dear OJ, you managed to beat a double murder rap, but will probably end up in prison for trying to steal some sports memorabilia from a Vegas hotel room? We're pretty sure that the Darwin Award committee rethinking its criteria and just might make a new honorable mention category named after you.

Juniatian Editorial, Letters Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Life on the Lake

continued from page 8

search for the U.S. Army Corps of Engineers on an invasive aquatic plant that is running rampant in the lake.

The Army Corps owns the lake and much of area around it, including our field station land. The Army Corps leases the College 365 acres for a whopping $1 per year. It's a great tradeoff to live on this federal land and give back meaningful research that will be honored and used at the federal level.

Living aside peers who share a similar passion for the environment is also empowering. Ten college students living alone for a semester sounds like it could be potentially messy, but we've created a living community where responsibilities and ideas are shared. For me, it's exhilarating. I've always wondered what it would be like to live on a commune. It's a romantic idea —shunning the stresses and burdens of modern life and building an enclave to live happily and healthily. But it is more easily daydreamed than done.

It's a romantic idea– shunning the stresses and burdens of modern life

So this semester provides an opportunity to experience "commune-ity" living as much as I probably ever will. In this small community, idea implementation is as easy as proposing and then voting on something at the dinner table. Recycling and composting are givens, and "If it's yellow, let it mellow; if it's brown, flush it down" is our rule of thumb.

The ten of us, all juniors save one senior, spend a lot of time together. When we're not in class or collecting research data, we're kayaking, sharing fire circles, fishing, pudding-wrestling, launching water balloons, dying hair, watching movies from a projector or listening to the stories of the station's Sodexho cook, Dee.

Although I hate going to sleep and ending one of my numbered days on the lake, I love knowing that I'll wake up in the morning to the tree-framed lake view outside my bedroom window. What a way to start the day.

Charles at the Clifton: Screening a student's film

John T. Huffstetler

A young guy is having some intestinal trouble. He makes it to the outhouse, only to have a meteorite crash down on him, infecting him with an alien parasite.

With scenes like this, the Iris Film Festival is not something to miss.

Junior Charles "Wylie" Earnhart is one of many Pennsylvania independent filmmakers that submitted to the Iris Film Festival held at Huntingdon's Clifton 5 Theatre on Sept. 21-23. His film, "Attack of the Meteorite Parasite," previewed above, fits the short film category in the festival.

Earnhart wrote, shot and edited the 16 minute long film in about a week near his hometown in Grove City, Pennsylvania. It cost Earnhart approximately $20 to make, not including the cost of the equipment he has collected over the years.

Trouble with explosive effects and Earnhart's lead actress's cancelling set him back. However, with the help of family and friends, he managed to complete the film by the deadline.

Earnhart said that he "got more out of it than expected."

According to Earnhart, the purpose of his film is part personal message, part historical parody. Mostly for entertainment, the film does speak about standing up for yourself.

"Attack of the Meteorite Parasites" includes stark lighting contrasts, somewhat cheesy dialogue, black and white film and dated music that remind the audience of 1950's stereotypical science fiction films.

The piece is not the first Earnhart has submitted to the Iris Film Festival. He entered one film in an earlier competition, and has made several others. Film has always fascinated him, mainly the editing and camera work. These two elements essentially develop the entire style of his latest work. "I'm a control freak," he said, defending his need to run the show. This involvement lets people see exactly what he wants, not skewed by others' input.

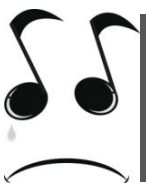
Earnhart wishes to continue working as an independent filmmaker to maintain this creative control. His role models include director Robert Rodriguez who owns his own studio. "The hardest part is the pay," said Earnhart.

Yet with all the hardships, there are still many who submit to independent festivals like Iris. The categories included short and feature length films, as well as documentaries. These, along with the | unique 60-second challenge, drew people of all ages from all over the state to this second annual event.

Pennsylvania state or college residents could submit to the festival. Artists could submit more than one film. There were no restrictions on submitting the same film to other festivals.

He makes it to the outhouse, only to have a meteorite crash down on him, infecting him with an alien parasite

The prize is $100 for each of the four categories. This is not much considering the cost to produce and the $25 dollar entry fee. The 60-second challenge has a $10 entry fee, but doesn't pay a winner. It's not for the money though, Earnhart said. The love of the craft is what drives him to produce films.



Earnhart plans to submit to Iris again next year, with a feature-length film, he hopes.

A trailer of the "Attack of the Meteorite Parasite" and others by Earnhart is available to view at http://www.youtube.com/devobonostudios.

Christopher Shannon / Juniatian

Junior Charles "Wylie" Earnhart poses outside the Clifton Theater with his camera. Earnhart's short film was shown in the Iris Film Festival from September 21-22 at the Clifton. He took home the Audience Choice award for his production.

MUSICALLY CHALLENGED

I LOVE FALL OUT BOY!

Zach Stoll

Fall Out Boys sucks. Just face it—they are goobers. After listening to Fall Out Boy all day while working at a mall this summer, that is the realization that I have come to. Don't get me wrong, they have some catchy songs that stuck in my head. But they still suck. Now that might seem a little weird-- a band that writes catchy pop-punk songs, but still isn't good. The reason that Fall Out Boy is horrible is that they try too hard to get a hit with that catchy song. That's all they want, a number one hit, not to make a meaningful song.

The overproduction, like that of the album, "Infinity on High," is what always turns me off a band. I'm not saying production and perfect sound are bad. I just feel that it's more important to sound like a band than a group of people getting together in a studio to make a top record. That's not what music is about. It's about writing songs that have something to them, having fun with your friends and performing for people that love the music as much as you do.

If you listen to Fall Out Boy's first album, "Evening With Your Girlfriend," you find a different band. They are under-produced (hey, it was their first album) and the songs had more depth musically and lyrically. The follow-up album "Take this to Your Grave" wasn't bad either. Not my style, but not bad. It is full of emotion that seems genuine, and the music is fairly good.

From there out though, the band's sound is just over-produced. It reminds me of to the MTV pop I listened to in sixth grade. Now, not surprisingly, that's who loves them, preteens. In a record store, I overheard a 12-year-old girl pick up their latest album and say, "Fall Out Boy? I love Fall Out Boy!" For those of us who aren't 12-year-old girls, an example of the opposite of Fall Out Boy is Alkaline Trio. Now that band has not put out a bad album in 17 years. Of their seven albums, you can't listen to one and know if it was an early release, or one released last year. Their first album, "Goddamnit," sounds similar to their last one, "Remains." Not that all the songs sound the same, but you can't tell a difference in the polishing of the albums.

If the Trio cared about getting people to like their music, then wouldn't they have changed to a more popular production style to get a larger fan base? Their songs remain dark and lyrically complicated, full of metaphors, yet light and full of energy. They remain loyal to a mix of punk and alternative.

The Trio has also remained loyal to itself. Every album is a gem, from "Maybe I'll Catch Fire," which has the most bitter song ever, "Radio" (if you just got out of a bad relationship it's even more meaningful), to their self-titled album, which is a combination of both of their earliest EPs.The Trio's live shows are amazing, too. Just this past summer I saw them twice, and the performance of new and old songs dripped with passion and energy. They were still true to their original style and sound, even after having made music for 17 years.

So overall, music is about being true to yourself more than anything. Who cares about money and what people think about you? It's about having fun while spilling your guts on stage.

Hunting down Huntingdon

You stay classy, Huntingdon County

Romeeka Gayhart

Moving to Huntingdon County is nothing short of a gigantic leap of faith, which every Juniata College student takes. After the excitement of move-in day, we all ask ourselves the same question: now what? The answer? Explore. Huntingdon is full of unique, interesting, wonderful and, at times, bizarre places. All you have to do is look.

To begin your Huntingdon tour, I recommend taking a trip down Washington Street to visit Sweet Annie Herbs. Ann Marie Wishard, radio personality, author and owner of Sweet Annie Herbs has been in the herb business for 30 years. Her interest began with early cooking experiments from her own garden and has blossomed into a thriving business.

Sweet Annie Herbs offers a friendly environment and a wide selection of natural products, including clothing, teas, soaps, and, of course, a large collection of herbal supplements. Wishard encourages shoppers to have a free cup of tea, to browse the store and tour her gardens. She offers free health consultations, and her knowledgeable staff welcomes questions.

The name "Sweet Annie" is widely known thanks to Wishard's radio spots and her manufacturing business, which ships her own herbal supplements. The most famous supplement of the Sweet Annie Herbs brand is the New Life for Woman Formula. Some women consider the formula so effective in battling everything from PMS to menopause that they say they won't live without it.

It may seem strange to find Sweet Annie Herbs in Huntingdon County, but Wishard looks at things differently. She said, "Everything you want in life you can find in this small community."

Wishard is taking her unique approach to customer service a step further by opening a bed and breakfast in October. To learn more, visit www.sweetannie.com or stop into the shop and warm up with a cup of tea and good company.

Directly behind Sweet Annie Herbs, on Penn Street, is one of the best restaurants in central PA for a great dinner and a sweet drink. Husband and wife team Jaime and Rhonda "Mimi" Muir opened Mimi's Restaurant and Martini Bar in Huntingdon five years ago. The pair was proud to open a "relaxed, casual upscale dining establishment" in the area they grew up in. Jaime Muir graduated from Juniata in 1969 with a degree in economics. Both owners express their appreciation for the College and the community.

Mimi's Restaurant is a good destination for anyone looking for a fine dinner and glass of wine in the candlelight, or even just for a great half pound all-Angus burger and a beer. Mimi's offers both fine dining and casual sections, as well as a fully stocked bar with a collection of unique drinks. Desert, frozen and coffee based martinis are big hits among customers.

Mimi's also offers a 10% discount for card carrying Juniata students. Be sure to stop in for happy hour on weeknights from 4:30-5:30 p.m., which applies to select Martinis and all domestic beers. For more information about the Mimi's menu or to contact for a reservation visit: www.mimisrestaurant.net

I highly encourage readers to take a trip downtown to visit both Sweet Annie Herbs and Mimi's. Nowadays, it's a rare thing to find knowledgeable, friendly and approachable businesses with genuinely good quality products and food.

Raise your martini in the air and don't despair, oh college student. Huntingdon has much more to offer.

Hunt these down

At Mimi's...

Appetizer: Breaded Stuffed Olives, Sesame Encrusted Ahi Tuna
Salad: Hearts of Palm Salad
Entree: Sicilian Salmon
Sandwich: Wild Mushroom Pita
Martini: Mangopolitan
Desert: Hot Fudge Cake

At Sweet Annie...

Herbal Formula: New Life for Women
Herbal Tea: Love "N Stuff Tea, Cinnamon Herb Coffee
Personal Care: Hemp Shampoo and Conditioner

Storming the Arch

Christopher Shannon / Juniatian

On Sept. 11, the Class of 2011 stormed in a blur. Junior rugby player Jesse "Goose" Myers stood as a brick wall.

Here Myers shoulders the immense responsibility of protecting the arch and preserving the streak of zero freshman victors at this most grueling Juniata tradition.

For more on Storming, see page 3.

In the Name of Fashion

Fall Fashion: Seriously Stylish

Kelly Popernik

The end of summer is near. Leaves will soon start to turn red, orange and yellow. That means storing away those white pants, flowery tank tops and that chill summer attitude. Fall fashion can help harvest a new style and will shed new light in the world.. Trends to most look forward to for autumn are jewel tones, lots of layers, prints, boots and hats.

Fall colors: Feel and look like a queen

Colors can be tricky. Matching your shirt with earrings and a cute handbag is no longer in the rules of fashion. Grey, navy, black and brown can all be mixed together to create a new and interesting look. Purples will add a splash of passion into a neutral wardrobe. They have always been associated with

royalty, so now is the time to embrace that inner princess or queen. Different hues of purple like deep violet and soft pastels are sparkling. What is the best part of purple? It slims just like black.

Prints: A bold statement

Plaid and houndstooth are back and are no longer only associated with rock 'n roll. The bold print of a plaid, or black and white check, like houndstooth, will add some attitude. Elle and Cosmopolitan magazines claim that animal prints are out and crocodile is in. They don't always get it right, though. I say leopard is still roaring for fall.

Layer it up

To mark your own personal style, try layering. Start with a basic camisole, followed by a sweater or any other shirt that can be the staple of your outfit. A bright colored sweater, or a big and bold print, will pop. The last layer should be some type of jacket. This will add structure to your figure and show off the right curves. Fall's most popular jackets are tweed, velvet, corduroy and denim.

These boots are made for walking

Knee high boots are yet again a "must have." Try tucking skinny or straight legged jeans into your boots for a polished look that can go from daytime to nighttime in a flash. Ankle boots are a trend being embraced by some. If you are willing to try something new, wear a mini skirt or skinny jeans with this type of boot.

Hats: No longer just for bad hair days

Why wear a hat? Not only is it fashionable, it's utilitarian. Between 60-80 percent of our body heat is released through our heads. A cool beret, beanie, schoolboy or a rib knit hat are all ready to be worn on those chilly October afternoons. They are the finishing accessories to a great ensemble.

Which trends will you embrace this fall?

Fun Fashion Tip

Want to banish dry skin?

Instead of taking a hot shower, opt for a cooler temperature. Hot water reduces the moisture your skin naturally maintains.

But I like to sing AND dance

Scheduling conflicts between chorus and musical

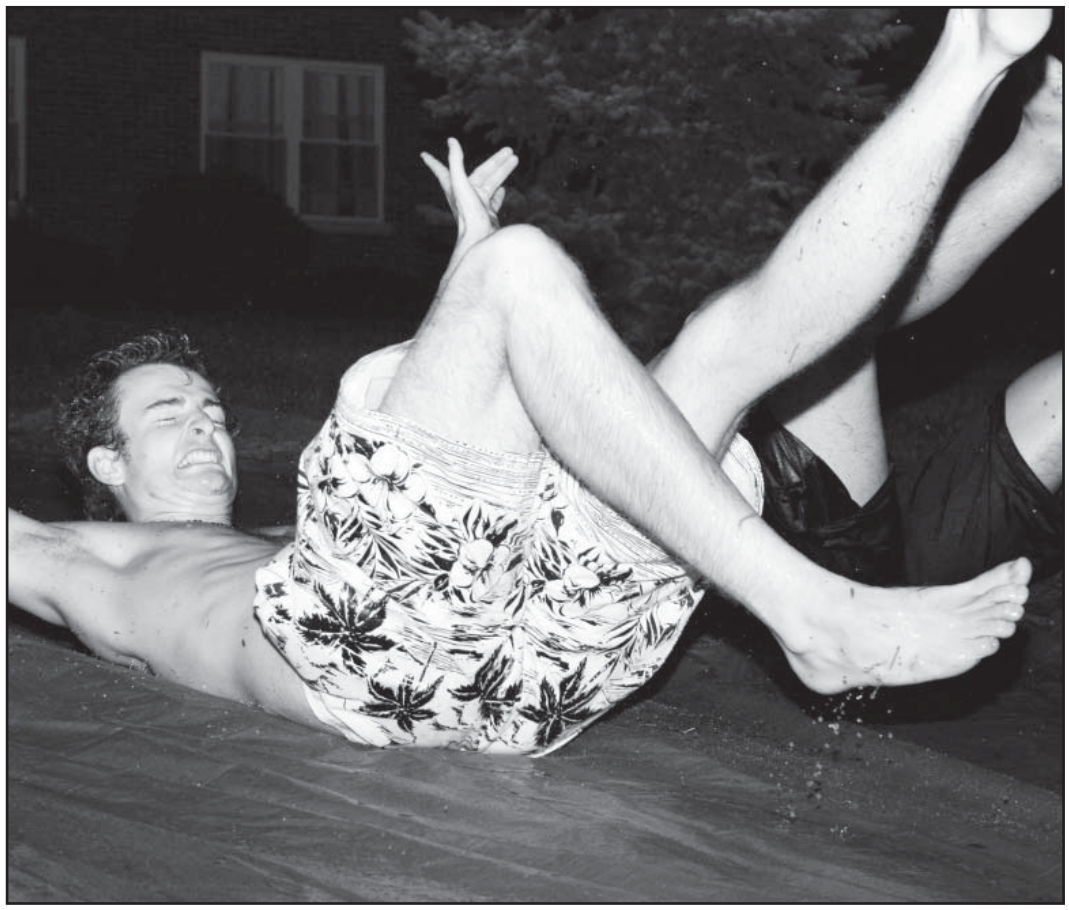
Monica Tulley

Some students had to make a tough decision this semester: be in the musical, or be in concert choir. A conflict has arisen between rehearsal schedules for both the musical "Pippin" and the concert choir. "Pippin" calls for 20 hours or more of rehearsal a week; concert choir schedules five hours a week. Some of these hours would overlap, especially the weekend of the chorus concert.

Music professor Jim Latten said, "This situation is similar to a freshman coming to Juniata wishing to play field hockey and volleyball. They both practice at the same times. It's a compatibility issue."

There have been many students in the past who have been in productions for both the theater and music departments when schedules permitted. "This school is all about liberal arts. We have to plan ahead and work together to make sure there is compatibility" Latten said.

This semester, while music department chair Russ Shelley is on sabbatical, Cicero Alves, from Brazil, is the acting concert choir director. Alves agrees that the scheduling incompatibility is a difficulty. "We are singing 16 songs, and nine are in Portuguese. The music itself is a big project. Maybe it is hard to do both. Not just because they are incompatible, but maybe it will be too much to study at once."



Concert choir member, junior Tyler Kochel said, "It's a shame that we have to split the talent. It's nice, though, that we didn't lose too many from choir to the show."

The performing arts POEs, did leave the choir for the semester to be in the musical.

According to Latten, there should have been a simple solution. "As with every year, in December [the music department heads] will all meet to discuss the 2008-09 schedule. This [semester's problem] should have been caught in December of 2006."

Welcome Week

Christopher Shannon / Juniatian

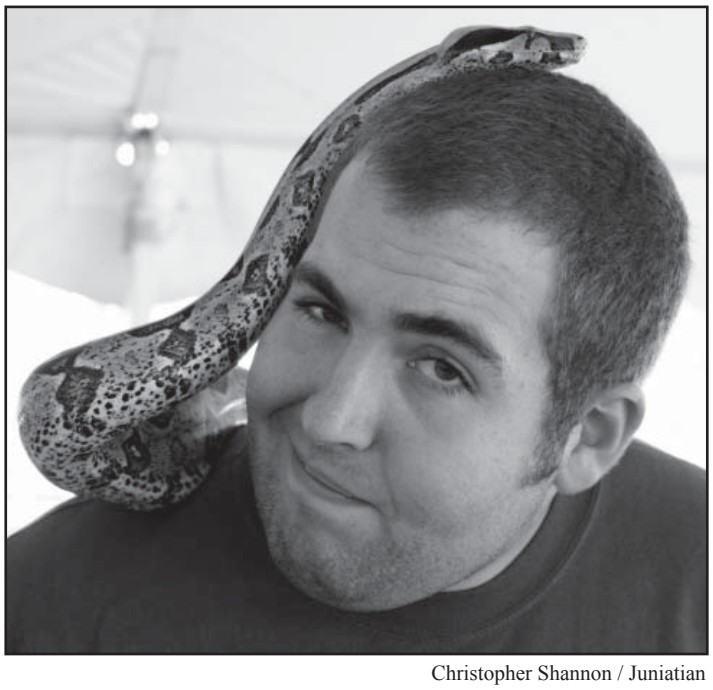
Juniata welcomed students back to campus with a full slate of activities. On the opening day of classes freshmen met upperclassmen at an ice cream social where gathered students could also decorate pillows. Games were big throughout the week. Students played Bingo in the bookstore to win fabulous prizes, including books, gift cards, a DVD player and a bike. They also played dodge ball and cell phone tag on different occasions. The "Say Cheese" events varied by residence hall and ranged from making grilled cheese to picture frames. The week-long welcome session ended with Lobsterfest, a movie on the lawn, a DJ dance party and a "Celebrate Your 8th Birthday" party.

"Crispin" to open Oct. 2

The Gravity Project's newest production, "Crispin" will run Oct. 2-6 in the Suzanne von Liebig Theatre.

"Crispin" tells the story of an orphaned serf living on a feudal manor in England in the 14th century. When Crispin must flee his feudal steward, a singing, juggling, dancing man named Bear teaches him how to survive.

Gravity Project creator and "Crispin" director Andy Belser said that the production is "a really family-oriented play."



Russell Davis' play is based on "Crispin: The Cross of Lead" the Newbury Award-winning young adult novel by Avi. Davis.

Tickets to "Crispin" are free.

Homecoming 2007

Christopher Shannon / Juniatian

Top*: Cheerleaders incite fans to inspire the football team.*
Middle*: Jack ('73), Kelly ('11) and Jane Stewart spend a little quality time together in the von Liebig.*
Bottom*: Brock Eastman ('07) returned to campus to visit an old familiar face from the biology wing.*

The Director's Chair

A raunchy exterior surrounds this tender core

Bennett Rea

Judd Apatow has struck gold again. The writer/director/producer of "The 40 Year Old Virgin" and "Knocked Up" may only have the role of producer in "Superbad," but his comedic influence is clearly present. Just as in his previous hits, "Superbad" is hilariously funny yet still has a heart to it that many comedies do not.

At the core of this vulgar comedy is the relationship between Evan (Michael Cera) and Seth (Jonah Hill). The two best friends are nearing the end of their high school career and are experiencing separation anxiety. While Evan is going to Dartmouth, Seth was only accepted into a nearby city college. When they are asked to go to a party, they realize it's their last chance before college to "get with" a girl while she's too drunk to have inhibitions. Together with the quintessential nerd, Fogell (later known as McLovin and played by Christopher Mintz-Plasse), the boys hatch a scheme. They plan to get alcohol for the party and get lucky after they heroically deliver the booze.

As is often the case in Apatow's productions, the characters with smaller roles really make the movie. A side story involving Fogell and two cops, played by Seth Rogen and SNL regular Bill Hader, turns out to be one of the funniest parts of the entire movie. Rogen (who also co-wrote the movie) and Hader are trying to relive their youth with their new, young friend, McLovin.

Just as Rogen and Hader complement each other, so do Cera and Hill. Cera's quiet character makes droll, subtle remarks throughout that add to the movie greatly. Hill's character, Seth, is loud, obnoxious and vulgar, but in mostly humorous ways. Therein lies the only real weak point of the film: mostly humorous ways. At some points Seth is more obnoxious and abrasive than funny. Yes, the movie is supposed to depict real life fairly well (though the cop story is not exactly believable), and not everything in life is funny, but sometimes you just get angry at Seth for being a jerk.

Nevertheless Evan and Seth are fantastic foils of each other. Their close friendship makes up the heart of the film. Their sadness at having to leave each other for college can be felt by any viewer. It is a universal theme, and that's really what makes "Superbad" so good. It is also what distinguishes it from other teen comedies.Other teen movies may be funny, but they lack the wonderful interpersonal interactions that are so important in "Superbad."

The plot is simple and the dialogue is hilarious, but it would not be half the movie it is if it were not for that heartfelt relationship between Evan and Seth. For Apatow movies, this is nothing new. What made "The 40 Year Old Virgin" and "Knocked Up" so superb was that each had the perfect mix of raunchy humor and sweetness, making it viewable for both sexes in the process. That perfect balance was not quite achieved in "Superbad," but it is close enough to make it a very entertaining movie that is worth watching.

Final Take:

★★★

"Superbad" is now playing at the Clifton 5 in downtown Huntingdon. It is rated R for pervasive, crude and sexual content, strong language, drinking, some drug use and a fantasy/comic violent image – all involving teens.

Work of celebrated artist on display at Museum of Art

Sarah Dotter

From Sept. 20 until Nov. 3, Juniata College Museum of Art in Carnegie Hall is displaying work by African American artist Jacob Lawrence.

The exhibit is entitled "Jacob Lawrence: A Series of Prints." It contains silk screen prints from his "Genesis," "Hiroshima" and "Toussaint L'Ouverture" series.

Museum Curator Judy Maloney is thrilled to have the exhibit at Juniata. "I teach African American Art. Through teaching that I've come to love Jacob Lawrence," Maloney said. "Even for students who don't know much about looking at art, you cannot help to respond by looking at his art…they [his pieces] just have a very immediate power and presence."

Lawrence's style employs bold, bright colors and non-complicated images and shapes.

"He found a way in his work to simplify things…to convey the deep human entity of courage and strength and endurance," Maloney said. "What he wants to get across, the motion or the feeling, he isolates just that gesture, just that feeling, to portray that idea. You just sort of sense it right it right away."

For freshman Angie O'Keefe, Lawrence's "Hiroshima" series was especially affecting. "The emphasis on the suffering at Hiroshima really stuck me. You don't see too much art about dropping the atomic bomb and how it affected the families."

Museum hours are 10 a.m. to 4 p.m. Monday through Friday and 12 p.m. to 4 p.m. on Saturday.

This semester, the Juniatian sent out a call to athletes on campus. We asked them to revamp the sports section, to give our readers more than just scores and standings. We asked them for the inside story on their sweat and sacrifice. Athletes from four teams responded. These are their stories.

Field hockey: Winning team beats with one heart

Michelle Campbell

Currently ranked 15th in the nation with a record of 7-1, the Juniata College field hockey team is climbing to the top. We proved our desire for a third appearance into the NCAA tournament when we upset tenth ranked Rowan University 1-0 on Sept. 15. Making this game even more significant, first ranked Messiah College had just fallen to Rowan two days prior.

Senior Ashton Cutchall said, "We went in knowing that they beat our long-time Middle Athletic Conference rival, Messiah College, which added fuel to our fire. Because we won't see as many competitive teams this year, it was our chance to prove how successful we are going to be."

Our season-opener on Aug. 30 ended in a disappointing 2-1 loss to Stevens Institute of Technology. The game still remains our only loss. We are currently riding a seven-game winning streak.

Cutchall and senior Kim Wagner agreed that this loss was an eye-opener for the team. The loss was good for us because we went into the game thinking it would be an easy win. As we proved against Rowan and Stevens proved against us, you should never underestimate your opponent. Wagner said, "Because we are such a good team and have been enjoying a winning streak, our opponents see targets on our backs. We now go into every game expecting to put up a fight."

We left the Middle Atlantic Conference, one of the most competitive conferences in field hockey in the nation, as one of four teams in the conference who entered the NCAA tournament. Compared to the MAC, the Landmark Conference is not nearly as competitive. This year, we are looking to capture our first-ever Landmark field hockey championship. We were picked first in the conference's preseason poll, being chosen first on each ballot. We are currently 1-0 in the Landmark, defeating Moravian College 3-0 and recording our fourth straight shutout of the season.

Junior goalkeeper Abby Funk gives credit for our success to our strong defensive unit. Funk said, "In practice, we work on shutting the other team down before they can enter the circle. Our defense stops our opponents from getting shots off. It's like they say, 'the offense sells the tickets, and the defense wins the games.'"

The strong bond of our team also creates our success. Just two games into the season, each member of our team saw playing time in a varsity game. We are confident in one another, regardless of skill level or class, because we all want to win.

Our team's cohesiveness does not go unnoticed. Many coaches ask how head coach Caroline Gillich creates such a close-knit team. In response she said, "We bring in players who will fit into the team culture. These athletes are the ones who are willing to work hard, try anything and be positive."

Christopher Shannon / Juniatian

Senior back/midfielder Amanda Wimer looks to pass in Juniata's home opener against Washington and Jefferson on Sept. 5. The 15th ranked Eagles won 2-1. JCFH has outscored its opponents 27-5 in its first eight games of the season.

This year, 21 athletes came into preseason wanting to play field hockey and all 21 still remain on this team. It is rare for every freshman to make it through preseason. All nine incoming freshman continue to play for the Eagles.

Field hockey is the best part of our day. It's the only time in the day where we can forget about our classes and all of the work we have to do and just play hockey. For just a few hours in the day we can finally come together and play the sport we love. We all want to be there and are all working towards the same goals.

Come watch our second Landmark Conference game as we host Catholic University of America on Saturday, Sept. 29 at 2 p.m. and witness what it's all about.

Women's soccer team kick-starts the '07 season

Team looks to kill with speed

Kristen Penska

"We are different" said head coach Scott McKenzie when asked about our 2007 Juniata women's soccer team. He could not have stated it any better.

This season each player faces the challenge of adjustment, be it facing a new life at college, a new conference or even a new coach. Clearly these changes reflect the growth of the soccer program, but will they also ensure success for the squad? Players and coaches believe so.

This year we'll compete in the Landmark Conference, where the top four of seven teams will move to the playoffs in early November. Though the former Commonwealth Conference had "powerhouse teams," such as Messiah College, the Landmark offers more even competition.

"The [Landmark] conference is well balanced," McKenzie said. "No longer are the standings written in stone. There is more chance for improvement."

McKenzie believes that we are definitely playoff worthy this year, but we are still "young and unproven." He speaks the truth. After a heartbreaking conference opening loss to Moravian on Saturday Sept. 22, we now stand at a 6-2-1 record

With 10 talented freshmen and 18 solid veterans, our team is a cannon waiting to explode. "We have something that we never had before…SPEED," McKenzie said.

Senior captain Stephanie "Cheese" Mury said, "With the freshmen we have both a solid starting line-up and an equally solid bench….Anyone can go on to the field and play like a seasoned starter."

With the speed and talent displayed by freshmen and upperclassmen alike, we are able to implement a new formation, deemed the 4-3-3. This formation takes action by increasing offensive opportunities and solidifying the defense, but it also takes hard work. "We are solid," said McKenzie, "but we must commit in order to be considered a talented team."

Along with the new formation is a new face. Beth Bleil, the head Juniata tennis coach, has become a part of our soccer staff as well. A former Juniata soccer player and team captain, Bleil is excited to be back. "It is a return home," Bleil

continued page 16

Unsung Juniata Eagle

Senior men's soccer player Jonathan Van Blarcom worthy of recognition

Jess Winemiller

Senior co-captain Jonathan Van Blarcom initially approached the Juniata men's soccer program with uncertainty. "I didn't even know if I would make the team," said Van Blarcom. Three seasons later, it is impossible to imagine this 2007 team without his presence.

Van Blarcom does not score the goals and is rarely recognized by the media. He would rather have it that way. However, his consistent dedication toward the success of the team, and his textbook skills, are not overlooked by his coaches and teammates.

"He is the kind of teammate that you want to play with. Jon is the most solid kid on the team. He is the focal point of our defense."
– Brandon Grim

"He is the kind of teammate that you want to play with," said Brandon Grim, fellow senior captain and starting forward for the Eagles. "Jon is the most solid kid on the team. He is the focal point of our defense."

Van Blarcom has been the starting central defender for the Eagles for the past three years. It is a crucial and physical position. The physical aspect of the position is thoroughly embraced by Van Blarcom as well. "Jon is a big boy who likes initiating contact," said head coach Dan Dubois who recognizes the strength of his senior.

The position is not made for the player whom wants his name in the paper though. That is fitting for Van Blarcom.

"There are no stats for defense, absolutely no credit," said Dubois.

Despite the lack of individual recognition, "You have to be solid down the spine of the field," said associate head coach John Mumford. "The central defender is a part of the backbone of the team. One mistake could be a goal."

Van Blarcom, as the backbone, must organize his fellow defensive players and distribute the ball quickly. "I get to see everything," he said.

The team is right there with the coaches and acknowledges Van Blarcom's performance in the backfield. "We are very confident with having him back. He is the most level-headed kid I have ever met," said Grim. "I have never seen him out of his game mentally. He keeps me in check."

Mental toughness is one area Dubois has witnessed Van Blarcom really improve in over the years. "There is no such thing as perfection for him," said Coach Dubois. "He used to self-implode a lot." With his teammates looking to him this season, Van Blarcom knows that he must keep his head in challenging situations.

Now he is the first one to build the team back up when there is a breakdown. "He is good at putting out fires," said Mumford. "He is good at very calmly taking on a tough task."

, Dubois sees Van Blarcom as a calming influence on the field and an ally. "I can say all I want to my players; but, if I don't have someone on the field saying the same thing, I am wasting my breath," said Dubois.

Van Blarcom, whether on the field or in the classroom, exhibits the same level of dedication in all that he does. His program of emphasis is biology with a pre-veterinarian path. In this demanding POE he currently holds a 3.3 GPA.

Junior co-captain Bryan Hess holds Van Blarcom in high regard. "It's been a great pleasure playing with Jon and getting to know him as a person. I'm sure he'll do great things in his after graduation plans," said Hess. "He has continued to lead people on the field while making sure everyone fits in creating team chemistry."

Building our own team chemistry, my fellow seniors and I recently discussed with our basketball coach the various levels of leadership. We might as well have been talking about Van Blarcom. There are five levels, with a level five leader determined to do whatever it takes to make the team successful. This type of leader is a combination of authentic modesty and unquestioned willfulness.

This unsung senior is a true level five leader. He exemplifies the "team first" mentality, which I felt the instant I began talking with his soccer family. Though I am sure he is humbly shaking his head reading this article, after three years, this recognition is well overdue.

Kevin Dundore/ Juniatian

Senior defender Jon Van Blarcom plays with a team first mentality.

Kevin Dundore / Juniatian

Freshman forward Caitlin Bigelow goes up for a header against a Case-Western Reserve defender on Sept. 8. Juniata won 1-0.

Women kick-start the '07 season

continued from page 15

said.

For Coach Bleil, seeing our '07 team is a sign that her legacy lives on. Bleil is more than just an assistant, "She is a link to our history," said McKenzie.

The upperclassmen are ready to crush the competition this year. Lisa Russo, our goalkeeper who was recently named player of the week following an amazing game at Rutgers-Newark, is ready to see improvement. "The talent we have this year gives our team potential that I haven't seen in my entire college career," Russo said. "We have a great chance of getting to the playoffs, and that extra game is what is most exciting."

Heather McMinn, a senior defender, loves the chemistry between the players. "I am really excited," she said. "The girls have stepped up their game[s] over the past four years and now I feel like we are finally a true team."

And what about the infamous orange shirts people see us sporting around campus? "Homage to the Dutch," said McKenzie. "The shirts make us stand out on campus, but also send the message that we stand out by our victories." With these flashy symbols, we clearly set the tone for our season. "We are coming out strong this year," said senior captain Heather McMinn.

This weekend we face Catholic University. Due to the frustrating defeat at Moravian, we are craving victory. "They better be ready," said freshman Caitlin Bigelow.

With a 5-1-0 record, Catholic proves to be tough competition. In spite of this, we are prepared for whatever we see. "Give to them nothing, but take from them everything," said Mury. Surely, we plan to do just that.

Football starts off with clean slate

Ranked last, training for first

Tyler Sasala

Seventy-four players, 59 different high schools, five different states, one team, one mind set, one common goal: win a conference championship.

The 2007 season marks a new chapter in Juniata College Football. It is the first time in school history that the football team switches conferences. Juniata joins the Centennial Conference after playing in the Middle Atlantic Conference for over 80 years.

Moving into a new conference, we have a chance to start over and wipe the slate clean. With this in mind, the upperclassmen took it upon themselves to come into camp prepared and in shape. Asked about the team's preseason preparation Coach Alt said, "We are holding our guys to a higher set of standards and I have to give a lot of the credit to Jay Leonard, Zach Swartz, and Zach Shatto. Those guys were here with 10 or tw12elve other players that worked here all summer."

Senior, Lance Tippett, a 6'2" wide receiver, said the team was motivated to come to camp in shape, "Because we were 2-8, 0-10 and 1-9 the first year[s] I played here. Basically it's a big motivating factor and we know we are better than that. It says a lot about the team, our work ethic and our desire and dedication to winning."

Common pre-training camp concern is team unity, especially how the returners and new additions will mesh. Junior quarterback Jay Leonard commented on the team unity. "It's great, a lot better. Every year I've been here its gets better. The senior class gets better with the freshmen."

The Centennial Conference preseason poll has been one of the hot topics surrounding the team this year. The poll placed us last in the conference. I asked Coach Alt how the coaching staff was reacting to the ranking and he said, "Preseason polls are based on your performance from the previous years. So we look at it as more motivation than anything. It's a motivational tool."

Also commenting on the poll, Tippett said, "We were picked last and Ursinus was picked first. We believe we are one of the best in the conference. We feel disrespected, we want to go out and prove our talent and how hard we worked."

Saturday, Sept. 22, was our homecoming game against Franklin and Marshall. We went down 7-0 early in the first quarter. But our offense responded and made it 7-6 Another F&M score made it 14-6 at half time.

The second half proved that Murphy's Law is correct. Everything that could go wrong did go wrong for us. We had some turnovers and mental mistakes but we did have some positive things happen. It was a game that as a team we can learn and move forward from.

Our first two games were also tales of two halves. The first, on Sept. 8 at FDU-Florham, started off slow for us; we gave up a quick 14 points before our defense tightened down and smothered the Devils. We scored 17 points in the second half, relying on our preseason conditioning to carry us late in the game. But a long field goal in overtime ended our hopes of a comeback win.

On Sept. 15, we led Ursinus 20-19 at halftime. But Ursinus scored on their first play of the third quarter and deflated our excitement from the first half. After a few Ursinus scores and a long touchdown pass for us, we lost our Centennial Conference debut.

We have had some tough losses already, but we have learned from each one of them. Every week is another chance to improve and get better.

Christopher Shannon / Juniatian

Senior linebacker Tyler Payne and sophomore corner Andy Miller tackle a Ursinus player during the Eagles' home opener on Sept 15. Payne had four tackles for the afternoon. Miller had seven. Juniata held a 20-19 lead at halftime but fell in the contest 44-26.

Next home football game:

10/6 Muhlenberg

Women's Volleyball

Christopher Shannon/Juniatian

Junior playmaker Beth Kozak sets a teammate during the final match of the Asics Invitational against Gallaudet on Sept. 1. The Eagles won the match in convincing fashion, 3-0. Finishing the tournament with 158 assists, Kozak was named to the all tournament team. The Eagles, currently 17-1, are ranked #1 in the nation.

Men's soccer-- new conference, new coach, new era

Sarah Ruggiero

The Juniata men's soccer team began its 2007 season not only in a new conference, but under new leadership as well. New head coach, Dan Dubois, former women's soccer assistant coach, has taken the reigns in heading men's soccer in a new direction.

This year, Juniata returned seven key starters to the field, including four of Juniata's top five scorers. Also returning is leading point scorer of 2006, junior midfielder, Fred McNeal.

The Eagles are led by their 2007 captains, seniors Jon Van Blarcom and Brandon Grim, and junior Bryan Hess. "Our captains are great. Grim's our emotional leader and Jon's more of the person the guys turn to and ask 'what do we do now?'" said Dubois.

On Sept. 22, conference play began with a game against Moravian College. Despite approaching the game with a 2-5 record, the men came out with intensity, winning 3-1 and landing their first Landmark win.

"We've been experimenting with new formations and testing them against some of the best teams in the country, so it was nice to finally see everything click," said Grim, who scored during the match.

Although they have played well, the men haven't had it easy this season. They recorded five tough losses early.

"It's unfortunate that we have outplayed a few of our opponents and haven't been on the right end of the scoreboard. We're holding our own against everyone," said Dubois.

> "Things are really looking good for the team this year. We are all very upbeat and excited for the rest of the season. With conference play starting, we are going into it with a lot of confidence. "
>
> – Jordan McGowan

On Sept. 12, Juniata outshot McDaniel 15-9, and held a 6-4 advantage in corner kick opportunities. Despite enough chances, the Eagles could not find the back of the net, falling 2-0.

"Our defense is strong. Our offense is possessing, just not finishing," said Dubois.

Even with the early losses, the team said that no one is frustrated. They know that the games that they have lost do not matter much because they have not been in conference play. Right now, the conference is wide open and will be won by the hardest working team. Not having to face Messiah and Elizabethtown, two traditional powerhouses, is a big help.

"Things are really looking good for the team this year. We are all very upbeat and excited for the rest of the season. With conference play starting, we are going into it with a lot of confidence," said sophomore midfielder Jordan McGowan.

In addition to work ethic, the freshman class is doing well and the keepers are definitely being challenged. "This has been the best freshman class to come [here] in years. But none of them regularly start because the returners put in so much time over the summer and work hard," said Dubois.

One freshman to step up has been defender, Doug Jackson. As a solid player, he has worked hard to earn a starting spot.

On Sept. 5, the Eagles recorded their first win of 2007 against Keystone College. "We played well as a team for the entire game…We relaxed and had fun playing together," said Van Blarcom.

Standout sophomore, Andrew Steffen tallied both of Juniata's goals. The second was the game-winner in the seventh minute of overtime.

"It's going to be fun to work with this team for the next few years," said Dubois.

The team's early season experience has taught the players how to mesh as a team and taught them the value of finishing their scoring opportunities.

Tennis and Cheez-Its!

The Perfect Combination

Brandon Wolfe

So I'm on the tennis team. I'm a new member coming in with little experience, and I have no idea what to expect. Fortunately for me, there are eight other players feeling the same thing.

The new semester brings a new beginning for our team. Jonathan Skoner and Jarrad Silver are our only two returning players. Three team members who contributed to last year's MAC playoff run, Casey Chew, Aaron Rhodes and Ryan Navarro, are studying abroad this fall. So the void in the team had to be filled by youth.

Besides changes to the roster, we face a new slate of conference opponents in the Landmark Conference. Rhodes said, "We are starting a new conference and the first year will tell us a lot about the type of competition we should expect. For the returning players this season will be completely new."

The fall season is a warm-up as we only play four matches. We play the bulk of our schedule in the spring.

If there is one theme we all have for the fall season, it is fitness. We run at almost every practice. It is helping us prepare for the matches to come, while giving us all cut bodies. Ladies, beware of the cut men's tennis team.

When asked about the team's conditioning, Skoner said, "The fitness training definitely helps us as a team. It is unconceivable how much tennis has been won on fitness alone. Andre Agassi once ran nine miles in one match! That is in sprints and bursts of speed. Tell me fitness doesn't help. It only makes us more confident in a match [sic] to know that we are adequately prepared in all that we can be."

We played a tough Division I opponent in St. Francis on Sept. 9. Being a new member of the tennis team, I was surprised by the tenacity we showed, even in a 2-7 loss.

Already head coach Beth Bleil likes what she sees from her players. I can't help but I agree. We're relaxed. We're fighting hard. And above all, we're eating Cheez-its while cheering on other team members. So if you want some Cheez-its, come to a tennis match.

One of the key players fans should watch this season is Skoner. He revels in the pressure that is placed on the #1 singles tennis player. Skoner said, "Tennis is 'mono y mono' (in singles anyways), and there is nothing I enjoy more than having all of the pressure on myself for myself. I don't have to depend on others to do what I could do myself."

That is true, but the great part is that we are all on a team. While we are out there as individuals, we have the support of our teammates—even if they are eating Cheez-its.

Our next match will be home at noon, Sunday Sept. 30 against Lebanon Valley. This is a big match for us. Lebanon Valley is one of our biggest rivals, and we would like nothing more than to put aces on them. And with a guy on our team named Acer, it's more than likely the aces will kill.

So maybe some people thought, "Hey the tennis team is going to suck! Eight new team members!" Well, you can rest easy tonight, Juniata. I promise you that when we put an ace in a Lebanon Valley face, you won't be crying for us anymore.

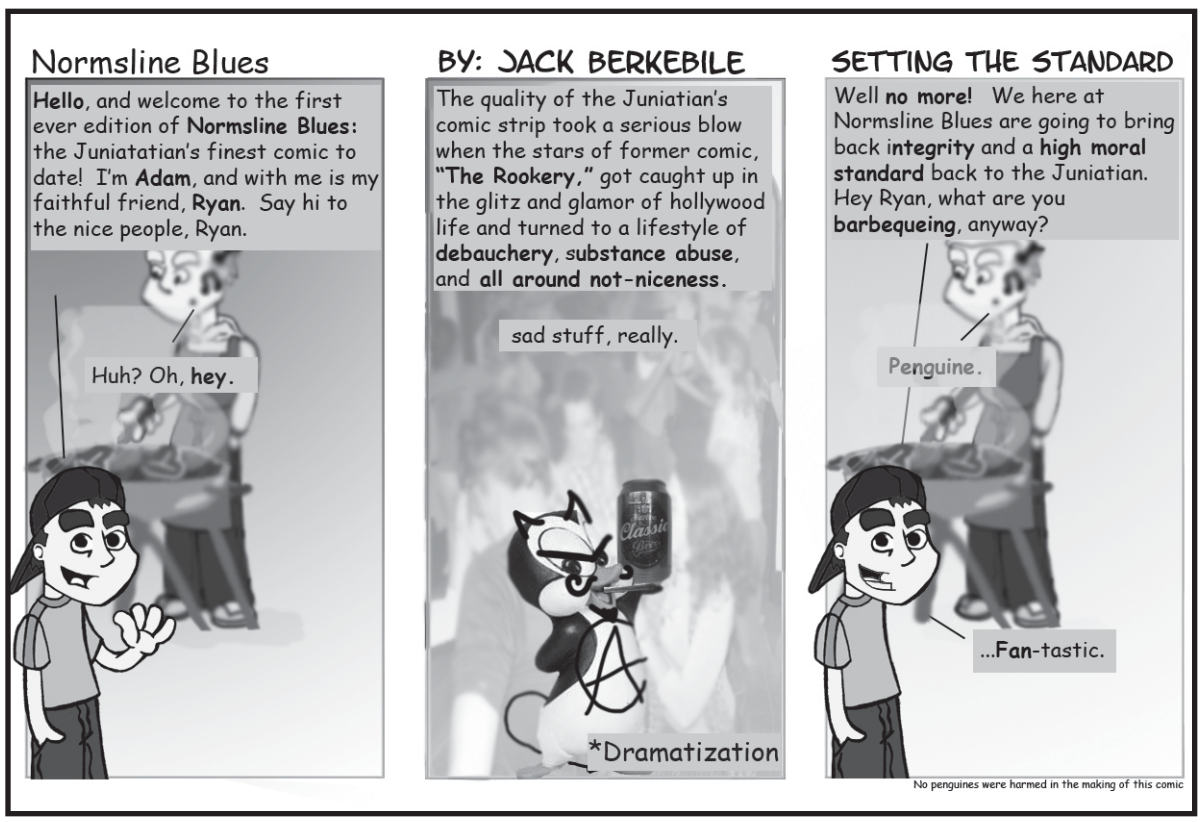
When hunger strikes

Chicken Parmesan

So. You can keep whining about how unsatisfying Baker's food is, or you could suck it up, and make yourself your own dinner one night! It's not hard; all you have to do is find a good recipe and make the meal! Luckily, we did half the work for you. Here's the recipe for some classic Chicken Parmesan that you can whip up in your dorm kitchen. This specific version is calorie conscious and much healthier than the original meal. But trust us, it'll still make your taste buds tingle! All you have to do now is book the kitchen, get the ingredients and start cooking!!

What you need to make it for 4 people:
½ cup of Italian seasoned dried bread crumbs, 1 teaspoon dried basil leaves, 1 teaspoon dried oregano leaves, 6 boneless skinless chicken breast halves, ½ cup reduced fat 2% milk, 1 tablespoon olive oil, ½ cup grated Parmesan cheese, 1 jar marinara sauce,1 ½ shredded part-skim mozzarella cheese



How you make it:
1. Preheat over to 350◦ Fahrenheit, combine bread crumbs, basil and oregano in small bowl. Dip chicken in milk. Dredge coated chicken in bread crumb mixture
2. Heat oil in large skillet over medium-high heat until hot. Add chicken and cook 2-3 minutes on each side or until browned.
3. Place chicken in 13 by 9 inch baking dish coated with nonstick coating spray. Sprinkle parmesan cheese over chicken. Pour marinara sauce over chicken and top with mozzarella cheese. Bake, covered, 45 minutes or until chicken is no longer pink in center.

Dish has total of 317 calories, 15 g of carbs, 14 g of total fat and 30 g of protein.

Muslim students teaching Arabic lessons

Student initiative reintroduces questions on future of Juniata's language curriculum

Christina Gongaware

On Sept. 23, the Muslim Student Association (MSA) held its first meeting for students interested in learning Arabic.

The meetings, held every Monday and Thursday at 8 p.m. in Good Hall 202, introduce the benefits of learning Arabic as well as basic concepts such as the alphabet. In the following weeks, topics such as food and clothing will be presented. The seven-week course will conclude with a celebration and feast.

Students who may not have gone to previous meetings can still attend upcoming lessons.

Senior Bouchra Kachoub, one of the class' instructors, called Arabic a "critical language." She pointed to President Bush's recent National Security Language Initiative as proof.

This act is aimed at increasing the number of students who speak languages such as Arabic from kindergarten through college.

Kachoub said that although its objective is to increase national security, the initiative also includes cultural aspects. With increasing tensions between the Middle East and the United

The price of free speech in The Gambia

Laura Hess

The Gambia is the smallest country in Africa. It is a peaceful country with little to no conflict. It has never been to war and the Gambian people, although very diverse, live with no clashes. In recent years, The Gambia has become of increasing importance to the College.

Juniata College has a three week summer program and a spring semester study abroad program in The Gambia. Two Juniata students have made an impact on this country through journalism.

The press in The Gambia is very restricted and censored heavily by the government. Freedom of speech exists in The Gambia's constitution, but writing news in the country is sometimes a dangerous job.

The government does not allow anything written that is anti-government in any way. The staff of the Gambian president, Yahya Jammeh, actually edits one of the national papers, "The Daily Observer."

Senior Noriko Hayashi, traveled to The Gambia and worked for the national newspaper, "The Point." She shared stories of how journalism works in the country.

Hayashi's journalist friends have received e-mails warn-

"Infidel" causes conflicts in the classroom

Muslim students upset over required text for international course

M. Piazza

Some Muslim students recently disagreed with Emil Nagengast, professor of politics, over his use of the book "Infidel." Written by Ayaan Hirsi Ali, "Infidel" covers her views on how Islam encourages the subjugation of women. Nagengast is using "Infidel" in his International Law and Human Rights class this semester to start discussion of women's rights in Africa.

According to Nagengast, "Infidel" is a clear illustration of the violation of women's human rights in Somalia. "Infidel" asks the question of where the line between multiculturalism tolerance and protecting human rights should be drawn.

"'Infidel" contains a strong and powerful argument, though [Ali] is not an Islamic scholar, for the idea that Islam encourages men to subjugate women," Nagengast said.

Muslim students oppose studying this book because they believe that "Infidel" represents Islam in a false manner, generalizes too much about Islam and insults the Prophet Mohammed. Insulting Mohammed for Muslims is highly offensive and this is the students' strongest reason for disliking the book.

"[Ali] discusses more traditional things rather than religious ones. In my idea it would make more sense if she called

Faculty seeks adequate daycare services on campus

Early Childhood Education Center not designed to solve problem

Sarah Ruggiero

Over the past two years, professors have been pushing to gain daycare on campus. Professors find it difficult to locate sufficient childcare while in the office and are receiving little help from the College.

Communication professor Lynn Cockett has searched for adequate daycare for her daughter for three and a half years. She said, "Daycare in the immediate area is not good. There are only two licensed non-home facilities within ten miles of campus, and one felt actually unsafe to me. I withdrew my daughter after she got a black eye that no one could explain, and after I was laughed at by a staff member when I told her [my daughter] had reported to me that she'd been hit by another child."

Although Juniata currently has the Early Childhood Education Center (ECEC), located in the basement of Lesher Hall, it is classified as a preschool, not a daycare.

In an effort to help with the need of an on campus daycare, co-directors Sylvia McDowell and Chris Breene have not only extended hours, but now allow children to stay all day. The ECEC has also added another preschool session, running through the month of May and lengthened the spring session.

Although these may seem like extensive additions, they are still not enough to comply with the needs of professors. The ECEC is only open until 3 p.m. while many professors still have classes and office hours.

Christopher Shannon / Juniatian

Freshman Dessie Schwentner reads a story to Carly McKellop at Juniata's Early Childhood Education Center (ECEC). The ECEC provides preschool programs, but not full daycare services that faculty currently seek.

McDowell and Breene are part of the committee in favor of an on campus daycare. "I think there is a definite need for a daycare and there has been a push for one ever since I've been here. We are very supportive," said McDowell, who has run the ECEC with Breene since 1998.

Any changes to the ECEC would have direct impact on the Education Department. More work study students and practicum students would have the opportunity to interact with the children since longer hours allow more flexibility in scheduling.

Arguing against the daycare, the administration states that a daycare is not related to Juniata's educational mission. The primary reason that the ECEC exists is for students to gain an education perspective in a preschool environment.

"Although we are sensitive to the diverse needs of families and are experimenting with some different enrollment options this year, we have no plans to change the mission or philosophy of the ECEC. Any significant changes in that site would need to go through the Education Department," said Fay Glosenger, education department chair.

Funding also comes into question. The ECEC now receives straight funding from Juniata to cover supplies, though this figure though does not cover McDowell and Breenes' salaries. The establishment of a daycare would require the hiring of more credited staff members. McDowell and Breene are the ECEC's only actual workers right now.

With the current extension of hours, they had to drop teaching Child Development Lab for the Education Department.

Additionally, the extended hours

Off-campus students deal with "good neighbors" and the JCPD

Kazia Eastep

Good Neighbors, the Juniata College program created to encourage good relations between college students living off campus and the town residents who live near them, swings into its third year of promoting goodwill in the Huntingdon community.

Assistant Dean Dan Cook-Huffman says the program "started because there was a spring 2006 semester incident involving one house of students, and the community members were tired of the disruptive behavior." Some of the offensive acts included loud cursing, repeated late-night noise violations, and, ultimately, a direct quarrel with one of the neighbors. Though this case was an extreme, it was enough to prompt the dean's office into action.

Cook-Huffman said, "Sometimes neighbors are too quick to judge. They expect students to be obnoxious." He also said that this conflict "occurs all over in little towns with colleges."

In an effort to resolve this conflict, students are encouraged to be "good neighbors" by visiting neighbors, developing lines of communication and offering personal phone numbers for the neighbors to use before they might phone complaints to police. Additionally, neighbors of Juniata College students are invited to block parties and given free football tickets. The overall goal of the program is that students will become a part of the Huntingdon community.

This goal has nothing to do with off-campus parties being shutdown recently, said Rocco Panosetti, director of campus safety and security. When the Juniata College Police Department (JCPD) does show up at an off-campus residence, students are just asked to quiet down. If the students comply, everything turns out fine. However, repeat noise complaints in a single evening may end in an appearance by Huntingdon Borough Police and consequential arrests.

Currently, Huntingdon Borough Police cooperates with the JCPD. Although JCPD jurisdiction is on campus, when a call of a noise complaint comes in, JCPD is usually dispatched first. Cook-Huffman said that this allows Juniata to be as involved as possible with student activities.

When asked if there has been an increase in the amount of off-campus complaints, Panosetti said, "There is no increase in the quantity; the reports are just arriving much earlier in the semester than normal." He also said that the JCPD only leaves campus to deal with these situations "every so often. They're kind of rare, actually."

If the dean's office is informed of repeat incidents of student misconduct, the students will be called in to speak with the dean, and a disciplinary letter is sent to parents, advisors and, when applicable, coaches.

Two students, who recently found themselves in this position, detailed the events that have left them "on thin ice with the Huntingdon Borough." The students had hosted two parties. The first party was huge and when JCPD arrived to tell them it was too loud, most of the guests left. But, police arrived the next morning because a neighbor had called about broken glass as a result of the party. When the students hosted another party later this semester, it too prompted a noise violation and warnings from police.

After the first incident, the students were called in to speak with

continued page 4

Pinch, punch, steal, or deal and you're out?

Bennett Rea

There is a perception on campus that Juniata's behavior policy is, "If you 'pinch, punch, steal or deal,' you're out." In other words, if a student is involved in sexual harassment, fighting, theft and drug use or drug dealing, he or she will be suspended from the College.

According to Assistant Dean of Students Dan Cook-Huffman, this view isn't comprehensive. "That's a shorthand way of reminding people there are certain things that you can certainly get suspended for, but that doesn't mean they're the only four things." If a student commits any of these violations, there is a legitimate chance that he or she will be suspended for the semester.

Violations of the student conduct policy are judged on a case-by-case basis. After a student has allegedly committed a violation, he or she will be subject to either an administrative hearing or a judicial hearing. The former is for minor misconduct (noise violations, drunkenness, etc.) and is handled by either Cook-Huffman or Dean of Students, Kris Clarkson.

In a judicial board hearing, the student has usually been accused of a major misconduct (drug use, assault, etc.), or multiple minor misconducts. He or she is brought before a board made up of four student government members, two faculty members and one administrator.

The judicial board hearing is to determine what occurred through the use of witness testimony. The board then makes a recommendation regarding punishment to Clarkson, who makes the final decision.

Punishments can include suspension, probation, restitution, loss of privileges and payment of a fine.

A student appeal of any disciplinary action goes to the president.

If a student chooses to withdraw, he or she will almost always recieve a pro-rated refund upon returning to Juniata.

If a student does not wish to go to a judicial board hearing, he or she may also voluntarily withdraw from the College. This is often done when suspension will be the most likely outcome of the hearing.

Four students have withdrawn so far this year because of behavioral issues which is "around average or slightly above," according to Cook-Huffman. On average, 10 to 12 students per year withdraw or are suspended because of behavior-related issues.

There is a financial incentive to withdraw instead of going through the hearing and getting suspended. If a student chooses to withdraw, he or she will almost always receive a pro-rated refund upon returning to Juniata. When a student is suspended, there is no possibility of a refund.

As stated by Cook-Huffman, the student conduct policy is not a blanket policy. There are variations from case to case. A major variance in punishment occurs between drug incidents and alcohol incidents. For drug use or dealing, a first offense usually leads to a suspension.

For alcohol use, a first offense leads to a warning and mandatory attendance to the Responsible Alcohol Choices (RAC) program. RAC is a program run by counselors that lasts a few hours and helps the student to think about more responsible use of alcohol. A second offense constitutes disciplinary probation and another more extensive RAC session.

"We have very few second-alcohol offenders," Cook-Huffman said. A third offense which violates probation will most likely result in suspension.

The discrepancy between alcohol and drug cases is a cause of concern for some. Some students have argued that marijuana use should be on par with drinking or should be considered less serious.

"We do not want harsher drugs being pushed on students here," says Cook-Huffman.

continued page 4

Students learning Arabic on campus

continued from page 1

States, Kachoub feels that these lessons will increase cultural understanding. By the end of classes, she hopes that students will be able to read Arabic and to develop a "small amount of vocabulary."

"We were planning on doing this since last year. We knew that there would be a lot of people who would be excited about learning Arabic, but just had no place to go," Kachoub said. "It is very exciting. Students want to learn more about what is going on in the Middle East, and now they can discover the truth for themselves."

Although the instructors have purchased textbooks that will help them instruct classes, no textbooks for students have been provided. The classes rely mainly on personal instruction from Arabic-speaking students.

"We need resources," Kachoub said. She also mentioned online tolls and audio books which would be helpful. Even without aids, Kachoub said that she was "very impressed with the quick learning" of the students. She will continue teaching Arabic until she graduates, and hopes that in the future, Arabic will find a permanent place at Juniata.

Last spring, students and faculty began to discuss the potential of adding Arabic language to the College's curriculum. That discussion began as doubts arose concerning the future of the German program following professor Klaus Jaegar's retirement at the end of this year. On a forum thread about the issue, some expressed a desire to see Juniata move toward other languages, like Arabic or Chinese, instead of replacing Jaeger and continuing German.

Provost James Lakso noted the importance of languages such as Arabic to the US, and said that "our understanding of things in the Middle East could be helped" by introducing the language. There is no sign, however, that Arabic is being positioned to replace German.

Professor Michael Henderson, current chair of the world languages and cultures department, said that this fall's Arabic classes are "just informal gatherings."He said that "virtually nothing new has transpired" since the Juniatian first wrote about the language conflict last April.

Lakso echoed the same opinion. "It is not simply an either/or kind of situation," he said.

Juniata has not actively searched for available Arabic instructors. Lakso said that while they have not actively begun to search for a new German instructor either, the administration will place an ad in the coming weeks.

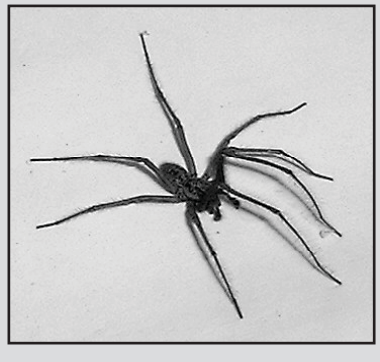
The main problem with keeping German is that German class enrollments have been low. Lakso said that "interest in German in the United States is off." He estimated that of the 500 public high schools in Pennsylvania, only about 50 actually offer German, posing a problem for higher education in recruiting experienced students.

Lakso said, that although German class enrollments could "never rival biology," they do not need to increase by a huge amount to ensure the program's survival. He calls German "an important heritage language," especially in Pennsylvania. Lakso also noted that students do well in German, citing the excellent study abroad opportunities Juniata provides in Marburg, Münster and Bocholt. "We know that we have a great German program," he said.

Spanish professor Harry Thurston-Griswold has been a defender of the continuation of the German program. He stressed both its strengths and the obstacles that the school would face in introducing Arabic in a forum post last spring. He said that qualified Arabic instructors "are being snatched up by research institutions and colleges with much deeper pockets than [Juniata's]."

Lakso agreed. He said that if Juniata were to introduce Arabic, it would be a long process, taking several years to round up enough prospective instructors. Another issue would be supplying the "supporting coursework…to construct a bona fide academic program."

Lakso said that "our expectation is that we will continue the German program, but of course, if no one takes it, we certainly can't."



Spiders in dorms for second straight year

Dealing with the arachnid sightings

It is not unusual to have spiders make their way into Juniata's residence halls as well as some houses in Huntingdon. Last fall an outbreak of brown recluse spiders in Tussey and Terrace Halls caused some concern to students. Facilities was able to rid the hall of spiders soon after complaints were made.

To keep spider visits as minimal as possible, all the dorms on campus are treated annually in August, as well as whenever a problem rises.

The latest spider incidents happened on the east stairwell in Sunderland and in one room in South. According to Facilities, there were no reported injuries related to spider bites in those two places. The spiders found in subsequent checks have not been recognized to be dangerous.

To help keep the spiders out of the dorms, all residents should keep their window screens closed at all times.

Being responsible neighbors in the Huntingdon Borough

continued from page 2

the dean about what had happened. After the second incident, letters confirming the police reports were dispersed. One of the students said "the letter home really freaked out and upset my parents." The student admitted he was in the wrong, but said the letter was "harsh."

The students were angry at first but, after talking things over with the dean were more understanding. "I like to think that if something were to happen, the school would have our backs," said one student. What was most upsetting to the students was that the neighbors "didn't give any warning, they just called the police."

Another off-campus resident who has hosted several parties to which the police were not called offered a different take. She said: "Even when I've been drinking, if there's something going on at my house I'm still on my toes, and I think that has a lot to do with being a responsible drinker, home owner and adult. If your house is the house where the party is going down, it's your responsibility to limit your intake. When you're wasted and 40 people are in your house, and an important decision needs to be made—like, the cops are here and they need to speak to someone—well, that someone's you."

The Good Neighbors program is, overall, about "being on your toes." Students should "have a good time—but do it reasonably," said Cook-Huffman. "[Most students] are doing a really great job at being responsible neighbors."

Kevin Dundore/ Juniatian

Senior Kara George does her part to be a good neighbor by cleaning the street outside her off-campus residence after a weekend gathering.

Juniatians discover obstacles in journalism abroad

continued from page 1

ing them to not write about certain topics. Printing equipment of opposition newspapers have been destroyed to prohibit news circulation. Journalists are jailed for their stories with no known charges. The editor of "The Point" was murdered four years ago for what he had written.

Hayashi wrote a controversial editorial in "Foroyaa" that dealt directly with press freedom in The Gambia. A disclaimer at the end of her story read, "The author, a non Gambian, has made two visits to The Gambia before making these observations. We hope that authorities will carefully consider her observations rather than dismissing them outright as hostile propaganda."

Noriko said, "I was shocked. Journalists really steer clear of politics out of fear."

Emil Nagengast, department chair of politics, also provided insight to the Gambian press. He once wrote an editorial for "The Daily Observer" criticizing something previously printed in the paper. He was told by the assistant editor that it could not be printed because it was too controversial.

Later Nagengast wrote an article critiquing the Arian president. The assistant editor liked the story and published it. After the story went public, the assistant editor was fired for letting Nagengast's article run. His editor feared that the president of The Gambia would find the article offensive and come after him. He acted to show the president that the mistake had been corrected and wouldn't happen again.

"It is extremely difficuly to get accurate information when people don't want to talk."

Nagengast said that any student involvement in The Gambia's press is solely individual work separate from the College. This is because the relationships that are established could be in jeopardy if a Juniata student infuriates the Gambian government with their articles.

Emily Eller, a 2006 Juniata graduate currently resides in The Gambia, working as a senior proofreader for "The Daily Observer." Eller believes that the censorship is self-applied and self-sustained. She said, "Gambians believe that you should only write about something if it is helpful." They believe that critiquing the government is detrimental.

Eller did bring up a problem, however. President Jammeh claimed in Jan. 2007, that he could cure AIDS. Eller said that reporters wanted to cover the story but they could not find any doctors or professionals that would even confirm the definition of AIDS because of the fear of speaking out against the president.

Eller explained that one of the biggest hold ups to freeing the Gambian press is the lack of sources. People do not feel safe and won't talk to reporters. Eller said, "It is extremely difficult to get accurate information when people don't want to talk."

There are other issues that the press faces in The Gambia. Gambia's national language is English. The national papers such as, "The Point," "The Daily Observer" and "Foroyaa" are published in English. The people of Gambia speak dozens of different native dialects and only have English as a second language, if they know any of it at all, making a language barrier a problem. Also, the papers cost 50 cents each. The Gambian people cannot afford them.

Press freedom is one of the very few problems that The Gambia faces. It is a relatively safe place and can be an excellent experience for interested students. The Gambia spring semester study abroad program was new to Juniata in Jan.2007. However, students have been traveling to The Gambia with a summer study abroad program since 2004.

The Gambia study abroad program is primarily overseen and encouraged by Nagengast. His experience in Africa led to his interest in sending students to the continent. Through a fellow professor at Thomas Jefferson University, Nagengast set up Juniata's first summer program to The Gambia. In 2006, Nagengast taught at the University of The Gambia through a Huntingdon Rotary Club grant and worked on setting up the semester program.

Currently, about 42 Juniata students have studied abroad in the Gambia.

JC discipline isn't blanket policy

continued from page 3

"We don't mind sending out a message to potential pushers and dealers saying that this college will not tolerate drug use."

Cook-Huffman added, "It's the culture we live in. There is more acceptance of underage drinking than marijuana usage. If we suspended people who drank alcohol, we would be throwing out almost 200 students a year."

Some rumors suggest that cases are decided by financial motivations. In response to accusations that retention rates and budget plans keep students from being suspended, Cook-Huffman said, "They don't factor in at all….If we believe someone needs to be suspended because of a safety issue, there's no way we're going to compromise the security and safety of the Juniata community just so we can retain one student and get their [sic] money. That's ridiculous."

Most students who are suspended or withdraw are allowed back after their semesters of punishment ends. In fact, nearly 100% of the violators who leave for a semester return afterwards. The College's stance is that letting known violators back is necessary because Juniata students are not "hardened criminals."

Juniata's policy is much less strict than the those existing outside the College. The policy protects students from having to face criminal charges and the police. Except in extreme cases, the College handles everything internally.

In the case of a very serious offense, a student would not be allowed back and would likely have to appear in front of the district magistrate.

"People make mistakes, we've all made mistakes," said Clarkson. "I don't think that Juniata students are mean or malicious. The Juniata community is inclusive and caring. We don't want to publicly flog people because they've done something inappropriate."

The Juniata student conduct policy can be found online at www.juniata.edu/services/pathfinder.

Juniata Active Minds: slashing stigma

Sara Cieslewicz

Juniata Active Minds (JAM) is a new student organization designed to increase awareness and comfortable communication between students and their community regarding issues of mental health, symptoms of mental illness and the available resources for help.

JAM is a chapter of Active Minds, Inc., a non-profit organization headquartered in Washington, D.C. According to the Web site, the organization strives to "increase student awareness of mental health issues, provide information and resources regarding mental health and mental illness, encourage students to seek help as soon as it is needed, and serve as a liaison between students and the mental health community."

College aged adults have the highest rate of mental illnesses. According to Active Minds Inc., "1 in 5 Americans suffer from a mental illness at any given time- which means that essentially everyone on campus is somehow affected."

"I know that there are a lot of college students struggling with a lot of mental health issues, and it's something we don't talk about," said Alison Tyler, president and founder of JAM, "There is a lot of stigma. No one really understands all these illnesses, and we need to make them more aware."

Advisor Dr. Kathleen Biddle said, "I wanted to see students being able to discuss mental issues and not hide under this shroud of secrecy." The illnesses addressed by JAM include depression, schizophrenia, bipolar disorder, generalized anxiety disorder, eating disorders, and self-harm.

"This is not a support group. It is no replacement for counseling," said Biddle, "Not at all."

JAM does not provide clinical services or therapy. Nor is it only meant for psychology students.

Along with Tyler and Biddle, many feel students should not be hesitant to discuss mental health even if they do not have any illnesses.

"The point of the club is not to discuss our own health at meetings. We have no idea if the other students are suffering from any mental disorders at all. It's more like…is this an issue that could be affecting students on our campus? How can we increase awareness about it, get the facts out, break down misconceptions?" said Tyler.

Tyler's main goals for the club are to make an impact, to break the silence, and to make this an issue for which people have respect.

"The first meeting was a big success. A lot of different people, freshmen through seniors, came. All for different reasons…they feel strongly for the cause or just have great enthusiasm to participate," said Tyler.

To raise awareness JAM publishes a monthly flyer and posts it in bathroom stalls. October's edition, about depression, coincided with the work JAM and the Health and Wellness Center did to promote National Depression Screening Day on Oct. 8.

Other projects in the works include mid-term stress busters, yellow ribbons for the National Suicide Prevention program, and bringing in an author who has experienced bipolar disorder.

"Later in the year, we will be showing films and hope to have speakers to talk about neurological bases on these disorders, have stomp out stigma walks, host lunch sessions with counselors, and possibly a benefit event." said Tyler.

A Web site for the Juniata chapter will be coming soon with links to scientific information, signs/ symptoms, self-assessment links, resources in Pennsylvania, support groups and meeting events.

JAM meets the first and the third Thursday of every month at 7:30 p.m. in the carpeted Lesher lounge. Minutes are sent to members after each meeting. To be added to the contact list, e-mail Tyler. She encourages people to send her ideas to help JAM spread the word about mental health on campus.

Sophomore Clare Coda creates a poster for an upcoming Stress Busters event sponsored by JC Active Minds.

Juniata joins boycotting of college rankings system

Claire Williams

Recently Juniata and other members of the Annapolis Group decided to boycott the US News and World Report college ratings.

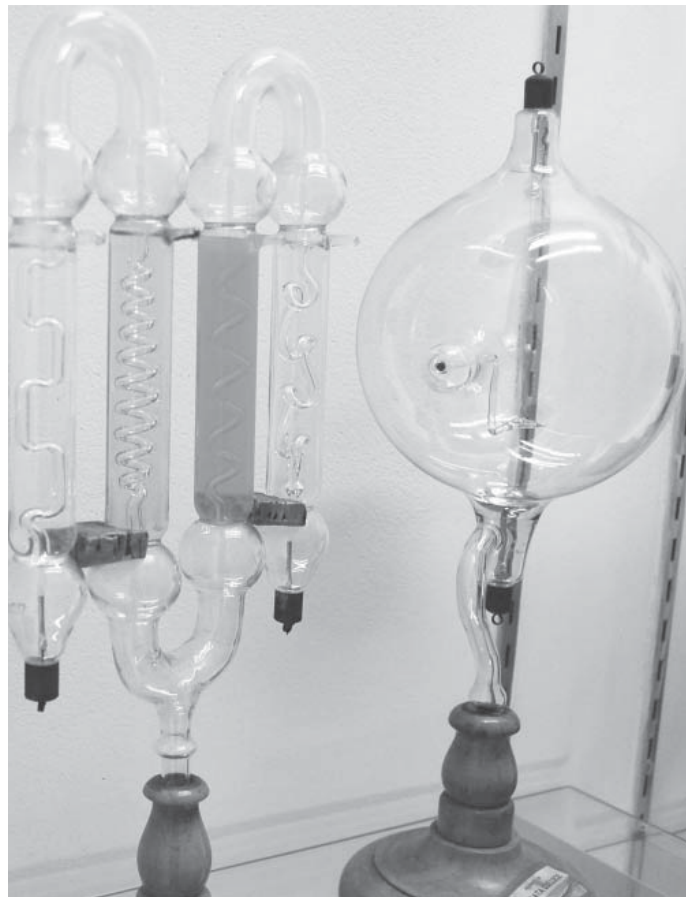
The Annapolis Group, comprised of 125 liberal arts colleges, was founded to promote understanding of what liberal arts colleges do, such as preparing students for the ever changing world and helping students develop their individual skills. The presidents of the colleges meet at least once a year to discuss issues facing their community.

Last year the most of the group's presidents decided that they were no longer going to participate in the peer review portion of the US News rankings. They didn't call for a full boycott, leaving the choice up to each school. Some colleges are going so far as not submitting any information.

Juniata has chosen to continue providing statistical information to US News, but is no longer participating in the peer review. US News had said it would collect the general information through other methods if it were not submitted.

The group decided to boycott peer review because many presidents see it as an unfair way to assess the quality of a school and they don't agree with the weight it is given. It represents 25 percent of the overall ranking. In this portion, each college is asked to assess all the other schools in its category which can include its direct competition.

The group says the peer review is unfair because it is unlikely that any school will rank a competitor higher than itself, and because the person filling out the assessment might not know much about the school he or she is to assess.



President Thomas Kepple called it a "bogus system." Kepple said that without peer assessment Juniata would logically be higher on the list, and that "our outcomes are better than people think they are."

When asked if Juniata felt any pressure to participate in the boycott, both Cynthia Clarke, head of institutional research, and Kepple said no. Kepple called it "a logical decision."

Kepple said he is still unsure how this will affect Juniata being rated in US News since next year

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. Congratulations to last issue's winner: Lacey Rhodes!

Boycotting college rankings

continued from page 5

will be the first year of the boycott. Both Kepple and Clarke said that the College does not gain anything by boycotting. They see it as more of a moral stand.

Several prospective students at Juniata's fall open house said that ratings didn't have much of an impact on them choosing Juniata. Some said they hadn't even looked at the ratings. Instead, most mentioned the book "Colleges That Change Lives" as a way they found Juniata.

Kepple said that he doesn't think that a single good rating really shows the quality of a college. He believes Juniata's diverse mix of listings shows the value of the College. He said students should choose a school based on the best fit for them.

Kepple also said he really appreciates students who take the time to fill out questionnaires for the other rankings such as for Peterson and Fiske.

He said, "It's helpful to Juniata. It's helpful to other students, prospective students who are trying to know what this place is like."

Current students said that they didn't come because of the ratings either. Jessica Maxon, of Pennsylvania, said that it had made her proud to come to a school with a good rating, but that it wasn't what she based coming here on. Instead she came because of the strong science programs.

Erin Satterthwaite, of California, said that she had come because the school felt right and that she liked the sense of community. She found the college through a liberal arts college fair in her area.

Though each found the school a different way, they seemed to agree that they came because it was the right fit.

For future students also looking for the right fit, the National Association of Independent Colleges and Universities launched a new Web site, "U-Can," on Sept. 26. Initially, 613 schools signed up on U-Can, with 440 having profiles posted. Approximately 114 members of the Annapolis Group, including Juniata, are included on U-Can.

U-Can allows students to search alphabetically, by religious affiliation or by state. It allows people to look at each college and follow links to the school's site. It gives similar data as US News, but also more features. It does not allow students to compare one school to another.

The main difference between the U-Can site and the US News ranking is that the site doesn't rank the colleges, it simply presents the information for review. It is also free, where the US News site has limited function unless viewers pay.

In an online campus news release, Kepple was quoted as saying, "I believe both colleges and families benefit from unbiased data that help students make informed decisions in finding a college that best fits their interests. The new U-CAN database and other sources such as the National Survey of Student Engagement and the magazine rankings can all be source material for an informed student."

College's daycare issue not easily solved

continued from page 2

have caused a drop in the center's income. Professors pay only 50 percent of the normal cost for their children to attend. Many of the children staying all day are professor's children, filling spots that would normally go to children who pay full price.

McDowell has recently written to the state for grant money, and although this helps, it is still not enough. This money can only be used for such things as classroom work, or for example, the recent renovation of the playground. It cannot be used to pay staff; therefore it does not allow new workers to be hired.

"There are many different staffing issues for a daycare. Daycare provides a level of care that starts with children six to seven weeks old. There are rules that you need a certain amount of accredited staff members per child," said Provost & Executive Vice President for Student Development, James Lakso. He also said that other issues include initial space for a daycare and other economic issues.

Psychology professor, Phillip Dunwoody and the committee in favor of a daycare have viewed over ten schools, including Moravian College and Susquehanna University, to compare their working childcare systems, to one that could be molded on Juniata's campus.

"Huntingdon does not have many options in the immediate area, and this was part of the reason that the faculty and staff petitioned the administration last year to explore day care options," said Dunwoody.

Honoring the legacy of Professor Duane Stroman

Emily LaBrecque

Six students in Bob Reilly's Social Work Practice: Large Groups, Communities and Organizations course have a grand undertaking before them. Twenty-five thousand dollars must be raised to realize their vision: the Duane Stroman Legacy Fund.

The students (Alison Meckey, Ana Rosenthal, Tiffany Fortson, Gloria-Ann Seel, Amanda Partington and Marissa Vlasach) think this scholarship is the best way to honor Stroman's memory. The late professor of sociology devoted more than 40 years of service to the Juniata campus and surrounding community.

"He was a really great professor—funny, too. He was really passionate about what he was teaching, and even took us into the community to get involved," said Rosenthal of her former instructor.

According to the students' mission statement, the scholarship would be available to social work and sociology POEs "who exemplify Stroman's characteristics and values."

"It would also help students who want to go to grad school or study abroad," said Meckey.

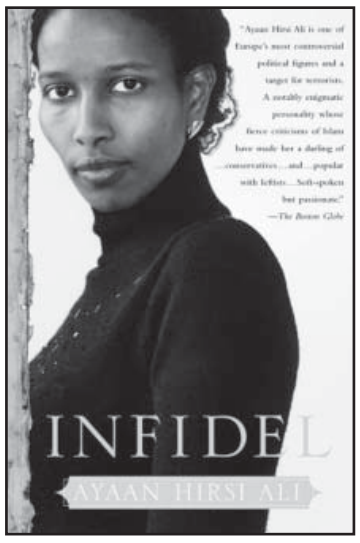
The concept was born out of a class project. The students knew that Stroman's wife, Diane, was starting something like this on her own and wanted to help her. Once complete, it will be the first fund on campus devoted to sociology and social work.

Reilly's students began establishing the fund at the beginning of the semester. Since they have raised no money yet, the project may run beyond the semester's end.

Those interested in donating to the fund or in providing fund-raising ideas should contact Meckey or Rosenthal via e-mail.

Required text upsets Muslim students

continued from page 1



the book "Non-Somali," because it has more to do with why she doesn't want to be a Somalian than a Muslim," said Jawad Peikar, a senior with a POE in International Politics and president of Muslim Student Association (MSA).

"[Ali] is misinforming people about Islam. I feel sorry for what she has gone through, but that is not how I live nor is it how my sisters live…they chose partners, and were educated," said Subhi AbuAbbas, a senior MSA member from Jordan.

Other specific Muslim student complaints cover things like Ali making comments that cite the Quran but fail to cite where precisely the information can be seen. Another objection is that Ali assumes that her experience as a Muslim in Somalia is the same for the 1.2 billion Muslims all over the world.

Not all students in the class found the book offensive. Samantha Henchy, an elementary special education senior said, "I think [Ali] gave the people in her book a fair chance; she continually tried to give explanations for people's actions."

"Nagengast embodies the idea of western education being provocative and he's not afraid of being that way, be it choosing a book like this to discuss or to ask us what we really think about it to help us to learn," said Mike Fisher, a senior in the class.

Still Nagengast met with Peikar and AbuAbbas to discuss why he was using "Infidel" as well as to discuss alternate materials with them. The materials that AbuAbbas suggested were "Gender Equity in Islam" by Jamal Bawawi and "Islam for Dummies." Both, according to AbuAbbas, represent a clearer picture of what the religion is really like. Nagengast added the books into the coursework.

Also Nagengast invited Peikar and Rasma Qadir, a freshman Muslim student, to give a presentation in response to "Infidel" based on their personal experiences of Islam.

Nagengast will still use "Infidel" as a discussion starter for women's rights in Somalia and other African countries.

Ali's experiences included female genital circumcision (FGC), donning the black veils, an arranged marriage and a lack of any freedom or education beyond religious themes. She makes the point to say that her experiences were directly influenced by Islam and that it is in fact a backward religion because of this.

"The book clearly has some very provocative language and ideas that can be offensive," said Belle Tuten, associate professor of history and advisor of the MSA. "At the same time, these ideas deserve to be spoken about, though the reaction of the MSA students is very natural."

What to be PRESIDENT of Juniata College for a day?

Enter the contest to win a day in the life of T-Kep!!

If chosen, T-Kep will switch places with you for one day. He'll go to *your* classes, eat lunch with *your* friends and more!

You won't go to classes. You won't eat at Baker. And you will be the president of Juniata!

It's like a SECOND Mountain Day... only better... for one lucky winner.

Purchase tickets until Monday, Oct. 27. at the Information Desk in Ellis Hall.

See Announcements for price information

Buy your tickets early and often. President Kepple will randomly draw the winner.

Sponsored by Young Entrepreneurial Society

Weimer to receive state teaching award

Jason Najarian

On Oct. 19, Donna Weimer, chair of the communication department, will be honored with the Pennsylvania Communication Association's Harvey Kelly Excellence in Teaching Award.

The honor is based on commitment to teaching inside and out of the classroom. Those who receive it are models of what it means to be an educator of communication.

Weimer was nominated for the honor by colleagues, students and administrators.

"It was very gratifying to see the nomination letters and be recognized by colleagues and students for excellence in teaching, which I love doing," said Weimer.

The award had special meaning to Weimer because she personally knew and worked with the award's namesake.

"We worked for many years on the PCA together. He [Kelly] had a true passion for communication and public speaking" said Weimer.

An awards ceremony will be held during the Communication Association's 68th Annual Conference at the Atherton Hotel in State College.

Nobel Prize on campus

Christopher Shannon/ Juniatian

In 1997, Dr. William Phillips ('70) won this Nobel Prize for his work with laser cooling and trapping of natural atoms. Phillips recently donated the prize to the College. It is on display in the physics wing of the Brumbaugh Academic Center.

Does true freedom of speech exist?

EDITORIAL

It's interesting that although freedom of speech is one of the most universally desired human rights, it is also one of the most contested (see "Thinking about Thinking," below). Nobody ever really talks down free expression as a bad idea, yet everyone seems to have his/her own exceptions to this rule.

Many governments claim to support free expression, but often it gets twisted to uselessness or even ignored completely.

In many cases there is blatant oppression. One of the biggest examples of this in the world today is the protest against the military junta in Myanmar. The peaceful protest, led in part by Buddhist monks, recently erupted into a violent military crackdown.

It appears that The Gambia is one of these nations that allow freedom of speech unless they don't like what they hear (see "The price of free speech" pg. 1).

The evidence arrayed against it is condemning. It is absurd to claim freedom of speech when the public is too fearful to even speak out. Against the spirit of the Gambian constitution, journalists' careers can be ruined, or worse, they can be jailed or murdered for their words.

It's unlikely that most Americans can even imagine constantly having to evaluate what they say based on the fact that the government could come after them if they say "the wrong thing." However, a surprising amount of people face these challenges on a constant basis.

There may not be the same level of violence in the United States that occurs in much of the world, but free speech is still contested. Recently, "Banned Book Week" was celebrated to remind Americans not to take for granted the relative freedom they have.

While there are less overt attempts to stifle the expression of others, many try to censor what they find personally distasteful. Harry Potter book boycotts and burnings certainly prove this.

These challenges are not absent from Juniata. Two years ago All Class Night was so heavily moderated that it basically lost its value. Even though a band of students exercised their American freedoms to protest the censorship through staging a second, unauthorized version of the event, the mere attempt by some College staff members to dictate the content of a student parody show illustrates that there are restrictions on free speech, in some form or another, almost anywhere you go.

It brings up the question as to whether there is truly free expression anywhere. Even in places that claim to embrace freedom the most, some degree of censorship exists.

The most difficult part about true freedom of speech is that it entails hearing and giving thought to ideas that might be distasteful, or even hated.

George Orwell wrote, ""If liberty means anything at all, it means having the right to tell people what they do not want to hear."

This makes freedom of expression a constant struggle. Guaranteeing free speech means eventually somebody will say something that you don't want to hear.

It is this paradoxical aspect of free expression that makes compromise difficult. People generally want free expression, but only to the point where it does not offend them. This is why the history of free expression is that of struggle rather than acceptance.

"If liberty means anything at all, it means the right to tell people what they do not what to hear." - George Orwell

Thinking about thinking
Free speech, belief and punishment

Ryan Hamillton

"I disapprove of what you say, but I will defend to the death your right to say it." With this statement, made over two centuries ago, Voltaire revealed our current American notion of free speech. This very same principle encouraged Columbia University to invite Mahmoud Ahmadinejad, president of Iran, to speak in New York on Sept. 24.

Ahmadinejad's speech prompted controversy from all sides. He is a prominent critic of western power and Iran is seen as a significant nuclear threat; the media was enthralled. During his appearance, Ahmadinejad even went so far as to question the historical validity of the Holocaust.

Ahmadinejad said, "…if, given that the Holocaust is a present reality of our time, a history that occurred, why is there not sufficient research that can approach the topic from different perspectives?"

From a political or historical perspective, the statement is certainly controversial. Some would argue laughable. However, the speech also raises interesting questions about the implicit, more philosophical issues of belief and free speech.

Ahmadinejad's denial of the Holocaust is interesting because in America the freedom to make such a statement is upheld. Contrary to this, in many European countries, most notably Germany and Austria, the same statement is a punishable offense. For obvious reasons, the Holocaust is a very sensitive subject in these countries. There is a strong obligatory feeling for coming to terms with the brutal reality of the past.

In Europe, questioning the extent of the Holocaust is treated as anti-Semitic hate speech, encouraging racism and violence. Essentially this is a personal belief, contradicted by vast historical evidence in this instance, which impedes on the freedom of others. As such, in April 2007, the European Union (EU) passed legislation making it a punishable crime to deny the Holocaust.

Ethically and morally these are intuitively contentious, even wrong beliefs. Nonetheless, the words of Voltaire are echoing in our minds, and America upholds Ahmadinejad's right to free speech even if his beliefs drastically oppose her own. The critic will insist the government has an obligation to protect the ears of the uneducated from slanderous ignorance. But is legislation the right way to go about this?

Does our notion of free speech rest on the childish idea that sticks and stones will break my bones, but words can never hurt me? Contrary to this, E.U. legislation implies that a personal belief can be detrimental to society. Anyone who has ever been a victim of hateful speech knows that words can be damaging.

continued page 10

Provost Perspective

James Lakso is the College's Provost and a professor of economics. Lakso began his tenure at Juniata in 1970.

What's a Provost? I hear the question frequently, mostly from people outside of higher education, but often from students and their parents as well. Here's a list of some of the more important things Provosts do:

(1) Chair the monthly faculty meeting.

(2) Chair the faculty executive committee which sets the agenda for the faculty meeting.

(3) Meet regularly with department chairs as a group (once a month) and individually a couple of times a year to evaluate faculty in their departments and talk about program, staffing and student accomplishments.

(4) Receive reports from the faculty personnel evaluation committee and make decisions on faculty promotion, tenure and contract renewal.

(5) Work with academic departments to hire new faculty.

In addition to duties related to the academic departments, Provosts also typically have responsibilities in student affairs, study abroad, the library, safety and security and registration. I meet twice each month with the academic affairs staff that includes Dean Clarkson, Dr. Jenifer Cushman, John Mumford, Athena Frederick, Roy Nagle, Chad Herzog, Sarah Clarkson, Cindy Clarke and Assistant Provost Dr. Paula Martin.

The range of topics discussed goes from locking residence halls, to computers in the library, to the Artist Series, to Web registration, to Mountain Day, to athletics.

Professor of biology, Dr. Randy Bennett, said (not sarcastically, I think) that a Provost has to stand firm yet bob-and-weave at the same time. Other Provosts' metaphor to describe the job is "herding kittens." I prefer "shoveling toads into a wheelbarrow."

Juniata trustee, Dr. Maurice Taylor of Morgan State has said, "The job of the President is to make speeches. The job of the faculty is to think. The job of the Provost is to prevent the faculty from making speeches and to make sure the President doesn't think." It's a great job.

Life on the Lake

Eco-envy: the politics of college sustainability

Brittany Moyer

The Raystown Field Station (RFS) hosted a meeting on Sept. 25 of four Pennsylvania colleges that have signed on to the Presidents Climate Commitment, a nationwide pledge by college presidents to ultimately make their institutions climate-neutral.

I'm proud of Juniata's own president, Dr. Tom Kepple, for giving this initiative his John Hancock. The Commitment, onto which over 400 institutions have signed, demonstrates that the academic world understands the moral importance of being green and will take concrete action because of it. But the recent meeting of these four colleges at RFS also demonstrated that it is difficult to separate politics from even key moral issues like this one.

Present at our meeting were student, staff and faculty representatives from signatory colleges Juniata, Franklin & Marshall, Allegheny and Dickinson. With so many passionate people in one room, a lot of brainstorming yielded many cutting-edge ideas. We talked about ways to integrate sustainability into college curriculums, cut student energy use and recycle more efficiently, amongst countless other things.

But as the day wore on, I could not help but notice an undeniable undertone of rivalry between each of our schools. Here we were, collaboratively sharing thoughts on how to meet our presidents' pledges, but at the same time each hoping that *our* college could take the sustainability cake. We all had a bad case of eco-envy.

Granted, inter-collegiate competition to be sustainable can be helpful, for the same reason that progress is promoted through capitalist competition.

But there's a certain irony to rivalry as well. We boast about how we are working towards a sustainable future, which begs cooperation between people for the best use of natural resources and capital. But we were obviously hesitant to cooperate fully, for fear of losing the sustainability edge and everything that comes along with it: especially media attention and publicity, which lead to higher standings in the college rankings, spawning collegiate prestige and public esteem.

Dickinson College is reaping the benefits of a green agenda. Its larger student body (2,355 full-time students, according to Dickinson's Web site) and heftier budget helps it gain a competitive edge over the rest of us. Its rankings indicate that its efforts are noticed.

During one of the meeting's break-out sessions, we discussed methods to assure that freshmen are exposed to ways of more-sustainable living. We came up with the unique idea to have a two-week retreat for freshmen during first semester, where students spend time living at a green facility similar to RFS. It would be an intensive immersion in eco-friendly practices and living.

The idea emerged from the group as a whole, and we each wrote it down and starred it. But we realized that we each wanted the idea, and the positive attention that could come along with it, for our own colleges. The representative from Dickinson even half-jokingly said something like, "Now, don't any of you take this idea; I'm pitching it to Dickinson."

Brittany Moyer / Juniatian

A black-capped chickadee held by Chuck Yohn at Raystown Field Station's Grove Farm, where students caught and released birds.

And so we're faced with a conundrum in the go-green education movement: to what extent can idea-sharing and cooperation between colleges exist without rivalry interfering?

A little competition never hurt anyone, but it would be a shame if the collective movement to ensure the health of the earth and its humanity became fragmented because of its participants' self-interest.

Junior Brittany Moyer is one of 10 students living and studying at Juniata's Raystown Field Station for the fall semester. Those interested in applying to spend at semester on the lake should contact Chuck or Sharon Yohn, co-directors of RFS.

Join Brittany in a discussion on the Arch about this column, the Raystown Field Station or sustainability.

This week's topic: Was a college's "greenness" a factor in deciding who your tuition check would be made payable to? If it wasn't, would it be now if you did it all over again?

Ask the Administration

Apparently Juniata will no longer have athletic trainers from Penn State work in our training room or at our games. This fall we have two trainers to work on eight teams who often need pre-practice or in-game treatments at the same time. Why was this change made? Is it a permanent change, and what effects will this have on the care our athletes receive?

In early September Penn State's Athletic Training Education program made a decision to stop sending interns to Juniata. Our understanding is that this was a cost saving decision for their department with time saving implications for their students.

Obviously Juniata was surprised by this and disappointed that the relationship will not continue. For now, we will rely on our current full-time staff. In the longer term, Juniata will be closely examining the best possible ways to care for the health and well-being of our athletes.

Again, this was a sudden and unilateral decision on Penn State's part. As the inquisitor has indicated, the training room is busier than ever and there are challenges in making sure everyone receives the best care possible. However, the athletes and coaches have shown great forbearance as we work through a challenging semester.

~Jeff Leydig, Athletic Trainer
and
Larry Bock, Dir. of Athletics

In my science courses, my additional discussion sessions were already noted on my schedule, but my CWS lab section's meeting time was chosen by a class vote. Why aren't CWS lab meetings scheduled like every other discussion session on campus?

A few years ago CWS Lab's were scheduled, but were mostly at the 8 a.m. time slot – since scheduling is so tight. Because of the nature of CWS Lab, we developed an option for each lab group to come to a consensus about an alternative time – so that the 8 a.m. labs could be avoided. It is not optimal, we realize, but it seemed like the best option at the time.

With a growing number of other classes scheduling exams, tutoring sessions and lab-related activities in the evenings, we realize that students are being 'crunched' more and more. The number of conflicts with club and organization meetings has also grown.

We are reviewing the situation and hope to have a better solution for next fall. One option on the table is to hold all CWS Labs at two or three specific times in the evenings, working to coordinate with other classes and clubs and organizations, so that those times don't create conflicts for CWS students. Alternatively, we could go back to having a majority of the labs at 8 a.m., but we suspect that most students will continue to view that option as the least favorite.

We certainly welcome students' feedback and suggestions for how to help manage this issue, as we are committed to making it better.

~Dan Cook-Huffman,
Asst. Dean of Students & CWS Lab Coordinator

Athena Frederick, Registrar

Carol Peters
CWS Coordinator
Writing Center Coordinator

You can ask the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective" (see above). Though he has plans for his column this semester, the president welcomes topic suggestions.

For the "Ask the Administration" feature (see page 10), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwared to administrators via the Juniatian's e-mail account.

Free speech, belief and punishment

continued from page 8

So what is the relationship between belief and action? If a person believes that minority groups are inferior, they may or may not act discriminatorily towards these groups. If a person believes that a personal relationship with God is the one and only road to salvation, they may or may not discriminate against unbelievers. Is it the belief or the action which is wrong? There is a fine line. And how do we decide to outlaw one type of expression and not another?

I want to agree that a person should be punished for promoting hate and violence, but where do we draw the line? By treating ill formed beliefs in a serious manner, we only give credence to absurd theories.

If it is illegal to make an outrageous claim against the validity of the Holocaust then punishing other marginal beliefs is only a small step away. Maybe legal action is not the right way to approach this. Intellectual discussion and education may be more appropriate solutions.

We must remember, the right to free speech allows a minority to speak out and instigate positive change. America's founding fathers and Voltaire insisted on preserving free speech to allow for an open flow of ideas. Legally limiting the right to voice a belief, no matter how controversial, directly limits the freedom of us all.

Juniatian Mission Statement

The Juniatian exists to better inform the campus community about events and issues that affect the College. We have three main objectives:
1. To provide information on campus events, departments, clubs, athletics and general Juniata-related news.
2. To express opinions, through the editorials, that contribute to campus awareness on a variety of topics.
3. To allow the community the opportunity to respond to relevant campus issues to our reporters and via letters to the editor.

THUMBS UP, THUMBS DOWN

to Dr. James Latten for making his concert band go to rehearsal on Mountain Day (a clear violation of the tradition). What's he going to do to his musicians for Madrigal… make them wear fake reindeer antlers and pull his sled while he steals cans of Who Hash?

to the enterprising Kvasir students who sold hot dogs and cookies outside East last Saturday night. Apparently, they turned a nice profit. $20 says you just heard about JCEL's next student business venture…

to the recent 85 degree weather…in October. Nothing says, "Sign of the Apocalypse" better than seeing coeds tanning on blankets of freshly fallen autumn leaves.

to the fact that all Res. Life members became certified in CPR last week. We are publicly praying that Tim Launtz has t-shirts made for his staff that say, "Dying sucks, so RAs blow."

to people who didn't tip at JC Dine Out. So the menus were limited, the exchange rate small and the hidden extra costs unfair. But, come on, people, when you sense injustice, you stick it to The Man, not the waitress.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Hunting down Huntingdon

The Diner: An American tradition and Huntingdon specialty

Romeeka Gayhart

American diner food is my personal favorite Sunday mid-afternoon hangover remedy. But beyond the healing properties of a delicious omelet, diners always have a great history. Diners are especially appealing to Juniata students because they have better hours than Baker and a great meal for under $8.

Juniata students have three major diner options, since "the fall of Grubbs": Miller's Diner, Diner 22 and Tops Diner.

Miller's Diner

The Miller family opened its diner in 1974. The once all-pink establishment has passed through many different owners. Yet Miller's Diner focuses on tradition; previous owners and their children still eat there and most of the menu items and employees are inherited. The daily dinner specials, for example, have stayed the same for over 30 years.

Miller's also has its own home baked bread and pastries. With every pie, Miller's gives out one "Tuit." Stop by to find out what it is!

Miller's is best known for its motto: "We're Train-Stoppin' Good!" Given Miller's close proximity to the train tracks, railroad engineers and conductors are known to toot their horns while passing and even stop trains to take meal breaks.

According to diner legend, one such pair stopped for lunch in Oct. 1996. Although this act itself is not unusual, the engineers neglected to notice that their train was a few cars too long and blocking traffic for miles on Route 829. A police officer from Mount Union, caught in the road block, drove to Miller's to kindly ask the engineers to move the train (and give him $94 in fines).

Miller's offers a great sit-down, family dinner. In addition to offering a full menu, Miller's offers a breakfast buffet on Saturday and Sunday mornings and a Friday night dinner buffet.

Miller's Diner is located on Route 22, three miles east of Huntingdon, PA. They are open Monday through Saturday 5 a.m. to 8 p.m. and on Sundays from 7 a.m. to 2:30 p.m.

Diner 22

Diner 22 was inherited by owners Gloria and Ed Wilt a little over 19 years ago from Gloria's parents, Agnes and Joseph Bilich. The building was actually a 1919 Huntingdon Broad Top Railroad dining car. During its transportation across Route 22 in 1946, the railcar slid off the truck onto the side of the road. Rather than move it, the car was transformed into a diner.

Diner 22 is known for its homemade soups, pies, all day breakfasts, and fresh ingredients.

Gloria Wilt, who has been a waitress since she was 16, recently won first and second "Best Pie in Huntingdon County" for her Coconut Crème and Peanut Butter Cup pies. She joked, "It's like I always tell the customer, we only asked you what you wanted, we didn't tell you what you were going to get. You want homemade food, [well,] Mom's didn't always turn out right either!"

Despite the joking, Diner 22's consistent quality of food is what keeps the regulars coming back.

Diner 22 is by far the smallest diner in the area, but its well worth the trip. What the diner lacks in size, it makes up for with friendly atmosphere.

Diner 22 is located about eight miles from Huntingdon on 22 West. Hours of operation will be shortened for the winter months, but the diner is currently open from 5 a.m. to 9 p.m. every day of the week.

Tops Diner

Tops Diner has been a part of Huntingdon since 1949. The original diner, which burned down in 1959, was reopened in an old fruit market. The business became a family tradition, with original owner Gini Helsel selling the diner to her daughter Marge Matthews. The building is full of family touches, including a giant mural painted by Matthews' uncle.

After the interstate was built, times were hard for diners along Route 22. With truck traffic diverted, Tops had to change its 24 hour tradition and adopt different hours for a changing clientele.

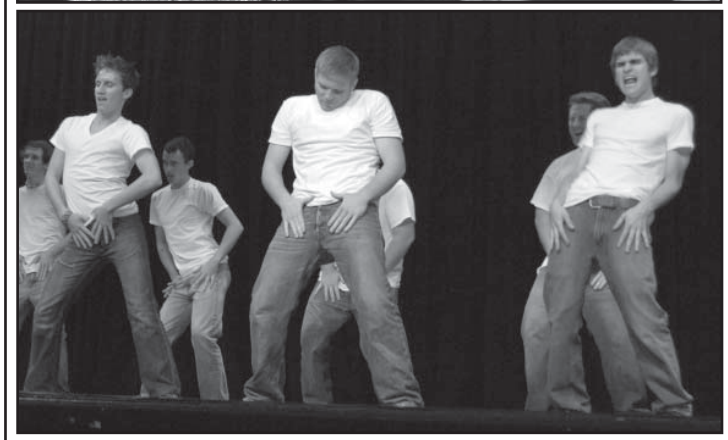
Owner and manager Rick Walker took over the business in May, 2006. Walker was born and raised in Huntingdon and fondly remembers going to Tops with his grandparents for ice-cream and pie. Although many different buyers were interested in Tops when it went on the market, Walker was chosen because he was dedicated to keeping frozen hamburger patties and instant potatoes out of the Tops kitchen.

Tops had many exciting changes with the new ownership. In addition to old favorites, the menu has some new items, including hot wings and contemporary sandwiches, such as the Reuben and Rachel melt.

Tops is a great choice for Juniata students, because it offers a free wireless connection, a 10% discount for students and outside dining while the weather is nice.

Stop by Tops from 6 a.m. to 9 p.m. Monday through Saturday, and from 7 a.m. to 8 p.m. on Sundays. It is located on Route 22, four miles east of Huntingdon.

HUNT THESE DOWN



At Miller's...
Breakfast Buffet: $7.75 Sat./ Sun. 7-11a.m.
Dinner Buffet: $10.49 Friday nights.

At Diner 22...
Breakfast: "The Mess," $5.75
Dinner: hamburger steak with starch, vegetable and salad, $6.75
Home baked pie, $2.00

At Tops...
Breakfast Special: Bacon, eggs, home fries or hash browns and toast or biscuit with a cup of coffee, $4.99
Dinner: Chicken Parmesan with spaghetti and salad, $6.99

Mr. Juniata

Kevin Dundore / Juniatian

Circle K presented "Mr. Juniata: King of Hearts" on Sept. 28. Pictured above, contestants shake their groove things and are adored by the ladies for a worthy cause. Mr. Juniata winner, Ryan Hollister (top), and his comrades raked in $2,974 for the Multiple Sclerosis Society.

Mountain Day

Christopher Shannon / Juniatian

Mountain Day, on Oct. 1, was a success with warm weather, great food and plenty of outdoor activities. From top to bottom: Senior Brian Frey looks as happy as a kid on the playground. Juniors Fred McNeal, Kevin Dundore and Lance Joesph looked tough against the seniors in tug-of-war. Senior Heather McMinn and sophomore Melissa Johnson buffed the hillside on the slip-n-slide.

In the Name of Fashion

Five Minute Face

Kelly Popernik

Heavy makeup is out and simple makeup is in: less is more in the makeup world. The light application needed this season can be done in five short minutes.

The first step of creating a great look involves clean skin. Moisturize and then follow these simple steps for a five minute face.

5 minutes left

Those who wear foundation or powder will find it easier to use 2-in-1 products. These give your skin medium coverage, and will help to avoid the "caked on look."

Foundations or powder give a base to your makeup. As a result, it will stay on for hours and you won't have to re-apply throughout the day. Apply the foundation-powder formula over your entire face including eyelids and lips.

4 minutes left

Eye shadow is the most important tool in your makeup arsenal. Once, women thought eye shadow had to match your clothes. Wrong. It should compliment your hair and skin tone.

For green and hazel eyes try a purple eye shadow. Blue eyes opt for brown or bronze. Brown eyes will look great with grey tones. These colors will give a sultry look and can easily be transformed into a night look. To play it safe, neutral tones will go with any eye color. Remember, these are just a few colors I suggest. Play with them!

To make your eyes really pop, apply a lighter color to the inside corner of your eyes near the tear ducts and right below the eyebrows. Don't forget to blend this color with the rest of your eye shadow.

3 minutes left

Apply a coat of mascara to both your top and bottom lashes. Mascara comes in different shades of black and brown. For a subtle, more natural look, try brown. If you want your eyes to really stand out, try black.

Remember to curl your eyelashes first to make your eyes look larger and more awake. Be careful. If you curl your lashes after mascara is applied, it will stick and possibly rip out lashes! For easy application to lower lashes, use the tip of the mascara brush.

Try to fight the urge to constantly pump your mascara brush into the bottle because it will dry it up faster.

2 minutes left

Blush has the ability to transform a face. It can come in a powder or cream. Stay away from cream based blushes if you have acne, wrinkles or other blemishes. The cream will sink in and make the creases stand out.

Apply your blush starting at the bottom of your cheek bones. Brush up towards your eyes.

For a lighter toned face, a pink shade of blush will do wonders. Those with a dark complexion should avoid lighter tones that will barely show up. Opt for a berry shade to bring out those cheek bones.

If you are not the biggest fan of blush, a bronzer is another option. Bronzer is meant to highlight, so apply to places where the sun naturally hits your face like your forehead, top of your nose and cheeks. Bronzers are simple to apply and will add a natural shimmer.

1 minute to go

The finale is lip color. Avoid lip liners unless they perfectly match your lipstick. They are appropriate, though, if you are trying for the seductive red lip.

For daytime, a gloss will add a simple shine and is easy to apply without a mirror. Like blush, if you have a fair complexion, try lighter shades of pinks. But if you are going for a dramatic look, I would recommend a dark red. Medium to dark skin tones can get away with a lot because dark or bright colors will not overpower the face. Try a fierce lip color like a berry tone or hot pink.

Your five minute face is finished! Want to take your daytime look to nighttime? To make your eyes more dramatic, apply a darker shade to the outside corner of your eyes. For the smoky look, apply shadow directly beneath the bottom lashes. Add more blush and a bright lipstick. You can get away with crazier eye colors, so go for it! Perhaps a green or purple eye liner will make your eyes pop.

Don't be afraid of a little trial and error. This is the time to play and try new things with your makeup because in the end, it's all about freedom.

Finding the right brands to put together your five minute face can be a hassle and expensive. There are hundreds of brands to enhance your look. Chanel is one of the best brands out there, but isn't exactly affordable. One single color of eye shadow is in the $45 range. L'Oreal, Neutrogena and Physicians Formula are all good brands that are affordable, easy to apply and will last for hours.

For the best makeup tips visit cosmopolitan.com or allure.com.

Fun Fashion Tip

The best time to tweeze your eyebrows is right after a warm shower. It will be less painful.

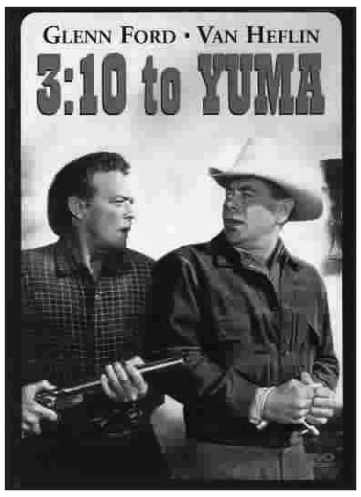
"3:10 to Yuma" blends past and present on screen

John T. Huffstetler



"3:10 to Yuma," a remake directed by James Mangold ("Walk the Line," "Girl, Interrupted"), is based on a 1953 short story by Elmore Leonard. It tells of a rancher down on his luck that joins a group of men transporting an outlaw to prison. The dangerous path would give the rancher money to repay his debts and start anew. Yet, the perils grow the farther he travels.

The film, set in the past, shows the old western in a modern light. The typical view of westerns shows tough emotions from rugged men. Their speech is quick, intimidating and to the point. It's surprising then that "3:10 to Yuma" consists of long exchanges between Ben Wade (Russell Crowe, "Gladiator") and the other men keeping him captive, especially the rancher Dan Evans (Christian Bale, "Batman Begins").

These long talks exhibit a greater range of emotion not typical of the western. Wade is a compassionate, yet ruthless killer. He draws pictures of nature and quotes the Bible. He also shoots innocent men and steals their gold. Evans' tough exterior masks his shortcomings, yet reveals his perseverance. These elements set it slightly apart in its genre. They also add to the believability of the film.

The plot itself seems modern as well. The film is reminiscent of the 2006 movie "16 Blocks." In it, a cop tries to walk a witness down a NYC street, constantly at risk of attack. The difference lies mainly in the setting. Here dangerous Indian territories replace gang ones. Horses replace the cars. But the men in "3:10 to Yuma" could easily be traveling across a modern city to put Wade away.

While the film's setting reflects modern times, the choice to place it in the old west adds to the tension. There are scenes of unchecked violence, paid off law officials and guns placed in the hands of doctors and teens. This lawlessness sets a mood of unpredictable action. A soundtrack of slow, intense music aids this. Shots that switch between escorting Wade and his gang catching up to save him build excitement. The moods of Wade's captors were also tense as their lives were at risk. The only relief from tension was Wade's unsettling laid back demeanor.

Crowe plays this role remarkably well. He gives almost comic relief. Yet, he plays the most dangerous man in the film. Bale plays the typical stoic good guy role. But like in his other films, he delivers it well. Crowe and Bale play with each other's emotions throughout the film. Many times this leads the plot more than the actual events, and provides depth beyond the action. This also shows their skill as actors.

A surprising change comes from actor Ben Foster. He plays Charlie Prince, Wade's right hand man. In the film he is the most ruthless killer. This is far different from his role in "X-Men: The Last Stand" as a mutant resembling an angel. Foster typically plays the lovable geek. This role change is convincing and shows Foster's range as an actor.

The climax is a classic western shootout between Evans, the last man in the group, and Wade's gang who try to stop Wade and Evans from boarding the train to Yuma. The twist at the end retains the unpredictable nature of the film, and leaves you pondering the characters' decisions.

Final Take:

★★★

Rated R for violence and some language.
Running time is 117 minutes.

Now playing at the Clifton 5 in downtown Huntingdon

MUSICALLY CHALLENGED

LET IT LIVE

Zack Stoll

Go to every live music event that you can. Live music is better than any album, because you're there watching the music being created, seeing and hearing what goes into the song. It is an experience unlike any other. The intensity of the band pulls the crowd into it, which makes the band more pumped. It's a positive feedback loop. When there's a band up on the stage that is rocking out, putting everything into that show, it's awesome.

That's what a good show should do; draw you into the music and completely consume you. That is much easier to do at small venues. At these shows, you're close enough to see the band, truly getting into its music.

Also when you're in a smaller venue, most of the people that go are true fans who add more energy to the show. You're standing packed in, right up against a stage that has a bunch of people having fun. It's impossible not to get into it. I have a perfect example from this summer.

I was at Warped Tour at the Tweeter Center in Camden, NJ. I had seen one of my favorite band's sets and the crowd had left, so I wandered up to the stage. I was front and center for the next band, Hawthorne Heights, who I don't like.

In about three minutes, the crowd had built back up to about 1,000 kids and I was too lazy to try to get out of the crowd. When Heights came out, the crowd went crazy. I'm standing there tolerating it, but within a few songs I was into it. It was too hard not to be when the singer was two feet in front of me belting it out, and everyone else around me was loving it. The energy was contagious.

I've been to big arena shows, but it's not the same as small shows. It's pretty hard to get into the set when you're up in the nose bleeds. I imagine it's exciting to be front row at that show, but then is it really worth hundreds of dollars?

Don't get me wrong though; an arena can still have a worthwhile show. When I went to see Roger Waters of Pink Floyd at the Continental Airlines Arena in Jersey, it was a great time. But it definitely wasn't the same as a small show.

Here's another example of a small venue show from last summer. My friend randomly invited me to a Boys Night Out show at the North Star Bar in Philly. The

12 Things to do over fall break

12. Tell your grandma the food is so bad here that you've resorted to ironing grilled cheese sandwiches in your dorm room. Smile as a four course feast materializes in front of you.

11. Nap so long that your mom wants to have you checked for mono.

10. Spend hours on facebook to see which of your friends' high school romances failed in the first seven weeks of college.

9. Take the GREs…in a ridiculous outfit guaranteed to distract others.

8. Whittle a voodoo doll of the professor who scheduled your exam for the day after break.

7. Practice your "Soulja Boy" moves in front of your pets.

6. Organize the neighborhood kids in a friendly game of "Storming."

5. Learn how to tie a bow tie to impress Tuten and Bukowski when you come back.

4. At random hours of the morning, run through your house screaming, "IT'S MOUNTAIN DAY!!!"

3. Design the most pimped out Madrigal Line tent of all time.

2. Begin studying next year's academic calendar and sports schedules to narrow down Mountain Day options.

1. Squeeze the freaking Charmin!

Musically Challenged: Let it live

continued from page 13

stage was in the back of the small bar that could hold about 300 people at most; so we were packed in there. The crowd was only there for Boys Night Out though, so the energy was low for the opening acts. None of those bands were bad, but no one was feeling it, and it was reflected in the performances. The second Boys Night Out came on stage, it was completely different; the energy went up tenfold, and it became one of the best sets I've seen. It was enough to pull me into it the pit for a band that I barely knew.

On Oct. 17 there will be an amazing show in Altoona. A Wilhelm Scream, The Swellers and at least three other bands will play at the Lion's Den, a small venue. Get out there and you'll see what I'm talking about. This show will be crazy if you're a punk rocker, and it's only $12.

Pretty much, go to any live show you can. It may be some local band at your favorite dive, or your favorite band playing a festival. No matter what, you'll have fun.

The Gravity Project: Cripsin

Christopher Shannon / Juniatian

The Gravity Project presented "Cripin" October 4-6 in the Suzanne von Liebig Theatre. The play is based on Avi's Newbury Award-winning novel of the same title. The play will be performed from Jan. 17 -Feb. 17, 2008 at the People's Light and Theatre in Philadelphia. The Gravity project plans to introduce "Crispin" in other U.S. theatres and on tour in Europe. In this photo, senior Kellyn Miller and junior Skye Hatton-Hopkins star as Crispin and his mentor, Bear, respectively.

T his is why we have a post office box ...

Fairly often, the Juniatian receives letters from prisoners asking for a variety of things: subscriptions to our paper, help in legal battles, phone numbers for the WKVR deejays. The following letter is the most unique request that the Juniatian has ever seen. Why have we decided to publish this correspondence in our arts and entertainment section? Read on and you will see.

I am in the RHU at S.C.I. Huntingdon Prison. My complaint concerns some "continuing wrongs/ongoing harms" being committed against me by staff. Such as certain "technology" (hidden cameras, microphones/speakers, etc. and some kind of mind violation scan device that allows staff to hear, read, monitor, record one's thoughts without the victim (prisoner) speaking or writing) in regular G Block RHU cells used by staff to covertly harass, humiliate, agitate, intimidate, and confuse certain unsuspecting prisoners nonstop 25 hours a day who are not "double celled." It's also a tool to read prisoner's outgoing personal and legal (privileged) mail without prisoner's knowledge and/or consent. I don't know of any other prisoners who have experienced such "harassment." I don't know if all staff are aware of it. I don't know if it's some kind of Department of Correction (D.O.C.) experiment or just another S.C.I. Huntingdon tool of harassment. BUT I do know that it's psychological terrorism, retaliatory, malicious, discriminatory, against PA, D.O.C Policy & U.S. Constition Amendments 1, 5, 4, 6, 14, & 8.

Also, staff have made a habit of telling my visitors (without my knowledge and/or consent) that I'm refusing their visits (including an investigator for a prison case I had to resolve at Huntingdon County Courthouse).

I have filed Grievances. Various Pennsylvania Prisoner "support/advocacy" groups, all proper (superintendent, etc) and PA. D.O.C. Central Office (secretary, office of Professional Responsibility (O.P.R.), etc.) staff have been notified over a period of months. NONE of them have "investigated" and/or remedied my complaints. The above mentioned can be [proven] if someone came in this prison to investigate/expose the truth of the foregoing (beyond mere phone call or "questioning" staff).

I declare under the penalty of perjury that the foregoing is true and correct.

Thanking you in advance.

Sincerely,

Ricardo (Last name withheld to protect to " the innocent")

This semester, the Juniatian sent out a call to athletes on campus. We asked them to revamp the sports section, to give our readers more than just scores and standings. We asked them for the inside story on their sweat and sacrifice. Athletes from four teams responded. These are their stories.

Harder, faster, better, stronger

Women's soccer trains with a "bend, don't break" mentality

Kristen Penska

What keeps an athlete at the top of her game? This year, our team knows the secret.

This season, it's all about the ACL. Studies show that female athletes are 2 in 8 times more likely to tear their ACLs than their male counterparts. Our Juniata Women's Soccer team is taking a stand against the treacherous injury. "We don't want these injuries to affect our competitive edge, so we are preventing them from the start," said team captain Heather McMinn.

"We just have to maintain our composure out there. We can't get caught out of position, even for one second."
– Laura Goodlander

Our daily ACL warm up is no stretching session. It is a workout. We arrive at practice a half an hour early to strengthen our ACLs. We run, stretch, jump and pivot to improve our balance, while also building our quad and hamstring muscles to add extra protection for ligaments. "Trust me, after the ACL warm up, you can feel the burn," said sophomore Amanda Broadwell.

On top of this dynamic ACL workout, our team has taken steps to ensure that we are strong. Coach Smith has created a unique lifting program, worked on last year by goalkeeper and captain Lisa Russo. This workout focuses on the core, which is utilized to ensure that all players maintain balance and control while moving assertively down the field. Arms and legs are strengthened by using light weights and more reps, guaranteeing lean muscle formation, rather than bodybuilder bulk.

We do Plyometric-type warm-ups so that every player's heart rate stays at a good pace. This ensures that we burn the maximum amount of fat possible and gain the maximum amount of muscle at a quicker rate. "My arms felt like they were already toned by the end of one week's workout," said sophomore Sarah Ruggiero.

Though practices do not include hours of sprint drills and distance running, we utilize strength drills and focus on improving muscles for overtime scenarios, which likely aided us in our Sept. 29 game against Catholic University.

The game against Catholic was a heart pounding 110 minutes long, and our team stuck it out until the end. Though wet with the rewards of fatigue, each player ran strong to every ball, and gritted through every close shot.

Outside forwards Katie Young, Sarah Ruggiero, Elizabeth Van Blarcom, Kelly Logue and Maura Collins had it the worst. Chasing crosses are their specialty, so running the equivalent of 10 to 15 50-yard dashes per game is not uncommon.

The Catholic players were exhausted by the end of the second half, while we could have ran them into the ground for another 45 minute period. "It was a really hot day and I was surprised that I wasn't dropping. My body just kept going even though my mind was already passed out," said forward Young.

Though we were defeated in a hard fought battle against Dickinson College on Oct. 4, weakness was not our problem. Defend-

continued page 18

Christopher Shannon / Juniatian

Senior defender Stephanie Mury wins the header battle, but takes a cheap shot from a Dickinson plauer for her troubles. Juniata fell 5-0 to the Red Devils on Sept. 4

Missed opportunities back Eagles into corner

Football is 0-5 start to season

Tyler Sasala

The first five weeks of the season have been a roller coaster ride for the football team. Unfinished opportunities have resulted in our 0-5 start.

Senior wide receiver Lance Tippett said, "We are not doing anything different practice-wise, but trying to keep the enthusiasm high. The problem doesn't lie within our schemes but rather in our inability to execute them consistently."

Although the team has been struggling, there have been some good individual performances that have produced career milestones. Junior quarterback Jay Leonard has exceeded 4,000 yards passing for his career, accumulating over 1,100 yards this season. He is currently ranked 13th among all Division III quarterbacks in passing yards per game, and leads Juniata to the best passing offense in the Centennial Conference at 221.2 yards per game. Leonard credits his success to "hard work in the offseason, great coaching and the receivers."

We are not doing anything different practice-wise, but trying to keep the enthusiasm high."
– Lance Tippett

To go along with Leonard's success, Tippett surpassed the 1,000 yard career receiving mark, 473 coming this season.

On Oct. 6, we met undefeated Muhlenberg College at Knox Stadium. Under the blazing sun, Muhlenberg's number one ranked defense held up to its name. The Mules smothered our offense relinquishing only 119 yards.

While our offense struggled to maintain drives, our defense wore down playing over 39 minutes in the heat.

After trading field goals in the first quarter, Muhlenberg capitalized on its size to score 41 unanswered points, relying on over the final three quarters. With a final score of 44-3 it was our most frustrating loss of the season.

Commenting about the competition in the Centennial Conference Leonard said, "I have no difference of opinion with the Centennial Conference compared to the MAC. The skill level and competition is still good. I think people thought that since we are in the Centennial and their academic standards are the same we will be successful. But they still get the athletes. It's a highly competitive league."

On Sept. 29, we traveled to Westminster, MD to take on Mc-

continued page 18

Flying under the radar

Hassinger a force worth acknowledging

Jess Winemiller

When an athlete dominates a position, he or she usually dominates the headlines. This is not the case with senior field hockey player Heather Hassinger. Besides the winning goal she knocked in against conference rival Susquehanna this season, the starting center back subtly continues to be a reliable presence for the Lady Eagles.

"She is sneaky and unexpected. She can come up with the ball and other teams are taken back by it."
– Leslie Stern

"She is sneaky and unexpected," said senior forward/midfielder Leslie Stern. "She can come up with the ball and other teams are taken back by it."

Head coach Caroline Gillich notices improvement in Hassinger's pursuit of the ball from last season. "When she is hell-bent on the ball, she is getting it," said Gillich.

Stern said most opponents focus on the Eagles' offense and who could blame them? The Eagles offense averages 3.15 goals per game.

As a result, Hassinger and the Eagles' defense are not opponents' first priority. "Other teams do not see her as a threat," said Stern. Often, opponents recognize Hassinger's significance and strength too late in the game, a phenomena exemplified by her game-winner over Susquehanna.

Juniata's scheme affords chances for defensive players to bump up. Coach Gillich encourages her defensive players to "look for overlapping runs."

Hassinger's skill and knowledge shine from the back lines. As center back, Hassinger controls the placement of the ball. To find the open player, she first must see the entire field. "She recognizes where the ball needs to go and where people need to be to make things happen," said freshman sweeper Sammie Smith.

"Coach always calls me the 'quarterback' of the team," said Hassinger with a modest smile.

Quarterbacks must have the ability to scan the whole field while keeping possession of the ball. Hassinger recalls working on this skill for many years. "I just remember dribbling around my house making myself keep my eyes up," she said.

Hassinger is not only talented at finding open teammates; she has the strength to hit the ball to its intended destination. "I can put it on somebody's stick," said Hassinger.

This hard hit is her signature ability. "She can find open space and the ball is so fast no one can stop it," said Stern.

Luckily, the Eagles practice with Hassinger on a regular basis. They are able to receive the momentum of the hard pass and continue advancing up the field. According to Stern, however, the team can sometimes "rely too much on her hit and we do not move."

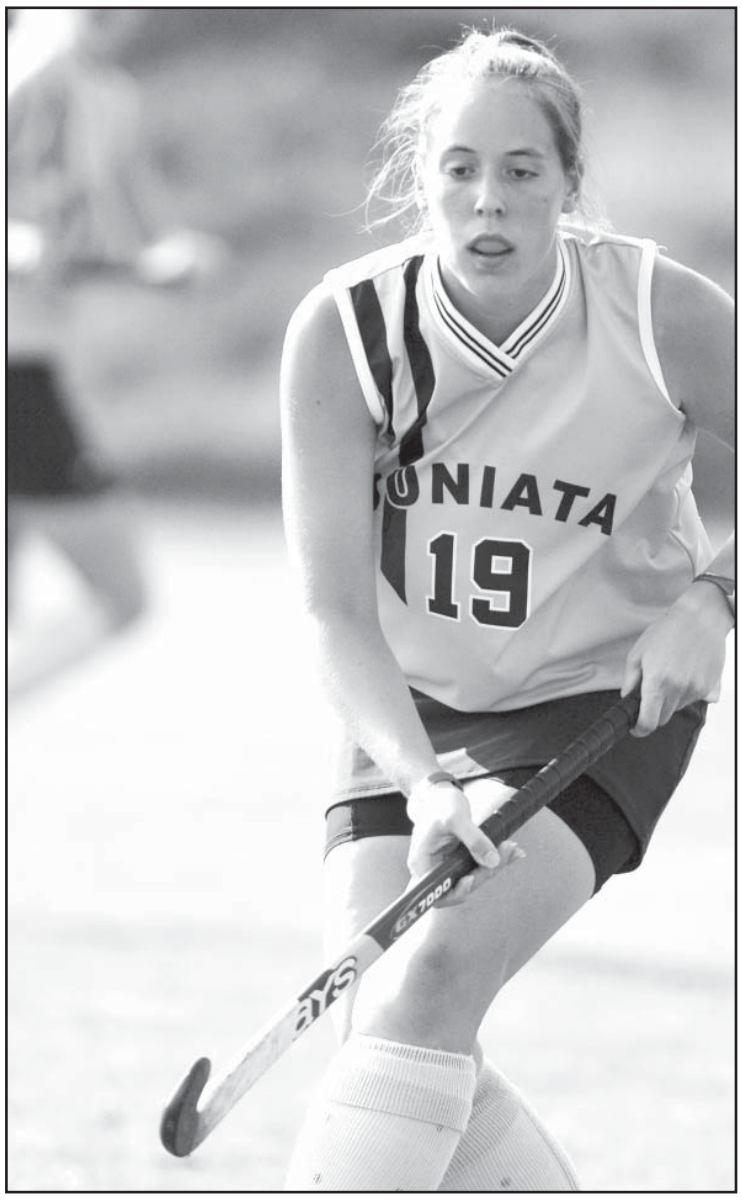
Movement and spacing are key elements in expanding the field, a main emphasis this season for Juniata. "It is hard to be successful in crowded spaces," said Gillich. She explained by referencing a foul shot in basketball where the percentage of success is higher because "it is just the player and space."

Gillich and the Eagles continue to use Hassinger to open up that space. By exposing the field, "she gives us the ability to move the ball back and forth. It makes the other team play the whole field," said Gillich.

This, as well, allows Juniata outside players to contribute.

This is an advantage according to Hassinger who has unfailing confidence in her defensive counterparts. "As a defense, we have a connection. We are beginning to communicate more," she said.

Being a strong leader is a characteristic Hassinger wants to further develop. "I do not have to be [vocal]. We have a lot of players that fill the vocal role. A lot of what I do is through my actions," said Hassinger. Her teammates appreciate and respond to this method of action leadership.



As a newcomer, Smith looks to Hassinger for visual guidance. She finds it easy to relate to Hassinger by watching her effort.

Though vocal communication is not Hassinger's specialty, "She isn't afraid to say something that needs to be said," said Stern. Hassinger vocalizes when it matters. In crucial situations she expresses to her teammates what needs to be done.

Hassinger often fails to give herself credit where it is deserved, blaming this perfectionist mentality on her passion for the game. "I just continue to push. Whenever I get somewhere, I just have to keep going."

This senior's quiet, yet persistent, determination pushes her to an unattainable goal of on-field perfection, which will likely never change. Her drive will continue until the last time she sports her gold number 19 jersey.

Each issue the Juniatian will highlight on athlete who makes a difference in the games or in the locker room without making the headlines. To nominate an Eagle who flies under the radar, e-mail juniatian@juniata.edu.

Courtesy of Juniata marketing dept.

Senior Heather Hassinger has started all 13 games this season, putting up 11 points from her defensive back position.

Playoffs not guaranteed

Every game crucial in JCFH's pursuit of the postseason

Michelle Campbell

Disappointment equals determination. On Sept. 29, Juniata College field hockey faced our second Landmark Conference opponent of the season, Catholic University of America. The game ended in a disappointing 4-1 defeat, giving us our first home-field loss since 2005.

Statistically, we dominated the game. We recorded 21 shots to Catholic's nine. How did Catholic score so many more goals than we did? Junior Erin Smith said, "We had a lot more opportunities to score, but we couldn't capitalize on them. Catholic beat us through the middle of the field with their speed and we never went for the ball."

Our defense has always been the strongest point of our game, but on this day something went wrong. We were hesitant. When the ball entered our defensive end, we did not sprint back to recover. After watching the game tape, we saw ourselves walking and jogging to help back on defense. Catholic's offense was sprinting straight through us. They wanted it more than we did.

The team has learned a lot from this loss. We have been in a groove, just thinking about heading to the field and winning another game. From now on, we must pump ourselves up to beat the opponent, no matter who it is or what its ranking.. Catholic snapped our eight-game winning streak, so now we're starting over again with this new mentality.

We cannot afford to lose another game this season. This year, all team sports in the new Landmark Conference will not automatically qualify for the NCAA tournament. NCAA rules state that a conference must have at least seven teams for two years in order to earn an automatic berth.

The only way for us to compete in the NCAA tournament is to receive a wildcard bid. Each team's record and strength of schedule are entered into a points system that

continued page 18

Men's soccer concentrates on the mental game

Conference schedule in full swing

Sarah Ruggiero

Freshman goalkeeper Joe Kohler is proving to be an ace in the goal box. As an important member of the men's soccer team, Kohler was named Landmark Conference Men's Soccer Defensive Player of the Week, for the week ending on Sept. 23.

Kohler has made 22 saves on the season. "He's doing really well and he's positive. He is a very athletic kid and has excellent reaction time, so he can get to a lot of balls that other keepers can't get to. We knew he was able to be good, ," said head coach, Dan Dubois.

Kohler's defense in goal helped the Eagles record a conference win against Moravian College on Sept. 22.He also did not allow a single goal against Mount Aloysius on Sept. 13.

On Sept. 29, the Eagles played Catholic University for their second conference match of the year. Kohler made six saves during play but let two goals go. Senior captain, Brandon Grim tied the game 1-1 in the 69th minute on a header past the Catholic keeper, but the Blue and Gold fell 1-2.

The men are disappointed in the loss, but happy with the way they played. Their finishing is improving greatly and they are capitalizing on opportunities.

"The guys stayed positive and showed we can be versatile. We came out in the first half with one forward, then switched and added a forward in the second half to go more offensive. We scored 45 seconds later….We had one shot the first half, then seven the second half," said Dubois.

On Oct. 3, the Blue and Gold played Dickinson College. The Red Devils are tied for the eighth spot in the Mid-Atlantic Region, which includes Pennsylvania, Maryland, Delaware and New Jersey. The tough Dickinson squad lived up to its ranking, shutting out the Eagles 6-0.

Now in the meat of the conference season, the Eagles are concentrating more on the mental side of the game. "We have intelligent players. We don't need to go over our formation day in and day out. We want to organize our attack better. It's all mental. We need to ask what our formation requires. We have a ton of guys who can do it," said Dubois.

The midfield is taking most of the shots right now, with Bryan Hess in the lead with five goals and Andrew Steffen right behind him with four goals. As two central midfielders, they are taking most of their shots from thirty yards out. The forwards are getting to the right spots, but unfortunately haven't been able to capitalize.

Five of the Blue and Gold's last seven games are in conference. "Going out we have a level playing field, there are no untouchables," said Dubois.

Feeling the lethargy that comes from the accumulation of games and long days of travel has forced the men to plan ahead for the approaching conference games. In this effort, Dubois has cut out one practice a week, which only last for 75 minutes. And to some players' dismay, many of the regular starters will be resting during non-conference games. The main goal is to maintain health.

This does not mean that the men have taken a back seat to the action. They are making the most of their practice time and are ready to match up with any of their opponents.

The Eagles are currently 3-7-0 overall and 1-1-0 in conference play. "We know we're good and can compete with anyone," said Dubois.

Christopher Shannon / Juniatian

Sophomore midfielder Aaron Bray dribbles the ball up field during Juniata's 6-0 loss to Dickinson on Oct. 3. The Red Devils came to College Hill with an 8-1-2 record. Dickinson is a non-conference opponent. Juniata currently sits at 1-2 in the Landmark.

Sophomore Amanda Fontana and the women's tennis team played a short, four game schedule (2-2) this fall for the first time. Coach Bliel scheduled the matches to give the team more experience heading into its first season in the Landmark Conference this spring.

Football backed into a corner

continued from page 15

Daniel College. There was a big crowd at McDaniel and they were anything but pleasant toward us. We warmed up on the field with boos and chants of "Juniata sucks" raining down around us.

McDaniel scored on its first drive of the game. The defense then held the Green Terror scoreless until the mid-way through the fourth quarter. We responded eight seconds into the second quarter with a 24-yard field goal off the toe of freshman kicker Davis Smith. The score at the half was 7-3 in favor of McDaniel..

In the fourth quarter Leonard hit senior wide receiver, David Nicklaus in the back of the end zone on fourth and goal for the go ahead score. The lead didn't last long. McDaniel responded on the ensuing drive making the score 14-10.

With the chance for a game wining drive, our offense struggled to move the ball. The defense fought and kept McDaniel from scoring, giving the offense four more opportunities before time expired. But we couldn't capitalize. On our four possessions McDaniel blitzed causing sacks and rushed throws that resulted in three and outs. Once again we came away from a game with a bitter taste in our mouths, and we felt like we let another win get away from us.

"A team's true spirit and character are revealed not when they're winning, but when they're losing." H. Jackson Brown couldn't have said it any better. As a team we have found ourselves in that position. After five tough losses, the season has become a test of character for our team.

Christopher Shannon / Juniatian

Senior quarterback Jay Leonard (2) goes down field in the first half against Muhlenburg. Juniata fell in the contest, 44-3.

JCFH playoff picture still hazy

continued from page 15

determines regional standings and eligibility for wildcard bids.

If we lose again, our wildcard chances will be in jeopardy, since wildcard bids are only granted to highly-ranked teams within each region. We are in the South Atlantic Region, which is the most competitive region in field hockey.

Last year, seven teams from our region entered the NCAA tournament. This is nearly one-third of the 24 teams that make it into the tournament.

Since our loss to Catholic, we improved to 3-1 in the conference, 10-2 overall. Three days later, we beat Susquehanna University 3-2. We were hungry for a win.

Senior back/defender Amanda Wimer said, "The game was intense. Susquehanna surged towards our defensive end in the first half. Our scoreless second half was mostly a battle in the midfield. It was tough playing against a team that wanted to ride our shorts."

To prepare for Drew University, our practices included a lot of sprinting, working on small passing and marking up in the circle. We could see that our hard work in practice paid off after the 3-0 victory over Drew.

Senior midfielder Leslie Stern said, "We pressured them hard and controlled the game with our small passing, which we are so successful with."

We have eight games before post-season play. With the final six games being away, we will need to prepare mentally and physically to make a successful playoff run.

Don't miss our last home game of the season against Frostburg State University on Oct. 11 at 4:30 p.m.

Reflections on the fall season

Men's tennis learning from defeat

Brandon Wolfe

The fall season has come to a quick close for the men's tennis team. With four matches in the books we are 1-3. After a close 5-4 win against Frostburg, the team hopes to build off the victory and look toward the spring.

The fall season was head coach Beth Bleil's idea. She said, "It allows for a preseason warm-up so the tennis team can play year-round and gain experience." With the victory against Frostburg, it seems the fall season was a great idea.

The whole team seemed to settle in and become more relaxed as the matches went on. Against Lebanon Valley some of the younger players, like me, were given the opportunity to play singles. We ended up losing the match 8-1, but Jarrad Silver "saw some great tennis." We started using better doubles strategy and gained valuable on-court experience.

The experience has been great for the young players, even if we have a losing record. Bleil said, "This is a positive challenge for the freshmen. It only makes us hungrier."

Hopefully this hunger will carry into the spring season, and with the play of Silver, it seems as though it will.

Silver is currently 3-1 in singles match play. His passion for the game has carried him through most of his matches. Silver dominated his Lebanon Valley opponent, defeating him easily in two sets.

Bleil said, "Last year Silver lacked maturity on the courts. Now he plays smarter and enjoys the arrogance of other players; he feeds off of it."

He also passes on this smarter play to more novice players like me. When I was having a tough match against a Lebanon Valley opponent he made sure he was there cheering me on.

That leadership goes a long way on the courts. It is just another way the Juniata tennis program is growing. The focus that exudes from veteran players will only increase as the team prepares for three returnees from study abroad. In the spring Bleil hopes to make another playoff run, but this time in the Landmark Conference.

She sees our young team placing third or fourth in the new conference. However, with this new found focus from a huge victory against Frostburg, who knows where we will end up.

It's not always easy for Bleil, because she is a woman coaching a bunch of obnoxious guys. Only 2-3% of coaches for men's teams are women, so Bleil is definitely in the minority. She also coaches the women's team. Bleil said, "It's not harder to coach men, it's just radically different."

Well, I would have to say we are radically different, but we're working on it. Despite the challenges associated with coaching the men's team, Bliel is leading us to make huge strides. Bleil feels we are just in "tennis limbo" right now because of the youth.

If we could add two years of experience to every freshman we would be in great shape. But for right now we are working hard to get out this tennis limbo, and head into the off-season with the motivation to succeed in the spring.

Train harder, play longer

continued from page 15

ers Mellissa Johnson and Heather McMinn shut down every possible breakaway with their lightning speed and solid match play. "We just have to maintain our composure out there. We can't get caught out of position, even for one second," said sophomore Laura Goodlander.

On Oct. 6 we defeated Drew, 3-2. Our physical strength and talent overcame their squad. We were on fire from the second the whistle blew, with the first score coming from Van Blarcom in the third minute of the game. Kelly Logue knocked the ball in to finish the first half and later Goodlander slammed a ball into the net from 30 yards out.

We've been training hard and are ready, so come out to our next game and see us dominate Scranton on Oct. 13. The Royals now have a record of 4-8-1, compared to our 6-3-2 mark. The game play will be quick and heated. "They will definitely be competition, but we're bringing our 'A' game," said freshman Caitlin Bigelow.

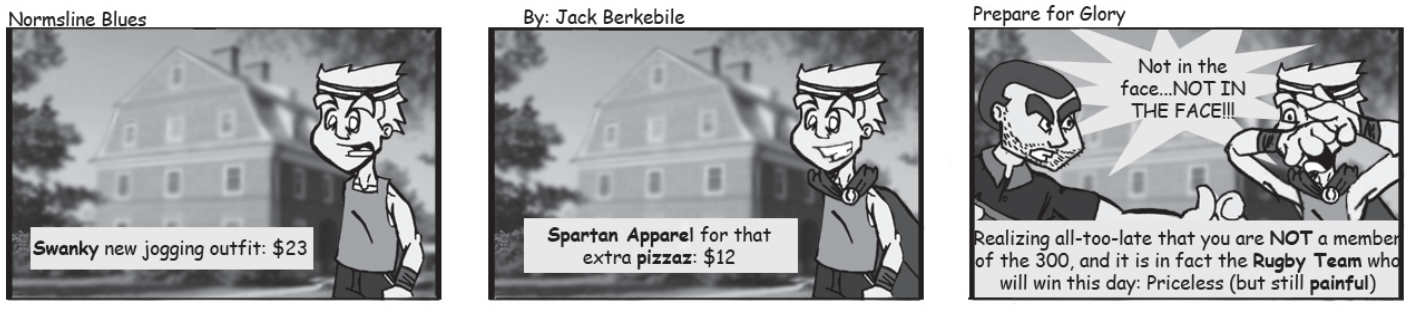
When hunger strikes

Spaghetti with tomato sauce and spinach

Sometimes, it's nice to stick to tradition, but other times, adding a little more ting to your dishes could mean you're in for a sweet surprise. If you feel risky and bold, try this recipe that I found in The Mediterranean Prescription by Angelo Acquista, M.D. It has a hint of your momma's classic spaghetti and tomato sauce dish, but its slightly spicy and rich taste will have your taste buds falling in love with this new school cuisine!



What you need:
3 tablespoons olive oil, 3-4 garlic cloves (crushed), 1 teaspoon red pepper flakes, 28-ounce can crushed tomatoes, ½ lb baby spinach (thoroughly washed and dried, stems removed), 1 lb spaghetti and ¼ cup grated Parmesan.

How you make it:
Sauté garlic and red pepper flakes in oil until garlic is golden. Add tomatoes and cook, covered, for 10 minutes. Add spinach and cook for 2 minutes. Cook spaghetti and drain. Add the pasta to the sauce and heat for 30-40 seconds. Sprinkle with cheese.

HUNTINGDON, PENNSYLVANIA

NOVEMBER 8, 2007 | JUNIATA COLLEGE | VOLUME 89, ISSUE 3

Will NORML be the weed among RSOs?

Sara Cieslewicz

A chapter of the National Organization for the Reform of Marijuana Laws (NORML) may become a registered student organization (RSO). The chapter, to be led by student Evan Gross, would promote awareness of the marijuana advocacy group's mission to educate people on its goal to legalize marijuana with strict government regulation.

According to the NORML Web site, it is a non-profit lobby that, for more than 30 years, has represented the interests of tens of millions of Americans who believe that marijuana can be used responsibly. As such, the group advocates that recreational and medicinal use of marijuana should no longer be a crime.

When asked why he decided to become involved with NORML, Gross said, "I had seen it mentioned online…then I saw it on the news this summer and saw you could start local chapters…. [I] saw there wasn't one in the central PA region. So, why not?"

The Juniata chapter would possibly host functions similar to those held by other NORML chapters such as those at Pennsylvania State and Pittsburgh Universities. Those schools host educational movie events for their campuses along with fake joint rolling contests.

First year Juniata student Alex Weidman said that legalizing marijuana is not just about making it fair or equal for everyone, it is also about making it safer. Legalization allows for quality control by the government regulating who uses it. NORML supports the development of a legally controlled market for marijuana, where consumers could purchase it from a safe, legal and regulated source.

The history of the prohibiting marijuana based upon its health risks is often pulled into question. Gross admits that research has found negative effects, but at the same time he questions what the medicinal value of alcohol is, and asks why alcohol is legal if it is a recreational drug that has similar inhibitory effects.

The major challenge to the chapter's existence on campus is that of the administration. Many wonder if the Office of Student Activities will even consider allowing NORML to become a RSO.

"I haven't talked with Staci Weber; I have approached other faculty members in reference to it and received positive interest. I won't disclose those [names] now" said Gross.

Weber said that if Gross follows all the procedures to register the chapter, such as agreeing to and following all rules and policies of all RSOs, and by never pos-

Athletics, aid and academics

How student-athletes stack up and pay up

Christina Gongaware

A recent on-campus study found that athletes, on average, graduate at a higher rate than non-athletes at Juniata College. The majority of sports teams also claim a higher GPA than the general student body.

Athletes are proving that it is possible to balance a sport and grades. While 73 percent of non-athletes obtain degrees after four years, athletes graduate 82 percent of the time.

When asked why retention rates for student-athletes are higher than the rest of the student populace, Provost James Lakso said, "Athletics have an aspect of connection to the institution and a better relationship with it that non-athletes do not have."

Lakso also attributed the higher retention rates to the influence of coaches. He said that coaches are a "critical element" in the retention strategies for Juniata's student athletes. Coaches also contribute to greater academic success, Lakso said, by both pushing for academics and expecting the athletes' best on the field.

The overall academic standards of Juniata are constantly increasing. The average GPA and SAT scores of incoming freshmen are rising each year, and the one-third

Commencement speaker 2008

Student opinions matter—some restrictions may apply

Kazia Eastep

Disappointed by the last two graduation speakers, vice president Justine Kobeski and the rest of student government decided that "we really need to do something about this." The noted decline in speech quality, and a strong desire to remedy it, resulted in the creation of a committee of seniors who would work together with the administration's honorary degree committee to select a commencement speaker.

"[Last year's commencement speaker] just kept speaking even when purple-haired old ladies were getting rained on…He was not thoughtful. He was just boring," said senior Suzanne Ostyn, a student committee member.

The student committee was created with the hopes of obtaining an entertaining and memorable speaker for the Class of 2008's graduation ceremony. Under the leadership of Kobeski, the student committee brainstormed a list of people, varying in degree of celebrity, that students would like to hear speak at graduation.

The students started work on this list this summer, but they have now been told that this time was spent mostly in vain.

They have only recently been informed that their ideas must be cleared through a rigorous examination by the honorary degree committee and the board of trustees.

"It was confusing to the point that we didn't know why we were involved….They [administrators] went out of their way to say that our opinions mattered, but they didn't make the process easy to follow," said Ostyn.

Kobeski said, "Miscommunication is a pretty harsh word," but said the student committee was not initially notified of "a whole other ten steps in the process." After creating their list, students were told by administration about these "miscommunication" areas—like budget, board approval and a preference for alumni speakers.

"I think that some of the students thought that they themselves could select the speaker, and that's really not the policy of the College," said President Kepple, chair of the honorary degree committee.

The honorary degree committee is made up of faculty, staff and students who sort through suggested degree candidates and prepare a list of potential recipients for board approval. Kepple said, "I'm pretty sure the student government picks the students and the faculty and staff members are volunteers."

According to the honorary degree committee's procedure list, "there is no universal standard" for who should receive honorary degrees. But some qualities that the Juniata honorary degree committee looks for in a recipient include honor and respectability, career success, philanthropic work/donation to the institution, quality of public speaking skills, alumni status and publicity potential. The same qualities are looked for in a commencement speaker.

In a previous issue of The Juniatian Kobeski suggested that perhaps the commencement speaker could be determined through a poll given to the senior class.

President Kepple said, "You really can't do a student poll, and here's the reason—if the students say we want to have 'x' person to be our speaker, and the trustees reject that person, now that's a very public rejection….It would be harmful to the person involved; it would be harmful to the College and it would disappoint the students. Not that it would always happen, but it is very possible. An honorary degree is the highest honor the College gives. The trustees take this very seriously and we wouldn't want to do anything harmful."

The commencement speaker usually receives an honorary degree. The only current example of a commencement speaker not receiving a degree is 2002 speaker, David Hsiung. He was not a recipient because he was, and remains, a current Juniata employee.

Kepple stressed the importance of selecting a good speaker again. "We want to get the quality back," he said. "The student representatives are enthusiastic about the first couple of choices" on the potential commencement speaker list.

The list of potential speakers has been narrowed down to two Juniata alumni. Kepple said, "I think that our experience, at least in the last nine years, is that alums have been much better received by students than non alums."

"We're looking for alumni from here, or people who have some kind of connection, [who are] not too old, not too young, and the most important thing is that they be able to relate to the students graduating," said sophomore Lizz Danforth, a student member of the honorary degree committee.

1972 graduate named chair of GRE Board

Juniata trustee Maurice Taylor ('72), accepted the position of chair of the Graduate Record Examinations (GRE) Board in July.

For five years Taylor sat as a member on the GRE Board and on the GRE Minority Graduate Education Committee as chair.

The setting of policy and research agendas is the main responsibility of the board. Also decided upon by the board are such sundries as fees and grading scales.

It doesn't look like this means major changes or advantages for Juniata students looking to take the GRE, though. "It's simply a notable accomplishment by a graduate," said Provost Lakso.

Taylor came to Juniata to play football and has been a trustee since 1993.

He currently works as dean at Morgan State University School of Graduate Studies.

Illegal file sharing on college campuses targeted by RIAA

John T. Huffstetler

The Recording Industry Association of America (RIAA) recently caught a Gettysburg College student illegally downloading music. The ramifications remind college students across the nation of the risks of file sharing.

The student (name withheld because case is pending) was one of many who received notices from the RIAA through Gettysburg College. Students received written warnings to delete all shared music files and the peer-to-peer networks they used. These include commonly used programs like Ares and Limewire. Those who complied within 40 days were not prosecuted.

The Gettysburg student who ignored the warning received another letter giving her the option to settle out of court or proceed with a lawsuit. The settlement was around $3,000, as opposed to a minimum of a $750 fine for each song downloaded required by law if she had been found guilty.

The student had been charged with distributing 297 audio files, yet said, "I didn't know that people could take my songs. I'm not computer savvy. I thought it was harmless."

Those who chose to take on the lawsuit have so far lost. The student's settlement out of court is still pending. She said, "Everyone at my school was shocked that this actually happened." She urges her friends not to download illegally anymore.

Gettysburg College was not involved in the proceedings directly. Under the Digital Millennium Copyright Act, administrators are obligated to provide copyright holders with information about users of university networks who have violated the law. Colleges, including Juniata, are not the prosecutors in these cases.

When choosing to pursue an offender, the RIAA looks at the IP address of the illegal file sharer. The RIAA can tell the sharer is a college student easily because colleges have their own networks and therefore unique IP addresses. The RIAA contacts the college to gain the suspected person's personal information in order to send him/her a letter. Juniata is only involved after the RIAA asks the College to provide information.

A recent poll by the RIAA shows that more than half of the nation's college students frequently download music and movies illegally. This targeted prosecution has affected colleges all over the nation, and it doesn't exclude smaller schools. Gettysburg is a school of roughly 2,600 students, not much larger than Juniata.

The RIAA's efforts in education and on supplying alternatives to file sharing are focused on the general public. Yet, admittedly its efforts to prosecute individuals are targeted at college students. But the group stresses that anyone who downloads illegally is at risk. According to the RIAA's official Web site, "The piracy habits of college students remain especially and disproportionately problematic."

The RIAA also uses educational tools, legal services and an introduction to technologies to help reduce illegal file sharing.

The Gettysburg student doesn't download illegally anymore, yet said, "I don't see the direct connection to hurting the artist." She still pays to go to concerts. This type of attitude is a target of the RIAA's campaign to educate and show that file sharing is "not a victimless crime." It reminds people that everyone associated with the music industry is affected, not just the artists.

One solution Juniata is looking into to help solve the file sharing problem is implementing a system similar to Rhapsody at Penn State. This program allows college students the ability to download as many files as they want to after paying a yearly fee through tuition. The catch is that at home or out of college the files won't work anymore.

Athletes making the grade

continued from page 1

of students who participate in athletics is part of this shift.

The average GPA of a Juniata student is currently 3.04. Of athletes, the men's cross country team boasts the highest academic standing with a combined 3.36 GPA, followed by women's tennis with a 3.31 GPA and field hockey with a 3.25 GPA. The men's volleyball team lags behind with a 2.54 GPA.

Sophomore Danielle Brenizer explained the phenomenon of athletes' higher GPAs. She said, "Athletes are more limited in their time, and are better at time management. They plan out their schedules well and use their time wisely."

Freshman women's volleyball player Sam Bristol said, "We [athletes] attend all of our classes," which could account for some of the difference.

The study also reintroduced the topic of financial aid and whether the College gives preferential treatment to athletes. A recent yearly NCAA audit confirmed that Juniata distributes financial aid without a bias toward athletes.

Prior to 1989, the College could give superior grants and loans to sports players. In that year, however, NCAA decided that participating Division III schools must blindly offer financial aid without consideration of whether or not the student was planning on participating in athletics. This idea was named "equity packaging," and ensured that academics would take priority.

The athletic program as a whole has not suffered from equity packaging. Fourteen teams boasted winning records last season, along with numerous championships. Budgets have also increased. While the football team still receives the largest chunk at $105,690, Juniata has made huge strides in increasing the budgets of all sports teams.

Although this equity rule was supposed to be strictly enforced, Lakso said that the "NCAA never used to control [the rule], but every year we had absolutely clean audits." The NCAA has become stricter in regulating schools, however, and even with a complete audit, Juniata met all regulations last year.

As many students on campus know, Juniata still actively recruits athletes. According to Juniata's in-house study of admissions results, there is a 16% difference in whether or not a student attends Juniata if he or she is recruited. This means that coaches are successful in persuading prospective students.

"I always tell coaches three things before they recruit," said Lakso. "I want athletes to graduate. I don't want to see them in the police logs… I also want them to be competitive."

When asked how if student-athletes are held to the same academic standards as the general student body for admissions decisions, Lakso said that there was no difference in the admissions process of a recruited student-athlete from any other. He stressed that "sports are only one part of the college experience."

Overall, the study has made clear that students do not have to sacrifice sports for class and vice versa. From freshman year to graduation, athletes at Juniata are proving that they can excel both on and off the field.

Faculty and alumni memories show reasons for restoration

Former residents of Founders Hall remember the building's glory days

M. Piazza

Founders Hall was once the center of student and faculty life at Juniata, but now it is only visited for administrative services. The board of trustees, administration and alumni have decided that this needs to change.

"I believe firmly in history and that we have a responsibility to honor the past in this building by restoring and updating it for the students of the future," said Linda McKonly ('73), Founders campaign chair.

Originally, the building housed everything from student rooms to the campus' dining room. By 1963 students no longer lived, had classes, did laundry or ate in Founders. Instead the hall became the home of faculty offices for several departments. These professors stayed in the building until 1980 when the North wall of Founders began to separate from the floor.

"I moved into the building in 1973 and even then the building was falling apart; the floors were already beginning to lean downwards," said English professor Mark Hochberg. "By 1979, one minute I'd be typing, and the next I'd be rolling toward the wall."

Founders was built around the chapel, which is now the registrar's office. The key element that the founders wanted in their chapel was a clear view of the pulpit from any point in the room. To do this, they had to use an inventive truss system that did not use pillars to support the floor above. However, the lack of pillars and engineering skills have allowed the walls to move away from the floor.

"We all knew that the building was hanging from the roof," said professor emeritus of philosophy Robert Wagoner, who once had an office in the hall. "It was a little disturbing to think that any really strong wind could knock the top floors off, but the upper floors were beautiful, even in the decrepit place."

Today, the upper levels still have chestnut paneled walls, with high ceilings and offices with appealing views. But they also have yellowing paint and slanting floors.

Despite the appearance of the top two floors, the atmosphere created with so many people working in Founders was invigorating, according to Erik Evans, associate vice president for advancement. With faculty members located right next to the administration, a sense of comradeship and collegiality developed that encouraged communication and better problem solving. The faculty during the sixties and seventies had coffee hour meetings, parties on the weekend and division meetings where they discussed any problems they were facing.

"The rooms might have been bare (essentially we had a desk, chair and lamp), but we all worked together," said Wagoner. "I have to say that I miss the coffee meetings and the sense of chumminess that existed. It made working together much more enjoyable."

According to Hochberg, there was only one telephone available for the two floors, so it was always a guessing game about who would be on the other end.

Current philosophy professor Janet Lewis had an office in Founders from 1970 to 1980. At times, Lewis said the secretary would scare them if the floor was being too loud by saying the dean or president was on the phone asking if they could keep it down.

According to Lerwis the atmosphere in Founders was laid back. She even painted the fire escape bright red and no one complained.

"None of us wanted to leave Founders. When we were there, we were connected to everyone, with students walking in at any time and faculty dropping in for a chat about what happened on the weekend," said Lewis. "We lost all that when we moved into Quinter House, and despite the lack of A/C or large offices, I'd be back there in a heartbeat if I could."

Evans said, "When we gave tours to alumni from the 1950s, we had all sorts of stories from the plumbing to the living on top of one another."

One of the most touching moments for Evans was when an older woman broke down in tears after entering her former dorm room that she had shared with a close friend who had recently passed away. Some stories were less sad. One included a student's recollection of having to warn the showering residents when any toilet was flushed or, at times…not warning them.

Founders Hall was once a vibrant, exciting place to be, and with the renovation project slated to begin in early 2008, administrators, faculty and alumni hope that it will be once again.

Christopher Shannon / Juniatian

Left behind. Photographs of famous writers still cling to an office wall on the third floor of Founders Hall.

Efforts to save Juniata's printed yearbook underway

Future of book depends on sales and staff numbers

Staff

On Oct. 12 two students met with members of the administration and faculty to discuss the College's decision to discontinue printing of "The Alfarata," Juniata's yearbook.

Senior Beth Woodhouse, "The Alfarata's" editor-in-chief, and student government president Shawn Rumery asked for the meeting after an October Senate meeting in which students present voiced dissatisfaction over the yearbook's demise.

Woodhouse put together a proposal for the administration. She talked to several publishing companies and researched other college yearbook prices to construct a plan that would reduce "The Alfarata's" budget by up to $8,000. That plan includes decreasing the number of pages included in the yearbook (down from 200 to 160) and other minor changes that would not diminish the book's quality, according to Woodhouse. "The Alfarata" would remain an all-color publication.

Rumery told the administration and Amy Mathur, the yearbook's faculty advisor, that student government would launch a marketing campaign on campus in hopes of boosting sales numbers. His cabinet's plan included placing flyers in student mailboxes, posting daily announcements, creating facebook groups and sending letters home to parents of graduating seniors.

Although few students responded to the Juniatian's forum post about the yearbook situation on Sept. 27, Woodhouse and Rumery believe that enough interest exists within the student body to warrant a continued printing effort.

After hearing both students' presentations, Provost Lakso agreed to give Woodhouse and Rumery a final opportunity to save the yearbook. In that deal, the yearbook staff and student government must collect checks for 200 yearbook orders by the start of Thanksgiving break. They must also recruit 20 students to enroll in EN 182-02, The Writing Practicum—Alfarata, by that time as well.

If either of the conditions is not met, Juniata will not produce a yearbook for 2007-08.

The marketing campaign is underway. Students are asked to submit their checks for $68.90, which includes tax and shipping, made out to "Juniata College—Alfarata, 2008" to the information desk in Ellis Hall, or to send checks to "The Alfarata's" post office box (#918) before Thanksgiving break.

Students can enroll in the Alfarata practicum during the normal registration period currently underway.

Recently, Juniata has paid over $25,000 annually to print the yearbook. Last year, only 105 students purchased those books, causing the debt for "The Alfarata" in the overall College budget to reach nearly $50,000. The College considered discontinuing the printed yearbook to reduce growing debt and unused inventory. The final decision about the 2008 edition will be announced by the end of November.

Student looking to create RSO supporting the legal use of marijuana

continued from page 1

sessing marijuana or any of the paraphernalia associated with it, the mission of NORML would be allowed.

"Colleges cannot prohibit a student group from receiving college funding (i.e. student government allocations) because it is a violation of free speech. The term often cited…is colleges or student governments need to use 'viewpoint neutrality.' So, it sounds like NORML plans to encourage and promote open dialogue about legalizing marijuana," said Weber. "Within the realms of viewpoint neutrality and free speech it is not my, student government's or Juniata College's place to tell these students they cannot start this organization."

On the forums, several posters invoked Juniata College's official Web site as evidence for the legitimacy of Gross' bid for making NORML an RSO. The site states that the College "encourages the free and open exchange of thought among peoples from distinct cultures and nations."

Additionally, the site claims that "Juniata has dozens of clubs and organizations on campus that give students the opportunity to develop different skills, support various causes, grow as a person, make friends and/or just have fun." Gross feels NORML will do all of these things.

Weidman said that he hopes they [the OSA] will look at it with an open mind. He thinks value will be added to the campus by sparking debate and discussion.

"If you have conflict you will eventually find an end, and something will be created from that discussion," said Weidman.

Senior Dan Popernak supports Gross' bid for RSO status for NORML. He argues that people who enter into debates in rational fields, based on their constitutional rights, should be supported on Juniata's campus, "Should we support drug use? No, absolutely not. It is not part of the campus, but political debate always has been" he said.

The Forums already show a spark of a long term debate questioning motives behind the chapter. Some posters also worried that having a NORML chapter on campus would damage the College's reputation.

Popernak said in response, "I'd say what reputation would be tarnished? One that shies away from issues that we should discuss and initiate and debate on?…This group does not say that we should all have political drug induced orgies. It is not about that. It is a political activist group."

Gross makes the comparison that one doesn't have to be gay or lesbian in order to support the goals and missions of All Ways of Loving. He feels it is the same situation with NORML, a group actively promoting awareness for the ideals it values most.

Popernak said, "I support NORML. If you really look at what it stands for, it is a group that argues for the legalization of marijuana and the constitution and our legal right. It's a safe assumption; [that] those who participate would want to partake in the liberties after, just like those who fight for worker's rights."

Many criticize the rationality for NORML's appearance on future resumes. Weber said, "I do believe these students should be aware of the stereotypes and the stigmas that may be associated with their involvement with an RSO such as NORML...to make sure they realize how other people (both within the Juniata community, future employers, etc.) may perceive them. With NORML, I would want involved students to realize, some people may have trouble seeing past the 'M.'"

ESS department to offer new POE in 2008

Gives option for students interested in wildlife conservation and management

Jason Najarian

Juniata is introducing a new Program of Emphasis for students who have an interest in wildlife conservation and management. The POE would also be a stepping stone for those seeking to become certified with The Wildlife Society.

Certification with The Wildlife Society is a powerful tool for students interested in working in wildlife conservation and management.

John Matter, professor of biology, stressed that although the POE would put a student on track for certification, it does not guarantee it. He said that the POE would be a nice way to begin the certification process, but is not sufficient on its own.

Juniata is not currently able to fulfill all of the certification requirements. Students would have to take about six outside credits and submit to the Society's certification board for approval. The courses outside of Juniata would deal mostly with botany.

The POE, housed in the environmental science and studies (ESS) department, requires a variety of courses inbiology, chemistry, physics and ESS.

Along with the POE, new wildlife courses will be taught largely at the Raystown Field Station during summer sessions. The planned courses are mammalogy, herpetology and ornithology.

These courses will include both lab and lecture components and will be worth three credits each. The courses would deal with topics such as the evolutionary history, life histories and identification techniques of the animals in that zoological branch.

The summer program is currently planned to place the courses in rotation, with the 2008 program to host the mammalogy and herpetology courses.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. Correct answers will go into a random drawing for a random prize. Congratulations to last issue's winner:Matthew McDaniel!

Mystery, Myth and Magic

Christopher Shannon/ Juniatian

Ten students and professors participated in the 16th annual Soapbox Speeches on Oct. 31 held at Detweiler Plaza. This year's theme was "Mystery, Myth and Magic." Speeches ranged from chilling ghost stories to Halloween inspired songs.

MRSA: The nasty bug we just can't swat

How to prevent yourself from something or other

Manal Daher-Mansour

Methicillin-resistant Staphylococcus aureus (MRSA) has lately been spreading at an alarming rate throughout colleges and high schools in the United States. According to CNN.com, the latest studies have shown that there are more deaths caused by MRSA in the U.S. than AIDS.

MRSA-related deaths have been making headlines mainly for the fact that the victims were young. CNN.com reports that one of the victims was a 12-year-old boy from Brooklyn, New York; another was a 17-year-old girl from Virginia. At least seven cases of affected teenagers were reported in Long Island, NY and 10 members of a sports team at Iona College in New Rochelle, NY have also been diagnosed with it.

According to the Center for Disease Control and Prevention's Web site, an estimated 25 to 30 percent of the population actually has MRSA on their bodies, specifically the skin, sometimes even in noses. The bacteria is actually harmless unless it gets inside the body via cuts, wounds and even surgical incisions. The most susceptible people are those in hospital settings with low immune systems. Out in the community however, people with poor hygiene or cuts who come across the bacteria can also be infected.

The diagnosis for the bacteria comes after running several tests which include taking a blood sample from the patient or a swab from an infected wound.

During the 1940s, penicillin was used to treat the bacteria; however, over time, MRSA became resistant to the antibiotic. This is due to the fact that the Staphylococcus aureus can produce a substance called Beta-Lactamase that could degrade penicillin and destroy its antibacterial activity. Later on, methicillin was developed and then a stronger antibiotic, flucloxacillin, followed.

Some strands of MRSA can be treated with certain antibiotics. However, MRSA itself can only be treated with vancomycin and teicoplanin, both antibiotics that can only be administered via injections and infusions. In some cases, draining the abscess or boil may be the best option.

MRSA is not a stranger to the Juniata community. According to the Health and Wellness Center, at least 20 Juniata students have reported cases of MRSA in the past five years. No cases of death have been reported on campus.

According to a Juniata student (name withheld for privacy considerations) who was diagnosed with the bacteria in the fall 2006 semester, MRSA can be treated within two weeks if the right medicine is used. In his case, MRSA started out as a very painful pimple. He was not alarmed until he noticed that it started eating away his flesh and spreading on his body. He said "the experience was a painful, disgusting one."

MRSA is most likely to grow on sweaty parts of the body such as the armpits or the genitals. Although there have been many speculations over how one can really contract MRSA, studies have shown that the most common way is through skin to skin contact with anyone who has it. During MRSA outbreaks, the environment has never been linked to the spread of the bacteria, yet it is still possible.

The easiest way to prevent having MRSA is to practice good hygiene, keep abrasions or cuts clean and covered and wipe gym equipment before use.

Changes to 2008 Commencement weekend

Staff

This spring, the Class of 2008 will participate in an altered commencement schedule spanning two days.

Baccalaureate, an inclusive worship service planned by the campus chaplain Dave Witkovsky, has been moved from its traditional Saturday morning spot to Friday evening. The service will be held on May 9 at 7 p.m.

Commencement will now be moved to Saturday morning, May 10 at 10 a.m.

In a letter sent out to seniors' parents in Sept., Provost James Lakso wrote, "In recent years we have faced the challenge of sitting out in the afternoon sun or worrying about a late afternoon thunderstorm. We believe a morning commencement will increase the chance that we can stay outside and it will be a little more comfortable if we do."

However, this is not the only reason for the schedule change. Recently few professors attended baccalaureate in the morning because they already planned to devote the afternoon to commencement. The administration hopes that by separating the two ceremonies, interaction between students, their families and faculty will increase.

The shift of baccalaureate is the second scheduling change made to commencement weekend in the past two years. Prior to 2007, commencement had long been held on Mother's Day each year. Reacting to a younger faculty's desire to spend that holiday with family, the administration moved commencement from Sunday to Saturday.

Some aspects of commencement weekend ceremonies will remain the same. Baccalaureate will be held in Rosenberger Auditorium in the Halbritter Center for Performing Arts. Commencement will be held outdoors, weather permitting. If held indoors, students will need tickets for guests entering the Kennedy Sports and Recreation Center.

Information on ticket distribution procedures will be sent by the provost's office to graduating seniors during the spring semester.

Community Service

As the holiday season approaches, the Career and Community Service Office provides opportunities for students, faculty and staff to volunteer time and talents to the campus and surrounding communities.

A sampling of ways Juniatians can contribute include:

The Giving Tree Project

Begins Mon. Nov. 12. Interested parties can purchase a Christmas gift for a child or family in need. Contact Lisa Baer (baerl@juniata.edu) or look for tags at a table outside of Baker.

Canned food drive

Food items can be delivered to Unity House until Nov. 21. All donations benefit St. Vincent de Paul Society. Contact the Catholic Council with questions.

"Winter Wonderland" Blood Drive

On Dec. 5 in the Ellis Hall ballroom, donate in honor or in memory of a loved one and sign the dedication banner at the drive.

For more information on volunteer opportunities, contact Shauna Morin, community service and service learning coordinator at morins@juniata.edu.

CORRECTIONS

The Juniatian regrets the following errors printed in the October 11 issue:

The Nobel Prize on display in the physics wing of the Brumbaugh Academic Center is the travel replica of William Phillips' ('70) actual prize. That was not made clear in the original photo story.

While the authentic prize is made of solid gold, the replica is not. It holds symbolic not financial value.

Phillips donated the replica to the College for permanent display.

Although the staff writers and editors strive to produce an error-free newspaper, to our regret, at times mistakes do pass through our review. The Juniatian encourages members of the campus community to report any errors discovered in the paper to juniatian@juniata.edu.

Fiesta Latina

Courtesy of Alfarata

Fiesta Latina is an annual celebration of Hispanic and Spanish culture at Juniata. It will be held this year in the Baker Refectory on Sat., Nov. 17 at 6 p.m.

The event is sponsored by Club International, with the help of several other clubs.

Participants have traditionally enjoyed dancing the salsa and sevillanas, Latin music, games and of course, authentic Latin food at the event. In the past, there have been video presentations exploring Hispanic culture on campus and beyond. Juniata has a strong tradition of sending students to Latin America and Spain. There is also a strong population of visiting Hispanic language professors and students at Juniata.

This event is not exclusive to Spanish speakers, and anyone interested in Hispanic or Spanish culture is invited to bailar y celebrar, or dance and celebrate. The campus community is encouraged to come prepared to eat salsa and tortilla española and take a swing at a piñata.

Tickets are on sale now at the information desk in Ellis Hall. Last year over 300 people attended.

Want to be PRESIDENT of Juniata College for a day?

Enter the contest to win a day in the life of T-Kep!!

If chosen, T-Kep will switch places with you for one day. He'll go to *your* classes, eat lunch with *your* friends and more!

Purchase tickets until Nov. 16 at the Information Desk in Ellis Hall.

Sponsored by Young Entrepreneurial Society

Respect: It's smokin'

EDITORIAL

America was founded on the principles of freedom and choice: the freedom to choose your own religion, the freedom of speech, the freedom to vote and the freedom to pursue happiness.

The pursuit of happiness is such a fundamental freedom, our founders considered it an inalienable right. It is guaranteed, even if in that pursuit someone makes what many consider to be a poor choice. Our rights to make poor choices must be respected, not only by the government but by our fellow citizens. Smoking is one such right.

The general opinion of society on smoking is that it is a foul habit that only a moronic idiot would take up. Additionally, second hand smoke can be harmful the lungs of non-smokers. It's natural, therefore, for there to be limitations on smoking. Usually there is some law similar to the rule established in Juniata's Pathfinder: "The rights of the non-smoker always supersede the rights of the smoker."

As Oliver Wendell Holmes Jr., a former Supreme Court Justice, put it, "The right to swing my fist ends where the other man's nose begins."

No one, not even a smoker, is going to argue that smokers' have the right to force smoke onto other people—especially those who have made the choice to refrain from smoking. The question is: where should the line be drawn?

In cases of fist swinging, it is fairly easy to see the exact boundary between one man's right to swing his fist and the other man's right not to be punched in the face. However, boundaries are not always so clearly defined. When the action is one that is viewed in a negative light by a large part of society, much like smoking is, the lines become even hazier.

The rules asserting the rights of nonsmokers also simultaneously assert the rights of smokers to smoke. Most smokers are respectful and obey the rules – smoking only outside, smoking at least 20 feet away from buildings, and discarding their butts properly.

Despite this respect shown to them by smokers, many nonsmokers have no problem being completely disrespectful to smokers. Comments like, "Enjoy your cancer stick," "I hope that cigarette is worth black lungs," "Have fun dying an early death," and the ever popular, "You shouldn't smoke; it's bad for you," are exceedingly common and considered acceptable simply because smoking is an unhealthful habit. Many nonsmokers seem to feel that it is their duty to lecture, ridicule and even verbally attack smokers.

In one example, a smoker was enjoying a cigarette in Sherwood's cubes, an area which is commonly accepted as a smoking section. He was smoking 20 feet away from the building, right next to a smoker's pole. A female student that he knew vaguely from one of his classes, walked by and started a fake and overly exaggerated coughing fit. It was exceedingly irritating but slightly amusing, as the wind was actually blowing the smoke from the cigarette away from her. "Don't you know," she asked the smoker with a sneer in her voice and a superior glint in her eye, "Cigarettes cause cancer?"

First of all, any comment about cigarettes and cancer is incredibly insulting. Anyone who is not aware of the correlation of lung cancer and smoking is a moron. It is nearly impossible to grow up in America and not know about the dangers of tobacco, nicotine and carcinogens. Anti-smoking propaganda is omnipresent and inescapable. Lecturing a smoker about cancer implies that the smoker is an imbecile. While the lecturer may disagree with the smoker's choice, there are very few times it is considered acceptable to insult someone's intelligence.

Compare smoking to other things which are considered poor choices. Overeating and lack of exercise are bad and unhealthful habits which can lead to diabetes, heart attack, stroke and other medical issues. Would someone walk up to an acquaintance in Baker who is chowing down on french fries and begin to criticize them? "Enjoy your heart attack waiting to happen." "I hope those fries are worth becoming fat and disgusting." "You shouldn't eat greasy food; it's bad for you." It just doesn't happen. It would be considered rude, insulting and unacceptable.

Yet smokers must face this kind of disrespect every single day. Smoking has been vilified by society, and smokers have become second class citizens.

Nonsmokers must acknowledge that everyone – even smokers – have the exact same rights to respect and courtesy. Unless they do so, nonsmokers risk becoming targets for criticism of their own poor choices—perhaps, even for their poor choice to verbally attack smokers. After all, don't you know? Being an insufferable know it all causes people to ridicule you.

Thinking about thinking

The power of irrational language

Ryan Hamillton

As 2007 comes to a close, the Senate has been busy passing amendments "to authorize appropriations for fiscal year 2008 for military activities of the Department of Defense." The Kyl-Lieberman amendment, expressing the Senate's position on Iran, passed on Sept. 26 with a vote of 76-22.

With the appropriate language in place, the Kyl-Lieberman amendment may be the first step toward a dangerous war with Iran. One section of it proposes, "…the United States should designate the Islamic Revolutionary Guards Corps" (IRGC) "as a foreign terrorist organization…on the list of Specially Designated Global Terrorists."

In the years following 9/11, 'terrorism' has become a very powerful word. Singling out terrorists or potential terrorists has allowed The United States to implement otherwise unjustified laws in our country, and fuel an otherwise unjustified war in another.

This is not to argue that these actions were necessarily wrong, though there seems to be a feeling of regret brooding around the 'war on terror.' This only highlights how, with proper marketing, the American public will allow emotional language to sway their hearts and minds.

We toss around words in the wind, when we should really be treating them as the bombs they may one day justify

I do not want to argue that the IRGC are not terrorists. I do, however, want to point out that labeling this group 'terrorists' restricts choice of action. The American public's current mentality makes it far too easy to justify the implementation of force in dealings with deemed terrorists.

A single word can be very persuasive. Language carries emotional and psychological powers that have the ability to blind us. Certain ideas are not exposed to the same critique we thrust on any other because of the way they are posed. This is why propaganda is so powerful and dangerous.

A person wielding these powerful words also becomes powerful themselves. As a simple example, imagine citing religious beliefs, as reasoning for exemption from a required high school health class. Religion is essentially a set of organized personal beliefs. And one personal belief could be that sitting through another year of required health classes is a waste of time. Not exactly an airtight argument.

Yet, if a person wrote 'religious beliefs' on the appropriate paperwork, there would be no questions asked. This is the kind unjustified language that the general public is willing to tolerate. By citing 'religious beliefs,' no matter how unjustified, the student is not questioned because it is generally accepted that religious beliefs are to be tolerated and respected.

No doubt, tolerance and respect keep our society civil. Yet, when these notions are stretched to their limits, propaganda justifies outrageous actions and the public has the wool pulled over its eyes.

The word 'terrorism' has a persuasive emotional control over the American public. By documenting an agreement stating the IRGC is a terrorist organization, we have, to a great extent also agreed upon how this organization will be treated.

We toss around words in the wind, when we should really be treating them as the bombs they may one day justify. The American public's tolerance for the marketing of vague unjustified or irrational language is absurd. When sophistry is substituted for logical justification, language becomes emotionally motivated and irrational. If we are not careful, this language can justify drastic actions.

The public will not be told why the IRGC are terrorists; the public will hear only that they are terrorists. This label controls the thoughts of the public by playing on its sense of morality and fear. Terrorists are bad people who need to be stopped. If the IRGC are terrorists, then this justifies a reaction appropriate for terrorists. If anything goes wrong, the Kyl-Lieberman amendment can be waved in the air; we all agreed.

Why are there certain instances where irrational emotionally motivated language exempts a person from providing the justification that we expect from everyone else? If this is how the world works, the public needs to recognize this and step carefully. Language is powerful, and irrational language is frighteningly dangerous.

Letters to the Editor

Campus Security ignoring serious issues

Juniatian Editor:

I'd like to mention something that has really upset me regarding the Campus Security department at Juniata College this year. As a student, I was to feel as if Security "has my back," but I've lost the respect I've had for this department.

On at least two occasions, I have heard from students who were cited by the Campus Security department for j-walking [sic]. Both of these incidents were on Moore Street. I'm not arguing that j-walking [sic] is legal, but it is important to note that while these students are being cited by Campus Police, local drivers are NOT stopping for students in crosswalks. This is putting all of our lives in danger…every single day.

Also, there are cars parked illegally along Moore Street in these very crosswalks students are expected to use. While all of this is happening, Campus Security is focusing on boosting our relationship with the town and citing students for ridiculous and petty things. This department CHOOSES to ignore these problems on Moore Street and that is not right.

My question to this department is: Will there ever be a time where [sic] I will actually feel safe on this campus while crossing Moore Street, or will Campus Security continue to ignore these very serious issues? Thank you.

Alumnus reflects on Founders memories

As an Emeriti Alumni Council Member I am privileged to receive the Juniatian in the mail each time it is issued.

The September 27, 2007 edition is OUTSTANDING. Even though I graduated many years ago - 1964 - I enjoy reading about life on campus today! It keeps me up-to-date on the changes, and what has remained the same, on campus over the years.

Some articles even bring back memories of days spent on campus as a student. But I must tell you dinner time on campus in the '50s and '60s was nothing like it is now—NO cafeteria style meals (except on Saturdays and Sunday nights in the Lesher Hall lower level dining facility). In my era, the dining room, complete with family style table service and coats and ties at the Sunday noon meal, was in Oneida Hall. Oneida Hall was part of the cluster of three building all linked together - Founders, Brumbaugh, and Oneida. Prior to the building of Brumbaugh and Oneida Halls, Founders most likely did have a DINING room. So, the caption on the Founders Hall picture (see pg. 7) may be a minor misnomer.

But, it is true this building [Founders] has been of great service to the Juniata community since it was built, I believe, in 1877-1878 and dubbed Founders Hall in the mid 1890s. In the early '60s it was used for administrative offices, professors' offices and a classroom in the "chapel." The tower bell was rung to announce a victory on the football field and I think was used to announce Mountain Day.

The appearance of the [new] structure, especially the rebuilt "chapel" wing, will probably be difficult for some older alumni to accept at first - much like the change of mascot from the Indians to the Eagles! But, this project will result in retention of this traditional landmark - especially the bell tower - and bring the structure back to life as an enhancement to the quad area.

If the future editions of this year's Juniatian are as interesting and informative as this one, you will have a memorable year!

Keep up the great work!

Dan O'Sullivan, '64

Life outside of the Lake

Nader: A civic mentor

Brittany Moyer

This past weekend, the ten of us left our Raystown Field Station bubble and voyaged to the University of Maryland for the first national youth climate summit, an event called "Power Shift." We joined some 5,500 college students from around the country for two days of panels and workshops geared toward addressing the climate crisis facing our world.

Although Speaker of the House Nancy Pelosi was a featured speaker, the conference's highlight for me was an inspirational and poignant speech by the weathered, unwearied activist Ralph Nader.

After the 2000 presidential election, when President George W. Bush narrowly took the race from Al Gore, I had ill feelings toward third-party candidate Nader for fractioning the progressive vote and costing Democrats the presidency. But the 73-year-old was extremely impressive last weekend, when he stood before a gathering of the "youth vote" and pumped us up with a message not heard from mainstream politicians.

Here are the main points I took away from his speech:

We lack the skills to be good

continued page 10

Presidential Perspective

Have a topic that you'd like Dr. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

On July 21, 2007 I was among 60 college presidents who signed the American College and University Climate Commitment in Washington DC. The group of presidents has now grown to over 400. Each of us has pledged that our institution will work toward climate neutrality in our operations.

As part of this commitment, Juniata will develop a comprehensive plan within two years to attain climate neutrality as soon as practically possible, including an inventory of emissions, target dates, specific actions and tracking systems.

As many of you know, this is a huge task, and fortunately we are already making good progress. As Sustainability Day illustrated, many on this campus are already working to reduce our negative climate impact.

By signing the Climate Commitment we obligated ourselves to complete at least two specific actions to reduce green house gases this year. We are already working on many more than two, including over 20 projects to reduce electricity consumption that Student Government President Shawn Rumery worked on last summer in his internship. As reported to the business affairs committee of the board of trustees at its October meeting, we will begin work on many of these projects right away.

We have also included many sustainable design elements in the renovation of Founders Hall, including the use of geothermal energy. You will also see in our draft strategic plan, to be approved by the board of trustees at next spring's meeting, many references to sustainability.

Rob Yelnosky, vice-president for finance and operations, has developed a consortium of other signees (Allegheny, Dickinson, Franklin and Marshall and Washington and Jefferson) to work together in sharing ideas and seeking grant support for projects.

I signed this pledge because of my own belief that I must reduce my own contributions to global warming, but more importantly because I firmly believe that sustainability is, and has been, an important part of Juniata's culture.

If we are to be successful, it will come because everyone in the Juniata family works together to reduce our negative impact on the climate. I'm confident that we will all do so.

Ask the Administration

"Why does registration open to people by birthdates instead of by GPA? It seems unfair that a person with a 2.5 has an advantage over a student who carries a 3.5 just because he was born earlier in the year. Why can't the Registrar make a switch to a more merit based system?"

This round of registration, only freshmen are using birth month because they are the only group that is registering for all their spring classes. For upperclassmen, this is really an add/drop period.

Since freshmen must do so much more registration, allowing them to all start at the same time could overwhelm our servers and bring registration to a halt. That's why we break up registration by birth month whenever a full registration is occurring.

In March, all classes begin registration by birth month.

We chose birth month as a discriminator in an attempt to be fair. The registration cycle begins at a different birth month each round, so that students born in the early part of the year do not always have an advantage. We try to choose the starting month so that students who were near the end last round will be near the beginning for the next round. Birth month is also very clear-cut and random, so that the students should be broken into 12 equal groups.

GPA sounds like an attractive alternative, but it is actually hard to use, and there have been many complaints from students about the way that GPA is used to order housing requests. For example, do you use the overall GPA for transfer students, or just their Juniata grades? What about students whose grades from a semester abroad haven't arrived yet and aren't included in their GPAs? Also, freshmen don't have a GPA yet for their fall or spring registration periods, so GPA won't work for them. We would have to know the GPA distribution for each class during each registration to figure out appropriate break points to form twelve equal groups.

Registrar Athena Frederick assures campus that, "It is basically a process of first come, first serve and no one, to my knowledge, has ever 'not gotten' into a class because of how his birthday fell on registration."

Barb Hughes
Director of Administrative Information Services

"Why are there no paper towels in the dorm bathrooms? Are we expected to keep our hand towels in there? If so, there aren't enough hooks for everyone to keep theirs in the bathroom. Couldn't we at least get hand dryers installed?"

This has been an issue for many years, not only at Juniata, but at other colleges and universities as well. Recently, we conducted a survey of colleges similar to Juniata and found that the majority of those surveyed did not provide paper towels in residence hall bathrooms, nor did they provide soap.

The rationale for not providing paper towels includes: the potential damage that occurs when paper towels are jammed into toilets, dispensers are damaged often, and the amount of waste produced when paper towels are pulled out and left all over the floor of bathrooms.

The colleges that they do provide paper towels and/or soap noted that they replace an average of 6-7 dispensers per year and in most cases they do not replace the damaged dispensers until the end of the year.

We recognize the importance of proper hand washing and elected to install soap dispensers and hand sanitizer in our residence halls bathrooms. We inform students that we will provide the soap/sanitizer and that they may need to take a towel with them to dry their hands. Overall this has been well-received. We have had very few complaints and there has been very little damage to the soap dispensers.

Still, we are not completely satisfied with our present system. We will be installing more hooks for towels in the restrooms and we will continue to request special funding to install electric hand dryers in all student bathrooms.

Working for students and with students,
Tim Launtz
Director of Residential Life

You can ask the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective" (see page 9). Though he has plans for his column this semester, the president welcomes topic suggestions.

For the "Ask the Administration" feature (see above), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwared to administrators via the Juniatian's e-mail account.

Thumbs Up, Thumbs Down

to the South Hall resident who set off the fire alarm at 6 a.m. by burning a Pop Tart in his microwave. Here's a tip, Emeril: never set the cook timer for a number higher than your GPA. That should keep us all safe.

to turning back the clock. Given the incredible amount of work heaped upon us, we are always looking for more time in a day. This week we actually got it.

Life outside of the Lake: Climate crisis

continued from page 9

citizens. We have been formally instructed about advertising, marketing, business and economics. But our education has hardly addressed how to be active and engaged citizens. How do we expect American democracy to function properly when we, the citizens, do not know how to engage in democracy? Our schools should incorporate civic skills into curriculum so that students know what it means to truly be a citizen capable of making changes in our communities.

We must nurture our "civic personalities." In any movement against the status-quo, there will be obstacles, challenges and defeats. But a civic personality is resilient and does not give up, regardless of setbacks.

Being concerned about an issue is not enough. This point hit me hard. I consider myself concerned about climate change issues, but that does not mean I am working actively to stop global warming. Especially when it is becoming trendy to have an eco-conscious, we must remember that simply being concerned does not affect change.

Our efforts cannot be short-lived. Our generation is considered to have a short attention span. Therefore, our political representatives expect that our devotion to the climate change issue will expire as soon as we lose interest. But when it comes to issues that matter, we cannot back down. We must defy conventional views that student activism is only short term.

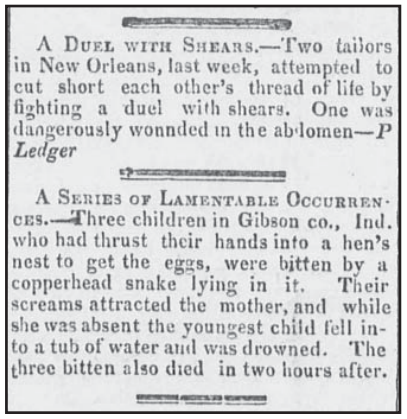
If our generation lifts up and personifies Nader's points in our behavior now and the years ahead, civic engagement will have been more than a fad, it will have become our generation's signature.

Junior Brittany Moyer is one of ten students living and studying at Juniata's Raystown Field Station for the fall semester. Interested in applying to spend at semester on the lake? Contact Chuck or Sharon Yohn, co-directors of RFS.

Join Brittany in a discussion on the Arch about this column, the Raystown Field Station or sustainability.

This week's topic: What is civic engagement? What are ways that you can become civically active?

Hunting down Huntingdon



Microfilmed and digitized: Giving huntingdon's past to the future

Romeeka Gayhart

Although spending hours in a library basement may sound dull, one student's historical curiosity has led him to help years of newspaper articles "escape from the basement." Senior Jonathon Knepp spent last summer as an intern at the Juniata College Beeghly Library working on two projects with the Head of Library Public Service, Andrew Dudash. The projects fill in gaps in the existing microfilmed records of local newspapers and help maintain a digitized, searchable database.

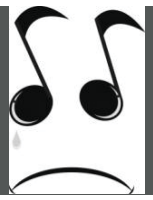
Dudash, who has been working on these projects for over two years, explained the relevance of Knepp's internship. He said, "Microfilm is about preservation. Digitization is about access." In the Beeghly Library and the Huntingdon Historical Society archives, 28 volumes of print newspapers had never been microfilmed and are likely the only copies in existence. The Beeghly Library stores newspapers which date back to1816.

Juniata College microfilms Huntingdon County newspapers with the Penn State Preservation Department thanks to a venture called the Pennsylvania Newspaper Project. It is funded by a grant

A Duel with Shears.—Two tailors in New Orleans, last week, attempted to cut short each other's thread of life by fighting a duel with shears. One was dangerously wonnded in the abdomen—*P Ledger*

A Series of Lamentable Occurrences.—Three children in Gibson co., Ind. who had thrust their hands into a hen's nest to get the eggs, were bitten by a copperhead snake lying in it. Their screams attracted the mother, and while she was absent the youngest child fell into a tub of water and was drowned. The three bitten also died in two hours after.

for the National Endowment for Humanities. This fund, which must be spent by March 31, 2008, allows for 400,000 pages of microfilm to be made in Pennsylvania. Of those 400,000 pages, Juniata College has microfilmed 20,000 pages from three different newspapers in the county.



Newspaper is a difficult medium to preserve. Its paper is highly acidic and is often stored without the appropriate care. Historians copy older newspapers onto microfilm so that the information can be accessed without causing further damage to original copies.

"The main goal of our project is to preserve as much as we can of what we have," said Dudash.

Microfilm is a great form of preservation, and the files are available to students, but microfilm has a downside. It is browsable, but neither searchable nor accessible from off campus.

The second half of Knepp's internship focused on the digitization of microfilm. The program is a part of the Huntingdon County Historical News Project. It is a collection of more than 70 years of digitized, searchable newspapers. These papers can be searched by using optical character recognition

MUSICALLY CHALLENGED

RAINBOWS ROCK

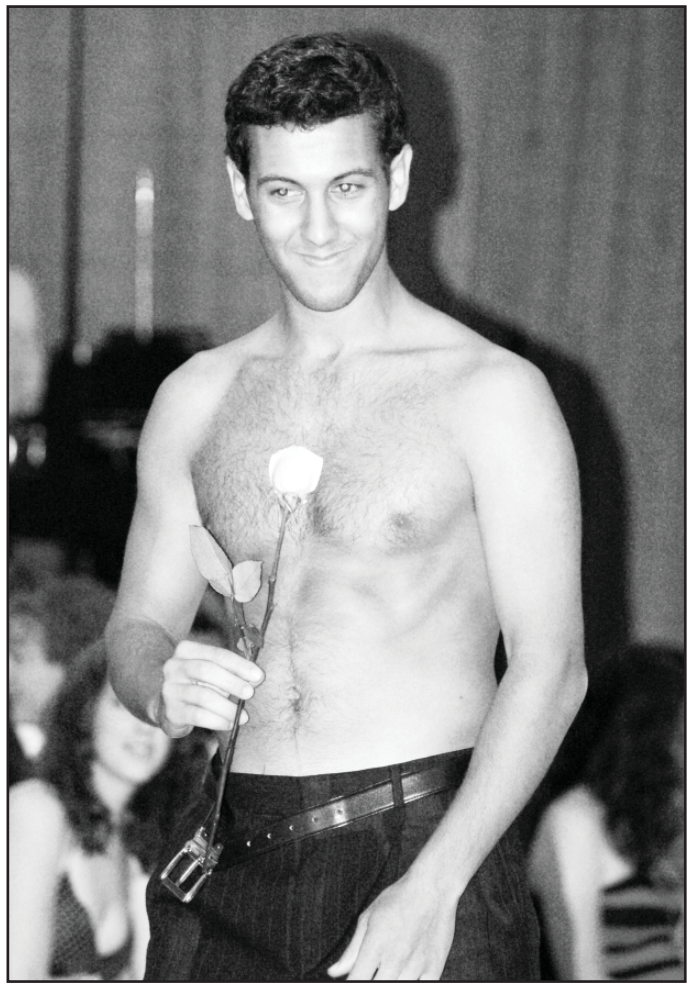
Zack Stoll

What is music worth? The band Radiohead posed that very interesting question on Oct. 10. The band set a major precedent when it released its new album "In Rainbows." The album was released exclusively on the band's Web site, for whatever price you wanted to pay. Radiohead was able to do this because it has no record label.

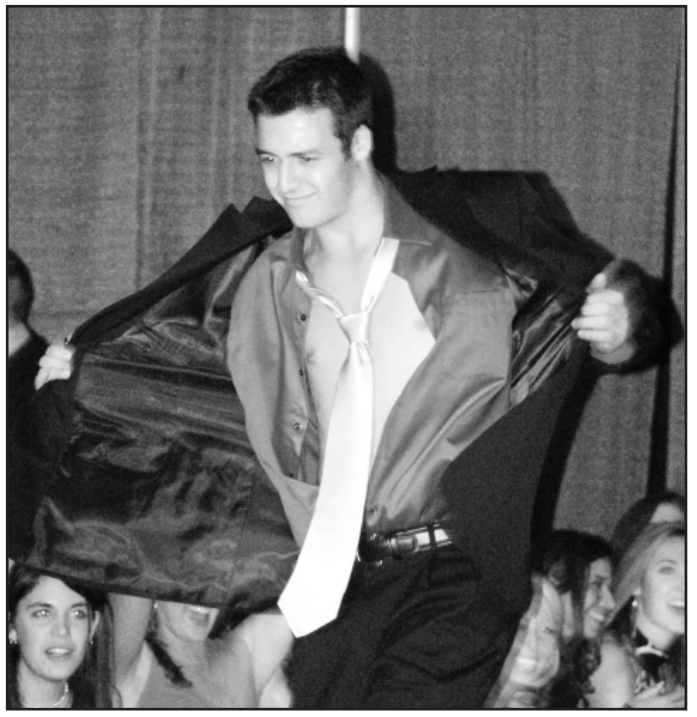
I downloaded "In Rainbows", and the price was blank; I typed it in. I'm not a huge Radiohead fan, and I had no idea what the album would sound like, so I didn't pay anything. It sucks when you are burned by buying an album that you think will be good, but it is not. That's $15 for an album that might be listened to twice. By now, I've already listened to "In Rainbows" three times, and I will be listening to it more. It's an album that it is best listened to at night while drifting off to sleep.

This album does not let up on the ambient electronica sound that I have grown familiar with. What does disappoint me a little is the lack of songs like "Creep" and "High and Dry." That can be expected though, since Radiohead has been moving away from that kind of sound since its sophomore album "The Bends." Now the sound is softer as on "Ok Computer."

The question is still how much will people pay for it? After listening to the album, I would say it's worth around $10. The most I'd be willing to pay for any album, though, is $15. The songs, which are self-produced, are solid and I can't find any major flaws in the album. I say this album is worth only $10 because, as I said, I'm not a huge Radiohead fan. I think that extra five dollars should be put toward an album that I just completely love.



Without a record label marking up the price of the album, and then taking an almost 70 percent cut of sales, all the money from "In Rainbows" goes directly to Radiohead. The number of sales was 1.2 million on the release day. If each person only paid three dollar for the album, then Radiohead most likely made up the cost of recording, production, and servers to download the album already.



Now the precedent has been set. Other bands are starting to move toward this label-less setup like Nine Inch Nails.

While not having a record label may be a good thing for bands that have a large fan base, the up and coming bands still need them.

Man Market

Beth Woodhouse / Alfarata

Junior Evan Heisman and senior Luke Ferster work the runway during the River Rats' second annual Man Market on Oct. 20.

The rugby team held a canned food collection before the event. Donations were sent to the Huntingdon Food Bank.

Fevered bidding led to a total collection of $885. Proceeds go to fund the River Rats' participation in tournaments and equipment.

Frightful Melodies

Christopher Shannon / Juniatian

In full costume, the Wind Symphony and Sinfonia Orchestra performed their first Halloween Concert on Oct. 27. Alyson Jacques as the Keebler Elf (above), was joined by super heroes, black cats, lords and ladies of the Renaissance and ballerinas. The Percussion Ensemble used complete darkness, fog machines and trapeze artists to accentuate their performance. Sinfonia and Wind Symphony gave the concert a classical atmosphere with "The Sorcerer's Apprentice," "Masquerade" and "Toccata and Fugue in D Minor." The Wind Symphony then killed the lights for the eerie performance of "Voodoo."

Hunting Down Huntingdon

continued from page 11

technology and the Internet.

Digitization is a more expensive and trickier medium than its predecessor, microfilm. When microfilm is converted to digitized images, even a simple scratch of the film can lead to illegibility. "Image quality on microfilm is varied from the amount of ink on the printing press… if that paper was run first or last, the lighting in the room when they make the microfilm," said Dudash. It is important, therefore, to choose the right microfilmed images to digitize.

The first phase of the digitization project focused on cataloging the oldest newspapers. The later two phases will focus more on preserving the newspapers' quality. Dudash says within the next month or so that the project will upload digitized versions of the Huntingdon Journal from 1876 to 1880. These years are especially important to the College community, as it was founded in 1876.

A proposal was submitted in September for a grant to further digitize. Dudash and Knepp will find out if it was accepted in February. If the proposal is funded, Juniata will digitize at least two other titles and complete the digitization of the Huntingdon Journal from 1835 to 1904. These years chronicle the early years of the College and will be a valuable resource for alumni, historians and genealogists.

Although there had been student involvement in the project, Knepp was the first student to be selected as an intern. If the project receives the grant money, the library will look to take on another intern for next summer. Dudash encourages interested students to apply, andsaid that the number one criteria for the position is "historical curiosity."

A link to the digitized newspapers can be found on the Beeghly Library Web site under "Huntingdon County Historical Newspapers."

Anything But Ordinary

Black Phoenix Alchemy Lab

Claire Williams

Ladies on campus probably wear a celebrity's perfume or Chanel. Most guys wear cologne that smells alike and lacks personality. That's where Black Phoenix Alchemy Lab comes in.

Black Phoenix Alchemy Lab is a perfume company based in North Hollywood, California. It makes a huge line of perfumes with something for everyone, even guys.

This is no exaggeration. There are 22 different general catalog lines and many limited editions, such as Lunacies and scents for Friday the 13th.

As with any new perfume choice, each scent from the Lab is a bit of a gamble. What smells amazing and floral on your friend might smell like bland soap on you. Even what smells good on you one day might smell different a week later. As you go along you'll find what scent notes work for you.

Most people start out buying "Imp's Ear," the Lab's trademarked sample vials. They contain about 1/32 of an ounce of oil and are $3.50 each or six for $19.50. Using Imps, you can find out which scents work with your chemistry and then begin exploring similar scents. I recommend trying a wide variety of imps at first because you never know might smell amazing on you.

Once you find scents you love, which may take a while, it's time to move on to buying 5ml bottles. Most of the general catalog scents are $15, but range up to $27.50. Limited editions generally range from $17.50 to $21.50.

Limited editions are more of a gamble. They can not be purchased from the Lab in Imps, so there is no trial size. If one interests you, you have to buy blind. Don't let the risk turn you off; some of your favorite scents might end up being limiteds.

There are usually four or more limited editions released a month, one being a Lunacy. Lunacies are released every month for a few days before and after each full moon. Each represents its own moon. There are also seasonal scents released for a few months like the current autumn/Halloween (available until Nov. 15) and winter/holiday lines.

The Lab even gives you freebies, such as including Frimps, or free Imps, in your order. These could be something you had wanted to try, something you might never have thought to try or maybe something you have. Usually the higher the price of your order, the more Frimps you receive.

A plus of the Lab's products is that they are almost all vegan friendly. A few of the scents contain honey and that will be listed in the scent notes.

As you try a lot of them to find your favorites you might not always like what you get. Unlike other perfumes, if you buy something you don't like, there are plenty of sites and online communities where you can find someone who will happily trade Lab products with you.

Signs you might be a BPAL addict:

You eagerly await for Friday the 13 and are disappointed to find only one in 2008.

You have answered the question 'What are you wearing?' with "Spanked" or "Eat Me" and don't think it's at all odd.

The phrases 'Will Call' and 'Click N' Ship' make your heart happy.

When you found out there was going to be an East Coast Will Call, it made your whole summer.

Mostly the Black Phoenix Alchemy Lab is based online but it has monthly Brick and Mortar events, which are sales in actual buildings. Until recently such events were held solely on the west coast, but in June one was hosted in Hershey. There are a few stores that sell a limited amount of the product on a regular basis. These locations are listed on the Lab's Web site.

The Black Phoenix Trading Post also carries a variety of other lab-related products; one of the newest is nail polish that embodies some of the perfumes. The Post also carry t-shirts, containers for perfumes, soap, massage oils and a variety of other products. Occasionally the Trading Post carries perfumes as a set with a shirt or statue, such as the previous Limited Edition Trick or Treat Inquisitions, which came with a 5ml bottle of either a Trick or a Treat perfume and a matching t-shirt.

So if you're feeling a little naughty, you could try some "Debauchery." If you're feeling a little bit like a pirate, try some "Jolly Roger." If you really need a vacation, you could try "The Hamptons" or if you want to get to Wonderland, you could try some "White Rabbit."

One warning, wearing this product will probably cause lots of wrist smelling, especially if it's a new scent or a favorite. You might think "Does it look weird that I'm sniffing my wrist?" Don't worry about it; you can't help it that it smells amazing.

Black Phoenix Alchemy Lab can be found at www.blackphoenixalchemylab.com.

Musically Challenged

continued from page 11

They don't have that start up money to produce albums that an established fan base can provide. They need the support a record label brings them. However, I would much rather buy mail order from an indie label than from a major label. The small labels support the band, while the large labels support a profit.

So what is music worth to you? Is ninety-nine cents a song on iTunes fair? How about the $18 from the chain music store? I say the $13 from an indie label is fair.

With Radiohead's actions, I may never have to pay for a large record label's profit. Only the bands will benefit from my purchases. With all this said, I'm going to go back and pay for "In Rainbows". That way the band gets what I think it deserves. Not a penny more, not a penny less.

If you need "In Rainbows" in CD format, it will be released next year.

The Director s Chair

"Dan in Real Life" -- Carell shines through in so-so film

Bennett Rea

Steve Carell clearly has acting chops. He's been wonderful in numerous comedic roles and even flexed his dramatic muscle in "Little Miss Sunshine." Unfortunately, his great performance here isn't enough to save "Dan in Real Life" from mediocrity. The plot is entirely predictable and some parts that were obviously meant to be "awkwardly funny" are just plain awkward. Fortunately, there are touching and funny moments that keep "Dan" from being completely bland.

The plot is a somewhat common one. Dan (Carell) is a single father of three girls who are, of course, quite a handful in their respective ways. Half of the film is devoted to the difficulties Dan has with parenting. The other half is devoted to his romantic connection with Marie (Juliette Binoche). Dan and Marie hit it off in a bookstore after she mistakes him for a helpful employee. They talk for hours and there seems to be some chemistry between them. However, Marie is already involved with someone. She agrees to give him her phone number only to continue their conversation as friends.

Dan returns to the cabin where his whole family has gathered for an annual getaway. There he finds out that Marie is actually involved with his brother Mitch, played annoyingly by Dane Cook. From there, the movie follows a basically predictable plot. Turn on the television and watch any romantic comedy on any channel and you'll know the sequence of events that will inevitably follow in this movie.

Perhaps "Dan in Real Life" was meant to be predictable and conventional. But it was distributed by Focus Features, the art house branch of Universal Studios. Focus Features has been known for putting out unconventional and critically acclaimed films such as "Broken Flowers," "Eternal Sunshine of the Spotless Mind," "Lost in Translation" and "Brokeback Mountain." All of these films are a notch above "Dan in Real Life." They are simply less predictable and more interesting. It seems that "Dan" was directed more at a general audience at the sacrifice of being a better film.

That being said, it is still an interesting and warm movie to watch. Beyond the predictability, there is a human element that distinguishes it from many other romantic comedies. The characters seem believable. They are insecure, vulnerable, interesting and overall very human. Even the young actresses playing Dan's daughters (Brittany Robertson, Marlene Lawston and Alison Pill) flawlessly purvey a sense of disappointment yet hope in their hapless father. Save for Dane Cook's butchery of a skill known as acting, the cast did very well in their portrayals of each character.

Yet as human as the characters feel, there is something amiss. There is a slight lack of development in the relationships between Dan and Marie and Dan and his girls.

The larger problem though, is misplaced awkwardness. Carell is involved with NBC's "The Office," a superbly funny comedy in its 4th season. It relies on great characters and hilariously awkward moments for it to work. However, in "Dan in Real Life," only awkwardness is present while the "funny" part is forgotten. Due to subpar writing, certain parts of the film feel like they should be funny just aren't. A scene at a dinner table where Dan intentionally brings up Mitch's questionable past to Marie makes the viewer feel more uneasy than amused. What is often pawned off as quirkily funny comes off as pure discomfiture.

Overall, "Dan in Real Life" rings true when it comes to human nature and connects with only the hearts of the audience. The performances by Carell and Binoche are some of their best, and the movie gives them a chance to shine. But many of its attempts at comedy fall short. Combine that with a predictable plot and the lack of fleshed out relationships and you end up with a mediocre movie.

Final Take:

★★

"Dan in Real Life" is rated PG-13 for some innuendo.

Now playing at the Primiere Theater in State College

Digital Media students enter Apple film festival

Sarah Ruggiero

Students associated with the Digital Media Zone (DMZ) and the Teaching Learning Technology Center (TLT) have entered the Apple Insomnia Film Festival. The five students who produced their film, "Robin's Cage," are juniors Jigar Patel, Tim Auman, Neil Perrin and Scott Thomas, and freshman John Huffstetler.

Apple commenced the film festival on Saturday, Oct. 13 at 9 a.m. To begin, Apple posted a list of elements that all contestants needed to use in their films.

Filmmakers needed to use three of the 10 locations that were posted. Options included a park bench and a bird cage.

Contestants also needed to incorporate the character name "Robin Darjeeling," the background sound of radio static and a tuxedo. They also had to include the dialogue, "Don't tempt me."

Technically, artists needed to use a Dutch camera angle, employ the narrative device of dream sequencing and usethe editing technique of a match cut.

"The birdcage was an integral part of our story and it just seemed to fall into place. By that I mean, once we got the final idea for the story, things started coming together really quickly, including integrating that prop," said Huffstetler.

No film could be longer than three minutes, including credits. All edits and production had to be done on a Macintosh computer with a maximum of 400 pixels. The film also had to be prepared for high speed Internet streaming and comply with MPAA guidelines of PG-13 or lower.

Aside from the film criteria, all team members had to be United States citizens in either high school or college. There was no submission fee for students.

Perrin said that everything was completed over fall break. It took over six hours to storyboard and brainstorm for ideas, an additional eight hours to film and another six hours to edit the film.

"The acting was about as low key as you could make it. I never had any lines, and besides a little sprinting, there wasn't anything physically difficult about it. So, it was pretty laid back. I was just happy to contribute," said Huffstetler, the lone star of the film.

To narrow the over 1850 submissions to the final 25, Apple is hosting a public vote on its Web site. The 25 most popular films will then be judged by industry professionals. The judges include Fred Armisen, Nora Ephron, Terry George, Mary Harron, James Mangold, Mira Nair, Jim Sheridan, Barry Sonnenfeld and Luis Valdez. These Hollywood

Unlock Your Voice

Deidre Hightower / Alfarata

On Nov. 2 students and faculty celebrated women writers by reading aloud from their works at the 15th annual Unlock Your Voice coffeehouse. Two participants read from their own works, including junior Katie Cibort (above) who shared a poem that she wrote in tribute to Alice Walker's essay, "In Search of Our Mother's Gardens."

Students enter Apple film festival

continued from page 13

gurus have been responsible for such blockbuster hits as "Men in Black," "American Psycho" and "Hotel Rwanda."

Voting can be done until Nov. 9 on the Apple Web site by creating an Apple ID or using an already existing one at https://myinfo.apple.com. "I really want people to watch it and vote on it," said Perin.

To search for "Robin's Cage," type the last name of one of the students who made the film or type "Juniata College" into the search bar of the Insomnia Gallery at http://edcommunity.apple.com/insomnia_fall07/contest.php.

Judging will be based on the following criteria: content, script, storyline, creativity, originality, coherence, aesthetics, visual creativity, cinematography, technical excellence, camera operation, editing, special effects, titles, final product, overall impression, enjoyment factor and cohesiveness.

Winners will be announced on Nov. 19. Prizes include meeting the judges, winning equipment such as a new Mac Book Pro and film editing software. The winner of best storyline and directions will receive a private video chat with the producer of the "Harry Potter" films, plus many opportunities for publicity.

"Meeting the judges is a big deal in the film industry because that's a connection to Hollywood and the more connections the better," said Perin.

Pippin to be performed this weekend

On November 8-10 and 15-17 at 7:30 p.m., the Juniata theatre department, in collaboration with the Juniata instrumental music department, will present the classic musical "Pippin" at the Halbritter Center for the Performing Arts.

The production, which has also been popular on Broadway, tells the tale of the son of Charlemagne, Pippin the Short, as he tries to find his true calling in life.

With its theme of "sex presented pastorally," Pippin appeals to the young at heart. It features music from the Oscar-winning composer Stephen Schwartz, including a wide array of styles, from ballads to dance numbers.

Tickets are available at the information desk in Ellis Hall and cost $3 for students and $7 for general admission.

In the Name of Fashion

Halloween's scariest, sexiest and most outrageous costumes

Kelly Popernik

The best part of October was Halloween! The ghosts, goblins and ghouls made their ways into Halloween stores and our precious Wal-Mart. We shed our everyday clothes and transformed ourselves into something out of the ordinary.

Halloween is my all time favorite holiday; the more over the top you are, the better. After searching the Web, recalling past costumes and asking fellow classmates what they dressed up as this year, here are some famous, funny and sexy costumes.

Trick-or-treat traditional

Every year some of the same costumes pop up and should be inducted into the Halloween hall of fame. Some that fall into this category include the cowgirl/boy, Indian, devil, pirate, witch and ghost. Perhaps they are popular because they are easy to pull together. Being a cowgirl/boy involves finding blue jeans, a western shirt, hat, bandana, toy gun and maybe a rope. A feather, headband, moccasins, brown pants and a tomahawk define being an Indian. Whatever the reason for their popularity, they deserve to be recognized.

Funniest

Halloween is also about looking absolutely ridiculous, especially for college students. Some of the funniest costumes I have come across include a car air freshener, and one night stand. Being an air freshener is exactly what you would picture, someone wearing a human size tree-shaped costume (scent not included). The one night stand costume looked like a dresser next to your bed but with the words "one night stand" on it to help other Halloween goers figure it out.

On Saturday, Oct. 27, some costumes stood out above the rest. Sophomore Luke Jenson was a flamingo rider. His costume was a blow up flamingo with no legs attached to it. Jenson's legs were the flamingo's legs to create the illusion of the flamingo walking. The rest of his costume included a Hawaiian print shirt and sailor hat. Alex Snyder was Borat and wore a lime green thong swimsuit. He said, "It was cold outside."

Sexiest

College students have transformed Halloween into one of the sexiest holidays. For once, you can be as trashy as you want and not be considered any less of a person.

Some of the costumes that fall into this category include Santa's sweetie, and the naughty nurse. But ladies also like to take childhood characters and make them a little more risqué. Picture the Rainbow Bright costume, complete with a wand, rainbow stockings, a tiny blue dress that barely covers Rainbow's rear. Just a warning ladies, you might want to keep your Halloween pictures a secret from your parents!

Juniata's Best

There were a few themes that need to be recognized from this year's Halloween festivities on campus. The theme my friends and I decided to embrace was the Wizard of Oz. Our costumes included the cuddly lion worn by senior Tara McMinn and the tin girl worn by senior Ali Meckey. I was the scarecrow and wore an orange, brown and green dress with a floppy hat and brown nose. The only thing missing were the flying monkeys. McMinn said, "Seeing all your friends dressed up is the best part of Halloween."

Seniors Courtney Callas and Travis Sumner were the American Gladiators; Ice and Thunder. Their costumes included bedazzled singlets, blonde wigs and sheer strength.

Lastly, there seemed to be a "Revenge of the Nerds" comeback. Seniors Zach Shatto, Chad Steiner, Lance Tippet and junior Jay Leonard had everything from taped glasses, suspenders and the comb over hairstyle.

As a whole, this year's Halloween costumes might just go down in history.

Fun Fashion Tip

For easy application of fake eyelashes, apply all eye makeup first. Then, apply the lashes and seal with eye liner at the lid.

From surreal to so real! Landmark Champions!

Michelle Campbell

"We won the ship! We won the ship!" is the phrase we chanted as the rest of the team and our parents ran onto the field. JCFH won the first ever Landmark Conference field hockey championship, beating Catholic University of America 2-1. This was also the first time in Juniata College history that our field hockey team won a conference championship.

On Friday afternoon, students and staff sent us on our way and told us to "make it exciting." That is just what we did. The first half remained scoreless until 3:41 left when Catholic scored its only goal of the game.

"I couldn't believe the goalie missed the ball. I kept thinking I better not miss it. [Then] I knew I was getting it in!"
– Paula Price

Determined to take home the conference title, we came out in the second half with a new game plan, which included a change of uniform jerseys. We felt that all we could see were the Catholic whites, and our gold jerseys weren't sticking out, so we changed to our blues.

This change of clothes helped change our fortunes. With 19:05 remaining in the second half, senior forward Kim Wagner scored a well-needed goal for us, tying the game at 1-1.

The clock was winding down and it looked as though we would be heading into overtime until with 1:05 remaining, freshman forward Paula Price scored the game-winning goal off an assist from Wagner.

Catholic came back harder than ever in the last minute of play, but we were strong enough to hold them off for our championship win.

I asked what was going through Price's mind when she was about to score her goal. She said, "I couldn't believe the goalie missed the ball. I kept thinking I better not miss it. [Then] I knew I was getting it in!"

How does if feel to win the conference title? "Indescribable," said senior back, Amanda Wimer. "Even walking around after the game and on the bus ride home, I just kept thinking 'Did this really just happen?' It's like nothing we've ever done before."

My teammates agree that there are no words to describe how we felt when we won the championship. Some were so excited that they simply peed in their pants… just a little.

Not only did the win earn us a championship, it also increased our record for wins in a season and consecutive wins to19 and 11 respectively. We have also scored in every game of the season so far, with a total of 63 goals, while allowing our opponents to score only 17.

Over a third of our goals were scored by Wagner, who leads the team with 25 goals and nine assists for a total of 59 points. Wagner also leads the Landmark Conference in shots, points, goals and assists. I asked what goals she set for herself this year, and they are quite impressive. She said, "Last year, I broke all of the records at Juniata, so now I am looking to break the national record of goals in a season [38]."

courtesy of Juniata field hockey

After several years of coming close, the field hockey team made history by winning its first ever conference championship on Nov. 3. The team celebrated again when receiving a bid to the NCAA tournament.

Wagner has also earned impressive accolades to go along with her records. She and six other Eagles field hockey players captured Landmark Conference field hockey honors. Earning placement on the first team were Wagner, senior midfielders, Leslie Stern and myself and senior back, Heather Hassinger. Second team all-confer-

JCWS makes playoffs for first time

Kristen Penska

We couldn't have been more prepared. With our iPods blaring and cleats slapping pavement, our number four ranked Juniata women's soccer team was ready to defeat Scranton University, the number one ranked team in the Landmark Conference.

In the season match against Scranton, our performance was not the best. This time, we were determined to make a difference. We wanted this win. "Why not us?" said Coach Scott McKenzie.

Our warm-ups started up as usual. We stretched and went through the motions. "We were so nervous, we just tried to act natural and do what we always did to make sure nothing went wrong when it was game time," said freshman defender Laura Fisher.

After seconds of match play, it was clear that we came to give Scranton a game. With Heather McMinn, Melissa Johnson, Christine Schottie and Laura Fisher defending, nothing went past midfield.

After weeks of training, our forwards utilized the speed and talent gained throughout the season to execute perfect runs down sidelines. "I was so pumped up for the game, I couldn't feel the cold, or how tired I was. I just kept pushing," said forward Katie Young.

At halftime the game was at a draw, but soon our hard work would pay off. In the 52nd minute, Amanda Broadwell scored a goal. We had just scored first on the number one ranked team.

"It was amazing. Just when we thought we were beat, we were right back in the game."
– Lauren Auster-Gussman

We hardly took a breath before Scranton made its mark by placing a well-earned ball into the net. We held our own, but following the Royals' first goal, they soon scored another. "We knew we needed to get our heads back in the game," said forward Caitlin Bigelow.

Not a moment too soon, we came back to score our second goal.. "It was amazing. Just when we thought we were beat, we were right back in the game," said freshman goalkeeper Lauren Auster-Gussman.

As time wore on, the game remained tied. Whispers among the bench spoke of golden goal halves, and eventually penalty kick situations.

We had it made. We were about to go into overtime. Four minutes remained on the clock. For close to 90 minutes we were solid competitors with a team that, to others, seemed much more talented than us.

And then, there was the break away. A Scranton forward ran out of nowhere, taking the ball and ending our chances in one swing. Before we could react , our time at Scranton University was at an end.

The loss was painful. Our seniors wanted the win more than anything, and the underclassmen pushed hard to ensure that our team was as successful as it could be. But we know that " We played

continued page 19

Seasoned and shaped

Women's basketball out to prove something

Jess Winemiller

Experience cannot be taught. Luckily, with five seniors and five juniors, the majority of our team is "seasoned veterans," as head coach Danny Young puts it.

We have been through the grind before, the two-a-days and early workouts. We have experienced games where the buzzer was our friend and ones when it was our foe.

"There are no surprises anymore," said senior guard Courtney Callas. "We know what is expected of us."

Expectations run high on an experienced team. Constantly being competitive in practice, accepting accountability for mistakes, and a making playoff appearance are not just goals—they are expectations.

"Yes, it is expected of us to make playoffs, considering we have missed playoffs by one game the past two years," said senior guard Mindy Werner.

To earn a berth in the Landmark Conference playoffs is an orthodox goal, especially with a seasoned team. One trap we cannot fall into, however, is postseason fever. We cannot allow this to distract our day to day focus. We want more out of our season, beginning to end.

Daily successes hold just as much weight as postseason achievement.

Our two scrimmages against Bloomsburg and University of Pittsburgh - Johnstown were our first tests. Both competitive Division II programs, our opponents were taken aback. We won both competitions by double digits.

"We want to establish ourselves as the dominant team," said Werner. This goal transitions back to our expectations of constant execution in every drill, practice and game.

"The key is consistently raising the bar," said Callas.

Coach Young loves making us dig deeper. She specifically designs practice to provoke elevated competition. There is a winner and loser during most drills. Loser runs.

Continually pushing ourselves takes its toll, especially physically.

Our experience and preparation assists this enduring physical aspect. When bodies are slow and beaten up, minds need to step up. My opponent may have a quick first step, but I know when and where that step is going before she makes it.

"With age comes wisdom," said Young. "We have become smarter players not because we necessarily want to, but because we have to."

We've increased our court I.Q. to compensate for mismatches; however that is no excuse for poor stamina.

Matt Huntsman, our off-season trainer, made sure that we came into preseason well-conditioned. He thrives on kicking our butts five days a week.

"He [Huntsman] puts together workouts that challenge us, and make us push harder to exceed our own expectations," said senior guard Ali Meckey. "Our team prides itself on our run-and-gun game and our hardnosed defense, and I truly believe it's because of Matt and his tough love that we are able to do so."

Having our wind on top of our experience allowed us to jump into basketball-focused drills immediately at the official start of practice. We were able to execute defensive rotations and offensive schemes right out of the gates.

Though we are conditioned and mentally seasoned, "We haven't proved anything yet," said Young. Entering my last season, I could not agree with Coach more.

Women's basketball has not earned an appearance in any postseason tournament in the past four years. Memorial Gymnasium is not decorated with our team picture or a congratulatory banner.

And even worse, Lady Eagles' basketball has not consistently been seen as a threatening presence on the court.

"Our past reputation is not a reflection of the attitude we are building," said Callas. An attitude that is second to none.

"I hope other teams look at our past because it will give them a false pretense of the present," said Callas with a smirk.

The Eagles open their season at Penn State-Behrend on Nov. 16.

Missed opportunities and mistakes still keep Eagles from soaring

Tyler Sasala

Frustrated, disappointed and disheartened are a few words you might hear a Juniata football player say. But one word that you won't hear us say is "quit." Without a tally in the win column, the team hasn't given up on the season yet. Senior wide receiver Lance Tippett said, "When you're struggling like we are, you have to remember why you play. You play to have fun and that's what we are doing, remembering to have fun."

On Nov. 3 we traveled to Dickinson College, where we hoped to end our winless streak in the Centennial Conference. Miscues, turnovers on downs, penalties and a blocked punt led to a 41-0 deficit in front of 3,800 fans on Dickinson's homecoming weekend. It wasn't until 12:32 remained in the fourth quarter that we finally put points on the board. The first of two scores came off of a 61-yard touchdown pass from junior quarterback Jay Leonard to Tippett. The second came from the legs of Leonard on a nine-yard run. It was too little too late with a final score of 41-14, adding another frustrating loss to our season.

Talking about the loss Leonard said, "We kept shooting ourselves in the foot. It basically boils down to us making little mistakes that keep us from being competitive week in and week out."

On Oct. 27 we hosted Johns Hopkins University. Hopkins received the opening kickoff and marched down the field for a quick score. After the scoring drive from the Blue Jays, Leonard's pass was intercepted and returned to our eight yard line. On Hopkins' next play they scored on a run from eight yards out. Then after a three-and-out by our offense, the Blue Jays increased their lead once again. The score already was 21-0 and only 11 minutes had rolled off the clock in the first quarter. Once again we dug ourselves into a big hole early.

With one minute left in the first half, our offense engineered a 57-yard scoring drive to make the score 28-7 in favor of the Blue Jays. The drive was capped off with a 10-yard touchdown pass from Leonard to senior wide receiver Dave Nicklaus.

Johns Hopkins added two more scores in the third quarter before our offense struck again.

Freshman fullback Ryan McDonald threw two touchdown passes on the day. The first was an 80-yard strike off of a halfback pass to sophomore wide receiver Matt Dunker. The second was a throwback pass from three yards out to Leonard. McDonald said, "It felt great that I was able to contribute to the offense. I was really glad to get to run those plays in the game and that they both worked as well as they did."

Leonard finished with 205 yards through the air and reached another milestone against Johns Hopkins. Leonard became just the sixth person in Juniata history to surpass the 5,000 yard mark for his career. With 5,116 yards Leonard is currently fourth among the all-time career passers at Juniata. Leonard said, "It's a nice accomplishment not only for me but it's a nice accomplishment for my teammates."

As a team we have had high points and low points through the last nine weeks of the season. We never imagined that we would be winless with only one game left. Despite this, we are remaining focused and not giving up. Tippett said, "The team's record is always in the back of our minds, but everyone on the team realizes that each Monday we start a new week against a new team. As Coach Alt would say, [we] "start the clock over." We are not thinking about last week or next week. We are excited for this week's game."

Christopher Shannon/ Juniatian

Junior quarterback Jay Leonard is pressured by a defender during Juniata's 42-21 loss at Gettysburg College on Oct. 13.

Leonard connected with his receivers only 19 times on 46 attempts for 271 yards on the day. He also threw two interceptions and one touchdown. He has thrown for 2078 yards in 2007.

The Eagles (0-9) continue to struggle, averaging only 15.2 points per game, while giving up 33.6 points per contest to their opponents.

Stagg Bowl star's jersey retired

Kershishnik's #86 joins others in Juniata hall of fame

Sarah Ruggiero

At the 2007 homecoming football game, the athletic department celebrated the dedication and retirement of Joe Kershishnik's football jersey. This marked the first time in Juniata history that a football jersey was retired.

His #86 jersey now adorns a wall in the Kennedy Sports and Recreation Center. It can be found hanging in the stairwell facing the tennis courts, along with Carolyn Stambough's ('87) volleyball uniform and Bill Berrier's ('60) baseball uniform. Berrier later served as Juniata's baseball and wrestling coach, director of intramural sports and athletic director.

Kershishnik was a three year student at Juniata during the 1970s. As a three year letter winner in football, he played on the 1973 Stagg Bowl team, eventually starting as a defensive tackle during his sophomore and junior years. He wrestled for Juniata as well, though his heart and soul were part of the football organization.

From the age of 11, Kershishnik was the "man of the house," supporting not only himself, but his six younger siblings and mother as well. Prior to his senior year at Juniata, Kershishnik was forced to drop out of school in order to support his family financially. Kershishnik vowed to return to complete his senior year and receive his degree in mathematics.

On Sept. 7, 1976, Kershishnik addressed a letter to the Indiana Evening Gazette, clarifying his motives for his leave of absence from Juniata. He said, "I regret very much to say this, but I have decided to take a full one year leave of absence from Juniata College. Financial reasons were the basis of my decision and I am presently, slowly but surely, relieving the situation as I have a very good paying job. I have pride in Juniata as a learning institution and also in its football program."

> "A guy like that sets an example for what the rest of us should desire to be like."
> – Brandon Spayd

Kershishnik accepted a well-paying job in the Indiana County coal mines of West Virginia. A few months into his new job, on Nov. 18, 1976, Kershishnik was killed in the mines when the roof collapsed, suffocating him. Kershishnik was 21 years old.

"The loss impacted the whole campus. Everyone expected Joe to be back. It wasn't the same without him," said Bub Parker ('91), associate director of alumni relations.

Judy Swartley ('75) agreed that the death of Kershishnik affected the entire Juniata community. Years later, at the 2006 homecoming football game, she decided that Kershishnik deserved for his jersey to be retired. "I saw #86 on the field and it just didn't feel right. It ran through my head that we should retire it," said Swartley.

Swartley, in collaboration with current head football coach, Darrell Alt and Donald Page ('77), initiated the process to memorialize Kershishnik in Juniata's history.

"Coach Alt was so agreeable to work with us. He is a wonderful man and he is very open-minded. Without that spirit behind it, it wouldn't have happened. He carried the ball from there. Juniata moved so fast with it, and I am indebted to them for it," said Swartley.

This collaboration prompted Juniata to create the policy for retirement of a jersey. Individuals considered for the honor include those "forced for unavoidable reasons to terminate their athletic career [sic] before establishing credentials that may have allowed their election to the Juniata Sports Hall of Fame, former Juniata athletes who gain national recognition in a "professional athletics career" or those who devoted a large portion of their lives to Juniata athletics.

In Feb. 2007, it was agreed Kershishnik would be honored by the retirement of this jersey on the 2007 homecoming weekend.

Thanks to Coach Alt, the halftime ceremony was thoroughly planned to honor Kershishnik. Page opened the ceremony, educating people about Kershishnik's life and contributions to the College. Walt Nazdak, Kershishnik's former football coach, who took Juniata to the Division III championships, then spoke about Kershishnik the football player. They both spoke on Kershishnik's behalf and about how greatly he affected the football program and the Juniata community.

"Juniata's phrase is 'service before self' and this whole ceremony brought that to light for me. That was Joe. I want future students to know what type of person Joe was. He did everything for everybody else before himself, and having him recognized before he was forgotten was so memorable," said Swartley.

Seven years ago, Swartley, Simon Corby, a past employee of Juniata, past teammates and friends of Kershishnik formed the Joe Kershishnik Scholarship Fund. They raise money every year through donations and an annual golf tournament organized by Juniata alumni, Denis Burke ('78) and Stu Jackson ('77). This scholarship is awarded annually and helps to pay homage to the memory of Kershishnik, while providing students with the same opportunities that Kershishnik experienced.

"A guy like that sets an example for what the rest of us should desire to be like. With the current status of where we are at, we all want to leave this school better than what it was when we came in. And that's what Joe did," said junior football player, Brandon Spayd.

Funding for the retiring and preservation of Kershishnik's jersey is credited to trustee Dave Goodman ('74).

"I hope this event instills that Juniata has been this way forever. Juniata attracts a certain type of person. That kind of person is a good student, someone who cares about others and cares about the College as a whole. Most people are proud to be here. We do more with less," said Parker.

Field hockey wins conference

continued from page 15

ence honors were given to junior goalkeeper, Abby Funk, Wimer and Price.

Three of these athletes also captured major conference honors. Wagner earned Offensive Player of the Year, Hassinger was named Co-Defensive Player of the Year and Price was honored with Rookie of the Year.

With these honors in hand, we are looking to extend our postseason play throughout the NCAA tournament.

We faced Johns Hopkins University in the tournament's first round on Nov. 7. Results from this game were not available as of press time. For information, visit the field hockey page at www.juniata.edu/athletics.

Since we will be facing much more competitive teams than we have during the regular season, it is crucial that we stay focused on the game we are about to play. Sophomore Melissa Gorman said, "The teams we will be facing are just as fast and have skills like us. We need to be exceptional. During our regular season schedule, we were never forced to be exceptional."

So far we have shown Drew and Catholic, both of our post-season opponents, just how exceptional we are. Winning the conference was the first of many goals. With your support, help us travel through the NCAA tournament to achieve our next goal.

Kevin Dundore / Juniatian

Freshman Paula Price passes the ball out of pressure in the 2-0 win over Goucher on Oct. 31. Price came up big in the Landmark championship match, scoring the game-winning goal in the final minute.

Women's volleyball wins 27th title

Josh Lingenfelter

Christopher Shannon/ Juniatian

After winning their 27th consecutive conference, the women's volleyball team celebrates with some victory cigars.

Expectations can be dangerous. The women's volleyball team knows all about expectations, though, winning its last 26 conference titles. After Nov. 3, the Eagles ran that number to 27 with a victory over Scranton University in the Landmark Conference's inaugural season's title match.

Asked about constantly facing high expectations success, junior outside hitter Amber Thomas said, "It feels really great to win even though people expect us to win. We just have to continue off of that [Landmark title] with regionals coming up."

To explain the keys to team success, Thomas said, "It has to do with the chemistry we have as a team on and off the court. We work as a unit."

The women not only dominated the regular season as a team, they also dominated it individually. Six Eagles were awarded all-conference spots, with five on the first team all-conference squad. Erin Albert, Paige Johnston, Beth Kozak, Megan Sollenberger and Amber Thomas were awarded first team spots, while Megan Lamens was on the second team. Thomas was also named Landmark Player of the Year. Sollenberger was selected as the Landmark Specialist of the Year.

The Landmark Conference champion does not receive an automatic berth in the NCAA tournament this year because by rule, a conference must be recognized for two years before automatic bids are conferred to its champion. Juniata, the number two-ranked team in Division III, will enter its 27th straight NCAA tournament with an at-large bid.

The Eagles begin their national title defense today at 1 p.m. They face Philadelphia Biblical University (30-8) in the first round in the Haverford regional.

If advancing, Juniata will meet the winner of the Friday match-up between Salisbury and Christopher Newport. The regional final will be played on Nov. 10.

If recent history holds, their dominance will continue far into the tourney. With a cohesive unit of six conference all-stars, fans expect the Eagles to be dangerous enough to make another national championship run.

XC team dominates Landmark Conference

Women place first, men second

Brandon Wolfe

The Juniata cross country teams went into Goucher College on Oct. 27 to participate in the inaugural Landmark Conference championship. The women's team was crowned champions, while the men's team lost by one point.

Before the meet, Coach Cutright felt both teams had a chance to win or at least be in the top three. The women's team only had one runner place in the top ten, Laura Rupprecht who placed third. Since the scoring in cross country is an overall team score, the balance of the team allowed the Eagles to edge Moravian by 11 points.

Cutright said the women's team has more depth, and this depth certainly helped claim the championship. With the women's victory, the men carried the momentum into the following race.

Cutright said prior to the race, "The guy's side is up and down, very inconsistent. But if they all race their best, they can get it." Cutright was looking to Matt Bailey and Sam Williams for strong performances.

Susquehanna barely edged the Blue and Gold by one point. Led by Bailey who placed third, and Eric Hoover who placed fourth, the Eagles made a valiant attempt for the championship.

Both the men and women now look toward the Midwest Regional championship at Lehigh University on Nov. 9.

Cutright said, "We have been making progress… and we are certainly in much better shape then we were at the beginning."

Cutright usually bases the thoughts of the season on the championship meets. With a victory on the women's side and a second place finish for the men, Cutright has much to be positive about heading into NCAA regional competition.

Men's soccer learns from lessons of defeat

Brandon Wolfe

After a difficult season, the men's soccer team is looking forward to offseason training. The men finished the season 3-14, placing last in the Landmark Conference with a 1-6 conference record.

The last match of the season was October 27 against Goucher College, resulting in a painful 3-2 defeat. Though the defeats have been plenty, the lessons learned have been valuable for the young team.

Coach Dubois said, "We made great steps from last year. The win-loss record didn't really show it. We're 1-6 in the conference, but we're improving. We're still young, but we hold possession very well." Possession is key, and the team has already made huge strides in this area.

Dubois feels great about this season because they learned to play like a team. He said, "There is no one standout player. They are very team-like. They have yet to shut a team completely down, but we will retain most of our players for next season and this will help us." If they can start shutting down teams, and continue to play like a team, there is no doubt they could compete next year.

The men have also had trouble finishing games all season, oftentimes being unable to put the ball in the back of the net. Jordan McGowan said, "A lot of it was just unlucky bounces or the ball was just a few inches off, and that was just the story of our season." However, more and more game experience should give them that killer instinct to capitalize on opportunities next season.

Dubois knows his team is better than their record, and maybe next year they can show it. They just need the ball to bounce their way, and their fortunes will undoubtedly change.

JCWS playoff run

continued from page 15

out of our shoes," said Laura Fisher.

Though our season in the Landmark Conference is finished, we have been selected to participate in the Eastern College Athletic Conference (ECAC).

Though making its first impression in Pennsylvania, the ECAC is a popular conference in the New England states.

Teams for the ECAC Champion Tournament South are selected from around Pennsylvania and Ohio. Colleges such as Grove City, Frostburg, Swarthmore, Widener, Catholic, Miseracordia and Carnegie Mellon are prospective competitors.

We met Grove City College yesterday, Nov. 7. Results of that matchup were not available as of press time. Visit the ECAC website at www.ecac.org or Juniata's homepage for results.

If advancing to the second round, we will be back in action on Saturday against either Widener University or Catholic University.

Regardless, it is time to prepare for next season. Our team is planning to compete in an indoor league, followed by the spring season. Our lifting and conditioning program is going to start soon enough, ensuring that we are strong and ready to win that extra game next season.

"We'll be back," said Bigelow.

No doubt.

When hunger strikes

Pineapple-Ginger Bavarian: the perfect pudding for fall!

What you need:

1 can (8 ounces) crushed pineapple in juice, drained and liquid reserved, 1 package (4-serving size) sugar-free orange-flavored gelatin, 1 cup sugar-free ginger ale, 1 cup plain nonfat yogurt, ¾ teaspoon grated fresh ginger, ½ cup whipping cream, 1 packet sugar substitute, ¼ teaspoon vanilla

How you can make it:

Combine reserved pineapple juice with enough water to equal 1/2 cup liquid. Pour into small saucepan. Bring to a boil over high heat.

Place gelatin in medium bowl. Add pineapple juice mixture; stir until gelatin is completely dissolved. Add ginger ale and half of crushed pineapple; stir until well blended. Add yogurt; whisk until well blended. Pour into 5 individual ramekins. Cover each ramekin with plastic wrap; refrigerate until firm. Meanwhile, combine remaining half of pineapple with ginger in small bowl. Cover with plastic wrap; refrigerate. Meanwhile, combine remaining half of pineapple with ginger in small bowl. Cover with plastic wrap; refrigerate. Just before serving, beat cream in small deep bowl at high speed of electric mixer until soft peaks form. Add sugar substitute and vanilla; beat until stiff peaks form.

To serve, top each bavarian with 1 tablespoon whipped cream and 1 tablespoon pineapple mixture.

NOVEMBER 30, 2007 | JUNIATA COLLEGE | VOLUME 89, ISSUE 4

Juniata screws up, Juniata pays up

On-time graduation guarantee or fifth year free

Sara Cieslewicz

"Our promise is that if we mess up, you don't have to pay," said President Thomas Kepple on Juniata's recently drafted On-Time Graduation Guarantee.

The On-Time Graduation Guarantee will be implemented in nine months and will ensure that, starting with the incoming Class of 2012, students who have met all required commitments but are still unable to complete their degrees in four years or less due to the fault of the College, will not be charged tuition the fifth year or semesters beyond the eighth.

"It's a way of saying Juniata is really good at this and other places aren't," said Kris Clarkson, dean of students. "In six years' time [at Juniata], almost 80 percent of the kids who start will graduate within six years. Of the 80 percent who graduate, 90 percent plus do it in four [years] or less."

When questioned about the motivation for this new policy, Gabe Welsh, assistant vice president of marketing, said, "It is a marketing ploy; let's embrace this." said. But he added that the word about Juniata's quality and influence has been out longer than this latest ploy.

"We took a good look at our numbers. What this policy does [is] put into practice what is already essentially happening… good work that our faculty are doing, good work that our advisors are doing, [and] our students that come here are very driven and very motivated," said Welsh.

Students recognize the marketing ploy, but some see the necessity of it. Junior Jessica Milheim said, "With tuition prices on the rise, it's almost necessary to find other ways to get students to attend."

The College initiated the guarantee not only as a marketing campaign to compete with other colleges in Pennsylvania, but also to encourage applications from high school graduates in the surrounding areas who apply to public universities.

Kepple said, "Our suspicion was that people were not applying because they saw the cost of Juniata as being too high in comparison to state institutions."

The College is trying to send a message out to those who don't realize how much financial aid is offered here. Kepple thinks that

Security report raise concerns

Christina Gongaware

A recent report by a Juniata alumnus has brought up several questions in regard to campus security. Among the issues are whether or not campus security officers should be armed, their role in patrolling off-campus residences and other ways to ensure that Juniata remains a safe campus.

Alan Ringgold ('67) conducted the report after a four day visit to campus in September. Dean Kris Clarkson said that Ringgold, with almost 30 years of experience with the FBI and as the acting Corporate Security Director of DuPont, was "highly qualified for the job." He led what was known as the Virginia Tech Review Group that analyzed the campus' current security policies and introduced recommendations for improvement.

The most controversial topic introduced by the review group has been the question of whether or not Juniata officers should carry weapons. Each officer currently holds pepper spray and some wear protective vests, but guns may soon be a necessity as well.

Local and state police have both reported that criminality is on the rise in the Huntingdon area. According to Clarkson, every law enforcement officer in Huntingdon supports arming the campus security personnel.

Clarkson noted that the Juniata

Beeghly library: Staff and students feel the squeeze

Kazia Eastep

L.A. Beeghly Library was sufficient to its purpose at the time of its 1963 construction. However, the building's 30,000 square feet of floor space are no longer adequate for the increased resource and space demands of student, faculty and community patrons. With Juniata's financial attention currently directed toward the Founders Hall project, library staff members must overcome their biggest obstacle—their own facility's restricted space.

"Space is always an issue…. Any way you slice it, we're small—by square feet, seats, shelves for collection—but I think the Juniata students use every inch available in the library, and that's very encouraging," said Head of Library Systems and Technology Julie Woodling.

Despite the library's small size, daily usage and circulation numbers are up. The daily exit count is typically 800-1,000. The library currently has a circulating collection of over 150,000 volumes and access to over 10,000 electronic journals. The library also has extensive special collections. "I think that students have a lot of resources at their fingertips.Aall it takes to find and use them is a quick question," said Woodling.

Senior Troy Crumrine uses the library daily. "I think it is functional as it is. The library is one of the most used buildings on campus…the most heavily used part gets revamped when it needs it," said Crumrine.

Head of Library Instruction Mary Murray said, "We do a really good job of keeping the collection up to date. It's one of the things emphasized strongly here—having a collection that meets the students' needs, a collection that the students want to use. Space is a completely different issue. We need more space. We're trying to meet the needs of the students. There's just not enough room to do what we would like to do and what it is we are expected to do."

One idea for more efficient space usage of the current periodicals section (ground floor, behind the circulation desk) has been proposed. Library Director John Mumford explained the idea of an information commons which he hopes to see created as soon as financially possible. The proposed floor design would include space for group or collaborative work, furnished with tables and chairs equipped with electrical outlets for easier laptop use.

The information commons space "shows a shift in recent years regarding the nature of library use. A library was once intended to be a solitary study area. Now there is a shift toward group usage and communal areas," said Murray.

"Any way you slice it, we're small–by square feet, seats, shelves for collection– but I think the Juniata students use every inch available in the Library."

Mumford hopes that an information commons would provide "space that is comfortable and technologically compatible, but the key is that it is still in the library and those resources are still available."

To make the commons, the print journals currently housed in the periodicals space would need to be moved downstairs, and older periodicals would need to be stored elsewhere. The journals would remain accessible to students but would require time for retrieval.

"The [information commons] design is great. Although trendy, it is an excellent idea. It is positive on an outward level, but there are possible ramifications related to access. It's faux, but at the same time one of our goals as a campus is for it to be attractive," said Head of Reference Services Andrew Dudash.

History department chair Belle Tuten also commented on the library's appearance. "Rightly or wrongly, when prospective students visit campus, they look at the buildings and judge the institution based on what they see. The library, although constantly bustling, does not give the impression of being a priority space," she said. "The building is older and the space does not take into account the realistic ways in which a library should be used by students."

"I think the library is a building being considered to have improvements in the future--but with renovations to Good and Founders Hall needing to be finished—my understanding is that it is on the table as an idea for future improvements," said Mumford.

Renovations to Founders Hall will be especially beneficial to the English and History departments. Still some members of the Juniata community were unhappy that the library was not chosen for improvements. Tuten said, "If it had been up to me, I might have chosen to do renovations on the library over Founders. But, it may be that if we don't do something now, Founders Hall might be toast. If Founders had been stable, I would have said library."

Dudash said, "I think we need a new library or an addition to the library. Anything less than that is shortchanging current and future students."

New trustees explain their roles and goals on campus

M. Piazza

On Oct. 24 three new trustees were shown the ropes of to their new duties. As trustees they are responsible for ensuring the future of Juniata, be it financially or academically. By voting and debating on issues ranging from tuition increases to sustainability on campus, these new trustees will be part of a board that affects every aspect of campus life.

The new trustees are Nathan Ehrlich ('80), Gail Habecker ('76) and Rod O'Donnell. To become new trustees these three were nominated by the specific trustee committee in charge of nominating individuals. Then the entire board voted on each candidate. Those candidates with the majority vote were chosen as board members.

"I was nominated by the president's request as a possible alumni representative, possibly because I have been involved in alumni matters ever since I graduated. But I'm interested in the position as it will allow me to have a say in Juniata's future," said Ehrlich, alumni representative to the board.

As an alumni representative Ehrlich is responsible for helping to represent what Juniata graduates would like to see happen on campus. This covers anything from donor recognition to projects that alumni would like to see completed. He is also responsible for bringing back reports from each of the general trustees meetings. Ehrlich is already looking forward to ensuring that Juniata continues to be a place where students are so very important.

Christopher Shannon / Juniatian

During their orientation in Oct., trustees met with students to hear about campus news and student concerns.

Ehrlich was an English and history POE. His interest though was not focused on only those subjects. While here, he participated as an athletic trainer and was assistant coach of wrestling. In addition to that, he was also his senior class president and has been responsible as class treasurer ever since he graduated. After college he pursued a career as an athletic trainer for the Philadelphia Eagles, and later became an attorney and then finally a Juniata trustee.

Habecker, a former music POE turned financial analyst, served on the board of trustees as the alumni representative before being elected to a specific committee. She now will work on the board's committee of business affairs.

Habecker sees her fellow trustees as "always asking questions and debating at the full board level even (after the presentation) until they completely understand an issue before they vote on it."

As a trustee member Habecker will work on the business affairs committee discussing things like the College's budget, renovations and tuition increases. As an investment committee member she will be responsible for making decisions on where Juniata invests its money. Specifically, Habecker's vote will directly affect whether or not students pay more the next year for food and what building will be the most important to be renovated. This committee's overall decision will be based on recommendation from the College treasurer and other reports from the different individuals involved in these services.

"My goal as a trustee is to make sure that Juniata stays the wonderful institution that it is, while at they same time encouraging Juniata to be even stronger in the future," said Habecker.

O'Donnell, the final new trustee elected last spring, is also very interested in making Juniata's future just as bright as its past. He is the church representative to the board, and is responsible for bringing the Brethren church's perspective to the trustees. As a church representative he is interested in the church's involvement as well as the strength of the religion department.

"Juniata is one of the few colleges that puts the theoretical idea of being able to practice who you are, including your religion into practice, and it's part of what makes Juniata so very strong," said O'Donnell.

He is also involved in the business information committee which is responsible for looking at Juniata as a business and voting on decisions that will make it better. At the last trustee meeting this committee discussed how to make campus and the school as green as possible.

As new board members, these three all agree that being a trustee is about ensuring the future of Juniata as an institution of learning and growing.

Juniata alumna publishes first novel

Sarah Ruggiero

Juniata alumna, Becci Goodall ('02), recently published her first novel "Chaise."

Goodall labels her novel to be part of the genre of experimental fiction, called speculative fiction. Speculative fiction is imagining things that could really happen, such as people with robotic body parts. She describes "Chaise" as a story about a nameless character who succumbs to a mental breakdown. Given the extent of her mental illness, which she denies, she does not leave her couch for years.

"Chaise" captures a terrifying world, controlled by fast food and corporations. The story is portrayed through vivid portraits of Goodall's characters and excerpts of the characters' past.

Goodall began writing her novel in the summer of 2004. Over the next three years, she wrote on and off again, with no intention of writing a novel.

"I started my novel as a short story. It was form of therapy. I never set out to write to write a book," said Goodall. As a single parent, working full time, while also attending graduate school, Goodall found minimal time in which to focus on her writing. She would often begin her day at four in the morning to write for an hour.

"I just got to thinking about life. I started writing about the things that happen to women in our own lives. A lot of the names [in the book] are friends of mine, but the things they do aren't real," said Goodall.

To her surprise, her story was published in July, 2007 by an online speculative fiction Web site, silverthought.com. Editor Paul Hughes charged nothing for the cost of publishing.

"She's very ironically funny. She is very insightful, very passionate. She's poetic and her imagination is present in everything she does. She is completely alive….She does all this as a full time mother and is absolutely there for her kids," said English professor, Judy Katz, to whom Goodall dedicated the book.

About her reaction to learning about the dedication, Katz said, "I was stunned. She kept it a secret. I didn't know she was going to dedicate it to me! I read it and I called everyone I knew and said, 'I can't believe this!' I am just honored and amazed."

The relationship between Katz and Goodall stems back to Goodall's junior year at Juniata. Transferring in from a community college close to home, Goodall found that Katz took an immediate interest in her writing.

Goodall said that she dedicated the book to Katz because "Judy was the first person to take interest in me and that ever noticed that I had talent. She was the first person to encourage me to work on it and first to show me how to edit my work."

"It's so great to show what a difference a person can make in another's life. It's amazing to honor Judy for all she has done for me," said Goodall.

The two grew together, bonding over school, writing and family, all the while forming a friendship that

Study abroad: Priceless experience can come with a hefty price tag

Bennett Rea

The weak value of the dollar in many foreign countries has made study abroad expenses higher for both the College and students, but it has not lowered participation in the program at this point.

Recently there has been a decline in the value of the dollar across the world, especially in most European countries. One dollar and forty-six cents only exchanges to one euro. Just five years ago the dollar was worth the same amount as the euro.

This cost though, has not deterred students from studying abroad. According to Jarmila Polte, the director of study abroad, in 2007-2008, 174 Juniata students will study outside the U.S. Polte also said that there has been no drop in the number of students going to Europe in recent years. This is partially because the tuition costs are fairly consistent from year to year in the exchange program.

Students have several options when they choose to study abroad. The first, called "direct exchange," costs the College nothing extra and will not affect future study abroad opportunities. The second is studying through a third party provider. The most common one for Juniata is the Brethren Colleges Abroad (BCA) organization.

For students, choosing either option makes no difference economically. The cost will be the same either way with their tuition, room and board and financial aid all transferring from Juniata to the foreign host school. For some students, the second option is more beneficial because there are BCA directors at each foreign site.

The cost for the College for this method, however, is variable and rising. The College is beginning to incur higher costs from dealing with the BCA because of the dropping value of the dollar. This means Juniata is writing larger checks to make up for the dollar's low value according to Provost James Lakso.

To deal with the rising costs, Lakso said, "We either need students to move from third party provision to exchange, or negotiate with BCA."

Cutting the cost of the checks the College writes to the BCA would save money and prevent restrictions being placed on the program. But here could be unfavorable results if potential negotiations do not lead to success.

"We may have to eventually limit the number of students studying abroad…especially in Europe where the dollar is so weak," said Lakso.

The weak dollar does have effects on students while studying abroad. Though tuition may stay fairly consistent, the cost of living in most countries in Europe has grown far more expensive than it was previously.

While room and board is paid for by the College, traveling and transportation are usually left up to the student. Sara Hernandez, a junior studying abroad in Seville, Spain, said that using the public transportation or bus system is pricy. "Using it every day can really add up," says Hernandez.

It is also very common for students studying abroad to travel to some of the surrounding countries since they are so close. "I probably spend most of my money on plane tickets to see other countries in Europe," Hernandez said.

A "cheap" roundtrip ticket for one from Seville to Paris, France costs around $251 at this time of year. But since the dollar is only worth .685 percent of a euro, the cost skyrockets to around $366. A student would be paying over $100 more just because of the exchange rate.

There are some factors that do make up for the weak value of the dollar. Clothes and alcoholic drinks are cheaper in much of Europe than in the United States, counteracting the dollar's low value. Hernandez also advises students to "not ever purchase a cell phone in the U.S. for Europe." A student who purchases a cell phone plan in Europe will find it to be much cheaper and simpler according to Hernandez.

Students who are planning to study abroad can also combat the rising costs by using Juniata's resources. There are numerous scholarships available for people studying abroad, as well as vacation travel allowances. For example, Juniata's study abroad program may give a student a $350 check per semester so that he or she can travel while abroad.

The financial aid office will also maximize loans in order to allow a student to study abroad at a lower cost, though it will cost a good deal of money to pay them off later. "The bottom line is: plan ahead," says Polte.

Going to a country in Latin America and Africa can also avoid the problem of the weak dollar altogether. In countries such as Ecuador and The Gambia, the dollar is extremely strong. Juniata has exchange programs set up in both areas.

Even in Europe, there are several countries in which the dollar is still strong, such as the Czech Republic where Juniata has an exchange program in place. Although the costs may be high in many of the possible study abroad areas, there are many opportunities to study in a country where the dollar remains strong.

Wondering how to file for an Incomplete or a Withdrawal?

An incomplete is given at the discretion of the professor. This must be approved before the end of the fall semester. It requires a satisfactory explanation, which usually includes an illness or an accident.

After an incomplete is filed, a student has three weeks into the spring semester to complete all missing work. The deadline for incomplete work due in the spring semester is Feb. 8.

A student wishing to withdraw from a course has until the scheduled date a professor has set on the course syllabus to do so. To receive a withdrawal, a student must complete a form that is to be signed by both the professor and academic advisors. The form must be submitted to the Office of the Registrar.

If passing the course at the time of the withdrawal the student will receive a WP (withdrawal pass). If you were failing at the time of the withdrawal a WF (withdrawal failure) will be given.

Withdrawals will not be calculated in a student's GPA, but will appear on his or her official transcript. An unofficial withdrawal will be calculated as an F. Withdrawals are considered unofficial if the student fails to make satisfactory arrangements at the Office of the Registrar.

Suggestions for improved security being considered

continued from page 1

police (JCPD) have become more involved in incidents involving students living in close proximity to campus. JCPD aids Huntingdon officers in emergency situations and are expected to pull over dangerous drivers on and near campus. Clarkson said that "there is already a level of concern that we are putting our officers in dangerous situations."

Freshman Britney Lenig supports the idea of JCPD officers carrying guns. She thinks that "it would deter students from partaking in any violent activity."The main opposition has argued that the arming of campus police will drastically change their relationship with students. Clarkson acknowledged that perception. "When the officer is carrying a gun and the student isn't, you're obviously not on the same level anymore," he said.

"When the officer is carrying a gun and the student isn't, you're obviously not on the same level anymore."

There is also the worry that arming officers would lead to more accidents than actual protection. "It's only causing more risks," said freshman Ariele Maury. "If a personal *[sic]* can get a hold of the gun, then they can use it against the officer."

Currently, only two officers have the credentials to carry a weapon, which poses another problem.

Clarkson says that the board of trustees, who will ultimately make the arming decision, is "fairly divided" and "has a very important and difficult decision to make." A decision will not be made until at least next year, as the trustees will not meet again until April.

Ringgold's group also recommended locking the residence halls. While the doors, frames, and swipe locks have been in place, a glitch in software has delayed the process. Clarkson envisions that the process will be in place by the end of the semester.

While he said that "everyone knows that someone intent on getting through will get in," Clarkson said that the system is still important to non-students who are looking for easy targets for theft. It will also become important for any student who loses his or her ID card to report it. This will stop any non-student from entering the residence halls.

Hiring additional security staff was another important recommendation. According to the research group, a larger JCPD would allow for "greater flexibility in scheduling and a more equitable sharing of the duties." Juniata currently employs seven full-time and two part-time officers.

Clarkson considers this the most important suggestion of all and sees it as the best way to make Juniata safer. If new staff is hired, there will be a concerted effort that at least some of them are female.

Increased training was another of the research group's suggestions. A mock emergency exercise was conducted on Oct. 31 to ensure that all emergency systems and personnel were functioning properly.

Huge changes in security have already been made around campus. A siren has been installed. A text-messaging system has also been put into effect. Notifications will also be available through WKVR and Channel 98. A system of feedback on the resolution of campus police incidents has been completed, which will aid officials greatly in organizing updating files. Updates will continue to be made to security as a whole as the group's recommendations become realities.

Campus hosts Model UN conference

Laura Hess

On Nov. 12 200 high school students from 14 different high schools across Pennsylvania came to Juniata-for the 10th Annual High School Model United Nations Conference.

The conference is annually sponsored by Juniata's Model UN club and is advised by Emil Nagengast, department chair of politics. The overall goal of the conference was to allow high school students the chance to examine current world issues and explore peers' opinions about them.

Holding the annual event was prompted by Juniata students in the Model UN club in 1997. Juniata's high school conference has continued to grow every year since its implementation. Nagengast said, "The conference promotes Juniata to prospective students while involving them in internationality."

The conference provides the high school Model UN chapters with an opportunity to participate in a Model UN Conference modeled after the National Collegiate Conference which Juniata students attend each year in Washington, DC.

The high school students spent the day; simulating the problems and complexities of international delegation in committees that mirrored actual United Nations' procedures. Students were responsible for researching their previously assigned countries' backgrounds and preparing debate material on assigned topics.

Some of the debate topics this year included the genocide Darfur, the situation in Iraq, women's rights and the Iran nuclear proliferation. From the information they gathered, students acted as delegates from the assigned countries in the simulated UN committee meetings held all over campus.

Jiwoong Park, a senior at Juniata Valley High School and a prospective Juniata College student commented on the conference experience. He said, "It is a great learning experience. It's hard to actually argue a country's point of view thoroughly, but this gives us a good sense of what has to go on at UN committee meetings."

Model UN on campus is a club as well as a credit course. There are currently 19 students involved through the course. An additional 20 students participate strictly through the club. Juniata's Model UN members facilitated the high school conference by serving as committee chairs, committee assistants, home government people, other country representatives and errand runners.

The home government was based in the TLT computer lab where Nagengast and Model UN members were connected to each committee via the network to answer questions and print each committee's paperwork.

Juniata's Model UN members, who served as simulated country representatives, kept the committee debates interesting by delivering made-up crises and offering controversial views to the committees.

The conference was an overall success and Model UN members look forward to next year's event. Senior Jigar Patel said, "This year's high school conference was one of the most interesting ones I have seen in the past four years I have done this. The high school students were way more prepared than they have been in the past and that made the conference successful."

Students interested in more information on how to join Model UN should visit http://www.juniata.edu/faculty/nagengast/modelun.htm.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz. Congratulations to last issue's winner: Samantha Schrieber!

Fifth year free guarantee isn't as free or easy as it seems

continued from page 1

people don't realize that the real cost of going to a public college for a year or two years extra in some cases makes that education more expensive than four years at Juniata.

"The real cost of not graduating in four year is not the cost of tuition, [it] is loss of income, loss of time in grad school, and lost time in getting to your career. While Juniata students are out there advancing their career, students at Penn State are in their fifth year or maybe sixth," said Kepple.

In regards to where the money is coming from to fund this program, Kepple said, "It's almost no cost; we expect there won't be many students to do it. The truth is… it just means adding one or two students to a senior level class. We have the space in those classes."

Students who take the fifth year won't receive everything for free. "It will cost the students something…room and board somewhere, whether they live on or off campus," said Kepple. Along with room and board expenses, the student will have to pay for books and fees other than course fees.

According to the rough draft of the guarantee sent out to faculty and staff, there are two sets of requirements for a student to be eligible for the guarantee. These are titled "the student's commitment" and "the College's commitment."

Students are only eligible for the guarantee if they are first year students when they sign the agreement, have declared their final POE prior to earning 60 credits, have met with their academic advisors every semester and have registered for classes as early as they could (notifying advisors when a required course is unavailable).

They must also complete 30 credits each academic year and not drop any course required for their degree or POE after their third semester, maintain academic progress and stay out of trouble.

The key is the College's commitment. Advisors are expected to continue to keep up the vigilant work that the policy boasts about in their commitments as advisors. According to the guarantee these include informing their advisees about College degree and POE requirements, providing the necessary courses in a timely manner, encouraging students to study abroad, supporting their students in obtaining research and internship opportunities, and stopping the plan's clock if students must withdraw because of serious health or family problems, or any other approved leaves of absence.

Senior Todd Beaumont said, "I think that the advisors should be able to handle this responsibility. I don't see any [thing] different from their current responsibilities as academic advisors. I think with a fifth year free incentive, it will ensure students graduate in a timely fashion."

The guarantee does not apply to international students, transfers or students whose graduation is delayed for not paying their graduation fees. Double majors that require more time, or students who seek dual certification in education are not covered either.

"I think that the school should guarantee that fifth year option [for dual certifications]. Dual certifications make students more marketable, so Juniata should commend them for that ambition," said Milheim.

Clarkson said, "If people are here doing what they should do and they are taking a normal course load (and they are)...they are going to graduate in four years. Who wants to stay longer than they have to?"

"If there is any senior out there this year [who will not be able graduate in four years] because of some reason we created, I'd like to talk to them. We'll see what we can do," said Kepple.

Alumna writes book

continued from page 3

would last long after Goodall's graduation.

Goodall described her relationship with Katz as a mixture between family and friend. She said, "When I was in school, she was a mentor and often like a mother to me. She was always there to pick me up when I needed encouraging words."

Goodall showcased an excerpt from "Chaise" during last month's celebration of women writers, "Unlock Your Voice," which is run by Katz. She has performed at Unlock Your Voice numerous times in the past, both as a student and an alumna.

"Her performance was very inspiring and truly celebrated the work of women writers," said sophomore attendee, Chloe Pott.

Goodall is now the editor of the writer's workshop forum entitled, Megans-closet.com. Megans-closet is an online community where writers can post personal works for a group of writers to critique.

She is also the editor of the upcoming "The Misfit Literati: a reader's guide to the underground press." This will be a quarterly newsprint that will review and feature the best of new writers.

Goodall will perform in a poetry slam at Boxer's Cafe, located at 410 Penn Street, in downtown Huntingdon, on Dec. 3. She will sell her book at the event, donating all proceeds to All Ways of Loving, a Juniata Club.

"Chaise" can be purchased for $12.95 at Boxer's Café and the Juniata Bookstore.

Community Service

▪The Community Service Office is bringing the "White Ribbon Campaign" to campus. The campaign is aimed at "men working to end men's violence against women."

Men on campus will try to recruit 250 other men to sign a pledge saying that they will never physically harm a woman. Those who sign will wear white ribbons. The first 100 to sign will receive a "wife lover" undershirt to oppose the "wife beater" tank.

Students can sign the pledge tonight at the JC Up Late event and tomorrow, Dec. 1, at the men's and women's basketball games.

▪A blood drive will be held on Dec. 5 from 12-6 p.m. in Ellis Ballroom. The entire campus community is invited to donate in honor, or in memory of, a loved one. Donors can sign the dedication banner at the drive. Appointments can be made in advance by visiting www.givelife.org.

▪Juniatians can also contribute to annual Toys for Tots campaign which runs until Dec. 22. Students, staff and faculty can drop off toys at the Community Service Office in Ellis Hall.

Volunteers are also needed to help sort, bag and tag toys on Tues., Wed. and Thurs. evenings from 7-9 p.m. Volunteers should contact Melissa Herheim at 814-658-6812, Crystal Plumley at 570-439-0176 or Shauna Morin at morins@juniata.edu.

A bonehead if there ever was one

A friendly reminder from Academic Support Services

Dear Students,

It is time again for me to send you all my end-of-semester warning, which can variously be entitled "Do the Right Thing," or "Don't Do Something Crazy . . . Like Cheat," or "You're Better than This." Before I enumerate all the ways to avoid heartache and stomach ache, please read below and meet Bubba, a bonehead if ever there was one.

The Bubba Test

Bubba applied for an engineering position at an Alabama refinery.

A Yankee applied for the same job and both applicants, having the same qualifications, were asked to take a test by the manager. Upon completion of the test, both men only missed one of the questions.

The manager went to Bubba and said, "Thank you for your interest, but we've decided to give the Yankee the job."

Bubba asked, "And why are you giving him the job? We both got nine questions correct. This being Alabama, and me being a Southern boy, I should get the job!"

The manager said, "We have made our decision not on the correct answers, but rather on the one question that you both missed."

Bubba then asked, "And just how would one incorrect answer be better than the other?"

The manager replied, "Bubba, it's like this ... on question #4, the Yankee put down, "I don't know." And you put down, "Neither do I."

The example above being eminently clear to all of you, I'm sure, please keep the following words of wisdom in mind during the weeks ahead:

- Keep your head. Everything will get done, and will get done before you leave for the holiday break. Don't panic.
- Do not use any words, anywhere, from any source that are not cited correctly—especially words you have found on the Internet. You understand the principles of intellectual property, and you know which intellectual property is yours and which is someone else's. So does your faculty know this distinction.
- Lock your computer whenever you step away from it, even in your dorm room or suite. I'm not kidding about this.
- Do not share your password and username with anyone. This represents temptations that even the strongest person can cave to during a busy and stressful time.
- Do not e-mail or share files, papers, programs, presentations or work electronically. Ever. Do not EVER do this.
- Please don't collaborate when directions have been clear from your faculty that you are not allowed to.
- If a study guide or answers manual is on reserve in the library, you have a solemn responsibility to keep your person IN the library and return the text within the designated time. If you do not, the librarians will be sharing your name with me.
- Be assertive. Even say no to people who are asking for help that you know is more than help. We want to support and encourage cooperative learning, but we do not want people to bully or pressure others or take credit for work that is not theirs. So just say no . . . you won't e-mail that file or document, or let that person review your lab, but you'll be happy to sit down and talk someone through it.

I think that's everything. Let me give credit to Darwin Kysor, director of Career Services, who sent me the Bubba story way back in August. I've been saving it all these months, just to share it with you now. The most important thing for you to know is that we have great confidence in you, consider it a privilege and honor to teach you, and wish you a very successful end of semester.

Be careful out there,

Sarah May Clarkson
Academic Support Services

Thinking about thinking

Time travel provides insight on global warming

Ryan Hamillton

The 2007 Nobel Peace Prize was recently awarded, jointly, to the Intergovernmental Panel on Climate Change and Al Gore. The award was given in recognition of the effort to spread knowledge about climate change. To learn more about this controversial and important issue, I knew my research would need to be unconventional.

Without a moment's hesitation, I fired up my hybrid time machine and embarked on an epic adventure to get the low down on global warming and possible solutions. Who better to ask than those great minds and influential leaders of our past?

Of course, I made my first stop ancient Greece for an appointment with the man often noted as the father of western thought. In typical form, Plato replied, "Global warming is not the worst that can happen to men."

Aristotle was only slightly more helpful. He said, "The gods, too, are fond of a joke, but global warming isn't very funny."

Without any tangible solutions from ancient Greece, I decided to hop, skip and jump forward in time to visit my other favorite philosophers. I found Descartes sitting in a leather armchair in his study. When asked for his thoughts on global warming he replied, "I think the earth is warming, therefore it is."

Nietzsche only forcefully grumbled, "Global warming is dead."

In hopes of finding a solution, I revved up my time machine once again. Shakespeare lamented, "I wasted resources and now doth my resources waste me."

Emerson was certain, "The end of the human race will be that it will eventually die of global warming."

It seems that the issue of global warming falls into the hands of us all. However, little can be accomplished if world leaders are not engaged. With this in mind, I decided to ask past American presidents for their perspectives. Thomas Jefferson said, "When in the course of human events it is no longer possible to live with global warming it becomes necessary for a people to remove global warming from their society."

Jumping back into my time machine I arrived in the 20th century to talk with John F. Kennedy. His advice: "Ask not what you can do for global warming, but what global warming can do for you."

Franklin D. Roosevelt explained, "We have nothing to fear but global warming itself."

Nixon declined to comment. Storming away I heard him exclaim, "I am not a dirty polluter."

When I arrived to talk with Reagan, he was in the middle of a speech. "Mr. Gorbachev, tear down this wall!" Seeing me in the audience he added, "And use it to seed a coral reef in the Caribbean."

At that moment I thought, when the future of the entire world is at stake, the megalomaniacs of the past will certainly have an opinion, so I zipped back in time again. Hitler was adamant: "We need to stop global warming or it will conquer the world before we do."

Napoleon was busy, but took a moment to say, "Global warming is a set of lies agreed upon."

Ironically, my time was running out. With desperation, I punched the random time travel button. Gandhi said, "Whatever you do about global warming will be insignificant, but it is very important that you do it."

Benjamin Franklin commented, "In this world nothing can be said to be certain, except death, taxes and global warming."

Martin Luther's solution, "Pray, and let God worry about global warming."

Back in 2007 once again, I felt there was still insight to be found. In an unprecedented feat of diplomacy and plot levering, I convinced George Bush, Tony Blair and Mahmoud Ahmadinejad to meet me at Boxers in Huntingdon. As we waited for President Bush and former Prime Minister Blair, I sipped a beer. Ahmadinejad said, "In Iran we don't have global warming like in your country. Iran emits no CO2. I don't know who told you that." He promptly got up and left.

Sadly, my other two guests never arrived. It looked like I was on my own. The words of Einstein came to mind. "Do not worry about your difficulties with global warming; I assure you that mine are still greater."

It was late in the day and the sun had set. I could only finish my beer and begin the walk home.

Make the Juniatian work for you

The Juniatian encourages members of the campus community to send the editors news leads, story ideas and general questions to be investigated.

In order to publish a newspaper that appeals to the interests and needs of the entire campus, the staff also accepts requests for coverage of student achievements, club events, academic departmental happenings, residential life programs and other campus-related activities.

Please send your suggestions or requests to juniatian@juniata.edu. Or submit your idea(s) anonymously to the Juniatian's post office box, #667.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Ask the Administration

"At the beginning of the semester, a big deal was made about the new ID card key entries that were supposed to be activated on the dorms. Now, with only three weeks to go before break, we still don't see any of them in use. Is the College still planning on making the change to ID card entry? If not, why, or if so, when?"

The delay has been caused by some software problems. The contactor for the system is attempting to correct the software problems and we expect to have a new software package for the system before the end of this semester. Our original plans were to have the system up and operating by the middle of the first semester, but we were unable to meet that goal. Our new goal is to place the system in service sometime during the first two weeks of the spring semester.

Working for you and with you,
Tim Launtz
Director of Residential Life

"Madrigal is the last tradition of the semester, and probably one of the most expensive for students to attend (if you consider purchasing attire, pre-gaming materials, tickets, etc.). So is it the most expensive tradition for Juniata to offer? If not, which one is, and how much does the most expensive tradition generally cost?"

Madrigal may costs the students the most to attend; however, other Juniata traditions cost JAB more money to produce. The most financially expensive tradition on campus would be the major event which costs around $35,000.00, followed by Friday Night Live at approximately $19,500.00, then Springfest at $14,000.00.

While these numbers sound high, it is important to break each dollar amount down and look at what the costs need to cover (production, marketing, artist and agent fees and catering), how many students attend and the leadership opportunities provided to each of the JC students who assist in the planning and executing of the event. For example, the major event provides incredible leadership opportunities for about 30 students. If those 30 students attended a leadership conference, it would cost approximately $1,000.00/person (conference fees, transportation, room and board). So, the leadership benefits alone make JAB's money well spent!

With that said, JAB still invests a lot of money and time into producing Madrigal to ensure it is a memorable evening for JC students and guests.

Staci Weber
Director of the Office of Student Activities

You can ask the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective." Though he has plans for his column this semester, the president welcomes topic suggestions.

When Kepple cannot submit his column, due to College-related travel, Provost James Lakso will offer his take on a topic pertaining to campus.

For the "Ask the Administration" feature (see above), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwared to administrators via the Juniatian's e-mail account.

Provost Perspective

James Lakso is the College's Provost and a professor of economics. Lakso began his tenure at Juniata in 1970.

It is course evaluation season at Juniata. Students have received an e-mail from the faculty Personnel Evaluation Committee (PEC) asking them to complete evaluations for some or all of the courses they are taking this semester. It is a regular end-of-semester ritual which students should take very seriously.

The PEC will use the data from the student evaluations, as well as information provided by colleague letters, advising evaluations, faculty service (committee work, advising of student groups) and professional development activities (research, professional papers, conference presentations, grants, new course development) to make recommendations on faculty tenure and promotion.

It is very important that students take the time to fairly and honestly offer their views on teaching effectiveness. This evaluation of teaching effectiveness is the most important part of the PEC process.

Faculty members not currently being considered for promotion and tenure also have course evaluations done. I can assure you that faculty review these evaluations and make changes to their courses based on what they read. For this reason as well, it is important for students to offer honest and fair evaluations of teaching effectiveness.

We struggle with a couple of potential negative consequences when relying heavily on student evaluations in promotion and tenure decisions. The first is that faculty might require less student work or lower their standards in an effort to recieve good student evaluations. I can't say that this never happens, but my own experience in almost 40 years of teaching at Juniata is that this is not a serious problem. What I have observed is

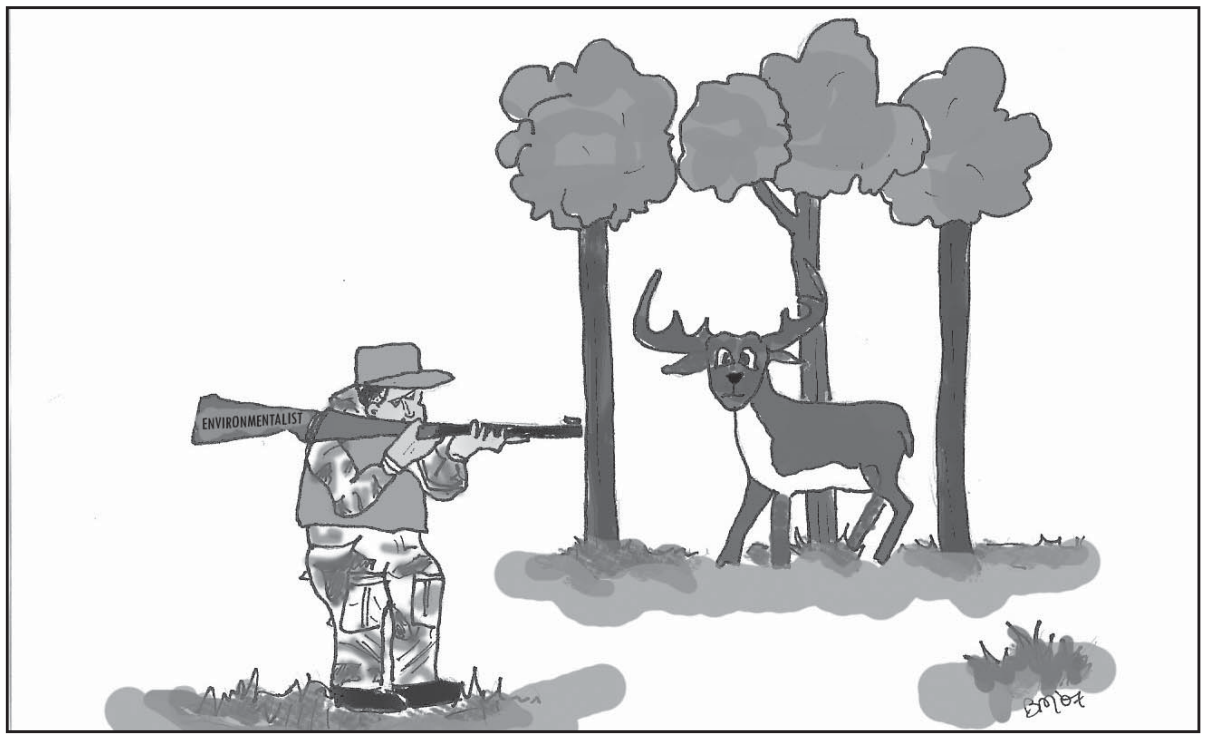
Life on the Lake

Hunting as Environmentalism: not the paradox you may think

Brittany Moyer

Think back to Monday's weather. Remember how rainy, windy and generally miserable it was? Still, hundreds of Huntingdon County hunters bore the elements and watched for movement in the forests on opening day of Pennsylvania's 2007 deer season. And dare I say, I am appreciative of these hunters.



I used to be against, or at least uncomfortable with, recreational hunting. Something about romping around the woods with a rifle and taking aim at unsuspecting animals—just for fun—didn't seem right to me. Hunting for food is one thing; hunting to be able to mount some stuffed creature on your wall is another. The majority of my friends back home in the Washington, D.C., area felt similarly, as do many environmentalists and wildlife lovers.

But in many ways, this is a naïve point of view. As life and studies at Raystown Lake have taught me, hunting does have an important cultural value, and, when well-regulated, it is also extremely important in wildlife management.

This is specifically true for deer, the favorite game for many hunters. Deer are herbivores that love to feed on young tree saplings, which are low-growing and widely accessible. However, this has tremendous effects on forest health and regeneration, since the deer's grazing can stunt a tree's growth or even kill it completely. Deer are also notorious for eating and disrupting agricultural crops and home gardens. If left unchecked, deer populations have the potential to skyrocket, causing severe damage to both forests and agriculture.

In this regard, environmentally conscious people should be grateful that there is a captive audience of deer hunters in Pennsylvania to help manage the deer population.

In Pennsylvania, hunting is regulated by the Pennsylvania Game Commission (PGC), which was first established in the early 1900s to monitor the dwindling deer and other wildlife populations, which were important food sources. Today, the PGC sets the laws and regulations surrounding Pennsylvania game hunting, including the season dates and bag limits.

Join Brittany in a discussion on the Arch about this week's column, the Raystown Field Station or sustainability.

The PGC is responsible for wildlife management, wildlife protection and wildlife habitat management, three areas of which any environmentalist should realize the importance. When I learned that the Commission is funded almost entirely by license dollars spent by Pennsylvania hunters and trappers, I again found myself indebted to these folks.

Junior Brian Pearson, who is also living at the Raystown Field Station with me this semester, has been hunting since he was 13 years old. As an environmental education POE, he has often undergone scrutiny for his seemingly paradoxical interests.

"People look at me and say, 'How can you be an environmentalist and hunt?'" Pearson said. "But it's not just me; there are other environmentalists who also hunt. It's not like I've broken some sacred rule of environmentalism."

Pearson also spouted off the ways in which hunting is a great wildlife management option, which in turn helps to maintain forest health, prevent agricultural losses, and lessen the amount of deer-vehicle collisions.

Last Monday, the rain didn't stop Pearson and his father from hunting on opening day of the deer season. They were out in the woods of Sinking Valley by 6 a.m., where they had previously set up their tree stands 50 yards apart from one another. Around 9:30 a.m., Pearson's dad heard one shot ring out; Pearson had shot and killed a 130-pound doe, which his family will use for deer steaks, burgers and jerky.

So, next time you hear an environmentalist bash hunting, ask him how much he values healthy forests and farmlands.

Junior Brittany Moyer is one of 10 students living and studying at Juniata's Raystown Field Station (RFS) for the fall semester. Interested in applying to spend at semester on the lake? Contact Chuck or Sharon Yohn, co-directors of RFS.

Thumbs Up, Thumbs Down

to the idea of giving a loved one a basket filled with sustainable gifts this Christmas. (Such things have been advertised on campus for $45). We love the "go green" movement as much as the next recycler, but an energy efficient light bulb for Christmas? That's no can of Who-Hash.

to the number 7…the maximum number of days left on which we could possibly have class in

to the illegal arrival of camo-clad hunters skulking around the Raystown Field Station on Monday morning. Students studying on the lake this semester were instructed to wear orange if going outside and they struggled to concentrate during classes while the sound of gunfire rang through the trees. We told you that living in the wilderness was dangerous. We don't care what Thoreau said.

to the low number of Madrigal tenters this year. At one count, we marked only 23 tents "lined up." The line for cough syrup at the Health and Wellness Center is longer than that.

to security, facilities and Res. Life for their quick response to the possible CO leak in Sherwood prior to Thanksgiving break. They immediately knew something was wrong when the building no longer smelled NORML.

Provost Perspective

continued from page 9

that students are smart enough to know when they are being bribed with the promise of easy grades for little work and don't give good evaluations to faculty who don't expect much of them. In fact the best teaching evaluations I have ever seen were for faculty who were both demanding and fair.

The second potential negative consequence is that faculty might be discouraged from experimenting with new teaching methods or radically changing their approach in a course when be evaluated for tenure. We know that such experimentation often results in lower student evaluations at first, but that such experimentation is really necessary to improve teaching and learning over time. Senior faculty and administrators have to be sure that student evaluations are not used to punish faculty who are truly interested in trying new and innovative approaches.

Our job is to make honest and fair decisions about promotion and tenure. We need student help to do that.

Fiesta Latina

Christopher Shannon / Juniatian

On Nov. 17, Club International sponsored Fiesta Latina, a celebration of Latin American culture. The event included a piñata breaking contest, salsa dancing and a buffet of home-cooked Latino dishes.

The annual event's success is growing. Once held in the Ellis Ballroom, the fiesta now occurs in Baker to accommodate larger crowds.

Hunting down Huntingdon

resale, thrift, consignment and repair

Romeeka Gayhart

The leaf piles are growing. Birds and the elderly are migrating to Florida for the winter. And the average college student is beginning to think about tacky sweatshirts and holiday gifts for disliked relatives. It's thrift store season again.

Huntingdon is known for its wide selection of resale stores. These stores are not only good places to buy unusual items, but often times will buy, resell or accept a variety of items for donation to good causes.

There are a number of stores in Huntingdon that accept items to sell on consignment. They accept clothing, household items and miscellaneous knick-knacks. Because most consignment stores are smaller, they can afford to be picky in what they accept. Clothing must be seasonal, clean and free from stains.

If an item has been on consignment for longer than three months, stores will usually donate them.

Objects accepted and the price that they are ultimately sold for depend on the store. It's a good idea to find out each store's strengths, as you will only receive money for items that the store chooses to display and which are purchased within a few months.

The B.L.S. Repeat Boutique, located at 510 Washington Street, sells items on consignment at a 40%-60% split. Consignees (that's you) get 40 percent of the profits in the form of a bi-monthly check. The store is only a few months old and sells items at very fair prices.

Twice Upon a Time, at 708 Washington Street, also offers a 40-60 percent split, but checks are offered every three months.

Little Hearts offers a 50 percent split on items sold for less than 100 dollars, and a 40-60 percent for anything over 100. Little Hearts, whose claim to fame is being 'the largest resale store in Pennsylvania,' is located at 601 Washington Street. In addition to consignment, Little Hearts buys children's toys and clothing and small furniture.

If interested, future consignees should pick up a consignment contract at any of these stores. All items to be consigned should be bagged or boxed, with the consignee's name and account number written clearly on the outside.

There are also specialty stores which buy and sell specific items. Mary's Bargains, at 320 Penn Street, specializes in electronic equipment, movies, music and video games, but also pays cash for furniture and a wide selection of household objects.

Yesterday's Best, located on Seventh Street, gives store credit for used books depending on their condition and quality.

Corbin's Watch, Clocks, Jewelry and Repair, at 406 Seventh Street, purchases jewelry and offers a selection of antiques and collectables for purchase.

These stores usually have quality items and owners who are passionate about their inventory. Owner Bryan Corbin said, "Anything I can't sell, I collect."

Resale stores may also accept items donated for a good cause. Donations can be written off for tax breaks. Goodwill Industries has a donation center located in the Huntingdon Plaza. Items that don't sell at consignment shops usually end up at donation centers. For this reason, Goodwill often has the widest variety of quality and strangeness of goods.

The B.L.S. Repeat Boutique, which accepts consignments, will also accept donated items. The profits from these sales go to the Humane Society. Donations don't have to be in as good condition as consignment items, but it's important to remember that donation centers are not city dumps.

Readers are encouraged to explore the newer resale stores and those stores not covered in this article. Huntingdon has a wide selection, and each resale store has its unique qualities. Before running down to Wal-Mart to buy a blender, throwing out the that sweater that grandma gave you for your birthday or ordering shoes online, try taking a trip to a few resale stores.

One person's trash can be transformed into someone else's treasure, and these stores are welcoming and friendly places that specialize in doing just that.

PROFESSOR'S ARTWORK ON DISPLAY

"Counterpoise," an exhibit by assistant art professor Monica Malewska, opened at the Juniata College Museum of Art in Carnegie Hall on Nov. 15. The exhibit will run until Feb. 23.

Malewska's work has been described as postmodern and provides a commentary on American culture.

"Our attitude toward excessive consumerism – it's a schizophrenic attitude," said Malewska. "The advertisements focus on all the excess [especially food], and yet you also have to be a size zero."

Freshman Angie O'Keefe found the exhibit to be specifically poignant. "After I looked past the disturbing surface of her work, I finally…saw the message of American consumerism, and the dark humor behind her work."

"Her imagery provided a different point of view for cultural issues," said freshman Peter Mike-Mayer. "Specifically, her 'Pillsbury Doughboy and Barbie' painting was almost grotesquely sexual, yet completely entertaining."

Malewska is careful to make sure that the message and meaning of the pieces do not overshadow the art, however. "I think you can appreciate the works on several levels," she said. "You can enjoy them without getting to the bottom layer."

Museum hours are 10 a.m. to 4 p.m. Mon. through Fri., and noon to 4 p.m. on Sat.

Anything But Ordinary

"Will Write for Wine"

Claire Williams

"Wine, writing and song. But mostly wine and writing."

Add to the wine and writing two fun and funny women and you've got a really good time. That's exactly what the podcast "Will Write for Wine" is.

"Will Write for Wine" is a weekly podcast hosted by Samantha Graves and Lani Diane Rich. Both are romance authors who live in New York and have very different styles for just about everything. They discuss wine, how to write, problems writers face and answer reader questions. They also make suggestions for cool stuff, give fun words and generally make you laugh for an hour.

Each episode starts off with what they're drinking. The wines are usually fairly inexpensive, but still good quality (except the 'booze in a box' Rich drank because the show made the Top 10 at Podcast Alley.) After they say what they're drinking, they move on to segments like, "We Recommend" and then answer reader/writer questions before addressing the main topic of the week.

Originally the podcast was supposed to run 45 minutes, but now it's an hour because Grave and Rich couldn't stick to the 45 minutes. I doubt many people mind because that's just 15 minutes of more fun. I know I can use it, and I'm guessing most listeners could, too.

Just looking at the title list on iTunes makes me laugh. The first real episode is "Inauguratory." A little further down the list is "Flaming Skulls and Acronyms," and "Gypsies, Tramps and Cheese." Other eye catchers include lists like, "50 Ways to Torture your Characters" and movie nights with "Princess Bride" and "Finding Nemo."

The podcasts are always funny, but they're more than just that. They're also helpful to anyone who wants to write good stories. At the core of most episodes is a mini-seminar on writing. On movie nights, they talk about the structure of a movie from a writing standpoint. It could be boring listening to someone telling you how to do different writing techniques, but Grave and Rich always make it interesting.

One of the most recent episodes was "NaNoWhatMo." In it the hosts discussed NaNoWriMo (National Novel Writing Month) which was actually where Rich's first published book got its start.

Everyone needs some help at the start and "Will Write for Wine" is a brilliant place to find it. Grave and Rich don't just give you a 'writer's toolkit' and move on. They don't leave blind spots. They hand you the toolbox and then explain what's in it. They also tell you where you can go wrong, how you can get to the point of being published and what it's like once you get there.

Even those who can't drink yet (legally) can enjoy the humor and the writing tips. I also love the recommendations for other things, one of which has been macrocats. I like hearing funny stories about writing and about the editing process. For anyone who wants to write, it's nice to hear that even though it's hard, it can be a ton of fun once you're there. Not only that, but when you look back you can even laugh at the hard parts.

So, if you'd like to add a little more wine, writing and song to your week, open up iTunes or go to Podcast Alley and search "Will Write for Wine." Click the little 'subscribe' button beside it. After that click, it won't be long before you'll be laughing, too.

While you wait, you can head over to their Web site at www.willwriteforwine.com to check out past show notes and for links to other cool stuff like their Cafepress store.

Things I've learned from "Will Write for Wine":

*Don't drink and drive, e-mail or write. But feel free to podcast.

*The importance of the phrase, 'You see, I'm a writer.'

*Bad cheese is a good way to torture your characters.

Oh, no ho ho ho you don't

It is Santa who had better watch out this Christmas. Westaff, a company in Australia that trains and employs Santas throughout the holiday season, recently banned its Saint Nick's from using the phrase, "Ho Ho Ho" when talking to children.

Westaff said the traditional Kris Kringle greeting sounded too much like the American slang term for a loose woman or prostitiute. They said that the potential association with the American term could scare children and be considered derogatory toward women.

Westaff's Santas were directed to say, "Ha Ha Ha" instead. People around the world have been laughing at this unprecedented attempt at political correctness ever since.

The Director s Chair

Beowulf: A very old story meets very new technology

John T. Huffstetler

"Beowulf," directed by Robert Zemeckis ("Back to the Future," "Forrest Gump"), is a story of an ancient hero. It is a fairly loose adaptation of the old Anglo-Saxon epic poem of the same name. It stars actors Anthony Hopkins ("The Silence of the Lambs," "The Mask of Zorro") as Hrothgar and Angelina Jolie ("Mr. and Mrs. Smith," "Lara Croft: Tomb Raider") as Grendel's mother. It is filmed using entirely computer-generated images.

The film relies heavily on action and sex appeal to keep viewers watching. Most of the plot was Beowulf (Ray Winstone) attacking monsters or talking to a woman. He fought a gruesome creature named Grendel, battled sea monsters the size of subways and attacked a dragon when he was in old age. Every time he won. Every time he boasted his own name when doing so.

Often, Beowulf didn't wear his shirt, and in the first major fight scene he was entirely without clothes. This was easily handled by the use of computer-generated scenes. There were many shots carefully hiding certain things.

Later, Jolie's character appeared and never wore clothes, save a coating of gold liquid. These scenes had a very thin relevance to the actual story and were blatantly for show.

The movie follows the old poem fairly closely in terms of plot, but there were many differences. Among these, Beowulf never had much care for women in the poem. In the film, the director put his hero in various relationships that transformed the meaning completely. It went from a story demonstrating Anglo-Saxon nihilism to a hokie love story that wasn't even developed.

The film also included Christian elements that were not present in the poem, a theme common in remakes of ancient works. Like in the movie "Troy," there was much unhistorical disdain for the heathen gods by a particular individual. Yet, these differing elements weren't really essential to the overall purpose of Zemeckis' film.

Whether the intention was to have this movie look cool or not, the crowd agreed that much of it was cheesy. The characters remained serious throughout, yet after certain lines the audience would chuckle. The action was exciting to an extent, but some things seemed too extraordinary. These created a detachment from Beowulf that made him seem more of a cartoon than anything else. This wasn't helped by the fact that the film was animated.

Yet, maybe this aspect was lost on viewers in a regular theater. Zemeckis filmed "Beowulf" with animation intended to be shown in Digital 3D. This can only be done with animated works though, and it requires a special theater, like an IMAX theater, to be shown properly.

The red and blue glasses are gone. The new polarized lenses look less silly and more like regular shades. I could clearly make out shots where the 3D would have been used, such as spears sticking towards the screen or fire shooting straight out. They didn't have much effect in a normal theater.

The movie seemed to exploit the old poem to film the action sequences described. This saved money by not purchasing an original script, and saved writers the task of coming up with cool things to invent on their own.

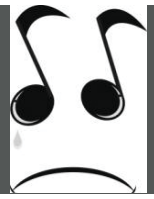
Overall, "Beowulf" is "blockbuster" purely for making money that won't be acclaimed or watched for decades. Although the Digital 3D might be an interesting development in film technology, it won't help this film last as long as the poem has.

Final Take:

★★

"Beowulf" is rated PG-13 for intense sequences of violence including disturbing images, some sexual material and nudity.

Now playing at the Clifton 5



Juniata Feud

Christopher Shannon / Juniatian

On Nov. 16, JAB presented "Juniata Feud" hosted by English instructor Will Dickey. Four teams answered questions like, "What is the wierdest you've heard someone say during sex?" The best question and answer of the night? "Where is the best place to have sex on campus?...Under the von Liebig painting."

MUSICALLY CHALLENGED
NEW AND DIFFERENT

Zack Stoll

Listen to new and different music every chance you get. That way it's possible to expand your musical tastes and enhance listening pleasure. You never know what different music you may end up loving.

Even though you have a certain preference for a genre of music, this should not mean abandonment of all other music. Me, I'm a punk rocker, sort of. Look at the music that I listen to most: it's punk. If you were to look at my complete music collection though, you would find a little bit of everything because I'm open to different music.

As I write this, I have the anarcho-punks Against Me! burning up in the background. Their melodic screaming and simple, hard punk guitar goes with how I am feeling right now. I'm a bit angry. But just the other day, I listened to a classical waltz. I was feeling very chill and needed some background music.

My one roommate is a metalhead, but he doesn't complain when I play country music. He at least gives it a chance and listens to it. He even likes some songs. I've done the same thing with his metal. Now I've picked up a few metal albums from Pantera, who is fast and heavy, like Megadeth. Whenever I'm in a metal mood, I have some groove metal that I can enjoy.

I've picked up some hip-hop along the way, too. When I hear a lot of buzz about an album, I tend to pick it up, regardless of genre. There was a bunch of talk about Danger Mouse's "The Grey Album," which blends The Beatles' "The White Album" and Jay-Z's "The Black Album." After hearing a song from it, I went out and got "The Grey Album." I'm glad that I did, because it is a great album that blends Jay-Z's lyrics and The Beatles' music.

If I were to be close-minded about music, then I wouldn't have found this. I would be limiting my listening enjoyment.

That's how I found that I liked punk, just by listening. Without the playtime on radio and TV, the only way to figure out what you like in the punk realm is to listen to all of it. Just last year I found one of my favorite bands, Tiger Army. I had heard about them from my friend, so I gave the rockabilly band a listen once I found some of their music on the Internet. I searched Purevolume.com until I found Tiger Army's music posted on the site. Purevolume is like Myspace, but more music oriented. It turned out that I really liked the group, so I downloaded the music posted. Their sound was unlike anything else I had heard before. It's a mix of 1950's rock and roll, with a stand-up bass, drums and guitar, mixed with the speed of punk rock. I just love it, and if I keep listening to new music, I can find more bands that I like.

With continued exposure to new and different music, the level of music appreciation and enjoyment goes up.

With continued exposure to new and different music, the level of music appreciation and enjoyment goes up. Listen to your music of preference, but give different music a chance, whether it is a recommendation from a friend, or from listening to a different radio station, like Power 92.3 WKVR. You may end up liking something crazy if you give it a chance.

Madrigal dresses for rent

A new dress for Madrigal every year can cost a sizeable amount of money and Habitat for Humanity (HH) is looking to change that. On November 30, HH will be loaning out previously owned dresses for the low, low cost of five dollars. The club members are attempting to gather together a collection of used dresses from the student body to lend to students in an effort to raise additional money for their club. The dresses will be returned after the dance. There is no guarantee that the dresses will be returned in a positive condition because a consent form will be signed by the individual giving the dresses prior to it being borrowed, releasing the renter from any responsibility for the care of the dress. Anyone who is interested in wearing a rented dress should look for the HH's table in Ellis this Friday from 6 to 8 pm.

Kwanzaa dinner held this weekend

This Sat., Dec. 1, at 6 p.m. the African American Student Alliance is sponsoring the annual Kwanzaa dinner. At the dinner, Juniata College's Step Team will perform a traditional African dance.

Kwanzaa is a celebration unique to African American culture, celebrated almost exclusively in the United States. It is celebrated from Dec. 26 until Jan. 1. Kwanzaa celebrations involve candle lighting, giving of libations (the ritual pouring of a drink as an offering to God) and culminates in feasting and gift giving.

A central focus of Kwanzaa is celebrating African heritage and culture while honoring African ancestors.

The seven principles of Kwanzaa are celebrated on each of the seven days. The principles are Umoja (unity), Kuji-chagulia (self-determination), Ujima (collective work and responsibility), Ujamaa (cooperative economics), Nia (purpose), Kuumba (creativity), and Imani (faith).

Kwanzaa is fairly new holiday. It was established in 1966 by Ron Everett who later changed his name to Maulana Karenga.

Tickets are on sale at the Info Desk in Ellis Hall. Tickets cost $4 for kids, $6 for students, and $8 for adults.

In the Name of Fashion

Q & A with Jeremy Fultz

Kelly Popernik

Prep, punk, posh, glam, athletic or preppy are all adjectives used to describe your style. Personal style can develop throughout your entire life. Factors like your age or the environment you are in can be influential. College is the time when people realize what they want their wardrobes to say about them. I wanted to explore one Juniata student's personal style to better understand this phenomena. I chose junior Jeremy Fultz, who can be recognized by his cool California style.

If you had to describe your style in one word what would it be?
JF: Unique

Who inspires you?
JF: Music artists like Davey Hacok.

What is your favorite Web site to shop at and why?
JF: HSSsurf.com because they have very original California inspired stuff.

How do you think other people view your style, especially Juniata students?
JF: I think people view my style as out of the ordinary because a lot of people just wear sports stuff [here]. I think because of the environment we are in is what determines style.

When did you start wearing clothes different from the norm?
JF: 9th grade.

What is the funniest thing someone has said about something you are wearing?
JF: Senior Chris Gas has said numerous times that I'm "glam rock." He claims it is a type of music video when people wear the most extreme stuff like tons of sparkles and tight fitting [clothes].

Do you think, as a guy, that society accepts you or not for liking style?
JF: It's looked down upon by other males.

What fashion trend do you despise?
JF: Ridiculous novelty t-shirts that say things like "California" or "Delaware" are heinous. Rain boots and leg warmers are fitting for crazy people. Starter jackets are coming back though.

Do you follow trends?
JF: No. I go against trends and like to be original.

Do you ever say to yourself, "can I pull this off," or "this is too crazy" and why?
JF: No, not anymore, because I don't really care.

What of your wardrobe most reflects your personal style?
JF: My Dickeys clothes and a homemade t-shirt that has my favorite bands name on it, AFI.

Let's talk about your pink sunglasses…
JF: I bought them on the boardwalk at Ocean City. They stood out to me and no other cats wear pink sunglasses.

Talk to me about your accessories…
JF: I wear a lot of bracelets and necklaces. Hemp, shells and wooden jewelry is mostly what I have. I guess my tattoo is a part of my wardrobe, too and is a way of expression.

What is your best fashion tip?
JF: Don't question if you can wear something just do it. Quit being a conformist.

After interviewing Jeremy Fultz, I realized that fashion is what you want it to be. So, have fun with it and don't be afraid to try new things.

Christopher Shannon / Juniatian

Junior Jeremy Fultz showing how he's a Juniata fashion original.

Fun Fashion Tip

In love with Coach, Gucci or Burberry handbags but can't afford them? Go to Bagborroworsteal.com. You can rent handbags for as long as you want and a membership is on average five dollars a month! For more details visit the Web site.

Suggest a Bailey Oratorical topic

For the first time ever, students will have the chance to submit a question idea for the Bailey Oratorical Contest. The Bailey is the communication department's annual speech competition held in the spring semester.

The student whose question is chosen will receive a $50 reward.

To get an idea of past topics, check out the past Bailey speeches cataloged in the library.

Submit a topic suggestion that is persuasive, open-ended, timely and in a question format. Questions should be sent in e-mail format (no word documents will be accepted) to Sarah Worley at worley@juniata.edu by Wednesday, Dec. 5 by 5 p.m. One entry per person will be accepted.

The detective's corner: Art is dead on campus

One of the greatest bands in history inspires a Juniata mystery

"The Music Never Stopped" -- and neither did the multi-colored Sharpie markers. There are graffiti artist(s) on the loose, and they dig the Grateful Dead. Bathrooms all over the campus, mostly in academic buildings, have been tagged with "Dead heads."

These drawings mimic the logo printed by the Grateful Dead in its self-titled album. These words were printed with the logo originally: "DEAD FREAKS UNITE: Who are you? Where are you? How are you? Send us your name and address and we'll keep you informed. Dead Heads, P.O. Box 1065, San Rafael, CA 94901."

The fan art was drawn with markers, mostly black and purple, but some are very multi-colored and intricate, like the one in the far stall in the men's bathroom of the basement of the library (see photo). The symbol doesn't represent any discriminatory or vulgar messages, only a love of the band. Perhaps this brief is exactly what these artist(s) wanted, greater recognition for their favorite band's keen taste and cool jams.

The facilities department has not given its usual quick response and painted over any drawings yet – read into this what you will.

Our Facebook Special Investigation Unit has narrowed the potential suspect pool down to 17-25 year old male(s) who attends Juniata and whose musical interests favor the Grateful Dead. If you have any information regarding the whereabouts or identity of the "Dead Head" graffiti artist(s), please buy them a pint of Cherry Garcia.

Juniata Top Chef

Christopher Shannon / Juniatian

On Nov. 28 the first round of Juniata Top Chef was held in Baker during dinner. Participants used food present in Baker to create dishes which could fall into one of three categories. The "open" category included dishes that were made using anything in Baker that night. The second category was "vegetarian." And, the third category was the "specialty" category which included dishes made with food that is available in Baker everyday. Dishes were judged on nutritional balance, creativity and presentation. Prizes, which total $750 will be awarded after the Dec. 5 final.

Battle of the bands and DJ dance party TONIGHT

JC Up Late to create club feel on campus

On Nov. 30 from 8 p.m.-2 a.m., Juniata students are invited to a JC Up Late event entitled, "Respect everyBODY."

The evening will include two experiences, a battle of the bands and a dance featuring New York City's finest DJs. According to event co-coordinator and Class of 2008 president Ryan Conrad, it is "purely about entertaining students while supporting a great cause."

There is a $3 cover charge for the battle of the bands which takes place in Baker from 8-11 p.m. The proceeds benefit the National Eating Disorder Association and the Huntingdon House.

Bands featured are the Bleeding Wingnuts, The Lampshades, The Blylevens and Juniata alumni Brandon Long and Brenton Mitchell.

The concert is B.Y.O.B. Free Red Bull will also be offered along with henna tattoos and wax hands.

The second event, the after party, is to be held in the Suzanne von Liebig Theatre from 11 p.m.-2 a.m. and is free.

JC Up Late rented club speakers that, along with equipment already available in the theater, will enhance the club feel. Some of New York City's finest DJs, The Bangers, will appear as a dance off for the best Soulja Boy Dance takes place.

"I wanted to create a party that would blow away the normal East parties," Conrad said. Juniata students will experience a "party atmosphere never seen before on our campus."

The evening is hosted by Juniata psychology club, JAB, Direct Fusion Entertainment (created by Conrad), the Health and Wellness Center and AWOL.

Women's Chamber Choir presents holiday concert tonight

This evening at 7:30 p.m. the Juniata College Women's Chamber Choir will perform a holiday concert at the St. James Lutheran Church in downtown Huntingdon. The newly built church sits at the corner of Mifflin and 6th Street.

Gowned in authentic Renaissance madrigal costumes, the 20 voice women's ensemble will join Arietta, the State College Choral Society's outreach group and Moore Street Pro Musica, an ensemble of authentic Renaissance instruments, to perform a program of holiday favorites.

Directed by Janice Mianulli, the concert will feature five centuries of women's choral music, including pieces by Rutter, Charpentier and Purcell.

A donation of five dollars is requested. Students are free. A reception will follow the performance.

Memorable Madrigal

Take the pledge not to go over the edge!

For Madrigal this year, the men of Mr. Juniata, in cooperation with the Social Norms Committee and Leaders in Motion, are going to hold sign-ups for the Memorable Madrigal Pledge on Dec. 3 and 4 in Baker during dinner.

The pledge is a personal commitment to stay healthy on Madrigal night, and will signify, when signed, that the student is committed to drinking responsibly. It also signifies that if any friends are in need of aide due to extensive intoxication, the student will find it for them in whatever form necessary (medical attention or JCPD).

The pledge is not to prohibit those that sign (who are of the legal age) from drinking, but to encourage them to stay at a fun and flirty level without accelerating to a violent or malicious one.

The first 20 to 40 who sign will receive a promise ring pop and a bracelet that says, "I can make a difference."

Let's hear it for the boys

Giving women's basketball new intensity and confidence

Jess Winemiller

With a long preseason of what seems like endless intra-squad scrimmaging, women's basketball is utilizing an outside source to shake things up. We are bringing in the boys.

Athletic males on campus, from students to coaches, have been asked to dig out their basketball skills and take the court with us. These young men are no strangers to the game. Most of them played in high school or at the collegiate level.

The most important characteristic, however, is that they are not afraid to give 100% against a group of women.

"I am going to play them as hard as I can," said senior baseball player Jay Enoch, who has been playing against us for the past three years. "They get a true sense of what it is like to play a little bit faster, a little bit stronger and a little bit taller."

Senior Michael Conte, who also takes the court with us on a regular basis, agrees with Enoch. The team is "not going to play against tougher competition than us guys," said Conte.

Males play at a quicker pace. They are stronger and more athletic. There is no argument there. Our team is not out to prove that women possess better attributes than men in the game of basketball.

"They play at another level of competition," said junior guard Claudia McDowell. "We are so used to playing one another [that] we tend to get comfortable with it." This results in a decline in our intensity at moments, which the men revive when they step on the floor.

> "Someone who is two or three times in size and strength is physically intimidating."
> – Gina Piccolini

Though we tell ourselves we would not be intimidated, unconsciously we were at first. It showed in our timid style of play, which our coach was quick to point out.

"We were afraid to step up on defense," said junior guard Gina Piccolini. "Someone who is two or three times in size and strength is physically intimidating."

It took some mental adjustment, but we learned to accept their physical advantages and use them to our competitive advantage.

Playing males "helps develop good habits," said McDowell. It forces us to play with our heads, and execute those fundamentals that often get lost in the mix. Defensively stopping the ball is one concept that was immediately highlighted.

"In most cases, the person with the ball is able to dribble down the court past defenders without being challenged in the backcourt…thus we end up getting a good number of easy lay-ups," said Enoch.

Stopping ball is always a key focus in practice, whether the men are present or not. It is an aspect of the game our team consistently struggles to execute.

If we are able to stop an Enoch or Brad Litchfield, assistant men's basketball coach and previous standout basketball player at Dickinson College, we can stop any Division III opponent. It's a confidence the males are helping us to develop.

Juniata women's basketball is not unique, however. Implementing male practice squads is a trend that is popular among elite Division I women's basketball programs across the country. Institutions such as the University of Connecticut and Tennessee University utilize male scout teams as major components in practice.

In some cases, young men are offered scholarships for their daily participation. Unfortunately, being a Division III institution, Ju-

continued page 16

Christopher Shannon / Juniatian

Junior guard Claudia McDowell drives to the basket in the first half of Juniata's game at Penn State-Altoona on Nov. 20. McDowell led the Eagles in scoring for the evening with 21 points. The Blue and Gold held off a Lady Lion comeback in the second half to win the non-conference match-up, 79-73.

Sweet success: Field hockey leaves its mark in the Elite Eight

Michelle Campbell

Sixty-seven goals scored, two weeks of post-season play, three rounds of the NCAA tournament, eight record-breaking accomplishments, 24 post-season honors. All of these numbers equal one team with one enormous heart. That is what brought us so far and will continue to bring success to Juniata field hockey.

We have always said that a winning team beats with one heart. Any spectator could see our team played with heart in each postseason game, especially in the NCAA tournament.

At 3:00 a.m. on Nov. 5, I was awoken by my roommate, Kim Wagner, who told me not only that we received an at-large bid into the NCAA tournament, but that we were hosting the first round. For the first time since 1972, Juniata was to host an outdoor NCAA tournament event.

With an energetic crowd of over 150 Juniata fans, we defeated Johns Hopkins University, 2-1. For the first time in Juniata field hockey history, we advanced past the first round of the NCAA tournament. Grateful for the large turnout, sophomore Melissa Gorman said, "The energy from the crowd came onto the field. They definitely helped us come out with a win."

This energy stayed with us as we traveled to Lebanon Valley College for the second/third rounds of the tournament. In the second round, we played defending national champions, Ursinus College. The statistics were certainly in favor of Ursinus, ending with a 27-6 advantage in penalty corners and a 26-9 edge in shots. But our defense was too strong for them to find the back of the cage. We became the first team to shut them out in 2007. With one goal in each half, we ended with a 2-0 win.

> "This season we did many things we've never done before. Hopefully this will fuel the fire in future Juniata field hockey teams."
> – Coach Gillich

Our win could easily be considered the biggest upset in Division III field hockey this year. Senior Kim Wagner said, "They were expected to beat us. I think their mentality was that we were just Juniata—an easy win. "

Ursinus quickly found out winning this game would not be an easy task. Not only was our defense relentless, but our offense made the most of very few scoring opportunities. With only six penalty corners and nine shots, we secured twice.

This victory advanced us into the third round to play an old rival, Lebanon Valley College. This time, we experienced much different emotions. Our season came to an end as we fell to the Flying Dutchmen, 6-0.

Junior Erin Smith said, "They [Lebanon Valley] came out harder than we did. We were sluggish, but still played our hearts out. The Ursinus game took a lot out of us. We just didn't have enough steam left to take out Lebanon Valley."

Even though our season ended

continued page 19

Swimming treads water with small roster

Brandon Wolfe

The Juniata swim team is about as small as Rhode Island. The four person roster is led by a new head coach, Katie Ruff. With such a small team it's not about winning, it's about rebuilding.

The team consists of Kasey Brough, Lindsay Cooper, Rachel Gipe and Kelly Serfling. This tiny roster does not allow the team to compete in every event at a meet. The swimming scoring system involves placement, much like track. The points in the events Juniata does not compete in go to the other team, making it impossible for the Eagles to win a dual meet. However, Ruff said, "The dual meets will simply not discourage [us]. We have other things to fight for."

Despite being unable to win dual meets, the team is competing in invitationals where individual swimmers can earn medals. Thus the season is not a continuous stream of unwinnable dual meets.

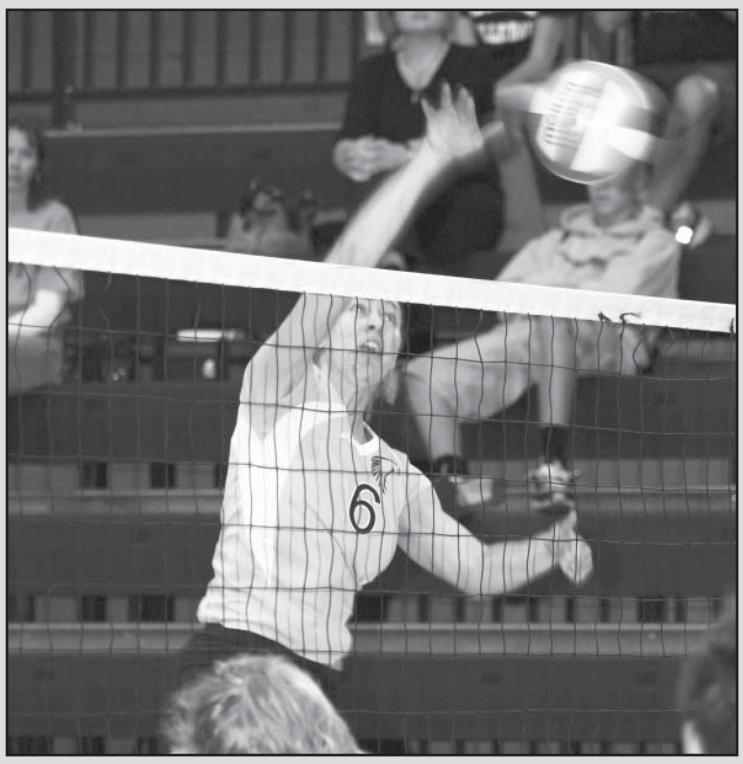
Ruff said, "I love this team… We're looking for strong individual performances, and to learn thing you can't necessarily learn in the classroom."

Perhaps the main theme of the swim season is not personal achievement, but recognition of the program. Ruff said, "We hope to get four girls per year, and that's even a dream. It's going to take a couple of years, but eventually we will be able to compete in dual meets."

> "I love this team... We're looking for strong individual performances, and to learn things you can't necessarily learn in the classroom."
> – Coach Ruff

Ruff feels the swimmers need to gel as a team in order to succeed and make a name for themselves. Brough is the team captain and will be a key factor in gaining attention for the program again. Over the past four years, the Eagles placed no lower than fifth in the MAC conference championship meet. But losses to graduation and the departure of Coach Brian McGrath affected returning numbers and recruiting.

Ruff represents a fresh start for the women's swimming program. as and has already made huge strides. Ruff said, "It's hard to win with just four girls, but we're close knit. Possible recruitments love to see that."



The team will swim for personal records, not a team win. Ruff just wants the swimmers to excel in practice to obtain those personal bests. This will help them when they enter the large meets.

The Eagles only host one meet this year on Jan. 26 when they face Chatham.

Christopher Shannon / Juniatian

Kasey Brough swims the freestyle during a recent swim team practice. Brough, the team's lone senior, holds the Juniata record in the 500 meter freestyle with a time of 5.20.25.

Christopher Shannon / Juniatian

Division III National Player of the Year Amber Thomas goes for the kill against Saint Vincent early this fall. Thomas led the Eagles in kills in 2007. She is the third Juniata volleyball player to win the Player of the Year honor during Coach Larry Bock's tenure.

Volleyball falls in Final Four

The Juniata women's volleyball team finished off its season with its 22nd trip to the Division III Final Four on Nov. 16.

The Eagles fell in the national semi-final match to the University of Wisconsin, Whitewater in three straight sets (30-28, 30-27, 30-25). Juniata had defeated UW-Whitewater two times during the season.

The Eagles finished the season with a 37-5 record. That mark continues the program's 27 year streak of posting more than 30 wins in a season.

Keeping another streak alive, the team finished undefeated in conference play for the 27th straight season.

The Eagles also won all 17 of their home games.

Though the team sailed undefeated throughout the conference playoffs and through the first four rounds of the national tournament, UW-Whitewater proved to be too much in the semi-final. In an AVCA press release, head coach Larry Bock said, "They were very good and we weren't."

"Though we lost all our games in the semifinals, it was [sic] by a very close margin," said freshman Stephanie Strauss. "It was definitely uncharacteristic."

During the Final Four weekend, junior Amber Thomas was named Division III National Player of the Year.

"I am kind of stunned at the moment," Thomas said. "I am thankful for the talent God has given me and the opportunity to play for Juniata. I owe it all to my coach, teammates, my dad and my mom, who I know is watching all of my games."

Thomas posted 525 kills, an average of 4.37 kills per game in 2007. Along with these numbers, Thomas averaged a .346 hitting percentage and 2.75 digs per game.

Co-ed hoops practices

continued from page 15

niata does not have the liberty to offer practice players such perks. Our male squad plays an even less glamorous role. However, they view it differently.

"There is no public glory, but it is not about that," said Conte. It is about the guys pushing us to achieve a competitive level in practice we may not be able to achieve on our own.

Deep down these young men, along with our team, fully recognize their contribution to our success. They have helped us to a 3-1 record thus far this season, which included a tournament championship at Penn State – Behrend.

Enoch said it best: "No one on this campus may know we play you. No one may care….We do it to make you guys better. Every time you take the court I cheer a little harder knowing that I pushed you in practice.…I feel like I have a piece of this team in me every time I see you compete."

Men's basketball to a 3-1 start

Building on last season's success

Tyler Sasala

The 2006-07 men's basketball season was a record breaking year that ended with heartbreak for the Eagles. The team posted a school record 17-win season and advanced to the MAC championship game for the first time in program history. The Eagles fell in the final on a three point buzzer beater. Only one starter remains from last year, but the team returns 10 letter winners.

Coach Curley commented on how last year's success is affecting the current squad. "I think there is an added level of confidence in the program. Because of last year there is now a blue print of how to be successful. There is a belief now that how we do things works. And beyond that, the taste of being in the postseason and the crowds and the atmosphere that we were able to play in, they can see what happens when we have great years."

Last season the Eagles averaged 70 points per game. They were led by 6' 5" forward Brian Cannon, who contributed a team-high 14.5 points per game. Cannon made appearances in all 29 games in 2006-2007, but did not start in a single one. Averaging nearly 25 minutes and contributing 6.6 rebounds per contest, Cannon will need to make an even bigger impact this season as a starter.

Receiving 61 points, Juniata was voted fourth in the Landmark Conference preseason poll. Curley commented on his and the team's reaction. "To be honest there isn't a reaction. Last year we were picked seventh and finished second. We don't place value on those things; we don't discuss it as a team. If I have to use that for motivation, I'm in trouble. At the start of the year everyone should be playing for first."

The 15th Annual Mutual Benefit Group "Doc" Greene Invitational Tournament was the kickoff to the 2007-2008 campaign. In the opening round the Eagles took on the Lancaster Bible College Chargers. Juniata forced Lancaster Bible into 25 turnovers en-route to an 80-69 victory. Four Eagles finished in double figures. Cannon led all scorers with 28 points and also grabbed 14 rebounds. Brent Ferko, David Thompson, and Kyle Opitz finished with 14, 12 and 11 points respectively.

In the championship game, Washington and Jefferson was the only thing that stood between the Eagles and their third consecutive tournament title. Juniata used stingy defense and a 46.5% shooting percentage to roll to an impressive 74-48 victory. Opitz shot 3 of

New basketball locker room the envy of Juniata student-athletes

Is women's basketball's new room the model or the dream for other teams?

Kristen Penska

At Kennedy Sports and Recreation Center, the women's basketball team has been gifted with a newly renovated locker room. However, many other Juniata athletic teams have been left far from pleased with the quality of their facilities.

The many rumors of four flat screen televisions, massive freezers and never-ending beverage supplies are stretching the truth when talking about the women's basketball locker room. Yet, adorned with sleek wooden cubby holes and a flat screen TV, the team's newly refurbished room is quite the prize.

"We are very lucky for what we have been given," said head coach Danny Young. "Of course you always want what's best for your program [and this locker room] is just that."

Though the room itself is tidied and modernized, it is simply a cozy version of the other athletic rooms. The bathrooms remain similar to other athletes' facilities and the air still retains the remnants of sweat, shoes, and body spray. The difference, however, lies within the quality.

Many complaints about Kennedy's locker room facilities focus on poor shower and bathroom conditions. "We have two shower heads that work, and one doesn't have hot water" said sophomore soccer player Coleen Cribbs.

Other athletes are simply paranoid of catching MRSA from dirty floors. "I feel like I am stepping on germs everywhere I walk. The second I get out of the shower, I just feel dirty again," said freshman volleyball player Jennifer Laver.

Another grievance is that multiple teams must often share locker rooms. There are 14 sports teams, and only 10 locker rooms. Two of those rooms are given to the faculty and staff. The women's volleyball team shares its room with cross country and track. The women's soccer team shares a locker space with women's field hockey and softball. Football and baseball share one room, along with men's volleyball and men's soccer. This can be crowded and extremely inconvenient when teams practices at similar times or when players want to use locker space during off-season training.

Whenever people discuss the current conditions, certain questions arise. Could these outdated and dingy locker rooms hinder Juniata recruiting? Can the basketball room persuade players to attend the university? Could Juniata College benefit from an apocalyptic renovation of Kennedy? Any coach would likely say answering those questions is not that simple.

"I don't think high school players understand the importance of their facilities until they are in college and use them constantly," said Young, "Yes, our locker room is definitely a perk, but if a player bases their [sic] college decision on it, they need help."

Also, according to Young, players must value their locker rooms, regardless of what they are given. "I told my girls that this locker room was a gift and that they needed to respect it."

Many players who have developed frustrations with their locker rooms give no concern to the maintenance. But freshman soccer player Elizabeth Van Blarcom said, "Taking care of what you have is the first step to receiving new and better things."

But all teams should not expect immediate facilities upgrades. Young's team received its new locker room through a donation by David Goodman, the owner of D.C. Goodman and Sons, a locale business. Goodman also sponsors a summer league team comprised of several Juniata women's players.

Though there gift was a donation, Young does have predictions for the future of facilities in the Kennedy Sports and Recreation Center. She said, "Over the next five to ten years every sports team should have its own new facility. The problem arises only when the renovators run out of space."

When space does become an issue, a long range plan will need to be made. In that instance, Young said that, "The field hockey and soccer teams may get their own field house."

Until bigger and better facilities present themselves, athletic teams will attempt to preserve what they have, looking on with envy at the women's basketball locker room. But hey, who wouldn't? They have a Nintendo!

By The Numbers

Senior forward Brian Cannon shoots over a Washington and Jefferson defender during the championship game of the "Doc" Greene Tip-off Tournament on Nov. 17. Cannon had 14 points to go along with a team leading eight rebounds during Juniata's 74-48 victory over the Presidents.

Men's hoops start 3-1

continued from page 17

6 from behind the arc, pacing all scorers with 18 points. Jon Tundel and Ferko both sparked the defense with two blocks a piece.

The Eagles made a road trip to Lancaster, PA on Nov. 24 to take on the Diplomats of Franklin and Marshall. A 30-21 halftime deficit seemed surmountable, but F&M went on a 14-5 run to open the second half. Down 19 points with 10:57 remaining, the Eagles began their comeback with a 12-0 run that spanned three-and-a-half minutes. The Diplomats' lead was cut to five after an Eric Mueseler three-pointer with a minute left. Despite the run, the Eagles fell short, losing 66-57.

Opitz and Cannon led the Eagles with 18 and 13 points respectively.

The men's fourth game was a visit from Westminster College. The Eagles held only a one point edge going into the break. After trading the lead five times to start the second half, Juniata went on a 15-0 run to take the lead for good.

Cannon turned in a career high 33 points to lift the Eagles 80-63 over the Titans. Opitz was the only other Eagle in double figures with 15.

Juniata plays its first Landmark Conference match-up Saturday when former MAC foe Susquehanna comes to Kennedy Sports and Recreation Center.Tip-off is at 8 p.m.

54 Eagles make Landmark Conference fall Academic Honor Roll

Athletes from each of the six Juniata teams that participated in the inaugural Landmark Conference fall season were represented on the conference's first Academic Honor Roll.

To be honored, student athletes of sophomore standing or older needed to maintain a GPA of 3.0 or better. The student-athletes also needed to complete the fall season in good standing with their teams to be considered.

Three hundred and fifty-seven athletes from the eight Landmark Conference institutions made the Academic Honor Roll. No school placed fewer than 18 students on the list. Fifty-four Juniata athletes earned the honor.

Landmark Conference 2007 recap

Eagles step into new conference and into the winner's circle

Sarah Ruggiero

This fall's athletic season has provided positive outcomes and brilliant insights into Juniata's individual athletic programs.

Upon the College's decision to remove the football team from the Mid-Atlantic Conference (MAC), MAC officials gave Juniata an ultimatum. The entirety of Juniata athletics were ordered to compete in the MAC or none at all. President Tom Kepple responded to this by initiating the formation of the Landmark Conference, the new home of Juniata athletics.

"The Landmark Conference offers a more competitive playing field. Schools have more in common and athletes are more similar in their academic profiles. The socio-academic statuses are more in line, which creates a more level playing field," said head women's soccer coach, Scott McKenzie.

Juniata dominated the level playing field this fall. Of the six teams competing, three won conference championships (women's volleyball, field hockey and women's cross country), one came in second by a point (men's cross country) and one fell in the conference semi-final (women's soccer).

Women's volleyball continues to reign victorious no matter what conference it enters. With two national championships under their belt, the Eagles' focus has never been on conference playoffs. Their expectations are much higher. As expected, the new Landmark Conference did not present the team with any new challenge. The Eagles went undefeated through the conference regular season and post-season tournament.

"Even though we switched conferences, our focus was still the same and our goals have been the same," said sophomore Molly Sollenberger.

Field hockey concluded its season with a 21-3 record, including postseason play. Relocation to the new conference paid off as the women earned the first ever Landmark Conference field hockey championship, the first conference title in program history.

"Switching to the Landmark Conference was… an easier switch than we realized [initially]. We did step a few notches down in competition," said senior captain Kim Wagner.

The MAC was proven to be a strong conference for field hockey, sending four teams to the NCAA Tournament in 2006, including Juniata. It is considered one of the hardest and most competitive conferences in field hockey. Obviously, the women had their qualms about moving into a new conference.

Any field hockey player would admit that even with teams of lesser quality, the new conference presented unknown challenges.

"First of all, traveling is bad. Susquehanna is the closest with a two-hour drive, and then the rest are three to four hours away. Having to leave at 10 in the morning for a four o'clock game is hard to do. We missed many classes and thankfully most professors were very understanding," said senior Michelle Campbell.

Like the volleyball and field hockey teams' experience, women's and men's cross country had great success but mixed feelings about the Landmark. "Everyone realized that we were moving from one of the most competitive conferences to a very weak one. While winning a conference championship instantly became a reality, the sacrifice of strong competition was a drawback," said senior Shawn Rumery.

The Landmark switch instantly changed the cross country program's focus from the conference championship to the NCAA regional. The regional would retain the same format as past years, despite the conference change.

Unlike their fellow Eagles, the women's soccer squad did find the conference playing field more even and deep. The team surpassed expectations and concluded the season with a fourth place ranking in the Landmark Conference.

"The Landmark Conference was more competitive because everyone has similar skills. It provided us with an opportunity to show how good we are. We're getting better and it allowed us to showcase our skills," said McKenzie.

McKenzie, who started the women's soccer program in 2000, has seen unprecedented success in the Landmark Conference. During the 2007 season, the Lady Eagles gained their first ever playoff berth and also received a bid to the Eastern College Athletic Conference (ECAC) tournament during the postseason.

"I think being in the Landmark conference was a positive thing for our team this year. Some of the teams we had never played before, so it was nice to approach each game and not worry about past results. This team will definitely continue to see success," said senior captain Stephanie Mury.

Like all of Juniata athletics, women's soccer has also been presented with more extensive traveling conditions. The women positively responded by combating hours on the bus with longer preparation time for games and more strategic warm-up drills prior to taking the field.

"The enthusiasm of a new conference encouraged us to work harder for the Landmark Conference playoffs," said senior captain Heather McMinn.

Just like women's soccer, men's soccer enjoyed the unknown of the new conference. This sense of anonymity coupled with the start of a new season, sparked the men to play with a positive attitude and competitive edge.

"Being in the Landmark Conference was a good change for the men's program. We were competitive in every game. We are looking forward to getting started on our training for the 2008 season and having things bounce our way," said men's head coach Dan Dubois.

Outcomes of the men's conference games were close. Five of the games were decided by only one goal. The eventual conference champions won 1-0 over the Eagles on a late goal in double overtime, showing the parity of the conference.

"I think that the Landmark was much more competitive than the MAC. Every game was a toss-up. It could have went [sic] either way for any team. It seemed like we had to travel a lot more this year though. We were away every Wednesday in September," said sophomore Jordan McGowan.

Juniata's overall adjustment to the new conference has proven to be favorable for all athletic teams. Thanks to a smooth transition, players have easily dealt with the change and still compete with a high level of intensity.

Eleven more Juniata teams will compete in the Landmark in 2008.

Field hockey finishes in the nation's top eight

continued from page 15

that day, we were grateful for how far we had come. Head coach Caroline Gillich agreed. She said, "We definitely reached all of our goals this year. We peaked at the exact right time, the beginning of post-season, both individually and as a team."

"This season we did many things we've never done before. Hopefully this will fuel the fire in future Juniata field hockey teams, knowing that our dreams are a lot closer than you think," said Gillich.

Our season may be over, but we continue to receive postseason honors. We placed three athletes on the NFHCA All-Region Team. Seniors Heather Hassinger, Wagner and I were each honored. Wagner was also placed on the All-American team.

Thanks to all of our fans for coming out to support us! A big thank you goes to the dedicated members of the rugby team who supported us at many home games and even made the trip to Lebanon Valley to watch the regional final. We felt honored to have fans that went shirtless and painted their chests, came up with ridiculous cheers that flustered the other teams, and were always lined up and ready to give us high-fives after our games.

And for those who were woken up from a relaxing afternoon nap because of our pre-game rituals on our way to the field, you can now rest in peace and quiet—until next fall, of course…

Kevin Dundore / Juniatian

Senior forward Kim Wagner battles for the ball during Juniata's first round game in the NCAA tournament against Johns Hopkins on Nov. 7. The Eagles prevailed (2-1) to advance.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

DECEMBER 13, 2007 | JUNIATA COLLEGE | VOLUME 89, ISSUE 5

Title IX: JC's compliance issues

Michelle Campbell

Title IX is a law that demands equal opportunity to be provided for men and women in any educational program that is federally funded. The law has been in existence for 35 years, but many still believe that Title IX is specifically about gender equity in athletics. Although it is commonly misperceived this way, Title IX in athletics is not as simple as the same number of sports teams having to be offered to men and women.

While the law is one sentence long, it is very complex. Due to the complexity, many school athletic programs are not in compliance, including Juniata. The following explains what Title IX entails and how Juniata can work towards compliance.

History of Title IX at Juniata

After Title IX was passed in 1973, Juniata began to add women's sport programs. In 1995, the College asked the athletics department to cut money out of its budget. Unable to drop women's sports and remain in compliance with Title IX, the final decision of the department was to cut five men's programs. These sports included men's swimming, wrestling, golf, tennis and cross country.

Testing Juniata's Compliance

To find if a college is effectively accommodating the interests and abilities of members of both sexes, the school must look at the three prong test. As mentioned above, Juniata is not currently in compliance. Below explains the three prongs and why Juniata fails to comply with each one.

Prong 1

According to prong 1, the gender ratios of students and student-athletes should be proportionate. In the 2005-2006 Equity in Athletics Disclosure Association (EADA) report, Juniata's student population was 53 percent female and 47 percent male. Juniata's student-athlete population consists of 43 percent females and 57 percent males (see graph). These numbers show that there is a ten percent difference within genders in our student body and student-athletes, causing us to not gain compliance in prong one.

The Women's Sports Foundation recently graded each institution according to its proportionality gap. Juniata earned a C+ with for the 10 percent proportionality gap. In comparison to peer institu-

Arming the JCPD

Faculty members argue for and against

Sarah Ruggiero

As reported in the Nov. 30 issue of the Juniatian, the College received a report from outside evaluators concerning campus security. The complete evaluation suggests that an important measure to take in an effort to make campus safer would be to arm the Juniata College Police Department (JCPD). The board of trustees will likely vote on that proposal at its spring meeting. Until then, the campus will see the issue publicly and privately debated.

In order to provide the public with a balanced view of whether or not to arm the JCPD, the Juniatian invited everyone on the faculty's e-mail distribution list to sit for an interview. Faculty members opposed to the proposal responded to the invitation first, and in higher numbers. After a second request for participants, several faculty members who declared themselves "fence sitters," said that although they were not completely for or against the proposal, they would present the advocate's take on this issue. Only one faculty member claiming outright support for the arming proposal responded to the Juniatian's request for interviews.

The Juniatian conducted four interviews. Andrew Dudash, an instructor and head of reference services at the L.A. Beeghly Library and James Tuten, a history professor, are both against arming the JCPD.

Phillip Dunwoody, a psychology professor, describes himself as a "fence sitter." He agrees with both sides, but voiced his opinion in favor of arming of the JCPD.

Donald Braxton, chair of the religion department, describes his position as accepting of the proposal in order for the JCPD to perform their duties effectively.

iPod, therefore I am

Duke puts education in a podcast; could Juniata?

John T. Huffstetler

In the fall of 2004, Duke University was the first college to hand out iPods to all incoming freshmen. The iPods came preinstalled with orientation information and an academic calendar. The device's main purpose was to download course materials via podcasts such as lectures, language lessons and audio books.

Duke and Apple co-designed this pilot program, and Duke received a grant to cover the $500,000 expense. The purpose was to, "Motivate our faculty and students to think creatively about using digital audio content and a mobile computing environment to advance educational goals in the same way that iPods and similar devices have had such a big impact on music distribution," said Tracy Futhey, Duke's vice president for information technology, in a CNN interview.

Such a program is part of the growing trend of using new types of media in the classroom. The specific move to using iPods is to make learning more accessible, portable and interactive. It also helps integrate many types of media to enhance the learning process. Many schools have started to implement programs with iPods or related software. Juniata is currently in the process of integrating some iPod use into campus life.

Use of iPods include the two that the Teaching Learning Technology Center (TLT) has available for students to rent. These are handed out with microphones so that students can do audio recordings for some classes that currently ask students to create podcasts.

There are also a number of students on campus that have personal iPods. However, these are not used in the same way that Duke and other schools use them. Most professors on campus have not yet integrated audio lectures into their classes or taken big strides to incorporate some of the benefits of digital media.

One professor interested in using podcasts for educational purposes on campus is Donald Braxton, chair of religion. Braxton proposed to the TLT that Juniata participate in something called iTunes U. iTunes U can be found by going to the iTunes store. Jigar Patel, current student manager of the TLT, took on the task of looking into this system. If available, students would be able to go online and download podcasts, lectures, audio books or any other material professors would want to make available. One of the things discussed by Braxton and Patel was putting up recordings of guest lectures.

The process of getting iTunes U for campus use required that Patel fill out an application. It asked questions about how Juniata would use the Web site, why the College should have it and what educational value it would have. Apple approved the application, and so Juniata currently has permission to be a part of iTunes U. However, maintaining iTunes U could be expensive.

In order to incorporate iTunes U on campus, certain technology would have to be purchased. Anne Wood, director of campus network and security, is in charge of working with Apple in the next step of the process. If the technology required is affordable, then iTunes U will probably come to Juniata.

The prospect of Juniata students receiving iPods as freshmen is unlikely. Along with the cost issues, schools like Duke and others learned that simply handing the devices out is not the best way to incorporate this new technology. Much of the educational benefits that come from having iPods, such as downloading lectures or other content, can also be done on a computer. Close to 90 percent of Juniata students use laptops, and so content found online can simply be downloaded to them.

Duke no longer hands out iPods to all incoming students. After the pilot year, Duke decided to only supply a select few with iPods. Only students majoring in directly related fields, such as music and languages, received them. Currently, Duke's policy is a one semester, class-by-class basis.

Those interested in learning more about iTunes U, and what it could do for Juniata's campus, should follow the link from the iTunes store. The universities involved have different things available, and it is all public. For instance, MIT offers online classes over iTunes U that anyone can access.

Although the iTunes U program is still tentative at this time, Juniata students may soon be able to listen to lectures in the comfort of their dorm rooms.

Field station to go solar

Juniata recently was awarded a grant for $46,564 from Pennsylvania's Energy Harvest Grants program to install a five-kilowatt solar voltaic energy system at the Raystown Field Station. The College plans to install the system in Shuster Hall, the station's main instructional building, sometime next year.

According to an official College press release, the solar energy system is expected "to generate 6,500 kilowatt hours per year and reduce emissions of carbon dioxide, nitrogen oxide and sulfur dioxide."

President Kepple said, "The addition of a solar energy system to Shuster Hall's other 'green' technologies makes our field station one of the most effective teaching tools to show students how much of an environmental footprint they are leaving behind."

This plan keeps in line with Kepple's recent pledge to make the College more sustainable. In July, Kepple signed the American College and University Climate Commitment. To uphold that commitment Juniata must "develop a comprehensive plan within two years to attain climate neutrality as soon as practically possible, including an inventory of emissions, target dates, specific actions and tracking systems."

Great Orations course has a dream

Sara Cieslewicz

Six students of the Great Orations course, led and co-directed by professor of communication Grace Fala, performed a dramatic reenactment of Martin Luther King's "I Have a Dream" speech for State College Middle School and Williamsburg High School students on Dec. 5. The Juniata participants intended the speech to initiate discussion among students about their dreams of justice and how they can actualize them.

Great Orations, an upper level communication class, focuses on great speeches of the past. Fala said that students attempt to answer questions in their study such as, "What makes a speech a great? What makes it eloquent? Persuasive? Influential?"

Halfway through the semester students had to reenact one speech out of all those they studied. This year's small group decided on Martin Luther King's "I Have a Dream" speech. It was originally given publicly on the steps of the Lincoln Memorial during the March on Washington for Jobs and Freedom as a watershed in the American Civil Rights Movement.

"I go with what they [the students] decide. Once the decision is made, it's figuring out the show. And we work collaboratively. Everyone here is a co-creator, producer [or] director of the production," said Fala.

While creating the production, senior Amanda Albanese said, "We got to interact with students that we don't necessarily have classes with all the time. [It was an] opportunity to work on a closer level. [You] get a chance to know everyone really well and not [be] afraid to criticize, be brutally honest."

The presentation was performed polyphonically, a technique in which individual speakers present excerpts from the speech at times, while groups of two or more recite the words of King together in others.

> ***We're presenting not just words but feeling, and we're presenting the feeling of justice***

Their performance took into account the atmosphere of August 28, 1963 when King gave his speech. The students carried placards and fanned themselves in the simulated heat of the summer weather that actually occurred that day.

"We're presenting not just words but feeling, and we're presenting the feeling of justice…to kids that look up to us. [You] learn how to be a role model," said junior Kasey Brough.

A gospel song named, "The Welcome Table," adapted for the Civil Rights Movement in the 1960s, was sung to a drumbeat while the students reenacted a march sequence and a photo montage was projected onto a screen over the stage.

"We really got a good sense of what it feels to actually send a message across. So even though we are saying someone else's words…we had to know it by heart, not just memorize it, but feel it," said Albanese.

The group created the presentation with a specific residual message for their audience. "We ask them 'What you can do to make these dreams a reality?' Write to your congressman; start clubs at your school… [It's] not just about conveying a message but also inspiring them to be active and to go out and do these things for community," said Brough.

In regards to stepping into the famous and intimidating shoes of Martin Luther King, Brough said, "I don't think it's so much about sounding like him, or trying to emulate him or be like him, [it is] more of conveying …his message."

King's message was to see African-Americans and whites existing harmoniously together. "I truly believe that we believe this message. It's easier to present it and [to] convey and get across to the people when we believe it ourselves," said Albanese.

Why the POE matters: A look at its past and present

M. Piazza

Although Juniata's Web site indicates that the Program of Emphasis (POE) is just another term for major, Juniata's community tends to disagree. The importance of the POE is not just in its name but in its flexibility and accountability, both of which can not be found with a traditional major.

"I believe having the POE system encourages students at Juniata to think outside the box. Outside of here professors discourage that because they want to hang onto their set of students and control what they're thinking," said President Thomas Kepple.

According to Kepple, students in other schools rely on their chosen majors when choosing classes and tend not to branch out to satisfy other intellectual pursuits. In other words outside Juniata's unique POE, many students do not have the freedom of taking a pottery class simply for the experience; they only have time for those courses listed under the title of their majors. Few non-Juniatians have the option of deciding at the end of the sophomore year to change their majors to without serious consequences to an on-time graduation plan.

Without Juniata's flexibility, I would never have been able to develop a program so focused on helping me achieve my future dream of attemding graduate school for linguistics

"The POE is terrific for two reasons: one, the flexibility allows students to pick and choose," said Provost James Lasko. "And two, [is] accountability of students, making them choose a POE and think about what they want to do as early as freshman year."

The idea for the POE came out of the 1960s' desire for more freedom and the rejection of authority as supreme. The faculty devised the POE so that every student had to design his or her own programs as is done today with an individualized POE. This meant that students were responsible for choosing every single class that made up their POEs. The POE system was enacted in 1971. The student response, however, was not as positive as hoped for initially. The students' difficulties encouraged many professors to slowly shift the POE away from strictly individualized toward the more defined POEs that Juniata has today.

The defined or designated POE really has captured what most students want when coming into an unfamiliar environment--something to tell them what to do. The curriculum committee, responsible for dealing with problems with the POE, has developed several new rules like the limit on the number of credits that can be demanded in a POE (63) and the type of credits needed to graduate (FISHN). These rules help to guide students through their careers without dictating exact courses to be taken.

According to statistics from Registrar's Assistant for Degree Verification, Christine MacEachern, the number of individualized POEs is still quite high. In the senior class there are 108 individualized programs. In the junior class there are 55 individualized programs. The designated POEs are still the most commonly chosen in each class. Either choice though allows students to fit their interests to their studies without worrying that they might not gain enough of the right credits to graduate.

"Without Juniata's flexibility, I would never have been able to develop a program so focused on helping me achieve my future dream of attending graduate school for linguistics," said senior Rachel Mongerson.

Philosophy professor Janet Lewis said the majority of current POEs do really resemble the majors from other colleges. "I wish students would take more involvement in what they choose to study," said Lewis. "The opportunity is there, but students just don't seem to be brave or forward-looking enough to take advantage of it."

Today the prerequisites can limit the amount of picking and choosing students can do within POEs, leading them to resemble a structured major. Yet the fact remains that a student who is willing to do the work can strike away from the defined structure and design an individual POE that is unique.

You can have our souls, but please don't take away our TV!

Writer's guild strike affects thousands

Christinia Gongaware

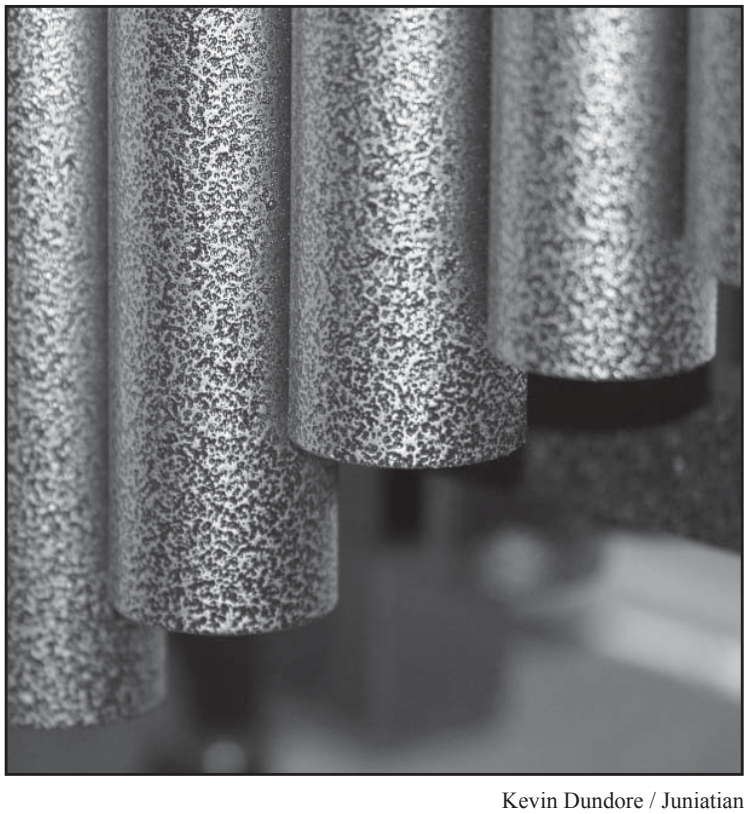
The fate of television's most popular shows has been compromised as the Writer's Guild went on strike last month. The main sticking points have been revenues from DVDs and online sources. As talks continue and production is halted, the entertainment industry as a whole is feeling its effects.

On November 5, the official strike began as picketing occurred in both Los Angeles and New York at major production venues. More than 12,000 writers were affected as they walked out for the first time since 1988. Talks broke down as writers demanded larger profits from the sale of DVDs. Writers currently make four cents each time a DVD is sold, and that figure has remained stagnant since 1985 with the sale of VHS tapes. They are currently demanding a doubling of that figure. The Alliance of Motion Picture and Television Producers, on the other side of the strike, is currently refusing to accept that number because of rising marketing costs.

The home video market is the most lucrative for writers. Companies made 4.8 billion dollars from home video sales, while the box office only earned 1.7 billion dollars.

Also central to the strike is what is known as "new media". Whether by being downloaded online or seen through "streaming video" in real time, writers currently have no deal with producers on their revenues. Writers were enraged at being offered the same four cents per show, since many believe that the format will eventually replace DVD sales. Writers currently receive no revenue whatsoever except from paid online platforms such as iTunes and Amazon. As 48% of writers are currently unemployed and solely rely on residuals get by, the issue is one that will not go away.

The Writer's Guild released a statement that proclaimed, "Every issue that matters to writers, including Internet reuse, original writing for new media, DVDs, and jurisdiction, has been ignored. This is completely unacceptable."



Primetime television is varied in the number of new episodes that have been filmed before the strike started. Most have between 10-15 new shows ready for television. However, "Family Guy", "Big Love", and several others are now on hiatus.

Other television shows, on the other hand, have not been affected by the strike. Shows such as "The Price is Right", and "Are you Smarter Than a Fifth Grader" are not scripted and have continued their production. Oprah Winfrey employs non-union writers and has gone on uninterrupted. News Program writers belong to a guild separate from that of the Writer's Union.

Late night programming is suffering the most, with talk shows from Jay Leno to David Letterman on hiatus since the strike began. Carson Daly, however, is the first host to announce that he will cross

Eagles Abroad scholarships available for seekers

Laura Hess

Studying abroad costs can be a significant obstacle to participation. Knowing this, the study abroad office works with students seeking scholarships intended to defray those costs. Recently Jarmila Polte, director of study abroad, offered information on several scholarships available through the Eagles Abroad program and other national programs that provide financial help.

The St. Andrew's Society Scholarship is an option for students with high GPAs and interest in studying in Scotland. Juniata nominates one student each year for this competitive scholarship competition. If chosen by the St. Andrew's Society, a student is provided up to $18,000 to study at one of the four St. Andrew's universities in Scotland. Juniata students have great success with St. Andrew's. Eighteen Juniata students have been awarded the scholarship since 1979. The application process for current sophomores begins at the end of fall semester. The deadline to submit the required autobiographical essay to the study abroad office is January 28, 2008.

The National Security Education Program is a scholarship for students interested in entering the national security sector. This award provides around $10,000 for the recipient to study in specific countries that change each year. The financial support includes transportation and ongoing contact with the Institute of International Education during the study abroad program. The application deadline is January 28, 2008.

Another scholarship outside of Juniata is the Gilman Scholarship for Study Abroad. It is a competitive award for international study for up to a a year anywhere in the world. Students must be receiving Pell Grant support and demonstrate a need for financial aid to be eligible. The award is worth up to $8,000 a semester. The deadline for applications is January 28, 2008.

"These three scholarships are means that supply students with a substantial amount of aid," said Polte. The application processes for each are involved and specific. Polte stresses that it is a worthwhile process, and will help students through it.

The five scholarships that are offered through Juniata's Eagles Abroad program are also important resources to look at when seeking for financial aid to study abroad.

The Bliss-Karns-Schwemmlein Scholarship for Study Abroad is an endowed merit scholarship available to a full-time Juniata student who plans a full academic year of study in France, Germany, Russia or Spain in a Juniata- sponsored program. The program must be one of foreign language instruction. One scholarship will be awarded to a student for his/her junior year. Selection is based on the candidate's academic record

Application processes are involved and specific, but worthwhile

at Juniata, two recommendation letters and a letter from the candidate outlining how s/he will promote language study upon returning for his/her senior year at Juniata. This scholarship's deadline is January 28, 2008.

The Jane P. Carpenter Endowed Scholarship for International Study in France is awarded to a student or students who show exceptional promise in the study of French. Preference is given to students who are studying abroad for a full year in France. Upon return, students are expected to promote French study on Juniata's campus and abroad. The deadline for this scholarship is January 28, 2008.

A variable stipend is available for students who are studying abroad in Latin America through the Nyce Scholarship for Study in Latin America. This scholarship is available to students studying abroad for a year, a semester or in a summer program. To apply, a student must submit an essay explaining what s/he will do upon return to campus to promote the program and educate students at Juniata about issues relating to Latin America. The commitment outlined in the essay must be completed during the senior year. The application deadline for this scholarship is February 11, 2008.

One of two scholarships not limited to a specific country is the Philbrook W. Smith History Scholarship. It is an endowment scholarship awarded to a student traveling abroad, with a preference given to students with POEs in history. To apply, a student must submit an essay addressing the philosophy of the scholarship, where and why s/he is going and why s/he deserves the scholarship. The deadline is January 28, 2008 for this scholarship.

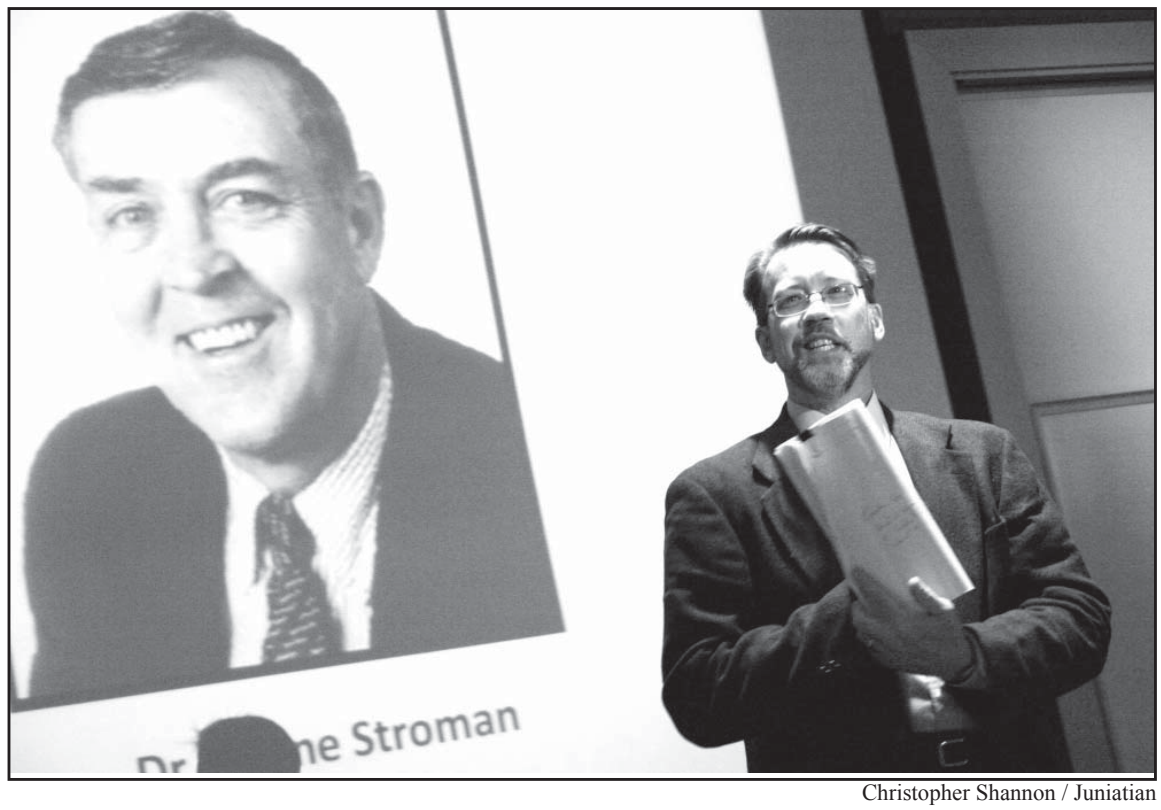
The second scholarship not tied to location is the Rinehart-Darkatsch Scholarship for International Study in Education. The scholarship is specific to students with POEs in education, preferably to elementary education POEs. The income from this scholarship is awarded at the end of the sophomore year to the student for study abroad during the junior year. To apply, a student must submit an essay explaining how his/her education study is enhanced through study abroad and what s/he will do upon return to share the education principles and methods of the host country. The fulfillment of the commitment outlined in the essay must be completed during the senior year at Juniata. The application deadline for this scholarship is January 28, 2008.

Scholarship opportunities do exist to help alleviate the financial burden of study abroad. As Polte said, "There is money out there for qualifying students. The big secret is to research and apply." Specific information on the scholarships available through Juniata can be found on the P:drive in the Eagles Abroad folder or by contacting Polte.

Writer's Guild strike ongoing

continued from page 3

the picket lines and begin airing new episodes. Comedy Central's Jon Stewart and Stephen Colbert have also gone dark because of the strike. They are both currently running on repeats until the strike ends. Ellen Degeneres has also attracted criticism from the entertainment industry for continuing to air her talk show, but without the monologue.



Although most writers are without a salary because of the strike, some late-night television hosts are taking a stand and paying their regular salaries. Jay Leno, Conan O'Brien, and David Letterman are planning on offering their writer's their regular salaries out of their own pocket through the end of this year.

The last Writer's strike in 1988 was devastating for entertainers. It cost the industry nearly $500 billion dollars and lasted 22 weeks. It delayed the fall television season, and several television shows were cancelled. 10% of television viewers at the time never returned. The issues were parallel as writers were demanding a greater profit from the sale of VHS tapes. As the cost for producing them dropped dramatically, writers felt as if they were being cheated.

Hollywood has been extremely supportive of the Writer's Guild. Jay Leno, for instance, said "I've been working with these people for 20 years. Without them I'm not funny. I'm a dead man."

As talks continue and deals are made, the writers have remained united. As one picketer said, "I think everyone feels we have to be doing this".

Tribute to Duane Stroman

Christopher Shannon / Juniatian

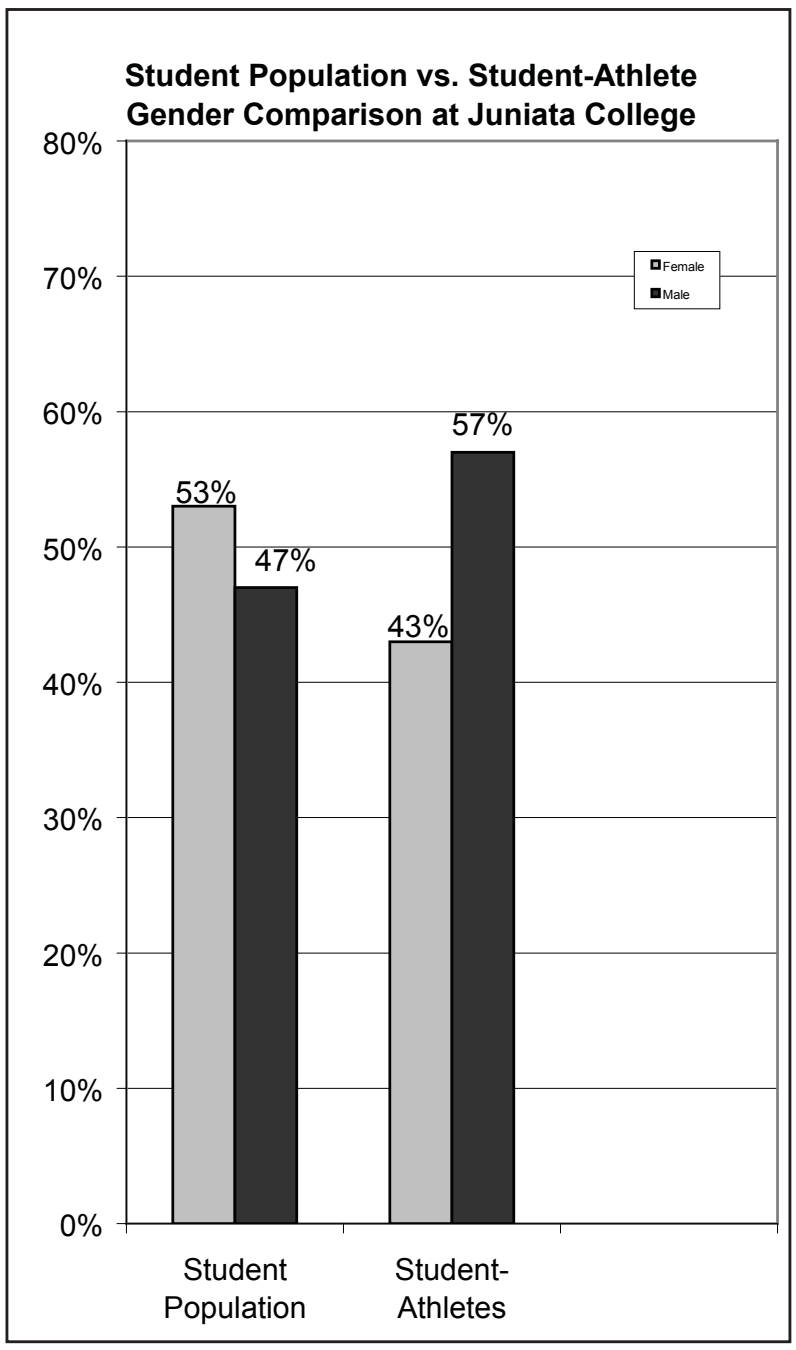
Daniel Welliver, assistant professor of sociology, shares his memories of professor Duane Stroman at a remembrance ceremony on Nov. 28. Stroman began his Juniata teaching career in 1963. Following his retirement in 2004, he continued to teach courses annually as part of a phased retirement. Those who knew him call Stroman a pioneer in connecting Juniata with the Huntingdon community.

Current standing with Title IX

continued from page 1

tions of the Landmark and Centennial Conferences, Juniata falls in the middle of the pack.

One common argument made against Title IX is that it's impossible to be in compliance at an institution with a football program. Senior woman administrator and head field hockey coach, Caroline Gillich, is responsible for reviewing the College's current standing with Title IX. She said, "Gender equity is difficult when you're a small liberal arts school. It's [gender equity] not impossible, but it will cost us more. Others have done it."



Prong 2

Another way to gauge an institution's compliance is to look at a proven history of expansion for the interests of the underrepresented sex. Over the past 12 years, Juniata has added three sports. In 1995, women's soccer was added; in1999 men's cross country was reinstated; and men's tennis was brought back in 2005. Since two of the sports added were men's, history does not show that Juniata is expanding the women's programs.

Prong 3

The final way an institution can show compliance is by providing for all the interests and abilities of the underrepresented sex. Juniata has three active women's sports clubs that attract students with an interest in competing at the collegiate level. These clubs are women's lacrosse, equestrian and rugby. Each could be considered for elevation to varsity status.

If any of these clubs shows the ability to and interest in becoming a varsity sport, it is the College's responsibility to provide an expansion opportunity. There are many obstacles that the athletic department faces, however, such as not having adequate indoor and outdoor facilities, coaching staff and funding for additional team sports.

"No person in the United States shall, on the basis of sex, be excluded from participation in, or denied the benefits of, or be subjected to discrimination under any educational program or activity receiving federal assistance." - Title IX law

Working towards Compliance

Gillich is in the process of writing the 2008-2013 Juniata College Gender Equity Plan. This plan would help the College work towards compliance while maintaining the success of its athletic programs.

Gillich said, "Sports at Juniata have a reputation of being very successful. In order to continue this success with new programs, we must have careful planning."

When questioned about the athletic department's outlook on its Title IX situation, Athletic Director Larry Bock, can see progress paying off. "The dynamic, year to year accomplishments will require levels of effort and funding," said Bock, "As long as we continue to strive to accommodate the needs and interests of the student body, we'll be in compliance."

According to the 2005-2006 student-athlete numbers, over 60 female athletes must be added in order to be in compliance. In the proposed Gender Equity Plan, many sports are being looked at for consideration, but the top three with the most NCAA Division III participation within reasonable distance are lacrosse, equestrian and golf. The addition of these three sports will help Juniata to be in compliance with prong two.

Senior Justine Kobeski, president of the equestrian club recently became aware of the club's possibility of becoming a varsity sport. She said, "I've heard about it at a board of trustees meeting, but we [the equestrian club] haven't really talked about it."

Since the Equestrian Club already has the facilities to train at a non-college owned, off-campus site, the biggest obstacle would be funding. Costs would include installing lockers, purchasing tack and travel/competition costs.

There are 13 program areas where male and female athletes should receive equal treatment, benefits and opportunities. Six of these 13 areas will be specifically addressed in the Gender Equity Plan. These areas include accommodation of interests and abilities, locker rooms, practice and competitive facilities, travel and per diem, equipment and supplies, coaches and recruitment of student-athletes.

Although there are currently no repercussions of non-compliance to Title IX, it is Juniata's responsibility to do the right thing, whether men or women are the underrepresented sex.

Before Title IX, women's varsity athletics did not exist at Juniata or any other institution in the United States. With the implementation of the law, thousands of women have joined the men in having the chance to experience NCAA championships.

Senior field hockey player, Kim Wagner said, "Competing at the championships on the Juniata field hockey team was one of the best experiences of my life. I hope many more women at Juniata have same opportunity that I and few others have had."

As Juniata continues to work towards compliance with the 2008-2013 Gender Equity Plan, those opportunities may be available.

Those interested in learning more about the EADA report and the compliance of other post-secondary institutions should visit http://ope.ed.gov/athletics/main.asp.

Students' marketing efforts fail to save the yearbook

After weeks of marketing efforts, the yearbook staff and the student government obtained 100 orders for yearbooks. This number falls well short of the 200 sales needed to print The Alfarata for 2007-2008.

As reported in the Juniatian, the administration cited decreasing sales and increasing debt as reasons to discontinue printing The Alfarata. On Oct. 13 yearbook editor-in-chief Beth Woodhouse and student government president Shawn Rumery convinced administrators to reconsider that decision and give them until Thanksgiving break to gather 200 orders to fund this year's publication.

Though the student marketers posted fliers, forum threads and daily announcements, placed order forms in campus mailboxes, created a Facebook group to raise awareness and sent letters to seniors' parents, only seven percent of the student body placed orders.

Woodhouse said, "We pushed as hard as we could to reach the pre-sale goal, but the interest just wasn't there...This is personally disappointing to me because I have seen the yearbook become a fantastic product that everyone should be proud to own and now, no one will have one to remember the 2007-2008 year by.

Due to the limited response and the public disinterest voiced concerning a possible DVD version of The Alfarata, there will be no yearbook created this year.

All checks submitted for orders will be destroyed by the accounting office.

Faculty talk about JCPD packing heat

continued from page 1

	 ***Andy Dudash*** ***Head of Reference Services*** ***Opposed to arming the JCPD***	 ***James Tuten*** ***History Department*** ***Opposed to arming the JCPD***	 ***Phil Dunwoody*** ***Psychology Department*** ***Undecided (supporting here)***	 ***Don Braxton*** ***Religion Department*** ***Supporting arming the JCPD***
The Juniatian asked: ***Describe your stand on whether or not the JCPD should be armed.***	My initial reaction is no. Really my simplest explanation would be that if there is a gun, it could go off. That's basically it for me.	People make real snap decisions one way or another. I need to be convinced one way or another. As tragic as Virginia Tech…was, I need to see the numbers. Statistically, it's like saying…"1% of students were affected. Let's change and spend money for a small percent." Locking the dorms makes sense. We are not in a setting where we have gun related crime. Why don't we just tell everyone they can't drive? That's a risk.	First, I think it's a difficult issue. It's not a clear cut issue. Campus police, their job is to prepare for the worst case scenario. Most of us don't like to think about Virginia Tech here. It's a real possibility. They must prepare and plan for it. There is a great argument for them to be armed for that reason.	I think the security people know best if they should be armed. They think they do and I support their judgment.
Why do you think the security review team recommended arming the security officers? Why do you agree or disagree with the team's rationale?	I would say that the guy that was in charge made his decision based on the 30 years or whatever of experience in the FBI. Anyone working in that field for so long would come to that conclusion. It's an ideology. Right or wrong, it's predictable to recommend that. I'm sure he's qualified; it just goes back to the ideology. The interesting issue is that the office was once a security office and now it's a police office. I can't say that I agree, but any officer would want to be armed.	I don't know. I don't remember them saying why. What was clear was that they did a review. But they didn't make it clear why. Clearly, it's not that we needed them in the past. Before we leap to a conclusion, they need a convincing claim for the change. We need to act rationally, not emotionally. Do a serious examination and show me the numbers.	Probably for the same reasons I think. What do you do in the unlikely case that you have a shooter on campus? It's a low probability event that they must be prepared for. I don't know how they would stop an armed shooter on campus without weapons.	I think it's primarily that the team spent most time seeing they need to use arms and the issue is not about students. It's about the mixture of the outside community coming in and that we don't have control over them. It's primarily because the writing's on the wall. It's inevitable. Many smaller schools in more remote locations are already in the process of arming. Plus there's liability. If a situation could be prevented if the JCPD was armed, are we ready to take on legal action for not being armed? There is no such thing as being too isolated or hidden.
As of right now, what do you think is the main objective for the JCPD?	Their objective is just to keep campus peaceful and orderly.	Community security, which is an important feature. Part of what you would like is a cooperative relationship between our officers and the Juniata community. I heard once from someone that "Juniata students to an extent police themselves." I completely agree with this statement.	My guess would be drunk students, complaints from neighbors where students live, speeding and rarely dealing with violence.	Safety and well-being of campus and students at Juniata.
How do you think arming will help or hinder them from reaching that objective?	I don't think a gun strapped to someone's side is going to deter anyone. The biggest objection is that they need to understand how to diffuse a situation without resorting to a weapon. But that's also the job of every single person on this campus.	I think it's totally unclear. I'm willing to bet there are many studies. So my argument is before you make a decision, you view the work done for those studies.	I don't think arming them is aimed to help what they do on a daily basis. The arming of the police department is not for typical actions, but for atypical extremes.	I suspect the type of scenario is that the security people pull over a speeder on Moore Street, etc. and they get into a situation where they are searching the car and that person has a gun. The only thing they can do is call the cops and stay away. They can not and will not intervene. Weapons allow them to have choices at their disposal.

continued page 7

Faculty argue for and against arming the JCPD

continued from page 6

The Juniatian asked:	***Andy Dudash* *Head of Reference Services* *Opposed to arming the JCPD***	***James Tuten* *History Department* *Opposed to arming the JCPD***	***Phil Dunwoody* *Psychology Department* *Undecided (supporting here)***	***Don Braxton* *Religion Department* *Supporting arming the JCPD***
In general, what does the faculty think about the arming proposal? What are some of the main arguments for and against the proposal?	I really couldn't say. I haven't discussed it with any faculty.	Again, it's unclear. We weren't asked to vote. My guess is you would get mixed results and gradations between all views. Right now there are only two officers licensed to carry a gun. What are the odds that one of those officers is even on duty when you need it?	To my knowledge, most are against. I don't think they like what it represents. I respect that and I am sympathetic, but we have things to consider.	My guess is the faculty is largely against it. First, they would agree that we are a Brethren college and arming is in direct opposition of our heritage. Second, they would argue that there is no evidence between arms on campus and a decrease in crime.
What are the benefits or detriments of arming the JCPD?	I think the detriments are if a gun is present, it can be used and it becomes a judgment call. I'm not questioning their judgment, but it's not going to deter something like Virginia Tech.	I can speculate, but we don't have to. People have gone through these experiences, even whole countries have.	The detriments are that it will likely change the social dynamic between the department and students, which is unfortunate. The benefits are hopefully never needed and that is to deal with a very extreme circumstance. It's like having life insurance. You hope you never need it, but you're prepared.	I don't want to talk in terms of benefits. This step is necessary, a necessary evil. The detriments are not clear. We have security on campus to agree with. Also, if we arm them, there is the financial burden of the training and certification.
If there has been no need for guns in the past, is there a need for them now? Why or why not?	Well, I guess I wonder if there has ever been a need. The decision has to be made on research. It needs to be well researched and tie to our mission as a college, rather than ideologies.	It's unlikely that they do, unless statistical trends say armed violence is something we need to look at. Our decision must be based on our own situation.	I've never needed life insurance in the past, but that doesn't mean [I] won't need it in the future. The question isn't will this happen; it's if this happens, what do we do?	Yeah, it's up to security to argue if they need them. We live in an era of Virginia Tech.
Given the rash of school shootings across the country over the past decade, some people argue that no institution is safe from potential tragedy. How much should Juniata consider previous school tragedies when making this final decision?	I think they need to consider those things when dealing with issues. Bullying is at the heart of all those issues. Understanding that and thwarting that will go much further in making this campus safer than an armed police department.	All kinds of horrible things are possible. You have to contextualize it. We notice deadly incidents and have strong reactions to it.	That is the reason for this task force. They recognize it as a possibility. They should consider it.	Again, it's liability. We are accountable for things that happen here. Are we ready to take on that burden?
How will arming the campus police affect the College community's sense of safety?	I personally wouldn't feel safer, but many people would.	I don't know that it will. It may have zero effect, I don't know. We need to look at other campuses against ours. We also need to see if students have anxiety because of the issue.	I don't know. That's a good question. Some people will feel more safe. Some people will feel less safe.	I don't think it will.
How do you feel arming the JCPD will affect the reputation of Juniata?	I don't know. I would have to look at what other educational institutions are doing.	I doubt it. It will be interesting to know if other …schools like Haverford and Elizabethtown have armed officers.	I don't think it will have an effect. I know parents are asking more security questions than they used to, so we need to address parents' concerns, and arming might be something parents like.	I don't think it has [an] effect on reputation. The real reputation change will be if Virginia Tech happened here and we weren't ready to handle it. The real issue is when something does happen.
Juniata is a Brethren college that upholds non-violent behavior. How does/should the College's religious heritage affect the decision to arm its security officers?	I think that initially it would be that we don't need it. Maybe we all just need conflict resolution classes, not firearms for the JCPD. That way we could preserve the legacy of non-violence at Juniata. Nothing will make things safer than understanding conflict.	Our decision should be based on setting, not heritage. Our setting is a luxury we take for granted.	That's a question for the board of trustees. That's more their turf, although it's something to consider. But we don't ask our students or faculty religious questions upon admittance. Although our religious heritage is here, it is a fairly minor role.	I don't think it will. People who are Brethren here are like 2% of students. So my guess is for them it will be an issue. But for the larger collection it is not relevant. Those people are still free to pursue a Brethren path of peace.

From gimmicks to gange: a semester in review

The editors give their take on the biggest stories of the fall

EDITORIAL

As finals begin, students spend hours going back over a semester's worth of notes, frantically trying to remember what it was that they were supposed to have learned.

In that spirit of retrospective thinking, the Juniatian editors sat down to review the most significant stories in our pages this semester.

Here are all the things we wanted to say but didn't because we were trying to be objective.

Juniata's Fifth year Guarantee

The implementation of Juniata's fifth year free policy is confusing at best. It sounds flashy, but when all the requirements and stipulations are taken into account, it boils down to something nearly unattainable. Basically, if a student meets a long list of minute requirements and if the College, through some advisor's error, prevents an on time graduation, Juniata will foot the tuition until it the problem is fixed. And it's just tuition. The student still has to pay for room, board and books. That doesn't exactly sound free, or fair (considering to receive the year's tuition, the student would have kept up a very large part of the bargain).

This policy sounds less like a fifth year guarantee and more like fixing a mistake, which is what normally happens when something goes wrong. Does this mean that previous to this policy, if the College messed up then students were out of luck? This deal sounds like something Juniata should have been doing all along.

This new marketing strategy is obviously aimed at boosting admission numbers. The administration admits this. In the Juniatian's Nov. 30 issue, marketing director Gabe Welsh said, "It's a marketing ploy; let's embrace this." In that same article, President Kepple guessed that the guarantee would add "one or two students to a senior level class."

Offering thousands of prospective students a deal that so few will receive is nothing more than a gimmick.

Arming the JCPD

This is a complicated issue, one on which even "The Juniatian" editorial board couldn't agree.

On one side of the issue, arming the JCPD would allow officers to handle any situation that could come up. Something like Virginia Tech could happen at Juniata, and we have to be prepared. Carrying a gun is a part of being a police officer. You wouldn't ask Sodexho to cook without utensils, and you shouldn't ask law enforcement to enforce the law without the tools they need.

However, the likelihood of a Virginia Tech situation happening here is minimal. Arming the JCPD would be abandoning Juniata's Brethren (and therefore pacifist) heritage. Officers carrying guns are on an entirely different level than students, which destroys the sense of community. There are other non-lethal ways to deal with crisis situations.

The board of trustees has a difficult decision to make this spring. No matter which choice they make, someone is going to be upset. Good luck with that.

Pinch, Punch, Steal or Deal

We would like to believe that our administration is as just as it can be when dealing with issues regarding student violations of policy. However, there would be enough to convince us otherwise if we looked closer at each case that has been handled so far this year.

Decisions are made on a case by case basis, a system that has many questioning the validity of some verdicts in different situations. How is it fair that a girl who claimed that she used self-defense to protect herself in an altercation was asked to leave when students actually caught with drugs have not been?

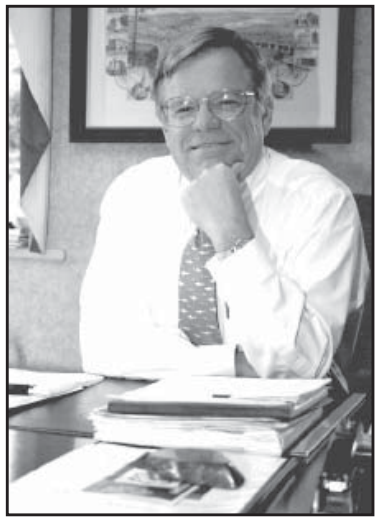
It is obvious that Juniata's reputation is seldom put on the line because of some students' actions, but how low will we go before we actually punish offenders appropriately on an every case basis?

NORML

Duuuuuuuuuuude. We like what you NORML guys are doing, man. It's like, so totally awesome that you are standing up for what you believe in. Free speech is awesome, man. It's groovy that you want to start a chapter on campus, but we're not entirely convinced that future employers will think the same way. Staci Weber said it best: "With NORML, I would want involved students to realize, some people may have trouble seeing past the 'M.'" Of course, they may just need to mellow out, man.

But as for your frontrunners, make sure your followers come down from their high every once in a while. We don't mean really far down, like a 65 foot drop off a cliff, though. That's harsh and not a very groovy way to advertise. Peace out.

MRSA



College kids are notoriously unhygienic, and young adults are no strangers to the occasional blemish. MRSA is a disease that targets young, dirty people and manifests itself in the form of a zit. It should have been well-advertised complete with ways of warding it off and treating it.

There have been at least four known cases on campus just this semester, but who knew about them? Someone asked about the MRSA outbreak on the forums, but information never even appeared in the Daily Announcements.

The Health and Wellness Center should have made a bigger deal of the matter by circulating flyers with specific need-to-know facts. It's not a difficult step to take but it's extremely useful, and could have saved those four folks from falling ill. Although there was an e-mail sent out, it was not in a format that everyone could access (despite multiple attempts to send the correct format). Additionally, it was entirely too lengthy for a busy student to read on the fly.

There is no way you can expect an entire student body to remain healthy when it doesn't know it's at risk of contracting a potentially fatal illness. It is the present and future responsibility of our resident medical professionals to keep our campus fully aware and healthy.

Presidential Perspective

Have a topic that you'd like Dr. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

"Should Juniata officers be armed?"

This is a very important question that we are now considering. No decision has been made, and in the end this is so important that the board of trustees will make the final decision – perhaps at its April 2008 meeting if we are ready to recommend a course of action. We will also want to have community input into this decision.

I happened to have overseen the security operations at two different liberal arts colleges before joining Juniata. One department was armed with guns and one was not. Each brings on its own complications.

Last year's Virginia Tech and the recent mall shooting both illustrate how important it is to be sure that we are making the right security decision for Juniata.

Please do send your comments to me or Dean Clarkson to incorporate into our discussions.

Thinking about thinking

Apathy proves fruitful: student election to township office

Ryan Hamilton

American civil rights activist Jesse Jackson once said, "In politics, an organized minority is a political majority." Nearby Brady Township, in its recent elections, has shown that the minority need not even know they are in the race. It must be a fluke — or is it the beauty? — inherent in the democratic process which allowed senior Jon Knepp to be elected Brady Township Auditor.

Knepp likes to write his own name in the blank ballot spaces when no one is running for the position. He finds it humorous to think that someone will have to count the single vote.

Jon's mother, knowing that he does this, thought it would be funny to write in his name as well. The real joke is that Knepp was elected to township office with only two votes.

Knepp explained his duties: "The auditor oversees the financial transactions of a township." It is a paid six year position. Knepp admitted that he has no experience auditing. He only said, "I plan to audit to the best of my auditing capabilities."

Granted, no one was actually running for the position. However, Knepp was elected with at least twice as many votes as any other possible candidate. The landslide demonstrates how easy it is for any uncommitted and unqualified candidate to be elected, at least in a relatively small township. Knepp said, "This just shows how rampant voter apathy is, but also that people who say they can't affect government are just wrong."

It can be acknowledged that Brady Township is only a specific example, but if voters are not interested in running for offices at the local level, it makes one curious to know how these same voters feel about national government. Knepp suggested, "Even if you don't run a campaign, you can still be elected, and if people knew this maybe they wouldn't be so apathetic and positions wouldn't go unfilled."

Knepp and I reminisced back to the notorious 2000 presidential election. It rode on a couple hundred votes in Florida, a state where voter participation was low. Knepp suggested, "If people felt they were more involved at a local level then they would be more confident on a national level and we could really make some changes."

Democracy may not be the perfect political system we envision. It is interesting to wonder if in the 21st century there will be a new form of government implemented to deal with our ever changing culture, ideals and dare it be mentioned, our apathy. For now, however, it is the system which we have in place and emphasizing the positive aspects of it is very important.

With the airwaves electrified by coverage of the 2008 presidential campaigns I can only hope to persuade every student of age to take advantage of his/her opportunity to vote. The beauty of democracy is that every individual is involved.

Yet, increasing voter participation is a problematic issue in the United States. Enormous efforts from nonpartisan groups like the League of Women Voters and Rock the Vote are applaudable. Nevertheless, the problem persists. Is this seriously a problem stemming from apathy or is there something else?

The American essayist from Pennsylvania, Agnes Repplier, once said, "Democracy forever teases us with the contrast between its ideals and its realities, between its heroic possibilities and its sorry achievements."

There is a vague feeling within our generation, an apathetic political mentality far from the ideals of democracy. This feeling needs to be questioned. I have heard many students express their disinterest in politics. Is this because people feel insignificant in national elections? Knepp commented, "Those people are only insignificant because they make themselves insignificant."

Knepp has no plans to run for public office in the future. However Knepp did say, "If I continue to see such apathy, I may continue to write myself in and maybe I'll squeeze out another win."

Life on the Lake

The state of global stability

Brittany Moyer

It is difficult to open a newspaper or a web browser in the U.S. without seeing a headline about the environment. With the surge of public awareness about global warming following former vice president Al Gore's release of the documentary "An Inconvenient Truth," the environment's well-being has become a central political and social issue in the United States. American presidential candidates are describing their plans for an energy-secure U.S., while newlyweds boast about their eco-weddings.

Sustainability has also become a common buzz word in schools, universities and workplaces, and we're commonly told that we should be working towards it. In fact, at Juniata, "sustainability" has been added as one of the college's strategic points. But where does human society stand on the path to sustainability?

Before an answer can be reached, another important question must be addressed: what does "sustainability" mean, and what does it mean to "be sustainable"? The term was first used in the United Nation's 1987 Brundtland report, "Our Common Future," which defined sustainable development as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs."

Since then, the word has evolved to possess different meanings in different cultures and contexts. A Principles of Environmental Science textbook says that the central idea of sustainability "is that we should use resources (anything that is useful for creating wealth or improving our lives) in ways that do not diminish them." In the American mainstream, being sustainable can encompass any behavior commonly deemed environmentally sound, such as composting, recycling, buying local produce, or buying a hybrid car.

At an international level, experts are weighing in on the sustainability issue. The loudest cries seem to come from those who foresee a dark future for humanity if we don't drastically change our path.

One commonly cited concern is that humans are extracting natural resources at a rate that does not allow adequate regeneration. While the earth is composed of finite resources, modern civilization runs largely by neoclassical economics, which emphasizes and encourages growth, despite the earth's natural limits.

The U.S., a world superpower, has gained much muscle through the forces of a booming economy and prolonged economic growth, but in doing so exhausted many natural resources. Seeing that economic growth led to increased prosperity, less developed countries are following the U.S.'s example and scrambling to grow, but at a point in time when the global environment cannot support further resource extraction, especially at the high levels needed to support large and expanding human populations. The result has been deforestation, soil erosion, loss of farmable land, collapse of fisheries and species extinction, which are not signs of a healthy earth or a sustainable future.

While natural resources face depletion, the human population that demands them is ever-increasing. In 2004, the total world population was approximately 6.4 billion people, according to the U.S. Census Bureau, and is rising at 1.14 percent per year. Of those people, approximately 840 million do not have enough to eat. The harsh reality is that today, as you read, millions of people are living in poverty. They do not have access to clean drinking water, proper health services, or a primary education. Human society cannot be considered sustainable when such a large population is currently living in such abject conditions.

Despite the seemingly grim outlook for a globally sustainable future, there remain a few reasons to keep hope. In fact, there is a group of academics who argue that in actuality, we have nothing to worry about. They argue that much of the conclusions drawn from the data used to prove global warming, our declining supply of energy resources, species extinction and human overpopulation are unsupported and exaggerated. One such academic is Danish professor Bjorn Lomborg, who wrote the book "The Skeptical Environmentalist," which questions these crises phenomena from a point of view the general public rarely hears.

Other evidence suggests that our society is consciously sustainable-

THUMBS UP, THUMBS DOWN

to anyone who thinks that Juniata shouldn't admit the "Jesus loves you" girl. Think about it. She ran around campus for a *long* time screaming religion at people and *no one* could catch her. Who better to have on our cross country team than a kid with Jesus in her heart and the Spirit in her shoes?

to professors. We don't have one specific reason why, but as final grading approaches, we just thought that you should know how much we care.

Ask the Administration

"How does the Registrar schedule final exams? Is it random, or is there a method to it?"

Of course, there is a method to it. We try not to clump similar classes together so that the students who have these clusters do not all have them in days in a row. So, who is our biggest POE group? Biology students. So we look at where these classes sit, (especially Biology I, O-Chem, and Calculus for freshmen and Genetics, Analytical Chemistry, and Physics II for sophomores) and have them spread out over a five day period.

I also try to reward faculty whose times periods are not in the 10 a.m. to 1 p.m. range by having their finals first. It sometimes doesn't happen that way, but I try really hard as they help you not have major conflicts for selection.

And then I look for my faculty who typically wait until the very last day to grade exams and papers. I try to rotate them so I at least have the worst offenders in the beginning of the final exam period so they are not all at the end.

Our common exam time has also grown by one day last year -- on Sunday night. We had maybe five or six common exams when I first started, but you see this year we have 13. Which leads me to your next question…

"When and how will we find out our grades after the semester ends?"

Faculty are to have grades in 48 hours after the last exam, paper or class. This has never been absolutely dead-on since my seven years here. We would like to post before the entire staff leaves for the holidays, but we found that we must give a couple of days for possible mistakes. It takes just one skip to have half a roster wrong. Or, as you have found in registration, if you don't SUBMIT it doesn't stick, and everything sits in your shopping cart. The same happens for faculty.

Academic reviews must happen soon after grades are posted, so yours truly and my assistant come in during the holidays sometimes to post the grades and send out letters to students who did not do well. After this happens, we do the Dean's List, the Ranking Report and we update your class levels. And then we are ready for the upcoming semester.

~ Athena Frederick
Registrar

"Why does Madrigal include nods to other religions beyond Christian ones? Madrigal, by definition, is a Christian celebration. Juniata, by enrollment, is a predominantly Christian campus. Yes, we should encourage diversity, but why must we do it in this manner? It does not seem fair that Christians on campus should have to acknowledge all other religions and downplay Christmas at their one campus event when other religions are not asked to honor Jesus at Hillel functions (like the Hanukkah festivities) or at Muslim functions (like the Eid dinner). Honoring diversity is about providing different learning opportunities on campus, not about forcing all races and religions into every event. The administration and Office of Student Activities seem to recognize that for every religious sect on this campus except the Christian one. So what gives? Why can't Christians have a purely Christian celebration where other religions can come to learn about and celebrate our traditions?"

As Dean Clarkson reminds us all - "Madrigal" is not, by definition, a Christian celebration. Madrigal is by definition "music – a lyric or poem or any part of song or glee." Our Madrigal celebration has many Christian traditions – "Feliz Navidad," "The Twelve Days of Christmas," "Silent Night" and Santa Claus. Why shouldn't it also reflect Juniata – "an inclusive community?" We do have many purely Christian celebrations – the weekly on-campus Catholic mass, Tuesday night Christian worship service, bible study and Brethren Heritage Week which includes the "Love Feast" and foot washing. There was a lovely Advent Service last Sunday night (12/2) in von Liebig lobby.

Life on the Lake

continued from page 9

minded. There is a noticeable trend in the international business community to exhibit "greenness" by employing renewable energies, cutting pollution and minding the environment in other ways visible to consumers.

In the book "Mid-Course Correction," American businessman Ray Anderson chronicles his realization that his everyday decisions as CEO of Interface, "one of the world's largest interior furnishing companies," are taking a tremendous toll on the environment, but that he has the opportunity to change the company's course. Anderson's book serves as a guide to other concerned businesspeople, especially demonstrating that we must be conscious of our resource use.

There also exists a new interest amongst consumers to "go green" and support new, eco-friendly developments. One such movement is dubbed "smart growth," which encourages city planning away from suburban developments and towards small, centralized cities designed to be in walking distance to the store, your job, etc.

Even buildings themselves are being designed in "green" ways. The U.S. Green Building Council awards Leadership in Energy and Environmental Design (LEED) certifications to buildings and homes built in an environmentally conscious manner, such as Juniata's Shuster Hall at the Raystown Field Station.

Globally, there is also pressure for better waste management, which includes regimes in recycling and composting. Some engineers are pitching products made of 100 percent reusable materials, such as books and office chairs.

Perhaps most importantly, many modern colleges and universities are showing outstanding interest in sustainable development. These academic institutions are sending graduates out into the world with a new understanding of the earth and our responsibility to it. These are the graduates who will become tomorrow's CEOs, Congressional lobbyists, and school teachers that can start making real changes. Grist.org, a popular environmental news blog, currently has a story listing its "15 Green Colleges and Universities," which includes schools from Harvard University to the little-known Aquinas College in Michigan.

Overall, determining if a human society is sustainable poses many difficulties. Foremost, assessing sustainability requires speculation about future global conditions, but only time can tell what outcome the future will truly bring.

As detailed above, the current state of humanity and its practices does not appear to be sustainable. However, if faced with a definitive reason to get our house in order, modern civilization may be able to pull through, as the gaining global interest to "go green" is promising.

But as Jared Diamond concludes in "Collapse," even if an impending problem is realized, societies seldom attempt to fix it. Therefore, only time will tell if what we know as modern civilization can be considered sustainable, or if it will take a similar turn as did many societies of yore.

Wacky Traditions Make Holidays Fun

Sarah Ruggiero

Juniata has enough wacky traditions to excite anyone for the holiday season. Thanks to the hype of the holiday season, many annual traditions have seen enough publicity to fuse together to form a tale of holiday magic. Below, Juniata students share some of their families' traditions that showcase some of the more unique aspects of the season.

The integration of these traditions into any holiday story has become so unified that many people forget their separate origins. Many people take past traditions, originating in countries all over the world, and make them unique to their own families or cultures.

England and Austria stake claims on the roots of Christmas caroling and Germany started the event of cutting down the Christmas tree. Many Christmas traditions revolve around bringing home the Christmas tree.

"One of our most memorable traditions is that we do not get a regular or store bought tree. Every year we travel to East Stroudsburg, Pennsylvania and get our tree as a family from the same Christmas tree farm. We have a big tradition like how we always get a cedar tree that usually has something wrong with it," said senior Stephanie Mury.

The entire autobiography of Santa Claus began in Scandinavia. The Netherlands contributed to the story by adding Santa's entrance to homes through the use of a chimney. They also began showcasing Santa's generosity through filling stockings with gifts. Switzerland then added into the mix by beginning the myth of Santa's reindeer drawn sleigh.

"Ever since my sister and I were little, my mom has left a small piece of ripped red velvet fabric near the fireplace on Christmas morning. It proves Santa was there and that he ripped his suit on his way down the chimney. Even though we are older now, she still does it," said sophomore Maura Collins.

Many holiday gatherings include mounds of fine foods and desserts.

"My family's tradition revolves around the holiday feast. We have so much food on Christmas Eve at my aunt's house. It's unique to us because of all the different dishes we have. The tradition is that we make the same crazy things every year," said freshman Laura Fisher.

Another edible tradition, originating just north of Juniata, in Saratoga Springs, New York is the tradition of the "Peppermint Pig." Legend suggests that the traditions began with candy makers during the 1880s and is revered as a symbol of good health, happiness, and prosperity.

The tradition consists of breaking the hollow candy pig inside a cloth bag with a steel hammer, both which come with the pig, after the holiday dinner. The pieces are then shared by all in the hope that those who eat the pig will have good fortune in the coming year. "Peppermint Pigs" can be purchased at any holiday store for around $15.

The German tradition of the "Christmas Pickle" is celebrated by many students. The tradition is that on Christmas Eve, a pickle ornament is left out by the Christmas tree for Santa Claus to hide amongst the branches. Then on Christmas morning, the first child to find the pickle is rewarded with an extra gift or the pleasure of opening a family gift.

"My family does this every year. It's so fun!" said freshman Bess Englehart.

Juniata students also take part in a holiday tradition on campus. Madrigal is a tradition that has been part of the campus' anticipation of the holidays for decades.

Madrigal traditions include tenting for coveted tables during the festive dinner that precedes the annual dance. Reasoning for these sought after tables are that the first 12 tables participate in singing the Christmas carol, "The Twelve Days of Christmas."

What many students are not aware of is that this song actually originates from the Appalachian Mountains, located not too far from campus. The carol originally began as a "counting song" for pagans to use as they counted down the days to the holiday.

"Madrigal is a great way to get everyone together before finals and going home," said sophomore Paige Johnston.

When everyone does reach home for the holidays, whacky gifts will await. Sophomore Jordan McGowan can attest to that. He said, "I get Christmas pajamas every year on Christmas Eve. Then my brother and I wear them to bed and open gifts in them the next morning. Last year's pair was elves in a snowball fight."

Pickles, peppermint pigs and peculiar pajamas…yes, it is "the most wonderful time of the year."

The Director's Chair

Short on laughs, Christmas spirit

Bennett Rea

Some films mix modernity with Christmas quite well. "Fred Claus" is not one of them. The "bodyguard elves" and efficiency expert are only a few of the multiple misfires in the movie. The bottom line is: It's no "Elf."

With an all-star cast including Vince Vaughn, Paul Giamatti, Rachel Weisz, Kevin Spacey and Kathy Bates, this film should deliver. But the star power is severely wasted. Vaughn's sophomoric humor that was present in "Wedding Crashers" (also directed by David Dobkin) doesn't fit here. Giamatti makes for a lackluster Santa, and Spacey's efficiency expert character is entirely undesirable.

Vaughn plays the title role, Fred, the brother of Santa Claus. Fred is forced to work with his famous brother in order to get money from him. Fred is, of course, jealous of his jolly brother's fame and adoration from their mother (Bates). An efficiency expert also happens to arrive at the same time Fred does. For Santa, it's three strikes and he's fired. Fred's presence complicates matters, needless to say, and the movie follows a predictable plot.

The predictability isn't the problem though. The lack of laughs and the modern issues are. Jokes about downsizing and globalization are misplaced and they simply suck the Christmas spirit out of the movie. Who wants to see an efficiency expert analyze the business procedures of the North Pole? Is that supposed to be Christmas-y? The jokes surrounding the efficiency expert are clearly aimed at adults and people who understand business and technology to a slight degree. But the jokes seemed to be forced and are ultimately unfunny.

Both "Elf" and "Fred Claus" have highly talented actors in the lead roles, but the difference lies in the execution. "Elf," which starred Will Ferrell, was a movie that pleasantly and hilariously mixed modern day things, such as the big city with the North Pole. "Elf" set out to be charming, warm and funny and succeeded at all three.

"Claus" set out to be a little edgier, but also warm and funny. But the "edgy" parts seem more meant for Billy Bob Thornton's R-rated "Bad Santa" than a PG movie where they have to be toned down. Dobkin seems like he couldn't decide if he wanted a raucous, more adult Christmas comedy or a great-for-all-ages holiday film. He decided to mix them into one, unsuccessfully.

Even the parts of "Claus" that attempt to be warm and fuzzy don't work. There is a small subplot that makes little sense at times involving Vaughn and a young orphan whom he sometimes takes care of. There are supposed to be touching moments between the two throughout the movie, but those moments are almost laughable in their execution. Watching it brings to mind cheesy made-for-TV movies where the acting and score work together perfectly to destroy any semblance of feeling at a supposedly touching moment.

There are more factors that add to the cheesiness, though. Whenever someone slips, or when the elves fight Vaughn, there are scores of Three Stooges-esque noises to make sure the viewer knows something silly is going on. Pulling out humor from the 1950s is not a tool often used so blatantly as it is here. The effect is that the movie seems like a very young child's cartoon in these moments. That wouldn't be such a problem if the rest of the movie fit that mold, but it clearly does not.

Attempts at physical humor also fall short (no pun intended). There are numerous instances of the "Secret Service" elves attacking Vaughn, which I assume were supposed to be entertaining. Instead it came off

as repetitive and cringe-inducing. Dobkin's philosophy seems to be "The more times a little person beats up a tall person, the better."

"Fred Claus" has almost none of the attributes it strives for—playful comedy, some adult humor, Christmas spirit, or warmth. The result is a painfully unfunny mess of a movie. If you're looking to go see a good Christmas movie this December, wait a little longer.

Final Take:

★

"Fred Claus" is rated PG for mild language and some rude humor. Running time is 116 minutes

Now playing at the Clifton 5 in Huntingdon and most major market theatres

Christmas Gifts 2007: Giving for the greater good

Kazia Eastep

Parking lots are full. The mall hums loudly with shoppers. Department store shopping carts become ankle-clipping weapons in the hands of stressed grandmas. This is the stressful and demanding portion of the year between Thanksgiving and Christmas Eve. It's the time when the masses seem to emerge from their homes with a frantic mission—find the perfect Christmas present. Now, however, thanks to the Internet—and the following list— holiday gift giving can be simple, stress-free fun and even socially conscious.

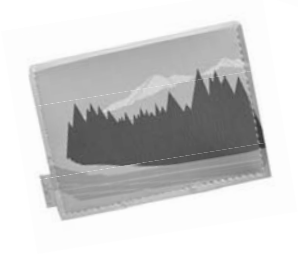
Giving to the geeky, but lovable person on your list

Looking for a thoughtful gift for an equally thoughtful fellow student? Make the choice between studying and showering unnecessary with a periodic table of elements shower curtain ($32, www.shakespearesden.com).

For the geeky, try a "Star Wars" mimobot USB flash drive, stocked with exclusives movie extras and available in Chewbacca, R2D2, Darth Vader or Stormtrooper ($60, Urban Outfitters).

Give the technologically-advanced a pen top computer, which may or may not contain more information than the writer using it (around $80, www.flyworld.com).

Bookplates (20 for $4.20, www.nutandbee.com) can help organize a bookworm's personal library.



Or keep schedules straight – and allow some room for margin doodles – with The Little Otsu 18-month open-ended day planner ($16, www.buyolympia.com).

Giving to the person who has it all

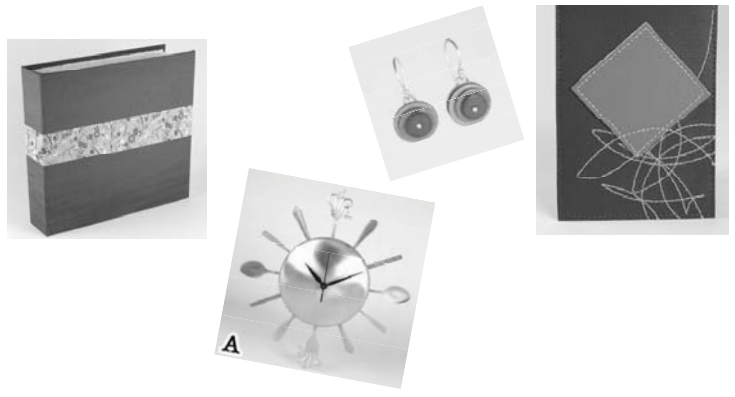
There's always someone on your list who has everything. But you still need to find the perfect gift, so this can be problematic. The only real solution for this genre of gift recipients is something equally eclectic.

How about action figures? Shakespearesden.com has a variety of figurines like Carl Jung, Librarian, Annie Oakley, Cold War unicorns and the unicorn vs. narwhal play set (all under $10).

Or give them something more traditional, like a printed wallet ($18, www.FluffyCo.com).

Bring back "Thunder Alley" with an ice cream social using the ice cream ball—it makes ice cream with a few ingredients and a lot of rolling ($24.95, Target).

If your recipient has a tendency to oversleep, check out Clocky, an alarm clock on wheels that hides from a would-be snooze button presser ($49.95, The Sharper Image).



For an exercise fanatic, check out the Nike+ iPod sports kits which allow runners to sync and record distance, calories and other statistics with their home computers (prices vary with package, www.apple.com).

Giving local

Handmade crafts plus activism has resulted in "craftivism," a new trend in consumerism which supports "local" artisans of small-scale, hand produced items. According to BuyHandmade.org, a pioneering force in craftivism, handmade gifts are more meaningful to the recipient and are more socially and environmentally conscious than mass produced goods.

Check out Etsy.com, something like the craftivist version of Ebay.com. Etsy allows artists to maintain online shops to showcase their unique, handmade wares. This Web site has everything from jewelry to clothing and a variety to meet any taste or budget.

MixtGoods.com is another Web site that rejects mass produced goods and showcases the products of local artists. Here are some items to check out on MixtGoods.com: hand-sewn vinyl iPod case ($10), pendant necklaces made from Scrabble tiles ($15), recycled flatware wall clock ($50), hand-bound Japanese silk photo album ($62) or hand torched enamel earrings ($110).

Giving global

A recent holiday trend involves gifts in small packages with big benefits. More people are purchasing uncommon gifts involving charitable organizations.

Groups like Heifer.org provide farm animals and other agriculturally beneficial services/items to poor, developing villages. With Heifer.org, animals or shares of animals can be purchased and sent to villages.

Through a similar system, a little piggy can be saved from market through the Adopt-A-Farm Animal Project at The Farm Sanctuary (prices vary, www.FarmSanctuary.com). The Farm Sanctuary adopts unwanted and abandoned farm animals, literally saving them from the chopping block.

If you are looking to give an actual present, not just a card saying "a donation has been made in your name," have no fear. There are many socially and environmentally gifts available. If the recipient is concerned with reducing, reusing and recycling, and the giver has some free time to spare, a reusable shopping bag is easy to make (tutorial at www.morsbags.com).

Not so crafty? Try some of these products and Web sites: natural bookmarks ($8, www.madre.com, benefits destitute women and families), fair trade and organic coffee and tea (prices vary, www.GroundsForChange.com), Veg-out Scarf ($34.95, www.AWorldofGood.com, foundation operated by UNICEF) or a handmade bag from recycled juice boxes (price varies, www.doybags.com, made by a women's cooperative in the Philippines).

Hunting down Huntingdon

Finding your way with a life coach

Romeeka Gayhart

Everyone has moments in life when stress and fear prevents him/her from moving forward. Students have trouble balancing the goals set by peers, parents, professors and bosses against their own needs. Professionals find themselves searching for personal definition as their children and careers grow and change. At times like these, a life coach asks the powerful questions that help to clarify, define and manifest major life changes.

Certified professional life coach and retreat leader Joanie Yanusas-Maughmer has brought life coaching to central Pennsylvania for the past three years. Before training in California, Joanie worked as a health and physical education teacher, as well as homeschooling her own children. Inspired by her experiences of constantly working, listening and talking to her students she now coaches men, women, students and teens from all over the United States.

Yanusas-Maughmer said, "When people come to coaching, a lot of times they feel stuck."

Clients say things like "I can't do this" and "I'm not smart enough." These thoughts are known as "saboteur voices or gremlins." Yanusas-Maughmer said, "We really look at those fears. What coaching does is really address them. Fear is always going to be there. What's important is the way you approach it."

Life coaching, unlike therapy, is focused primarily on current issues and moving forward with goals. Yanusas-Maughmer said, "I feel every call is successful. They [the clients] have started to open up and be honest with themselves. They've started the process. Once you start moving, you want to try new things."

Yanusas-Maughmer holds free introductory meetings with potential clients. They are usually 45 minutes long and are conducted in person. During these meetings, she explains her profession and talks to her clients about his or her plans.

If a client chooses to begin the coaching process, the first official session lasts between two to three hours. Yanusas-Maughmer spends the time trying to get to know her client. Beginning with this meeting, session styles become more personalized. She said that life coaching is a "dynamic, mutually respectful relationship that exists exclusively for the support and achievement of your goals and intentions."

Subsequent sessions are one hour long. Joanie recommends meeting three times a month over a three months period. Some of her clients have chosen to keep coaching for longer, and some have returned after months of separation.

During coaching, Yanusas-Maughmer uses a variety of tools such as the Wheel of Life, which includes sections titled "career, family and friends, significant others/romance, fun and reaction, health, money, personal growth and physical environment." Tools like these help to clarify what clients feel they are missing in life.

"You come to a coach and say 'Wow, I can choose that.' I think people forget that they can choose" said Yanusas-Maughmer.

Life coaching can be held in comfortable environments, in person or over the phone. Sessions have been held in her home, clients' homes, local coffee houses and even outdoors.

In between meetings, Yanusas-Maughmer encourages clients to stay in contact over e-mail and short phone conversations. Many times, this ongoing communication helps clients achieve their daily goals, knowing that they are responsible to check in with their coach. "I say, 'When are you going to do that?' After you do, you can either e-mail me or call me'….If you're held accountable for something you said you're going to do… you'll do it," she said.

Yanusas-Maughmer also leads retreats and is involved on the Juniata campus. She has coached students and professors, and has been invited on campus to host talks. Recently she spoke with pre-medical students, along with a professional therapist, to discuss the differences between coaching and therapy.

Joanie Yanusas-Maughmer can be contacted by phone (814)-777-0410 and by e-mail at coachjoanie@hotmail.com. This author highly recommends readers, students, professors and community members alike to take advantage of this unique opportunity to find perspective.

In the Name of Fashion

Madrigal Red Carpet

Kelly Popernik

The most looked forward to event of the semester happened on Dec. 8. We dressed in our sleekest ensembles, applied more makeup than usual and slipped on shoes that were less than comfortable. As they say, beauty is pain. Some of us brought dresses from home and others rushed out to Altoona to see what was left on the racks. Regardless of what we wore, Madrigal was one of the most memorable nights of the year as usual. Here are some things I thought should be recognized from this year's Madrigal red carpet:

Best shoes:

There was a wide variety of shoes at Madrigal. Most of the girls took off their shoes as soon as they started to bust out the dance moves, so I wasn't sure what shoes belonged to which girl. But as I looked at the DJ booth I spotted one pair worth recognizing. They were black high heels with single strap over the foot and a single strap around the ankle. They were classic, but the straps made them chic. I imagined they belonged to a girl who is traditional with a little spice.

Best accessories:

Senior Tara McMinn won the best accessories award. She wore a hot pink and purple zebra print strapless dress with a gold sheen. Her purple shoes complimented her outfit and her accessories were simple, yet made a statement. McMinn wore light purple teardrop shaped earrings and a dark purple ring on her finger. She could have bought funky earrings, a crazy necklace and a few more rings, but because she didn't, all eyes were drawn to her dress. Since the print of her dress was so bold, her accessories were the perfect compliment.

Best dress:

There were three people to whom I would give best dress awards. Courtney Callas, Kenzie Scavone and Nicole Staricek all had dresses that ranged from classy to funky. Senior Courtney Callas wore a gold bubble dress that she purchased from Macy's. It was the perfect cut for her body type and could not be described in just one word. It was unique, fresh and trendy at the same time. Not only was her dress rockin', but she wore black stockings and black shoes with it. This made her ensemble stand out even more among the crowd.

Freshman Kenzie Scavone wore a sleek black dress with a white bow at the top. A black dress is an

continued page 15

Madrigal

Kevin Dundore / Juniatian

On Saturday, Dec. 8, students celebrated the upcoming end of semester and took time in their busy schedules to attend the annual Madrigal dinner and dance. Dressed in their holiday finest, attendees were served dinner by faculty and staff members.

Following dinner, entertainment included festive toasts from professor Andy Murray and each class' officers, an ode to "Snowflake Bentley" by the Clarksons and Cook-Huffmans and the traditional caroling.

To close the night, students rocked out at the dance until 1 a.m. in the Kennedy Sports and Recreation Center's intramural gym.

MUSICALLY CHALLENGED

ALBUM OF THE YEAR

Zack Stoll

Well it's the end of the year, and you know that means – it's time for "top of the year" lists. I'm not going to disappoint and leave everyone wondering what I thought the best releases of this year are.

The first item I looked at while making my list of bests was what other people have been talking about. This year the nominees for Album of the Year at the Grammy's are Kanye West's "Graduation," The Foo Fighters' "Echo, Silence, Patience & Grace," Vince Gill's "These Days," Amy Winehouse's "Back to Black" and Herbie Hancock's "River: The Joni Letters." All of these are good albums, but I think the Foo Fighters rock is the best. Unfortunately, with big awards, like the Grammy's, the best don't always win. My bet is on Kanye's creative hip-hop to take the award.

Outside the Grammy's, Radiohead's "In Rainbows" is at the top of many critics' lists, as expected. Radiohead is one of the biggest bands in the world, so whatever it releases is going to be widely accepted. As I mentioned in my other ramblings this semester, this album is mediocre to good. There is nothing stand out about it, just the ambient electronic that is Radiohead. Despite its lack of innovativeness, Radiohead may still take best album for many people.

I decided to look beyond what mainstream critics thought and searched on a smaller scale to make my pick for the best album of the year. Most alternative music magazines had Radiohead near the top of the list, but not as the best. One promising new album was The Arcade Fire's "Neon Bible." These Canucks also have an ambient sound to them, but "Neon Bible" is better than "In Rainbows" for sure. The best description for this album is an echoing voice with solid, repetitive guitar and bass backing. If you're into alternative music, then I'm going to bet you'll like The Arcade Fire's powerful music that often includes violin, cello and organ accompaniments.

The Arcade Fire is definitely good, but I would not say the best. Another album which has gained attention is actually a movie soundtrack. "Across the Universe" is one of the best cover albums out there. Devout Beatles fans disagree, but just because the songs are classics doesn't mean that I can't like new covers. The film "Across the Universe" is based on characters of The Beatles songs, and has remakes of those songs throughout the film. The film was great, and so is the soundtrack.

After researching enough critics' opinions, I decided to look on an even smaller scale. Perhaps a friend could point me in the direction of the best album of the year. Most replied with "I have no idea," but I did get a few good suggestions. From the metal world comes HellYeah with its self-titled album, which I must say is very good. HellYeah is drum driven metal that is still approachable to the less hardcore out there. The album contains metal growl and wicked guitar solos as well as ballads, like the single "Alcohaulin' Ass" that enjoyed some mainstream attention.

From another friend, I got the suggestion of Coheed and Cambria's new album "Good Apollo, I'm Burning Star IV, Volume Two: No World for Tomorrow." "No World" had been all this kid had talked about for three months, so there was no doubt that for him it was the best of the year. He does have a point; "No World" is great. Coheed and Cambria play progressive metal that has a sound unlike much else. Claudio's singing, higher than any rocker I've heard, and the complex timescales give the band its unique sound. Among the complex epic songs are the catchy hits that appear on radio, like "Running Free." The chorus will get you singing whenever you hear it.

Coheed and Cambria come close to the top, but after doing my research, it was time to make my own call. The choice for best album was tough. First runner up for best album was The Weakerthans' "Reunion Tour.' This album missed my pick for best because it contains one song I do not like. The rest of this Indie-rock album is amazing. "Reunion Tour" is a midtempo, guitar hook filled, piece of art. And art really is the only way to describe how the music creates characters and songs with personality. However, the song "Elegy for Gump Worsley" was bad enough to keep the album from topping my list.

It looks like I'll be plugging my band Tiger Army for my pick for album of the year. These rockabilly punks won with their unusual sound that utilizes walking bass lines from a stand-up and haunting vocals. Their album, "Music From Regions Beyond" has fast songs to rock out to, like "Hotprowl" as well as slower dark songs like "Pain."

Well, that's it for this year. Now that I've picked my top albums, it's time to make a play list that'll get me through the long ride home for break. Hopefully, this time, I'll be a little less musically challenged.

Stress busters

Thursday, December 13

Beeghly Library (1-4 p.m.): Tea, coffee and other snacks will be available compliments of the Friends of the Library.

Tnt Lounge (8-9 p.m.): A professional massage therapist will be available to teach massage techniques.

Friday, December 14

TNT Lounge (9 a.m.-9 p.m.): A yoga class for beginners will be taught.

Anything But Ordinary

A Great and Terrible Beauty Tragedy

Claire Williams

Recently there have been a lot of books for young adults in the media. Books like "The Spiderwick Chronicles" have been adapted to movies, which has probably boosted the number of readers. Some other series of a similar type have been seemingly overlooked, such as the "A Great and Terrible Beauty" trilogy by Libba Bray.

The series consists of "A Great and Terrible Beauty," "Rebel Angels" and the upcoming "The Sweet Far Thing" which will be released on Dec. 26. The books follow Gemma Doyle, a girl in her mid-teens, from India to England's Spence Academy, a boarding school, where she is to become a lady befitting her station in the Victorian Era.

Once there she makes friends with three other girls, each very different from the others. During her time at Spence Academy there are many adventures, both major and minor. There is also the unraveling of several mysteries and plots. Each girl learns from the others and from their experiences. They all grow as people and as friends.

In the second book Bray reveals more of Gemma's family and more of the social circle in which she is expected to operate. Bray adds more issues for Gemma to face as well those that remain from the first novel. The second novel has a slightly darker tone than the first. This is fitting as the adventures and the characters continue to deepen.

The third book should have even more development among the characters because the adventure is coming to a close. We will get to see what has happened to all the characters and how their previous choices have affected them.

The series isn't an especially hard read, but it is a good read. Beyond the story there are many messages of strength to be gained and many life lessons that can touch any reader, regardless of age. You really feel for these characters. They are people you can relate to, ones you can think, "I have a friend like that."

The books have something for every type of reader. There is magic and danger, good friendships, power struggles, secret societies, other worlds and even some romance. These elements are carefully woven together to make a beautiful story with both light and shadows. This gives a marvelous texture that leaves you wanting more.

Unlike some books, these do not skirt the hard things in life. They face them head on and with a sense of reality. Bray doesn't give a candy coated world with candy coated characters. You see the characters as they work through their issues. Readers are shown the shades of gray that exist and how the play of light and dark matters.

I'm eagerly waiting for Dec. 26 so I can find out what happens to Gemma and all of her friends. It seems like there should probably be a good battle at the end, and those are always fun to read when you're curled up under blankets…and I love good character development. I also want to see what happens to her family, since there are quite a few unresolved issues there.

I would strongly recommend this book for anyone who enjoys fantasy with realism, but also for anyone who likes a well told story. The series would make a great read over break. If you start now, you should have plenty of time to catch up on the first two before the third is released. The books can be found in most bookstores, many libraries and online.

There is a movie in the works, though not much about is it set. Bray has promised in her blog to keep her readers informed as soon as information is available.

Bray can be found at www.libbabray.com and her blog at libbabray.livejournal.com. On her blog she posts things that have been cut from the novels during editing as well as other information on her works and life More on the books can be found on Wikipedia (beware of spoilers), on Amazon.com or on the publisher's website at http://www.randomhouse.com/teens/greatbeauty/.

Madrigal fashion

continued from page 13

essential piece of every woman's wardrobe. Scavone's had a twist to it that made it go from simple and classy to out of the ordinary. She said, "I wanted one [a dress] that was classy, so I looked for one on the Internet. I ended up finding it on sale so I ordered it! I got from Venus.com."

Junior Nicole Staricek took the most interesting route with her dress selection. She wore a black dress that had three quarter length sleeves that puffed out at the end of the sleeves. She bought her dress from White House – Black Market which is one of the classiest stores I know. She said, "I went with a simple black dress and added accessories to make it pop." Since her dress had sleeves, it was different than the typical black dress with little embellishments. Her accessories included a long beaded necklace that complimented her dress and pulled off a beautiful look.

This year's Madrigal red carpet was a fashion success. There was a wide variety of footwear, accessories and dresses that made a statement and deserved to be recognized.

Fun Fashion Tip

Dress clinging to your body because it is so static-filled? Try having a small can of Static Guard with you to prevent this. It is available at Rite Aid.

Annual Pot Shop sale

Various ceramics pieces created by Juniata students and friends this semester will be sold on Friday Dec. 14 from 11 a.m. to 3 p.m. in the Ellis lobby.

Pieces vary in shapes, sizes and colors. The wide range of art provides great opportunity to find that unique Christmas gift that you are looking for this year.

Battle of the Bands

Christopher Shannon/Juniatian

Juniata alumni Brandon Long ('07) and Brenton Mitchell ('06) perform during Battle of the Bands on Nov. 30. They sang all covers of hits such as, "Hey Girl" by OAR, "Hey Ya" by Richard Cheese and "Lullaby" by Billy Joel.

Battle of the Bands was sponsored by the psychology club and JC: Up Late. All proceeds from the event went to benefiting the National Eating Disorders Association and Huntingdon House.

Four bands performed at the event.

Men's basketball playing down to the wire

Learning how to win the close ones

Tyler Sasala

On Wed. Nov. 28, Juniata traveled to Grove City to take on the Grove City College Wolverines in a tale of two halves. The Eagles were flying high at halftime with a 40-19 lead thanks to two big scoring runs. The first one was a 13-2 run that changed a 7-6 Eagles lead to a 20-8 advantage. The second run was a 10-0 burst that lasted the final five minutes of the first half.

The second half brought a disappointing and frustrating end. The Wolverines waited for their time to attack. It came with 8:31 left. Grove City went on a 19-5 scoring run to cut the lead to 58-57. Kyle Opitz hit a three to put the Eagles in front by four, 63-59, with just 42 seconds remaining. After a turnover by Opitz, a foul by senior Brent Ferko with one second on the clock put Grove City College's Luke Tomaselli on the free throw line. Tomaselli made one foul shot to give the Wolverines the win.

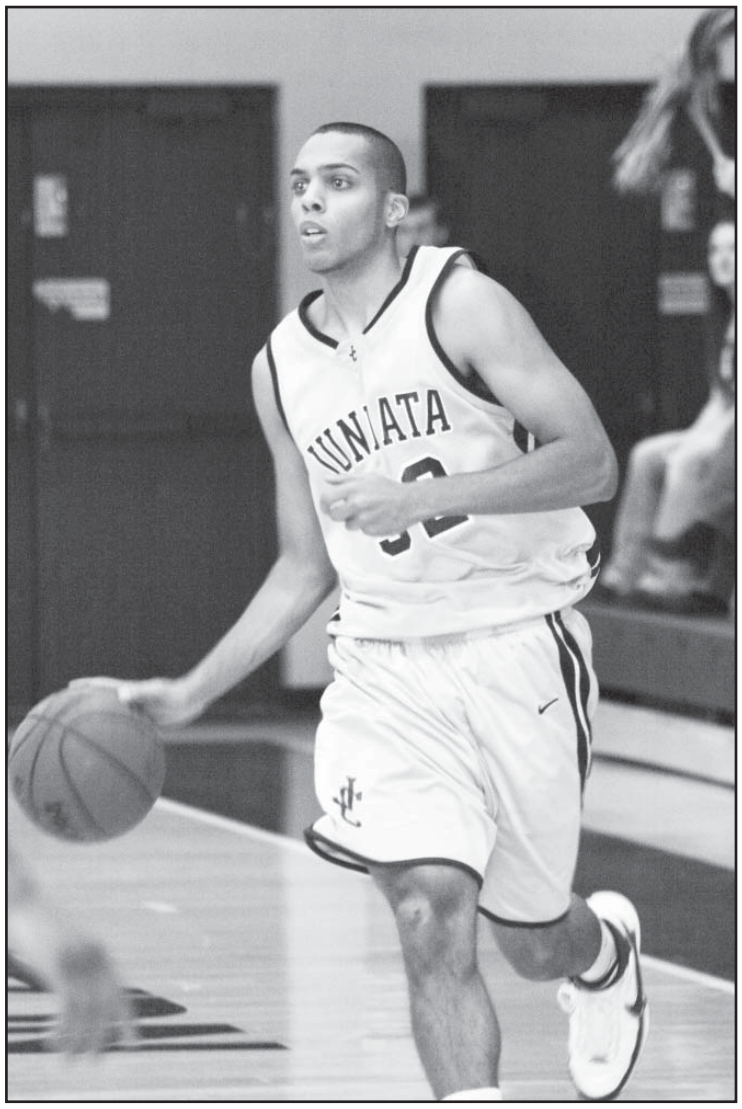
Ferko led all Eagles with 14 points, shooting 60 percent from the floor. Sophomore guard Jeff Berkey was the only other Eagle to post double figures. All 12 of Berkey's points came from behind the three-point line.

The Eagles' Landmark Conference opener was a match up with rival Susquehanna University. Juniata held a 39-35 lead at the break, but could never separate from the Crusaders. The second half saw three ties and three lead changes. The Eagles clung to a three-point lead with only 1:22 remaining in the game. Susquehanna then outscored the Blue and Gold 6-2 to close out the game and take home a victory (75-71). Opitz led all scorers with 24 points on the night, going 8-11 from the field, 6-8 from behind the arc.

Saint Vincent College was next on the schedule. The Eagles trailed 47-31 with 13:34 remaining in the second half when they began a comeback. Going on, a 22-6 run, Juniata evened the game at 53-53 at the 6:25 mark. Neither team could take control down the stretch.

Senior Brian Cannon forced overtime twice during the game. The first was with a jumper with three seconds on the clock that tied the game at 64-64. The second was a buzzer-beater three-pointer to tie the game at 77 at the end of overtime.

In the second overtime, Thompson went coast to coast to cut the Bearcat's lead to 88-87 with only three seconds on the clock. Saint Vincent's Joey Butler was fouled on the ensuing inbounds pass, and made both free throw attempts to seal the game at 90-87.



After losing three straight close contests, freshman Johnny Martinez talked about what Coach Curley has been preaching to the team. "He has just been saying that we have to keep getting better each day. We've just been sticking to our motto which is: the hardest working team in basketball."

A close game finally went in Juniata's favor in the opening round of Messiah College's Falcon Alumni/Hampton Inn Invitational. Jeff Berkey waited all night to hit a bucket. With 3.1 seconds on the clock he drained a three to lift the Eagles to an 88-85 win over Manhattanville.

Berkey also came up big in the tourney's championship game against Messiah College on Dec. 8. Berkey scored 17 points on the night. Cannon and Opitz also posted double figures (22 and 12, respectively) to help Juniata finally put it all together and avoid another close game. The Eagles also shot 18-of-21 at the line on their way to the 76-66 win.

Cannon was named tournament MVP.

The Eagles will be off for the week of finals but will return to the hardwood on Wed., Dec. 19, when they begin a four-day, three-game road trip to southern Ontario.

Christopher Shannon / Juniatian

Junior guard/forward Dave Thompson brings the ball down court during Juniata's first ever Landmark Conference basketball game against long-time rival, Susquehanna University. The Eagles dropped the Dec. 1 contest, 75-71.

On the fifth day of practice

Intensity is the key

Jess Winemiller

Robert Gallagher said it best, "Change is inevitable."

The most successful teams possess the ability to adapt quickly and make the correct change when the time demands it. Women's basketball is facing an adjustment of our own – the practice week.

Entering the Landmark Conference marked a dramatic change in scheduling. To cut down on expenses and travel time, we now plays two conference games in one weekend. The first game is held on a Friday or Saturday evening. The second game is played the following afternoon.

What once was a season composed of 25 games spread out through the weeks, now seems to take the form of 12 tournaments.

"I am set in my ways. I am used to being rewarded with a game every couple of days. Five days of straight practice is what preseason is for," said senior guard Jill Walsh. "But, if they [teammates] are willing to do it then I should be too."

There is no question the team is willing. I have never in my basketball career worked with a more willing group of players. However, I would be lying if I said we had it down to a science yet.

Our first test run was this previous weekend, Dec. 7–8, when we traveled to Philadelphia to face Neumann College and Gwynedd Mercy College. We split the series, emerging victorious against the Knights, 80-64, before falling to the Griffins, 70-64. Fatigue was certainly a factor in the second match-up.

As a player, pushing oneself all week long in practice can take a toll on the body physically.

"There is always the issue of whether you should save yourself throughout the week or go hard and be run down, then have to play two games back to back," said Walsh. However, conserving one's energy is difficult. The nature of the sport and the expectation of this team demands full effort at all times. "Saving one's self" is not a realistic option. It is only a luxury to those who are hurt.

"Right now it is very demanding on our bodies," said junior forward Kelly Ashcraft. "But, as we get more into the flow of the season, we will be able to adapt better."

With each stretch we do become more accustomed; however settling into this new flow has proven to be difficult.

"We just get into the flow of practice," said sophomore forward Kelly Rotan. A routine begins to develop because we compete against the same players day in and day out. With this monotony comes a comfort level; a comfort

> "There is always the issue of whether you should save yourself or go hard and be run down, then have to play two games back to back."

Potatoes away in Williamsport, PA

The story of Dave Bresnahan and the Great Potato Caper

Christopher Shannon

There is nothing special about Dave Bresnahan. He never collected 3,000 hits. He did not break any records. He did not even make it up to the major leagues. Bresnahan was not even a starter. He played back-up catcher for the Williamsport Bills (now the Williamsport Crosscutters). Go to Williamsport's Bowman Field, however, and you will see his retired number 59 displayed in a blue circle on the centerfield wall. Why is his number retired? Simply put, he threw a potato.

The 1987 Williamsport Bills would finish 60-79, good enough for seventh in the eight team Eastern League. The season was not noteworthy. However, with one throw, that would all change.

It all started with a dare. Two weeks before the incident, Bresnahan mentioned his idea for throwing the potato. His teammates challenged him to do it. Bresnahan took the dare, bought some potatoes at Weis and peeled one down to the size of a baseball.

On August 31, 1987 the Phillie Phanatic was in town and 3,000-plus fans were in attendance for a double header with the Reading Phillies. Bresnahan knew this night would probably be the best chance he would get for his stunt because he would start the first game of the double header.

Then, in the fifth inning with Reading's Rick Lundblade on third base, Bresnahan called a time out claiming there was something wrong with his mitt. During the time out, Bresnahan went to the dugout and grabbed another mitt with the potato in it. After the time out, Bresnahan called for a pitch on the far outer half of the plate so that the batter would not swing. While the pitch was on the way to him at home, Bresnahan shifted the potato from his glove to his bare hand. As soon as he caught the pitch, he threw the potato toward the third baseman as if he was trying to hold Lundblade on base. But he purposely fired the potato into the outfield. Lundblade, seeing the ball had sailed over his head, ran home only to be tagged out by Bresnahan with the real baseball.

What ensued was nothing short of confusion. Home plate umpire Scott Potter asked Bresnahan what he had thrown. Bresnahan said that it did not matter because he had the real baseball. It was not until the third base umpire found the remains of the potato in the outfield that Potter called Lundblade safe and the inning resumed.

Christopher Shannon / Juniatian

Although Dave Bresnahan was released from his contract with the Williamsport Bills, his memory lives on in bobblehead form.

While most participants on the field got a little laugh from the events, Williamsport manager Orlando Gomez did not. Gomez promptly fined Bresnahan $50 and removed him from the game.

The next day the Cleveland Indians, Williamsport's parent club at the time, released Bresnahan ending his four-year professional career. Bresnahan walked into Gomez's office with a sack of 50 potatoes and left a note that read, "Orlando, surely you don't expect me to pay the $50 fine since I got released. Instead, here's 50 potatoes. This spud's for you."

After the incident Bresnahan would soon gain fame. His story made it onto national television before NBC's "Game of the Week" and in national media publications such as Time, The Sporting News, Sports Illustrated, and USA Today.

The next year, Williamsport retired Bresnahan's number 59 during "Dave Bresnahan Day." The price for admission to the game—one dollar and one potato.

Kennedy Sports and Rec Center schedule for finals and winter break

Brandon Wolfe

The schedule for the fitness center and the Kennedy Sports and Recreation Center during finals week and winter break is as follows:

The fitness center will be closed on Dec. 15 and 16. It will be open from 10 a.m. to 6 p.m. on Dec. 17-20. On Dec. 21, the center will close for winter break, reopening on Mon., Jan. 14.

The Kennedy Sports and Rec Center will close all facilities (gyms, racquetball courts and pool) at noon on Dec. 21. The building will reopen on Jan. 2. The hours are 10 a.m. to 6 p.m., Mon. through Fri. during break. Regular hours will resume when the spring semester begins on Jan. 14.

There will also be new open swim times starting in January. Contact the pool hotline, 641-3509, for more details.

Does Juniata compete when it comes to facilities?

Kristen Penska

An instant feeling of respect and gratitude is experienced upon entering Juniata's Kennedy Sports and Recreation Center. Each and every wall is adorned with accomplishments achieved by various sports teams. Pictures of Juniata athletes adorn the halls. The floors glisten with morning polish, and sounds of squeaking tennis shoes echo from the recently refinished gymnasium.

The aura of Kennedy is irreplaceable. However, the question arises: does Kennedy compete with other Division III athletic facilities?

Athletic director Larry Bock is frank when speaking about renovations. "Updates depend on every school's individual cycle," said Bock.

Not every school can complete renovations when desired. "Juniata can't simply use money to renovate immediately. We must wait for the right moment to present itself."

Whether this moment depends on Juniata's ability to obtain grant money or private donations, when money does become available, renovation choices must be made wisely. "We must use every square inch to effectiveness," said Bock.

Facilities	Juniata College	Catholic University	Messiah College
Sports Centers	Completed in 1983 w/ recent improvements in locker rooms and gymnasium surfaces. Contains intramural gym, sauna, training room, racquetball courts, natatorium, weight room, main gymnasium, locker rooms and coaching offices.	Completed in 1985. Contains gymnasium, natatorium, training rooms, locker rooms, saunas, batting cages, racquetball courts, indoor track, dance studio, intramural gym and coaching offices.	Completion not given on Web site. Contains four racquetball courts, four basketball courts and indoor track and fitness center.
Track and Field	Capacity 3,000 fans. Natural grass playing surface. Six lane track, with all-weather training surface. Grandstands and press box updated in 1988.	Capacity 3,500. Field Turf playing surface with a six lane track, bleachers, press box and scoreboard.	Field 1-Field Turf. For field hockey and lacrosse. Includes eight lane track. No football team. Field 2- Grass Field. Only for men's and womens soccer. Seats "several thousand" with standing room available.
Gymnasium	Capacity 1,200. Mezzanine available for spectator viewing and team practice. Floor surface recently refinished.	Capacity 2,000. Floor recently resurfaced.	Capacity 1,800. Recent improvements to sound system.
Natatorium	Six lane 40 yd. pool. Balcony available for spectators.	Six lane 40 yd. pool.	Aquatics center includes eight lane 25 yd. pool. Swimming team will be added in 2008.
Fitness Center	5470 sq. ft. 55+ pieces of strength cardio and free-weight equipment. Personal trainers available.	7,000 sq. ft. center. Strength, cardio and free-weight area available. Personal trainers available.	Approx. 6,000 sq. ft. weight room. Strength, cardio, and free-weight area available.

With a beautiful gymnasium, competitive natatorium, effective weight room, soccer, football, field hockey fields and tennis courts, our campus athletic facilities offers a great deal. Though other schools may have recently undergone renovations, to truly compare facilities one must factor in when these buildings were built, along with how long the colleges waited before updating. Above is a table comparing Juniata's athletic facilities with two of its competitors.

It is easy to see that although Catholic University and Messiah College have updated many facilities, they still lack some qualities. If there are differences that ail Juniata, they are items that will be addressed in the very near future.

First and foremost, every Division III school's main goal is academics. "Before we focus on athletic facilities, we must fix dormitories, update the library, and work on Founders. This is what is most important for our students," said Bock.

If this is the case, Juniata is doing very well. We are planning to begin serious renovations to Founders Hall, and recently renovated Good Hall. Along with this, Juniata has recently refurbished the gym floor, placed key locks on all locker rooms, installed new batting cages in the Memorial Gym, constructed a new scoreboard on Langdon Field and upgraded cardio equipment in the fitness center.

Though changes are happening, Bock still has wishes for our athletic facilities' future. "We need to get an indoor track," said Bock. "Our grass fields must be taken care of and our outdoor track must be fixed as soon as possible. New locker rooms for each team are in Juniata's sights, but won't be completed [for a while]."

He also plans on maintaining our facilities' allure. "The great thing about Kennedy is that all the sports teams come together to use it, and they get along so well," said Bock. Our sports center is used by athletes and students alike, and the care given to each piece of equipment is remarkable. "Our staff is amazing [and] having experienced individuals in our weight room gives us something."

Though at times only cold water rushes from locker room showerheads, Juniata College athletic facilities are quality material. With the promise of future renovations, the future of Juniata athletics can only look better.

Christopher Shannon / Juniatian

Freshman Lindsay Cooper swims the freestyle during a recent swim team practice.

Women's swimming treads water

Brandon Wolfe

There is no way to describe the feeling of competing even though you know your team is going to lose. The Juniata women's swimming team does this every swim meet. With a lot of heart and determination, the swim team is making news with its younger swimmers.

At the beginning of the season Coach Ruff set two goals for the team: support each other and excel individually. Ruff has done an outstanding job of motivating the swimmers despite the team's low numbers mathematically eliminating the possibility of winning dual meets.

When asked how the team can go out and swim knowing it will lose, Ruff said, "We have to know who we are as a team. [We're] competing individually, and not worrying about score."

Individual performances so far have been outstanding. Lindsay Cooper is putting in solid times as a freshman.

Cooper swam strong against Goucher College. She swam a 59.00 in the 100 meter freestyle, and a 29.57 in the 50 meter freestyle. Fellow freshman Rachel Gipe is not far behind with time of 1:02.3 in the 100 meter and 28.4 in the 50 meter freestyle.

The freshmen are led by sophomore Kelly Serfling and senior Brough. Ruff said, "Support was a key issue for us at the beginning of the year, but the team has been stepping up to the challenge."

It is amazing how well the Eagles have placed individually in the conference. This just shows their tenacity. Ruff said, "It is a shame we don't have more swimmers. They all work so hard at practice, even though they can't win."

The season is a long one, and the team has nowhere to go but up.

Zanic's departure leaves hole in Eagles' baseball family

Josh Lingenfelter

With all of the adjustments involved with entering a new conference, yet another change must be endured by the 2008 Juniata baseball team. The Eagles' head coach George Zanic recently resigned from his position, citing family reasons. The resignation came after Zanic's election as Huntingdon's district attorney.

While his abrupt resignation may come to a shock to many Eagles fans, the feelings from within the baseball program spoke to the opposite.

When asked if Zanic's resignation was unexpected, senior third baseman Steve Wilk said, "No, not really. There's always been the rumor before each season that this will be coach's last season. We all know how important his family is to him. George always was upset about missing his son's baseball and soccer games."

Zanic created quite a reputation here at Juniata College, first starring on the field as a player in the 1980s and later leading the Eagles to the NCAA tournament as coach.

When asked how he thought the program would react to Zanic's departure Wilk said, "We will take it in stride. There's a lot of senior leadership on this team, and an array of personalities and talent." Despite these bright outlooks, Wilk added, "His knowledge and presence will definitely be missed."

Certainly a coach with the experience of Zanic cannot easily be replaced. Over his seven years, he led the Eagles to great success, amassing 171 wins en route to four Commonwealth Conference tournament berths and one NCAA tournament appearance in 2004. He was named Commonwealth Conference Coach of the Year following that campaign.

To explain how the team is the feeling now that their coach is gone, Wilk said, "Everyone on the team is of course worried about the coaching situation, but we are just eager to get a coach, get on the field, and win. It's what we've been working for."

Zanic would not have it any other way. One intangible that Zanic always drilled into his athletes was the desire to win and compete. Certainly, that legacy is reflected in the sentiments of the current team and will live on for years to come.

Christopher Shannon / Juniatian

Former head baseball coach George Zanic jogs onto the field during a game against Messiah during the 2007 season.

Christopher Shannon / Juniatian

Senior guard Jill Walsh sets the offense during Juniata's game against Susquehanna on Dec. 1. The Eagles fell 67-73.

On the fifth day of practice

continued from page 15

level in years past that was broken up by games. Our complacency now has five days to evolve, and it is our responsibility to fight it.

"It's challenging to keep motivated and intense earlier in the week because the game still seems out of reach," said Ashcraft.

Intensity is innate in a game atmosphere. That is not always the case in a practice setting. Though intensity requires no technical skill, with a five day span of straight practice, this basketball buzz word is more prone to lapses, especially mentally.

"With things that are more mental, such as running through plays dry, we can lose focus," said assistant coach Shawna Little.

Competition brews intensity, both on the mental and physical ends. Our coaches understand that. More than ever, they are incorporating competition into practice drills.

"Coach tries to keep practices competitive by awarding points to teams for different aspects of drills, such as buckets scored or defensive stops, " said Ashcraft., "Loser runs."

Our coaches can only create so much, however. Consistent productive intensity ultimately begins and ends with the players on the court, and that all starts with the right mindset.

"Coming in with a positive attitude each day," said Ashcraft, is where it all originates.

The practice week is a big adjustment, but we need to remember one important fact. All the programs of the Landmark Conference have to adjust to this change as well.

The sooner we can make the adjustment, the quicker we can focus on our games instead of concentrating about the week-long drought between them.

New Year horoscopes

by Le Madame

Capricorn (December 22 – January 19): Whatever you are planning for St. Patrick's Day, FOR THE LOVE OF GOD, DON'T DO IT!

Aquarius (January 20 – February 18): You will be caught in crossfire this spring when the voices inside your head wage a nuclear war on your imaginary friends.

Pisces (February 19 – March 20): You will be tempted to pick up an old but kind looking hitchhiker. Don't worry about his red high heels.

Aries (March 21 – April 19): After New Years' you will realize that the Captain never meant to be your friend.

Taurus (April 20 – May 20): This April you will FINALLY realize what is so funny to Wayne and Garth when they ask, "A sphincter says what?"

Gemini: (May 21 – June 21): Over winter break, Halo will finish its complete and utter consumption of your soul.

Cancer (June 22 – July 22): This March you will find out for sure whether or not that crazy track recruit was indeed correct.

Leo (July 23 – August 22): Sorry, Lion, but you are going to break up with the best person in your life after graduation. Don't worry, though, the second best will come around and laugh at your misery.

Virgo (August 23 – September 22): You will discover the glories of the internet when it sends your sexy message for your girlfriend to her mother instead.

Libra (September 23 – October 23): Your imagination is the limit! You will be blessed by the stars with good fortune and OH MY GOD LOOK BEHIND YOU!!!

Scorpio (October 24 – November 21): Halfway through the spring semester you will realize that your poor grades are largely due to the fact that most of your so-called studying consists of sending out Hotness requests on Facebook.

Sagittarius (November 22 – December 21): You will love this Spring's Pig Roast almost as much as your tape worm does.

When hunger strikes

Melting moments cookies

What you need:
2 cups butter
½ cup cornstarch
3 cups flour
1 cup powdered sugar

How you make it:
Cream butter; add remaining ingredients and mix well. Drop on cookie sheet (1/2-1 inch balls). Bake at 350 degrees for approx. 20 minutes. Cool, then roll in sifted powdered sugar.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

FEBRUARY 14, 2008 | JUNIATA COLLEGE | VOLUME 89, ISSUE 6

GPA determines non-campus housing

New policies in place for seniors wishing to live outside the College grounds

Sarah Ruggiero

New procedures for senior off-campus housing will take effect for the 2008-2009 academic year.

Student interest for non-campus housing has steadily risen for the past three years. In 2004, when juniors were allowed to live off-campus, Juniata let 185 juniors and seniors do so. This fall, there were 160 seniors alone in non-campus residences.

The new non-campus housing actions spawn from the collaboration between the Juniata administration, Residential Life office and student government.

The registration procedure has been entitled "non-campus housing." To avoid confusion, "non-campus housing" is defined as living in any residence that is not campus owned. This does not include Mission, Pink, Hess and the College owned residences on Mifflin Street, Moore Street and Washington Street which will still be named, "off-campus housing."

"Juniata is a residential campus with a limited number of exceptions. Students are expected to live in campus owned facilities," said Director of Residential Life Tim Launtz.

Senior permission to live off campus will be determined by the new procedures, though permission itself s not guaranteed.

Each year, a predetermined number of seniors only will be allowed to live in non-campus housing. Students that do not fall into that predetermined number will be placed on a waiting list. Students will be ranked by GPA, upholding the academic mission of the College and adhering to the rest of the room draw process. Class rank as of January 25, 2008 will be used for the coming academic year.

Non-campus housing registration began on Wed., Feb. 6. Rising seniors gained access to the Non-Campus Release Request Web site at midnight. The timeframe for submitting online requests continued to the deadline on Feb. 13 at midnight.

Students will not be permitted to register in groups. Students must register as individuals, with

continued page 4

Sustainable future of JC

Christina Gongaware

Sustainability is becoming an ever larger presence in campus life. Administrators, faculty and students have been making contributions in hopes to aid in Juniata's quest for climate neutrality.

Juniata's commitment to environmental awareness took a huge leap when it became part of the first 100 schools to sign the Presidential Climate Commitment (PCC) in 2007. As part of the promise, Juniata completes an emissions inventory annually and takes immediate steps to reduce the amount of greenhouse gases it produces.

Rob Yelnosky ('85), vice president for finance and operations and the supervisor for Juniata's sustainability project, points to several achievements that reflect that commitment. Juniata's electricity consumption has dropped four percent over the past year and landfill consumption has decreased by 53,000

Geology and ESS departments merge, POEs stay separate

M. Piazza

In the fall of 2008 the geology and environmental science & studies (ESS) departments will merge to become the earth and environmental science department (EES). Though POEs will remain separate, the departments will share professors, a budget and some courses.

When asked why the merge was occurring, professor Larry Mutti, head of the geology department, said, "We found that many students from the two departments were taking both environmental science classes and geology classes, and we noticed that between the classes there was a considerable amount of overlapping information."

The overlapping of course material was only a small concern in considering the merger. More important was the fact that a larger department will be able to do more for students. With six professors in the department there will be more heads looking for grants, more varied classes offered and a larger budget for field trips and equipment.

"The merger was a great idea from its initiation as we were already doing so much together," said professor Neil Pelkey, assistant professor of environmental science. "It simply required some ironing out of what the department would be called and who would head it and how it would be organized."

A serious issue in organizing the new department was its name. Professors on both sides wanted to show the presence of their old departments in the new title. Yet "geology and environmental sci-

Commemorating Founders Chapel

Christopher Shannon / Juniatian

Juniata College chaplain David Witkovski (center) presents a gift from the College consisting of a photos of the Church of the Brethren's old home (Founders Hall) and its current home (Stone Church) to Stone Church pastors Dale and Christy Dowdy during the Founders Hall Chapel Commemorative Celebration on Jan. 24. The photos' frame is made of wood taken from Founders.

Sticking to the figures: Mass freshman exodus?

Sara Cieslewicz

A rumor has been circulating around the student body that a mass exodus of first year students, through both withdrawals and transfers, is occurring this year. According to Dean of Students Chris Clarkson, this rumor is not true.

"I feel that there is [a] dynamic of perceptions, and if there is some distorted perception that everybody is leaving, [this] may affect some people…We have to correct that," said Clarkson. He also said that recent first year student and overall withdrawal and transfer rates are not high or abnormal in comparison to the College's past attrition rates. Attrition is the reduction of students due to withdrawals, leaves of absence, etc.

Cindy Clarke, director of institutional research, provided the Juniatian with a freshman attrition rate report that began in the fall of 2003 and ended in fall 2007. The report noted a total attrition of 36 students last fall. Only 24 of those students were freshmen.

The difference in the total attrition between fall of 2006 and fall of 2007 is an increase of 10 students. However, this increase is largely due to an increase in leaves of absence, which rose from four to 10 students. Three fewer students withdrew or transferred this fall than last.

For some, vacancies in residence halls raise questions. However, Juniata's occupancy rate in residential halls was still around 90 percent this spring semester, which is high for a spring when the previous fall semester was not full in occupancy. Clarkson attributes the low fall 2007 occupancy rate to a record number of students studying abroad. This spring there are also about 65 students studying abroad. Historically, the spring average is usually 20 or 30 students.

Despite rumor or perception, overall attrition has fluctuated very little at Juniata. The average percent of attrition from 2002-2006 was 3.4 percent.

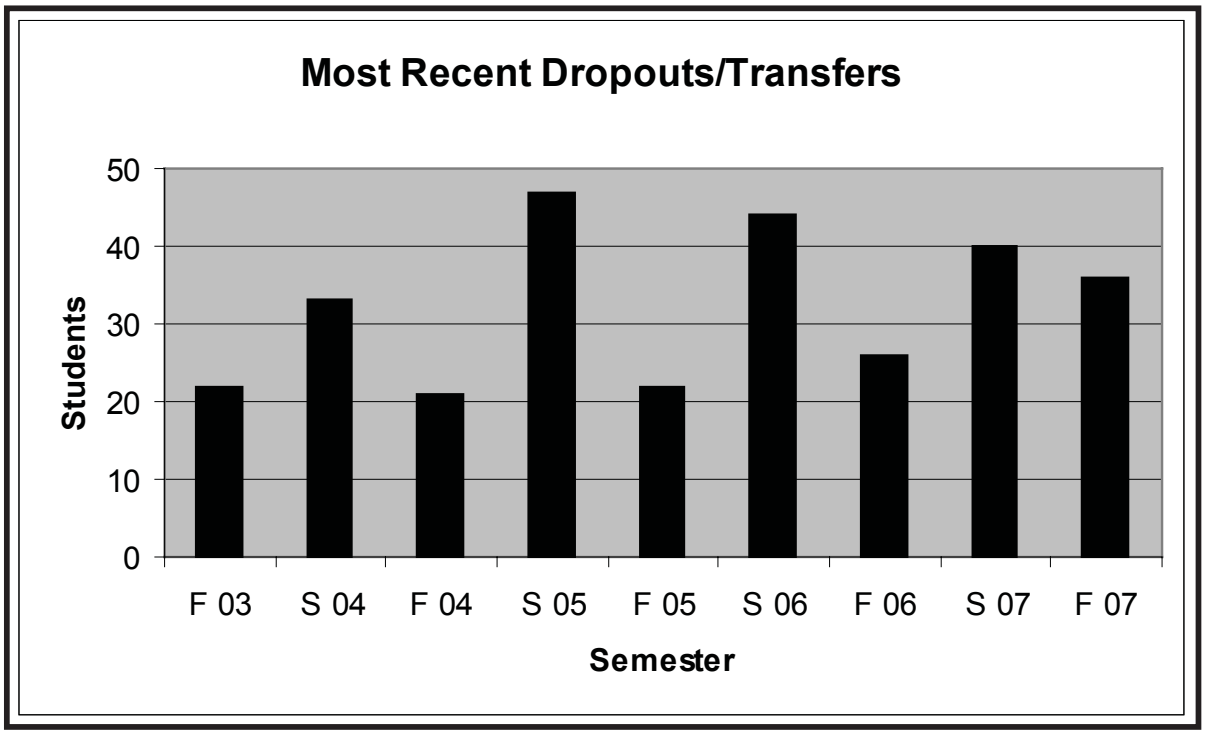
Clarkson said, though, that student withdrawal or transfer is not uncommon to today's college experience. "It's an interesting dynamic in your generation. Students currently are much more likely to transfer and to attend more than one school than any other generation," he said. "Something has changed."

Clarkson noted that a quarter of students in college today expect to transfer. "I think that students want it all…the full experience... traditional and graduate…study abroad….paid internship. [Some] want to go to a small liberal arts college in a rural setting and also the experience of a large public university in an urban setting," he said.

When students do transfer, Juniata's institutional research department keeps a running list of who leaves and why. According to "personal" or "other" reasons for leaving Juniata, the following are prevalent reasons cited: significant others, personal-family issues, disliked situation in varsity sports or coaches of varsity sports, disciplinary trouble, armed forces and a desire to be closer to home.

Clarkson said that self-disclosure is not a very good way of assessing attrition. "People will pick virtuous reasons because it's all about self-esteem [such as citing] 'financial, family, my mother's ill, or I don't fit in here, everyone is always drunk… [These are] not necessarily true," he said. "Again, do you choose to go to the film festival, on campus lecturer, speaker, hypnotist, movie, performance [or] play, or do you choose to sit around and drink and game and watch TV alone?"

RAs frequently report to Clarkson that those who transferred or withdrew went home every weekend, never became involved, were from day one not happy, broke up with a significant other or were embarrassed about something.



For some students no one reason causes a transfer. Senior Katie Rhoads transferred to York College of Pennsylvania for her junior year for several reasons. Rhoads came to Juniata as a recruit for the women's basketball team. When she wasn't satisfied with her experience, Rhoads said that she wanted to remove herself from the team situation. She also wanted to move on to explore more options while experiencing a larger campus. Finally, Rhoads said that her younger sister started college and her family was not able to help her as much financially. "I had to take out a lot of loans and was trying to save money," she said.

Rhoads is a unique case, though, in that she returned to Juniata for her senior year. She said the level of education at Juniata and the opportunity to spend her senior year with her close friends brought her back. York did not have the willingness of Juniata's professors nor the close connection between students and community she said.

Some question what Juniata can do while admitting students and during the first year, to preserve enrollment. The Juniatian attempted to contact Michelle Bartol, dean of enrollment, several times to have her comment on the strategies her office uses to promote four year enrollment. Bartol refused those interview requests and failed to comment.

Clarkson said that in order to stop transfers and withdrawals, the College challenges people on what they are doing and tries to change that "It can't be me; it must be this place" attitude.

The dean's office does a variety of things to reach a student before he or she holds an exit interview with Clarkson. The College encourages the student to think the withdrawal or transfer through completely, and notifies authoritative figures that can help the student make the best decision, academically or financially.

The Bailey Oratorical: Carrying tradition through persuasion

Kim Wagner

The Bailey Oratorical Contest is a long-time Juniata tradition that challenges students to write and deliver persuasive speeches. Between 30 and 40 students usually register for the preliminary round each year, but only seven students will be chosen to present their prepared speeches in the finals.

The 2008 Bailey final will be held on Feb. 26 in Suzanne von Liebig Theatre in the Halbritter Center for Performing Arts at 7:30 p.m.

Although this will be the 93rd Bailey competition, this year is unique. This is the first time Juniata students influenced the topic selection. SPEAK, the communication club, held a contest where students submitted ideas. A 50 dollar cash prize was awarded for the chosen suggestion. The prompts needed to be persuasive, open-ended and timely. The topics submitted ranged from politics to international affairs. With several suggestions pertaining to concerns with communication technologies, the communication department chose the one that explained the topic most clearly.

Sarah Ruggerio, a sophomore communication intern, won the contest. Ruggiero's prompt is, "Challenge the audience to reflect on the social changes new technologies are bringing to our private and/or professional lives."

The preliminary round is judged by three outside sources, including alumni and friends of the College. The contestants' speeches are judged on their introductions, bodies, conclusions and their overall deliveries. The same applies during the final round.

Donna Weimer, Col. Sedgley and Elizabeth Bailey Thornbury chair of communication said, "The students need to create a solid argument and respect their audience."

This year 35 students have registered to participate in the one-day preliminary round on Feb. 16. The preliminary event will take place in the Sill Board Room from 8 a.m. to approximately 1 p.m. The general public is encouraged to attend. Spectators will be let in on the hour to avoid distrubing the speakers.

Last year, members from SPEAK had to turn students away from attending the final round due to lack of seating in the Suzanne von Liebig Theatre. This year the overflow will be sent to watch the contest projected onto a large screen in Rosenberger Auditorium.

The contest was established by Thomas F. Bailey in 1915 to honor his father, John M. Bailey, who held the position of President Judge in Huntingdon from 1893-1903.

Dealing with the disgusting

A dirty job for JC custodians

Kendall L. Markel

JC custodians work hard to keep the campus clean and livable. However, college students aren't always the cleanest bunch, and keeping Juniata clean can be a real challenge.

When asked about most memorable messes seen here, one JC custodian described a soccer game gone awry. "Some students decided to play a game of soccer with a gallon of apple cider. The cider was all over the floor, and the walls – even on the ceiling."

Regular infractions include simple littering. "Sometimes, people from other buildings throw their Jitters coffee cups and glass bottles under the stairwells," said one custodian. A new problem has arisen with the appearance of paper towels in bathrooms. An RA said, "People have been stuffing [paper towels] in the toilets, and making them overflow. It's just a shame, because we've been working to get [paper towels], and the custodians shouldn't have to deal with immature actions like that."

Other times, the damage is more disgusting. A custodian said, "It's puke missing the toilet."

Some of the most severe incidents in recent memory happened last fall. On RA recalled that someone defecated in the bathroom and then smeared the waste along the walls. Another custodian had to wash a wall when someone smashed a used tampon on it. Custodians need to clean these things, regardless of how ignorant or sickening they find them.

If found to be the culprits of such incidents, students are made to assist with cleaning and are written up by the Residential Life staff on duty. But with most routine messes, custodians must resolve the issues on their own.

Some regularly seen problems could pose serious health threats. According to one JC custodian, some male dorm residents can't seem to properly dispose used razors and razor heads. It isn't uncommon to find multiple razors on the shower floor. .

Custodians are responsible for keeping all ground within 20 feet of the building clear of litter. It isn't unusual, said one custodian, to find "lots of broken glass on the ground." They keep nearby sidewalks cleared of snow and lay down salt. The garbage cans outside the dorms are also their responsibility.

Juniata's custodians have to prioritize when cleaning dorms. They clean and sanitize the bathrooms, and work their way down. One JC

Locking system up and running

Alison Rihs

After months of anticipation, the Juniata residence hall locking systems are finally put into place. Shipping and software issues delayed this process but by Feb. 12, every dorm was added into the system. Now the dorms will be locked at all times.

Director of Residential Life Tim Launtz explained that new doors had to be purchased and installed for the system. However, a shipping problem delayed this already lengthy process. Launtz said, "It was a lot more time-consuming than we expected."

In addition to the shipping problem, the software being used is new to Residential Life. The B.A.S.I.S. lock system allows entry whenever a Juniata gold card is swiped and it also tracks card usage. The initial problem was with the system's default settings. The doors locked if a student did not wait 60 seconds to swipe his or her card after the previous person opened the lock.

With the technical advisor often busy with meetings, it was difficult to find a time to fix the problem. Eventually, the Residential Life staff was able to change the default options on the locks. All of the issues have now been resolved, and everything should work properly.

According to Residential Life, this delay has been worth it. Launtz said, "Security is the main premise…We wanted to make sure we didn't have any bugs."

Launtz also decided to spread out the locking dates in order to fix any setbacks that could possibly arise. "We could've brought it online sooner" Launtz said. "We've tried to make sure we don't inconvenience the students."

Cloister was the first dorm to have the system implemented because it houses the least amount of students. So far, there have been no setbacks. Stephanie Tyler, assistant director of residential life, confirmed, "We haven't had any complaints about Cloister."

Christopher Shannon / Juniatian

According to the Juniata Web site, there are several reasons why a student's card may not work in a new card reading lock.

•If a student hears three short tones, he may have swiped it too fast.
•If there are red flashes and three tones, his card could be invalid.
•If a student sees one red flash, he may have swiped the card incorrectly.
•If there is a green light, red flashes and three tones, there is an issue with the lock. If this occurs, the student should talk to an RA or RD immediately.

To reduce problems in all dorms, Residential Life suggests that students also check their cards in Ellis. Without a properly functioning card, it will be impossible enter a dorm without aid of another student.

Brittany Monk, a freshman, has experienced this firsthand. "I've had it for a short time and it's already messed up," she said. When Monk tried to enter Lesher, there were no beeps, buzzes, flashes of light or anything. She had to go to the Campus Security office to obtain a new card.

Although this process has taken longer than originally expected, Launtz and his staff think that there should be no more problems. The default settings have been changed, and Residential Life is confident that this system will work fine. "Our approach was the right approach. It's allowed us to not have any problems [for students]," Launtz said.

Intercultural Communication class holds teleconference with Russian university

Ashley Hileman

What better way is there to learn the art of intercultural communication than to put it into practice? That is exactly what students in professor Grace Fala's Intercultural Communication class will be doing this semester. Starting with a "dress rehearsal" on Thurs., Feb. 14, from 8 to 9 a.m. these students will be interacting via teleconference with other intercultural communication students at Volgograd University in Russia.

The semester-long project is a collaborative effort between Fala and Olga Leontovich, professor of intercultural communication at Volgograd University. Fala credits the establishment of Juniata's relationship with Volgograd University to former provost Bob Hatala. It was this relationship which prompted an invitation from the University to Hatala and President Kepple to attend its 75th Anniversary Celebration in September, 2006. Due to previous engagements, President Kepple was unable to attend. Fala took his place.

During her time at Volgograd, Fala participated on a panel with other intercultural communication scholars. The idea for the teleconference project resulted from these panel discussions.

Coordination of the project required overcoming a number of challenges including the delayed start of the semester at Volgograd which does not begin until Feb. 11, as well as the eight hour time difference between the schools. However, Leontovich and Fala communicated often through e-mail to find suitable dates and times for the discussions.

Fala hopes that the teleconferences will serve to maintain the relationship between Juniata and Volgograd. She also wants her students to learn to look at the world through a variety of perspectives, not just their own.

Bethany Weymer, a student in Fala's class echoes this sentiment. She believes students "need to experience different cultures and not limit themselves…the teleconference is a neat opportunity to talk to people that you normally wouldn't have the chance to talk to."

Not including the dress rehearsal scheduled for Feb. 14, six other sessions are planned starting on Feb. 19 and extending to Apr. 22. Each session will take place from 8 to 9 a.m., 4 to 5 p.m. in Volgograd time, and each will feature a different topic. Topics range from "Dating and Marriage Customs" to "Sharing and Shedding Our Stereotypes."

Arrangement of the technology necessary for the teleconferences will be overseen by David Fusco, Juniata's associate vice president and chief information officer.

Fala invites any interested student, faculty or staff member to participate in the teleconferences. Attendance of all sessions is encouraged. The location of the teleconference has yet to be determined.

For more information read the Daily Announcements or contact Fala at Fala@juniata.edu.

How your GPA beat your voice

Sarah Ruggiero

The Juniata administrative cabinet consists of president Kepple, Dean of Students Kris Clarkson, and other vice presidents who represent different aspects of the College. Residential Life is a subsidiary of the cabinet.

Recognizing the housing changes and the College's need for full occupancy of the dorms, the cabinet asked the student government for input on the non-campus housing situation (see page 1).

"We were happy they asked us and seemed to take our opinions legitimately," said student government president and senior Shawn Rumery.

The cabinet met with the student government's executive board and Residential Life to discuss the issue. Flaws were soon seen in every method proposed for non-campus selection.

Originally, the student government recommended a first come, first served method of registration. Students would have a limited window of opportunity to register electronically to live in non-campus residences.

"We felt this was the best method. It still gave students control, but it didn't unfairly punish students with harder majors for example," said Rumery.

According to Rumery, although the administration didn't like it, they settled for it.

"We solicited student government's input. We brought them into the process and they spent considerable time on it. I had concerns for students studying abroad and for students on a leave of absence. It seemed like a system that was inherently flawed because people couldn't always get there," said Clarkson.

On Thurs. Jan. 31, the senate was asked to vote on the matter for a second time. Again the senate mandated its desire for first come, first served registration method.

There was an emergency meeting held on Feb. 6 and the cabinet did not approve the idea.

"No one on the cabinet really gave it a thorough review. We didn't have a full group present and it wasn't on the agenda. It isn't fair to say that the cabinet turned it down. It was never voted on and there was never a formal decision. I was perfectly willing to go with it," said Clarkson.

Rumery said that the student government was given an ultimatum, use a GPA or a lottery system.

"We chose the GPA option grudgingly. We wanted first come, first served, but that was taken off the table. We didn't have much choice," said Rumery.

The cabinet believes that the GPA system would uphold Juniata's academic mission.

"I really like doing academic standing and rewarding out students for success. We want to reward," said President Tom Kepple.

Students have expressed their own concerns for this method.

"I think room draw based on GPA for a dorm is a good idea, but not for living off-campus. We go through three years of waiting to live in a house and I feel that there should be no more obstacles," said junior Amy Reynolds.

The student government executive board and senate committees worked diligently to find the best method that reflected the desires of Juniata's students, not the College's mission as a whole.

"We are very upset. Student Government has been working on this since October. They asked us for our opinion and we spent four to five months on this issue. Then at the last minute the administration said, 'Thanks for all the hard work. Sorry none of it mattered'," said Rumery.

He added, "This is indicative of a larger issue. One of our goals is that we want students to see us as a legitimate decision making body. This decreases student participation. Why would you want to get involved in student government if they [the cabinet members] don't listen to our voice?"

Student Government is taking a series of serious measures in order to make their voices heard. Rumery said that the executive board's first response to the administration's actions is to make them public.

Student Government also wishes to set up a meeting in order to improve communication and establish a better relationship with the administration. This then will promote student government as the central source of student involvement and input. A future goal is even to place a student on the cabinet to help improve communication lines.

"Ultimately the College needs to make decisions based on the well-being of the institution. We will continue to try to do this here," said Clarkson.

Non-campus housing procedures about to change for students

continued from page 1

individual GPAs. Students will not be granted permission simply because they are roommates with those who receive permission.

Seniors applying for non-campus housing will be notified of permission results during the week of Feb. 18. Those receiving permission will then have until Feb. 29 to accept this proposal and notify the Residential Life office of their decisions.

"This system is not different than other schools," said Launtz.

Non-campus housing takes many outside factors into consideration. Community impact, coupled with the size of the incoming freshman class and a five year average of upper-class persistence, will help decide the predetermined number of seniors who will be granted permission.

"The College wants to keep full occupancy of rooms," said Dean of Students Kris Clarkson.

This is due to the fact that each year, room and board revenue is factored into the next year's budget. Therefore full occupancy must be upheld to maintain the expected revenue.

"Our enrollment number is not changing or fluctuating. We just have more students who are not physically studying on-campus. This is another reason the number of students we allow to go off has decreased. We have more available beds to fill," said Clarkson.

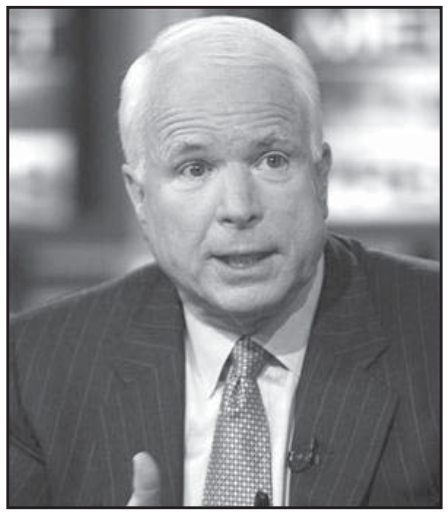
Currently, there are 1177 beds to fill on-campus. In 1995, the College's capacity was 868 beds, indicating a 74 percent increase of bed availability in the last 13 years.

Senior incentives to stay on campus are also being considered. Although at present they remain preliminary due to lack of time in this school year, the ideas that were generated would bestow seniors with privileges if they lived in on-campus facilities. Potential incentives include such things as priority parking, digital cable, painting the rooms or even different alcohol policies. The administration will look into these incentives in the future.

Residential Life has crafted one senior incentive that will be in effect during the current room draw. These incentives allow any senior group, living on-campus, to keep their senior points if they have a junior roommate. For example, if a group of eight seniors apply for an East Halls apartment, and there are seven seniors and one junior, that junior will receive senior status.

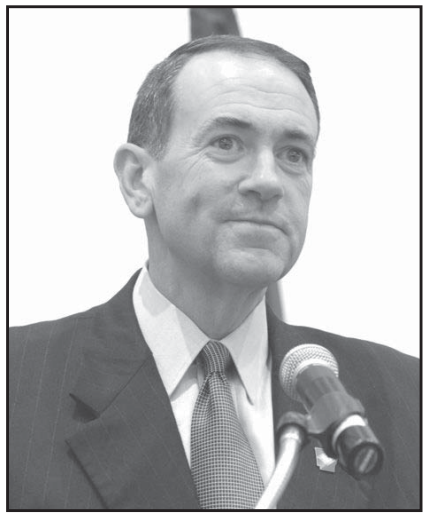
The new policies and incentives are not meant to eliminate non-campus housing. "We recognize that living off campus is a valuable experience, preparing students for independent living in the real world," said Launtz.

The final four. Looking at the candidates' main stances



Barack Obama (D)

Abortion: Pro-Choice
Same-sex Marriage: Opposes (opposes constitutional amendment)
Immigration: Wants 700 mile fence across Mexican border.
Taxes: Taxes increase due to repeal of Bush tax cuts.
Guns: Supports extending the assault weapons ban.
Iraq: Wants majority withdrawal by March 2008.
Iran: Allow military option, declares the National Guard of Iran as terrorist.
Health care: Would create a govt. program with pick of current or new coverage.



Hillary Clinton (D)

Abortion: Pro-Choice
Same-sex Marriage: Opposes (opposes constitutional amendment)
Immigration: Wants 700 mile fence across Mexican border.
Taxes: Taxes increase due to repeal of Bush Tax cuts.
Guns: Voted to extend 10 year assault weapons ban.
Iraq: Wants majority withdrawal by March 2008.
Iran: Would allow military option, but only with congressional approval.
Health care: Would mandate individual health insurance coverage for all Americans.

John McCain (R)

Abortion: Pro-Life (overturn Roe v. Wade)
Same-sex Marriage: Opposes (opposes constitutional amendment)
Immigration: Wants 700 mile fence across Mexican border.
Taxes: Extend current tax cuts to 2010.
Guns: Voted against a 10-year extension of the assault weapons ban.
Iraq: Early proponent of sending additional American troops to Iraq.
Iran: Considers military action only with congressional approval.
Health care: Opposes federally mandated universal coverage.

Mike Huckabee (R)

Abortion: Pro-Life (with constitutional amendment)
Same-sex Marriage: Opposes (with constitutional amendment)
Immigration: Supports illegal immigrants gaining citizenship.
Taxes: Abolish IRS and income tax. Wants "fair tax."
Guns: Opposes reauthorization of the assault weapons ban.
Iraq: Opposes funding cuts. Supports troop increase.
Iran: Would allow for congressionally-unsanctioned military action.
Health care: Opposes federally mandated universal coverage but supports change.

Keeping time on the campaign trail: highlights of the last six months

September
• 6 - Fred Thompson (R) officially announces his candidacy for the Republican nomination.
• 17 - Alan Keyes announces that he's again a candidate.
• 23 - Congressional Black Caucus Political Education and Leadership Institute. Republicans Romney, McCain, Rudy Giuliani and Thompson fail to attend.

October
• 9 - Republican presidential debates, 2008 - Thompson makes his debate debut. His numbers plummet soon after.
• 16 - Stephen Colbert announces he is running for president as a favorite son in South Carolina.

November
• 28 - Republican debate hosted by YouTube/Google and CNN.

December
• 31 - Federal Election Commission Chairman Michael Toner estimated that a prospective presidential candidate "needs to raise $100 million" by the end of 2007 "just to be taken seriously."

January
• 8 – Bill Clinton attacks Obama's campaign tactics and is "politely" asked by Democratic leadership to "pipe down."
• 13 – Hillary Clinton cries while answering a question from a supporter..
• 14 - Iowa caucuses. Obama wins Democratic vote. Clinton places third behind John Edwards. Huckabee wins Republican vote.
• 15 - Michigan primaries. Obama and Edwards do not put name on ballot after Democratic Party penalizes state for ignoring primary date rules. Clinton wins. No delegates awarded from MI primary.
• 19 - Nevada caucuses. Clinton wins Democratic vote by six percent. Romney wins Republican vote by 37 percent.
• 9 – McCain wins South Carolina Republican primary.
• 22 - New Hampshire primaries closely contested. Clinton wins Democratic vote by two points. McCain wins Republican decision by five points.
• 29 – Obama wins South Carolina Dem. primary 55% to Clinton's 28%.
• 29 - McCain wins Florida Republican primary. Obama is endorsed by Ted Kennedy and Governor Schwarzenegger's wife, Maria Shriver.
• 30 –Edwards and Guiliani drop out of the race.

February
• 5 – Super Tuesday. Obama wins 13 states. Clinton wins eight. Democrats' delegate count is nearly split. McCain emerges as "front runner" for Republican nomination.
• 7 – Romney suspends his bid for the presidency after spending 35 million dollars of his personal fortune on his campaign.
• 8 – In the two days following Super Tuesday, Clinton raises $4 million in campaign funds - . Obama raises $7.5 million.
• 8 – Clinton to boycott any debate hosted by MSNBC after a network political correspondent suggested the Clinton camp had "pimped out" Chelsea Clinton when it asked the former first daughter to make personal phone calls to celebrities and super delegates on her mother's behalf.
• 9 – Obama sweeps caucuses or primaries in Louisiana, Washington, Kansas, Nebraska. Huckabee takes two of three over McCain.
• 10 – The Democrats' Maine caucuses go to Obama.
• 12 – Obama and McCain sweep primaries in D.C., Maryland and Virginia.

- by Seth Fox

Exotic education: summer abroad programs in abundance

Brianna O' Malley

Juniata offers a wide range of summer programs that can fit into almost any student's plans. The study abroad office provides these programs for students who are curious about other cultures but do not have the time in their academic schedules to spend a full semester abroad. Below are some brief overviews of the programs Juniata offers.

Münster, Germany

This five week program gives students a chance to study in this culturally rich city near the Dutch border. Students take a German language course and a cultural class. The courses total five credits. Host families are provided to offer insight into German family life.

The Gambia/ Senegal, Africa

Department chair of politics Emil Nagengast takes students on a three week journey to explore the political and cultural society of the Gambia and Senegal. For four credits students receive distributions for I, S and CA. Part of the program involves meeting once a week in the spring semester in preparation. "Students come back and feel empowered," said Nagengast.

Lille, France

For four weeks students can study in Lille, a small town in the north of France. The program offers language and culture classes. Students can make a choice between an economics and politics or a literature and cinema cultural class. French Professor Dr. Michael Henderson said that in the future they plan to teach the economics and politics class in French for advanced students. Participants live in dorms during the program. Field trips to Brugge, Brussels and the famous Flanders Fields are also included in the itinerary.

Quebec, France

For those who want a language-intensive program in French but don't want to take a trip to Europe, a new option has emerged. Quebec is a six credit, five week program. Unlike the Lille program, students can choose to live with a host family or in a residential hall. The program is based on language immersion for those who want to boost their French proficiency. Henderson said that the trips taken will include whale watching on the St. Lawrence River.

Orizaba, Mexico

The Spanish department offers a four week program in the small city of Orizaba. Located only an hour from the city of Veracruz, Orizaba is not a tourist stop. Students will take one language class and another in Mexican Culture for a total of four credits. In addition, students can stay an extra two weeks to take part in a community internship. Travel plans are included in the program but destinations vary from year to year. Students live with host families whose children also attend the university. Spanish professor Holly Hayer said that this living arrangement is beneficial to the experience of integrating students into a Mexican social network.

St. Petersburg/ Moscow, Russia

This program is specific for those students who wish to immerse themselves in the Russian language. Students can earn five to six credits of Russian language classes in this four to five week program. Juniata's program works through Dickinson College or the University of Scranton, both offering programs in either St. Petersburg or Moscow. The international office works with students to choose the best city for them based on their interests. Students stay with host families and take trips to museums, theaters and historical sites.

India

During this three week program students stay in Kerala, on the southwestern coast of the country. Students can take classes on sustainability and gender studies. For more information on this program students should contact environmental science and studies professor Neil Pelkey.

Tetouan, Morocco

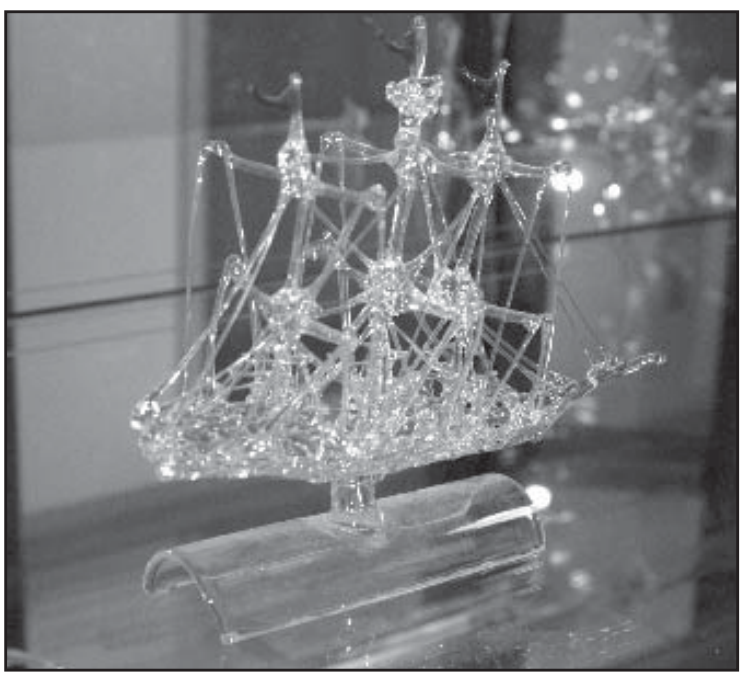
Juniata launches its Morocco program this year. Students travel through Brethren Colleges Abroad (BCA). The program includes Arabic language classes and a culture class. Students will also participate in volunteer work. The course totals eight credits according to the BCA Web site. History professor Belle Tuten will make the trip with the students, and plans to travel with students around Morocco while there.

Remote Field Course (RFC)

Forty students with four faculty members climb into vans and head out west to the Colorado Plateau for 17 days. Although the group stays in hotels during the journeys to and from the west, once the classes begin, students camp for the duration of the program.

Students have the option of choosing module classes in biology, geology, anthropology, psychology or physics. While in the west, students visit several national parks including: Carlsbad Caverns, the Grand Canyon and Arches National Park.

RFC students must take a semester-long seminar in the spring to earn four credits as well as their IC distribution. Physics professor Jim Borgardt says this is a great chance to for students to see the U.S. and experience the West.



Other programs

Director of Study Abroad Jarmila Polte said that she and other professors are in the process of creating new programs for the future. Possible summer courses include a business program in China and psychology opportunities in Europe.

Polte stresses that these opportunities are not meant for those looking for standard vacation. Students should apply to these programs expecting to learn and be culturally involved.

For more information about any summer study abroad program, students should see Jarmila Polte in the International Office in The Oller Center for Peace and International Studies.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz. Congratulations to last issue's winner: Katy Vanderau!

Geo and ESS merge in effect in fall 2008

continued from page 1

ence department" lacked a feeling of integration. They settled on "earth and environmental science" to reflect the interrelatedness of the disciplines.

The departments were already involved in cross communication at several different junctures. The merger now will guarantee that no professor is left out of the loop on matters concerning course material, field trips or possible joint classes.

"The idea of the merger is that really we share a lot of things in common and so we should come together, and so our Intro course next fall reflects that. It will cover six topics and each one will be split into two parts- one concerning the environmental science aspect and the other concerning the geology side," said ESS professor Uma Ramakrishnan. The fall introductory course will be "Introduction to Earth and Environmental Sciences" (EES 100). It will be a requirement for all incoming freshmen who are geology or environmental science POEs. It will not be a requirement for sophomore, junior or senior students who currently have those POEs. The class will be divided into six modules, and each module will further be divided into lectures, labs and field trips.

"This course will show the importance of integrating the department, and introduce geology students to the environmental science issues that they need to be addressing early on and vice a versa for the ESS students," said geology professor Ryan Mathur.

Craig Ebersole, a junior with a geology POE said, "It's [the merger] a great idea, if only because of what happens with a lot of ESS students…They have to take Intro to Geo but they put it off until senior year. Then realize that it would have been so much fun to have taken more [geology courses]. This merger will allow them to be exposed to them so much earlier."

According to ESS professor Dennis Johnson, the overall hope for the merger is to retain the POEs while expanding the opportunities and outcomes for the students in the new department. Starting with the Intro class, students will begin to develop the knowledge that they will need outside of college. It will also increase the cohesion between the ESS and geology people.

According to Mathur there are also a set of water courses in development that will increase the knowledge base begun in the Intro course, but those will not be available until at least 2010.

Future campus sustainability

continued from page 1

pounds.

The ultimate goal of the PCC is to achieve "climate neutrality," meaning that the campus must offset all greenhouse gases produced on campus. Yelnosky points to the "action-oriented" nature of enthusiastic students, as well as a concerned faculty, as the keys to achievement.

Founder's Hall will soon be a key aspect in Juniata's sustainable future. Once reconstruction is complete, the building will be Leadership in Energy and Environmental Design (LEED) certified. This means that in aspects such as water efficiency, energy use and construction activity, the building is considered a "benchmark" in green building. It will run on geothermal energy and have a 20 percent water use reduction over the existing facility.

Juniata pledged its commitment to wind energy over Christmas break. By the year 2012, 75 percent of the College's energy usage will be purchased with Renewable Energy Credits. According to Renewable Choice, purchasing these wind credits for a monthly home energy bill would be equivalent to planting 50 full grown trees or not driving 13,392 miles.

Professors are doing their part in the sustainable effort. History professor Alison Fletcher uses Moodle as a way to save paper. Geology professor Ryan Mathur also uses Moodle for his "Intro. to Geology" lab. Posting journals or lab assignments online saves students from submitting endless hard copies every week.

Yelnosky also credits the increased use of online syllabi as a helpful faculty strategy.

The classroom itself has become a hotbed for environmental awareness. Classes like "Sustainability" and "Sustainable Agriculture" give the faculty a chance to show students how they can take steps to help the environment. By "considering a triad of environment, economics and society," the Sustainability course at the Raystown Field Station also focuses on the changes that could be made in our culture. Similarly, "Conservation Biology" explores the complexities of conservation, which are important for conservation efforts.

Incoming students will now learn the basics of sustainability through their Information Access class. In a mandatory project freshmen must research a certain facet of sustainability. After posting it on Moodle, students share their opinions on their peers' research as well. This spread of information is key, according to Yelnosky. He points to sharing and talking about sustainability as a main aspect of its success.

Freshman Jennifer Wright agrees that faculty and students are making strides in achieving sustainability, but thinks that there is still a long way to go. "I think that double-sided paper should be mandatory because the change would be incredible. Moodle helps a lot, too, because everything is online and that makes a lot of difference," she said.

Freshman Michelle Muro thinks that the focus on sustainability is just right. "Sustainability is important, but we definitely shouldn't go overboard. I think that there are enough events going on around campus that people definitely know how to help out. I really can't think of much else either students or faculty could be doing to help out," she said.

Student involvement has been increasing. Awareness has been raised through events such as Sustainability Day. Conservation Club educated students through events such as a dumpster dive and the planting of a dozen new trees on campus.

"The neat thing about a college campus is that 25 percent of the population is always new. There are new ideas and new perspective coming in every year," Yelnosky said.

Faculty and student involvement are both vital to reach the goals that have been set. Yelnosky said, "There is a stronger sense that this is not the flavor of the month."

Problems that remain are a lack of financial resources and time. Yelnosky deals with the frustration of not being able to do everything. "If you hear about it [sustainability], then I think we are making progress," he said.

In 10 years, Yelnosky hopes for a campus where "sustainable behavior will be the normal course of business," and that "everyone understands and models that behavior."

Juniata's sustainability statistics

-Recycling up 70% in 2007 vs. 2006 – a total of 134,000 lbs. (an increase of 55,000 lbs.)

-Waste to the landfill down 5% - a total reduction of 53,000 lbs. The College's annual waste to the landfill would fill a three story building the length and width of a football field.

-For more information go to www.recyclemaniacs.org or contact any member of the Conservation Club.

-Electric consumption down 3.3% vs. the same time period last year.

-After the first week of Recyclemania Juniata ranked 60th out of 147 schools in recycling, and 66th of 82 in waste to the landfill.

JC custodians doing the toughest job on campus

continued from page 3

custodian said that a floor bathroom takes about 30 minutes to clean. The amount of time spent on cleaning varies on the amount of work there is to be done. If there's more to clean than usual, JC custodians can notify their supervisor and ask for overtime if a mess keeps them here longer.

A group of custodians arrive to work at 5 a.m. They tackle various parts of their buildings and then have lunch at nine a.m. for a half hour. Their day ends at one p.m. Another wave of custodians begins their workday at 7 a.m., has lunch at 11 a.m. and leaves at 3 p.m.

Custodians have two days off each week. When one custodian is off, another custodian cleans that person's building, in addition to cleaning his or her own. When this happens, the custodian places importance on cleaning the bathrooms and changing the trash cans.

"I alternate and take care of a second dorm two days a week," said a custodian. "They [supervisors] think that your original building should be clean enough that you'll have enough time to take care of another building. I just make it [in time]."

Another custodian said, "We get quicker at it the more we do it. It's because of the repetition."

Though students stay on campus during the months of the academic year, the JC custodians clean the College all year. They work in the summer months, to keep the dorms clean for camps, and they prepare the buildings for the students' return from vacations.

The custodians do more than clean. Many are on friendly terms with the residents of their dorms.

One JC custodian said, "Dorms are a home away from home. Treat it like that…. Be respectful."

*Names were not used in this article in order to avoid singling out one custodian, RA or residence hall which the Juniatian felt could potentially cause backlash for those who spoke with the paper.

Campus whiners: Can the outlandish complaints

EDITORIAL

We come to college to learn the basics of our future trade. We come to learn how to think. That's what we pay for; that's why we're here. We also learn life skills during these four years. For many of us, these are the first years that we are out of our houses and on our own. This is where our independence should begin. Some on campus, though, still expect someone to make everything right, to give us what we want and to sends us on our merry ways.

Many have noticed this growing sense of self-entitlement at Juniata. People plague the forums with silly complaints about the "injustices" on this campus—injustices including food service and Wellness Center hours, locks on doors, not being able to park within 25 feet of an academic building and seeing puddles on campus after it rains. This world is not one big "24-hour, we have what you want when you want it" place. Outside this little campus bubble, when any other person in this town falls ill, rarely is any doctor willing to open his office at 2 a.m. If something happens that is so severe it cannot wait until Monday morning, the patient will go to the ER. Why do students think it should be different on campus?

If someone has to see a doctor during the week, the Health and Wellness Center is available. Dr. Laura Siems' hours are posted. If she is not there, Nurse Connie will do everything she can. If it's serious enough, she'll tell the patient to go to the ER. The medical staff at J.C. Blair is very nice, too, we've heard. The triage nurse won't laugh too hard at a paper cut.

This is a small, Central Pennsylvania town. Life runs a little slower here. Shops aren't all open 24 hours a day, every day, and rarely is a business open on Sunday. Some students may come from large metropolitan areas, with many businesses and public transportation services running through the night. Welcome to Huntingdon: wake up tomorrow morning and walk. People could use the exercise.

Talk is going around campus that Muddy Run should be open 24 hours. Why? If anyone else in this town is up late and hungry, he will either open his refrigerator to find leftovers or go to Sheetz. Students have the same options. Do we want the trustees to jack-up the price of room and board to cover 24-hour Muddy service just so we can grab a bags of chips and some Sobe at midnight? Probably not. But that is what would happen. Realistic people understand that, in this world, when you want what you want when you want it...you end up paying extra for it.

Other people are upset about the gym hours. Certainly the fitness center hours are not optimum. But why complain that the center is closed from 8 a.m. to 10 a.m. on Mondays, Wednesdays, and Fridays? Shouldn't most students have class at that time? If not, shouldn't they be doing work? The library is open at those times. Check it out. If you are currently angry with this editorial and the editors, remember: we are all eight feet tall and we know Brazilian Ju Jitsu.

As for parking complaints, students should be thankful that we can have cars on campus. Many campuses don't allow underclassmen to have them. For the size of this student body, there is ample parking. If people parked where they are supposed to, when they are supposed to, everyone would have a spot. When security forbad overnight parking in the Kennedy lot, it wasn't because it wanted to spin donuts there (or eat donuts). It frees up parking for visitors who want to watch athletic events in Kennedy and for townsfolk and alumni to play tennis in the morning. We pay tuition. They pay ticket prices or membership fees. Why begrudge the community's use of our campus? Even the kids at the ECEC understand the concept of sharing.

While we're digging up old news, let's talk about the locking system. First people complained that a lock system would be implemented. Then they complained when it wasn't installed on time. The discontented should realize that the system was set in place not for the sick pleasure of watching the grief of students who forget their gold cards, but for our personal safety. Granted, this is Huntingdon, and the chance is higher statistically that a student would be shot by a hunting rifle than an assault weapon. But extra safety shouldn't be so infuriating. This is a small campus. If you forget your card, someone will eventually come by, recognize you from a class and let you in. If not, wave down security. Odds are they'll be driving by every 10 minutes.

Remember that no one is out to get us, and no one is obligated to give us exactly what we want either.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Vice Presidential Perspective

Recently The Juniatian asked President Kepple to use his column to update the campus community on the current state of the Founder Halls reconstruction project. Kepple deferred to Rob Yelnosky, vice president of finance and operations, to address the issue.

The Juniatian provided Yelnosky with some questions to guide his column. He chose to answer the questions specifically and individually. According to Yelnosky, "The construction project on Founders is currently underway and progressing well."

Will the fact that the construction workers found asbestos in the building present any dangers to students in the removal process?

By the time you read this, all hazardous materials that were found in the building will have been professionally removed. The condition they were in, and the method which with they were removed, posed no threat to anyone on campus.

Will the construction close down paths on campus?

For the safety of everyone involved, the construction footprint for the building will be extended from 17th Street to the 18th Street path and from Moore Street to just outside the side entrance of von Liebig. As a result, the current path from von Liebig to Good will be closed.

Will the construction be confined to certain hours of the day or will they start early like they did with Halbritter construction?

There are no set construction hours at this point. We will work with the contractor to balance the needs of the campus and the local community with the construction timeline we have in place.

Just how/when will the demolition of the north wing happen? Will students be able to watch it implode or will it come down in pieces?

We expect the North wing to come down in a very systematic manner starting in late March and extending into April. Unfortunately, we do not plan any dramatic 'implosions' or wrecking ball events.

By starting now, are we really managing to bring the budget down?

By starting the project now we optimize the construction schedule, allowing for exterior work to hopefully be completed this summer so interior work can occur next winter inside a closed building. This not only will make the project less expensive but will allow us to occupy the building by the beginning of the 2009/2010 academic year.

Thinking about thinking

Convicts are doctors, too

Ryan Hamilton

Juniata graduate Jim Kalinski ('03) was recently expelled from John Hopkins Medical School when it was revealed that Kalinski held a record of aggravated assault and armed robbery. Kalinski created a fake identity, which he used to conceal his past, after his release on parole in April 1999. His falsified records were only noticed when Kalinski applied for a grant to continue his medical studies at John Hopkins.

The incident raises many ethical concerns for the medical community as well as safety concerns at Juniata. Professors at Juniata were shocked to hear about Kalinski's past. One professor, who wished to remain anonymous, said, "Jim was a model student, polite, helpful, and involved in student life. He graduated at the top of his class."

With meager legal precedent for the expulsion, John Hopkins has come under fire from human rights groups. They claim that Kalinski was wrongfully expelled; they say that he is not being judged on the basis of present behavior or performance, but because of the stigma attached to ex-convicts.

On the contrary, the National Medical Association (NMA), in an official statement claims, "The removal of Kalinski will uphold the trust which the public places in the hands of medical practitioners."

Kalinski's case, though entirely fictionalized, has an alarming resemblance to the actual case of Karl Helge Hampus Svensson. Svensson was recently expelled from The Karolinska Institute in Stockholm, Sweden where he was studying medicine.

According to the New York Times, it was discovered last fall that, "Mr. Svensson had been a Nazi sympathizer who was paroled from a maximum-security prison after being convicted in 2000 of murder, a killing the police called a hate crime." In prison, Svensson took classes online and was then accepted into the prestigious Karolinska Institute.

With his criminal record out in the open, controversy arose concerning the character of those men and women whom the public depends upon for its continued health. Just as pressing however, is the ethical concern that a capable individual can be denied a future on the basis of his past. Should an ex-convict with previous Nazi sympathies be allowed to become

Looking for layout editors

The Juniatian will have two assistant layout editor positions available for the upcoming 2008-09 academic year. All students are eligible for the positions.

Assistant layout editors are assigned one section of each issue and are responsible for the entire design of that section. Design includes placing staff writers' articles, photographs and captions on the layout using Adobe InDesign CS software. Knowledge of InDesign is not a requirement, but some layout experience (on high school newspaper or yearbook staffs) would be an advantage. New assistants would work with current editors to learn layout design techniques and rules.

No article writing is required. Some caption and headline writing is necessary. Responsibilities also include attending the biweekly editorial board meetings.

Layout editors earn three credits for their work each semester. Students can enroll in the course in every semester.

Students interested should contact the Juniatian's faculty advisor, Amy Mathur (mathura@juniata.edu), before spring registration begins. Students are not permitted to enroll in the course as an editor without instructor permission.

THUMBS UP, THUMBS DOWN

to Tim Launtz, director of residential life, for showing up outside the dorms last week when the new lock systems were activated. He just stood outside for a very long time waiting to help students if they were having trouble. It's no joke, folks…he *is* working with us and for us.

to the people who bash Valentine's Day. It's commercial, you say? It's a made up holiday, you quip? Yeah, we'll see what you haters are saying the year you finally get lucky…in love, that is. You'll be toting that five foot chocolate candy heart out of Wal-Mart, too. Cross our hearts and hope to die. Stick Cupid's arrow in our eyes.

to life imitating art. For last week's 50th Annual Grammy Awards show, Amy Winehouse was temporarily released from her substance abuse program in order to perform her Grammy-winning hit, "Rehab." After the show, they told her that she had to go back to her program. She said, "No. No. No."

to the FAA and LAPD. On Jan. 31, the agencies collaborated to shut down the air space between Britney Spears' home and the UCLA Medical Center where the troubled celebrity was admitted as a psychiatric patient. That's right…thanks to our tax dollars, no one flew over the cuckoo's nest.

Ask the Administration

There have been rumors floating around campus that Muddy is going to quit offering meal exchange. Is there any truth to this? What reasoning would there be for Muddy to end meal exchange in the first place?

The rumors are true and have a better scenario for students. We have developed meal plans that are block plans with generous DCB. Students will now be empowered to purchase, or not purchase, as they choose. It will be a truer retail format (Food Court- not Cafeteria # 2) especially after this summer's exciting renovation.

It's much more convenient for hungry students to eat in Baker now that some of the same subs and wraps that are upstairs in Muddy are now offered downstairs because students can get seconds and thirds for the same price they would pay at Muddy for one. Is this new change affecting Sodexho's profit?

Not really. In the beginning, yes guests did eat two and three sandwiches sometimes. Who could blame them? Did you try the Cuban Stacker? It was awesome. Patrick and I realized we needed to infuse some fresher ideas and offerings. More changes are on the way. We are also conducting the second round of surveys this year. We will be making modifications based on the outcomes. Our goal is for all our guests to have an enjoyable experience and we are committed to it.

Hal McLaughlin
General Manager, Sodexho

You can ask the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective." Though he has plans for his column this semester, the president welcomes topic suggestions.

When Kepple cannot submit his column, due to College-related travel, Provost James Lakso will offer his take on a topic pertaining to campus.

For the "Ask the Administration" feature (see above), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwarded to administrators via the Juniatian's e-mail account.

Make the Juniatian work for you

The Juniatian encourages members of the campus community to send the editors news leads, story ideas and general questions to be investigated.

In order to publish a newspaper that appeals to the interests and needs of the entire campus, the staff also accepts requests for coverage of student achievements, club events, academic departmental happenings, residential life programs and other campus-related activities.

Please send your suggestions or requests to juniatian@juniata.edu. Or submit your idea(s) anonymously to the Juniatian's post office box, #667.

Thinking about thinking: convicts are people, too

continued from page 9

a doctor? Maybe he has changed his ways.

Svensson proved himself through exceptional coursework and questions about his past were never raised. The discussion really centers on a question of human nature. The answers to the complicated questions at hand rely on the answer to one simple question: Can people change?

From one point of view, it can be argued that Svensson possesses the 'know-how' and intelligence to prove himself as a capable doctor. Is it right to deprive the public of a competent medical professional? If human nature is essentially determined by nurture, then it seems reasonable that a person who made unacceptable decisions in the past can be turned around. These ideas can be used to build the argument, made by human rights groups, that Svensson's expulsion was unjustified.

On the other hand, if human nature is essentially determined by nature, then it will most likely be argued that Svensson cannot be trusted. Once a bad apple, always a bad apple. If a person's identity and character are determined at birth, there is no rehabilitation project that can ever reform a convicted murderer.

However, there are not only two options. There are some who argue that human nature is determined by a combination of nature and nurture. This makes the issue even more complicated. There is also the notion that a 'medical professional' is not just a person with the necessary practical skills. Some suggest that a doctor is also a person who makes the kind of rational, moral decisions which a man guilty of murder has exhibited he does not understand.

The public places an almost unreasonable trust in medical professionals. Would the case be different if Svensson were training to be an architect and not a doctor? Is this a question of trust in the individual or comfort for the public? Which should be more important? It is always interesting to see how basic assumptions about human nature can determine policy and action in a very real way.

Classic Juniatian

Party policies basically unchanged

Use of lounge areas encouraged by increased occupant capacity

Social functions at Juniata will be basically under the same regulations concerning the use of alcoholic beverages as last year. The emphasis this year seems to be placed on the utilization of the lounge areas provided by each dorm for social activities rather than halls, dorm rooms or stairways.

In order to encourage use of the recreation rooms for parties the capacity which the lounges can accommodate has been raised in several dorms across campus including South, Tussey-Terrace, Sherwood and East Houses. The number of half kegs available for consumption has also been increased in a few of the dorms.

The typical "Tower" parties are now nonexistent. The assemblage of students in the halls and stairwells constitutes a fire hazard and is in violation of the alcohol policies. This applies not only to East Houses but also to similar affairs anywhere on campus.

Non-alcoholic beverages must also be present at every party in a ratio of 15:1; that is, for every half a keg of beer, one gallon of non-alcoholic drinks must be supplied. A certain percentage of money must also go toward the purchase of food. Additional policies and guidelines were distributed to all students at the beginning of the term.

Failure to adhere to these policies will result in an administrative hearing before the Dean, from which further disciplinary actions may result.

- Kathy Novak

Career Day tomorrow in the IM Gym

On Friday, Feb. 15 from 11 a.m. until 3 p.m. Juniata will hold a Career Day in the IM Gym of Kennedy Sports and Recreation Center. Dress code for the event is business casual. It is not necessary to register for the event.

Career Day is sponsored by the Student Alumni Association, the Alumni Office, and the Career Services Office. It is a combination of Student Alumni Career Connection with the Annual Eagle Expo Job and Internship Fair.

Career Day is designed to allow students to network, explore career options, and get advice on what classes to take. Students can also get talk with alumni about applying to grad school, writing a resume, what classes to take, and how Juniata benefitted them.

Several employers will also be attending Career Day. These employers include FedEx Ground, Hershey Entertainment and Resorts, Office of Attorney General, Tyco Electronics, and many more.

Klaus Jaeger Film Festival

Juniata students and community members celebrate 36 years of teaching

Nicole McCloskey

On Jan. 30 through Feb. 1 the Clifton 5 movie theatre in downtown Huntingdon held the Klaus Jaeger German Film Days. The event, in honor of Juniata German professor Klaus Jaeger, was brought all the way from Germany by 1994 Juniata alumna Jennifer Jones. The festival included three independent German feature films, one short film, two of the directors and workshops on Documentary Filmmaking and Cologne Tribes.

Klaus Jaeger, who will retire in May, learned of Jones' intention to hold an event in honor of his retirement last spring. Jones organized and planned with the College for over a year to hold it as a College function. The Clifton 5, Juniata College and Goethe-Institute, New York sponsored the event.

Jones is the program director of the European Union's digital film project "Europe's Finest", as well as the manager for the Internationale Kurzfilmtage Oberhausen. She chose the films and directors based on availability and interest of the directors. Jones said, "All of the filmmakers, especially Rainer Knepperges and Anja Drescke, as well as Franz Mueller, are personal friends of mine from Cologne and filmmakers with great success in Germany and abroad."

Wednesday's events began with the short film by director Berhard Marsch titled, "Cologne Movements." The feature film, "Science Fiction," directed by Franz Mueller was next on the list. The film was based on finding a passage to a parallel universe.

The first night's large turnout continued throughout the festival. Senior Jonathan Knepp said, "The theatre was almost entirely full every night."

Thursday included a workshop on Documentary Filmmaking hosted by Dietmar Post, co-director of the feature film for that evening. The film, "Monks: The Transatlantic Feedback," is a documentary based on the American G.I. band, The Monks, that formed during their stay in Cold War Germany. Post's brief before the film detailed the struggle of bringing it together. After 10 years, Post's team incorporated all the footage necessary to provide a comprehensive story through the journey of The Monks. Following the film, Post held a question and answer session.

Drechke offered a workshop titled, "Cologne Tribes: Carnival, Re-Enactment and the Invention of Tradition in German Popular Culture" on the festival's final day

The evening's feature film, "The Career Changers" was directed by Knepperges and Christian Mrasek. The film follows two best girlfriends as they kidnap the boss of a major telecommunication company. Knepperges was present for the screening of this film.

When asked how he felt about the outcome of the festival, Jaeger said, "The event was a tremendous success…It was a very stunning, classy event with many students in attendance."

Klaus, a native of Kiel, Germany attended Ohio State University where he received his M.A. in German literature. He earned his Ph.D. at Pennsylvania State University. Upon arrival at Juniata in 1972 he began his teaching career and was involved in many campus activities. He was the first head coach of the Juniata varsity soccer team and head coach for the varsity men's tennis team. He also once served as an assistant football coach.

When asked if he was looking forward to retirement Jaeger said, "It's sort of a mixed feeling. I have one eye with a tear in it and the other with a smile."

Jaeger's post-teaching plans include traveling to Canada for the Shaw Festival and spending some time with his daughter and grandchildren who live in Oregon.

Christopher Shannon / Juniatian

Juniata alumna Jennifer Jones ('94) and professor Klaus Jaeger pose outside the Clifton 5 before the Klaus Jaeger German Film Festival on Jan. 30. Jones created the event honor the German professor before his upcoming retirement.

Hunting down Huntingdon

the quest for economically priced toilet paper

Romeeka Gayhart

It was 1 a.m. when we pulled into the parking lot for the first time. The tender glow of the Wal-Mart sign illuminated rows upon rows of station wagons and the freshly tilled asphalt. When the electric doors slid open for us, we blinked back the fluorescent lights to see our neighbors and colleagues, with similar looks of wonder, marveling at rows upon rows of economically priced toilet paper and party favors. Finally, there was a place in town to buy racing stripes for our Neons. A place to find matching outfits for our dogs. Finally, Wal-Mart had come to Huntingdon County.

Those of us who are old enough to remember Huntingdon county pre-Wal-Mart can recall the mixed feelings that its arrival evoked. Sure, we all knew Wal-Mart was evil…but we were sort of tired of driving to Lewistown to find reasonably priced shampoo. Now, after two years, many of us take Wal-Mart for granted.

We should never have allowed ourselves to be seduced by super savings.

Regardless of your gender, religious or political affiliation or nationality, Wal-Mart is an industry that we can all get together to hate. Even Sam Walton is rolling around in his 100% American-Made coffin. What started as a tiny chain of variety stores has turned into a multimillion dollar conglomerate that is literally sucking the life blood out of America through a twisty straw. The visual is excessive, but facts warrant it.

According to an Iowa State University survey, after 10 years of a Wal-Mart being built, the cumulative sales of local businesses decline by 34%. This shift might be acceptable if Wal-Mart was a viable source of employment. According to wakeupwalmart.com, Wal-Mart employees were so poorly paid that they were eligible for $2.5 billion dollars of federal assistance fund in 2004.

Where does the money go?

Seventy percent of Wal-Mart's products are made in China. In 2004 Wal-Mart reported spending $18 billion on Chinese products alone. WakeUpWalMart quotes the China Business Weekly, "If Wal-Mart were [sic] an individual economy, it would rank as China's eighth-biggest trading partner, ahead of Russia, Australia and Canada."

The good news is that, in Huntingdon county, there's no reason (or excuse) to shop at Wal-Mart. Pre-Wal-Mart businesses are still kicking.

As far as food stuffs are concerned, the smaller grocery stores (Weis and Giant) rival Wal-Mart in selection. The first Giant supermarket was actually opened in Lewistown, Pennsylvania although the company is now a subsidiary of the Dutch business Royal Ahold. Weis Markets, a small company founded in Sunbury, Pennsylvania, is an important buyer of Pennsylvania's produce. The walk to Weis from the College is both short and involves cutting through a playground. It's a great weekly moment of Zen.

Personally, I prefer the smaller markets. Brenneman's Meat Market (211 South 10th Street) and Country Garden Markets (on Route 22) are located within walking distance from one another.

The two markets offer produce and meat that is fresher and often cheaper than what can be found in Wal-Mart. Despite traveling to two stores, I find that it takes me less time to buy what I need when I don't need to wait in line behind someone buying a month's supply of cat food at Wal-Mart. I am also statistically less likely to walk out of a market with stuffed animals, pet fish, bulk packages of macaroni and cheese, and any other items that inevitably end up at the bottom of any Wal-Mart cart.

Wal-Mart can also be avoided when shopping for household items. Although thrift stores for are not recommended for, say, purchasing toilet paper, they come in handy for spare irons. Pick up a phone book and call ahead to local thrift stores. Chances are they have exactly what you're looking for under five dollars.

Students are typically busy, lazy and have credit cards. We're prime fodder for Wal-Mart, and its self-

Anything But Ordinary

Blue Bloods

Claire Williams

The living have long had a fascination with youth, the undead and the rich. Author Melissa De La Cruz has managed to combine these elements into "Blue Bloods," a book series with some interesting new takes on old vampire tales.

"Blue Bloods" focuses on Schuyler Van Alen, a girl living with her grandmother in New York. Despite the fact that her family did not enjoy the wealth they once did, she still attends Duchesne, the private school for the elite. Although she tried, nothing about Schuyler fit in with the kids she hangs out with at school.

Along with Schuyler we see Cordelia, her grandmother. She has raised Schuyler from a young age and has groomed her to fit in proper society. Other characters include the Forces and other students who attend Duchesne, along with their families.

When she turns 15, Van Alen finds out she is a Blue Blood, that is, a vampire. When other Blue Bloods her age start dying, Schuyler and her friend Oliver try to find out what's happening. Later we find out more about what is killing the teen vampires and why.

There is so much more to these books than I can possibly explain without ruining the story. And I do hate to spoil a good book. You have to read them without knowing much more than what's on the book jackets. The twists have to be discovered as you read and be processed as they come.

One of my favorite things about the books is how De La Cruz combines elements of New York, like fashion and clubs, seamlessly with vampires. I also enjoy her take on the vampire mythos. It is an unusual one that really makes the reader think but it also gives a very concrete root to where the vampires originated.

De La Cruz weaves the pieces together without making the reader feel like they are jumping from place to place. As with the mingling of New York and vampires, she slides history into the story naturally. Every element works together to make an engaging story and works to build the layers that surround the Blue Blood culture.

Readers coming into the series will have the first three installments ("Blue Bloods," "Masquerade" and "Revelations") already available. De La Cruz has said on her Web site that there will be six more books in this series.

Some other, older books that also humanize vampires include LJ Smith's "Night World" books. Though they have fallen mostly out of print, some are still available on Amazon.com.

You can find the "Blue Bloods" series at most bookstores or online. Melissa De La Cruz can be found online at www.melissa-delacruz.com.

Midnight Movie

Christopher Shannon/ Juniatian

Sophomore Lauren Conley and freshmen Corryn Kosik and Elizabeth Buenzli order refreshments before going to watch a movie sponsored by Circle K's Midnight Movie event on Feb. 9 at the Clifton 5. For admission, students paid $1and a canned food item for charity. The Clifton 5 hosts such events each year, showing several different movies simultaneously to accommodate the usually large student crowds.

The Director s Chair

"No Country for Old Men"; Oscar nominee for best picture lives up to hype

Bennett Rea

"No Country for Old Men" deserves every accolade that is thrown its way. The film is flawless. Everything, from acting to atmosphere, is perfectly executed. The directors, Joel and Ethan Coen, have created a dark and thrilling masterpiece that will surely be known as their greatest work.

The story begins when a simple southern hunter named Llewelyn Moss (Josh Brolin) stumbles across a drug deal gone awry. He finds trucks filled with drugs and bodies strewn everywhere. He also finds a case containing two million dollars and decides to take it with him. This is how the paths of Moss and a psychopathic killer named Anton Chigurh (Javier Bardem) cross. Chigurh is set on retrieving the money, and the movie plays through as a taut, and extremely intense, cat and mouse chase.

Throughout the film, a Texas sheriff (Tommy Lee Jones) is involved in trying to protect Moss and more importantly, to philosophize on the current state of life. His musings make the film so much deeper and serve to explain just what the title means. Parallels between what he's talking about and what Chigurh and Moss are going through are perfect.

Probably the most important aspect of "No Country" to praise is the acting. Brolin is excellent, and the smaller roles played by Jones and Woody Harrelson add to the film tremendously. However, it is Bardem's frightening portrayal of the psychotic Chigurh that will remain with viewers long after the film ends. His haunting expression and deep, coldly sinister voice make him so incredibly intimidating that one would wonder if Hannibal Lecter himself wouldn't be skittish after hearing it. Chigurh is cold-blooded and relentless in his killing, but there are also pieces of his dialogue that are equally disturbing. You don't know whether to laugh at his dark humor or be entirely creeped out by what he's saying. It ends up being a mix of both.

Final Take:

★★★★

"No Country for Old Men" is now playing at the Clifton Five in downtown Huntingdon. It is rated R for strong graphic violence and some language.

The feel of the movie is also perfectly directed by the Coen brothers. The lack of bright colors and the desolate landscapes used portray an almost post-apocalyptic world, even though it is set in 1980. There is also appropriately very little music in the film. The lack of music makes the viewer more uneasy than if a "tense" score were put in. The general unease and anxiety that you feel doesn't stop long enough for a breather. The entire film keeps you taut, tense and very nervous about what is going to happen. Even interludes of the sheriff's musings are not enough to make you feel safe.

The ruthlessness of the world in which Chigurh and Moss operate is astounding. Chigurh especially, seems to have warped morals which allow him to kill nearly anyone he wants (which is nearly everyone). Only a coin toss gives certain people a chance at living. One scene involving a gas station owner and Chigurh is one of the best scenes in any movie in the past year.

The Coen brothers chose to keep with Cormac McCarthy's original novel and leave some loose ends. However, by not compromising its ending to fit Hollywood standards, "No Country" has elevated itself even further above any other film in the genre.

Overall, "No Country for Old Men" is a fantastic film, full of twists and intensity. Its superb acting and seamless pacing make it a heavy contender to win the Academy Award for Best Picture. If it does indeed win, I will be completely unsurprised.

In the Name of Fashion

The history of fashion

Kelly Popernik

The most inspiring part of fashion is one day something is in, the next day it's out and years later it's back again. Twenty years may go by and you may find yourself wearing things you never thought would ever make it back into the fashion world. Does your grandma ever say to you, "I wore a dress just like that when I was your age!" That's because she probably did.

Twenty years may go by and you may find yourself wearing things you never thought would ever make it back into the fashion world.

The history of clothing is worth uncovering…

In the 40s social trends dictated fashion. Forties fashion was greatly influenced by World War II. Before the war New York fashion designers would make their way across the Atlantic to discover what European designers were creating in Paris. Once the war began, such travel stopped. This was the first time sportswear was introduced to consumers by American designers. Sportswear, which is also known as casual clothing has been the largest market in American fashion since.

There is more to remember about the fifties than John Travolta's cool leather jacket with the collar flipped up in Grease and cardigan sweaters. Fifties fashion was simply classic. Women also wore pencil skirts that were snug from their hips to their knees. Cropped jackets were paired with pencil skirts in order to accentuate one's hour glass figure. Not only are these fashions making a huge comeback, fifties swimwear is, too. Those high-waisted bathing suit bottoms have graced the 2008 Victoria's Secret bathing suit catalog.

The sixties were groovy baby! No other decade can even compare. When we picture 60's fashion, we probably think of huge bell bottoms and psychedelic shirts, but it is much more complicated. The invention of the mini skirt by Mary Quant graced the streets of London. Jacqueline Kennedy brought an elegance that no other first lady had done before. She got herself into trouble, though, by wearing European couture designs. Her trademark was boxy jackets and a-line dresses. Other influences that popular culture had on fashion included music by the Beatles. Everyone wanted that shaggy hairstyle!

Seventies clothing is reemerging with its short, loose-fitting minidresses. The Andy Warhol inspired prints are larger than life. Geometric shapes and large buttons are also tagged to this era and can be found embellishing the jackets of large retailers. John Travolta also made his fashion mark on this decade with his white Saturday Night Fever suit. The only thing sweeter was his moves. Wide leg jeans started in the 70s and are currently selling like crazy.

Fashion in the eighties is one that brings back memories of our moms with perms, spandex pants with stirrups, scrunchies and white washed jeans. These are memories we have attempted block and pictures we have tried to burn. Our dads enjoyed working the windbreaker pants that still can only be pulled off by MC Hammer impersonators. Adidas sneakers have been popular since the eighties and will continue be a popular show brand. One fashion trend that started in the 80s became one of the most popular trends of this past year--waist belts. They can be paired with anything from a dress to a tank top. Waist belts can be functional in both the summer and winter. They can even perform magic. I have yet to find another accessory that can make someone look ten pounds lighter just by being worn at the highest point of her natural waist.

The nineties were a sad time for fashion. Two words…shoulder pads. Skinny jeans are the best thing to be reinvented from the nineties. They are a bit on the rock star side but will look great paired with tall boots for winter and ballet flats for spring.

There is a lot to learn from the different decades. Some things should be avoided at all costs (puffed bangs) while others should be embraced. What do you think the fashionable people of 2050 will say about us?

Fun Fashion Tip

In order to make your lipstick glide right on, try rubbing a toothbrush (preferably your own) over your lips to exfoliate dry skin.

Chinese New Year

Kevin Dundore / Juniatian

On Sat. Feb. 9, students, faculty and staff were invited to celebrate the Chinese New Year festival sponsored by the Chinese club. The event offered many authentic Chinese dishes as well as entertainment, including music and other activities. Above, Pat and President Tom Kepple prepare to sample the festive fare.

Feb. 16, 2008
IM Gym

Semi-formal dress & masks are required

$5.00 general admission/ $2.00 for senior class students

Valentine's Day a la America

Geneva White

Like most holidays, Valentine's Day just makes sense. After all, if the mid-February weather isn't enough to get you in the mood for love, half a bag of mini Reese's Peanut Butter Cups can't fail.

Though Thanksgiving is traditionally hailed as the paramount American holiday, in my opinion, Valentine's Day has a lot going for it in that department. What other holiday embodies all the comic lack of substance and odd traditions concerning food and commercialism that are the meat, potatoes and candy hearts of all that America loves in its holidays?

Respecting a well-established formula, the day derives from a much older pagan celebration that was later re-robed in Christian clothes so that no one had to give up a good party. However the pre-Christian version had to do with sacrificing an animal and then beating young women with bloody strips of its hide, not with handing out cards. There's really no telling why that tradition got thrown out.

But we all know it's not really an American holiday without a little bit (oh well, a whole lot) of gluttony, and the traditional Valentine's fare sure lives up. For the most part it's just the regular candy we see all year with some kind of pink, white or red makeover. But hey, it's good news if you're strapped for cash around but in the mood for a metric ton or two of discount sweets on Feb. 15.

As for commercialism, if gross profit is measured, Valentine's Day can't compare with Christmas and Halloween. But what this mid-winter holiday lacks in size, it makes up for in heart...

Valentine's can claim only an illegitimate religious significance and it's not about family or togetherness as much as it is about getting lucky and buying jewelry (in order to get lucky). But to those who would pooh-pooh that as a bad thing I say only: this holiday is about love., If we can't get what we really love today, when can we?

So don't say no to that extra chalky handful of candy hearts this year and don't feel intellectual guilt if you go to the Step Up sequel to please a loved one. It's Valentine's Day baby, and this is America! This holiday is all about celebrating that inner voice of indulgence. And really, what's more American than that?

ROCK STEADY

RED WINE, DISGUSTING BATHROOMS AND RUNNING INTO THE WOODS

Meg White

"Hey guys! Want some red wine?" I was three months into my internship at Roadrunner Records in August when I went to Ozzfest. I had a working pass to aid my boss, with interviews.

We stepped onto the Daath and Devildriver tour bus, and there was Dez, the front man of Devildriver, with a bottle of red. It had to have been at least 100 degrees that day, and the last thing that I wanted was wine. However, to Dez, turning down an offer of wine would be blasphemous. So, I took some in a small Dixie cup. We sipped our wine in the hazy tour bus, enjoying the air conditioning and listening to some crap music from one of the band member's iPods. While Dez was being interviewed, I sat, just looking around, in awe of being on a tour bus.

It didn't surprise me that there was alcohol on the bus. What surprised me was that 12 guys shared this tiny space. It's nothing like "The Lifestyles of the Rich and Famous," where certain artists have a ton of money and can afford a ridiculously sized bus. Here, the two bands were traveling together, trying to save money. Artists that don't sell as many records as say, Tool or Nine Inch Nails, can't afford huge buses all to themselves.

The front area was typical of any bus, with a driver's seat and an extra for anyone who wanted to see the open road. Behind that was a living room type space with a big TV and a small kitchen area. To my left was the tiniest, most disgusting bathroom I had ever seen. A bathroom that at least 12 guys use is not the most pleasant place to be. Probably smaller than a shower in Sherwood, the bathroom included a toilet, a make-shift sink and no shower. There is no such thing as "showering" while you're on a tour bus. That happens at local stops. Past the kitchen and bathroom were the 12 miniature bunk beds and a small sitting room in the back with a couch. Take note, the music industry is not a profession for the claustrophobic, or for those who don't like being dirty.

My favorite part about Ozzfest was meeting four of Roadrunner's bands that were on the road with Ozzy. Part of my job was also making sure that radio stations and video shows met with those bands. My boss let me work very closely with Daath (pronounced like "goth"), because it is a "baby band." This means that they are up and coming and have not hit it big yet.

In the middle of the afternoon before the band went on stage, I had to set up Daath's interview with Rob, the DJ from the radio program "Metal Injection." Going into it, I was afraid because the media plays up the "divas" of the music business. But, the men of Daath were more goofs than divas.

Since it was a hot day, we went underneath a tree to do filming, which was right by a heavily wooded area. Little did I know that the lead singer was completely insane. About two questions into the interview, he led the camera crew into the woods while taking his clothes off. It was my job to make sure this interview wasn't messed up. So as soon as he started running off into the woods, I feared for my job. "Come back! I'm going to get fired!" I screamed into the woods. All the other guys just stood there laughing.

All the band members finally ended up coming back and finishing the interview. The guys from Daath and I bonded that day with a lot of laughing and running around in the heat. I still have a few pictures of the guitarist wearing an orange wig and orange lays (there is never a dull moment in touring).

Going to Ozzfest for free may seem like a fantastic thing for some, but working it is even better. Going on tour buses, meeting bands and getting to know people in the business was eye-opening. Not only are band members incredibly nice, but they're real people who like to goof off and joke around like everyone else.

Just take a mental note. Never take any wine on an empty stomach especially in 100 degree weather, even if it's from an awesome rock star. You'll end up hanging by the toilet regardless of how cool he is.

There's no such thing as "showering" while you're on a tour bus

Hunting Down Huntingdon

continued from page 11

perpetuated myth that the store saves shoppers time and money. Many students, like senior Brosi Bradley, who live off campus are responsible for not only buying their own toilet paper (let's face it, the college toilet paper is too thin to bother stealing), but also cooking meals and ironing clothing. When asked where she prefers to shop, Brosi said, "Weis because it's very close to my house and you can walk there and everyone's really friendly. And the Country Market because they have lots of good fruits and vegetables. It's a very unique experience. It's a much more pleasant shopping experience."

When asked if she thinks she spends more time or money by shopping selectively, Brosi said, "Not necessarily."

Avoiding Wal-Mart is not just for students. Anyone with children will appreciate the value of teaching them that food does not always come from a magic shelf and get paid for by handing a magic card to an un-magically depressed-looking salesperson.

So grab a friend, some good music, a few cloth shopping bags and get ready to feel better about your purchases. If transportation is an issue, I buy groceries once or twice a week. Contact me at gayharr04@juniata.edu. I'll drive you.

Our Country's Good opens tonight

Tonight Juniata Theatre presents "Our Country's Good" in the Suzanne von Liebig Theater located in the Halbritter Center for Performing Arts.

Tickets are $3 for students and $7 for the general public, and are available at the door or at the Info Desk in Ellis Hall.

Additional performances are on Feb. 15, 16 and 21 through 23. All performances begin at 7:30 p.m.

"Our Country's Good" is based on the the novel "The Playmaker" by Thomas Kelly. The play tells the tale of the redeeming power of theater on convicts in an Australian penal colony. A handful of Royal Marine officers and over 800 convicts live side by side in the strange, new Australian continent. Many of the convicts seem to be no more than animals to the officers, and the play explores the developing relationship between convict and jailer.

High expectations & new adaptations

Travis Raup

The 2007–2008 regular season all comes down to three remaining games. The men's basketball team finds itself (7-4) in conference play, which is good enough for third place going into this weekend's dual Landmark Conference showdown versus the Drew Rangers (3-8) and the United States Merchant Marine Mariners (5-6).

The playoff race is very tight and we find ourselves in a position where every game matters Currently only two games separate the first and third place teams. With three games to go, seeding is at stake.

For four seniors, these games are especially important as they lead the team into action for the last few games of their careers. The journey up to this point has been one for the books for this group of fine men.

This group of seniors has seen it all–from last year's miracle buzzer beater loss to Widener in the MAC championship game to switching conferences and having to adapt to a more demanding schedule. Before the conference change, we were a part of the MAC which had games Wednesday and Friday nights. With this rule, many players feel that it is strange to have so many practices during the week without any games in between. So far we have managed to win six of seven home conference games, while winning only one of three away.

Senior point guard Kyle Opitz describes this change as being difficult due to the fact that all Landmark Conference games are slated to be played on back-to-back nights on the weekend.

Senior guard Garrett Bull said the new compact game schedule is "difficult and fun." He said that playing back-to-back games provides the challenge of having to prepare for two different teams at once and staying focused on each team.

Senior forward Brent Ferko describes his experience as being "eye-opening." With playing new teams and traveling to new places, he enjoys the new atmosphere and level of competition. He summed up his experience when he said, "There is nothing like winning two games in one weekend!"

The seniors have also witnessed our basketball program ascend from last place to a team that is not to be taken lightly. Senior forward Brian Cannon discussed his freshman year, recalling that the team did not have a winning record and the year before that we were one game over .500. Amazingly, two years later we were playing in Juniata's first championship game and were literally one jump shot away from winning it all and advancing into the first round of the Division III NCAA Tournament.

The seniors are full of anticipation for the post-season. They want to take what they learned from last year's playoff run to win our program's first conference championship. So far nothing has been guaranteed. With such close conference standings, we have to finish the season strong to obtain a playoff bid.

The season has been full of adventure from traveling to Canada to play three exhibition games to early morning practices and returning from games late at night. So far we've handled it all quite well and have adapted to everything in our way.

The leadership of the seniors and Coach Curley's hard-working mentality has pushed our team into possible contenders for the first Landmark Conference championship.

After our two road games this weekend, we will finish the regular season on Feb. 23. We play at school rival and current Landmark leader, Susquehanna University (9-2). We'll look to avoid the season sweep and to avenge December's four point loss to the Crusaders.

Christopher Shannon / Juniatian

Senior forward Brian Cannon pulls up for a jump shot during Juniata's victory over Merchant Marine on Jan. 18. Cannon leads the Eagles in points per game average with 17.9.

Round two. Making the loop in the Landmark Conference

With little recovery time between contests, the women's basketball team stresses mental game

Emily Hauser

The Juniata College women's basketball team is at that all-too familiar place in our season, looking down the tunnel of opportunity to emerge into the sunlight at the other end. As we head into the second round of conference play, we've given all the Landmark Conference teams the once-over.

It has been a unique year for Juniata basketball because of the switch from the MAC to the new Landmark Conference. We face a host of different teams, as well as a new schedule of back-to-back games every weekend. The new schedule has forced our team to adjust, both mentally and physically.

The weeks become long and the weekends fly by faster than you can blink an eye. "It's tough to focus early in the week. However, it also builds up excitement for the weekend," said junior Kelly Ashcraft.

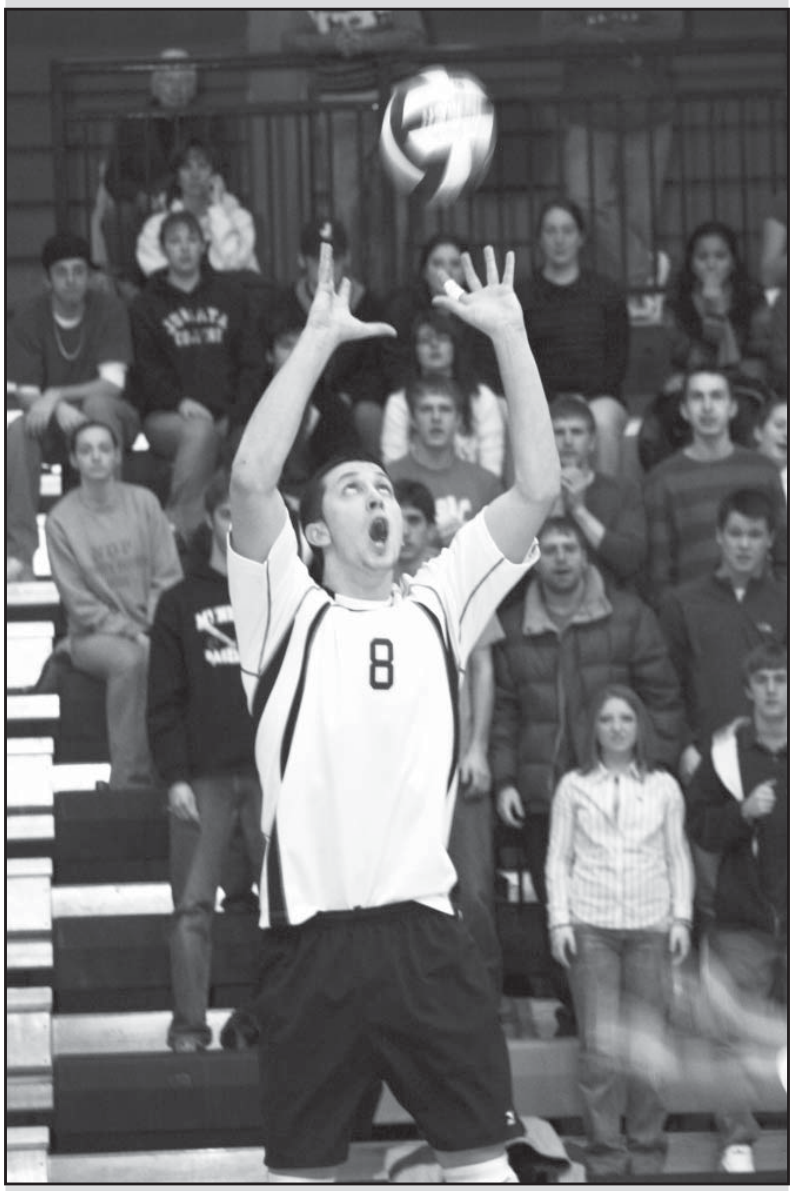
There is something to be said for the competitiveness that comes after a week of beating up on your teammates. It's exciting when we are finally able to beat up on another team.

It's unusual to play basketball in this tournament style so often. Usually, tip-off and holiday tournaments are the only back-to-back games of the year. It affects how the team prepares but also how we structure our style of play between nights.

The first night often needs to be a bit more fundamental and contained, especially on the defensive end. As a transitioning team, the necessity to slow down the pace can be mentally demanding.

> "Playing more contained on the first night takes us out of our element. The schedule has forced us to improve in this skill."
> – Kelly Ashcraft

"Playing more contained on the first night takes us out of our element. The schedule has forced us to improve in this skill," said Ashcraft. She keeps a realistic perspective, however, adding that "It's not like we are the only team making this change. It has just taken some adjustment."



As the second round of conference play unfolds, senior Mindy Werner said, "We can't let physical fatigue affect mental fatigue."

The schedule requires the team to be on its optimal level mentally in order to control the physical side. Physically, we can play with any team in our conference. It's going to come down to how well we perform in the mental aspect of competition. "Our team will 'live longer' in the playoff competition if we have a positive attitude," said senior Jill Walsh.

Throughout the season, we've seen that it's turnovers, especially, that can change the dynamic of the game. We have been focusing in practice on simulating the defensive-style played by our competitors so that our offense can 'practice like we play.'

Practice focuses mainly on what our team needs to be doing bet-

continued page 18

Christopher Shannon / Juniatian

Junior setter Matt Werle sets a teammate during Juniata's 3-1 victory over Mercyhurst on Jan. 25. Werle currenly leads the Eagles in assists with 323 on the season, or 11.54 per game.

Youthfulness is no excuse

Jess Winemiller

Our men's volleyball program has a tradition of excellence. The Eagles are determined to continue this tradition though their roster is less experienced in comparison to previous years. With a record of 4-3, and a disappointing loss to Mt. Olive College, the Blue and Gold were shaky out of the gates.

"We are not where we wanted to do be at this point," said senior Zach Bock after losing to nationally-ranked Penn State University on Feb. 5. "There is a lot of getting to know each other. In the past, we were in a routine."

With 12 underclassmen on a roster of 18 players, Juniata must break out of its routine. It all starts with preparation.

"Practice always reflects how we play the next day," said Bock. When the Eagles fail to keep practice competitive, it carries over into game play. This was the case with PSU, who defeated the Eagles in three straight games.

Playing such a solid team so early does have it advantages, however. Following the PSU defeat, Juniata had a long discussion of what needs to be adjusted in practice.

Focusing on the basics was among the adjustments – passing, cutting down on errors and serving. Over the following days, the Eagles took their preparation seriously for next opponent Princeton University. Their goal was to enter each practice ready to play, according to Bock.

This mentality was displayed on Fri., Feb. 8 as the Eagles soared pass the Tigers in a 3-1 victory.

Juniata continued action at Saint Francis University on Wed. Feb 13. Results were not available as of press time.

Juniata track team starts off on the right foot

Competes against D-I and D-II schools in West Virginia

Caitlin Hinson

Despite negative wind chills and a track in ruins, the Juniata track team has begun its season with lofty goals and great anticipation. We headed to West Virginia University bright and early Feb. 2 to compete in the State Farm Shell games. We held our own battling against Division I and II schools. The day was victorious for many members of our team both young and old.

On the men's side, senior Matt Booth had quite the day. Booth snagged first place in the long jump (6.51m) and fourth place in the triple jump (13.08m). "The meet provided a more competitive environment for the team," said Booth. "It shows how Division III athletes can sometimes be really underestimated."

Matt Bailey also captured a first place in the 5000 meter race, running it in 16:04.82. His time was fast enough to move him into the third all-time for Juniata in the event.

Following close behind was teammate Sam Williams with a time of 16:26.98, which placed him fourth on the all-time list.

Junior Tripp Rudolph followed the dominating trend in the mile, placing fourth in a time of 4:34.57 – an indoor personal record for Rudolph. Rudolph then joined Eric Hoover, T.J. Breya and Shawn Rumery for a third place victory in the 4x400 meter relay with a time of 3:36.88.

On the women's side, there were several top performances. First, Stephanie Varner ended her day with a bang as she seized Juniata's indoor pole vault record with a jump of 2.60 meters (8'6.25"). The triumph was quite an accomplishment for the freshman. "Coming into the season I thought the school record was in reach since I have cleared 10 feet in high school," said Varner. "It has been rough getting used to the indoor facilities, but I think I have come a long way and I hope to continue to improve at each meet to follow."

Freshman Megan McQuillan also had a successful day. She placed fifth in the 800 meter race in 2:32.21 just in front of sophomore teammate Laura Rupprecht who placed sixth with a time of 2:32.34. McQuillan then anchored the fourth place finishing 4x400 meter relay team with a time of 4:24.99. Melissa Johnson, Courtney DeGemmis and Cassie Majocha joined McQuillan on the relay. DeGemmis, a freshman, also had a strong individual finish in the open 400 meter race finishing in sixth with a time of 1:05.00. DeGemmis has quickly proven herself as a significant part of the team. She said, "As for my individual performances, I just always try my best. I came here to run and I don't want to let anyone down. I know what I can do and have done in high school, so when I came here all I wanted to do is that or even better."

"I think our team did well competing against tought D-I and D-II competition. It's a great momentum starter for when we go against the teams within our conference."

– Kelsey Buffenmyer

Megan Lamens had powerful performances on the field. She placed eighth in the long jump (4.74m) and seventh in the shot put (10.86m) ranking her second all-time at Juniata.

Kelsey Buffenmyer tied for a fourth place finish in the high jump with a height of 1.52m.

Landmark Conference Indoor Championships are just around the corner. The opportunity to take advantage of the strong and unfamiliar talent at WVU was not lost. "I think our team did well competing against tough D-I and D-II competition," says Buffenmyer. "It's a great momentum starter for when we go against the teams within our conference."

We return to action this weekend at Susquehanna University to compete in the Susquehanna Open.

New era for Juniata tennis about to begin

Merging rosters and making road trips

Amanda Fontana

On Mon., Feb. 4, the Juniata College women's tennis team finally launches its first spring tennis season ever in the new Landmark Conference. We are anxious to step back on the courts officially for our first traditional season since the fall of 2006. In the new Landmark Conference we will battle both old and new foes.

Our program has a whole new look this season; only three players return from the fall 2006 season and four freshmen join the program. The team will miss two players, Caroline Weisser and Ariel Otruba, who went abroad this year.

Not only is it the first time that we will be play in the spring, but we will be joining and competing alongside the men.

We experienced this new change in this past nontraditional fall season, when our teams competed in three matches together. This new system causes for longer matches with the average being about five hours, but it also allows for more support and team spirit.

Commenting on the men's and women's seasons being together men's player, Jarrad Silver, said, "I think it's going to be a lot of fun practicing and going on away trips with them. We all have things that we can learn from each other and I look forward to seeing how we grow as players and as a team in the upcoming season."

Women's player Maggie Wolenter said, "It's going to be an amazing experience playing with the men's team because they have so much talent and skill. The men are fantastic players and to make it better, they all have great personalities as well. Long road trips will be a good time."

> "We all have things that we can learn from each other."
> – Jarrad Silver

We have had some adjusting to do with the weather as well. Playing in the fall, we were greeted with sunshine and warm temperatures. Starting practice in Feb. is a different story. We have to play indoors in Altoona twice a week just to be able to play on real tennis courts. This takes about five hours out of each person's day. We depart school at 6 p.m. and don't return until around 11 p.m. This is quite a commitment for the team members and can sometimes be stressful, but it does enable us to learn time management skills due to these lengthy indoor practices.

Since, the women's team has four new members, the process of forming doubles teams that work well together and creating team unity are also vital parts of our first practices. For returning members, this is a radically different way of beginning a tennis season. This will take some adjusting to, but we are ready to begin.

Last year our team had a record of 7-5. Coach Beth Bleil expects a similar standing this year, but it is hard to say in the new conference. The goal of our team is to become better players individually and to develop into a stronger team unit. Tennis focuses on the individual as well as the team, so sometimes it is difficult to find a balance. Bleil believes our team will reach this balance and grow stronger this year.

Our team is excited to finally begin our new season and start a new era of tennis at Juniata College.

Christopher Shannon / Juniatian

Senior Kasey Brough celebrates Juniata's lone win of the season with freshman Lindsey Cooper. The victory came on Senior Day and Juniata's only home meet against Chatham on Jan. 26.

JC baseball prepares for 2008 season with new head coach

Shawn McDonald

For most teams, the departure of a longtime coach and the hiring of a new head coach would cause strife and internal problems. Juniata's baseball team is not most teams. Senior Paul Dunklebarger said, "At first, the decision by Coach Zanic to resign was hard to take. However, most of us look at this as nothing more than a change in staff, not our team."

The change comes as Tom Gibboney was named Juniata' head baseball coach on Jan. 7. Former head coach, George Zanic, resigned from the position on Dec. 6, 2007 following his election as Huntingdon's district attorney. Zanic had been at the Eagles' helm for seven record-setting seasons.

Coach Gibboney said, "I'm proud to be the new head coach for Juniata baseball. This year brings a new challenge to the team and to me, and I look forward to the season."

Coach Gibboney was a perfect fit to fill the void on the baseball coaching staff. He had been an assistant coach on our team for the past two seasons and knows us well. Players have supported the athletic department's hiring.

"I'm glad that Gib got the job," said senior Dan Kauffman. "Bringing in someone new this close to the start of the season could have been a disaster. Gib knows each of us and what skills we bring to the team."

Coach Gibboney brings change to a program that had a mediocre 2007 season, finishing 17-17-1. This followed a second place finish and a 30-12-1 record the previous year. Coach Gib, as he is referred to by our team, brings a change of motivation, coaching techniques and professionalism to the dugout.

His coaching scheme is centered on letting our team play, rather than giving us a chance to think and make mistakes. Coach Gib's first change to this year's approach came during practices. About this new approach Gibboney said, "We changed it up this year by starting practices at 6 a.m. and focusing more on the skills of the game, rather than the conditioning part. It's on the players to make sure that they are in shape for the trip to Florida."

Also promoted this year to associate head coach is former pitching coach, Tye Levy. Speaking about his promotion Levy said, "My main responsibilities remain the same; [I'm] teaching and coaching the pitchers through the season and off-season. I will now be running the fall season while Coach Gibboney is with football and I will control all game time decisions concerning the pitchers."

Both coaches are looking forward to the 2008 season. Also joining the coaching staff this year are Mark Campo, Craig Shope and Zeke Eisenhart.

Surprise victory gives boost before Championships

Jess Winemiller

Kasey Brough, lone senior and captain of the women's swim team, has tolerated losing all season. With only three other teammates, Brough realized winning was a long stretch. The Eagles lost their first five matches by an average of 70.2 points. In their last regular season meet, however, Juniata needed one point to edge Chatham University for what the ladies call the highlight of the season thus far.

"It was huge," said Brough. "We weren't expecting it with only four people. They [Chatham] took two firsts just by default."

The two defaults, though, were long forgotten by the final event. The entire team would compete in the 200 meter freestyle relay for the win. A time of 2:06.89 placed the Blue and Gold exactly one second faster than the two opposing teams, and Juniata defeated the Cougars 77-76.

Pulling out this Cinderella victory was a bonus for the Eagles. They began the season with 14 members at the opening meeting which eventually dwindled down to the four that remain. According to Brough, however, four is still a team and she had no intentions of walking away from her last year of competitive swimming.

"If I would have gone, the team would have ceased to exist," said Brough. "There was no way they were going to get rid of us."

Juniata now takes its optimism and high spirits into the postseason. The Eagles will be competing in the Landmark Conference Swimming and Diving Championships on Feb. 15 – 17 at the United States Merchant Marine Academy in Kings Point, N.Y.

Christopher Shannon / Juniatian

Junior forward Kelly Ashcraft looks to shoot during Juniata's game against Catholic on Feb. 9. Ashcraft scored 12 points against the Cardinals and currently is tied for the team lead in scoring with 12.4 points per game. Ashcraft also has a field goal percentage of .549 for the season to lead the Eagles in that catagory.

Landmark Conference round two

continued from page 15

ter. Since it is hard to prepare for two separate teams simultaneously during the week, it becomes necessary for our coaches to really push our limits so that we can adjust to diverse situations and teams and control the games in ways that plays to our strengths.

Rebounding is always another key focus at practice. Both offensive and defensive boards can really put a game into our control. Pulling in boards is necessary for finishing off a defensive series or sparking an offensive attack. It's one of the little elements that makes a huge difference.

Certain factors off the court have also changed because of the new schedule. Weekend games are intentioned to limit the amount of in-class time missed. While this has been successful, being away for the large majority of a weekend affects the amount of time and efficiency with which we can complete our out-of-class assignments.

"Even though we try to get our work done on the bus, there are always distractions like movies and farkle," said Werner. The team really needs to be efficient and not procrastinate during the week to make up for the lost weekends.

Parents are also affected by the schedule. Especially with the 5:30 p.m. tip-off on Fridays, parents have a hard time leaving work in time to make it to the games. This becomes more difficult for those with longer drives.

In order to see the most amount of games and avoid extensive driving, parents will often stay overnight in the same hotel as the team. It's a trade-off because they have to pay for the hotel room but they save some travel time.

Many find it easier to accommodate for the weekend travel. They are mainly excited to see the team's smiling faces at breakfast on the second day.

With fan support and team focus, we are going into the second round of conference play with confidence. There is no room for excuses in this do-or-die atmosphere. The way all playoff paths are made, only guts get the glory.

Title IX triumphs: JC female athletes took home key fall accolades

Staff

Two all-stars, one team

Field hockey players Kim Wagner and Heather Hassinger were named to the ECAC Division III Field Hockey All-Star team on Dec. 10. This marks the second time in two years that Wagner was named to the All-ECAC first team. Hassinger makes her first appearance on the All-ECAC second team.

The honor is one among many for the senior standouts following their team's record setting season. Wagner was previously named to the All-Landmark Conference First Team and selected as the Landmark Conference's 2007 Offensive Player of the Year for a campaign in which she led the conference in every offensive category. Wagner was named a Second Team All-America selection on Womensfieldhockey.com. She earned a Third Team All-America nod from the National Field Hockey Coaches Association (NFHCA). These selections make Wagner a two-time All-American, as she was also included on each of these squads in 2006.

Hassinger was named to the All-Landmark First Team and honored as the conference's Co-Defensive Player of the Year. She also made the Landmark Conference Academic Honor Roll this fall. She was selected as a Third Team All-America by Womensfieldhockey.com. The NFCHA placed Hassinger on its All-Region Second Team.

Juniata's field hockey team set a program record for wins in a season with 21. The Eagles dropped only three contests in 2007 on the way to their first ever conference title and a third NCAA tournament berth. The Blue and Gold upended Johns Hopkins and defending national champions Ursinus College in the first and second rounds before falling to Lebanon Valley College in the regional final.

Regional flare

Juniata's women's soccer's senior goalkeeper, Lisa Russo, was named to the Soccer Coaches Association of America (NSCAA) / adidas Scholar All-America East Region team. She was one of three Landmark Conference players named to the regional squad.

JC Softball: Family in a game of inches

Amanda Rose Albanese

The Juniata College softball is well known on campus for our loud voices and never-ending laughter throughout Baker. But this group is more than a team, we are a family: a family entering 2008 with a vision to succeed on the softball diamond. Our team ended the 2007 season with a 13-17 record. Victories were often an inch away, and with the return of the entire roster, there is much hope for success ahead.

Head coach John Houck, along with his assistants Ed Habershon and Kevin Flasher are very excited about the upcoming season. "With the return of the entire team from last year and the start of a new conference, this should be an exciting year for the Juniata softball program," said Houck. He feels that the 2008 season is a great opportunity for the Juniata softball program to make a statement against a new group of competitors.

What will make our team succeed in 2008? What will push us that extra inch? Co-captain, Tara Carl said, "Losing isn't an option this year, and we'll expect nothing less than a winning record." We have been working hard since September and are earnestly waiting to prove to Juniata and the Landmark Conference what we capable of.

The current success of Juniata athletics in the Landmark Conference has put great hope into our team. Carl said, "I've got very high expectations for this group of ladies and I know that they will give their all every time they set foot on the field."

Pitching will play a key role this year. We are lucky enough to return sophomore hurler Alyssa Erb. The Hollidaysburg native broke two Juniata pitching records in her freshman season.

Defensively, the team is solid. With the exception of a few player moves, the defense is almost identical to last year's squad.

According to our coaches, hitting will be a third tool for success. Houck said, "We need to be able to move runners and hit with runners in scoring position for us to have a chance of being successful."

Although we are young, fielding only two seniors, we are experienced. Kaleigh Driscoll and I have played together now for three years, bringing familiarity and leadership to the table. The coaching staff has given us a huge responsibility in regards to leadership. "They are on the field to be the voice," said Habershon, a true believer of playing his veterans., "Nobody has been in more games than they have."

Coach Ed has great hope for the sophomore and junior classes to excel this season, especially considering what the sophomore class will have to offer. With a year of college competition under their belts, they are in a perfect position to step up.

"I've got very high expectations for this group of ladies and I know they will give their all."
– Tara Carl

Last season, four players led the Eagles offensively. Sophomores Sarah Eckard, Stacy Nagy and junior Carl all hit above .300. Nagy achieved a batting average of .420, earning herself a spot on the 2007 All-Commonwealth Conference Team. Nagy is set to have another standout season. She has earned herself a stable position at first base and will be looked upon to continue her reign of solid play.

Every team goes into a season with a set of goals and ours is no different. Undoubtedly, we want to have a good season and finish above .500. "Who knows where being .500 will get us?" said Driscoll. "That could mean we're in the playoffs and that is fine with me."

The program has not reached post-season play since 2004 and now is a great time to go back. Habershon's goal for the season consists of a no-strikeout mantra. "That's what made us better," Habershon said, in reference to the 2007 season. Last spring, we cut down our strikeouts, taking away 73 free outs from our opponents.

On Jan. 28, we began our quest of inches. With the winter weather, the Intramural gym has become our practice domain and our main focus has been fundamentals. On March 2, our hard work will pay off as we step foot on the diamond for the first time this year. Our fundamentals will be fine-tuned and inch-by-inch we will prove why being a part of our family is a reason to be proud.

Female athletes winning games, winning awards

continued from page 18

Russo, who posted an impressive .782 save percentage on the season, led her team to its first ever post-season appearance in 2007. The Eagles fell in the Landmark Conference semi-final match-up to the University of Scranton.

National recognition

Women's volleyball player Amber Thomas was named one of the 11 finalists for the Collegiate Women Sports Awards' 2007-2008 Division III Collegiate Woman Athlete of the Year. The award winner will be announced on June 23 at a ceremony at Columbia University.

Thomas' selection as a finalist comes after another successful season for the junior outside hitter. She was named Division III Player of the Year by the American Volleyball Coaches Association (AVCA) and was placed on the AVCA All-America First Team. Thomas was honored as the first ever Landmark Conference Volleyball Player of the Year. She was also included on the All-Landmark Conference First Team and the conference's Academic Honor Roll.

This season, Thomas led the Eagles to the NCAA Division II Final Four for the third time in her three year career. Juniata could not defend its 2006 national championship, losing in the national semi-final to UW-Whitewater.

According to a Juniata press release, "The Collegiate Women Sports Awards program, now in its 32nd year, is sponsored by the American Honda Motor Co., Inc., which will donate $1,000 toward women's athletics at Juniata College."

Thomas' nomination is the second for a Juniata athlete. Former women's volleyball player Stephanie Kines was a finalist for the award in 2006.

Upcoming JC athletic contests

2/22 Men's volleyball vs. East Stroudsburg University, 7:30 p.m.
2/23 Men's volleyball vs. New Jersey Institute of Technology, 7 p.m.

*Can't attend the games? You don't need to miss the action. Check out "Live Stats" on the Juniata athletics Web site. On the site, click on the team's page. Find the game being played on the team's schedule (right side of page) and select the "Live Stats" to read all the action as it unfolds.

FEBRUARY 28, 2008 | JUNIATA COLLEGE | VOLUME 89, ISSUE 7

NCAA considers DIII structural changes

Proposed division and restrictions could change the face of Juniata athletics

Jess Winemiller

The National Collegiate Athletic Association (NCAA) recently formed the DIII Working Group on Membership Issues to research the possibility of adding a subdivision to Division III (DIII) or creating a completely new division.

Currently the NCAA divides its programs into three divisions (DI, DII and DIII). Due to the rapid growth and diversity between old and new members, the role athletics play within the DIII membership is becoming a concern. The provisions of a proposed subdivision or new division are not set at this point.

"We really do not know what this division is," said President Tom Kepple. However, schools pushing this separation want more restrictions. They want stronger limits on aspects such as, but not limited to, off-campus recruiting and *non-traditional seasons. (*see box on p. 6)

Coaches might no longer be able to attend high school games in order to recruit athletes for their teams. Additionally, the number of organized competitions and practices outside a sport's *traditionally defined season could be lowered. These discussions are all in preliminary stages, however, and are open to question.

"People can relax on this one. The chance of actually dividing at this point is relatively small," said Kepple.

Approximately 150 institutions must approve a new configuration. It would then be up to these members to determine the rules and focus of their new grouping.

The name of this structural change, if implemented, is also to be determined. It could be a numeric designation (DIV or DIII-A) or a proper name (Roosevelt Division or Roosevelt Subdivision). According to head women's soccer coach Scott McKenzie, the NCAA must market the product correctly. Otherwise, a degrading connotation could be associated

Spicing up Muddy Run

New food options and seating plans on the way

Christina Gongaware

When students return to classes next semester, they will not find the Muddy Run Café that they have become accustomed to seeing. A new food court style format will bring new menu options and seating arrangements.

Mexican-style food choices and a new "Jitter's"-style coffee bar are just two of the new food options that are part of Juniata's most updated plans for Muddy. "Salsarico," "Cyclone Salads," and "Sub Connection" are a few of the names that will tentatively be used for the new kiosks.

All of the classic meal choices

Fitness center: possibility of extending hours?

Sara Cieslewicz

Students in the Facebook group, "Extend the Fitness Center (aka GYM) hours!!!," are attempting to change the Kennedy Sports and Recreation Center hours to include the8-10 a.m. time slot on Mondays, Wednesdays and Fridays.

Junior Maura Collins, creator of the group, wanted to see how many people would support the gym being open from 6 a.m. to 9 p.m. straight, instead of closing from 8 a.m. to 10 a.m. Seventy-six members have already joined.

Students consider these hours valuable because of crowded facilities during popular hours. They also see the proposed change as an opportunity for more student job hours and greater flexibility for athletes to get in mandatory workouts amongst hectic class schedules. A few students see it as a chance to further the hour extension until 11 p.m. in the future.

According to Larry Bock, the athletic director, the fitness center staff has attempted several different hours of operation and the ones now in use are the ones receiving the most and longest uses for the facility. Bock added that $25,000 a year is put towards upgrading the fitness center with more machinery in hopes that it will help the crowd.

Collins, however, does not think adding more machines is the solution to an overcrowded gym. "It is cheaper to extend the hours so it is not so crowded at a peak time instead of trying to cram more equipment in there," she said.

In response to adding more hours, Bock said, "We are pretty sure that seventy hours is a lot to be open… [To add more] we would have to get funding ... It is not a great deal of money, but we

JC & St. Francis to share nature at Raystown Field Station

Alison Rihs

Next spring, Juniata will offer students the opportunity to spend a semester immersed in the woods at the Raystown Field Station (RFS). A new addition to the existing fall semester RFS programs is a partnership with St. Francis University. Both schools will provide professors to offer a team-taught non-traditional learning experience.

This science-themed program requires professors from both schools to work cooperatively to create an educational setting. For the semester, 14 students will live in the field station dorms. This is the first time Juniata has partnered with another institution for this type of project.

Chuck Yohn, director of RFS, said, "We will take seven students from each institution. …Each student will take all four classes."

Given the specific courses to be offered, the program is aimed toward zoology, wildlife conservation and ecology POEs.

Yohn and Vince Buonaccorsi, associate professor of biology, will teach Vertebrate Zoology and Biostatistics, respectively. St. Francis' Lane Loya, associate professor of biology, and Sue Morra, professor of biology, will lecture General Ecology and Animal Behavior.

Although the classes will be individually taught, Yohn said, "Ecology and Biostatistics both have projects that are likely to become integrated."

Dennis Johnson, associate professor of environmental sciences, explained why Juniata chose to collaborate with St. Francis University. "Initially it was common interest and proximity," he said. "We had been talking with St. Francis about a possible joint semester in Sustainable Business. …We hosted a conference at the field station last fall and [they were] very interested," said Yohn. He also explained that St. Francis has a wind power initiative similar to Juniata's.

Some students who do not want to study abroad can choose the RFS as an alternative off-campus learning experience. When not in class, students can go kayaking, hiking or simply admire the scenery.

Junior Brian Pearson, who had studied at the RFS said, "There are a ton of research opportunities, both on the lake and on land. The rooms are significantly larger than rooms on campus, with carpeting, ceiling fans and plenty of other things that make it feel just like home." He also liked having a full-time chef available, as opposed to the food from Baker.

Senior Genna Huston enjoyed her time at RFS in fall 2006. "I absolutely loved it. It was probably one of my best semesters I have spent at Juniata. …There was so much hands-on experience; it was great. And to be able to…go out in the field and actually collect the data you would work with was pretty cool." She also said that living in close quarters was a good lesson in dealing with others.

Students admitted that there were some drawbacks to the program. Pearson said that being away from campus makes it difficult for athletes to go to practices every day. Also, spending all day with a small group of students can be frustrating.

Juniata originally tried introducing "Humanities in the Woods" which would have allowed students from different POEs to experience the RFS. However, low enrollment (less than five students) forced its cancellation this spring.

Provost James Lakso believes that the College will try to reintroduce a similar idea in the future. "Absolutely. We're not giving up on that," he said. The spring '09 program will not replace the "Humanities in the Woods" concept. Instead, it is meant to provide "different program opportunities" for the students, according to Johnson.

Yohn said, "It's the intense focus and integration. …When you have an integrated semester, multi-disciplinary and inter-disciplinary connections are made. Because students are embedded in the field, they become embedded in their fieldwork and get more out of their project experience."

Preregistration for the spring '09 semester begins in March. The only extra cost for the RFS semester is the standard lab fee.

Lock-in for area middle school students

Juniata student to raise money for local lukemia patient

Sarah Ruggiero

Sophomore Gillian Thomas and the Huntingdon Community Center will host a lock-in at the center to raise money for Caleb Cook, a local child suffering from Hodgkin lymphoma, a form of leukemia. Though there is not a determined date at this time, the lock-in will take place sometime in March.

Thomas met the Cook family last year when she became involved as a volunteer at the Community Center. She helped with the afterschool program that the Cook children attended.

"I have an attachment with the kids and their family," said Thomas.

Thomas is expecting 6th to 8th graders from Huntingdon, Mount Union and Juniata Valley to attend the lock-in. Students will enter the center at 7 or 8 p.m. on Friday and be released on Saturday at 10 a.m. Events already planned consist of sports, team building activities, skating and arts and crafts.

Thomas is looking for volunteers to supervise children during the lock-in or anyone willing to contribute ideas. "I need people there all the time. I need people on every floor at all times," she said.

"Thinking about what Gillian's doing, thinking about kids helping another little boy, you don't realize what you are a part of," said Anna Elias, the coordinator of career services & community outreach.

Although a profit will be made from the concession stand and the entrance fee, Thomas is still looking for sponsors and donations from community.

"I would just like to raise the money for the family and let them know we're thinking about [Caleb]," said Thomas.

Anyone who would like to become involved should contact Gillian Thomas at thomagm06@juniata.edu.

Have PRIDE in your community: Upcoming telethon

Sarah Ruggiero

PRIDE will hold its annual fundraiser, the Huntingdon County PRIDE Telethon, from Mar. 26-29 at the Smithfield Fire Hall. All events will be broadcast locally on channel 17.

All money raised supports the functions of PRIDE. In recent years, the telethon has raised over one-third of the organization's annual operating budget.

PRIDE stands for the organization's commitment to Promoting, Rehabilitation, Independence, Dignity and Education for people with special needs in Huntingdon County. The organization's mission is to "provide programs which enable people who are developmentally and/or physically disabled to function at their optimal level of performance."

"The big thing the telethon helps with is PRIDE awareness. It is important to alert people about what we do," said Joel Pheasant, director of technology solutions center and an eight year volunteer and current member of the PRIDE board of directors. "It's not just the telethon, we're much more. We want to make everyone aware of all our services," he said.

The telethon opens with a wing-off, which will be held on Mar. 9 from 1-4 p.m. at the Smithfield Fire Hall. This will be followed by a combination of a three day auction with a 'PRIDE Idol' talent show. Local businesses, individuals, organizations and schools sponsor the events and donate goods and services to the auction.

"It's a very good organization to support and we love to get people involved. The College prides itself on community service. If people are looking to volunteer, give us a call. We're always looking for help," said Pheasant.

"We need students to help on auction days [from] 4:00-12:00, or any parts thereof, on Wed. Mar. 26 through Fri. Mar. 28," said PRIDE director Sandra Baer. Students may register by contacting apfingstl@huntingdonpride.org.

To find out more information about PRIDE, visit http://www.huntingdonpride.org.

Say cheese, save cash

Juniata College photo contest

Juniata's marketing department is currently sponsoring a campus-wide photo contest. Students are encouraged to submit candid photos of all aspects of campus life, including club events, academic field trips, dorm life, campus happenings, etc.

All photos entered will be considered for the contest's grand prize—free books for the fall 2008 semester from the Juniata College Bookstore. If the winner is a senior who graduates this May, s/he will receive a $400 gift certificate to amazon.com.

To submit photos, a student must:

1. Create an account at www.flickr.com
2. Upload photos to an album.
3. Join the Juniata College Photo Contest Flickr Group.
4. Send photos to that group.

The marketing department will display a winning photo each week on the College's Web site under the "Campus Life" tab. To see each week's winner, choose "Photo contest" on the page's sidebar.

A panel of Juniata administrators will choose the grand prize winner to be announced on April 30.

Upcoming Muddy renovations

continued from page 1

will still be available with the several additions. Seating choices will also be increased, including booth-style seating. This new area will be available 24 hours a day for students to congregate and study. Muddy Run itself will retain conventional serving hours.

The new coffee bar will also accommodate the needs of students. A walk-up window facing Cyber Café will be available. This will allow it to remain open during student events in the ballroom, according to Hal McLaughlin, manager of Sodexho. "If enough students get together and want the coffee bar open later at night, we can do that," he said.

"The school has known for years that [Muddy] needed a facelift," McLaughlin said. "It's a big project….The blue and gold rooms are going to have to be gutted, but I think that the end result is going to be very nice and students are really going to like it."

Freshman Stephanie Strauss agreed that renovations are needed. She said, "There was a lot of unused space and a lot of the furniture was outdated. There are a lot of changes that definitely have to be made."

Freshman Jacqui Johnson also approved of the changes that are being made. She said, "I think that Muddy Run really needs more space and is always too crowded, especially on chicken tender Thursdays. There aren't that many choices, either, so I think that the renovations are pretty overdue. I don't think that too many students are going to disagree with what is going on."

These changes will not be only structural. According to the most up to date plans, meal exchange will no longer be available. McLaughlin said that "taking away meal exchange offers students more choices." He also said that extra DCB will be offered next year to cover the difference.

The final decisions on meal exchange and DCB have not been made, however. The Dining Services Committee, composed of six students in all four classes, is still working with Sodexho to make their ultimate choice.

Meal exchange is currently available at Muddy Run for a greater span of time than at Baker Refectory, and offers students an alternative to the cafeteria. There is no set date as to when Juniata will make its final policy on the subject.

Staci Weber, director of student activities, said the Dining Services Committee has shared a great deal of influence on these changes. These students have helped look over floor plans and ideas since the beginning of the project.

"This is a continuous process. Last week we looked at an updated version, and hopefully next week we will have another one to take a look at," she said.

The same students who sponsored Juniata Top Chef are being "productive and reactive to the current changes," said Weber. From complaining about "too much water in the pasta to students wanting more organic food," Weber said that students are changing the way Juniata eats.

McLaughlin added that Sodexho greatly supported ideas of expansion and collaborated with Juniata to create a floor plan that students would approve of and enjoy. He said that it has been a long process and that several ideas and options were considered.

New job opportunities will also be created, as the added space will require new workers to operate the kiosks and maintain the seating area. McLaughlin said that hiring six to eight new staff members will be necessary to run the updated facility and fill the schedule.

Muddy Run was last renovated in 2000, when meal exchange at the café began. More meal options became available and dining capacity was expanded in the Cyber Café.

Construction, currently estimated at over $300,000, will begin in May and should be completed by the beginning of the 2008-09 school year.

Cockroaches and snakes and bees, oh my!

The little creatures on campus you haven't heard about until now

Brianna O' Malley

According to the Juniata Web site, 82 percent of attending students live on campus, little, however, is known about the other residents around here. No, it is not just the spiders in the dorm rooms and squirrels in the Good Hall ceilings. Juniata houses snakes, cockroaches, rats and other crazy critters to enhance student education.

Most biology students have endured "fish kill lab," officially known as Toxicology Lab. This lab includes students vivisecting rainbow trout treated with a chemical and taking blood samples. These fish can be found in an artificial stream in a cold storage room of the von Liebig basement.

Teaching assistant Kaj Gass said, "Juvenile fish are treated with endocrine disrupting compounds and are tested to see if they produce any female hormones."

Along with the rainbow trout, a tank of mudpuppies, or aquatic salamanders, are raised. They are part of professor Jeff Demarest's biological research on stomach membranes and are used because they have a large intestine in proportion to their body size.

Psychology professor David Widman keeps his lab rats in another storage room in von Liebig's basement... He uses time place learning, a method that involves rats performing maze work, as part of his research which also involves testing the rodents' counting abilities. Students in his Research in Psychology class receive the first hand research experience. Widman's testing is part of his own study, but he believes that the real benefit of the rats is giving students knowledge in research. "It is good work experience to prepare students for grad school," he said.

The B wing of the Brumbaugh Academic Center has its own little jungle, commonly known as the vertebrate zoology lab. In Vertebrate Zoology, students learn using live specimens ranging from fish to snakes. This allows students to care for the animals while learning firsthand about their biology.

The use of animals is not just constrained to the sciences; education professor Kathy Jones keeps Madagascar hissing cockroaches and plastic bins of red worm in her office. While many recoil at the word cockroach, Jones sees them as a great teaching tool. She uses them in Elementary Science Methods to help people conquer their fear of such crawlers. Jones' worm bins are also part of her mini vermacomposting operation, a process which allows worms to break down organic material, creating rich top soil.

Geology professor Larry Mutti is starting the beekeeping club with students. While this club is a few signatures away from being an official RSO, students like sophomore Erica Quinn think the organization is important. Quinn explained that there have been many hive collapses in honeybees and maintaining a population at Juniata is important. "We have a lot of hive boxes that need to be fixed, once we are an official club we plan on buying bees," she said.

According to the Juniata Faculty handbook, all animals kept on campus for academic reasons must comply with regulations of the Institutional Animal Care and Usage Committee (IACUC) which oversees institutional use of animals for research and instructional purposes. While the ends of some of these animals wouldn't exactly meet PETA approval, IACUC makes sure they are well cared for before they give their lives in the name of education.

Kevin Dundore / Juniatian

The vertebrate zoology lab in the BAC gives students hands-on learning opportunities.

Honoring top professors: The Beachley Distinguished Awards

Student nominations for outstanding teachers and mentors due soon

Ashley Hileman

At the Spring Awards Convocation on April 29, students won't be the only ones recognized for their hard work and achievements. Two faculty members will also be rewarded as recipients of the Beachley Distinguished Awards for teaching or academic service.

Until March 31, individuals or groups of full-time students, alumni, faculty, administrators and trustees can nominate faculty members for two distinct awards. The first is the "Beachley Award for Distinguished Teaching." Some of the selection criteria are as follows: a comprehensive knowledge of the field, arousal of academic interest, stimulation of thinking and development of understanding.

The second award is the "Beachley Award for Distinguished Academic Service" and is given to a faculty member nominated for outstanding services to students through advising, counseling, development of student-related activities or outstanding service to the College.

There are no forms to fill out. Nominations should be made in writing to the Provost. Nominations must include a signed statement of support based on the selection criteria for each respective award.

After March 31, all nominations received will be reviewed by a committee consisting of President Kepple and Provost Lakso, as well as the president of the student government and the award winners of the past three years. However, if the committee decides that no nomination has sufficient support, it retains the power to declare that no award will be given that year.

When asked to describe what makes a good professor, sophomore Amanda Broadwell said, "Someone who makes you feel like you've learned something when you leave the classroom; someone that teaches you something that sticks with you."

Students who have found faculty members with these or other commendable service qualities should nominate them for these distinguished awards.

Bonner Leaders program offers students a chance to grow through community service

Geneva White

The Bonner Leaders Program equips and shapes its student participants with the skills for a lifetime of community service. The program, revived on campus in 2005, is a two-year commitment to a rigorous community service schedule that is connected to The Bonner Foundation and AmeriCorps.

Faculty members nominate second semester freshmen for the program. Shauna Morin, community service director, then invites several nominated students to apply to the program.

While sophomores, the students spend five hours a week doing community service. The final project pushes the students to use the skills and experience they have gained in the program in an independent, leadership role.

"I think the program is about supporting a campus-wide effort to create students who are aware of their role in society, who are willing to give back and who are working to create a more enriched community inside and beyond the campus," said Morin.

So far the program has been limited, with roughly six students involved per year. Morin said that she prefers quality over quantity and stressed that it is not designed for casual volunteers. "This is not a big time commitment for a week or two, it's a time commitment for a year and a half," she said.

Brenda Tyler, a sophomore international peace and conflicts studies POE, said that she likes this aspect of the program. The deep involvement and the opportunity to see "the big picture" are important to her. This mentality and the small number of invitations to apply for the program might raise questions about elitism for some, but Morin says that she hasn't yet had to turn anyone away and the level of commitment required tends to pare down the candidates enough on its own.

The program is growing, though. This year, for the first time, a special section of the non-departmental class "Community Engagement" is being offered just for Bonner Leaders as a companion to the program.

Morin says that in the years to come she hopes to parse the work the students do by fostering goodwill in the community and on campus into a prestigious reputation for the program itself. Jennifer Kline, a sophomore biology and secondary education major, says that she, too, wishes the Bonner Leaders name was better known on campus.

The program gives students a resume boost, a stipend of $1000 from AmeriCorps for 300 hours of yearly service and builds life skills. The program encourages students to engage in programs that will prepare them for their professional lives. It also emphasizes the development of usable skills like program planning and grant writing.

Current Bonner projects include working with the Huntingdon House, the Raystown Field Station, Big Brothers, Big Sisters and Head Start.

For more information about the Bonner Leaders Program freshman students may contact Shauna Morin at morins@juniata.edu.

Students voice desire for more fitness center hours

continued from page 1

are kind of using everything we have right now. If we [open for those hours] we will need more help."

Part of the issue in extending the gym hours is finding students to work those hours. Another issue is having enough funds to pay students for those additional hours.

"Money is budgeted. There are work study funds that come in from the federal government. We more than use those. The College adds, [and] most of the student wages [come from] Juniata," said Bock. "We don't have unlimited resources but we want to look at everything. And that's the reality of it."

"As a student we get paid minimum wage," said Collins. "So to have to add six hours of student pay a week for the two hour slot on Monday, Wednesday, and Friday…I feel [in comparison to] how much we pay for other things at the school…is not that much in the long run."

Responding to the issue of finding students to work those hours, Collins said "Eight to 10 a.m. is my goal and if they did it soon, I would be willing to work those hours...I am totally willing to be that person."

When asked what he recommended Collins and fellow student supporters to do, Bock said he would do some homework with Manager of the Fitness Center Coach Doug Smith. The Fitness Center logs the number of usages per day by hour. The strongest argument for expanding the hours and appealing for more funds would be if the usages for this year have gone up dramatically.,

The problem with this, Collins said, is that the sign in sheet does not give an accurate record of gym use. "I know a lot of non-athletes use the gym, but I feel athletes are a majority…we put our name in our sign in sheet for each team so our coaches get the sheet and see what days we went in [but this is not on the main log in sheet]," said Collins.

Bock recommended that the best vehicle to present this information would be student government as it does a real good job with presenting cases."

"We don't want to put up any roadblocks. This is all about access. We don't have unlimited resources. We've got to do the best we can with what we have. If we've got people out there that can't get out here to use the facility, I've got work to do…I think that we are, compared to our peer schools…really good [at maintaining a healthy energetic college community]…We don't want to endanger that in any way at all," said Bock.

Merck/American Association Undergraduate Science Research Program

Juniata College was recently selected for awards in conjunction with The Merck/American Association for the Advancement of Science Undergraduate Science Research Program. Over the next three years, Juniata will receive $60,000 to subsidize five summer student research assistant positions in the biology and chemistry departments.

The students chosen will work closely with Juniata faculty members for a 10 week period on various research projects. Professors providing the different studies include chemistry professors Richard Hark, Paul Schettler, Tom Fisher, Peter Baran and Ruth Reed and biology professors Michael Boyle, Jill Keeney, Jeff Demarest, John Matter and Doug Glazier.

According to the College's Web site, "The Merck/AAAS Undergraduate Science Research Program is a competitive program available in all 50 states, the District of Columbia and Puerto Rico. Up to 15 awards are made annually. Funding supports research stipends for undergraduate students and ancillary programs that encourage research collaborations between biology and chemistry departments."

Professor Widman brings real questions to the virtual world

M. Piazza

Professor of psychology David Widman will be performing experiments with virtual reality using a new experimental environment, the Cave Automatic Virtual Environment (CAVE).

The idea of CAVE, according to Widman, is to have the individual test subject completely immersed in the environment of the game by having it projected onto a screen at the right height so that everything in the game is in the proper proportion. The feeling is similar to sitting in the seats at an IMAX movie and experiencing that feeling of motion.

The environment works in coordination with the game "Unreal Tournament." Widman is currently working with junior Nicholai Best and senior Nathan Blubaugh to build a game environment. Once one has been designed, then experiments can be designed to work with it.

"The game environment is not the same as designing a shoot 'em up kind of environment," said Best. "It's more of a walk through environment, sort of a cross between a maze environment and an Indian Jones set."

Widman hopes to use CAVE to investigate three key ideas: phobia tests, religious rituals and navigation.

Phobia tests would involve experiments with phobia exposure therapy, which works at exposing people to their fears. For example, one experiment might be to drop people from a virtual height repeatedly.

Religious ritual experiments would include running people through virtual religious experiences, similar to the quasi-Native American rituals in the videogame "Prey."

Navigation experiments would be based on an earlier study that Widman helped to design. The focus of the study was on the effect of testosterone in navigating. Widman would like to see if the results are different when CAVE is used rather than a desktop computer. Widman hopes to determine whether the size of the screen has any effect on a person's ability to navigate.

"I would like to begin running experiments this semester, but I have to find a number of female students who are familiar with working in a first person game. If I don't, it will interfere with what is actually being tested," Widman said.

According to previous experiments run by outside sources, the joystick and game environment are very confusing for women who are not constant gamers. Widman suggested that he would like to get something like the Nintendo Wii controller to help with this problem. Even with this adaptation, it is still hard to convince students who are not actively interested in games to participate.

Christopher Shannon/ Juniatian

Psychology professor David Widman demonstrates his research in what has become known as "The Cave."

"CAVE has a lot of potential but it is just taking awhile to get off the ground due to either technical problems or just getting the design of program to work," Blubaugh said.

"The problem in developing an experiment is that a lot of the easier work has already been done," said Widman, "and that means that the experiment must be carefully worked so that students at an undergraduate level can participate."

"I would have done this four years ago but it took me about that long to get the projectors [and] the technology and to build the computers that could handle the types of experiments that I want to run," said Widman.

Due to the renovations of Good and the introduction of new projectors, Widman now has the technology and space to run CAVE. He redesigned the space in Good 421 with extra columns to place projectors on and a smoother wall to project CAVE onto it.

Currently, CAVE has no funding. Widman will continue to search for grants as the experiments are more fully developed.

Campaign answers

Seth Fox

As the presidential race heats up so do the issues surrounding it. New developments and terminology are being introduced to those following the campaigns. The following examines some of the key issues and questions that currently confront voters in the electoral process.

Deciphering the delegates:

A delegate is someone that is attending the national convention of his or her party during the year of the presidential election. A delegate will cast a vote for a particular candidate at the convention.

There are pledged and unpledged delegates, a distinction that only the Republican convention uses. The difference is that a pledged delegate is required to indicate a preference for a candidate while an unpledged delegate is not required to indicate preference.

The Democrats have pledged delegates and "superdelegates." The media frequently tosses this informal term around, but there is some confusion over what exactly makes one delegate more super than the next. superdelegates are usually Democratic members of Congress, governors, national committee members or party leaders.

They have high standing in the party and are not required to indicate support of one candidate until the convention.

To win the party's presidential nomination, a Democratic candidate must secure pledges from 2,025 of the possible 4,049 party delegates. A Republican candidate

Senior dinner held Feb. 16

Christopher Shannon / Juniatian

Seniors Renee Weaver and Brian Sykes were all smiles at the annual senior dinner at Baker Refectory.

Changes to DIII athletics: plans not firm, split not likely at moment

continued from page 1

with this change regardless of what it is named.

The potential new divisions are "viewed as glorified clubs," said junior football player Eric Baker.

As a member of Juniata's Student Athletic Advisory Committee (SAAC), Baker attended the recent Landmark Conference Institute Meeting as the College's male student-athlete representative. At the conference DIII's potential structure change became a prevalent topic.

This issue was also discussed on Juniata's campus. President Kepple held an open forum on Sun., Feb. 24 to address the topic with the Juniata community. Overall, student-athletes were not happy with this potential split of DIII. (see box on p. 19 for student reactions)

"The persons who are thinking about some type of division of Division III are worried that as it grows, it will lose its uniqueness," said Kepple. They worry that DIII has lost "its student focus and that the institutions that are joining are less like the original traditional Division III institutions."

Juniata College is a traditional DIII member. According to Kepple, these institutions are typically liberal arts schools with a student population averaging about 1,000 to 2,000 students. They offer student-athletes a broad range of experiences, meaning a variety of sports are available to them. Academic and athletic balance is the goal of traditional DIII schools. A student first, athlete second model is followed.

However, more schools are joining DIII. There are currently about 420 active DIII schools, and the NCAA does not plan to place a cap on the Division. Officials expect this number to reach 480 schools by the year 2020.

With this growth, voting patterns during the most recent NCAA Conventions showed a spectrum of athletic perspectives.

"They [the NCAA committees] are noticing a somewhat bimodal vote pattern where the non-traditional Division III's are voting for more out of season practice, voting for *redshirting," said Kepple. (see box, p. 6)

A bimodal vote pattern means there are institutions concentrated on both sides of the scale.

On one side of the spectrum, are non-traditional DIII schools which have a larger student population than traditional DIII schools. For example, University of California-Santa Cruz is DIII and has a student population of about 15,000 students. This school's student-athletes account for about five percent of its student body. In comparison, Juniata's student-athletes account for about 30 percent of the student body.

There is a trend showing that these non-traditional schools want to take a more intensive, athlete-first approach to DIII athletics. Non-traditional DIII members also typically do not support a broad-based athletics program. This means there are less varsity sports on campus. UC–Santa Cruz offers 13 varsity athletic programs compared to the 17 programs offered by Juniata. With less varsity sports teams, non-traditional institutions typically favor a more intense approach to athletics.

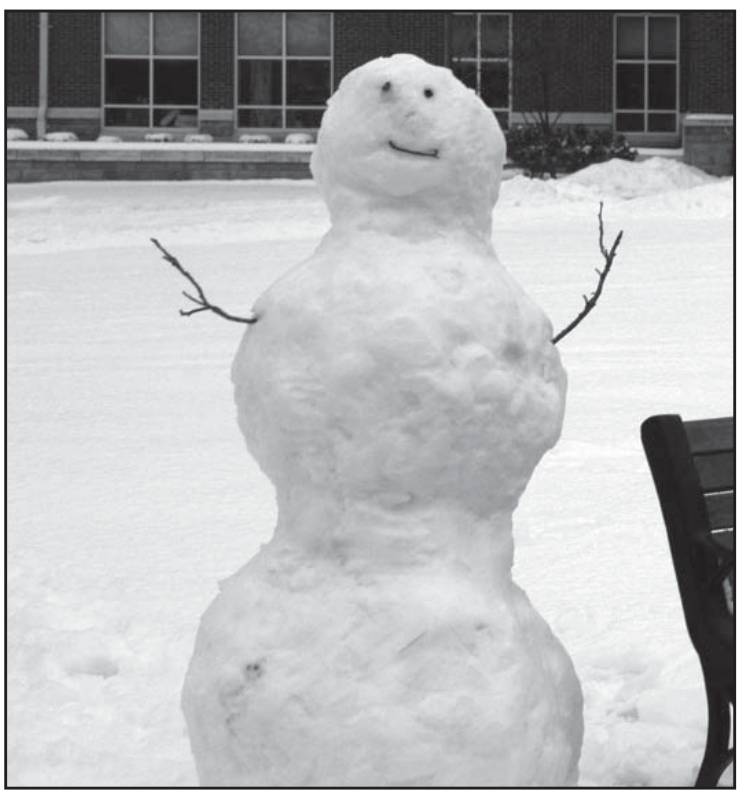
The opposing side of the spectrum is more student-centered. Traditional DIII schools make for the majority of this grouping. Schools competing in the Centennial Conference, such as Franklin & Marshall College, are supporters of this view. They favor placing more restrictions on athletics as explained above.

There is a third grouping, however. This collection of DIII schools falls in the middle and is satisfied with DIII's current rules

continued page 19

Definition of DIII

The focus of DIII institutions is the development of the student-athlete. Financial aid and tuition scholarships are not determined by athletic ability as they are on the DI and DII levels. The athletic department is funded like any other department on campus. DIII institutions must support five sports for men and five for women. There must be two team sports for each gender. There are restrictions on the number of contests for each sport. There is emphasis on competition within the conference as well as within the region.



Non-traditional season

Refers to organized practices or competitions which are played outside the defined season. For example, football's traditional season begins in the middle of August until about the end of November. Football's non-traditional season occurs in the spring when players are allowed to engage in 16 organized practices. Competitions held against other institutions during non-traditional season are not counted toward the team's record during the traditional season.

Redshirt in DIII

Refers to a student-athlete who does compete in a sport for an entire academic year. Therefore, he or she does not use a year of eligibility (student-athletes have four years of eligibility to compete in a sport). Currently, the only redshirt available in DIII is the medical redshirt. DI or DII students-athletes who need an extra year of development are able to take a year off of competition. DIII student-athletes are not.

Where on campus?

Kevin Dundore / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz. Congratulations to last issue's winner: Ben Sealy!

More renovations planned for Dale Hall

Ashley Hileman

As early as this summer, Brumbaugh Academic Center (BAC) could undergo additional renovation. This latest renovation will occur in Dale Hall, which currently houses the business, information technology and communication departments. Dale Hall was dedicated in Oct. 2006 after the completion of the first phase of renovations.

The construction of a new entrance is the main component of the planned changes. According to Rob Yelnosky, vice president for finance and operations, the stairs leading to the front entrance which currently houses Café A la Carte will be removed. The new entrance will then be located approximately one-third of the way up on the front left side of the BAC, and will extend outward toward Moore Street. New handicap accessible restrooms and a student lounge will be located just inside the entranceway.

The renovation plans also include the replacement of old windows in Dale Hall, as well as the relocation of the mathematics faculty. The math department, whose offices are currently located on the second floor of Dale Hall, would move to new offices on the first floor.

The layout of the new offices would be similar to that of the communications faculty's suite, which includes a common lounge area adjacent to individual offices. Room C102 and the storage room next door would be converted to the necessary office space.

Described by Yelnosky as a phase approach, these changes were included in the original Dale Hall renovation plans. However, they could only be undertaken as funds became available.

Although the exact cost of the project is still being worked out, the funds needed to complete the Dale Hall renovations came from bequests and other gifts given to the College that were not specifically designated to particular projects.

The first phase of refurbishments was made possible by the $300,000 donation of John ('54) and Irene Dale in 2006.

The administration hopes that the renovations will take place this summer, but with the number of other projects taking place on campus in both Good and Founders Halls, Dale Hall may have to wait.

Campaign

continued from page 5

needs to be nominated by 1,191 of the party's 2,380 delegates to be the Republican nominee.

Why is Mike Huckabee still in the race?:

The Republican primaries are mostly symbolic at this point. John McCain, the current frontrunner, is almost 700 delegates ahead of the closest challenger, Mike Huckabee.

Huckabee claims he wants the primaries for the remaining states to not be an inauguration but a legitimate election. Others speculate that his continued campaign is due to fighting within the Republican party.

Within the party there is major divide amongst the more moderate McCain supporters and the extremely conservative Huckabee supporters.

McCain has had difficulty winning over these more conservative delegates. Support from the current and former President Bushs has helped him gain more support in this conservative circle recently, but McCain is still lacking in their overall support. Huckabee continues to exploit this weakness in McCain in speeches along the campaign trail.

If Huckabee stays in the election, he mathematically can still win the nomination. Also, the margin of victory he has lost by has been slim in most states. He could still take future states from McCain and slow him down in his mission to be president.

Why are campaign advertisements suddenly so negative?:

The beginning of negative campaigning in the 2008 presidential election has begun. This past week Hilary Clinton launched commercials to attack Barack Obama on his past political stances. When Obama declined a debate proposed by Clinton, her camp showed ads in Wisconsin that included the tag line, "Maybe he'd rather make speeches than answer questions."

Clinton's Web site recently displayed an ad showing a multitude of people with the attached slogan, "Which one of these people will not get healthcare under Barack Obama?" Such a drastic tone shift switch has caused mixed reactions amongst critics of the campaign.

There are different theories as to why Clinton switched from the primarily positive campaigning used for the past year of to the negative mudslinging strategy.

The most common thought is that it's because of the results of the recent primaries. Clinton has lost 11 primaries in a row. While the margin of delegates won between the two is currently less than one hundred pledged, pundits suggest signs look bleak for Clinton should she not gain a victory in either the Ohio or Texas primaries.

Obama has gained much more momentum heading into the primaries of those two key states. The two major battleground states could make or break the democratic nomination for either candidate.

Alumni changing lives and the world

Kendall Markel

The marketing and advancement office will showcase alumni achievements through film documentaries and articles for the College's magazine. The project involves tracking down Juniata alumni and learning about their life-changing careers.

This semester, senior Kelly Popernik's internship as a marketing coordinator is part of this new project. She has been researching the alumni in the College's databases and setting up interviews.

"This project is really exciting, because I feel like this is a way to get Juniata students and alumni connected. We have an amazing alumni database – they're amazing people," said Popernik.

"We have nearly 12,000 alumni we can contact. We can make a story about any of them. That's the exciting part – there are so many stories," said Vice President of Marketing and Advancement John Hille. This project was developed alongside Juniata's new slogan, "Changing Lives to Change the World."

The marketing department has already picked several alumni whom they will or hope to feature in this project. One alumnus chosen for the project was Chris Ostrowski ('94). He runs a project called "The People's Art and Community Kiln" (P.A.C.K.). This non profit organization will make it possible for people with mental and physical disabilities to make pottery.

Another alumnus to be featured is Dr. Nicholas Bower ('00), who started "Physicians for Humanity." His non profit work involves sending doctors to Ecuador to help people in need.

Karin Brown ('06) is a candidate for the project. She was a human rights observer in an Israeli town to assess its needs. She is compiling her stories and pictures to write a book.

Grettel Wentling ('94) is another alumna being considered for inclusion in a film. She works on and coordinates medical-related missions' projects in Florida.

Bill Fegen ('48) is famed for his restoration of a town in New Mexico, and manages a theatre that hosts plays and after school programs.

Popernik explained that each alumnus' story rests on three legs. First – what scholarships the alumnus had at Juniata, second – how his or her work has changed the world and third – who he or she changed.

"The alumni are very modest. It was very hard to get them to tell me who they affected, so oftentimes I'd find out through their contacts," said Popernik.

Popernik finds alumni contact information from professors who keep in touch with their former students.

Assistant Vice President of Marketing Gabriel Welsch said there will be four to seven films made. Two films are beginning production and short versions will probably be viewable on the College's Web site by fall '08.

"[The films] will allow students to see what they can do. They are for anyone who is interested in this place," said Welsch.

The long versions of the films (about seven minutes) will debut in the fall in Huntingdon, Philadelphia, New York City and the Baltimore/D.C. area. These locations were chosen because of high giving potential in these communities.

The film company Seven Three Media is working with the College to film alumni. If an alumnus is picked to be filmed, the College will send a film crew to capture him or her at work. This could mean sending a film crew to Ecuador or Israel.

Eight to 12 stories will be printed in the College's magazine. They are easier to compile than the films, so the number of print stories the department can produce is almost unlimited.

Welsch said that the project is aimed to attract the interest of perspective students and donors, but also to raise funds for the College's endowment and for endowed student scholarships.

Currently, the College's endowment is $71 million, but the goal is to push it to over $100 million. The administration intends to meet this goal by 2011 when President Kepple retires from his position. Juniata competes for students with schools that have endowments of $200-300 million. Hille said that despite this difficulty, Juniata does well.

Hille said that the project has two goals: to decrease the number of loans students need and to decrease the amount of money normally reused as scholarships. The money raised will create more means to fund programs and professor positions.

Welsch said that the project will be funded by the College's standard operating budget.

Coed roommates need not apply

EDITORIAL

Our college's well known motto is "Think. Evolve. Act." It's a line fed to every prospective student that comes through; it's the verbal evidence that Juniata truly is a college which changes lives. And for the most part – with some nudging from the student body – the administration does a fairly good job of keeping to this motto.

For example, a few years ago, students pushed to have coed floors on campus. After students presented their case, South Hall was made coed by room.

Evolution, however, isn't a once and done thing. It's an ongoing process. So, while making South coed by room was a step in the right direction, it didn't go far enough. Juniata (administration, consider this your nudge) should allow coed rooming on campus.

This suggestion is bound to raise the hackles of more conservative readers. But there are no definitive, legitimate reasons not to allow coed rooming. Coed rooming will not, as many would argue, encourage more sexual activity on campus. If students want to have sex, they're going to have sex, whether or not they live together.

Allowing couples to live together would eliminate the need to "sexile" roommates (kick a roommate out so that the remaining roommate can have sex with his or her partner). Coed rooming would allow couples to be much more discrete, something few would frown upon.

Additionally, under the current system, gay and lesbian couples may room together. If the reason for the current system is the antiquated fear of cohabitation before marriage, this is a major loop hole.

A supposed problem to couples rooming together is the chance of a break up. However, this problem is not unique to coed rooming. A couple which breaks up is not all that different from a pair of same sex, heterosexual roommates who've had a falling out, something which is especially likely to happen with roommates who have been randomly paired.

Often when the issue of coed rooming is raised, it is imagined that it is an issue for straight couples who wish to live together. However, to believe this is to ignore a significant minority on campus: the LGBTA (Lesbian, Gay, Bisexual, Transgendered, and Asexual) community. Some gay or lesbian students may feel more comfortable rooming with someone of the opposite gender. It isn't uncommon for gay students to have closer friends of the opposite gender. For these students, coed rooming would be completely nonromantic and nonsexual, just like heterosexual, same gender roommates' arrangements.

Simply put, it's unfair that close, platonic friendship is not a viable reason to room together but happening to have the same number of X and Y chromosomes is.

Coed rooming would allow Juniata to be more flexible and open to the needs of transgendered students. There no longer would be the issue of where transgendered students should be allowed to live and with whom.

Coed rooming is an especially practical option for Juniata. The administration loves the community atmosphere of the college . Recently, there have been particular efforts to encourage students to live on campus. There are fewer greater incentives to live on campus than simply allowing students to room with whomever they want.

Coed rooming would not be forced upon anyone. It would be up to students to request it, so that only students who wanted and were comfortable with it would have a roommate of the opposite gender.

A move by Juniata to coed rooming might be evolutionary, but it will certainly not be revolutionary. Swarthmore, Haverford, and Wesleyan University have had coed rooming for years. All three schools report only a small percentage of students participating (around 1% for Wesleyan) and that the majority of students who choose coed rooming are only friends and not in romantic relationships.

The rigid same sex structure of the current rooming system is discriminatory, blind to the need of Juniata's student body, and ignorant of today's changing world. Perhaps 50 or 60 years ago, when our grandparents went to college, only allowing same sex rooming made sense. But much has changed in 60 years. Attitudes about sex, gender issues and even the responsibilities and expectations of college students have changed drastically. Juniata needs to recognize this, recognize that we are not our grandparents. Years from now, coed rooming will be an accepted practice. Juniata should adjust its own policy sooner, rather than later.

Thinking about thinking

Founders Hall is not Founders Hall

Ryan Hamilton

It is difficult to miss the large wooden sign planted in front of Founders Hall depicting a sketch of the Hall following renovations. Standing there, with the historic building in the background, some may wonder if the 'New Founders Hall' is still Founders Hall at all.

The age-old trouble of identity pertains especially well to the renovation of Founders Hall. The classic illustration of this problem is known as the Paradox of Theseus' Ship. The story begins in a major port of ancient Athens with a ship owned by a merchant named Theseus. His ship has sailed across the entire known world and weathered many nights on the rough seas. Upon the death of Theseus, his ship is inherited by his son. At this time, old rotting boards are replaced with new boards and the sails are patched before Theseus' son sets sail.

Over the following years the rudder wears out and needs to be replaced; the oars are all discarded and working replicas are provided. Even the original mast cracks in a violent storm and is also replaced. Eventually, every original piece of the ship is substituted for new materials. But is this still the same ship? If not, when did this ship cease to be Theseus' ship?

Following this thought, if Founders Hall is leveled to the ground and an exact replica is built in its place, could this building still be Founders Hall? This is a tricky distinction because buildings destroyed by fire or warfare are often rebuilt in nearly exact likeness and name with no questions asked.

Pushing this idea, imagine the materials from the original Founders Hall are all recycled and used to build a replica of Noah's Ark. Is the ark then also Founders Hall? Answering yes, and assuming the 'essence' of Founders Hall is inherent in the plywood, bricks and mortar, sounds wrong.

The question seems simple enough: what is it about the identity of this building which needs to be preserved so that the renovated building is still Founders Hall? There would be objections to constructing a new building across campus and claiming it is also Founders Hall. Therefore, it seems there must be something inherent in Founders Hall which needs to be preserved.

Those who are funding the renovations claim it is necessary to preserve the bell tower. Yet, why not preserve the door frames, or decorate the renovated building with pictures of the original? Granted, in an economic sense, if the funding for renovations requires the original light bulbs to be preserved, then it seems prudent to comply.

It seems reasonable to assume portions of the Hall are being preserved, not because of some belief that identity is inherent in the bricks, but because they are prominent features of the building. The bell tower is what identifies the original and the renovated Hall as one in the same.

Keeping in mind the story of Theseus' ship though, how is a 'prominent feature' determined? How many original bricks need to be reused for the identity of Founders Hall to persist? If the conclusion that identity is not inherent in physical material is correct, then why preserve any of the building at all? At some point, it becomes unreasonable to claim an entirely new entity is identical to the original.

At the very least, these are interesting questions to ask. The true answers, most likely, involve emotional attachment to Founders Hall. In the end, the actual mental procedure may be further complicated by other matters or even irrelevant. However, it is clear this is an important and intricate discussion which has very real implications. Those funding renovations for Founders Hall would probably agree.

Make the Juniatian work for you

The Juniatian encourages members of the campus community to send the editors news leads, story ideas and general questions to be investigated.

In order to publish a newspaper that appeals to the interests and needs of the entire campus, the staff also accepts requests for coverage of student achievements, club events, academic departmental happenings, residential life programs and other campus-related activities.

Please send your suggestions or requests to juniatian@juniata.edu. Or submit your idea(s) anonymously to the Juniatian's post office box, #667.

Ask the Administration: We get the answers for your burning questions

In the past year, I noticed that there are now student blogs on the school Web site. Why did we decide to add that feature? How are the students who blog chosen? Is it a paid assignment or is this something they volunteered to do?

We added blogs to our Web site as a way to give prospective students an unfiltered look at what life is like at Juniata. Several of the blogs are sponsored by departments across campus (e.g. alumni, admission, athletics); other students we asked if they'd be interested, especially if they were studying abroad. There's probably a limit on the number of blogs we can feature, but we're open to anyone who is interested. Send an email to stutzr@juniata.edu for more information.

Rick Stutz
Director of e-communications

The Alumni Office decided to start a student blog again this year (the office also had one during the 2004-05 academic year) to help connect alumni, parents, friends and prospective students to the life of current Juniata students. We encourage the students to keep it fun and "chatty" and to write about their every day lives on campus, what they do for fun and traditions at Juniata. In short, we are using this tool to create a connection with the reader(s). The Alumni Office had had one intern (for credit) each semester during the 07-08 academic year and ONE of their responsibilities is to maintain a student blog.

Bub Parker
Director of Alumni Relations and Volunteer Development

Has Juniata ever considered opening a bar on campus, strictly for students, possibly like a student union where school/local bands could play and it could be BYOB? Susquehanna University has a place just like the one described above and it works for them, keeping students from driving to bars, keeping them on campus, less noise in the community, etc.

You may have noticed in the Draft Strategic Plan (available on the President's Office Web page) a reference to a new eating facility in the former main computer lab space in Brumbaugh Academic Center. The goal is to complete the renovation by the end of summer 2010. The recommendation from the sub-committee on student life is to convert the former main lab space in BAC into a food/lounge/social space. Suggestions include the following:

- Relocate the café a la carte food service and expand food preparation area to offer a unique/novel menu.
- A bar/serving area to facilitate receptions and registered social events.
- Stage area, lighting and sound accessories to accommodate performances.
- Create a pub-like atmosphere with Juniata heritage décor that encourages students to identify with our legacy and to help alumni reconnect during homecoming and reunion events.
- Improve/replace windows.

Kris Clarkson
Dean of Students

Why does the women's basketball team have to split its practices into two groups during the season, while women's volleyball has the gym during those hours instead? This seems unfair and prejudice toward any team other than women's volleyball. How is practice time allotted and scheduled for the various teams? Do in-season teams get precedence over out-of-season teams? Does it depend on the success of the team?

According to the athletic department's official "Policies for Practice and Facilities Scheduling" document provided to the Juniatian by Greg Curley, head men's basketball coach and assistant athletic director, a system for allotting gym time does exist. Pages three to four of that document outline the following:

"In Normal Circumstances, where conditions have not been declared dangerous by the trainer, the following priorities exist for varsity sports scheduling within standard practice time slots (weekdays from 4:00 – 6:15 and 6:30 – 8:45).

1. Indoor sports, NCAA Traditional Season
2. Indoor sports, NCAA Non-Traditional Season
3. Outdoor sports, NCAA Traditional Season
4. Outdoor sports, NCAA Non-Traditional Season

Within any of these categories, using the following criteria sets priority:

1. Team that has been in season the longest
2. Team with the next scheduled game
3. If two teams have a game the

THUMBS UP, THUMBS DOWN

to the end of the Writer's Guild strike. Our favorite shows will return to TV before semester's end. Hello, McSteamy. Good-bye, McStudy.

to anyone who thinks that Juniata should support the idea of the NCAA making a Division IV. Listen—if we wanted to go to a school where sports were a joke, we'd have gone to Susquehanna.

to Fabolous for agreeing to come to the middle of nowhere PA to drop the beat on some rhythmically challenged college students. Somehow we doubt that he'll "Holla back, young'nz. Hooo! Hooo!"

to the hefty price tag for the naming rights to various offices in the newly renovated Founders Hall. $25,000 to name a prof's office? $250,000 to name the president/provost office suite? A cool quarter mill to put a name on a plaque? Um, we have $20...can we name a staple?

to the pancake bar in Baker on Tuesday night. Norm + Mrs. Buttersworth = Match made in Heaven.

Presidential Perspective

Have a topic that you'd like Dr. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

What do you (T-Kep) think should be the senior class gift? Discuss your feelings.

I think that the most important gift a senior class can give is one that is meaningful to the class. Whatever the decision the gift will forever be the symbol of the class of 2008's contribution to Juniata. Over time, gifts have been quite varied from endowed scholarships to fish ponds. This year's class has a great list of gifts to consider.

How's your new office working out now that you aren't located at the center of campus?

It's pretty lonely over here in Baker House! I think all the Founders refugees miss the opportunity to see each other, students and faculty just by going out into the hall. But I'm pretty sure the time away from Founders will be well worth it in the end.

Course credit for Juniatian staff

Students from all classes and POEs are encouraged to join the Juniatian staff for the fall '08 semester. Enroll in EN181 01 during the upcoming registration period.

Positions are available for news writers, arts and entertainment columnists, sportswriters, photographers and layout editors. Staff positions earn one credit per semester. Editor positions are appointed.

For more information contact Amy Mathur, the Juniatian's faculty advisor at mathura@juniata.edu.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

You can ask the questions for once...

In each issue, President Kepple and other administrators will address the campus community's concerns or questions.

Kepple will make public his thoughts on campus issues in his "Presidential Perspective." Though he has plans for his column this semester, the president welcomes topic suggestions.

When Kepple cannot submit his column, due to College-related travel, Provost James Lakso will offer his take on a topic pertaining to campus.

For the "Ask the Administration" feature (see above), the Juniatian forwards legitimate student, faculty and staff questions to the administrators most equipped to answer them.

To submit your topic ideas to Kepple, or to ask questions of the administration, please e-mail the Juniatian at juniatian@juniata.edu.

All questions and comments will be kept anonymous and will be forwared to administrators via the Juniatian's e-mail account.

Letter to the Editor

A Juniata grad of the class of '05, I am currently in a graduate program at a large, prestigious university. I am grateful to have the opportunity to continue my studies and I understand that large universities have an important role to play in the educational system. That being said, there are some distinct advantages to receiving a liberal arts education at a small school, of which I have become keenly aware during my time at the "Prestigious Institution."

Speedy delivery. How long would it take a piece of intercampus mail to travel from the mail drop in the basement of Ellis Hall to the appropriate mailbox? If it is dropped during business hours, I expect that it is delivered that day, or maybe the next day, if it is going all the way to Good Hall. Estimated time to deliver a piece of intercampus mail at the Prestigious Institution: Four days. I was shocked.

Hail to the chief. Last year, I had the honor of meeting the president of the Prestigious Institution. While he was very pleasant, the frenzy of cleaning and the hanging of banners prior to his visit to my department rivaled even the display of international flags for big prospective weekends at Juniata! It reminded me of my days at Juniata, when I might bump into President Kepple while getting a hamburger in Muddy, or while enjoying the special of the day in Baker. He was always smiling and always said hello, and while I'm sure that he didn't *really* know our names, you felt like he did. Granted, President Kepple and the president of the Prestigious Institution have different responsibilities, but there's something to be said for a school where the president waits in line with you to return dirty dishes.

Time to hit the books! This semester, one of my professors didn't tell us when the final exam would be; he just told us to look online. I tried this several times without success, until I talked to a more experienced student who let me in on the secret to finding the *graduate* student exam schedule. At Juniata, we had a single, easily-accessible Web page, with a simple table of exam times and locations. That's it. I understand the desire to list graduate courses separately from undergraduate courses, but do you need to have earned a perfect score on your GREs to be able to find out when and where you exam will be held?

And these are just a few examples. So, am I happy at the Prestigious Institution? Yes. Do I appreciate the opportunity to use more extensive facilities and take classes Juniata will probably never offer? Yes. Am I grateful that thousands of freshmen choose to enroll at the Prestigious Institution each year, employing graduate students (like myself) who need funding? Yes. Would I advise any high school senior looking for a college to put aside the brochures from the Prestigious Institution and pick Juniata instead? In a heartbeat.

A.C. , Class of 2005

Ask the Administration

continued from page 9

same day, priority will be given to the team with an away game

4. If two teams are both at home or both away, priority will be given to the team with the earlier start time

5. If none of the above criteria set priority, the facilities scheduling coordinator will make a determination.

6. If Juniata and/or visiting teams are competing in conference or NCAA playoffs, consideration may certainly be given to comply with rules regarding practices for these events.

*Note that with regard to the IM Gym, baseball, softball and track and tennis will be considered "indoor sports" during their traditional seasons only through Spring Break though these same teams will have practice priority on mezzanine spaces year round. In any case, it is to be understood that should weather and field conditions allow for outdoor play, then practices should be conducted outdoors.

In the event of Dangerous and Inclement Weather (i.e. lightning), the following guidelines will be followed in determining usage of indoor facilities. These guidelines apply only when outdoor practices are cancelled by the Head or Assistant Athletic Trainer. In the event of inclement but playable weather, priority reverts to the rules set forth in the above section.

Traditional season practices moving indoors will work around previously scheduled, indoor in-season practices. Practices for all in-season teams may be shortened to no less than 75 minutes in length.

1. Indoor sports, in-season
2. Outdoor sports in-season
3. Indoor sports, non-traditional season
4. Outdoor sports, non-traditional season."

Erica Quinn makes her own liberal arts

Juniata student's unique photography gaining recognition

Nicole McCloskey

The click of a button, the flash of a bulb, the opening and closing of a shutter. In this seemingly simple process that can occur in as little as 1/15th of a second, light filters through a lens and film captures one of the most valued possessions in the world. Regardless of its place, time, emotion or memory, we all know this little treasure as a photograph.

Sophomore Erica Quinn is very familiar with this process. In fact, she's known for it. With a POE titled, "Literature and Photography," she can be seen around Huntingdon capturing one of the best things in life: a single moment in time.

From Jan. 6 to Feb. 2, Quinn held an art show at Webster's Used Book Store in State College. Her show titled "13 Ways of Looking at Humanities" gave a look at constructed realities. Using different media and many willing friends, she was able to create a very creative collection.

With the use of a half naked mannequin and, as she put it, a few "sleazy man friends," she took photos on the streets of Huntingdon and the local Original Italian Pizza. The mannequin sat at a table while its human companions enjoyed pizza.

Commenting on the experience, senior Andy Fornadel said, "It was really cool. We sat there with the mannequin and drank pitchers of Yuengling while Erica took pictures."

Another concept used for her recent art show involved a reservoir and many friends. "We basically dressed up and went to a concrete reservoir and had a party," Quinn said.

One of her most infamous images included involves Quinn Daly ('07). From dressing in drag, to simple photographs, Daly is one of Quinn's favorite subjects.

Quinn also noted that all photographs included in this art show were very contrived and not at all true to life. "These photos are not photojournalistic," she said. "Nor were they Photoshopped. I pride myself on using real film and leaving the results basically unaltered."

Christopher Shannon/ Juniatian

Within weeks Quinn will display her most recent photography in the Halbritter Center for Performing Arts. The story of the work is displayed in a portrait series of friends that includes written autobiographies. Both the portraits and autobiographies are contrived to display specific personality traits. The images will be blown up larger than life to mimic the feel of celebrity status. "The photographs were printed gigantic, as to imitate the feeling of importance that is associated with very large pictures of famous people," Quinn said.

This exhibit is expected between Feb. and March. The process is already underway. Quinn submitted all of her print orders and matting the images herself. The idea to display the work on campus came from photography professor Monika Malewska. "She thought that I should present two projects and this was one of her ideas. I'll probably do the other project in State College when Penn State has their [sic] art exhibit," Quinn said.

Quinn claims that most of her inspiration comes from Cindy Sherman (whom she models her work after), Wes Anderson, Quinn Daly and Michael Fischer, who she calls her "artistic advisor." Her friends and Malewska are also a very integral part of the process. "If it weren't for Monika, who taught me what I know, and my friends who are willing to let me do pretty much anything, I would have nothing at all," she said.

Quinn's photographs are available for purchase. She can be reached via e-mail at quinnea06@juniata.edu. She also does freelancing, so anybody looking for creative presents or just nice pictures can contact her or find her in the campus dark room.

Quinn hopes to have a Web site established by summer where photographs can be viewed and purchased.

Hunting down Huntingdon

Bicycles: hobby, opportunity and profession

Romeeka Gayhart

Don Gill is a handy man. Over the past two years, Gill and his wife Margaret have used a love of bike repair to bring bikes to Huntingdon County and spread good will around the world.

Don's Used Bicycle Sales and Repair business, located on 907 Pennsylvania Ave, started as a small engine and bicycle repair shop. Said Gill, "I just wanted a hobby to do after I retired… Well it seemed like my bike business got out of hand for a hobby anymore."

As a result, he's been repairing the bikes, which often involves replacing parts, cleaning and painting. His only stipulation: no repairing Wal-Mart bikes. "A lot of the people bring Wal-Mart's bikes in and I just don't fix them. They [Wal-Mart] are not paying me to fix their bikes."

Bike repair was not Gill's first job. He began repairing bikes with his brother as a child, but since then he has worked a number of odd jobs. A retired steel worker, he has painted professionally for 25 years and built log cabins, among other hobbies.

Gill, a self-proclaimed handy man, says of his technical aptitude, "It just comes naturally, a talent. See, I can do anything. There's nothing that I haven't tried that I haven't accomplished."

"I just wanted a hobby to do after I retired... Well it seemed like my bike business got out of hand for a hobby anymore."

Gill bought his first lot of bikes with a friend at an auction. He continues to purchase bikes, but has found that since people have discovered his shop he and his wife have been waking up in the morning to find more donations in their driveway.

Many interesting bikes come into his shop. Some of Gill's favorites include a Stingray, a Schwinn (which he reportedly bought for three dollars at auction), a folding bike and a bicycle built for two. "I've got a scooter down there that's older than I am… older than my wife," he said.

Over the next year, Gill and his wife intend to expand their business into rentals. He is adding to his collection of mountain bikes in anticipation for a trail due to be built at Raystown Lake. His bikes can be rented for 25 dollars a day or five dollars per hour. He's hoping to set up a "bike shop on wheels" on the Rails to Trails' Lower Street section, but is waiting to see about permits and electricity for his air pump.

Gill uses some of his profits for donations. He gives bikes to radio station Froggy 98's Christmas Carol every Christmas. The program gives gifts to 12 families over 12 days. The profits also helped send Gill to Honduras on a mission trip. The trip profoundly changed the way that he looks at the world. Gill said, "It's something that you don't want to go and visit on a vacation. It was really bad over there. You have to be there to see what's going on."

Many people stop by the shop to chat and get repairs. Student Roy Holm, who purchased his bike from Gill said, "It's definitely

The Director's Chair

Scenic "Jumper" heavy on special effects, light on plot

Bennett Rea

There are people out there with the ability to teleport anywhere in the world. It is an interesting concept, but one that was poorly executed in "Jumper." Though the special effects and scenic locations provided some cinematic eye candy, the plot holes and skimpy character development made this movie second-rate.

The story revolves around a young man named David Rice (Hayden Christensen) who discovers he has the ability to teleport. He uses his ability for personal gain until a religious group begins to hunt him down. The group is called the Paladins and is led by a man named Roland (Samuel L. Jackson).

These Paladins hunt down "jumpers" like David because they believe only God should have the ability to be everywhere at once.

David meets another jumper named Griffin, played by Jamie Bell of "Billy Elliot" fame. Griffin explains the Paladins to him and the rest of the movie is comprised of lots of special effects and running from Roland.

"Jumper" amounts to nothing more than an action flick. But even there it falls short. The fight sequences are lackluster, only saved by the fact that the characters jump from place to place every second. One minute they're fighting on top of the pyramids in Egypt and the next they're beating each other up in the arctic. It's very gimmicky, but it's one of the bright spots of the film.

As immature as it may sound, it is fairly cool to see all the beautiful locations and fighting occurring in them. For example, there is a scene with Christensen and his love interest (Rachel Bilson) in the Colosseum. The fight scene that occurs is not that amazing, but the setting makes it more interesting.

There are some bright spots besides the scenic locales. Bell is very entertaining as Griffin. Bell does a good job of making the wisecracking Griffin likeable, but also a bit despicable. The movie probably would have been better if he were the main character instead of David. In fact, the whole movie makes you wonder why Bell gets so much less recognition and fame than Christensen.

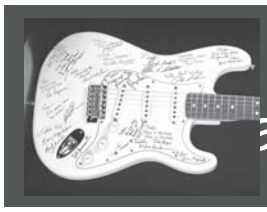
The special effects in the movie are worth seeing as well. The teleporting ability allows for lots of dazzling effects to be thrown into the movie at various times.

Even in action movies, though, there has to be some character development. In "Jumper" it felt as though there was no time for back story or development. At only 88 minutes running time, the movie feels short, if mercifully so. The brief running time, though, does not allow for any character depth.

Very little is explained about the teleportation ability, and the character of David is barely fleshed out. How does the teleportation ability really work? Why did David rob banks with his ability then suddenly seem like a better person later on? These questions go unanswered.

The roles played by Jackson and Diane Lane (David's estranged mother) feel empty and the viewer is left wondering who these people really are. In fact Lane, who is a high caliber actress, literally has only four minutes on screen. Even interesting characters like Griffin aren't given enough screen time for the viewer to be fully engaged by them.

It seems as though the director is setting up for a sequel to this movie. The ending, coupled with the lack of character development and the abundance of plot holes, suggests a sequel is imminent. The problem is, "Jumper" has to be judged based on its own merits, and not how it would fit into a trilogy. And based on its own merits, "Jumper" isn't that great.



However, if you're looking for a little bit of mindless fun and the tickets are cheap, it's not a bad choice. Just be prepared for mostly wooden acting, unanswered questions and plot holes to go along with the great visuals.

Final Take:

★★

"Jumper" is now playing at the Clifton 5 in downtown Huntingdon. It is rated PG-13 for sequences of intense action violence, some language and brief sexuality.

ROCK STEADY

GETTING SIGNED TO A MAJOR LABEL: FORGET ABOUT YOUR DEMO TAPES

Meg White

For this issue, I figured I would follow every other journalist in the country and talk about Britney Spears. But then I thought, that is a depressing story and I feel bad for her. I never liked Britney, but that woman has some serious issues, so I'm going to leave her alone.

Instead, let me talk about how bands and artists break into the music industry. During my time at Roadrunner Records, I had to cover the front desk for an hour or so every day. The other interns were terrified of doing it because what if Lyor Cohen, CEO of Warner Music Group, called? Scary stuff. It was probably the most mundane thing I had to do, but I learned a lot about the industry simply by answering the phone..

Roadrunner fields calls every day from people asking to get interviews, meet the employees or send in demos. Most of the calls I received were from bands who wanted to send in a demo. I felt really bad for these people because if you don't know someone, it's really hard to get your stuff heard by a major label. There was a box that ended up under my desk one day filled with demos that were never opened. I could only imagine the dreams that have been shattered.

Once I spent at least 20 minutes on the phone with a guy from Illinois who just would not give up.

He asked, "What do I do? Can I meet with someone in A&R?" (A&R is the coolest job in the industry. People who work in that department get to go to shows all the time, listen to potential bands and decide whether or not to sign them).

"No, sorry, you can't," I replied.

That conversation happened with different people daily.

Another time a rapper called to see if he could send in his demo. Remember: if you want to get your music out there, at least research the label you're trying to persuade. Roadrunner is a rock and metal label and has been for over 25 years. Rap is not going to happen.

Now I know all of the myths and legends that work in the A&R department at Roadrunner. I'm friends with the people who discovered Killswitch Engage, Slipknot, Nickelback, The Strokes and The Dresden Dolls. They are picky people. A band can't just be "good." It needs to have stage presence, play a good live show, sound awesome on recording and be especially awesome at interviews. That is the magic potion for a top-selling band.

A band can't just be "good." It needs to have stage presence, play a good live show, sound awesome on recording and be especially awesome at interviews. That is the magic potion for a top-selling band.

So if you want to make it big, make sure you know someone. How do you do that? Talk to people. I've met people who have worked for magazines and MTV by talking to people on the train or at work. Someone always knows someone.

If you want your band to get noticed, make a Myspace page to build up your fan base.

Follow up is also probably one of the most important factors in getting yourself out there. Think of a demo tape as a resume. It has to capture attention because you're trying to sell yourself. If you don't follow up on a demo tape, you're not going to hear anything back.

The entertainment industry is very powerful. It can make or break you. Unless you put a lot of effort into it, you're not going to get anywhere. Believe it or not, your demo will probably end up in a box underneath some intern's desk collecting dust while you sit around and hope for something to happen.

In the Name of Fashion

Dress for success

Kelly Popernik

Why should it matter what you wear on an interview? Shouldn't an employer want to hire you for your skills, personality and drive? Maybe, but what you wear on an interview does matter and first impressions resonate. Interview attire might be different than what you would actually wear if you were to get the job, but in the meantime, this is how to dress for success:

For the Ladies:

Being on an interview is not the time to make a loud statement. Try to avoid crazy patterns and bright colors. A solid colored conservative suit is your best option. Women have an advantage because we can wear numerous colors of suits and shirts without looking unprofessional.

If you choose to wear a blouse, make sure that it doesn't have too many frills and is not see-through or revealing.

If you wear a suit that has a skirt and not pants, wear nude stockings. You can also get away with black or brown if your suit is one of these colors. This is not the time to bust out leopard leggings.

As always, the shoes can make or break an outfit. A kitten heel or pointed-toed shoe will elongate the leg and are easy to walk in. Stay away from the "stripper shoe" that has a million straps and a thick, ten inch heel. Keep flip flops and sneakers in your closet, too.

This is not the time to wear your bling bling jewelry either. If you like to wear jewelry, try to keep it to a minimum. Pearls are a great option because they are classic and modest. One to two rings is also okay. Loads of jewelry can actually distract an interviewer and may make you look tacky.

Caking on the makeup is a don't. It may give the impression that you spend too much time masking yourself rather than being who you really are. Do opt for a natural look with a touch of mascara, light blush and a neutral lip color. If you decide to have painted nails, make sure they look polished and aren't chipping. Dirty nails suggest poor hygiene to an interviewer.

For the guys:

Like women's wear, men should also wear a solid color suit to make the best first impression. Black, blue, gray and other dark hues are acceptable. A subtle pin stripe will spice up a suit without making it too trendy. Remember to always match your pants with the jacket.

A white long sleeve shirt with a conservative tie will compliment a suit perfectly. Pastel shirts like a light blue or pink would also work. Avoid matching striped shirts with checked ties and visa versa. They don't go together and it looks like you got dressed in the dark.

There is no room for sloppiness, so make sure your shirt and suit have a "clean fit." In other words, it is the right length and width for your body type. If you are unsure, visit a tailor.

Like the ladies, keep the sneakers and flip flops away. A rounded or square-toed shoe in either black or brown leather will compliment a nice suit. If you choose a black suit, black shoes will look best. If your suit is navy, brown shoes will work. Keep those puppies polished, too. And guys, please remember to wear dark socks. No one likes to see white Hanes socks peeking out from your ankles.

Men should also wear very limited jewelry, if any at all. Depending on where you are being interviewed you may want to cover up your body art. Some companies have rules on piercings and tattoos.

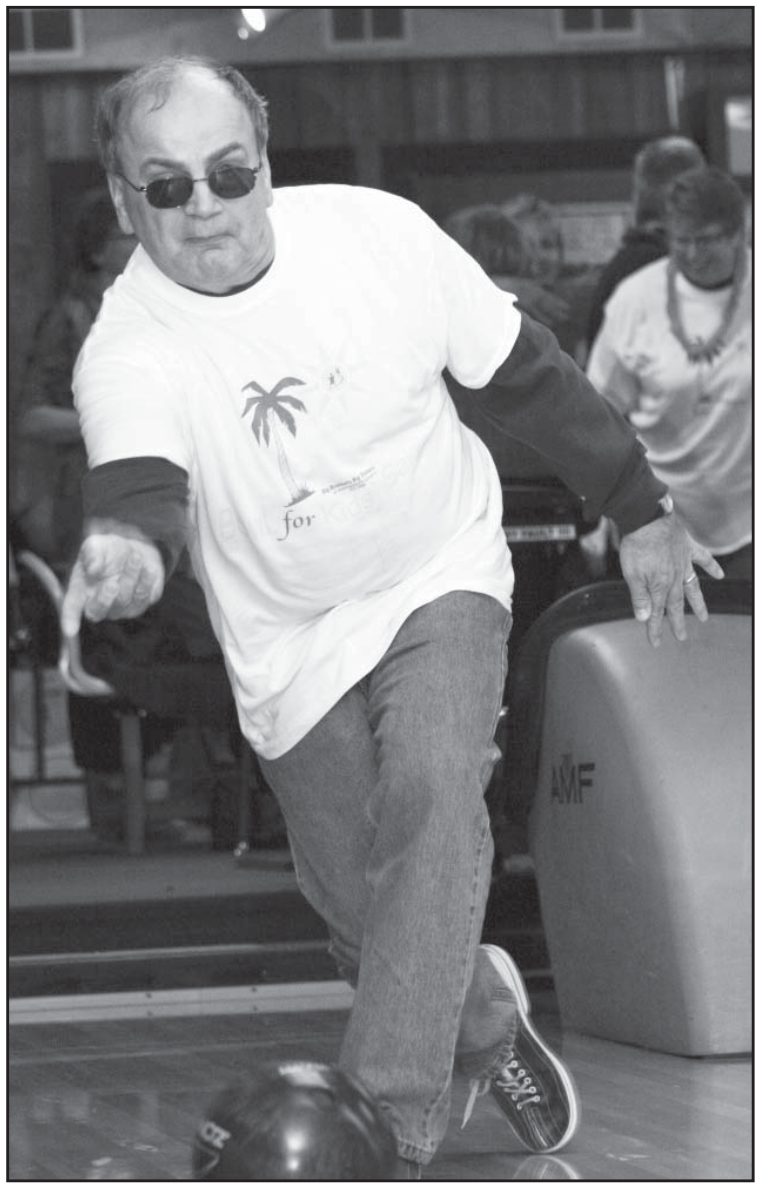
For Both:

I know firsthand that work clothes can be expensive. Try regularly adding pieces to your wardrobe that can be mixed and matched with other pieces. When going on an interview you need to think seriously about how you are portraying yourself. Within the first thirty seconds interviewers will have an impression of you. You want to look professional, polished and confident.

Fun Fashion Tip

Top five things to avoid when going on an interview:

1. Drenching yourself in cologne or perfume. People need to breathe.



2. Carrying a backpack or fannypack. This isn't Disney World.

3. Fishnet stockings. You know what I'm going to say.

4. Sunglasses or headphones on your head. Save it for the beach.

5. Stained clothing. Tide sticks "To Go" will eliminate stains.

Bowl for Kids' Sakes

Anything But Ordinary

Don't judge a book by its movie

Claire Williams

This year there were several Oscar nominations for movies based on books, proving that books can be made into good movies, giving book lovers hope. But when it comes to book to movie transitions, not every novel has a silver screen lining.

Generally there are two types of horrible transitions. One is a total retelling; the other is insertion/deletion to keep at least some plot connections. The following looks at botched book adaptations.

"Timeline":

"Timeline," like most books by Michael Crichton, has a complex plot. The simplified version is that one character goes back to the Middle Ages, right before the Plague, and gets stuck there. The story evolves with events leading to his rescue.

This movie is almost unforgivable. The book was brilliant, moving easily to the Middle Ages. Crichton never made it seem like a fun place to be. In the movie it didn't seem fun either, but everything was fairly clean and in good repair. No future plague rats here.

Even though the book and movie both had the same general plot, most of the details were lost or warped along the way. While the book was gripping, the movie was borderline confusing.

I would recommend reading this book both for its interesting plot and Crichton's amazing storytelling skills. But the transition from book to movie? Not so much.

"Blood and Chocolate":

Annette Curtis Klause said that after she sold the rights to her book, she had no say in its film adaptation. This was fairly obvious while watching the movie version. All the messages her novel conveyed were entirely reversed in the film.

Where the book was original, the movie used stereotypes and clichés. Everywhere the plot twisted in the book, it was straightened out in the movie.

Evidently, the only things that stayed the same were the names of characters and some minor plot issues. The location, message and character personalities were all entirely altered, as were major plot points.

Where the book begged the reader to look at things differently, the movie begged the question, "Why did you bother to buy the rights when you didn't use the story?"

"Harry Potter":

Few other movies inspire such mied feelings of love, rage and denial in avid book readers. Don't forget hope; there's wishful thinking that the next film will actually stick to the plot.

Almost everyone is familiar with the scheme of the seven part series which follows Harry Potter from the minute he finds out that he is a wizard.

The first two installments, directed by Chris Columbus, were not visually impressive but they followed the plot about as accurately as time would allow.

When he was unavailable for the third, Alfonso Cuaron took over. The movies became visually stunning, but less true to the text. The last installments followed suit.

"Potter" readers know that Quidditch is very important in the series. It is more important in the third book than any other. In the third movie, it's not shown at all.

These movies are also subject to a lot of character cuts, primarily anyone with the last name Weasley. They have been cut more and more each movie, no matter how important a part the character might have played in the books. Some readers have even begun, mostly jokingly, to question if Ron, Harry's best friend, will be in all the movies.

While I can live with cuts, changing popular characters and removing major elements is just wrong. Long story short, read the books. Save the popcorn for a better show.

"The Golden Compass":

This movie had controversy to deal with when it went from page to screen. "The Golden Compass" is set in a universe that isn't our own; the rules and the mechanics aren't the same. For one thing, the chief religious body isn't exactly friendly, a fact important to the plot. Predicting displeasure, the director watered down this element, with approval of the author, but to no avail. Given the change, the movie couldn't have the same feel that the books had.

Other changes were made due to time constraints or casting requirements. Some were silly and unnecessary, such as changing the order in which things occurred, even changing how the story ended.

In general, "The Golden Compass" was not a bad movie. It may shine less brightly because it lacks what the original text had, but its plot was easy to follow and it was very visually stunning. I would recommend it to those who like fantasy works; I would personally rather read the books.

Hunting Down Huntingdon

Women's basketball makes end of season push to enter playoffs as no. 2 seed

Emily Hauser

Juniata College women's basketball (17-8, 10-4) took care of business at the end of the regular season to clinch the No. 2 seed and the opportunity to host a playoff game last night. Entering the postseason on a five game winning streak, hosted the source of our last regular season loss, and No. 3 seed, Moravian. Results from that contest were not available as of press time, but can be found on the Juniata athletics homepage.

This is the first year since 2001-2002 that our program has made it to the playoffs and it has been even longer since we have finished above the No. 4 seed.

There has been a lot riding on these last games of conference play. Unlike years past, we rose to the challenge.

We clinched our playoff spot in a 55-51 road victory over Drew University, riding our momentum to crush the Merchant Marine Academy 70-55. Winning our final regular season matchup with Susquehanna was the last obstacle standing between us and the No. 2 seed.

Beyond the incentive of earning home court advantage, secretly we had the idea of payback on our minds after our disappointing home loss to Susquehanna in December. Even more than that loss, the seniors owed the Crusaders for a lousy 1-6 head to head record over the past four years. For the last two years, Susquehanna has knocked us out of playoff contention. The memory of end-of-season heartbreak is something that hasn't left us.

And after supporting the men's basketball team in its 2007 playoff run, we have been even more determined to be in playoff contention. We each vividly remember last year's whiteout at the MAC championship. We each remember how badly we wanted to be on that floor.

The importance and pressure of the last games has definitely been felt throughout the team. There is an unspoken air of determination and focus in practice, and there have been moments when we all could have used a deep breath. When we get tense, it's hard to reverse that feeling. And we play like we feel. That is why the last two regular season games were so important for our confidence going into playoffs. Prior to the Merchant Marine game, we had left with wins but still wanting more out of ourselves.

We had not put it all together, but something clicked in New York. Junior Claudia McDowell said, "We are peaking at the right time." Against Merchant Marine, she scored her second season high of 24 points and Kelly Ashcraft pulled in nine rebounds.

McDowell said, "The bench has really been stepping up lately. We need them to win games. When someone comes off the bench and hits a big shot or gets a big steal, it's huge for momentum. It shows the strength of our depth and gives a spark to the starters."

Sophomore Kelly Rotan has been a big off-the-bench momentum for our team in the last conference games. Against Susquehanna, she came in and hit a couple huge baskets for us in the second half. The team really responded, feeding off her confidence.

Recently, our pre-game discussions have focused on controlling the aspects of the game that are controllable. When we have an off-night shooting, we need to slow down on the offensive side, really work the ball around for a whole shot clock and convert the easy bucket.

Our success continues to be a story of defense and rebounding. Our coach emphasizes that when we win the rebounding statistics, we win games.

Rebounding is so important because it sparks everything else. We

Christopher Shannon / Juniatian

Junior guard Gina Piccolini plays defense during Juniata's 72-56 victory over Susquehanna on Feb. 23 in Selinsgrove. The win, coupled with a Moravian loss, earned Juniata a number two seed in the Landmark Conference tournament allowing the Eagles to host a semi-final game last night. The results of that game were not known as of press time.

Men's basketball stumbles in season finale, falls from first to fourth seed

JC faces old foe its first Landmark Conference playoff appearance

Travis Raup

We have waited the entire season for this one moment. All the work and dedication we put into practice over the last five months has placed us in position to redeem ourselves from last year's conference championship loss to Widener. From the beginning, one of our goals was to reach the Landmark final four and we sealed it with our commanding wins over Drew University and United States Merchant Marine Academy a little over a week ago.

Senior forward Brian Cannon scored 45 points that weekend including his fifth double-double of the season. Junior guard Dave Thompson also gave us a big boost against Drew burying three treys and shooting seven of nine from the field. Two impressive shooting performances helped us soar into a playoff berth in the Landmark Conference post season.

This past Saturday night, though, we finished our regular season at Susquehanna University losing 60-55. The gymnasium was packed and many Juniata faithful made the trip to cheer us on. The only way how to describe the game was that it was absolutely incredible. It felt like a championship game. With fans screaming at one another and players going at it, you could not tell that a title was not on the line that night. We were up seven with five minutes to go, but the Crusaders made a strong finish and overtook us at the end.

With that loss we fell to the fourth seed in the playoffs, setting up our third meeting with Susquehanna this season. We played that semi-final game last evening in Selinsgrove. Results of the contest were not available as of press time. Visit our team homepage for the final score and game recap.

> If you were to walk into our locker room and take a look around, you would find written on one of the walls the phrase: "Home of the Hardest Working Team in Basketball"

If you were to walk into our locker room and take look around, you would find written on one of the walls the phrase: "Home of the Hardest Working Team in Basketball." Coach Curley persistently pounds this phrase into our minds.

Not just any team can be called the hardest working. It takes a special group of individuals that sacrifice their own selfish ambitions and put their teammates before themselves. Coach reinforces this mantra daily saying, "Play for the guy next to you." I find this to be our greatest strength as we all are in it together and whatever happens affects us all as a team. We work as one and look out for each other on and off the court.

So far our strategy has worked.

Eagles continue to soar on track, in field

Successful indoor season draws to a close

Caitlin Hinson

The Juniata track and field team faced tough competition from all NCAA divisions on Feb. 16 at Susquehanna University, our second home during the indoor season. We joined 23 other teams, making for a long day of challenges and achievements. The results from the meet were promising, with numerous season's best performances and three school records.

Freshman Stephanie Varner finished seventh in the pole vault with a jump of 9' 6.25," matching her school record set two weeks ago.

Sophomore Laura Rupprecht finished seventh in the mile with a time of 5:32.09. Rupprecht's time broke her own school record set earlier this season. Rupprecht followed that up with a time of 2:31.05 in the 800 meter race, just eight seconds shy of the school record. "Competing against so many teams was a challenge, but a good thing," said Rupprecht. "It felt a little more stressful, but I think it was good for everyone on the team. When the number of athletes increases, there are more people who run, jump or throw similarly to the way you do. I think we all had individuals to compete with and we all felt challenged."

Sophomore Megan Lamens, a new and powerful addition to our team said, "With over 20 teams competing, it is very challenging to keep one's focus over such a long, tedious day...[but] competing against schools out of our conference serves as great preparation for us athletes."

Other top finishes on the track included the women's 4x400 meter relay comprised of Courtney DeGemmis, Amy Reynolds, Melissa Johnson and myself. We ran to a fifth place finish with a time of 4:14.64, just half a second from breaking the indoor school record.

Junior Kelsey Buffenmyer also had a booming day. Her season best long jump of 16' 8.75" earned her sixth place. She followed that up with a fifth place finish in the high jump with a jump of 4' 11.75".

On the men's side, senior Tommy Beideman led the way breaking his school record in the weight throw by three inches (38' 7").

Junior Patrick Filamor improved his personal best in the long jump to 20' 11.75", which was good enough for fifth place in the meet and fifth all-time for Juniata.

The men's distance medley relay (DMR) consisting of Eric Hoover, Tripp Rudolph, Shawn Rumery and Sam Williams captured third with a time of 10:53.3. The distance medley relay is a unique relay to college competition that involves each runner running different distances – a 1200, 400, 800 and 1600 meters.

To finish the meet with a bang, the quartet of Rudolph, Williams, Jason Hoover and Matthew Bailey nailed a fifth place finish in the 4x800 meter relay with time of 8:29.82. "I really enjoy being on relay teams because they are always competitive and have more of a team aspect to them," said Rudolph. "We have a solid group of really good distance runners and I thought we ran two solid relays. I think next weekend at championships the DMR and the 4x800 are going to be really big events for us because we have a chance to win both."

The Susquehanna Open was the final competition for us before the Landmark Conference Championship. Juniata's move from the Middle Atlantic Conference to the Landmark Conference has introduced new competition as well as retaining longtime rivals Moravian and Susquehanna. Although we were nervous about the championships, we were confident due to our ongoing success.

Speaking of the conference championship, Rudolph said, "[It] is going to be a really big meet for us. I think we have a lot of great runners; however, Moravian and Susquehanna severely outnumber us."

Moravian and Susquehanna did best us in points on Saturday as well. The Greyhounds and Crusaders finished #1 and #2 ahead of us in both men's and women's team competitions. Our men earned 78 points; the women tallied 92.

Success in Myrtle Beach will continue into the Landmark Conference

Amanda Rose Albanese

To college students, spring break is a time away from the classroom to let loose and have fun. To my teammates and me, spring break is our first experience for a little dirt in the skirt. It is our first chance to slide into second base or steal home on a passed ball. We say goodbye to the IM gym and hello to freshly cut grass and a real pitching circle. I look forward to the sore muscles that can only be obtained from playing the game, not from practicing it.

Spring training is one of the best college experiences that I have had. It is an amazing bonding experience for the team. The trip officially starts with a 12 hour bus ride, kicking off before sunrise. We will arrive in South Carolina on a Saturday afternoon, practice on the field Sunday and jump into competition Monday morning. We will play 11 games against other DIII teams, as well as DII programs.

Sophomore Sarah Eckard said, "We sleep, eat, play, practice, spend all of our time together and it really brings us closer." She's right. With four women in each hotel room, the team is forced to get along.

"It's just the greatest way to start a season, to welcome the freshmen and show them the ropes, and also to get together and have fun and remember why we play," said sophomore Nicole Fronczkowski.

This week of play is an opportunity for us to focus on the fundamentals we have been working on since January. The on-field experience we receive is better than any ground ball hit to us on the gym floor. I cannot wait to dig a ball out of the dirt, a play which cannot be simulated indoors.

This trip is also a stepping stone for freshmen. They learn the staff's coaching style before jumping into conference play. They also gain a better understanding of what is expected from them and witness the higher level of college play. "Since it's our first time really getting to even play outside, we get some good competition and we get to see how we work together as a team," said Eckard.

Although we are a young program, we have a lot of strengths that will fuse us together. Junior Jackie Morley said, "After four and a half weeks of practices and watching the girls give it their all, I would have to say that JC will make a lot of noise down south. Having two years prior experience playing down there and knowing the type of competition we face, I believe that we can improve last year's record of .500."

Fronczkowski said, "We have the skill; we have the chemistry; and we will prove ourselves.... Our offense is key for spring break, because our defense is tight and seamless, but our hitting will win games."

Every player in the line-up has improved since last season and the freshmen have shown us that they can definitely take the field.

Our trip to Myrtle Beach comes at a crucial time, weeks before our first conference game against Drew University on Mar. 22. Joining us in play will be longtime MAC rivals, Moravian College and Susquehanna University. As far as competition goes, these two schools always give us good games. Moravian has bested us for three straight years. The closest we have come to a victory against them was a two-run loss in 2006. With Moravian being ranked 6th in the DIII preseason poll, they will be the favorites to take the Landmark title this season. Their record last year was 35-7 and the Greyhounds return seven starters.

However, with a new conference, there are new foes on an open base path.

Drew University posted a record in 2007 of 14-20, winning five of their conference games. Susquehanna performed similarly to Drew posting a 16-12 record last season. The University of Scranton was below .500 last year, winning only seven games. The U.S. Merchant Marine Academy posted 18 wins and 16 losses in '07.

Posting 13 wins in 2007, Juniata fits perfectly into the mix. But what I love about my team is that none of these numbers matter to us. We are a new team, and we have set our goals high. We are ready to mark our territory in the Landmark Conference. Myrtle Beach is just the start to a successful season.

High expectations, high spirits

Baseball preview 2008

Shawn McDonald

It is hard to imagine the upcoming baseball season when the weather repeats snow, ice, rain, snow – in that order. But whatever the weather, baseball season has begun in the Kennedy Sports and Recreation Center six days a week.

With seven returning seniors and the loss of only one starter in the field, we are looking to explode into the Landmark Conference. Returning starters include Juniata career home run record holder Dan Kauffman, pitchers Jay Enoch and Andrew Snyder, catchers Greg Hoffman and me and infielders Steve Wilk, Andrew Kriss and Kevin Small. The outfield has been rearranged with the addition of transfer Adam Spadafora and freshman John Martinez. The two will be competing with several other players for starting positions.

For the seniors, this is our last chance to win the illustrious conference championship ring. The ring slipped out of our fingers two years ago to Elizabethtown. That's left a sour taste in our mouths ever since. Even though we can't win a Middle Atlantic Conference title, we now have the opportunity to win the Landmark Conference.

Enoch said, "Even though this senior class has seen a new coach, a new conference, and a new place for spring training, we all have prepared the same as in years past. We know this is our final rodeo, and we can't let the opportunity slip through our fingers again The goals of this year's team are to finish first in the regular season standings, host the championships for the conference, be the first Landmark Conference Champion in baseball, qualify for the NCAA Championships, and play hard and stay healthy throughout the long and grueling season. In the end, the fact that we play for our teammates and battle against opponents will make us come together as a true team on and off the field."

In order to prepare for the eight week, 40 game season, we are traveling to Fort Pierce, Florida for spring break. There we will play eight games in six days against teams from across the nation, including Lebanon Valley College, LaRoche College, Kenyon College, Massachusetts Maritime Academy and the College of St. Scholastica from Wisconsin.

The spring trip is necessary because of the Pennsylvania weather, but it is also needed for team building. Practicing indoors for five weeks before even touching a baseball diamond makes team cohesion difficult. It becomes monotonous, intensity is lost, and teammates squabble over nothing. Then spring break comes.

The trip to Florida is something that we all look forward to from the beginning of the school year in August through the mundane months of indoor practices. We anticipate not only the games, but the team bonding that happens in our down time between games. The card games on the plane and buses, going to the beach, hanging out at the pool, relaxing tired muscles, cracking jokes and playing practical jokes on anyone, anytime are all huge parts of our spring trip. Most important, however, is winning baseball games.

Spring break is the first time the rookies will see what Juniata baseball is all about. Freshmen quickly realize that this is no longer high school or summer baseball. This is college. The game is elevated to a new height and this trip is their chance to experience it.

For the class of 2008, this is our last chance to win it all. With 18 other teammates who want the same thing, we plan to do just that.

Eagles looking ready to dominate

Amanda Fontana

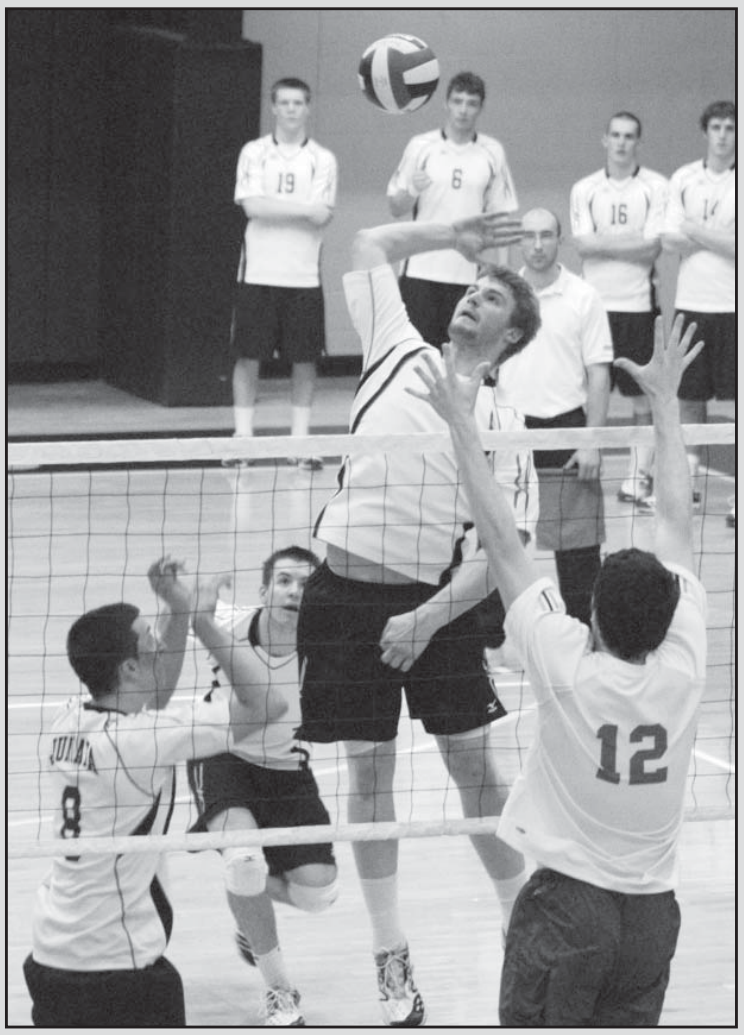
Windy conditions, cold temperatures, cloudy days–it must be the men's tennis season again. None of those conditions even faze the Eagles team though. This group of five returning players and four freshmen is prepared to compete in one of the greatest men's tennis seasons Juniata has seen.

The men's team had a solid 2007 season, finishing 4-2 in the conference and 5-6 overall, but expects even greater results this year.

In the fall season, three of last year's starters were studying abroad. This gave the freshmen a chance to accrue match experience. Now with the upperclassmen back, determining a lineup is going to be tricky and competitive. Each player will have to play to his full potential to earn his spot. This is a positive aspect for the team because it encourages competition and improvement while retaining a deep and talented bench.

Arnab Chakrabarti said, "Tennis so far has been a great experience. There will be a lot of competitiveness during challenge matches but I do not think it will affect this strong team negatively."

The Eagles have a great team bond. The men are one cohesive unit who are very vocal and outgoing. Practicing with the men is always a fun experience. From their constant cheering "Sut," a team chant which means "come on," to their positive outlook and hard work ethic, they are a really close group of guys. "Sut" is a made-up word that became the team chant. No one is sure of its actual origin, but it always pumps them up. No matter how the tennis match is going, "Sut" is the appropriate chant to keep the intensity.



Junior and returning starter Casey Chew said, "I have been excited about of this season for ages. We have a great squad, and each player has the heart of a lion. Sut to the max." Junior team captain Aaron Rhodes said, "Everyone is really enthusiastic and the team is looking to have great potential this season. We want a conference championship."

It is difficult to predict a season's outcome not knowing the competition, but the men still have great potential to dominate. Coach Beth Bleil said, "The men are striving to have an improved record from last year and the freshmen will make a great impact toward this goal."

There are some changes for the men this season, but not quite as many as with the women. The new system of practicing and competing with the women is the men's only major change. They have always had a spring season, so adjusting to the weather and indoor practices are nothing new.

The standards are set high for the men this year. Win or lose, the Eagles will still be cheering and working to compete at the best level they can. From the beginning break dance to start off the matches, to the completion of the season the last match is complete, the Juniata College men's tennis team is ready to compete at its best.

Men's volleyball: A tough schedule and lack of intensity

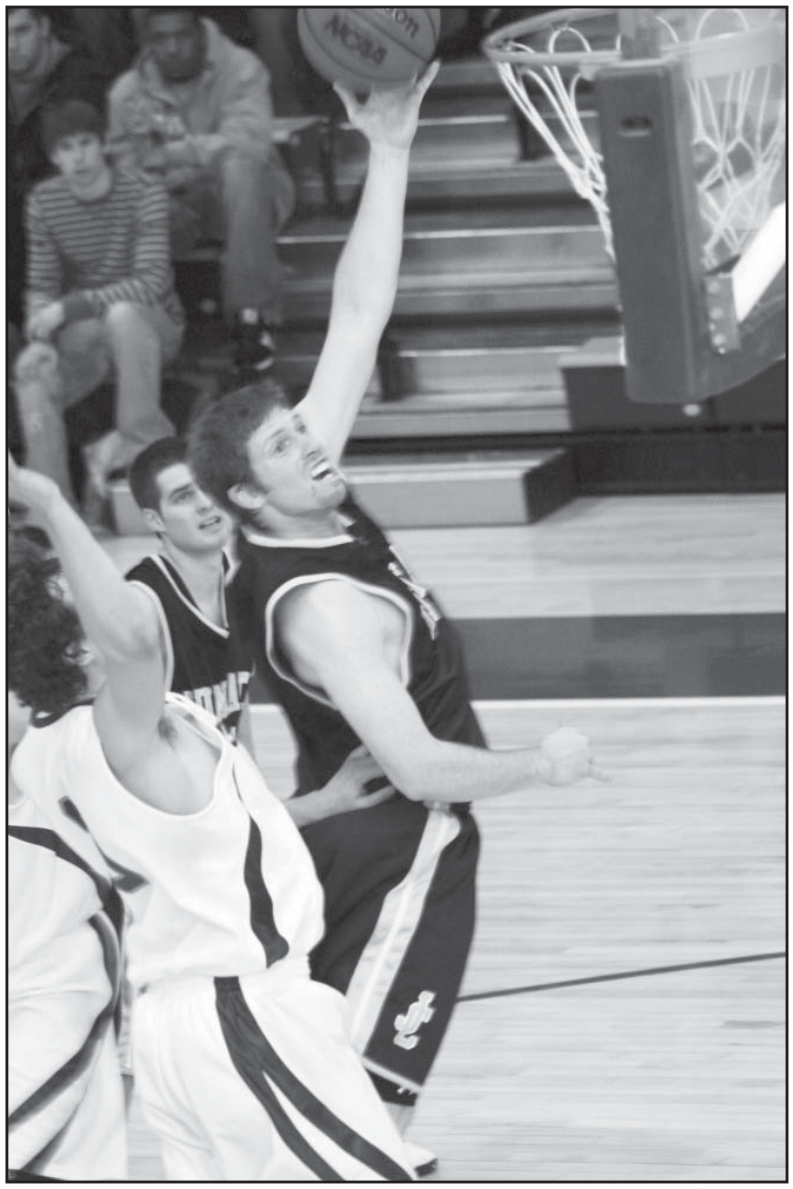
Kevin Dundore / Juniatian

Sophomore Evan Halteman goes up for a kill in the 3-2 win against New Jersey Institute of Technology on Feb. 23.

Kim Wagner

Halfway through the year the men's volleyball team is one game above .500. It is not a start they are not used to. With only two consecutive wins throughout the season, the team must create a strong game plan to maintain its Juniata identity as a perennial Molten Division III champion.

"There is no excuse for having a losing record. [But] there are a few matches that we didn't deserve to win because we didn't play well," said junior setter Matt Werle. According to Werle, the team plays well at times, but it struggles to keep up the intensity for the entirety of matches.



The Eagles currently hold fourth place for the Eastern Intercollegiate Volleyball Association (EIVA) Tait Division.

The Blue and Gold posted a win over EIVA-Tait divisional foe New Jersey Institute of Technology (NJIT), 3-2 on Feb. 23. Falling to a 2-1 deficit to NJIT, the Eagles were able to find their strength and bring the game back to their side, winning the fifth game 15-8. Senior Matt Fritz and Werle kept the Eagle's offense alive with Fritz amassing 17 kills and eight digs and Werle posting 54 assists.

"We have the toughest schedule you can ask for on the east coast," said Werle. "We play a number of top 10 Division III teams, and the number of Division I teams that are on our schedule heavily outweigh the number of Division III teams."

Juniata hosted East Stroudsburg on Feb. 26., winning 4-1.

After a two game stint in Illinois over spring break, the Eagles return to action in Huntingdon on March 14 against Springfield College.

Christopher Shannon / Juniatian

Senior forward Brent Ferko drives to the basket during Juniata's game against Susquehanna on Feb. 23 in Selinsgrove. The Eagles lost the hard fought contest 60-55, but earned a rematch with the Crusaders in the Landmark Conference semifinals yesterday. The results of that game were not available as of press time.

Juniata's "hardest working team in basketball" makes second straight postseason run

continued from page 15

We set a new school record for wins in a season with 16. But we're not done working. Going into this post season, we had been working on several different aspects of our game.

One aspect is our full court press break. So far this season, our guards have sometimes struggled with pressure. Teams scout for weaknesses and press us early, forcing turnovers. In almost every practice, we have been working on trying to perfect our press break, which will give us more offensive opportunities. Once we move the ball past midcourt we can pass it inside where senior forward Cannon can pound it into the defense or kick it out to one of our shooters. The secret to all of this is staying calm and not letting our opponents dictate the tempo of the game.

Another aspect that we do a great job of is our ability to involve everyone in the game plan. Senior point guard Kyle Opitz does a great job distributing the ball and controlling tempo. His ability to drive the lane and to collapse defenses is outstanding. This has really been a key factor in the games where we shot the ball well. If we can drive and kick or swing the ball against zone, our shooters will drain threes all night. However, the nights that we do shoot the rock poorly have come from inconsistent screens, poor timing or allowing the defense to dictate the speed of the game.

Depending upon the outcome of last night's game, our season could continue in one of two ways. We'll either contend for the first ever Landmark Championship on Sat. or we'll wait for the NCAA and ECAC invitations to postseason tournaments to be extended in the coming weeks.

Our second straight playoff appearance happens for the first time since the 1987-88 and 1988-89 seasons.

Success at Landmark Conference Championships

Two swimmers place in final rounds

Kim Wagner

In some eyes it may look like an unsuccessful season, but to the women of the Juniata swim team, it was a year of improvement and preparation. With only four swimmers on the roster, the team collectively earned 74 points at the Landmark Championships last weekend in Kings Point, New York at the United States Merchant Marine Academy.

Freshman Lindsay Cooper collected 28 points for the Eagles during the championship meet. She placed fourth in the 50 yard freestyle, earning the team 11 points, fifth place in the 100 yard breaststroke for 10 points and seventh in the 100 yard freestyle for seven points.

Senior Kasey Brough also competed in the finals, placing seventh in the 200 yard butterfly for seven points and twelfth in the 500 yard freestyle for one point.

Sophomore Kelly Serfling and freshman Rachel Gipe were unable to qualify individually for the championship finals, but each placed in the top 20 in at least one of their events. Serfling finished 18th in the 100 yard breaststroke while Gipe finished 17th and 18th in the 100 yard butterfly and 100 yard freestyle, respectively.

The swim team's season has now ended, but the women have formed a firm base for the future. Losing only one swimmer, graduating senior Kasey Brough, the Eagles will return three members for next year's campaign. Coach Ruff's recruiting efforts will likely add six incoming freshmen that will add depth, talent and competitiveness to the 2008-09 roster.

Brough made a huge impact on Juniata swimming during her four years in the pool. She will leave Juniata holding the record in the 500 yard freestyle (5:20.25 set in 2006). She is also in the top 10 for the 200 yard freestyle and in the top five in the 1000 and 1650 yard freestyle and the 500 yard butterfly.

The Eagles finished the season with a 1-5 record.

Proposed changes to NCAA divisions

continued from page 6

focus on the students. Whether traditional or non-traditional, these institutions at this time do not want a DIII structural change. Juniata falls in this category.

"There's also been a flood of conferences coming out against the separation of DIII and DIV," said McKenzie. "Some of those conferences that are coming out against this would be the same conferences historically you thought would support it."

The College's move to the Landmark Conference in the fall of 2007, criticized and praised for various reasons, was the administrator's stand for academics.

"They [Juniata administrators and coaches] like the way things are now," said Baker. "We joined this conference to be with schools that are like us [academically]."

According to Grace Fala, associate professor of speech communication and faculty representative to the NCAA, the Landmark Conference "makes a wonderful template." All eight institutions maintain an consistent academic mission, especially with regard to athletics.

Along with professors, student-athletes and coaches advocate for Juniata's continuing emphasis on education. When it comes to practices or even games, academics are the priority.

"There have been times when our number one player could not come to games because of a presentation, exam or speech and our coach understands that," said Amanda Albanese, senior captain of the women's softball team and member of SAAC.

"Take a look at the GPAs of student athletes at Juniata," said McKenzie. "I think they are either identical or in a very small variance away from the general student GPA." This is no surprise to many coaches.

Even though Juniata is staying true to the original DIII student-first, athlete second model, there still exists a chance for a DIII structural change. In this event, the presidents of the Landmark Conference are committed to staying together as a conference. A vote would be held among the eight authorities, and majority would rule. Kepple believes, however, the presidents would come to a consensus on this issue if a decision was necessary.

Juniata's football program is a different story. It competes in the Centennial Conference, which includes Franklin & Marshall College. It is unknown what would happen to football if the Centennial and Landmark conferences go separate ways.

The Juniata coaching strategies would be affected if a structural change led to more restrictions on their recruiting capabilities. Often times, prospective student-athletes are being recruited by coaches in various divisions. If Juniata's coaches were unable to engage in off-campus recruiting, they would have a difficult time competing with DI or DII coaches for desired recruits. The question is then raised whether coaches would remain at the College if they were unsuccessful in recruiting.

Questions are also raised about how enrollment at Juniata would also be affected. Athletics help in the overall diversity of the student body. If Juniata would move to an athletic division with more restrictions, it could hurt the College's appeal to high school athletes wanting to pursue a competitive collegiate career in sports.

The DIII Working Group on Membership Issues is researching this situation to discover if the athletic perspectives of DIII institutions are diverse enough to cause action. On Feb. 7 DIII schools received a membership survey seeking each institution's perspective. Participation was voluntary.

The DIII Working Group will use the survey results to help create any formal recommendations. These recommendations will then be discussed over various NCAA regional forums to be held in the spring and fall of 2008.

Any vote considering DIII membership changes will occur at the 2009 NCAA Convention on Jan. 14-17. This means that the 2011-2012 school year would be the earliest any membership change could be implemented.

Student-athletes react to the proposed changes to the NCAA DIII structure

"It almost seems unfair to me that a small group of presidents can initiate this huge change for a large number of institutions."
~Jeff Berkey, men's basketball

"This division is pointless." *~Laura Goodlander, women's soccer*

"I think of inferior sports and inferior athletics, and that the level of quality of play would not be that much higher than high school."
~Greg Hoffman, baseball

"It would be more like intramurals. It would diminish the whole idea of being a college athlete."
~ Sam Smith, field hockey

"I know it would definitely hurt the recruiting process. I wouldn't play for a DIV school."
~Jen Hnatuck, women's basketball

Women's basketball playoff run

continued from page 15

know things are going well when Kelly Ashcraft gets a full court outlet pass after a missed shot for the easy lay-up. Those are the moments when we know we are in the zone. Without defensive boards, we cannot run transition. Without transition, we cannot control tempo.

Offensive boards, without a doubt, are huge momentum killers for the other team. It is hard to sit down and play 30 seconds of defense. It is that much harder to play 30 seconds only to give up an offensive board and have to do it again.

Defensively, we have become more comfortable with disciplined, 30 second defensive series. This is a product of several weeks of drills geared toward playing defense for the whole shot clock. Earlier, we had a tendency to play 25 seconds and then give up an easy bucket.

Regardless of last night's outcome, further postseason play could continue. An NCAA tournament bid or an ECAC tournament invitation is a possibility.

We've put ourselves in a good place this year. It's a little strange being one of the top dogs rather than struggling to be the comeback kids. We play with more experience now and it shows. We will need to take that sense of experience with us to playoffs.

SEPTEMBER 18, 2008 | JUNIATA COLLEGE | VOLUME 90, ISSUE 1

New meal plans serve up discontent

Fewer options come at a higher price, according to student calculations

Marie Boller

Juniata College students arrived on campus this fall to some substantial changes in dining options and are still trying to make sense of the newly restructured meal plans.

"The new system has fewer meals per week, and each meal costs more than from before," said senior Nick Reiter.

Reiter calculated the difference between meal plans in 2007 and 2008. According to his figures, the average cost of a meal has increased by 13.2 percent, while the average number of meals per week has dropped by 21.66 percent.

The newly renovated, and soon to be renamed, Muddy Run now features a Mexican line in addition to subs, salads and a grill station. Each station has a specific item available for meal exchange at lunchtime only. Café ala Carte and Jitters also have four options for meal exchange from 11 a.m. to 3 p.m. on weekdays.

According to Hal McLaughlin, general manager of Juniata's dining services, meal exchanges weren't part of the College's original plan.

"President Kepple felt that…it might be a good idea to put meal exchanges back at lunches only, because that is the busiest time on campus," McLaughlin said.

McLaughlin explained the reason for the limited number of meal exchange options is to speed up service in the lines. "We can prep those items heavy," he said.

Generally, the meal exchange option will stay the same for one week unless supplies run out. But if the option in Salsa Rico is a chicken quesadilla all week, vegetarian students craving Mexican have to eat into their Declining Cash Balance (DCB).

"The food in Muddy Run is

continued page 6

Largest freshman class on record

Housing, food and scheduling issues resolved by departments

Christina Gongaware

Juniata's freshman class of 463 students is the College's largest incoming class to date. Several departments across campus—including the Office of Residential Life, the Registrar's Office and Food Services—have made changes to better accommodate the freshman class and the total 2008 student population of 1,585.

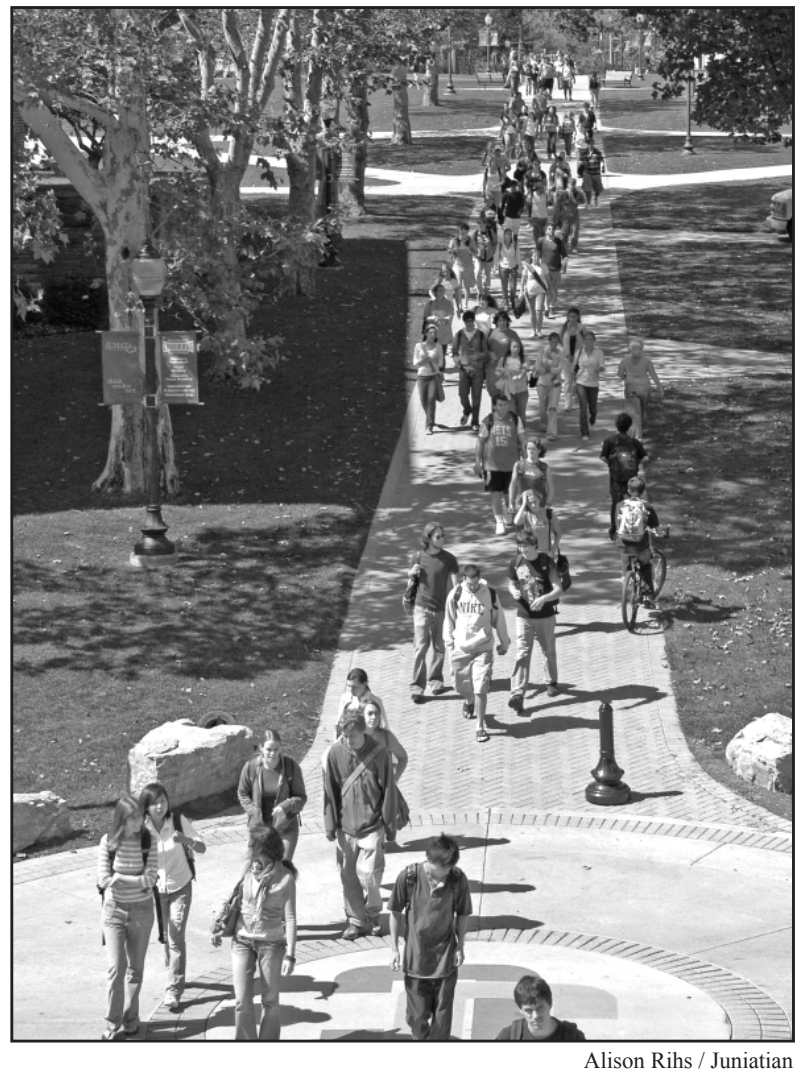
Housing

Director of Residential Life Tim Launtz was faced with the task of finding a bed for each student of the large class.

"It was a real challenge, although it was a good problem to have," Launtz said.

From building extra rooms to moving more students off campus, Launtz said, "The Residential Life staff did an outstanding job. They missed vacations, worked a lot of extra hours and in the process learned a lot so we hopefully won't encounter this trouble again."

"Trouble" involved slimming down the number of freshmen placed in "forced triples"—double rooms holding three roommates—which stood at 97 students in the second week of June. However, as of press time, only one forced triple remained on campus. Its residents, three males in Tussey Hall, are receiving a 10 percent discount on their room and board costs.



Residential Life used several resolutions in order to avoid overcrowding students.

One solution involved placing freshmen into housing traditionally reserved for upperclassmen. Freshmen were placed in the first two towers of East Halls.

Two new rooms were added in South basement. Cloister's lounge was also converted into housing, although Launtz said, "We sure don't like taking lounge areas, but we didn't want an astronomical amount of triples."

A traditionally male hall on the second floor of Terrace was also converted to a female hall.

PA teaching certification requirements to change

New structures and credit demands to take effect statewide in 2009

Alison Rihs

Beginning next year, all university education departments in Pennsylvania will make drastic curriculum changes. The State Board of Education recently passed a law to modify which teaching certificates colleges could offer. The Pennsylvania Department of Education (PDE) then created guidelines to require specific curricular elements and a higher number of credits for certification. These regulations, which go into effect with next year's freshman class, will make it difficult for future education POEs to graduate from Juniata in four years.

In accordance with PDE's new rules, Juniata students will need to take 15 more general education credits than they currently do if pursuing certification. Taken into account with other mandates, such as professional core classes and student teaching, this adds up to a total of 120 credits for some.

College representatives in Pennsylvania are concerned that increasing the already demanding workload for education majors would deter students from becoming teachers.

College presidents have fought PDE's resolution, but Governor Ed Rendell has not been able to meet with them.

These changes will make it increasingly more difficult for liberal arts colleges, specifically, to certify new teachers. This could negatively impact the state's educational future. Chair of the Education Department Fay Glosenger said, "Currently, Pennsylvania liberal arts colleges prepare 40 percent of all teachers certified in the state."

Specifically, Juniata College's education department has a good reputation and places teachers across the country. Since 11999-2000, on average 39 Juniata graduates have earned teaching jobs yearly.

Still, PDE believes that liberal arts institutions are providing ineffective teachers.

The new certification requirements mean that fulfilling liberal arts requirements and graduating as an education POE may be difficult in the standard four years. Glosenger said that she is "philosophically opposed to everything it [the change] stands for."

Elementary Education

The most drastic change will be to Elementary Education (kindergarten to sixth grade) certification. It will be called Middle Level Certification and cover fourth through eighth grade.

This POE will necessitate 120 credits, highly exceeding Juniata's POE limit. According to Juniata's curricular rules, no POE can be comprised of more 63 credits.

Early Childhood

The requirements for Early Childhood Education (ECE) will also be altered. Currently that certification allows certified teachers to work with children from newborns to third grade. The certificates offered under the new regulations will only provide for preschool to fourth grade.

PDE will now require 72 credits to earn this certificate. Though it is over Juniata's 63 credit POE limit, the curriculum committee has made an exception in this case and the College will be able to keep this program.

Glosenger said, "We have always had historically one of the best Early Childhood programs in the country."

Special Education

Beginning with the freshman class of 2009-10, it will no longer be possible to enroll in the Special Education certificate alone. It must be combined with an ECE, Middle Level or Reading Specialist certificate.

Adding ECE would call for 102 credits while adding Middle Level would equal 150.

Middle Level

There are two options for this certificate that depend on how many areas a student would like to focus on.

The first option necessitates 30 credits for a concentration in a single core subject. A student can choose from math, science, social studies or a combination of English, language arts and reading. Twelve credits are then needed in each of the other three areas to be eligible for certification.

The second option allows students to specialize in two subjects (21 credits each). There are several combinations students can try. However, they cannot group math and social studies or English and social studies.

Given the new requirements, Juniata may be forced to drop Middle Level from its curriculum.

Secondary

Secondary Education will remain the same for now. PDE will begin to review these certificates next. Thus, students in the immediate future will not be affected.

General Requirement

The final change will be the Chapter 49.2 Regulations created by the State Board of Education. On or after Jan. 1, 2013, all applicants for certification must have nine credits or 270 hours of special education. Applicants will also need three credits or 90 hours of English Language Learner.

The decision to change the new grade structure of teaching certificates offered in Pennsylvania is now law. The only way it can be overturned is to take it back to Congress. This would be a two-year process.

On the other hand, PDE's decisions about curricular and credit requirements are not law. They have the ability to reduce the required credits, but it is unlikely that they will change their minds. As a result, students and professors will have to adjust to these new guidelines starting next year.

To find out about Juniata's reaction to the PA Dept. of Education's certification changes and our education department's future, see part two of Alison Rihs' coverage in the Oct. 2 issue of the Juniatian.

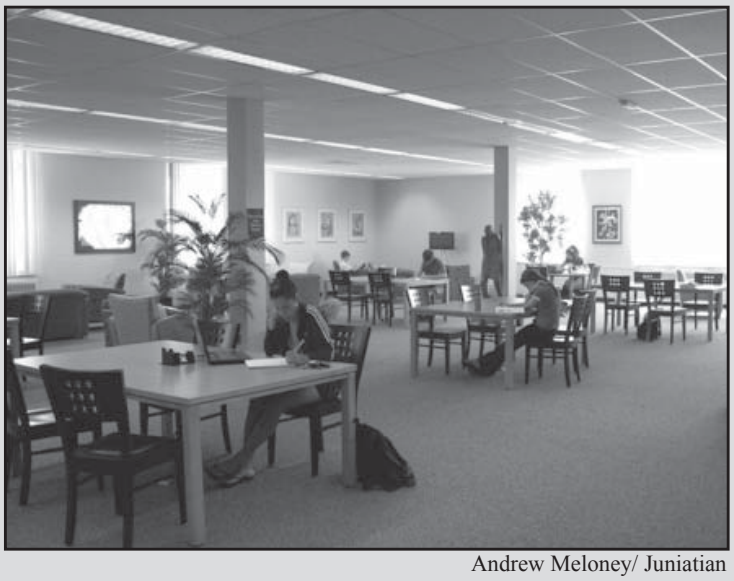
Library's first floor newly renovated

New space meets good reviews

Alex Loughran

Over the summer the library underwent significant renovations. The periodical stacks were relocated to the basement. In their place, is the new Klaus and Ellin Jaeger Information Commons.

This is only the beginning of the renovations. Library Director John Mumford said, "[We are] looking at completing the first floor in the near future. The information commons is such an aesthetically pleasing area, we want the rest of the first floor to match."



Further changes will be done over the next four years. Mumford said, "I think it's been wonderful. It offered our users a nice open area [that's] comfortable [and] technology friendly."

Echoing his sentiment, junior Connor Ross said, "I like [the commons], it's a nice place. I see people coming in everyday to do work."

The new environment seems to be the most talked about feature. Jess Michaelangelo, a sophomore, said, "The couches and stuff are really comfortable."

Megan McQuillan a sophomore said, "I think it's a very good atmosphere. It's a good place to study." When asked about her favorite new feature Michaelangelo said, "[The] tables, they are really to work at especially when you have a lot of books to spread out."

McQuillan however, was one of a few who expressed concern over the lack of computers. She said, "[The lack of computers] does kind of upset me. And there are always people on the computers [that we do have]."

Andrew Meloney/ Juniatian

According to Mumford, the modifications to the first floor were in reaction to student demands. "[In] most of the surveys we've done, students have asked for more study space. And anyone who's been in the library has seen how congested it can get," Mumford said.

The student body is pleased with the current renovations. And students can only hope their demands will continue to be heeded and that the next batch of modifications will be just as well-received.

Founders Hall: where history and the future collide

Construction will finish on schedule in June 2009

Kristin Rodkey

The Founders Hall reconstruction project is set to be completed in June of 2009. The project is estimated to be 25 percent complete with the demolition stage out of the way. The only part left to tear down is the stair tower, which will happen in the upcoming weeks.

Minor setbacks occurred during construction this summer. The original plans did not include putting a new roof on the existing part of the building. Structural damage, though, forced the removal of the old roof and part of the building. Due to the age of the wood, some of the materials could not be reused. The age of the building also necessitated replacement of some of the internal structure.

In spite of these difficulties construction was able to stay on schedule.

Rob Yelnosky, vice-president for finance and operations, confirmed that the contractors are starting to frame out the rooms. The fourth floor has already been framed and the first floor is almost finished.

Electric and plumbing are currently being put in the building, along with masonry work being done on the fourth floor.

Though members of the campus community had hoped that the stairwell in Founders could be kept, it had to be demolished due to building codes. A section of the stairwell was kept and will be on display in one of the history rooms. Although the staircase will not mirror the original design, Yelnosky said that it will be very unique. When standing on the first floor, a person will be able to see straight up to the fourth floor.

Even amongst rising prices, the Founders Hall project has stayed within budget. The budget was set last year at $8.59 million. A rise in prices was factored into the original budget in cost and has covered these expenses.

The cost of construction has been split between two sources. Half of the cost of the project is to be funded by private donations alone.

"We are on target to reach the $4 million Founders fundraising goal by Sept. 30, 2008," said Erik Evans, associate vice president for advancement.

John ('54) and Irene ('58) Dale gave the single biggest donation, $1 million, for the project.

The College also received an anonymous donation of $500,000 from a trustee.

When completed, Founders will be LEED Certified Green. This will include the use of geothermal energy, roof shingles made from recycled rubber and furniture made from bamboo and cork. The building will also have bike racks and more efficient lighting.

During deconstruction a goal was to avoid sending left over materials to landfills. Some of the wood was even made it into furniture that is now owned by Nicole Kidman.

During deconstruction a goal was to avoid sending left over materials to landfills. Some of the wood was even reused by a company who made it into furniture that is now owned by Nicole Kidman.

For Yelnosky, the most gratifying aspect about the project took place in the beginning. When Founders was closed off, past alumni came back to tell their stories of how the building had affected their time at Juniata.

"Everyone that has ever [gone] here has been in that building and touched those stairs," said Yelnosky.

For many Founders Hall holds a special place in their memories and a special place in the history of this college. Hearing people's excitement and support for the project has also made it that much more enjoyable for Yelnosky.

When asked what aspect of Founders he is most excited about, President Thomas Kepple said, "My office will be there."

Overseeing Founders Hall construction is Earl Martin, project manager. The primary company doing the work is Leonard S Fiore from Altoona. D.C. Goodman, from Huntingdon, is doing the mechanical and electrical work.

Christopher Shannon/ Juniatian

As part of the renovation project, Founders Hall underwent demolition during the summer. The renovation project is estimated to be completed by June of 2009.

Security office makes major changes

New title, new responsibilities, new look

Rob Schultz

Recently, Juniata's Campus Security has undergone a series of changes. The Office of Security is now known as Public Safety. This name takes into account the department's various new responsibilities such as emergency planning and operations, fire safety, accessibility and community safety. Another significant change has been the arming of the Public Safety Officers.

Act 235 was passed by the board of trustees in April 2008. The act enables campus officers to carry firearms.

The officers have gone through a series of psychological tests and completed physical training to be qualified to carry and use firearms.

Three officers will be armed by the end of September and six by the end of October. Also, two officers have the power to arrest if such action is needed.

Last spring students voiced discontent over the arming initiative on the online campus forums. Many students felt that campus is safe enough without armed officers and that the College would be going against its Brethren tradition of promoting peace by introducing weapons.

Some students see the value in the change. "I think that it is good that we have them, and that they are prepared to take control if anything does happen," said freshman Jess Spirko.

Another addition to Public Safety's new initiatives is the institution of civility patrols. Civility patrols take place on Thursday nights between campus and popular bars like Johnnies and Memories on Washington St.

Tim Launtz, director of residential life and public safety said, "We want students to be aware that patrols have been increased to ensure their safety." He also wants the officers on civility patrols to be relationship-oriented with students.

These patrols are also designed to help reduce vandalism that has been occurring in residential neighborhoods bordering campus.

The officers have new uniforms this year. The uniforms are made to make the officers more comfortable and more approachable. According to Launtz, these uniforms give students a sense of protection and help them quickly identify officers.

In addition to being allowed to wear shorts, officers now wear uniforms made of dri-fit fabric that is more comfortable than the former black polyester uniforms, especially during warmer months.

"We believe that people do their best work when they are comfortable," said Launtz.

Throughout the year, students can expect many more emergency drills. There will still be monthly fire drills for each residence hall. In addition to the fire drills, new drills will include emergency vehicles arriving on campus to simulate emergency responses. These drills will include the local fire department, police department and emergency services. The drills will be announced ahead of time for students via e-mail and are not meant to inconvenience students.

A community rewards program will also be put into effect soon. The program will reward students who do good deeds in the community with raffle tickets. The tickets that students receive can then be used for a chance at winning prizes such as a flat screen TV.

The department is instituting this program because Launtz said, "We'd rather be looking for the good."

Students already receive information about security-related issues through text messaging and e-mail. There will also be a JC Alert, which will pop up over whatever a student is doing on his/her computer screen when logged onto the Juniata system. The JC Alert will be used in case of extreme emergencies.

There are also plans to use WKVR, the campus radio station, to alert students of similar security issues. The goal is to have the station make an announcement if something security related has occurred on campus.

"We can definitely look at other ways," said Launtz, as he spoke of ways to alert the students of security related events.

Launtz plans more security updates and improvements throughout the year.

College cuts carbon and costs with geothermal heating

Juniata to activate new sustainable energy source near Founders Hall

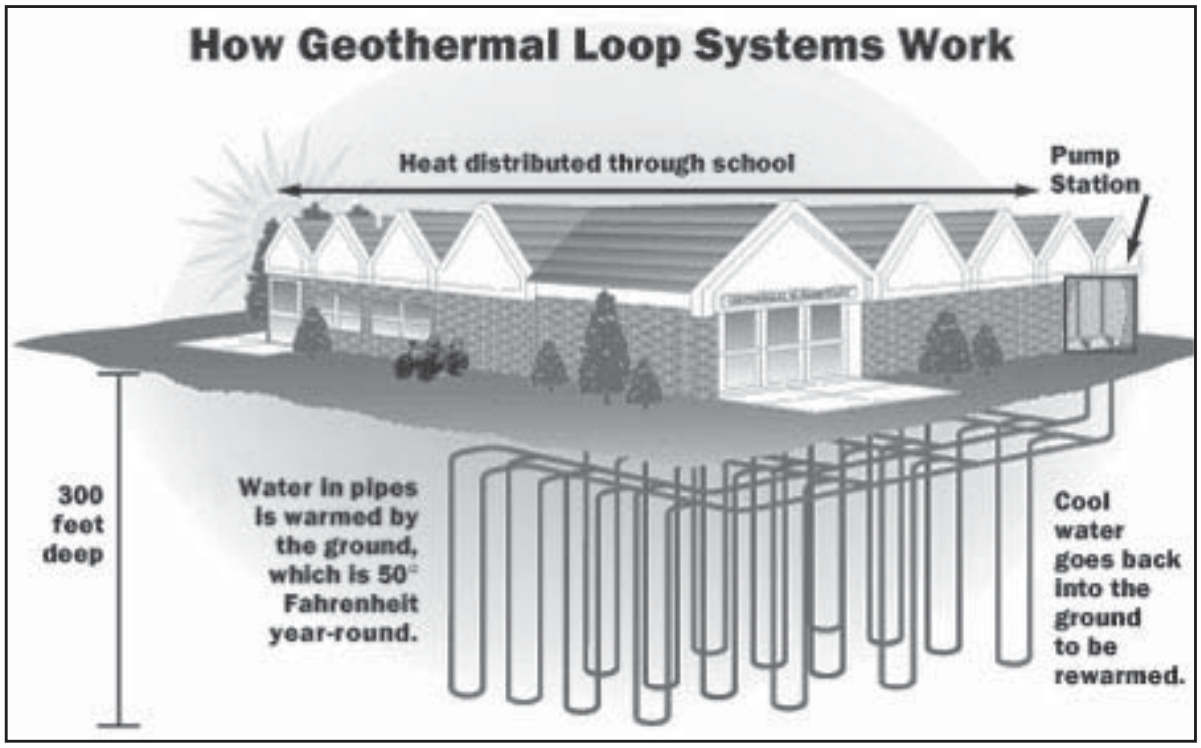
Neil Neigenfind

Over the past summer, geothermal heating was installed for Founders Hall. Geothermal heating is an alternative to conventional gas and electric sources and has the potential to both lower the College's energy costs and its impact on the environment.

According to Rob Yelnosky, vice-president for finance and operations, about 56 small wells were drilled into the ground. The wells are 225 ft. deep, and pumps keep a constant flow of water up into the building, and then back into the earth. Warm water will flow up through these wells at 55 degrees, cutting down the cost to heat buildings. This is also helpful in the summer when the water only needs to be cooled from 55 degrees by cooling systems.

The geothermal pump system is made of three parts. These are the loop, the heat pump subsystem and the heat distribution system. The loop is the water flowing through the series of wells drilled outside. This is the well field that was drilled outside of Founders. The heat pump removes the heat from the water in the loop, concentrates it and then distributes it throughout the building. For cooling, the process is reversed.

According to Ryan Mathur, professor of geology, switching from conventional heating to geothermal heating is a wise choice. Since the warmer water is being used, much less oil needs to be burned, creating fewer emissions. This benefits the environment by releasing less carbon dioxide (CO_2) into the atmosphere, and also by preserving our nonrenewable resources.



With the rising price of electric, gas and oil, this will be a cost saver for Juniata. Yelnosky expects that the $247,000 project will pay for itself in only three years.

Future installations outside Ellis Hall and East Halls are expected in the next three to five years.

Yelnosky said, "With the way electric prices are going to go in Pennsylvania, and natural gas and oil, it's becoming more economically reliable than a conventional system as well, so it makes a lot of sense to do."

Geothermal is one of Juniata's only sustainable heating options. It's effective in this area due to the amount of ground water. Since Juniata isn't a strategic candidate for solar or wind energy, geothermal is a good choice to save on energy.

This will also further establish Juniata as a leader for environmental sustainability. It serves to educate others and promote alternative energy. To Yelnosky, this is the beauty of this project.

He said, "It's another visible commitment that people can point to and learn from as others in the community are making investments [in energy]."

The project did not come without hardships. The process became difficult as ground would collapse in certain parts of the well field, despite the richness of this area.

Yelnosky said, "There were six wells we had to case, because there was so much sand that [they] kept collapsing on [themselves]. One we would drill without any problems, and right next to it we'd drill and have sand collapse, and then we'd find a perfect well again.

The wells provide supplemental support to von Liebig in addition to Founders Hall.

Geothermal heating can be applied to personal houses, as well. The U.S. Environmental Protection Agency identified geothermal as "the most energy-efficient, environmentally clean and cost-effective space conditioning systems available."

There are more than 1,000,000 geothermal heating installations in the United States alone. This eliminates more than 5.6 metric tons of CO_2 annually. The impact of this is equal to taking close to 1,295,000 cars off the road or planting more than 385 million trees.

Juniata's $6-million man

Deceased alumnus gives his estate to create scholarship funds

Amilcar Gabriel Toro

Last June, Juniata alumnus Larry Johnson ('61) quietly passed away. But his will made a loud statement.

In a gift totaling over $6.5 million, Johnson left his entire estate—everything from his house right down to his CD collection, socks and pet cat—to Juniata College.

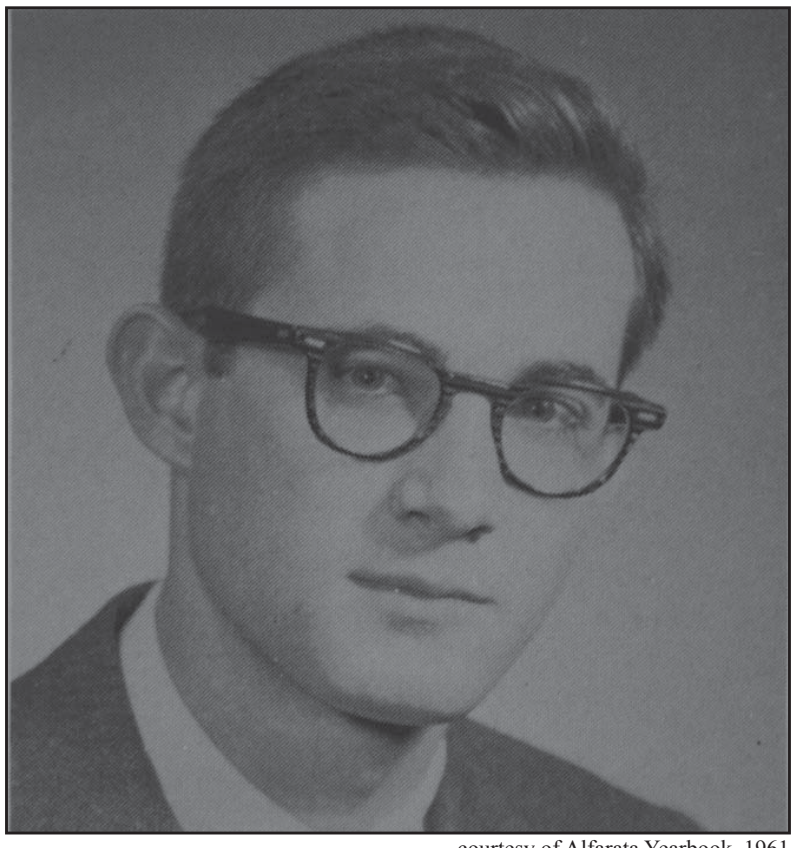
According to Kim Kitchen, Juniata's director of planned giving, the gift was Johnson's way of giving back to the College what it gave to him. As a senior at Somerset High School in Somerset, PA, Johnson received a financial aid scholarship from Juniata that enabled him to attend the College, graduate and go on to become a successful radiologist.

His gift will be used to make three new financial aid scholarships to give other students the opportunity the College once gave him. He insisted that none of his success would have been possible without Juniata's help.

In 1938, Johnson was born into a low-income family. Early on, his father abandoned his family, leaving his mom to raise her two children alone. When his mother, Mary Ellen, spent two years in nursing school, Johnson and his brother lived in an orphanage. After acquiring her degree, his mother reclaimed her two sons.

But little deterred Johnson. He went on to become class president of his high school, vice president of his school's National Honor Society chapter and even a star on the basketball team.

Then, with the help of the scholarship, Johnson came to Juniata. At the College, he became sophomore class president, led the debate club, took part in intramural sports and contributed to the social and homecoming committees.



"His final gift revealed who he was. He was always a man who cared about others, and he always put others in front of himself," said Kitchen. "Larry Johnson was a good listener; he would listen to people's problems and make their burdens his own."

After graduating from Juniata, Johnson went on to become a radiologist at the University of Rochester. According to his coworkers, he was very good at his job but liked keeping to himself.

Johnson asked that $1.5 million be used to create the Lawrence Johnson Scholarship, which will award a full ride to a graduating student of Somerset High School who plans to study the natural sciences at Juniata.

The College decided that the rest of the money will be split between two other scholarships. This first is to attend the University of Rochester School of Medicine and Dentistry, where Johnson received his graduate degree in radiology. The second is the Homer and Ethel Freshman Biology Scholarship.

Kitchen said of Mr. Johnson:

courtesy of Alfarata Yearbook, 1961

Larry Johnson, Class of 1961

"He was always behind the scenes. He always wanted to help other people, but he didn't want any recognition. He was really sort of a modest mystery."

Not even his friends could say that they had Larry Johnson figured out. Whoever he was, whether that be brilliant doctor, basketball star, kind man, or even cat lover, Juniata's own Larry Johnson will never be forgotten.

Politically Speaking

Which votes matter and what polls mean

Seth Fox

In today's election climate, the public is bombarded with political information from all forms of media. Still, many citizens and students don't know much about the election process. Here are some answers to common questions to help the average person navigate the election.

How is the presidency determined?

A common belief is that the presidency is determined by the popular vote. This is not true. The presidency is determined by Electoral College votes.

What is the Electoral College?

The Electoral College is a group of elected representatives who officially elect the President of the United States. It was put into place by Article II of the U.S. Constitution.

What is an Electoral College vote?

Each state is given a number of electors that is equal to the number of Senators and Representatives it has in Congress. Each of these electors casts a vote for a particular candidate.

How does the elector know who to vote for?

During the general election, the state counts its votes for each candidate. Whichever candidate holds the majority of these votes (in other words, whichever candidate receives the popular vote for that state) receives the electoral votes for that state. All states have a winner-take-all system except for Nebraska and Maine, which have proportional distribution of their votes.

How many Electoral College votes does a candidate need to win to become president?

There are 538 electoral votes. A candidate must win a majority of at least 270 electoral votes to be elected president.

What is the current Electoral College projection?

Although nothing can be determined until the actual election, many media and political organizations make projections, or educated guesses, as to which states will give their electoral votes to Senator John McCain (R) and which states will give their electoral votes to Senator Barack Obama (D).

Currently CNN projects Obama with 233 electoral votes and McCain with 189 votes. There are 106 electoral votes that are considered "up in the air." This means that they are not projected to either candidate yet.

What are the polls currently reporting for the popular vote?

Currently, the Gallup poll has the race at Obama-46 percent and McCain-47 percent with a margin of error of ± two points, and the Rasmussen poll at Obama-47 percent and McCain-48 percentwith a margin of error of ± two points. Fox News has Obama-45percent and McCain-46 percent (Fox News did not report a margin of error). CNN's Poll of Polls, a survey of several opinion polls, projects Obama-46 percent and McCain-46 percent. Since the Poll of Polls merely surveys other polls and not people, it does not have a margin of error.

How do you tell if a poll is reliable?

Polls have several clues to their reliability. A voter should check the source of the poll, the margin of error and who was polled.

What does the source of the poll tell a voter?

The source of the poll tells the voter who conducted the polls. Polls should be conducted by a reliable polling institute or a media organization. Check into the source before putting too much trust into a poll. Certain organizations may project a bias while conducting a poll. For example, a car buyer should be wary about a customer satisfaction poll conducted by General Motors.

What is the margin of error and what does it tell a voter?

The margin of error is a statistic expressing the amount of random sampling error in a survey's results. The higher the margin of error, the less confidence a person can put into a poll.

What does a "two point margin" mean?

A two point margin of error means that any of the numbers in a poll could be higher or lower by two percentage points. This would mean that if the poll says Obama-45 percent and McCain-48 percent, the results could actually be Obama-43 percent and McCain-50 percent, Obama 47 percent and McCain 46 percent or anywhere in between.

What does the poll's survey group tell a voter?

Who the poll's respondents are affects the results and how they should be considered. Many polls say "likely voters." This means people who have voted or whose socio-economic status makes them most likely to vote.

Many polls are conducted by telephone. A main problem with telephone polls, however, is that they do not reflect cell phone users' views. They only survey people who have a home or landline phone. This means a large group of people who only have cell phones (such as younger voters and students) will not have their views reported.

New meal plans unrolled

continued from page 1

definitely superior to the daily options in Baker," said freshman Maeve Neiswanger. "I'm a vegan, and the options upstairs are great as long as staff let me have a vegan option as my meal exchange at lunch."

The College food service has to adjust to the international problem of rocketing food prices. McLaughlin calculates the cost of supplying food this year at an 8.5 percent increase from last year. The College pays Sodexo a set amount for the year based on Sodexo's projections, and then sets the prices for students.

The price hike in meal plans will also help the College cover the Muddy Run renovation cost. "We upped the quality of food upstairs, but with that comes a cost," said McLaughlin. "About $700,000 was spent up there…All new fabrication of stations, menus, new equipment, everything."

"The new Muddy looks great, but we are being pushed to use up our DCB with the specific meal exchange at lunch and because there is no dinner meal exchange," said junior Rio Tomlin. "It's been designed in Juniata's favor. We're paying more money for less food."

Tomlin, who plays soccer, said that the new meal plans don't work well with athletes' schedule, who make up roughly a third of the student population.

Sophomore women's soccer player Lauren Auster-Gussman agrees. "It sucks. Coaches are cutting short practice so that we can get to Baker before it closes. Otherwise we have to use our DCB to get dinner in Muddy Run."

Teams that practice past 7:30 p.m. two to three times a week are using up their DCB fast. They are concerned that the money in their meal plans allocated for meal exchange is being wasted.

According to McLaughlin's statistics, 50 percent of meals for each student were not being used last year, so the College tweaked the meal plans to include more DCB and fewer meals per semester. It also eliminated block meals that had to be used up each week; now, unused meals roll over until the end of the semester.

Freshmen are still required to have the maximum meal plan for their first semester. Maeve Neiswanger said that this is a "waste of money for my parents and me. I often skip a meal in Baker and would rather have that money to use as DCB in Jitters."

In the near future, McLaughlin hopes that a credit card system could function across campus, as some other colleges that Sodexo works with have implemented. Students would have the freedom to spend their DCB whenever they wanted at any location on-campus.

The meal plans at the moment give the College a measure of control over where students spend their money. Foodservice can prep food amounts accordingly at the specific locations.

Changes will keep coming. This year, Muddy Run will be renamed by student vote. At least one station, Sub Connection, will be remodelled. "It was exposed that it was built backwards," said McLaughlin. The line should actually start at the window overlooking Baker and finish by the drinks stand. The setup will probably be flipped over Christmas break.

"Trying to please 1400 people, it's not easy," said McLaughlin. "We've got three chefs, which is unheard of for a school of this size."

He stressed that he and his team are willing to accommodate student requests. For instance, a student e-mail prompted him to add additional lunch meal exchange options at retail locations. "We'll evolve as student needs evolve," he said.

Students should also be aware of the flexible options for using DCB, including catering for parties.

A Food Committee that includes student representatives, College administrators, and Sodexo personnel meets weekly to decide on policy changes.

"Last year," said McLaughlin, "[Chef] Patrick and I never went because their meetings were always at 12 noon, our busiest time of day."

Andrew Murdock, a sophomore and member of the Food Committee, said that student representatives saw the meal plans before they came out but were not involved in the design. He said the new plans were formulated around April and May 2008, when the impact of the Muddy Run food court renovations was still undetermined.

"No one knew how it would pan out. This is definitely a semester of trial and error for everyone: the students, Sodexo and the College," said Murdock.

The goal of the new plans, according to Murdock, was to prevent students from being locked into a dictated amount of meals per week. He added that the Food Committee always welcomes student input. Different perspectives can be discussed on the Juniata Forum or by contacting a student representative or administrator directly. Students interested in joining the Committee should contact the Dean of Students Office, Murdock said.

What is your one-sentence reaction to the new meal plans?

"Yet again, Juniata has screwed us over."
"I like them."
"JT brought sexy back; he should work on bringing back dinner meal exchange next."
"It's almost as hard to digest as the food in Baker."
"Less food, more money."
"It is good, depending on the day."
"A deep, dark hoax."
"I think I'm getting gypped."
"Lame."
"A work in progress."
"This is an 'excellent' way to lose weight."
"Where are my spinach wraps?"
"I wish I could eat at Muddy Run all the time."
"I really like the meal exchanges."
"It's okay if you actually get your money's worth."
"Where is my money really going?"

2008 Inbound Retreats program reaches record number

Students take opportunity to adjust to college life before classes begin

Ross McMann

The 2008 Inbound Retreats reached a record number of participants, nearly doubling last summer's total. The week before move-in weekend, 150 incoming Juniata students, 31 student peer leaders and three interns descended upon the Juniata campus.

"This was awesome for us. One hundred fifty was a great number," said Staci Weber, director of student activities.

According to Weber, Inbound has grown steadily since the program's pilot year in 2005, which consisted of a single group of 10 student participants. The number of Inbound retreats has grown to 16. The steady increase in student participation over the program's history helped the College attain a $100,000 Wal-Mart College Success Award this past summer.

"The $100,000 grant from Wal-Mart, that is directly tied to the Inbound program," said Weber.

Weber said, "Using the grant, we were able to persuade about 24 students to come to the program" that might not have otherwise participated. Students who qualified were offered scholarships to cover the tuition costs of the Inbound Retreats.

Weber said she would be happy with expanding the program to include even more participants.
"I think we can probably do 200, definitely," she said.

There are some limitations though, on future programs. As it stands now, two large pools of incoming students are unable to participate, international students and pre-season fall athletes. Also there may not be a record breaking incoming freshman class in the near future.

Though expansion of the program is welcome, Weber has reservations about making the program mandatory for incoming students.

"The advantage of making the program mandatory is everyone comes. The disadvantage is that some can come with a negative personality and that negative attitude can spread like wildfire. When the program is not mandatory, then all of the students want to be there. Group dynamics within Inbound is very important," said Weber.

Weber believes it helps form connections with Huntingdon, other freshmen, student leaders and promotes campus acclamation and student engagement.

"The bigger [the program], the better." said senior Kelly McErlean. She was one of the 31 student peer leaders leading groups in this year's Inbound. Also, she attended a program akin to Juniata's Inbound when she was a rising freshman at Colby College in Maine.

Colby, like Juniata, is a small, rural, liberal arts college. McErlean said the biggest difference between the retreats at the two different colleges was that the Colby program had a lot higher participation rate.

"There were only about 20 people who didn't do it," McErlean said.

Even with the growing enrollment, at Juniata, the number of participants is less than half of the incoming freshman class.

She also thinks that Inbound would do well to include more participants.

Dealing with the Class of '12 factor

continued from page 1

Sophomore Jennifer Wright feels that freshman moving into upperclassmen housing has positive effects. “I think it’s a good thing to assimilate freshmen into dorms where they are not usually put into. They’re now less segregated, and I feel like they are a bigger part of the campus community.”

Residential Life did not convert single rooms won in room draw into double rooms.

In all, 24 new beds were added on campus.

Although students were encouraged to move off-campus, this year’s number of off-campus students is not record-breaking. There are now 175 students in off-campus housing, whereas that number reached 185 three years ago. "There were a lot of challenges besides finding rooms for students. We had to make sure that we had enough furniture for them, had to try the best we could to match the right students up, and turn to outside contractors for help in constructing entirely new rooms," Launtz said. Launtz believes that although their solutions were not perfect, their accomplishment of saving nearly 100 students from living in triples should instill pride in the campus community.

Class scheduling

Registrar Athena Frederick said while her department dealt with many complications, overall it “didn’t have too much difficulty.”

“Really, what’s 100 more students overall? We kind of just expanded,” Frederick said.

One of the biggest changes was the addition of eight new College Writing Seminar (CWS) sections. The number of sections rose from 25 classes last year to the current number of 33. Five new adjunct instructors were also hired to teach these classes. Another part of the solution was to spread class times throughout the day to break up the high volume of classes scheduled between 10 a.m. to 2 p.m. This tactic was successful in providing scheduling options and decreasing many class sizes for all students.

Food services

Juniata Director of Sodexho Hal McLaughlin does not feel that changes to Food Services are significant. Although the number of freshmen has risen, the number of students on meal plans has only increased by 27. While 1,290 students purchased meal plans last semester, that number now stands at 1,317. “We did beef up on inventories of cups, plates and silverware, but we did not invest in any new tables or chairs,” McLaughlin said.

Capacity actually decreased in Muddy Run from 96 to 86 due to the renovation. However, McLaughlin said that the ballroom area of Ellis should be considered as a way to ease seating demands during crunch times.

Much of present lunchtime rush is a result of the freshman class finding its way, said McLaughlin. “It takes a little time for the freshmen to develop their [eating] patterns,” he said.

Sodexho hired 27 new employees over the summer and has no intention of hiring any additional staff, according to McLaughlin. The number of Sodexho employees is now 76, an all-time high for Juniata.

Sophomore Jaclyn Johnson said that while staff is at a record high, waiting times are as well. “Sometimes I can only grab lunch at around noon, and with a one o’clock class it’s impossible to eat at Muddy without rushing. The waiting times are ridiculous. I think that they underestimated how much of a difference so many freshmen would make.”

There are no plans to renovate Baker Refectory to allow more seating. The Baker entrance was designed to accommodate the mealtime rushes. In 16 minutes, a record-setting 622 people were swiped into Baker, according to McLaughlin.

Where on campus?

New York	33	23
Pennsylvania	292	252
Virginia	13	11

Are you registered to vote in Huntingdon?

Registering at campus address is safe, easy and where your vote counts most

EDITORIAL

This November, we are faced with the task and opportunity to choose the next President of the United States.

It is incredibly important that this national decision accounts for the youth voice. But our age bracket notoriously has the lowest voter turnout. Perhaps this is because of widespread misinformation about where we are allowed to register to vote.

Late last month, political organizers conducted a massive voter registration drive at Virginia Tech. Afterward, the local registrar of elections issued two releases incorrectly suggesting grim outcomes for students who registered to vote at their college addresses.

The registrar falsely warned that registering at college addresses would change the students' permanent addresses, which could jeopardize their scholarships, coverage under their parents' car and health insurances and their ability to be claimed as dependents on their parents' tax returns—a claim the Internal Revenue Service says is incorrect.

The truth is this: We college students do have the right to register at our campus addresses, as defended by a 1979 United States Supreme Court ruling.

Students can easily cast ballots right here in Huntingdon, and it is important that we do so.

For the majority of our four college years, we are residents of Huntingdon. As such, we have a stake in the local issues, such as zoning restrictions, off-campus housing, the environment, taxes, transportation and safety.

Furthermore, registering in Huntingdon eases the voting process. Forget about filing for and mailing in an absentee ballot (the reliability of which we could debate). Forget about spending the time and gas money to drive home and vote there. If you register to vote locally, voting is as easy as walking to the Stone Church, one block from campus, and casting your ballot.

Through "dorm storms," class visits, information tables in Ellis Hall and appearances at campus events, student groups are helping us get registered. Get an application from them and take advantage of their help. They will make sure your application is correct and complete and even deliver it to the Huntingdon County Courthouse for you.

If you are already registered to vote at your home address, there's no problem. On your new voter registration application, check "Change of Address." Fill out the form using your campus address. Once the application is processed in Huntingdon, your old registration will automatically be cancelled.

For out-of-state students, consider what your vote weighs in your home state versus what it would weigh in Pennsylvania. As a swing state with 21 electoral votes (a number less than only four other states), Pennsylvania will play a big role in determining who wins the presidency. Unless you have the ability to register in swing-state Florida, which has 27 electoral votes, your vote would technically matter most in Pennsylvania.

Huntingdon County and the College are not only allowing us to register locally; they are encouraging us.

With this type of support, there is no reason why voter turnout among eligible Juniata College students should not be 100 percent.

ROCK THE VOTE www.rockthevote.com

DON'T FORGET TO REGISTER TO VOTE

To correctly register in Huntingdon, use the following on your voter registration application:
Address: 1700 Moore St. Box #XXX Huntingdon
Zip code: 16652
Municipality: Huntingdon
County: Huntingdon

Don't forget to also fill in your Date of Birth, PA Driver's License or Social Security number, and political party, in addition to the other boxes. Also, remember that in Pennsylvania, only registered Democrats and Republicans can vote in their party's Primary Elections.

You will receive your Voter Registration Card in your campus mailbox approximately one month after your application is submitted. To vote, take the card and a photo ID with you to the polls on Nov. 4.

Presidential Perspective

Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

Renovation and construction projects happen on our campus every year. Over the summer, we completed a bumper crop of projects, including the information commons in Beeghly Library, the Ellis Hall eatery and the Good Hall refurbishments.

Two ongoing projects will be completed later—the athletic track by early October 2008 and Founders Hall by May 2009.

Student input very much influences our work. We are now beginning the planning for the next round of construction and welcome student suggestions.

On the near-term planning board are: replacing Beeghly Library's front doors to improve accessibility; continuing the renovation of Alfarata (the home of the Sill Incubator and the Juniata Center for Entrepreneurial Leadership, near Sheetz); renovating South Hall, starting with new bathrooms; and completing Dale Hall by creating a new Moore Street entrance in the middle of the building and relocating the Math Department offices to the first floor of Dale.

Other items on the planning board include:

•Finding alternate uses for the I. Harvey Brumbaugh and Quinter Homes, which will be vacated once the history and English departments move into Founders. They might fit into our need for additional student housing or for office expansion.

•Creating new student housing options.

•Replacing dorm furniture.

•Building an addition to the Halbritter Center for the Performing Arts, to accommodate a new studio art building and music wing.

In 2010, the College will begin a new master plan for the campus. This will replace the 1990 plan, which now is virtually completed.

Student input will be critical to this planning process. If you have any ideas or suggestions, please e-mail kepplet@juniata.edu.

Ask the Administration

"Why don't we cancel classes on Labor Day?"

"The decision about Labor Day classes was made in the mid-1980s when we switched from a three-term to a two-semester calendar.

There were several reasons for the decision. First, we try to have the same number of Monday, Wednesday, Friday (MWF) and Tuesday, Thursday (TTH) class days in each semester. Since we give up a class day in the fall for Mountain Day—which could be one of the MWF days—we did not want to take the chance of losing two MWF class days in the semester by giving up Labor Day.

Second, losing a Monday of classes can create a problem for some labs. Some of the lab sections meet on Monday while others meet on other days of the week. By giving up an early Monday, we would start the semester with a lab schedule that is out of sync.

Finally, Labor Day is usually the Monday of the second week of classes. During the orientation, we encourage new students to stay on campus for several weeks before making a road trip home. There was some concern that students might decide to go home on the first weekend if it were a three-day weekend. This could present the need for some students and/or parents to make a round-trip to Huntingdon on two consecutive weekends, including a trip on Labor Day when the traffic might be a problem."

- Provost Jim Lakso

"New grass was recently planted behind Good Hall over an area that had held approximately six parking spaces. Why,

Red and blue sound off on VPs

Sarah Palin: an excellent pick

Rachel Kern

Senator Barack Obama's decision to choose Senator Joe Biden as his running mate makes no sense. Why would Obama choose Biden after he was quoted during the Democratic primary saying Obama is, "the first mainstream African-American who is articulate and bright and clean and a nice –looking guy?"

Perhaps Obama was hoping to balance his ticket with Biden's foreign policy expertise. Too bad Biden's only idea for Iraq was a forcible partition of the country into three states, followed by a quick U.S. withdrawal.

Maybe Obama chose to run alongside Biden because it would help him garner Catholic votes. Then again, since Biden is a pro-choice Catholic, he won't even be permitted to receive communion when he campaigns in many dioceses.

One good reason to run with Biden is that he is an attack dog. This is something Obama cannot claim to be, as evidenced by his go-along-to-get-along attitude rising through the ranks of corrupt Chicago machine politics. Biden is more comfortable playing the attacker than Obama, but it won't save them when election time rolls around.

Biden makes constant chauvinist remarks to the media that are ludicrous and uncalled for. Take, for example, the remark he made, discussing why Iowa schools perform better than DC schools. He said, "There's less than one percent of the population of Iowa that is African American. There is probably less than four or five percent that are minorities. What is [it] in Washington? So look, it goes back to what you start off with, what you're dealing with…."

Biden seems to be entirely proud of these remarks, owning them whenever possible. Republicans need not fear an attack dog so much as a yappy Chihuahua. We'll stick with Governor Sarah Palin.

When Senator John McCain announced Palin as his running mate, he shocked his own party. I, myself, went through several phases of shock when I found out that McCain had chosen not only a woman to run next to him, but a woman that I and most of the country had never heard of.

However, the more I thought about McCain's VP selection, the more I realized that Palin was, in fact, an excellent pick. She balances the ticket and no one is better positioned to keep McCain and the Republican Party on top of things.

Palin is young, energetic and more importantly, a different kind of leader. These are the same qualities that helped anoint Obama as the messiah of the Democratic Party.

Palin, like Obama, has been criticized for a lack of experience. However, unlike Obama, that is categorically untrue. Look at how much Palin has accomplished in just seven short years as a public servant.

The United States prides itself on its small towns, our family values and fiscal values. Palin has a strong public record in these areas. Her performance as mayor in Wasilla was recognized, not only by the people, but also by the Alaska Conference of Mayors, of which she was elected president.

She is tough on crime and firmly believes that all heinous crime is hate-based. She values cultural diversity and new life.

She's a hard worker and a quick learner. She has knocked off powerful incumbent opponents time and time again. In 2006, Palin defeated Alaskan Governor and former Senator, Frank Murkowski, in the Republican primary. After bringing down Murkowski, Palin went on to defeat former governor Tony Knowles in the general election, becoming Alaska's first female governor.

Although Knowles was a popular figure, both in Alaska and Washington, he lost to Palin because Alaskans saw her as the stronger leader. They saw her reputation as a hard-nosed, effective mayor and had faith in her leadership abilities.

She is a maverick, a strong leader and more than ready to take the step up to the national level. Palin is a breath of fresh air, not only for Republicans, but for America.

Once in office, Palin displayed the ability to make tough and smart decisions. She promotes energy independence by means such as offshore drilling and drilling in the Arctic National Wildlife Refuge (ANWR). Under Palin, Alaska has also started a $40 billion natural gas pipeline project.

She has overhauled the Alaskan ethics laws, reduced general fund spending in Alaska by $124 million, stood up to oil companies, and has taken down corrupt leaders of both political parties. It's no wonder that Palin had an 80 percent approval rating throughout her term.

The same abilities that made Palin an outstanding governor caught the attention of McCain and the rest of the GOP. One thing history has taught us is that leaders must be ready to make tough decisions, to take action, to not be afraid to take on the bullies.

Palin holds all the qualities all Americans should seek in their next vice president. She is a maverick, a strong leader and more than ready to take the step up to the national level. Palin is a breath of fresh air, not only for Republicans, but for America.

The Palin effect nobody's talking about

Sebastian Brown

Our lawmakers in Washington need to stop all the petty, political cat fighting that seeks to divide our country. Senator Barack Obama gets this. Obama believes that the country should be able to look to Washington as an example, not as an exception. Unfortunately, the Republicans don't agree.

They proved this once again this month when they crowned Sarah Palin as their vice presidential nominee. While Palin's energy might be rejuvenating the Republican Party, it will do little more than keep America split into two Americas, one Republican and one Democrat.

After President Bush spent the last eight years slicing the country and world into the good guys and bad guys, into 'us' versus 'them,' we need unity, and fast.

Besides almost certainly condemning the next two months of political campaigning to the tired party bashing of the past, choosing Palin doesn't even make sense strategically. GOP consultant Mike Murphy has been the most vocal of the many conservative analysts who were left scratching their heads over Senator John McCain's decision.

In a recent column published by the TIME's online blog, Murphy writes of Palin, "I think she'll ultimately be a polarizer...In a year where the Democrat generic numbers are 10+ points better than the Republican, I don't like the math of a strategy that just polarized the election along party base lines."

Behind in practically every head to head poll conducted in the last year, McCain knew that he had to shake things up quickly. In the weeks before he announced his VP pick, he had narrowed the field of potentials down to two: Democrat turned Independent Joe Lieberman and former PA Governor Tom Ridge.

After hearing that two pro-choice moderates were on McCain's final shortlist for VP, leaders of the religious right flipped out. They even threatened to throw a fit at the party's upcoming national convention. Scared of squandering the conservative vote, McCain ditched both Lieberman and Ridge. Then in a last second and impulsive move, he picked ultra-conservative pro-life advocate Palin.

Without a doubt, Palin has injected a new energy into a party whose endorsement of McCain has been only lukewarm. On the third night of the Republican convention, Palin introduced herself to America. For nearly 45 minutes, she unleashed a condescending and an especially smug, personal attack on Obama's character. We watched as the convention hall seemed to wake up from a trance, welcoming Palin with one standing ovation after another. Yes, energy can be good, even great. But not if it is spent on the same old name-calling and character bashing that has left Washington divided and ineffective.

Maybe it should come as no surprise, but the Republican Party's conservative base mistook Palin's patronization of Obama's record—including his being a community organizer—for a genuine call for reform. Instead of being a true agent for change, she represents what a majority of Americans hate most about politics in Washington. The party first, country second approach distracts our lawmakers from rolling up their sleeves and making our country a more fair and just place.

McCain's goal is to rally his party's conservative base behind him. Winning over undecided Hillary Clinton supporters would be an added plus. However, an ABC News national poll conducted post-convention indicates that support for Palin is split along partisan, not gender, lines. So no, if I were McCain, I wouldn't bet on throngs of pro-choice and anti Iraq-war Hillary supporters showing up in my defense come Election Day.

To be fair, there's been way more stink over Palin than over Obama's VP pick, Joe Biden. But

When Nature Calls

by Brianna O' Malley

An audience of trees

Sitting in my friend's room, I listened to her relay a story about freshman orientation where she was a CWS lab instructor. She told me of her dismay as she took her students to the "Think. Evolve. Act. Challenge," a lecture about the many eco-friendly things on Juniata's campus. While the event may have been informative, my friend noticed that her students paid very little attention to what was being presented. After the lecture the freshmen's attention waned even more as they walked up to a clearing near the Peace Chapel, which is to be the "Forest of 2012."

As I listened to this recap, I thought about how many times I have tried to explain 'fun facts' about nature to my friends only to find them drowning in puddles of their own saliva. I'm certain that some students did enjoy the lecture, but to many others, the idea of listening to said lecture was like audio Ambien.

The presentation featured Vice-President of Finance and Operations Rob Yelnosky talking about the strides Juniata has made to become more sustainable. He also challenged the Class of 2012 to become what Assistant Dean Dan Cook-Huffman calls, "The most sustainable class yet."

Following Yelnosky, senior Kelly Crosset presented her summer research data concerning Juniata's new chestnut research field. The indigenous American chestnut tree has become virtually extinct due to a fungus known as the "chestnut blight." Part of Crosset's research included maintaining and monitoring samples of trees. American chestnut trees have been crossbred on campus with four other species of chestnut, including the Chinese chestnut which is known to be immune to the blight.

The chestnut research forest was started last year by four students as part of their senior capstone project for their environmental science POEs. Now the plot has 150 units that range between one species to multiple crossbreeds.

Crosset's lecture was designed to make the freshmen start thinking about their own tree project, planned to take place during their CWS labs. In the effort to continue being a green campus, each CWS lab class will plant a tree at the clearing by the Peace Chapel this year.

"These trees won't get in the way of the view of the Peace Chapel" said Cook-Huffman.

Students in each class will choose a species of tree they wish to plant in the clearing. Through this project students should learn to better appreciate trees and recognize their actual and symbolic effects on the land. If all goes accordingly, Cook-Huffman plans to continue the tradition of planting trees for each class to come.

While these actions are important to bettering our planet, the lack of freshman enthusiasm poses the question of how many students are committed to our campus sustainability. There is some student support, with groups like the council for sustainability, and the eco-friendly super club Juniata Environmental Coalition. But what about the rest of the campus?

In order for the administration to determine this, it has implemented a sustainable survey. Initiated during the Class of 2009's freshman year, the survey asks people about their perceptions and habits of sustainability. The data collected from each class is then used by the administration to create policies on campus.

"The reason why we have recycling bins in every dorm hallway is because many students wrote that the reason they don't recycle is because they simply forget," said Crosset.

Changes like these allow us to go about our consumptive lives and feel as if we are making at least a small difference. Ultimately, the goal of these sustainable changes is eventually to create a norm of being environmentally friendly on campus.

As for the forest of 2012, for the few that actually made it up to the Peace Chapel, I'm sure the prospect was very exciting. Its construction is hoped to unify students in a way that's never been done. Perhaps the Class of 2012 was inspired by the "Think. Evolve. Act. Challenge." For those who weren't, don't worry— I hear sleeping reduces one's carbon emissions.

Ask the Administration

continued from page 8

on a campus where parking is such an issue, were these parking spaces sacrificed for more grass, especially in an area generally not seen or used by current or prospective students?"

"These spots were removed primarily to improve the overall appearance of the building, and also to address some concerns that have been raised regarding damage from ice/snow falling from the roof onto parked vehicles.

We've spent $2 million dollars on Good Hall over the past couple of years, and we felt that we should address the outside as well as the inside.

To clarify, there were actually 9 spots removed, and at the same time we added 12 spots down the alley from Good Hall by Baker Guest House.

As some additional data for your consideration: we currently have approximately 870 Juniata parking spaces. Forty of those are at off-campus housing; 180 are dedicated to faculty/staff/visitor parking; 680 are available for student use. We currently have 564 student cars registered, down 89 from last year."

- Rob Yelnosky, vice president for finance and operations

"This year, the freshman class moved onto campus on a Friday, a day earlier than normal. Will this be a permanent change, or was it a one-time solution to accommodate the largest freshman class on record?"

"In our student development planning process, we determined that new students could benefit from having more time to get settled on campus before classes begin and could also benefit from having more engaging social interactions as they transition into the Juniata community.

Many first-year students are taking advantage of the new Inbound program or are engaged in fall athletic teams. Having the remaining first-year students return a day earlier is an experiment we initiated to help us provide this extra time and social interaction.

Early reports indicate that the extra day has been well received by many and we are very likely to continue some form of this new tradition into the future.

The decision to implement the extra day at Opening Weekend was made months before we knew we would welcome the largest class in Juniata's history. We also welcomed returning students to campus on Saturday, rather than having them return on Sunday.

We'd very much like to hear more feedback from students about these changes!"

- Dan Cook-Huffman, assistant dean of students

An apple a day

Birth control: Cost and availability present obstacles

Chelsea Garner

The start of college means different things to different people. For some it means the beginning of studying and exciting classes. For others, it's the beginning of fun parties and—for those of us with loud neighbors, we know—lots and lots of sex.

We've all sat through the oh-so-helpful sex education classes and learned all the horrors that can possibly come from having sex. Unwanted pregnancy is probably the most dreaded consequence, but it is also one of the easiest to prevent.

With all the different forms of contraception (condoms, diaphragms, spermicide and oral contraception, etc.), there really is no excuse for getting pregnant. Yet it still happens all the time.

Oral contraception (the Pill) is one of the most effective birth control forms, being 99 percent effective when used properly, according to Ortho-McNeil-Janssen Pharmaceuticals, a leading manufacturer of the Pill. The only problem is that it requires a prescription.

Lucky for the ladies of Juniata College, the Juniata Health and Wellness Center can help get the goods.

"We provide a full women's health service. [Any student] can make an appointment to come see a physician about starting oral contraception," said Dr. Laura Siems, one of the center's physicians.

While this is a great convenience, there is one shortfall: a student can't fill a prescription on campus.

"There is a lot of regulation on what qualifies as a pharmacy, and we're kind of trapped. To provide a service where we actually sell medication, you have to be certified as a pharmacist," said Siems.

However, students can fill prescriptions at Weis grocery store or Kopp Pharmacy, both within walking distance of campus.

Cost is another big issue. Let's face it: many college students are poor, and some birth control packs can run as high as $55.

If we can make oral contraceptives cheaper and more available to Juniata students, we can prevent unintentional pregnancies.

The problem facing Juniata women is the fact that currently there is no low-cost alternative. According to Siems, there used to be a mail-order pharmacy that provided discounts on the Pill. Unfortunately, that pharmacy has gone out of business. Also, clinics that served low-income patients could award discounts they received from drug companies, but this, too, has ended.

Worst of all, because of 2007 federal legislation, women face price increases as high as three to four times the previous prices, according to the New York Times. The 2007 bill was supposed to counteract Medicaid abuse, but actually caused a spike in birth control pricing.

The cost problem plagues all of Pennsylvania. "In many other states, Wal-Mart has a reduced prescription plan where women can purchase birth control for $9. But in the state of Pennsylvania they are blocked from doing that," Siems said. "This seems a bit ridiculous to me. The idea that a private company can provide low cost options for birth control, but our backwards state government prevents it—something's not right with this picture."

Siems offers a few non-local options for students seeking birth control. Her office in Altoona offers free birth control to students who can come to her office in person. An appointment and full exam are required. "We're always looking for better and cheaper options for our students," Siems said.

When availability and cost of the Pill are an issue for students, they may try to find other options with the same effectiveness. Such options include a birth control patch, injection or vaginal ring. All of these options require prescriptions and thus face the same issue of availability.

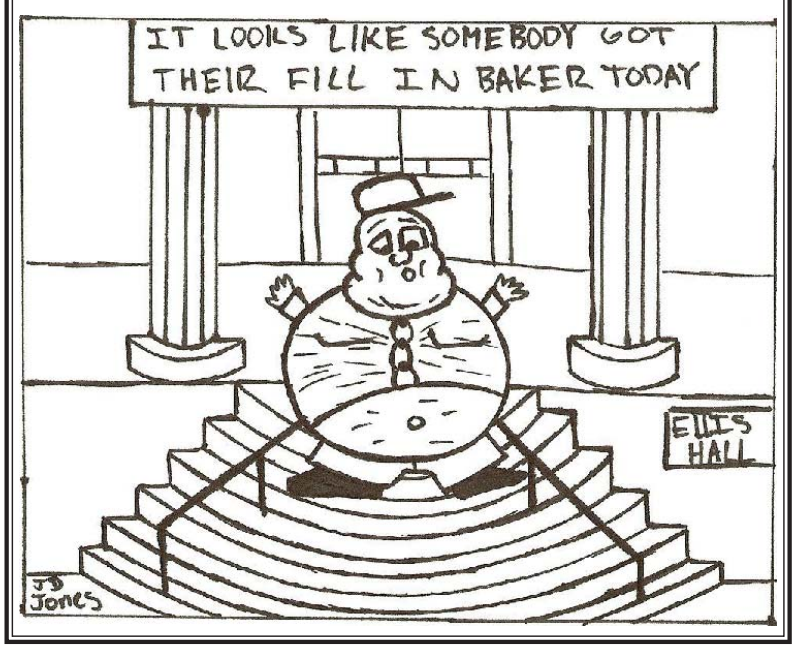
In addition, they all fall within about the same price range. According to consumerreports.com, the Pill runs from $20-50 per month, the patch is $40 per month, the ring is $38 per month and the injection is $57 every three months plus doctors visits. While these are all great options, they really don't solve the problem.

What we really need is a way for students to access more affordable birth control.

Siems and Nurse Connie Peters are both working hard to overturn the federal bill and to find a new mail-order pharmacy with discounts.

But, we need more than two people to solve this problem. Nude sit-in protests, anyone?

The problem with partisan Palin



continued from page 9

remember, while barely anyone had ever heard of Palin before her VP nod, we already knew about this Biden fellow. We had already heard plenty about his 'Tri-federal' plan for Iraq, which military leaders and lawmakers across the board have commended. We were already familiar with his reputation for straight talk (often a bit too straight, leaving him with his foot in his mouth).

We knew all this about Biden, but we knew nothing about Palin. Naturally, she's been under more intense media scrutiny. Since Palin is a relatively new story, there's much to be uncovered and the media and the public will continue to have a ball learning about her for the first time.

One thing we have learned is that political ploys can no longer be disguised as change. We, the American people cannot and will not allow it. We can't afford any more of the political back and forth that has left many of us without jobs, without health insurance and without faith in our government. We don't need more Palin style politics. We don't need more division. What we need is unity. What we need is to send Obama and Biden to the White House on Nov. 4.

Classic Juniatian

Cloister Tradition to be Broken

Cherise Kent, written 1980

On Monday member of the Residential Life Committee of Student Government met with Arnie Tilden dean of student services, Susan Twombly, assistant dean and Jack Linetty, director of housing to review the decision of housing women in the Cloister arch net year.

Cloister resident Rick Mayher attended the meeting as spokesman for the students opposed to the decision.

Following a discussion which lasted over an hour the administration decided to uphold its decision.

Mayher and 30 other angry attended the forum on Sunday night organized by the Residential Life Committee to review students' grievances surrounding the decision. There Mayher volunteered to attend the meeting on Monday to represent student upset by the decision. At Monday's meeting Mayer pointed out that the main thrust behind the student opposition stemmed from what he termed destroying the "all male Cloister tradition." Mayher also suggested that the bathroom facilities in Cloister may not be adequate for women.

According to Mayher students were also angered by the sudden announcement to convert the residence to accommodate females. He felt students were not given sufficient time to react to the decision.

Tilden stated the administrative decision was made to solve the problem of housing an increased female enrollment projected for the next year and female residents in the arch is expected to increase dorm programming and interacting between the arch and the Cloister wing.

Student were also concerned with the alumni reaction to the decision. According to Lenora Galamis of the class of '83, David Kreider, director of alumni affairs, checked with a former residents of the Cloister arch who gave this reaction to the proposed, "why give up one of the few remaining traditions on campus – like Mountain Day and All Class Night, the Cloister is something that makes Juniata College."

The administration, however, decided the advantages of moving women into the arch outweigh arguments against it. The decision to move women into the ach was confirmed.

Thumbs Up, Thumbs Down

to Tim Launtz and his Res Life staff. If it weren't for their crafty hustle this summer, a quarter of the freshman class would be sleeping on bunk beds made out of Baker trays right now.

to changing Lobsterfest's traditional name. Apparently it was changed because some religions could find it offensive. We still scalded pot after pot of crustaceans at the event though because it's only using the lobster's name in vain that gets people's pots a-boilin'.

at one meal this semester Donna swiped more than 660 cards in less than 16 minutes. Big ups to Sweet D and her Go-Go-Gadget arm.

to the people who actually think the Class of '12 will successfully storm the arch this afternoon. Come on, now—we all know that no freshman ever hits the hole on the first try.

to the people who gave Britney Spears three VMA awards this month. There's something so right about uniting Moon Men trophies with a space cadet.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

MUSICOLOGY

BY CAITLIN BIGELOW

WHERE DID THE REAL MUSIC GO?

I know that more than once I have wished I could have been at Woodstock. I have wished that I could have been part of a piece of history so phenomenal and mind-blowing that it could never be repeated.

In the middle of Max Yasgur's farm, artists performed songs about society and an end to violence. Speakers blasted their messages of social change, peace, love and sex. Music was powerful and people were listening.

Woodstock occurred during a time when music meant more to people than just a catchy beat and something to hum to. Music should still mean something to people. It should stir us, moves us and relate to us.

Legendary figures like Bob Dylan and Bob Marley realized that with powerful, eloquent and sharp lyrics, artists can shape society. The big players had the art of lyrical messages perfected.

Dylan captivated millions in the fight for civil rights through his lyrics. In one of his most popular protest songs, "Blowin' in the Wind," Dylan poses philosophical questions to society. He asks, "Yes, 'n' how many ears must one man have? Before he can hear people cry? Yes, 'n' how many deaths will it take 'til he knows that too many people have died?" His words had a purpose and he wanted society to hear his calls for peace and protest.

Bob Marley was also famous for his lyrics of protest, hope and love. He helped shape the face of reggae and started a completely new pop sub culture. His famous message of one love and one heart still resonates with people.

But where are the big players today? In today's society, where are the deep social meanings in songs? Meaningful lyrics have been replaced by crude 50 Cent songs, fluff by Britney and artificially spun record label junk.

We have passively said goodbye to the talented minds of music and have allowed manufactured artists to replace them in our generation.

What were we thinking in making a song like, "I Kissed a Girl" popular? Over a pop techno beat that screams "teeny bopper," Katy Perry teasingly sings, "I kissed a girl and I liked it. The taste of her cherry Chapstick. I kissed a girl just to try it. I hope my boyfriend don't mind it."

Long gone is the time when Flava Flav rapped about social injustice with Public Enemy. In the song "He Got Game," Flav preached, "Look inside yourself for peace. Give thanks. Live life and release." Now, he is too busy trying to find love with the latest reality TV skank to make meaningful music.

So here we are waiting for the next Tupac or Simon and Garfunkel, someone who will once again blur the line between poetry and song. We are waiting for the groups that will move us toward social reform, or at the very least away from guns, hoes and fancy cars.

Those kinds of artists and groups do exist, if you look hard for them. Recently, a friend told me to listen to "Mr. Wendel" by the Grammy-winning group Arrested Development. Arrested Development moved away from gangster rap to rap about more socially moral things.

"Mr. Wendel" is a wonderful song with a beautiful message. The song is about a homeless man who has learned to live in an unsympathetic society. His words of wisdom fall on deaf ears because no one cares about what he has to say.

When I asked Speech, Arrested Development's lead vocalist, about his inspiration for the song, he said, "It's a mix with personal story and good old-fashioned story telling. But the meat of it is from real life."

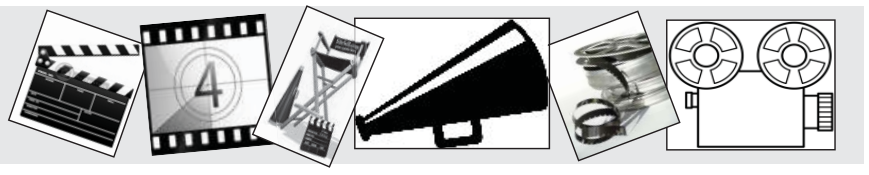
To Arrested Development its lyrics are more than just lip service. The group donates revenue from its songs to a variety of different charities including half of all its royalties from "Mr. Wendel" to the National Coalition for the Homeless.

blog.muchmusic.com

Arrested Development was created by lead singer Speech (Todd Thomas) and DJ Headliner in the late '80s with a positive Afrocentric sound. Their latest album entitled Since the Last Time, hit stores in the U.S in 2007.

Speech said that writing songs with a social message was always his goal. "That came from my mom and dad because they were always activists. My mom to this day owns a black-owned newspaper that addresses issues in that community."

When asked to describe his feelings about the current music scene, Speech said, "Too much violence, sex and prison glorification. The radio has become a joke for breaking records and finding the best talent out there. Thank God for other means like the Internet and live shows."



Here are my recommendations for awesome bands producing songs that mean a little more than what Miley Cyrus is singing. These bands aren't mainstream, but they are definitely worth your time. So here are the goods: Talib Kweli, Strange Fruit Project, The Coup, Dead Prez, The Roots and Cross Movement.

The Director's Chair

By Bennett Rea

Tropic Thunder is an uproarious satire

Ben Stiller is shot 50 times and survives. Robert Downey Jr. defends his African American heritage. Jack Black eats a live animal. A member of N*SYNC makes a cameo. These are just a few of the outrageous scenes in "Tropic Thunder." But while it's outrageous, it is also one of the best satires to come out in theaters in a long time. It is actually a very smart movie that will make you laugh a whole lot, too.

The movie starts out with a huge, jungle war scene--explosions, shooting, helicopters, etc. You eventually find out that this is all just the filming of a big-budget war movie. Frustrated with his star actors who are struggling to get into character on set, the director decides to film guerilla-style. This means dumping the actors in the jungles of Southeast Asia in order to get more authentic footage.

The director sets up hidden cameras everywhere in the jungle and then takes off, leaving the actors to unwittingly cross paths with actual enemy soldiers. The actors then have to deal with legitimate gunmen and drug runners with nothing but their bullet-less guns and a far-off explosives expert to defend them.

"Tropic Thunder" is just a big satire of actors, directors and movies in Hollywood. The movie takes clear digs at several Hollywood A-listers such as Eddie Murphy, Russell Crowe and Steven Spielberg. The biggest joke is at the expense of war movies in general. Every war cliché is played out hilariously by a great cast that includes Stiller, Downey Jr., Black and a highly disguised Tom Cruise.

Some critics have said that Cruise's character steals the show, but I disagree. While Cruise's character (who I won't reveal here) is great, it is really Downey Jr. that stood out. Playing an Australian who underwent skin pigmentation to play an African American officer, he is the source of countless laughs. It is a gutsy decision to do any sort of blackface in this day and age, but because it is satirical, it comes off inoffensive and absolutely hilarious. He has great lines and delivers them perfectly.

Black also steals the show a little. He plays Jeff Portnoy, the star of the fictitious "Fatties" franchise. His character is a clear stab at Eddie Murphy in "The Nutty Professor" (or just about any Eddie Murphy movie nowadays). Portnoy is also a drug addict and the jokes playing on that are priceless.

The film's main star, Stiller, does a solid job playing action-star Tugg Speedman. However, the real accolades thrown his way should be for writing and directing the movie. He understood perfectly what to parody in Hollywood, and how to parody those things in ways which casual movie-goers would find funny. The wit and cleverness in the dialogue can also be credited to Stiller.

continued page 14

A gathering of friends and music: The Get Together Festival

Leanna Yeager

The Get Together Festival intends to be a day of fun, food and music. Three months of planning will culminate this Saturday, Sept. 20 when music and art fans alike arrive at the Lincoln Caverns Campgrounds on Route 22. Between 12:30 p.m. and 3:00 a.m. eight bands will take the stage to perform folk, classic rock, jazz and modern rock music. Several vendors will also set up tables to sell food or artwork.

Among the bands to play at the festival is Three Quarter Blues. Most of the members of this band are employed by Juniata College: Assistant Dean of Students Dan Cook-Huffman, Assistant Professor of Psychology Phil Dunwoody and Food Service Director Hal McLaughlin.

The headlining rock band, Ekoostik Hookah, has performed all over the country, including places such as the Rock 'n Roll Hall of Fame and the House of Blues.

This one big-name band was booked to draw in a bigger crowd, but otherwise the bands are local, such as Burnt Cabins, in which Jon Guyer, a Juniata senior, plays guitar.

Guyer is one of the driving forces behind this project. Guyer's friend Brandon Corvin, owner of Doan's Bones Barbeque, also coordinated the festival. Their idea came from the Sunrize Festival, an older local festival that was discontinued. Their goal was to have a festival with a variety of music where everyone could have fun.

"We were sitting around one day, talking about it, and it just kept going from there," Guyer said.

His project really took off when William Hunter, professor of geography, helped him contact the headlining band. Guyer spoke with Ekoostik Hookah several times before reaching an agreement.

Afterward Guyer went out to gather local sponsors, such as Boxer's Pub, to cover the festival's costs.

Even though businesses were helping out, Guyer said that he wanted to keep the festival from becoming "too corporate."

When asked what his plans were for the future of this festival, Guyer said that he wanted it to "keep on growing." He hopes that further down the line there will be more people, more bands and more dates.

Planning a festival as ambitious as this one demanded a lot of hard work. There were many angles to consider, such financing, advertising, location, food and entertainment. Despite Guyer and Corvin's careful planning, they still ran into unexpected problems.

One problem they hadn't counted on was Ekoostik Hookah's contract. It is very specific about the conditions under which the band will perform. One of those conditions required Guyer to fix and expand the stage before the band would perform.

Another problem was timing. Since the festival is planned for younger people, the coordinators wanted to make sure that college students would be in town to enjoy it. However, they also had to make sure that it didn't conflict with previous events or classes.

"We wanted it to be in the beginning of fall because everyone would be moved in but the class workload wouldn't be too heavy," said Guyer.

Despite the time and effort involved, Guyer and Corvin didn't consider planning the festival a chore. The festival wasn't for them; they were committed to sharing this experience with everyone. They both feel that Huntingdon doesn't have muchto offer younger people and The Get Together Festival could change that.

Guyer said, "This is for Huntingdon, for Juniata, for everyone."

Tropic Thunder: Welcome to the jungle

continued from page 13

There will definitely be some viewers who will find "Tropic Thunder" offensive or crude. Beyond Downey Jr.'s blackface, a fake movie called "Simple Jack," will undoubtedly offend some people. This movie-in-a-movie stars Stiller's character, Speedman, as a mentally handicapped person named Jack. However, these parts of the movie are not meant to be offensive to anyone except the actors who would take those roles. "Simple Jack" isn't making fun of the mentally handicapped, it's ripping apart actors who take roles like that to win awards or elicit emotional responses.

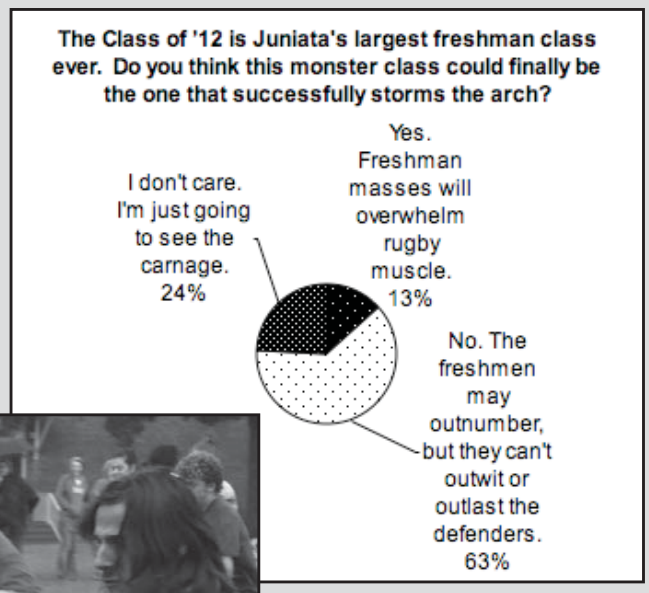
Even if someone can appreciate the satire, there is gratuitous violence and swearing that may turn a viewer off. Think "Saving Private Ryan" blown out of proportion. Yes, it's funny, but it is also a little unpleasant to watch.

One of the most hilarious quotes of the entire movie (which is not at all fit for print) is one that some people will find utterly disgusting. That's what kind of movie "Tropic Thunder" is. Sometimes the humor is brazen and loud. Other times, it's subtle and witty. In either case, it makes for a very funny film that intelligently tears Hollywood a new one.

Final Take:

★ ★ ★

"Tropic Thunder" is now playing at the Clifton 5 in downtown Huntingdon. It is rated R for pervasive language including sexual references, violent content and drug material.



Film Flash Back

Flashback Flick: "The Third Man"

This classic from 1949 is the quintessential film noir. The plot revolves around Holly Martins (Joseph Cotten) trying to discover who killed his friend, Harry Lime. There is mystery shrouding his death and Martins must figure out exactly what happened to his old friend amidst a slew of people trying to cover up the truth.

The film's perfect lighting and slowly unraveling plot make it both tense and visually appealing. Orson Welles is fantastic in his role (not revealed here) and the whole movie is full of suspense and intrigue. Yes, it's "old," but it's a film that has aged very well over time. Movies such as "Sin City" and "L.A. Confidential" draw heavily on "The Third Man." It's never too late to see where modern day films have their glorious roots.

Anything But Ordinary

From "Moral Disorder" to marbles

by Claire Williams

As a reader, and in general, I don't like to be bored. I don't like when writers make everything easy to guess or when they leave me with nothing to consider after I have finished their books. That is why I happen to love the writing of Margaret Atwood.

Margaret Atwood is a Canadian writer, poet and activist. "This" Magazine also rated her its least probable cartoonist. She did a comic called, "Kanadian Kultchur Komix" for the magazine from 1975-80 as well as several other short strips for her Web site.

The first time I read a book by Atwood was for my Women and Literature course. I enjoyed "The Handmaid's Tale" greatly because the writing made me want to keep reading. The plot was also amazingly interesting, which is always a plus for a book.

This summer I read "Cat's Eye" after seeing it recommended by a faculty member on the Liberal Arts Symposium board in the library. "Cat's Eye" was another brilliant book exploring interesting topics and I would highly recommend it to anyone.

Atwood's writing style makes it easy to step into the story she paints. She does not however make the steps boring. It's rather like being placed in an Escher painting where there are staircases running in every direction. Up is relative, but you always feel as though you have a sense of place.

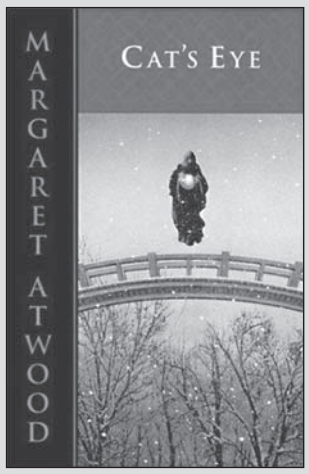
In "Cat's Eye" Atwood plays with perspective through the lack of a linear timeline. From chapter to chapter you find yourself in a different time but the jumps aren't confusing. Even when you jump from childhood to adulthood and back to adolescence you don't get lost; your reality merely shifts for a moment and then slides back in the next chapter.

Time also shifts in "Moral Disorder and Other Stories." The shifts are noticeable in the same way jumps would be while reading a journal. This holds with the feel of the book, allowing the reader to see fragments of someone else's life. While this might bother some people, for me, it makes the writing more interesting and more layered.

Atwood does not pull punches. Her characters don't avoid issues anymore than someone would in reality and Atwood examines issues that most people don't. She makes her characters real by making them flawed; I have yet to find a perfect character in one of her works and for that I admire her even more.

By putting imperfect characters in imperfect worlds, Atwood also asks the reader to think. When a book doesn't end with perfect characters being perfectly happy, some readers usually aren't happy until they reach their own conclusions. Atwood is able to complete a novel with a good ending and at the same time leave parts of the story wide open for the reader to explore.

Atwood has said that she doesn't like giving interpretations. She wants the readers to think and to see what they find, not to think about it and then be told "you're wrong, the author said X." Atwood allows a reader, to explore her novels and to be able to discuss books with other people when there is no 'right' answer. This is a talent that I envy as a writer and cherish as a reader.



I am glad that the writing and reading worlds have been blessed with Margaret Atwood. Her stories and style are what make books worth reading and what make writers strive to be published. Everyone wants to make a mark and Atwood has certainly done that for me.

Recommended reads:

"Cat's Eye"
"The Edible Woman"
"The Robber's Bride"
"The Handmaid's Tale"
"The Blind Assassin"
"Alias Grace"

An excellent short story:

Happy Endings
(http://users.ipfw.edu/ruflethe/endings.htm)

Mountain Day: Fact or fiction

We all have our own special ways of figuring out when Mountain Day will arrive. Some are better than others. The Juniatian wants to help you separate rumor from the real deal.

If there are athletic games on the schedule, you can cross that day off the potential Mountain Day list.
FICTION: These days became fair game after Juniata coaches discovered that their players actually play better when they smell like lake water and Rice Krispies.

Mountain Day will never be on a Friday.
FACT: Can you say, "Three day weekend"?

If T-Kep isn't in town, we can't celebrate our holiday.
FICTION: Who do you think he is…Santa Claus?

You have a "really good source" who knows when the blessed day will be.
FACT: Yep, if your roommate's boyfriend's lab partner is one of the nine people on campus in the sacred circle of knowledge, you are allllllll over it.

Hess' "forward" thinking has Juniata off to hot start

Andrew Meloney / Juniatian

Middle Andrew Steffen (Senior) and Forward Bryan Hess (Senior) drive down the pitch at Juniata's September ninth match against Keystone College. Juniata won the match 4-3.

Chad Kohr

After last year's 3-14 season, we needed a change. Head soccer coach Dan Dubois felt like he had a solid core of players returning, but the offense needed a spark. Because of the depth in the midfield, Dubois decided to move senior Bryan Hess from the midfield to forward.

Hess, last year's leading scorer, returned from a semester abroad in England and was ready to make the move. "I didn't play with everyone for nine months, so coming back to a new position was hard… [but] I was tired of midfield and the team needed a change up top," said Hess.

Coach Dubois felt like the move was natural for Hess. "Bryan is the type of player that thinks attack first and has a knack for scoring. Last year we lacked creativity in the offensive third and Bryan's speed and skill level creates matchup problems for opponents," he said.

Although it is early in the season, the move is paying off. We are off to a 3-2 start and have played very well. Our offense is outshooting opponents by 10 shots per game and is averaging nearly three goals per game. Last year, we were outshot by four shots per game and scored slightly more than one goal per game.

Although Hess has only played in three of the five games this season due to injury and card penalization, his impact has been vital. He has recorded two goals and an assist and has displayed leadership up top that has rubbed off on the other forwards.

Sophomore Noah Bowers, the team's leading scorer through five games, plays alongside Hess. Bowers, who failed to record a goal or assist during his freshman campaign, is benefiting from Hess' move possibly more than any other player.

"Our games contrast well. I am a pass first player and Bryan is a shoot first player. He's very active up top and plays smart, so we've been able to combine for a lot of scoring opportunities," said Bowers.

This season, Hess and Bowers have combined for five goals and four assists. Their combination play has Coach Dubois pleased so far.

"Noah's creativity and Bryan's work rate up top have been a nice surprise. It is still a work in progress, but they are two of the more talented players on the team and are really helping along the freshman forwards," he said.

Hess continues to battle numerous nagging injuries, keeping him sidelined. Hess feels his break from soccer while at Leeds University last semester is the main factor. "The long break has made it physically demanding and it has been tough. It has been a constant struggle to stay healthy," said Hess.

Despite the injury concerns early in the season for Hess and several

Eagles short by inches

Tyler Sasala

The 2008 edition of Juniata Eagle football camp opened with 40 new faces joining the squad. As a team we returned only four starters on offense, but eight on defense.

Of the youth on the team sophomore tight end Ronnie Shrift said, "We have a young team that is guided by solid veteran leadership….Our freshman class seems to be maturing quickly and adapting to the speed of college football."

Senior quarterback and two year captain Jay Leonard is soaring to the top of the Juniata record books.

Leonard threw for 2,360 yards last season, which placed him 36th in the nation among passers. At 6,089 throwing yards, Leonard is just 126 passing yards away from becoming the most prolific passer in Juniata history. He is chasing the school record of 6,215 held by Greg Troutman (2001-04).

Leonard also has 1,033 completions, just 93 shy of the current record of 1,126 completions also held by Troutman.

When asked about how it felt to be so close to the records Leonard said, "It feels good because playing college football has been one of my goals since I was a little kid and to be able to excel at the college level is a great feeling. These records also contribute to the excellent athletes and coaching I have been involved with over my career."

On Sat., Sept. 6, we kicked off our 2008 Division III Football season. We looked to open the season on a positive note by knocking off our non-conference opponent, the Allegheny College Gators.

The defense came out firing, caging the Gators to their half of the field on seven of their first 10 possessions. Offensively, two turnovers inside the red zone were our Achilles heel though.

We finally opened the scoring in the second quarter, but it wasn't the offense that put six on the board. After a Leonard pass was intercepted in the end zone, Allegheny's next play also resulted in a turnover. Senior cornerback Brian Jung stepped in front of a pass and returned it 30 yards for a touchdown making the score 14-6 in favor of the Gators.

Our offense finally struck pay dirt with seven minutes left in the game on a run from junior Kyle McKechnie. The score was set up by a 30 yard strike to senior Chad Steiner on the one-yard line.

After freshman J.D. Jones forced a fumble late in the fourth quarter, our offense finished out the scoring with a 9 yard run from Leonard.

The Gators had more success on the offensive side of the ball and in the end we dropped our home opener by a final score of 34-16.

On Mon., Sept. 8, Coach Alt began practice with one simple statement: "Its rivalry week!" Saturday's game with archrival Susquehanna University was a rivalry game in every sense of the word.

The game started with a turnover on our first play from scrimmage. Susquehanna took advantage and put points on the board.

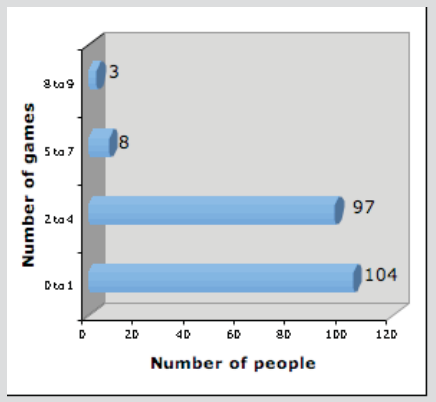
The Crusaders again threatened to reach the end zone in the first half but our defense buckled down and forced a 23 yard field goal.

On the ensuing kickoff, junior safety and team captain, Brandon Spayd broke a return for 56 yards.

After being set up with great field position, our offense engineered an 11 play, 29 yard drive that was capped off with a field goal by freshman Dan Zentz.

The score was set after that kick at 10-3 in favor of the Crusaders, but the drama wasn't over yet…

Late in the fourth quarter we were faced with a third and nine at our own 34 yard line. Leonard dropped back to pass and threw up a ball to Steiner. Steiner snatched the ball from a Susquehanna defender's hands and raced up field for a 61-yard gain. He was finally dragged down at the Susquehanna five yard line, setting up the firstand goal with a little over 3:00 left on the clock.



Zentz rumbled forward on the first down play, carrying defenders down to the one yard line. After two failed runs, it came down to a fourth and goal at the one yard line.

A quarterback sneak was called and Leonard plunged forward towards the goal line. It seemed that he had reached the end zone, but a referee ruled that his knee had touched before he broke the plane resulting in a turn over on downs. Susquehanna took over possession and ran out the clock to end the game.

Sophomore cornerback Q Lewis, who blocked a field goal in the third quarter, said, "The game was in our hands, but when we came down to it we couldn't finish... Having them at home next year means payback."

How many games do you think the football team will win this year?

JC women's volleyball wears our heart on our shoes

Michelle Morchesky

To everyone except those of us on the team, the letters are just gibberish. Unbeknownst to most, those lime green letters that adorn the backs of our shoes provide a deep meaning to our team.

Every year, at the beginning of the season, my team devises a mission statement. It's a statement that we believe describes our team and our goal for the season. If summarizing the heart of your team and your goals isn't hard enough, we only have 38 letters to work with, one letter per foot, for the 19 of us that create the roster.

This tradition is relatively new to Juniata. The idea began numerous years ago with Teri Clemens, the former head coach of our archrival, Washington University.

Teri Clemens, a great friend and avid supporter of Juniata volleyball, is no longer able to coach due to medical reasons. During her tenure at Washington University, she created a dynastic volleyball program that has yet to be surpassed with seven NCAA titles, six of them consecutively.

At the end of her career as a Washington University Bear, she bestowed a great honor upon our volleyball team. She requested that our team carry on her tradition of putting a mission statement on the back of our shoes. It is difficult to express what an honor it is for us to be a part of a legacy set forth by Clemens.

The 2006 season was the first year that we started to put letters on the back of our shoes. Since then we have not used the same mission statement twice. We believe that no two teams or seasons are ever the same.

The mission statements are typically derived from sayings that we hear as players almost everyday in the practice gym. It seems that every year Larry Bock, our head coach, has a catch phrase that he believes describes a winning attitude.

In 2006, Coach Bock told us to, "Take the punch." He told us to take the season one match at a time and allow our opponents to point out our weaknesses. This way we could capitalize on those weaknesses during playoffs. The 2006 season resulted in a national championship.

In 2007, we were asked to keep climbing in order to reach Mt. Everest. Mt. Everest is our metaphor for the NCAA final match. Coach Bock realized that as a team we needed to keep ascending throughout the season in order to reach the ultimate match, the NCAA finals.

While the 2007 season did not end with a title, it did not reduce the importance of our mission statements. It is well known that the ultimate goal for our team is another national championship. The mission statement is part of our means of getting there.

After two home events to begin this season, we are still far from ready to reach our goal. The first true test of competition came from the Teri Clemens Invitational in St. Louis, Missouri. We faced Division III rivals University of Wisconsin-Whitewater (ranked #5 nationally) and Washington University-St. Louis (ranked #2).

In front of a packed house at Washington University, we took the Wash U Bears to five games in an exciting match. After winning the first two games, we dropped the next two leaving the fate of the match in the fifth game. We traded points and sideouts the entire game. No team ever took more than a two point lead. At 13-13 we put up a decisive block, and a hitting error by Wash U clinched the victory for us, 15-13.

We had a quick turn-around time, playing 7:30 Friday night and 9:30 Saturday morning. The first match on Saturday was against University of Wisconsin-Whitewater. This is the team who knocked us out of the NCAA tournament last year. We defeated Whitewater in a decisive three game match.

Saturday afternoon's game against Bethel was much of the same. We overcame Bethel three games to one to clinch the title of tournament champions.

It was truly a team effort as the success we had at this invitational required everyone's effort. The victory against Washington University and Whitewater this weekend was big but it does not guarantee a national championship in November. Yet, it is a step in the right direction.

Andrew Meloney / Juniatian

Juniors Michelle Morchesky (left) and Megan Sollenberger (right) show part of the women's volleyball team's secret motivational message. Each year the team crafts a mission statement to display on their shoes. Opponents have found that figuring out the coded message is almost as hard as finding a way to beat the Eagles who now sit undefeated at the #1 spot in the country.

New track on ground, new turf on horizon

Kevin J. Campbell

Track Update

As the athletes returned for fall 2008 preseason, they looked for significant progress on their outdated track. However, construction seemed long from completion. The resurfacing and widening of the track from six to eight lanes occurred over the summer, but still appeared to be an unfinished oval at semester's start.

It was estimated for the track to be resurfaced and expanded by Oct. 1.

Construction started after the spring track and field season. Once underway, the major setback for the project was the installation of the trench drain and curbing. A trench drain is a specific type of floor drain containing a dominant trough. It is used for the rapid evacuation of surface water.

Moving the storm drains took longer than expected because initially only one was supposed to be moved, but four had to be relocated.

The drain system was put into place to help in the future plans Juniata has to install artificial field turf on the football field.

The asphalt base was poured two weeks ago, but a final top layer must be put on the track which will take two weeks to set. Fencing and the shot putters' throwing circle must be completed.

There was some concern whether the construction would affect home football games. Jeff Meadows, ground supervisor, said that those games would not be affected.

In addition to being behind schedule, the project was budgeted at $1 million. However, according to Rob Yelnosky, vice president for finance and operations, there was "a slight overrun ($10,000-$15,000) with some over excavation that had to be done on the East end of the track. The subsurface was not as stable as the contractor wanted, so we had to dig deeper in that area."

Despite the delays, Yelnosky said the track can be expected to be ready the second week in October.

Turf Future

Just as new jerseys can improve a team's performance by boosting morale, a team's facilities can also determine how it will play.

Many teams in the Centennial Conference, such as Dickinson, McDaniel and Johns Hopkins, have already converted from grass to artificial field turf. This fairly new playing surface is an expensive change, but can have a positive impact on a team.

"Artificial field turf is low maintenance, durable, safer, looks sharp and allows players to play faster," said Jordan Baird, sophomore safety, who played on artificial turf during his high school career.

When asked about the future of artificial field turf in Knox Stadium, head football coach Darrell Alt said that it would be great for practice and would benefit the entire campus. Artificial field turf would not only help save space on campus, but would help most teams, including club teams.

There is no definite date for installation of artificial field turf. However, according to the College's 2008 Strategic Plan, "by fall of 2011 we will have developed architectural plans, cost estimates and funding strategies for…installing a turf athletic field."

Juniata field hockey slips into four game losing streak

Joyce Eveleth

Cries of cheering and the clang of banging sticks can be heard in the locker room. We emerge with looks of determination, excitement and perhaps an indescribable energy on our faces. We are Juniata College Field Hockey.

Returning from a highly successful 21-3 season, we walk onto the field with a powerful legacy behind us, but no one said more success would come without a fight.
We started off the season with an exciting 6-0 victory over Arcadia. However, only losses followed. Our face-off with Elizabethtown on Sept. 10 ended with a disappointing 0-4 loss. Shutouts are hardly the norm for my team, whose every cheer is followed by a cry of, "…and score!"

Our roster is comprised of 14 upperclassmen (only two seniors) and a whopping 19 freshmen. Our young team needs to focus on opportunity and enthusiasm. Already our freshmen have contributed a large portion of this season's goals and assists.

Senior co-captain Erin Smith said: "We have a great and talented freshman class and they've really stepped it up. We still have a lot to learn, but they're a big part of our team," said Smith.

We now face two battles. We're not only fighting our opponents, but the frustration with ourselves as well. However, it is not in our nature to be intimidated. Despite four away losses in a row, we still have plenty of fight and heart to turn it around.

Not only are an increasing variety of players seeing playing time, but we often change the starting lineup.
"We're not letting the losses get to us. Attitude at the college level is so important and we have enough spirit to perseve, said sophomore Bridget Rosensteel.

Although we lost to Elizabethtown, we never caved in. Strong defensive saves were contributed from junior Melissa Gorman and freshman Kelly O'Shea.

We left the first half trailing 1-0, but collapsed in the fundamental structure of our team in the second half. Unfortunately, this resulted in three more Blue Jay goals.
The determination and enthusiasm each player brings to the team positively affects us. Each day we grow as a team and develop new connections with freshman and veteran players. Freshman Shauna Deschenes said, "All the older girls make us feel like a real part of this team. We're really close and have a lot fun together."
With that in mind, another conference championship is within our reach. This is something each member of my team desires, most of all seniors Abby Funk and Erin Smith.

As a team that has the foundation of the success, we know winning is fun. We're confident in our ability to perform and continue on the JCFH legacy.

By The Numbers

9

place the women's soccer team is ranked in the NCAA Mid-Atlantic Division. It is the first time in program history that the team has been ranked in the top 10.

The vision of a champion

08' season promising for JCWS

Kristen Penska

After a great 2007 season, our Juniata women's soccer team is back in action, and this year, we are ready to winmore than ever.

For the first time our team has four junior captains.

Amanda Broadwell is an active student at Juniata. She is currently the treasurer of the Environmental Coalition, a tour guide and a CWS Lab instructor.

Laura Goodlander participates in the Health Occupation Students of America, Pet Therapy group and JAB.

Melissa Johnson is also in JAB, and is a strong competitor for the women's track team.

Sara Ruggiero is an active part of JAB, SPEAK and is a sports editor for the Juniatian.

Each individual possesses the leadership skills needed to be great captains, and equally, great mentors. This encourages the team to be successful not only on the soccer field, but to strive to be the best on campus as well.

In the beginning of this season however, all the captains had the same fear.

"We were afraid our teammates would not be used to listening to their peers," said Goodlander.

"I had no idea what kind of respect we would get, or how we would make decisions if all of our players were the same age as us," said Ruggiero.

Not only are we all close in age, but each team member is a leader in her own way, which made it hard at first for our captains to take control. However, with some communication and love for one another, our captains' true leadership abilities were revealed.

This year, Lauren Auster-Gussman and I will guard the net in some of our first college matches. With the help of new assistant coach, Michal Zauzig, goalkeeper training has ramped up considerably. Breaks are a thing of the past.

"I'm glad we finally get to play. We are able to get much more game experience which will help when we start our conference matches," said Auster-Gussman.

Along with mandatory daily training, we have dedicated ourselves to practice time off the field.

We have been working hard to perfect all the skills we need to bring our team to victory.

On days off, you will find our team in the gym, on the field, or running through the town of Huntingdon. As soccer player Mia Hamm once stated, the true vision of a champion is, "bent over, drenched in sweat, at the point of exhaustion, when no one else is looking."

So far, our hard work has paid off. Sporting our new stealthy black and grey uniforms, we have an undefeated record. In 450 minutes, we have only given up one goal.

New captains, new goalkeepers and new uniforms are not the only things our team has to offer. We also have introduced six dynamic freshmen to the squad. Aimee Radic, Emily Pendleton, Nikki Hankinson, Jennifer Novak, Elaina Robins and Lucia Cappiello have worked hard to ensure a victory in every game thus far. In fact, a freshman has scored a goal in four of five games played.

Everyone knows about Zinedine Zadane's world famous head-butting incident in the 2006 World Cup, but are people aware that Zadane is included in the Juniata Eagles' new formation as well?

Zadane may not be a new freshman recruit, but we are utilizing a formation that was designed to mimic the French national team and its star player. Zadane has no real position on his French squad; in fact he controls the midfield by adding extra pressure wherever it is needed.

This year, we run the same scheme. We throw off other teams by implementing a seemingly "extra" player. "[The 3-3-Z-3] allows us to take advantage of space on the field, and it utilizes every teammate's skills," said Goodlander.

"I love this formation," said Broadwell. "Someone is always open for a pass."

This season, our squad knows that the vision of a champion is not the amount of records a team holds or what national rankings predict. Though we were ranked fourth in the Landmark Conference, we will play like number one.

We have swept by our opponents so far, maintaining a 4-0 record. We beat teams such as St. Vincent and regionally ranked Gettysburg, 2-0.

Upcoming opponents Lycoming and Penn State Altoona will have to prepare vigorously for what we will bring to the field. This year they know our name, and it won't easily be forgotten.

Andrew Meloney / Juniatian

Freshman forward Aimee Radic fights for the ball in a game against Keystone College on Sept. 9, where she later scored her second collegiate goal. The Eagles won handily, 12-0.

Hess making a difference for men's soccer

continued from page 16

other key players on the team, we still feel like this season can be very successful. "We have the ability to compete and be a top three team in the conference, it's just a matter of us putting in the work and executing," said Hess.

Coach Dubois' main goal every year is to simply get better and he feels like we are well on our way to attaining this goal. We were strong in the midfield and on defense last year. Now that the offense has been ignited by Hess' presence and Bowers' emergence as a legitimate scoring threat, we are very confident as we begin to prepare for conference play.

With the addition of a sufficient attack, Coach Dubois feels like the depth all over the field will mean success this season. "I knew we had a good team coming back. We have several strong players that contributed returning in the midfield and on defense along with a talented freshman class that have been learning underneath the upperclassmen," said Dubois.

Hess said the main goal for this year is to change how teams approach us and avoid being one dimensional.

We have already matched the win total of last year's season through just five games and are keeping opposing defenses on their heels throughout matches. This is a different Juniata team than last year and we have the desire to prove just how good we can be.

Birds of a new feather unveiled

Logo now up to the level of athletes

Erin McGinley

Last fall NCAA Juniata was featured as the reigning national champions during CBS' coverage of NCAA Division III women's volleyball. The commentators though referred to the Eagles as the "Juniata Falcons." This nationally broadcast mistake pushed a logo change into effect.

The new Juniata logo was unveiled by President Kepple at the first home football game this season.

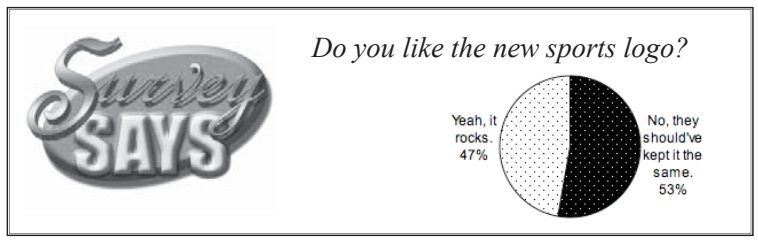
The new face of Juniata may seem like a quick transition to some, but not to Pete Lefresne, sports information director, and Gabe Welsch, assistant vice president for marketing. In the summer of 2007, they each sat down and created a list of goals to complete for the year at Juniata. An updated Juniata logo was on both of their lists.

Months later, when the Juniata "Falcon" mishap happened on national television, Lefresne thought, "This is a symptom of a larger [logo] problem."

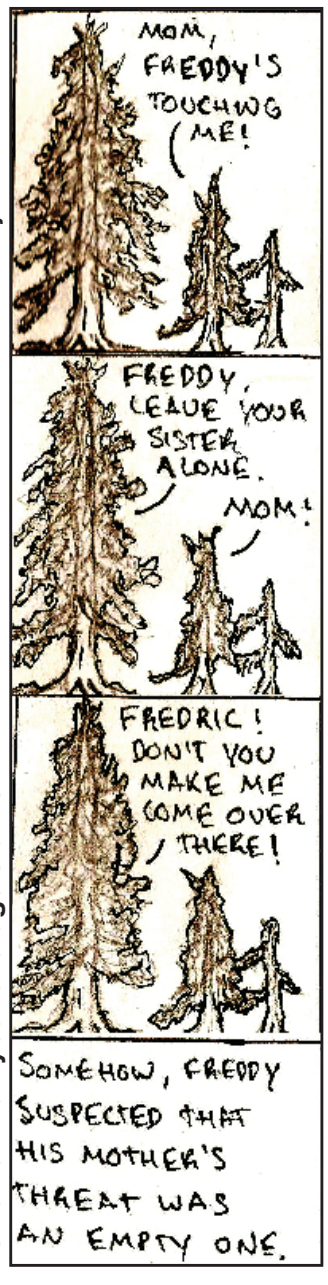
There are approximately 42 NCAA affiliated Eagle mascots. In effort to distinguish Juniata from the rest of the Eagles (and Falcons) in this country, the College decided to update the logo.

Lefresne also pointed out the old Juniata logo was obsolete. When compared to the rest of the Landmark Conference, Juniata's logo seemed old. "[It had] very limited options, lacked sophistication, was hard to reproduce, was not distinguishing to Juniata and was dated," Lefresne said.

When the old logo is reproduced on a dark background, the outline to the eagle is lost and undefined. Even when the Juniata logo is reproduced on a lighter or white background, there is still no concrete outline to the eagle form.
During the process of updating the logo, it first had to gain approval from the athletic department's cabinet. The president, coaches, community, trustees and alumni were also consulted.



The next step in the project was to outsource the idea to an outside company. Jason Oakman, a partner at the marketing firm of Xsalta, LLC, of State College gave the Juniata Eagle a facelift. Completed this summer, the new the new logo is a sharp looking eagle head which still features the blue and gold school colors. The eagle head can also appear with "Juniata College" beside it.



Individual sports teams also have their own personal identities. The common eagle appears with the different team names to specialize letterheads and team gear.
Welsch said that change to the new Juniata logo couldn't have been timelier. "This past year [athletically] has been amazing. Now the logo can be up to the level of the athletes," he said.

Welsch and Lefresne are both happy with the results but know that some may not be as receptive. "In reality there are always going to be people who prefer the old logo," Welsch said.

HUNTINGDON, PENNSYLVANIA

OCTOBER 2, 2008 | JUNIATA COLLEGE | VOLUME 90, ISSUE 2

Kepple says "no" to Amethyst Initiative

President opts out on national call to reduce drinking age

Christina Gongaware

The Amethyst Initiative, a nationwide movement urging the government to reexamine the legal drinking age, has caused national discussion. Juniata College has chosen to abstain from the debate.

Launched in July 2008 with the help of John McCardell, president emeritus of Middlebury College, the initiative includes the signatures of 130 college presidents. Signatories include Juniata's peer institutions Dickinson College, Elizabethtown College, Gettysburg College and Susquehanna University.

The Initiative says that "alcohol education that mandates abstinence as the only legal option has not resulted in significant constructive behavioral change among our students." It also calls for "new ideas about the best ways to prepare young adults to make responsible decisions about alcohol."

The Initiative's purpose is to lower the dangerous habit of binge drinking. It also aims to decrease the popularity of fake IDs which have led many 18 to 20-year-olds to make unethical decisions.

President Tom Kepple said that he has mixed feelings towards the Initiative. "This country assumes that you are a citizen when you turn 18, so setting the drinking age at 21 doesn't seem very rational to me," he said.

He chose not to sign the Initiative, however, due to doubts that it will overturn current legislation. "The truth is that I don't see the political will necessary to lower the drinking age. There is not enough political support, especially in the 18-20 age group."

A Gallup Poll taken in July 2007 reflects Kepple's opinion. Seventy-seven percent of Americans said that they would oppose any legislation that lowered the drinking age to 18. Furthermore, 60 percent of Americans would support stricter laws punishing underage drinkers.

Even so, Kepple said that "unless you are driving, the drinking age law is hardly enforced. [At Juniata,] we don't want to walk up and down the hallways and see who's having a beer. Institutions who [push] drinking off-campus create more problems with drinking and driving."

Dean of Students Kris Clarkson is open to considering the Initiative. "I can find no reason why anyone would be objected to a dispassionate discussion," he said. "There is a fair amount of denial and delusion there, and it's unfortunate that people are being so close-minded."

Most of the criticism of the Initiative has come from MADD (Mothers Against Drunk Driving), which says that the decrease of deaths from drunk driving is directly correlated to the increase

Legend o' Juniata 2008

Andrew Waplinger/Juniatian

Sophomore Blake Colaianne took home the Mr. Juniata crown thanks to his crowd-pleasing rendition of Billy Joel's "Uptown Girl." Colaianne sang, played the piano and danced with high profile back-up dancers Amy Mathur (left), Betty McKim (back) and Mary Murray (right).

Going green to reach gold

New standards set for students and faculty

Leanna Yeager

In the wake of the rising price of gas and other resources, more people than ever are considering the problem of sustainability. Juniata College, in living up to its motto, "Think. Evolve. Act," has committed itself to addressing this problem.

In June 2007 President Thomas Kepple signed the American College and University President's Climate Commitment to pledge Juniata's intent to work for a green future. The commitment calls on the college presidents involved to develop a permanent plan to achieve climate neutrality on their campuses as quickly as possible. It also stipulates that colleges initiate at least two temporary programs to reduce emissions while the permanent plan is created, and to make the plan and its progress public.

Rob Yelnosky, vice president for finance and operations, has been working with the Sustainability Committee. This panel of students and faculty is trying to make the President's Climate Commitment a reality.

"The purpose of this plan is to have colleges reach emission neutrality as soon as possible," Yelnosky said. This occurs when the emissions given off are reduced and offset completely.

When asked about Juniata's progress Yelnosky said, "I think we're right where we need to be. Some colleges are ahead of us. Some colleges are behind us."

Education students and faculty face new challenges

Juniata reacts to state-mandated certification changes

Alison Rihs

The Pennsylvania Department of Education (PDE) recently increased credit requirements and changed curricular elements needed for Pennsylvania teaching certification. The PDE believes the state is producing ineffective teachers. However, university representatives firmly disagree.

The changes will affect Juniata College dramatically. It will soon be nearly impossible to earn teaching certification in four years. This will deter future undergraduates from the education field.

President Thomas Kepple, does not understand PDE's reasoning for the changes. "We have no idea. This was such a radical change," he said.

Other faculty members responded with similar sentiments.

There are several problems with the new rules. First, raising the number of credits for education majors creates inflexibility. Given that students must take anywhere from 73-120 credits for certification, there is little room for error in choosing classes.

Freshmen will need to know exactly what certificate they want when they arrive on campus. Students will not be able to join the education field late without adding years to their college stays. It will simply be too hard to catch up.

A solid liberal arts education may be difficult to obtain under the new program. Sophomore Caroline Binder wants to pursue education in addition to a theater and French POE.

She said that the changes "will deter people who have a broader interest base."

Binder also said that with these required classes students will "never have any freedom because life revolves around the education department."

Juniata may have to drop the Middle Level and Special Education certificates. It may not be feasible for the College to keep curriculum that mandates so many credits.

Sophomore Dessie Schwentner, Elementary and Early Childhood Education POE, said: "I really don't see any good things [with this situation]. It's going to make things difficult and make them [the faculty] run double tracks...People won't be able to come to Juniata if we don't have the track."

There is some concern that the changes could affect enrollment. According to Fay Glosenger, Martin G. Brumbaugh Professor of Education, the new guidelines, combined with education students' higher standards, "will add one more burden."

Kepple said, "If we can't change the mind of the state, it will be detrimental to both the school and the state."

It will be tougher for Juniata to adjust to this than it will be for bigger universities. Kathleen Jones, assistant professor of education, said, "Larger schools have more faculty and can spread it [the work] around more. We have to figure out how we can accomplish this."

To accommodate the changes, next year the faculty will run dual curriculum to fulfill the different requirements for current and incoming students.

According to Kepple, Juniata's "fifth year free" deal will probably not be applicable. Even though many education students will not graduate in four years, the new regulations are a state requirement for which Juniata cannot be held responsible.

Overall, very few Juniatians agree with the PDE's decision to raise the number of credits. Binder said, "They [Juniata] will pay the price for what the State Department is putting upon them."

Glosenger said, "It's a nightmare. I've never had to tackle anything like it in my life. But we'll do it."

Kepple also cannot see any positives in the situation. He said, "No, not that I can find. This is bad decision-making by the state bureaucrats."

Though the future looks difficult for the education department, there is still hope. Kepple said, "I'm a little more optimistic than I was a few weeks ago."

College representatives are fighting very hard against PDE. They are trying to convince the state to reverse its decision. Kepple believes there is "strength in numbers." He also said, "We are definitely challenging the state. We're not just immediat ely going forward [without a fight]."

Everyone involved agrees that, though the situation is difficult, they will find a solution.

Enrollment: Reaching record numbers

Marie Boller

Juniata College does not ask prospective students what they can do for the College. Rather, the Office of Enrollment offers the approach of "Here's what we can do for you," said Michelle Bartol, dean of enrollment.

Juniata currently has eight full-time recruiters on the road year-round. They conduct off-campus interviews coast to coast. Juniata representatives meet hundreds of high school students at venues across America with "Pope Tours," featuring the 40 colleges in Loren Pope's "Colleges that Change Lives."

"We're competing for the best kids," Bartol said.

With a current freshman class that boasts a higher standardized test score average than previous years, recruitment efforts appear to be working.

This year, 40 percent of students hail from out-of-state, an increase from 32 percent in fall 2007.

A freshman population from diverse economic brackets has replaced Juniata's traditionally blue-collar demographic.

This year's freshman class had a 69 percent acceptance rate, up from 68 percent in 2007.

Economic factors played a role in the students' decision-making process in 2008, Bartol said. Parents could have been more wary to take out loans in a shaky economic environment. However, the amount of students who accepted Juniata's admissions offer was unprecedented.

"More kids said 'yes' earlier," said Bartol. Ninety-two students applied "early decision," compared to 33 in 2007. Before the May 1 deadline, a record number of students had matriculated. At least 20 students who missed the deadline were turned away.

Last year, Bartol said that Juniata received around 17,000 inquiries from high school students. The enrollment office categorized these inquiries by level of interest, and sent out brochures to a pool of prospective students.

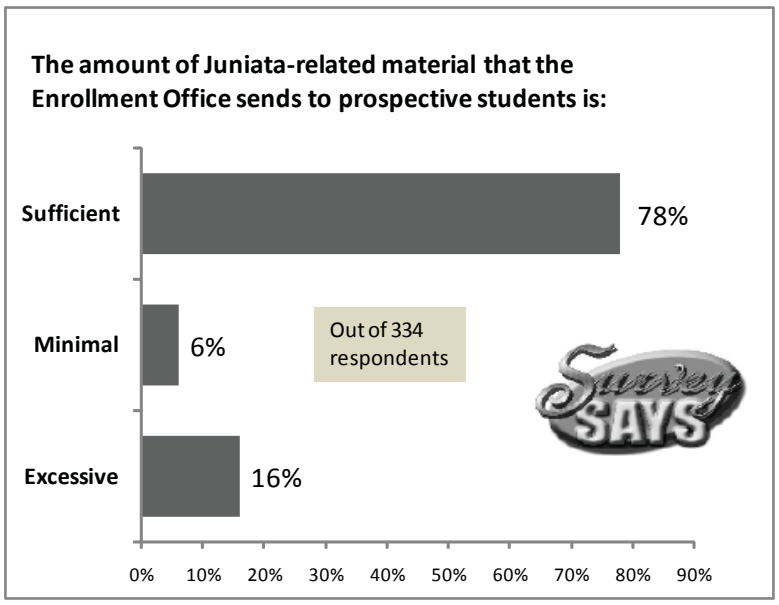
The marketing department, also involved in the process, said that it sends out hundreds of different kinds of publications each year. These include flyers to alumni encouraging them to help with recruitment, brochures for high school guidance counselors, as well as publications sent directly to the students.

The College's publications were redone last year to become easier to mail and more user-friendly. Their message highlights Juniata's vibrant learning community and commitment to sustainability.

Bartol said that the sheer volume of brochures does not fit with the College's sustainability ethos, but said, "We're not willing to go cold turkey" on publications.

Bartol could not cite the exact amount the College spends on marketing materials sent to prospective students. She said that recruitment involves more than publications making it almost impossible to measure cost and returns in the process.

To compete with the other colleges vying for the scattered attention of high school seniors, Juniata's pitch needs to be clear and tangible. "There's a lot of noise out there," Bartol said. The College's unusual name might stick in prospective students' minds when it keeps popping up in their mailboxes.



However, for students who have already decided on Juniata as their first choice, the stream of brochures seems pointless.

"The most important thing for me was that my admissions counselor remembered me each time I called," said freshman Dani Rauch.

Junior Brett Shaffer said that his decision to enroll at Juniata was determined more by his campus visit than any mailed brochures. "The publications didn't help too much," he said. "I remember a lot of colleges sending me a whole bunch of stuff I didn't really want."

To attract superior students, Juniata offers competitive merit awards. "My scholarship definitely influenced my decision to come here," said Ara Brancamp, a freshman from California. Having attended a small high school in Sacramento, Brancamp "wanted to go to a college that felt like a small family as well."

Asked whether student retention might be affected by the increased size of the freshman class, Bartol said her hunch was that the increased energy generated by the large class would inspire students to stay.

CNS deals with wireless, Windows and waste management

New semester brings new technology issues that frustrate faculty, students and staff

Neil Neigenfind

Laptop initiative

Last year, an initiative was put in place to bring laptops into all the classrooms at Juniata. This included the gradual phasing out of the classroom desktops in favor of students and faculty bringing in their own laptops.

Joel Pheasant, director of technology solutions center, said, "We wanted to give them [the faculty] an opportunity to get used to the laptops and get comfortable with taking them to classrooms before we started removing anything."

According to Pheasant, at the beginning of last academic year, professors were given laptops to use in their offices and classrooms. They were given a choice between several models, including Dell and Apple computers. Every three years, professors will be given upgrades.

During the summer, the process of removing tower computers from classrooms began. David Fusco, associate vice-president and chief information officer, says the towers were removed mainly from smaller seminar rooms. Rooms with Smartboards also did not have computers removed.

Pheasant explained that rooms are going to be evaluated each year to see if their desktop computers are necessary. If it seems like a waste of power or just unnecessary, they will be removed. It is also possible that if needed again, towers could be replaced.

Pheasant said, "The hope is, as professors become more comfortable with taking their laptops to the classroom with them, they'll say, 'we just don't need them in this classroom anymore.'"

With this change some frustrations and difficulties arose.

John Matter, professor of biology, said, "Most of my issues are with connectivity. I plug the thing in, and my resolution is changed. What's that about?"

Matter said that these problems mainly lead to his frustration and the loss of class time. He also only needs to plug his laptop in one of the six rooms he teaches in despite the initiative.

In response to common problems, Fusco said, "There's three [problems] that I can think of off the top of my head. One is the resolution of the screens of the laptops. I might have a high resolution on this [laptop] computer, and the projector might not have the same capability to display this resolution. The second thing is that we've found that some people just don't want to carry their laptops with them. This hasn't occurred a lot. And the other thing I can think of is if you have a Mac, you need an adaptor."

Vista Home issues

Some students this year arrived to find difficulty using the network with their operating systems. Students using Windows Vista Home Edition found many problems.

The reason for these difficulties, according to Fusco, is that home editions of operating systems are not meant to readily connect to networks.

The main difference between Home and other versions of Windows is that Home users can only connect to networks through a "workgroup." This requires users to log into a network every time they wish to access its resources. A student with a Home version of Windows will have to log on every time they access a drive or log on to the College's Virtual Private Network (VPN). Students using the other versions will only have to log on once to set up their computers, and then they can seamlessly use the network resources.

Pheasant said, "In past years, the students that were working in the TLT have worked hard on getting students with the home machines on the network, and it's great that we were able to do that, but it's created such a backlog of so many machines during the first month of classes that it's almost impossible to do anything else at that point. While we're not disallowing Home, we can't really support all the machines that come with Home edition."

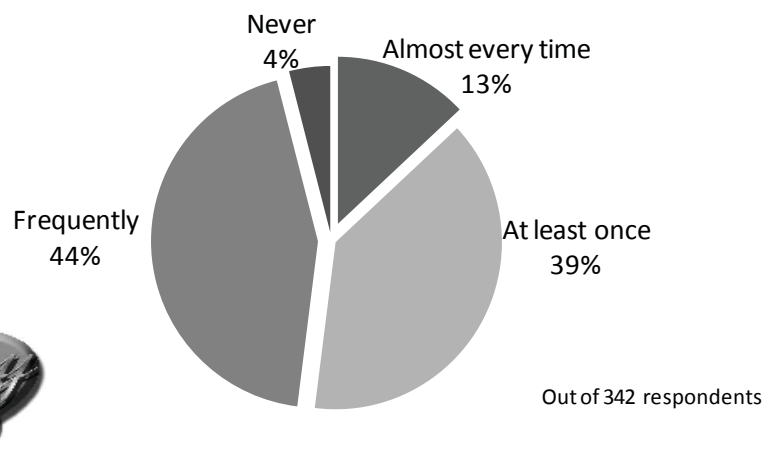
Fusco said that, because of these difficulties, Home versions are not commonly supported at college campuses. The support for Windows Home versions has always been limited on campus in the past.

Computers tossed?

In September, students noticed the College disposing of computers and computer parts. Some jumped to the conclusion that the College was throwing out computers rather than donating or recycling them. According to Pheasant, the computers were being placed into storage until they could be recycled.

Pheasant said that the computers were working, but they were too old to be supported anymore. Some were over eight years old. Older machines require more support than newer machines and can be expensive to repair. It is usually cheaper to recycle them, working or not. Local schools and organizations were contacted so that they could take these computers, but there was very little interest.

Pheasant said the computers were placed in a shed behind Brumbaugh Academic Center. He said, "A few students walked back and asked if they could have some of the parts, and we knew there was little interest in them, so we said, 'okay.'"



Campus technology plans on recycling older computers close to once a month, as opposed to twice yearly as has been in the past, Pheasant said. There will be a decreasing amount of room to store the computers, as the old storage room in Brumbaugh will be converted to offices for the math department staff.

Andrew Meloney/Juniatian

As part of the new wireless initiative, students in Stats for Social Sciences lab use their laptops in class.

How often have your professors or other students had problems using their laptops and/or overhead projectors for class presentations?

PACS department welcomes new director

Mahoney is an author, filmmaker and former public servant

Rob Schultz

The College recently hired Richard Mahoney—an author, filmmaker and former elected official—as director of Juniata's Baker Institute of Peace and Conflict Studies (PACS).

Mahoney began his duties on Aug. 25, replacing professor emeritus Andrew Murray, the previous PACS director, who worked at Juniata since 1971.

When asked what brought him to Juniata, Mahoney said, "It seemed like a very unusual college [with] a very unusual, really excellent peace and conflicts studies program."

According to President Tom Kepple, Mahoney was chosen from hundreds of applicants. Kepple believes that Mahoney was the best possible choice because of the amount of contacts he has made during his career.

"I think he brings a lot of experience from outside of Juniata," said Kepple. "He has a huge group of people he knows across the world."

Kepple hopes that Mahoney can be helpful to Juniata and its students in bringing in guest speakers and in exploring foreign-related issues.

While PACS usually emphasizes learning theories of peace, Mahoney believes it is important to work on applying those theories. "I think PACS can become a platform for action, global action," said Mahoney.

This approach is reflected in Mahoney's life and experience. In 1999, Mahoney founded the Nuestra Familia Escuela de Idiomas (Our Family School of Languages), a business that teaches English and Spanish classes and gives its profits to orphanages within Costa Rica. Through his work, Costa Rica's public orphanages are equipped with computers and interactive software.

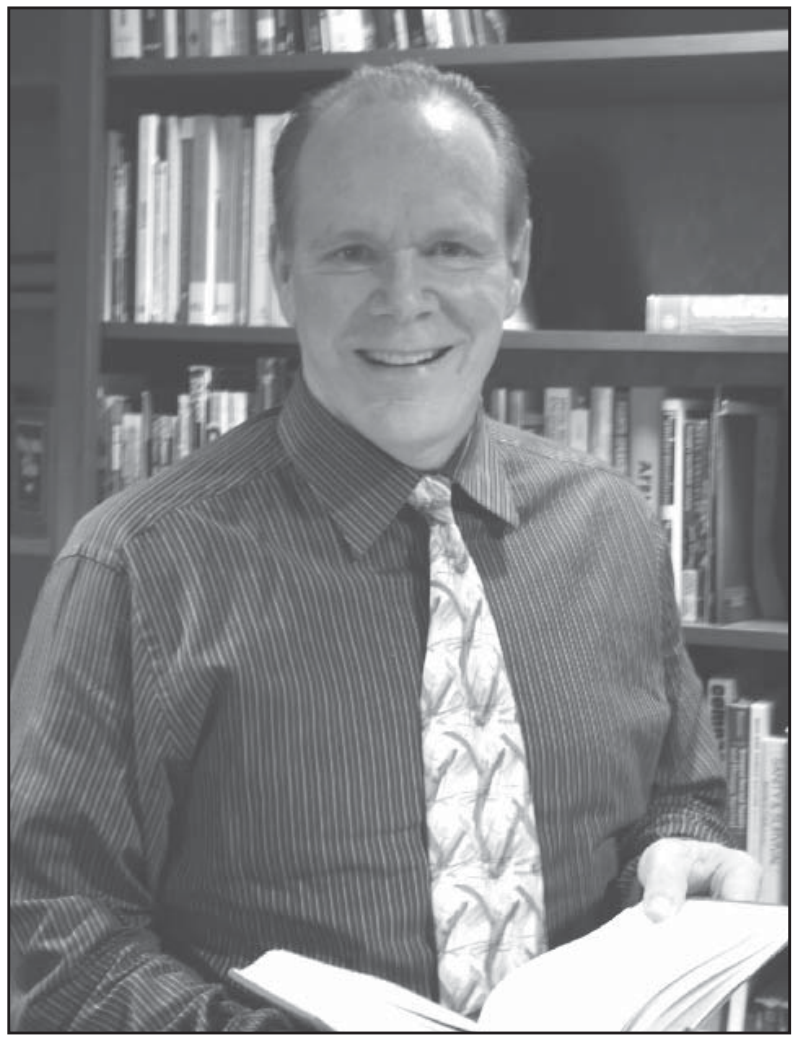
Mahoney earned various academic degrees from Princeton University, Johns Hopkins University and Arizona State University.

He can speak and teach in English, French and Spanish.

Mahoney's academic career started in 1980 in Arizona. He has taught in more than four universities, including The American Graduate School of International Management. At that school, he was voted the "most outstanding professor" 19 times by graduating classes.

Mahoney has guest lectured at institutions such as Oxford University and Harvard University. He has taught 17 different classes over his career.

This semester Mahoney is teaching the PACS senior thesis class. According to President Thomas Kepple, Mahoney will be teaching more classes in the future.



Mahoney has written books on politics including "Getting Away with Murder" and "JFK: Ordeal in Africa." Mahoney also wrote a book of poetry called "Petalos," published in 1995.

Recently he directed films including "Strong at the Broken Places," which introduces stories from the war in Iraq, and "Causes and Consequences of the Argentine Default." Mahoney has also been in five documentaries about the Kennedys.

Mahoney has led a very strong political life. He was elected as Secretary of State of Arizona in 1991. Mahoney also ran for the U.S. Senate seat in Arizona and for governor of Arizona. He has worked as a speechwriter and political consultant since the late 1970s.

He has been a member of African Studies Association, Latin American Studies Association and American Political Science Association.

"I'm a person who has a lot of different passions and I like to do different things," said Mahoney.

Andrew Meloney/Juniatian

Professor Richard Mahoney brings experience and connections to his new post as director of the Baker Institute and PACS program.

Politically speaking: a guide to the debates

Understanding how they work and what they mean

Seth Fox

The presidential debates have started and this raises a while new crop of questions to be answered. Here are some of the common questions surrounding the debates.

Who coordinates the debates?

These debates which occur late in the election cycle are organized by the Commission on Presidential Debates (CPD), a bipartisan organization. There are normally three debates held, generally at a university speaking hall amongst a public audience.

This year, the first debate was held on Sept. 26 in Oxford, MI. The second and third debates are scheduled for Oct. 7 in Nashville, TN and Oct. 15 in Hempville, NY, respectively.

What are the topics of the debates?

The official topic for the Sept. 26 debate was foreign policy, though discussion about the economy also surfaced during the event.

The second debate will be an open forum with town hall style questions from the audience on no particular topic.

The third and final presidential debate will focus on domestic and economic policy.

What are the rules of the debates?

The debate is governed by a memorandum of understanding between the two candidates. This agreement, not released to the public, states that both candidates will follow certain agreed upon rules.

Formerly the debate rules granted each candidate one minute responses. These rules were criticized by the public for not providing enough actual debate.

Recently, "Time Magazine" reported that these rules would be changing. Under the new format, each candidate still has one minute to respond, followed by five minutes of open debate during which either candidate may speak.

At the first debate, moderator Jim Lehr had some initial difficulty getting the candidates to speak directly to one another during the open debate section. However, eventually the two candidates warmed up to the new debate format. Typically, the open debate lasted well beyond five minutes.

What is the purpose of the debates?

The presidential election debates, while not required by the election process, have become a reoccurring part of the electoral system. The debates serve as a tool for a candidate to publicize his message while simultaneously attacking his opponent's message.

Although debates do not determine any official part of the election, historically they have been quite influential, especially in tight elections.

One of the most striking examples of this is the first electoral debate between John F. Kennedy and Richard Nixon in 1960. On camera, Kennedy looked handsome and bronzed while Nixon looked sickly and pale. According to television viewers, Kennedy won the debate, but radio listeners favored Nixon.

Another influential debate occurred in 1980 between Jimmy Carter and Ronald Reagan. The election was too close to call before the debates. Reagan, a former actor, was much more comfortable onscreen than Carter. This led to Reagan's message to be better received. The polls following the debates showed a bump for Reagan.

What are some of the criticisms of the debates?

The debates have been criticized for being exclusionary. In order to be invited to participate, a candidate must be polling at 15 percent or above. This rule is set by the CPD, which is mostly made up of Republicans and Democrats.

Critics argue that the CPD purposely makes it difficult for third party or independent candidates to be included.

The last third party or independent candidate to participate was Ross Perot in 1992.

During the 2008 election season, there had been push to allow Republican Senator Ron Paul to debate, but he failed to achieve the required polling numbers.

Another criticism of presidential debates is that they are short on actual policy discussion and heavy on sound bites, which provide plenty of political fodder for the either side to twist and manipulate.

What are the vice presidential candidates roles in the debate process?

Typically, the two vice presidential candidates have one debate. The vice presidential debate follows the same rules as the presidential debate and is also governed by the CPD. The 2008 vice presidential debate will be held on Oct. 2 at Washington University in St. Louis, MS.

Current Electoral College projections:

Though McCain's polling numbers have currently dropped below Obama's, a current shift in the Electoral College projections have gone towards McCain.

Pennsylvania has shifted from leaning towards Obama in Electoral College projections to being a toss up between both candidates.

CNN reports that the current Electoral College projections are Obama-229 and McCain-174.

A candidate needs to gather 270 Electoral College votes to win the election.

Current polling results:

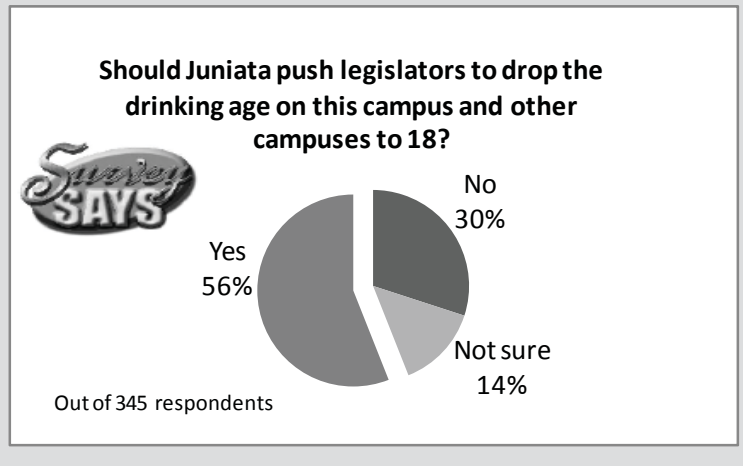
	Obama	McCain
CNN	47%	43%
Fox News	45%	39%
Rasmussen	51%	45%
Gallup	45%	43%

Kepple says "no" to Amethyst Initiative

continued from page 1

in drinking age. According to MADD, an estimated 25,000 lives have been saved thanks to the Minimum Drinking Age Act of 1984.

However, Clarkson said, "It is not completely fair to contribute the drop to raising the drinking age. There have been too many other encouraging trends."



But even if enacted, Clarkson doubts that a drinking age of 18 would change much at Juniata. "I don't think there would be an immediate change," he said. "Juniata students are generally more sincere and more focused than the average college student. For the most part, students who end up in the hospital due to drinking have been inexperienced, and as far as I know, I have never been to the hospital to see the same student twice."

He also said that the drinking problem across American campuses is a "highly cultural issue."

Julia Eder, an international student from Germany, sees benefits to the change. "In Germany the drinking age is 16, and I feel that it is much too young. Twenty-one is just as bad. Both of these countries are too extreme, and I think they both cause alcoholic tendencies. I see 18 as the perfect age to set for drinking." Senior Nicole Cappucio, a resident advisor in Tussey Hall, said, "I would definitely support any legislation that would lower the drinking age to 18. I feel like a lot of issues would be resolved on campus. More people would know what drinking is like entering college, and it would take the thrill away for freshmen who come to campus and feel a huge need to get drunk." At the end of the fourth week of classes, Clarkson said that there had only been a handful of alcohol violations on campus. Clarkson said that most of these violations have resulted from "normally responsible students who have just made some bad decisions." Both Kepple and Clarkson agree that there is no guarantee that the number of binge drinkers would decrease if the legal drinking age dropped. According to the Center for Disease Control and Prevention, about 90 percent of the alcohol consumed by those under 21 is in the form of binge drinking. Eighteen to 20-year-olds binge drink the most, composing 51 percent of all incidents.

Clarkson said, "Any dialogue or discussion would be helpful. There are many contradictions in our current law, and people need to start talking."

To view the Initiative, go to amethystinitiative.org.

Sustainability seal standards for student organizations

Bronze Level

•100 percent of organization records and communications are maintained and communicated paperlessly (on-line or other transmission).

•100 percent of organization "mailings" to campus (re: lectures, events, meetings) are done electronically.

Silver Level

As above, plus:

•More than 50 percent of organization members volunteer 10 hours per person per semester to campus sustainability efforts.

•Events catered follow the Green Catering Standard.

Gold Level

As above, plus:

•100 percent of organization members volunteer 10 hours per person per semester to campus sustainability efforts. •Student organization can demonstrate effort to ensure all incoming mail is provided electronically.

Sustainability Seal Standards for Academic Departments

Bronze Level

•100 percent of faculty provide syllabi paperlessly.

•More than half of all assessments (quizzes, exams, papers, homework, etc.) are handled paperlessly. Department can demonstrate encouragement, promotion and use of online assignments and submission.

•Department as a whole uses printer cartridge recycling programs.

•At least one required course exposes students to sustainability concepts and issues in the context of at least one lesson or module.

Silver Level

As above plus:

•Events catered follow the Green Catering Standard.

•More than 50 percent of required courses expose students to sustainability concepts and issues in the context of at least one lesson or module.

•Department can demonstrate a concerted effort to ensure that incoming mail (periodicals, particularly) is provided electronically.

•100 percent of departmental "mailings" to campus are done electronically.

Gold Level

As above plus:

•More than 50 percent of faculty walk/bike/carpool/otherwise travel sustainably to work.

•Department offers one or more full courses, relevant to their discipline(s) and devoted to sustainability topics.

•More than 50 percent of office personnel document five or more hours devoted annually to campus sustainability efforts.

Going green to reach gold

continued from page 1

One plan unique to Juniata is the Gold Standard, a certification given to departments and student groups that have met specific guidelines. The Sustainability Committee has defined three levels of sustainability standards for departments and clubs (see sidebar).

Reaching the Gold Standard is harder for some departments and clubs than others.

The English department has been doing its best to reach those goals, but meeting a few of them is difficult.

"We recycle. We put course work on the p-drive…we do what we can," said Peter Goldstein, chair of the English department. "It's hard to have staff members walk when many of them live out of town, and they can't carpool because they're in opposite directions."

Regardless, the department has still made improvements. It replaced some of texts with online resources and some professors may look into adding literature on sustainability to courses.

Clubs are also doing their best to meet the Gold Standard, but face a few difficulties. One consistent problem with the standards, especially for club sports, is the requirement that all records cannot be kept electronically.

"We have to have medical papers with signatures…If there's an emergency, I need to show a hard copy," said Staci Weber, director of student activities.

Advertising was another issue. "You can advertise on Facebook and the announcements…but it's just not as effective," she said.

The Gold Standard was introduced to the club leaders at a dinner with President Kepple earlier this semester. "They [clubs] care. They just haven't been exposed yet…it's still a new idea," Weber said.

Some clubs are already reacting to the Gold Standard. The women's rugby club held a held a drive to recycle cans. The Juniata Activities Board has tried to reduce paper by using a few giant signs to advertise instead of tons of little flyers.

The standards set in place by the President's Climate Commitment have been easier to reach than the Gold Standard. Juniata already has a plan to deal with electricity consumption. The plan states that by 2012 consumption will be cut by 25 percent and the rest of the electricity will be covered by an investment in a renewable resource.

The Sustainability Committee decided Juniata would invest in wind energy as a renewable resource.

There are also plans to cut overall energy consumption. "We also have to change our habits," Yelnosky said. Just little things like always turning off lights can help cut down on the amount of electricity used.

Electricity is only about 50 percent of the emissions the College produces. A plan still has to be made to cover the other 50 percent, which includes things like solid wastes sent to the landfill.

The deadline for the creation of a second plan is May 2009. "I hope to have the new plan ready to unveil on Sustainability Day, but [the plan] probably won't be until the end of the school year," Yelnosky said.

To help lower waste Yelnosky and the committee have started working on improving recycling. They had more recycling bins placed around campus and made them more diverse. Already he's seeing an improvement. In 2006 Juniata recycled 79,000 lbs. In 2007 Juniata recycled 93,000 lbs, an improvement of 14,000 lbs.

Yelnosky's plans do not end with reaching emission neutrality. He hopes that someday Juniata will be able to stop emissions altogether. "There are a lot of things I want to do, but the technology just isn't there. But maybe, in a few years, it will be," he said.

More detailed information on Juniata's plan can be found at http://www.juniata.edu/services/sustainability/.

Where on campus?

Andrew Meloney / Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. Congrats to last issue's winner Suzanne Nemetz!

Personal politics in the classroom

Participating in a free exchange is part of the liberal arts

EDITORIAL

Especially in this election year, personal politics have become a hot bed of discussion on campus. As professors stand confidently talking about the election at their podiums, many students may feel uncomfortable or unsure of their own political stances. They are also unsure whether the ideas in their heads came from them or from an influential professor's rant.

Saying that professors don't play a role in the formation of ideas would completely debunk the entire pursuit of higher education. Students value professors for their expertise and knowledge. Often students look to professors they know and respect to help them find the core of their own beliefs.

One student said, "Professors are paid more deference because they have PhDs, and they also have the ability to take advantage of that to exploit their own views."

The danger comes when a professor takes advantage of his or her position at the podium. This could create an environment where students fear being penalized on account of their views. This wouldn't be a productive educational environment.

Politics professor Dennis Plane said, "I think the best professors alleviate that fear and create a free and open forum for the exchange of ideas, regardless of whether or not they agree with that student's opinion."

Students who feel uncomfortable with this inter-classroom political conflict may be missing out on a very important element of the liberal arts education. For the most part, professors do not bring up a topic to intimidate students, rather to challenge them to explore the issues and form opinions.

Communications professor Sarah Worley said, "We want students to articulate their own opinions better. Out of conflict come some of our best ideas."

If a professor disagrees with what a candidate does or says and presents it to the class during a discussion, students should not take offense or fear to support that candidate. The professors typically want students to engage in the conversation, to defend their ideas and make their voices heard.

"Not being challenged can be disastrous," said Worley. "I think we learn more about our own beliefs by surrounding ourselves with people who have differing opinions."

Students should try to embrace open conversation, even if it makes them uncomfortable. As one student said, "It shows that the professors respect you enough to share their opinions with you and expect that you can contribute your own ideas."

Defining the line between indoctrination and exploration can be difficult for some professors to walk when they are passionately attached to a political issue, though.

Students should also be able to appreciate the fact that although professors have what Worley refers to as "the unique responsibility to create a civil and respectful learning environment," professors are still human.

Being human, professors have emotional knee-jerk reactions to events in the political landscape. Often these reactions are filtered through personal biases and students can misinterpret these reactions as a full representation of that professor's political stance.

In the same way students don't always think through every angle of an issue before they discuss it, professors can be guilty of the same.

"Noticing the difference between rhetoric and discussion, as well as the ability to respect both sides of an issue, is what a liberal arts education is all about," said one student.

Political discussions in the classroom only become inappropriate when a professor doesn't allow an equal, unthreatening discussion of as many sides of the issue as the students wish to address.

The most important thing to remember in the classroom is that your words and thoughts can make a difference. The more informed you are as a citizen, the greater contribution you can make.

At our small school, an open discourse should be encouraged rather than discouraged and that potential rests solely on the shoulders of the students who are willing to stand up for what they believe, regardless of partisan associations.

Presidential Perspective

Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

All of us in higher education laugh a bit about the U. S. News rankings of colleges and universities because we know that they are created through a very dubious process. So, why are the many rankings of Juniata important to you as a student or alumnus?

The rankings do bring Juniata to the attention of the general public, so the more often Juniata is ranked and the higher the ranking, the more people become familiar with our quality. The bottom line: The better Juniata's reputation the better your Juniata degree is seen by future graduate schools and employers.

So who ranks Juniata, and how do we compare against the rest of the colleges and universities in the nation? The good news is that because of our quality programs and the performance of our students and alumni, Juniata is mentioned in scores of diverse guides, articles and measures of colleges and universities. Regardless of evaluation methods, we are consistently praised in a wide variety of guides and rankings

We are praised for our overall offerings in "Baron's Best Colleges," "Peterson's Competitive College Guide," "U.S. News and World Report," "The Princeton Review," "The Fiske Guide" and "Forbes Magazine's Great Colleges."

We are recognized for our distinctive focus on experience and excellent outcomes in "Colleges That Change Lives," "The College Solution, A Guide for Everyone Looking for the Right School at the Right Price,"* "Make a Difference College Guide," the Teagle Foundation's study, "The Nation's 13 Best Performing Colleges," "The Unofficial, Unbiased, Insiders Guide to the 331 Most Interesting Colleges," and the National Collegiate Scouting Association ranking.

Our accessibility and openness to students from diverse economic, social, racial and ethnic backgrounds has been recognized by the Center for Student Opportunity's "College Access Guide" and Leland Miles' "Provoking Thought: What Colleges Should Do for Students."

We are lauded for our commitment to service and community in guides like "Rugg's Recommendations on Colleges," USnews.com's "America's Best Colleges—A+ Options for B Students," Entrepreneur.com's "Colleges with an Entrepreneurship Emphasis," Washington Monthly's College Rankings, Don Asher's "Cool Colleges" and ELLEgirl magazine's "Top 50 Colleges that Dare to be Different."

For those wondering what our student themselves say, see "Vault's College Buzz Book," "College Prowler" and, believe it or not, Cosmo Girl's Magazine's "The Top 100 Colleges and Universities."

In fact, we are the only college or university included in all of the above rankings and publications.

**"The College Solution" was written by sophomore Caitlin Bigelow's mother Lynn O'Shaughnessy.*

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

Blue vs. Red: The first debate

Obama looks America in the eye

Sebastian Brown

After the first presidential debate wrapped up the pundits unanimously crowned John McCain the winner.

The public, however, vehemently disagreed. According to the CNN poll conducted minutes after the debate, 51 percent of debate watchers thought Barack Obama won, while only 38 percent thought John McCain did. A CBS snap poll of uncommitted voters revealed a similar trend: 40 percent thought Obama won, while only 22 percent thought McCain did.

Why were the experts so wrong?

To be fair, the pundits did get one thing right. They agreed that while McCain came off as an angry and tired old man, Obama looked and acted like a president. I just wonder how, in one breath, they can argue that Obama appeared more presidential and then in the next, say that he lost. Either they aren't listening to the American people or they are just completely out of touch.

In the 90-minute exchange, Obama confidently and articulately laid out his plan to save the middle class. Our country's economy, which has always been a testament to our national strength and security, is falling apart right before our eyes. Obama will make our tax structure fair, so that the wealthiest Americans aren't getting even more breaks, while the other 95 percent of us are left to fend for ourselves.

Obama explained that he'd conduct the 'War on Terror' differently. He would refocus the mission back on where our enemies actually are, in Afghanistan, not Iraq.

Obama argued that until we engage in serious negotiations with all foreign leaders, including our most hated enemies, no real progress can be made in reaching a sustainable solution to the various problems we face in the world.

While policy is important, it's nothing new. We already knew what both candidates were going to say. The candidates have spouted off their positions a thousand times. Instead, what really made the difference last night wasn't what the candidates said, but how they said it.

Especially once he got warmed up halfway through the debate, Obama addressed every response either to the camera or directly at McCain himself. He wasn't afraid to stand upright, look his opponent squarely in the eyes and say, "John, you are wrong."

When McCain was speaking, Obama had his whole body turned toward his opponent, listening attentively. And when he wasn't directing his attention toward McCain, he was looking intently into the camera and addressing the American people.

On the other hand, McCain looked irritated throughout. As opposed to Obama's open and welcoming stance, McCain was hunched over, almost cradling his podium. And, despite the debate moderator Jim Lehrer's best efforts, McCain refused to directly address Obama.

In the entire debate, McCain didn't look at Obama a single time when he was speaking. It was almost as though he didn't think this up-and-coming political sensation deserved to be sharing the stage with him.

Certainly, our decision for who is most qualified to be our next president shouldn't be reduced to posture and eye contact. But, more than in any other time, we need a leader who can inspire confidence in not only the American people, but in people across the world. As the recent financial crisis has reminded us, we can't afford to wait.

Last Friday's debate marked the first of only three chances we'll get to see McCain and Obama make their cases to us while standing on the same stage. And it was clear that while Obama is ready to lead the American people out of this crisis, McCain is not.

We, the American people, want to once again believe in our government's ability to solve problems effectively here in our own country. And, perhaps more urgently, the world awaits that chance to look to America as not just a great world power, but as a fundamentally good one. The time to restore confidence in America is now. Fortunately for us, presidential candidate, Barack Obama is up to the task.

Thumbs Up, Thumbs Down

to Clay Aiken for coming out to America. Another of life's great mysteries solved.

to the guys who wore man thongs and Speedos on stage at Mr. Juniata. None of those contestants won because whatever was in those banana hammocks just couldn't stand up to talent.

to the Mountain Day committee for posting a fake Sodexo "Fall Feast" on the announcements and ARCH that threw us off the Mountain Day scent. We should have known something was up. When's the last time anyone used "Sodexo" and "feast" in the same sentence?

Round one to the maverick

Rachel Kern

The first presidential debate came against the backdrop of a close presidential election during a time of turmoil. Not only is our country facing its greatest economic crisis since the 1930s, but we are also experiencing some of its greatest military threats since World War II. Americans are rattled and they turned to the debates looking for reassurance that one of these two men could take our country in the right direction.

Between the two presidential candidates, Senator John McCain came off as the most reassuring. With McCain, Americans saw a calm, veteran commander in chief. Like a true soldier, McCain never allowed himself to be flustered. He remained in control the whole time.

McCain has lived foreign policy. He has breathed it, thrived in it, and studied it in the field. So, when he took to the stage to debate foreign policy, he took it with an air of confidence, one that made him truly presidential. He was well-prepared and answered all questions with ease and intellect.

That much cannot be said about his opponent, Senator Barack Obama. Obama hasn't lived foreign policy; he has merely read about it in books. He wasn't even prepared for the fight at the podium. Several times throughout the night, Obama was seen shuffling through his little pile of note cards as if he were cramming for the exam. On more than one occasion he asked moderator Jim Lehrer to move on because he was stumped and couldn't think of an answer quickly enough. When he was able to cobble together an answer, Obama stuttered often and was disrespectful, calling McCain merely "John."

Obama's number one task at this first debate should have been to ease voter concerns about his experience in handling foreign and defense policy. Instead he demonstrated that he is inexperienced and naïve. Obama doesn't seem to understand the seriousness of foreign issues like the Georgia/Russia conflict or what losing in Iraq will mean. Obama was his old meandering, aloof self, unable to take a strong stand on any one issue.

Even on the rare issues on which Obama has taken somewhat of a strong stand in the past, he was quick to change his attitude and opinion. At the Democratic YouTube Debates in 2007, Obama said he would absolutely talk to foreign leaders without preconditions, even leaders of countries with whom the United States currently does not speak.

He received heat from not only the Republican Party, but also his Democratic opponent, Hillary Clinton, and his current vice presidential running mate, Senator Joe Biden.

It seems the heat was too much for Obama. At the first presidential debate, he took a note from fellow Democrat John Kerry and completely flip-flopped on the issue. Obama was quick to say that he would enter into conversations with Afghani, Iraqi and Iranian leaders but only after they met preconditions, although he panderingly called these preconditions merely "preparations."

McCain, on the other hand, has always demanded preconditions before meeting with foreign diplomats. Additionally, when McCain makes a mistake, he owns up to it. "We Republicans came to power to change government, and government changed us," McCain said at the first debate.

There is no denying that he is right. Nothing has proved this statement more than our current economic standstill. But instead of backpedaling, McCain wants his party to take responsibility and fix our financial crisis.

America needs a leader who can handle a crisis, not some political celebrity with a toothy grin plastered on his face all the time. McCain said at the debate, "I don't need any on-the-job training. I am ready to go at it right now."

Let Obama race around the track with his training wheels on. What we need is commander, a leader and a manager. We need John McCain.

An apple a day

Sustainable medicine: Solutions for a sustainable society

by Chelsea Garner

Sustainability is a buzz word at Juniata. Recycle bins sprinkle every corner. Professors are encouraged to walk to work. Students are pushed to read online until their retinas are scarred. But just outside the campus confines are local healthcare facilities whose sustainability practices are not up to par.

There's been a push for sustainability in many areas, but medicine's exclusion from that movement is inexcusable.

Deb. Kirchof-Glazier, biology professor and director of the health professions committee at Juniata said that the sustainability issue can be corrected with several short-term and long-term solutions.

Preventative medicine is one of the most important short-term solutions to medical sustainability problems. By catching problems early, costs can be avoided down the road.

"Sustainable medicine focuses on prevention and non-toxic management of chronic disease, and that's the missing link in healthcare," said Kirchof-Glazier.

Preventative medicine includes vaccinations, promoting a good diet and healthy lifestyle and early screenings for disease.

"Preventative medicine is like a gardener of the body: giving it what it needs to flourish and heal itself," said Kirchof-Glazier. This would decrease costly end of life care, and replace it with lesser upfront fees.

Another short-term solution to unsustainable treatment is naturopathic and other alternative medicines.

"We need to get naturopathic medicine on the landscape a.s.a.p.," said Kirchof-Glazier.

The idea is to treat the underlying problem and not just the symptoms. "Naturopathic doctors work with food, water and their hands to help the body heal itself and to encourage optimal wellness," said Kirchof-Glazier.

Sustainable medicine is integrative in that alternative options are used in conjunction with conventional medicine.

For example, osteopathic manipulation may be used on patients with low-back pain, rather than prescribing narcotics. For patients with chronic headaches, acupuncture has been effective when nothing else has worked. These procedures have little or no impact on the environment and are less costly than traditional methods.

"The reason that I'm so passionate about this is because of my disabled son. I have seen firsthand how everything needs to work together. I'm a firm believer of using drugs, surgery and alternative medicine together," said Kirchof-Glazier.

The problem is changing the mindset of conventional doctors and patients. How can we go about doing this?

"One word: education," said Kirchof-Glazier. "We need to educate future doctors about this at the medical school level."

Lawmakers must also be informed about the benefits of sustainable medicine. "They need to know this is cost effective in the long run," said Kirchof-Glazier.

Juniata is in the forefront on this education, offering classes like Rotations and Issues in Rural Healthcare.

"We want to inform bright students of these options, so when they get into the medical field they can bring about the change," said Kirchof-Glazier.

In the long-term, medical sustainability will reduce environmental impact. According to Hospitals for a Healthy Environment, healthcare facilities produce 6,600 tons of waste per day.

Reducing the impact on the environment isn't as difficult as it may seem.

"Just making sure waste is properly disposed is a start. Even going so far as to have locally grown food served to the patients is good for the environment and the economy," said Kirchof-Glazier.

Pharmaceutical waste is another problem in the healthcare industry. Many patients have excess prescription drugs after finishing their treatments. Unfortunately, many flush leftover drugs into the water system.

"Our water is now having detectable levels of drugs in it. That's scary," said Kirchof-Glazier.

The solution to this waste problem is reuse.

"If there could be a center where unused drugs could be redistributed to people that needed them that would be wonderful," said Kirchof-Glazier. This would both limit waste and help those who can't afford treatments.

Another long-term issue is correcting the social injustice in medicine.

"Poverty is a huge factor in causing the breakdown in our healthcare system," said Kirchof-Glazier. "People who can't afford healthcare wait until they are extremely sick, and then go to the emergency room which is the most expensive care."

Being sustainable means providing care to everyone, including the poor.

There is not an infinite supply of medical resources, and costs must be kept down. Sustainable healthcare is necessary to keep up with the times.

If we, as a country, move toward more sustainable medicine, "We'll be able to provide healthcare for people for as long as there are people," said Kirchof-Glazier.

Ask the Administration

"This year residents of Lesher have found that the doors are accessible to anyone 24 hours a day. The doors were once closed to non-Lesher residents after midnight. Why the change, and does this go against Maude Lesher's original stipulation for the all-female dorm?"

I am not aware of any specific stipulations from Maude Lesher in regards to locking. In the past, Lesher was the only residence hall we offered that was locked overnight. Last year, the new locking system was not online until the middle of the academic year. We elected to keep the same procedure in place throughout the year and have Lesher only accessible to Lesher residents from midnight until 6 a.m. We did not want to inaugurate a new locking schedule, since students were familiar with and aware of the previous Lesher locking schedule.

This year, now that all residence halls are locked 24 /7, we did not believe it was necessary to have Lesher on a different locking schedule than the other residence halls. We asked the Residential Life staff in Lesher if there have been any questions or concerns about the Lesher locking schedule. They have not received any inquiries or complaints.

-Tim Launtz, director of public safety and residential life

"I heard that the College was given designs for upgrading the emergency blue light phones, but it had to reject the upgrades due to lack of funding. Is this true, and what is the state of upgrading the emergency phones?"

We have reviewed whether there was a need to replace and/or add Blue Light Phones. It is not true that funding has slowed this review or has caused rejection of the project. We are continuing to review new designs, products and contractors. Once we are comfortable with a replacement/update plan, we will discuss funding.

-Tim Launtz, director of public safety and residential life

When Nature Calls

by Brianna O' Malley

A green card for invasive species?

Tuesdays are always my favorite because it is the day of the "Science Times," a weekly special of the New York Times. I always grab my paper and flip past the sections about our economic demise and find comfort in science.

The Sept. 9 issue published the article "Friendly Invaders" that discussed the positive effects of invasive species. Invasive species are introduced species that often outcompete native species for space and resources. Given their image as an ecological bully, they're normally surrounded by thoughts of ecological doom and destruction. However, this article argues that in fact, invasive species usually cause few extinctions of native species and actually increase an ecosystem's biodiversity.

I had the pleasure of taking a walk around campus to look at invasive species with biology professor Norris Muth. Muth, having done much work on invasive species, has a keen eye for these stealthy creatures. On our manicured campus, the only invasives we could find were those planted by Juniata's landscapers. "We are lucky to have a conscience grounds keeping system that looks at using native species whenever possible," said Muth.

However, if you look at our campus's unkempt areas, such as the banks of Muddy Run near East Towers, invasive species are more noticeable.

"You'll find more invasive plants around edge habitat," said Muth. Edge habitat is a border area between two types of ecosystems. Disturbance in these areas allows for non-native plants to sneak in and take root.

The problem of invasive species originated with global travel. When adapting to the "new world," colonists attempted to relieve homesickness in a new land by bringing familiar species from home. More recently, a British man from The American Acclimatization Society released every bird mentioned in Shakespeare's works into Central Park in the 1890s, which had led to several invasive bird populations in New York City. Other examples can be seen with European rabbits in Australia and wallabies in the United Kingdom.

However, nowadays the invasive species we face are accidental. Examples of these are the gypsy moth, Dutch elm disease and hemlock woody adelgid, each of which attacks native North American trees.

Invasives affect life in many ways. A main one is hunting. While licenses regulate the number of animals hunted, invasives can affect animals that are unregulated.

Muth provided the great example of white-tailed deer and gypsy moths. Gypsy moths feed on oak trees, and so large numbers of gypsy moths can hurt an oak tree forest. Unhealthy oak trees produce fewer acorns which means less food for deer. Less food for deer means lowered deer populations and less to hunt. The chain effect of an invasive on an ecosystem is what can make them so dangerous.

For those that travel, the government has also created restrictions in airport customs to prevent the introduction of new and potentially invasive species. The agricultural industry spends a great deal to prevent invasives from harming crop productions. What may seem like a harmless orange from the Mexican airport could be an agricultural security threat. "An introduced pest like that could cause a huge economic collapse," said Muth.

All in all, Muth agrees with the New York Times article. "Most introduced species are fairly benign," he said.

But I reached a different conclusion. While the article's does make some valid points, it grazes over the idea that invasive species can cause drastic changes in an ecosystem. I'll stick with convention on this one and recommend we take caution against invasive species, even if they can be benign. The risk for our fragile planet is too great.

Mr. Juniata: Legends of rock

Amilcar Gabriel Toro

On Sept. 26, Mr. Juniata was back for the 12th time, and this time it was all about the rock and roll.

Mr. Juniata, the annual Circle K event that ridicules shows such as Miss America, was won this year by sophomore Blake Colaianne. Colaianne took the audience by storm when he sang Billy Joel's celebrated "Uptown Girl" with Juniata faculty and staff members Amy Mathur, Betty McKim and Mary Murray as back-up dancers.

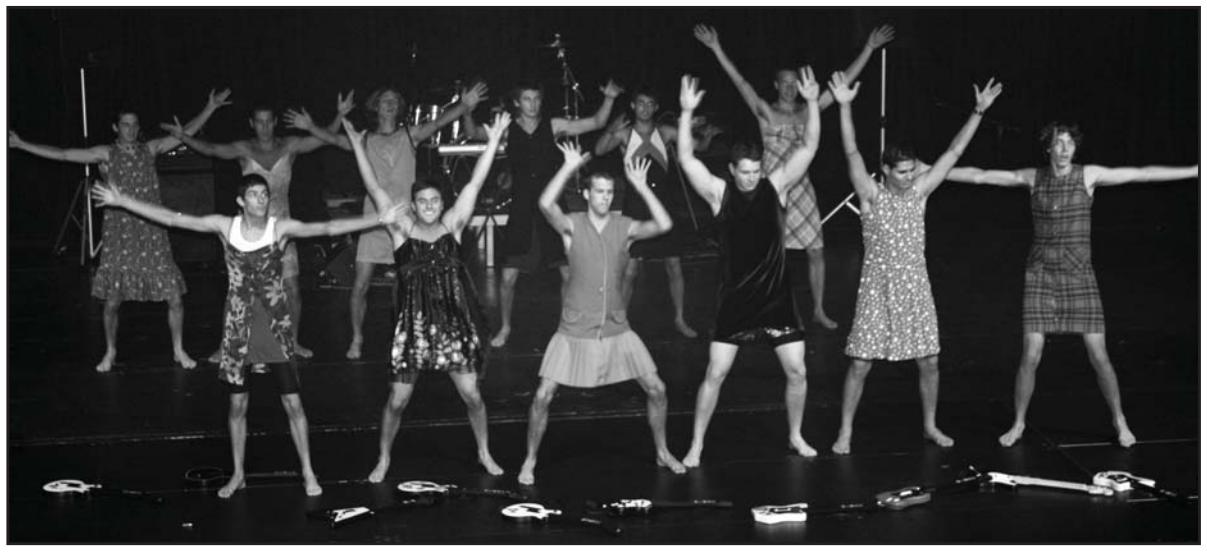
The final five contestants were Colaianne, junior Will Houser, senior Evan Heisman, senior Michael Day and freshman Benson Canfield. First runner-up was awarded to the hilarious performance of Will Houser, who sang an "emo" song because his escort had broken up with him. Houser's performance borrowed a Flight of the Concords song, something everyone in the audience enjoyed.

Second runner-up was awarded to Evan Heisman for what the audience has dubbed his "Indiana Jones and the Temple of Juniata" performance. Mr. Congeniality was awarded to junior Matthew Wagner.

Other contestants included senior Michael Link, junior Evan Walters, sophomores Michael Gagnier and Linden Will and freshmen Kyle Brewer and Chadi Bitar.

The show was also blessed with the hysterical antics of Juniata graduates Brandon Long and Brenton Mitchell, who acted as masters of ceremonies for the show. Long and Mitchell started the show with a funny original song detailing what was in store. The two masters of ceremonies, aside from singing throughout the show, also poked fun at the contestants before or after introducing them.

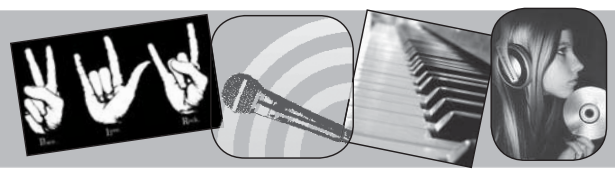
After the introduction song, all the contestants joined together and danced spectacularly to Lenny Kravitz's "American Woman," a performance that would be repeated at the end of the show. Then came the Dance Ensemble's fiery performance to "Man Wanted," choreographed by senior Kelly Crosset, junior Molly Denda, and sophomore Alicia Dahl.



Then the talent part of the show began. First up, Canfield wooed the crowd by singing "(You make me feel like) A Natural Woman" and then imitating Napoleon Dynamite's famous dance. His performance was followed by Gagnier's very funny, yet very short skit on hunting women in their natural habitat: college. After this it was Link's turn to please the audience, something he achieved by dancing to hip-hop and pulling off his clothes to reveal a man thong.

This stripper routine was followed by Wagner's standup comedy. Wagner talked about picking up girls at the boardwalk and fought with twirlers to the "Numa Numa" song, all while having an un-centered banana in his red spandex pants, which he later ate.

The first signs of problems appeared at this point in the night, when the crowd was getting antsy. Bitar's skit was hilarious, but very long. The skit was about a student who was disappointed with his first experiences in college, although he later learns he was wrong. Unfortunately for Chadi, in one scene, he had to repeat a line several times and then say "cue for music" before the scene could continue as planned.



Walter came next, and his act involved reading jokes from a piece of paper, and the audience could not stop laughing. Adventure followed laughter as Heisman's Indiana Jones spoof took over the stage. In this tale of the legendary explorer,

Mr. Juniata contestants kick off the competition by performing a hilarious dance routine in drag.

MUSICOLOGY

BY CAITLIN BIGELOW

A CONCEPT ALBUM? WHAT A CONCEPT

An odd thing happened in the American music scene in 1966. The Beatles released "Rubber Soul," an album that represented a striking departure from the bubble gum pop of the Fab Four's previous efforts.

In Los Angeles, a group of Southern Californian surfing enthusiasts known mostly for its fun-in-the-sun songs about beach life and teenage angst responded with a departure of its own. The Beach Boys' "Pet Sounds" represented a breakthrough in musical creativity due to the depth and themes that resonated throughout the songs. These weren't just songs concocted for the pop chart. Forty-two years later "Pet Sounds" is regarded as a musical milestone: the concept album.

The Beach Boy's morph to a more sophisticated and complex sound was mirrored in the changes and growth of Brian Wilson. With Wilson's age came a greater level of maturity and a thirst to be more ambitious and experimental in his song writing.

Of course, the Beatles responded again to the Beach Boys' provocation with what is arguably an even bigger inspiration as a concept album – "Sgt. Pepper's Lonely Hearts Club Band."

Today the Internet and digitized music have made the concept of a concept album seem as obsolete as vinyl records or 8-track tapes.

Society's need and desire for music has evolved over the last decade. Now iTunes allows us to choose what individual songs we want to buy and download. We no longer feel the need to own an entire album, especially when record companies are looking to produce chart-topping hit singles.

With playlists, music listeners can break up the natural order of albums and combine songs from different albums and groups. This has allowed us greater listening creativity, but at the same time, it moves us farther away from coherent, themed and highly creative concept albums.

A concept album that we are most recently familiar with is Green Day's "American Idiot." It is possibly the group's most complex and ambitious album to date. The album is more about a cohesive idea than a direct story. The band scored big by creatively linking themes, stories and the characters St. Jimmy, Whatshername, and Jesus of Suburbia into a well-crafted album.

Another fairly recent big album drop was Radiohead's "Ok Computer" which is not a concept album in the traditional sense. "Ok Computer" is unified in an underlying feeling, rather than telling a story. The songs echo a sentiment of human inferiority and obsoleteness in comparison to modern technology. The band denies that it set out to make a concept album even though it was originally considered one.

There are many lesser-known artists that have a lot to offer with their themed albums. Two of my favorites are Manu Chao and the group Explosions in the Sky.

Manu Chao really nailed the theme of togetherness in his abums.

His songs are linked in tone, common sounds and beat. His high intensity, high energy and upbeat sound seem lost when the album's songs not played together. My favorite album of his is "Clandestino."

Another band that did an excellent concept album is Explosions in the Sky. This mainly instrumental band connects its songs through a common theme of sound. The songs begin slowly, adding layers of tone and complexity until you are left with an entire album of beautiful songs. Explosions in the Sky is extremely talented. They can take you on a journey without using any words.

So if you find yourself with an hour or so to kill, kick back and listen to someone sing you a story. I mean, a concept album? What a concept.

Standing Stone Coffee Company opens

Cafe a hit with the Juniata community

Ross McMann

There is a new coffee shop/laundry mat just a 10 minute walk from campus that Juniata students will enjoy.

Standing Stone Coffee Company, located at 1321 Mifflin St., opened on Aug. 6. Greg Anderson ('99) who co-owns the business with his wife, Jessie, said, "It's close to the College, the hospital, the factory and the Huntingdon community…We're at the hub of all four of them."

Standing Stone boasts long hours for a coffee shop. Hours of operation are Monday-Thursday 6:30 a.m. to 10 p.m., Friday-Saturday 6:30 a.m. to midnight, and Sunday noon to 7 p.m.

Standing Stone Coffee Co. roasts its own beans in-house. Items sold include espresso drinks, fair trade coffee, fruit juice smoothies and variety of tasty sandwiches and salads.

"We try to provide healthy food as well as good tasting food" said Anderson.

Junior Erica Quinn recommends the "Montana Mountain Climber" sandwich. While reading the menu, she also said, "'A brilliant avocado Ranch spread.' Are you joking? That's great!"

The service is generally very fast. No item on the menu has a long cooking time, so customers never wait more than a few minutes for their orders.

The current building is a far cry from what it used to look like.

"I remember when it was a laundry mat," said Anderson, "Even then the building was pretty beat up."

The interior walls are now painted with reds and oranges and there are newly installed hardwood floors. Patrons are welcome to sit at high chairs at the counter, grab a seat at tables or park themselves on a comfortable couch.

"It was our goal to create a space that was warm, bright and welcoming," said Anderson.

Anderson encourages students to use the free wireless Internet along with the washers and dryers at Standing Stone Coffee Co. Washing one load costs two dollars, a bit more expensive than the on campus price. Dryers cost 25 cents per 10 minutes of drying time. The dryer price is a deal when compared to campus dryers which run $1.50 for 45 minutes.

Anderson is eager to welcome Juniata clubs and students to meet at the coffeehouse. "If we're going to be in this business, we have to see ourselves as part of a bigger picture," he said.

Juniata's literary magazine, Kvasir has planned its first monthly event to take place at Standing Stone. Kvasir president Erica Quinn said Kvasir's events will consist of local writers and poets.

Quinn said that Kvasir wants to hold events at the coffee shop because "It's awesome, and their food is soooooo good."

The first Kvasir event, featuring Juniata English professor, David Hutto, is scheduled for 8 p.m. on Oct. 18.

"Hutto combines a fiery wit with eclectic intellectualism. Also, he's a good writer," said Quinn.

Anderson expects to expand Standing Stone Coffee in the near future. "We're just getting started," Anderson said.

A parking lot will be added across the street. By next fall, Anderson plans to install outdoor courtyard seating in the adjacent lot. "There's something unique about courtyard seating. It engages the community," said Anderson.

Another goal, according to Anderson, is to make the building Leaders in Energy and Environmental Design (LEED) Certified. There are multiple facets in creating a 'green' building. Anderson said "You get points when you can use an existing structure" instead of constructing a brand new building. From recycling demolition materials to the heating and air conditioning to the low volt track lighting, Standing Stone Coffee Co. has taken the environment into consideration.

Anderson welcomes input from the community.

"If anyone has any ideas, we're definitely open to listening," Anderson said.

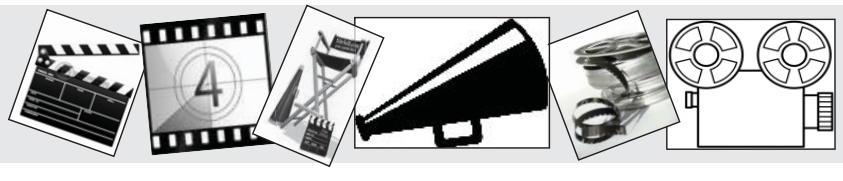
Andrew Meloney/ Juniatian

Located on the corner of 13th and Mifflin Streets, Standing Stone Coffee Company serves food and beverages to Juniata students and Huntingdon community members in a welcoming coffeehouse environment.

Ross recommends:

Sandwich: Veggie Bonanza Panini $4.75

Smoothie: Orange Paradise Smoothie 16 oz. $3.75



Fresh Coffee: 16 oz. French Press $2.00

The Director's Chair

By Bennett Rea

'Bangkok Dangerous' falters with Cage as the star

Action movies do not need dazzling dialogue and exquisite character development, but they should have fantastic action scenes. Unfortunately for moviegoers, "Bangkok Dangerous" sorely lacks any of the above.

This remake of the original Thai "Bangkok Dangerous" (which was made just eight years ago and directed by the same people) lacks almost every quality that is needed. While it may have a few bright spots, they are overwhelmed by bad direction and worse acting. The movie revolves around a hit man named "Joe" (Nicolas Cage). As you see him taking out his targets early in the movie, his narration lays out the rules of the business. You realize very quickly, however, that, at some point in the movie, he will break these rules.

Joe is planning on leaving the business with no strings attached after completing one last job: four hits in Bangkok. Of course, things go awry after he falls in love with a deaf pharmacist (Charlie Yeung) and takes on an apprentice (Shahkrit Yamnarm) who stirs up trouble with Joe's boss, Surat (Nirattisai Kaljaruek). Joe is forced to fight back against Surat and his guards in slow motion action sequences that constantly pervade the film.

The biggest and most glaring problem with "Bangkok Dangerous" is the casting of Cage. He is just not an action star, no matter how many times he may try. Cage is flat and lifeless, and not in the way that a hit man should be.

Good movie hit men have at least some emotions and personality to make them interesting. For example, Tom Cruise's character, Vincent, in "Collateral" is an excellent movie hit man. Vincent has intriguing thoughts and qualities, and you actually care about whether he lives or dies. Cage's character is not without emotion, but he is somehow without personality. The audience does not care about him or his love with the deaf pharmacist. Much of what is supposed to be romantic and serious is often laughable.

In fact, the entire movie induces laughter where it should not, and much of the blame must fall on Cage. He is a much better actor when he can focus on the minutiae of the character, such as his roles in "Adaptation" and "Matchstick Men." The bottom line is that Nicolas Cage is no Jason Bourne.

continued page 14

Theatre program growing in size and talent

Number of POEs triple in just one year

Kristen Rodkey

Andy Belser, professor of theatre, has been a part of the Juniata theatre program since 1997. Until 2005 he had only seen small but steady growth in the program. Before the Suzanne von Liebig Theatre was built, rehearsals for performances were done in dorm basements and lounges. Some rehearsals were held in Rosenberger Auditorium, but this was a shared space. With no place to call its own, the theatre department was unable to expand its program.

When the Suzanne von Liebig Theatre began construction, the theatre program started to grab the attention of prospective students. Last year was the first the College advertized the expansion of the theatre program.

Belser was pleased to say that the program has grown "quicker than expected."

This year's growth tripled from the previous year, with 12 students joining the program. The department now has around 35 students. The program has the capacity to have 40-50 POEs.

After reaching capacity, auditions will be held in order to be accepted into the program.

The program is now sparking national interest. Some students have attended art magnet schools before coming to Juniata, so overall the level of talent is rising.

The College is also competing for students looking at well-known art schools such as Ithaca, Carnegie-Mellon and the University of the Arts in Philadelphia.

Despite the larger number of students, the number of main stage performances will remain at four a year. Smaller performances include five senior capstone events.

Belser's goals for the expanding program include keeping the program at a manageable size, keeping interest and talent high and offering more opportunities for internships. He hopes to make the program a bigger part of not only the school, but the community. The department may also add a musical theater course. The department hopes to offer more advanced courses and increase community awareness.

The new direction of the program is "not just [about] growing bigger, but deeper," said Belser.

Belser said, "The College has been extremely supportive of this program by helping to add instructors, but also space [and] support staff. They see the potential for this to be a big part of Juniata's future. They also see it as a way to draw a diversity of students."

One way the school is supporting the program is by adding Kate Clarke to this year's faculty. Clarke hopes to bring experience and structured acting training to the students. She is also very passionate about what she does and hopes that it will inspire her students.

"The commitment level, talent [and] respect for each other has been inspiring," said Clarke.

Clarke teaches the general acting class and performance lab. Clarke is also directing this year's fall play "Angels in America," which opens Oct. 16. She chose the play "Angels in America" because of its difficulty to perform and direct. Clarke also feels the play is hard hitting politically.

While several freshmen have roles in "Angels in America," neither Clarke nor the upperclassmen in the play expressed worry about the having a younger cast.

Junior Alison Strausberg said, "The freshmen are so insightful. They [the professors] are choosing the right people."

When asked about the freshmen in the play junior Marci Chamberlain said she was "fairly impressed but can't help but feel bad for [upperclassmen] that put in the time [but did not get parts]."

With freshmen involved with the play "upperclassmen are taking on more responsibility with mentoring other students," said senior Josh Beckel.

The next performance is going to be a traipses aerial dance piece called "And They Lay, Not Awake, yet Dreaming Without Sleep."

The Gravity Project is another way the school is expanding its theatre program. The theatre department brings in professionals who come on as temporary faculty members who lead productions.

Andrew Meloney/ Juniatian

Students critique performances during a discussion in Kate Clarke's Acting course.

Some student pieces made with these professionals will go on to be main stage performances or be installed in festivals or professional theaters. After this experience, students will be well trained and may be asked to join the company.

The Gravity project is funded by the College and is comparable to undergraduate research customized for theatre POEs.

There are plans of continuing the Gravity project for the years to come. The focus of the project is to raise the level of performance and to "keep students excited," said Belser.

A main goal of the theatre program is "to grow the imagination of [its] students to think of themselves as entrepreneurs," said Belser. This mind set has helped many Juniata students receive internships, be accepted into graduate schools and earn professional positions.

"One of the biggest myths about theater training is that there are no jobs for theater majors, there are jobs," said Belser.

Right now the department has two programs of emphasis, Performing Arts and Performing Arts Management, but students are also able to customize their POEs to include theatre.

Mr. Juniata rocks

continued from page 11

Heisman takes on villains such as Pacman and the infamous Joker. Let us not forget that Heissman's Indi also saves a damsel in distress. His performance had some music timing difficulties as well, but other than that, it was phenomenal and by far the most original.

Next up, Brewer took the stage. He danced out the evolution of rock and its different dances through the ages, including the robot and the electric slide. After this, Will appeared as a pseudo magician whose tricks purposefully never worked out. The highlight of his act was when he pulled out a live snake, which kept the audience members on the edge of their seats.

This magical act was followed by one of the most popular performances of the night, Houser's "emo" song. Aside from being ridiculously funny, it was also well performed. At the end of his skit he wins his escort back and no longer needs to sing about his angst.

The show only got better as the winning act of Mr. Juniata came next. Colaianne, with the help of the emcees and his dancers, sang "Uptown Girl." Showing the most talent of the evening, the eventual Mr. Juniata winner played the grand piano while beautifully singing, eventually leaving the piano to dance with his back-up girls.

Michael Day's skit came after this hard-to-follow act. His performance began as a satire of cliché Mr. Juniata performances, but was intercepted by a pre-planned videoconference with 2006 Mr. Juniata winner senior Casey Chew. In his broadcasted cameo, Chew gave tips on how Day should deliver a winning performance. The last of the night, Day's act was entertaining and an obvious shoe-in to the top five.

Next, the hosts presented a slideshow of the contestants' baby pictures. The contestants then came out in their evening wear–this time, tuxedos, not dresses or g-strings. The men were accompanied by their escort(s), to whom each contestant presented either flowers or a comical substitute gift.

The top five were announced and asked the final question: if they could be one rock star, who would it be and what would they do with the star power?

While the scores were tabulated, the audience enjoyed a performance by the student band Susan vonLiebig and the Halbritters. Then the winners were crowned.

The proceeds of the show were given to the Make-A-Wish Foundation and Scott F. Grugan Memorial Scholarship Program, which supports education for students in Guatemala.

"It took around 80 hours of work to make Mr. Juniata happen, but it was a ton a fun and well worth it," said Kristin Brewer, Mr. Juniata chair, and member of Circle K.

When asked what he thought of Mr. Juniata, contestant Bitar said, "It was a really great experience, and it was one I will never forget. They were a great group of people and I can honestly say they made it twice as fun for me. It was definitely worthwhile, and if I can, I will definitely try again next year."

'Bangkok' bombs

continued from page 12

However, the failure of the film is not solely the fault of Cage. The directors, Oxide Pang Chun and Danny Pang, took what could have been an interesting storyline and obliterated it with murky cinematography and awful dialogue. No, Cage did not deliver his lines well, but the Pang brothers did not give him anything great to work with either. Most lines were clichéd and corny, making it sound even worse when Cage spoke.

The Pangs' pacing was almost as bad as their dialogue. They had no idea when to build tension or how to makes action sequences entertaining. In movies such as the "Bourne" series, director Paul Greengrass offers a blistering pace where intensity never lets up. In the action scenes in "Bangkok Dangerous," the pace is inconsistent and at some points even boring. At one point in the movie, Cage is going around shooting guards and it quickly becomes the most unnecessarily drawn out scene in years. It is unforgiveable for an action movie to have such lackluster action sequences.

I give the Pangs credit for writing a decent story, but perhaps they should stick to screenwriting, not directing. In the hands of a better director and with a better cast, this could have been a more watchable movie. Unfortunately, Paul Greengrass isn't the director, Nicolas Cage is still the star and it is not very watchable at all.

Final Take: ★

"Bangkok Dangerous" is rated R for violence, language, and some sexuality. It is now playing at the Clifton 5 in Huntingdon.

REWIND

Film Flash Back

Flashback Flick: "The Deer Hunter"

This best picture winner from 1978 is one of the most beautifully directed and tragic films of the past 30 years. It focuses on a group of friends from a small steel mill town in Pennsylvania who are going to fight in the Vietnam War. The four friends go off to Vietnam and come back (or don't) shattered because of their experiences. The most intense scenes revolve around the Russian Roulette games that they are forced to play as prisoners in a Vietnamese POW camp. The film focuses on the aftereffects of their horrific time in that camp.

With a stellar cast that includes Robert DeNiro, Meryl Streep and Christopher Walken, the film's character development and interactions are perfect. Very rarely do films come out that feel so completely raw and real. The emotions of every character are thrown out in front of the audience. Every word and every silence lets you in on more of their thoughts and feelings.

"The Deer Hunter" is a long movie, clocking in at about three hours, but there is never a point when you want it to be over. Everything from the detailed exposition to the shocking ending is carefully crafted and paced. It is not a movie that you watch to be entertained; it is a movie you watch to understand the devastation of these regular men turned soldiers. With a war currently going on in Iraq, this movie is just as relevant and powerful today as it was then.

Anything But Ordinary

Florist and Queen

by Claire Williams

In our celebrity inclined world we hear all about the A-list stars, from how they dress to what they had for breakfast. But we only hear about not so famous stars if they've been arrested or act alongside an A-lister. One of these overlooked actresses is Lena Headey.

Headey is an English actress. She has been in some blockbuster films but has mostly acted in smaller flicks and TV shows. In the roles, she plays more than just a pretty face.

She usually plays a strong female character, acting as a more positive role model than some characters in other films. Some examples of this are shown in the movies "300," "The Brothers Grimm" and the TV hit "Terminator: The Sarah Conner Chronicles."

In "300" Headey plays Queen Gorgo of Sparta, one of the only women featured in the movie. She shows strength of character when horrific events happen and she takes revenge upon those who deserve it. While it isn't a cheery movie, she gives a good performance and adds a realistic dimension to ground the epic battles that take place throughout the rest of the film.

Headey plays another warrior woman as the title character in the TV show, "Terminator: The Sarah Conner Chronicles." She fights to protect her son and, through him, to save the world from destruction by the Terminators. As the episodes progress, her character's relationships develop well and she convincingly plays a woman stuck between sheltering her son and allowing him to make his own decisions.

In "The Brothers Grimm" Headey portrays a woman who is trying to find or avenge her missing sisters. While most of the villagers fear what is happening, she proves to be the only person who is courageous enough to help the brothers find the evil plaguing the village. Her character is very dedicated to her family, independent and doesn't back away when everyone else is against her.

One of my favorite roles Headey plays is in "Imagine Me & You." This is a much more realistic role for her. The movie isn't set in an alternate time line or in a fairy tale world. It is a story that could easily happen.

In "Imagine" Headey plays a florist named Luce whose life becomes much more complicated after a wedding. Throughout the film the audience can relate to her acting. She, with the rest of the cast, lets the audience enjoy the story that seems like seeing a friend's relationship unfold.

I highly recommend watching "Imagine Me & You." It's a great movie that provides interesting views on the nature of love and marriage and could possibly make the viewer think differently about relationships. At the same time it is a sweet movie with a light tone that leaves the viewer happy with the ending.

Headey's lastest films are "The Broken," shown at Sundance Film Festival, "The Red Baron" which was released earlier this year in Germany and " Whore" which is set for an Oct. 20 release in the United States.

"Terminator: The Sarah Conner Chronicles" airs every Monday at 8 p.m. on FOX.

Outside of acting Headey, a vegetarian, has recently campaigned with PETA to stop circus animal cruelty. She joined the campaign to stop the use of animals in circuses after seeing a documentary about a group seeking to free lions from a French circus and return them to the wild.

Headey goes to show that you can be more than just a pretty face in Hollywood. You can be a positive role model for girls by taking roles with substance. She shows that you can be a good actress while still wearing underwear.

Mountian Day

JCVB's silliness and superstition: it must be the hairspray

Michelle Morchesky

Who is Juniata volleyball? I can tell you for certain that we are much more than the spandex and colorful jerseys. We are more than the numbers we wear on our backs and more than the logo we wear on the front.

Juniata volleyball is more than countless hours spent in the gym and long bus rides to games.

Despite how highly visible our sport is to not only our campus, but to those in our conference and region, few know much about what goes on beyond our practices and games.

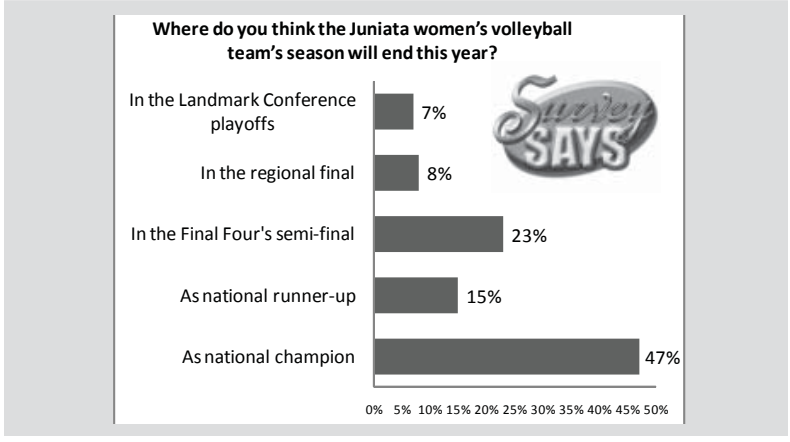
Practicing day after day in preparation for matches can get tiring. As student-athletes, we sometimes find ourselves struggling to get through the day in one piece. As coaches, Larry Bock and Heather Pavlick are fully aware of our constant dilemma of being students and athletes. While all practices have a very serious undertone, to keep spirits positive and motivation high, we often play fun drills, many of which conclude with crazy punishments for the losing side.

One of our favorite drills to lighten the mood deals with serving. We stand on the end line and serve one by one over the net and try to catch our own serve before it bounces twice. It may sound easy in theory, but in practice, it's brutal. There have been many bruises and episodes of floor burn that occur during this drill. The encounters with the wall and clothes-lining of the net make this drill great for laughs.

Along with crazy drills come great rewards. Last year, Coach Bock bet against us during a drill and lost. To pay up, he did a 360 with rolls. This punishment consisted of a suicide of the volleyball court with a volleyball-like roll at each line on the floor. To this day, that is one of the highlights of my career. Ask any of the other players, it was surely an event that none of us will ever forget.

Outside of the practice gym, we are prone to participating in superstitious acts, especially before a match.

Salem, Virginia in 2006 was home to Mac & Bob's. During the Final Four, that is the only restaurant we would eat at for four days. Some variety those few days might have been nice, but in the end, we stuck with Mac & Bob, and how could we complain? That year, with its national title, has been the defining moment in most of our careers.



Another superstition when we travel deals with the bus. We have no idea why, but we are under strict orders not to enter the bus unless it's right outside of Ellis Hall. If for any reason the bus is parked outside of the gym, we are not to enter until it moves to the other side of the street.

As players, we always warm up in the same exact spot for every match. We are a team that thrives on consistency and tradition. Without it, we are lost.

Pre-match rituals actually start in the locker room and our attire. Some of my teammates will only wear a certain pair of spandex for matches, or a certain pair of socks.

Possibly, the most ridiculous superstition with our team deals with hairspray. For those of us with long and untamable hair, hairspray is a necessity before a match. Last year one of the players purchased the cheapest can of hairspray she could find, Rave. It smelled terrible but the superstition was that if you didn't use some of it before the game, you would not play well.

We ditched Rave as our cheap hairspray of choice after our season ended short of another national title. Clearly, Rave did not make the cut. This year, we've stumbled upon an even cheaper hair product, AquaNet. This may in fact, smell worse than Rave, but it will give you prom-like hard hair in seconds. As of right now AquaNet is holding its own, but we'll see if it manages to last through the entire season.

JCWS outmatches opposition with a talented defensive force

Kristen Penska

Our women's soccer team has blown by competition this season. Our 2-0 victory over Gettysburg and our hard fought 3-1 win over Lycoming have paid off. For the first time in our program's 15 year history, we have earned the ninth spot in the Mid-Atlantic Regional rankings.

The rankings are decided by the NSCAA (National Soccer Coaches Association of America) and Adidas. The states included in the Mid-Atlantic region are Pennsylvania, Delaware, Washington D.C., Maryland, Virginia and West Virginia, proving that this year, Juniata has shown up to win.

It takes hard work to achieve and maintain such a goal. The "3-3-Z-3," our current formation, requires defensive perfection at all costs. Even the smallest slip up, trip or bad touch can cost us the game in seconds. Therefore, our defenders, Melissa Johnson, Colleen Cribbs, Laura Fisher, Chloe Pott, Christine Schott and newcomer Jenny Novak, are under constant stress.

"It can be really nerve-racking at times. When the ball is coming to you, you have to know what to do with it; otherwise, it could cost you the game," said Cribbs.

It is easy to see that the defense is where it all begins. By maintaining intensity, momentum is quickly transferred to the attack. Equipped with an extra "Z" player, the midfield uses quick foot skills to receive balls from the defense. From there, possession is maintained and directed to our speed-ridden forwards. The game, therefore, is never slow, but in constant motion.

If the defenders falter, it is up to us, the goalkeepers, to clean up the mess. While most goalkeepers utilize the use of their hands, Lauren Auster-Gussman and I have dominated match play with our feet.

Many keepers stay back and wait for shots. They are unconnected with their defenders until it is too late. Auster-Gussman and I have taken the initiative to become more offensive and demand the ball twice as often. This mentality allows momentum to be switched immediately to a counter attack, and keeps a constant connection between us and our defense.

No other Division III women's team possesses the collective strength, smarts and athleticism of our 2008 Lady Eagles' defense. Many coaches sneer when they see that we play with three defenders. However, they soon find out that three can protect the net extremely well. Often we hear them shouting at their players, "They only have three back. How in the hell can't you beat that?"

Having six solid defenders who rotate onto the field with a positive mentality keeps our team strong. It has also helped us keep our goals-against average very low. So far this season, we have yielded only five goals in 732 minutes of match play.

"The greatest thing about the defense is we know when to come off the field. We aren't worried about playing time. We just want to make sure our team has the best defenders on the field at all times, and if you're tired, you can't be the best," said Cribbs.

> "We aren't worried about playing time. We just want to make sure our team has the best defenders on the field at all times, and if you're tired, you can't be the best."
>
> – Colleen Cribbs

Even the coaches realize the amazing talent and depth of our defense.

"It is hard to believe that on the bench there are subs who we, as a coaching staff, trust as fully as the starters," said assistant coach Michael Zauzig. "The consistent work ethic and positive attitudes of the defense is promising."

Our defense is mortal however. Minor slip ups in communication and positioning have cost goals, which have led to the first two losses this season against Penn State Altoona and Stevenson.

"The good thing about those goals is that they are fixable," said head coach Scott McKenzie.

Soon after our slump, we returned to win our first conference game against Moravian. The 1-0 victory was a collective team effort. Practice paid off and the mistakes made in the previous week were eliminated, bringing us one step closer to the playoffs.

This weekend we play our next conference match against Catholic University. Last year's matchup against the Lady Cardinals resulted in a 0-0 tie.

This year the Cardinals have given up a total of 14 goals, while we have only let five slip by. It seems as though our winning attitude is back, but every practice leading up to Catholic must be one filled with dedication and determination. In the end, if we show up to Winton Hill prepared, no team will conquer the Juniata Lady Eagles.

It takes two to goal-keep

Versatility is key

Chad Kohr

There is no position on a soccer field like goalkeeper. For one, the goalies use their hands. More importantly, no other player has the power to lift his team one moment and let them down the next. Being the last line of defense is a huge responsibility, and we have two players sharing the duty.

Senior Ted Sonneborn and sophomore Joe Kohler are two very different players, but they each have one simple job: keep the ball out of the net.

Coach Dan Dubois feels comfortable with either goalkeeper manning the net in big games. "The goalkeeper position has been inconsistent for us in the past. This year we are confident, and the players know our goalies won't cost us games," said Dubois.

Sonneborn and Kohler have each seen action in multiple games. They each have distinct strengths and weaknesses and both know their roles on the team. "I'm more suited for a team that crosses and plays the ball in the air, and Joe is better suited to play against a team that is more direct because of his reactions and ability to cut off angles," said Sonneborn.

Kohler has a similar take on the issue. "We both have good technique. Ted is much taller and has a big punt, but I'm probably better at shot stopping ," said Kohler.

Coach Dubois has the deployment of goalkeepers down to a science. "Ted is 6'2 plus, so when we see on the scouting report that a team tends to play the ball high in the box, he is the choice. In most other instances, we like to have Joe in there. They are both good keepers and we have confidence in them. It's just a matchup issue," said Dubois.

Assistant coach John Mumford believes that the play of our goalies is essential to our success. "The team has to have confidence that the goalie is in control and is going to make plays. In the McDaniel game, Ted was aggressive and made a couple big saves that lifted the team," said Mumford.

That 2-1 win over McDaniel College redeemed last year's loss to the Green Terror. Coming into the game, Sonneborn recorded no saves on the year. Regardless, he played inspired soccer and made three big saves to preserve the win. "Ted played the best game I've seen a goalie play here," said Dubois.

"I played poorly the game before, and there was a lot of pressure from the team. I wanted to play well, too, so the team would feel confident with me back there. I made a couple good saves and communicated well with the defense, and it really got the team up," said Sonneborn.

Andrew Meloney / Juniatian

Sophomore Joe Kohler defends his goal during Juniata's Sept. 23 game against Lycoming College. The Eagles fell 0-2, putting their home record at 3-2 on the season.

Despite competing for playing time, Sonneborn and Kohler are able to leave it on the field. It is a good thing because the two are roommates. "We rag on each other about mistakes, but we compliment the good plays. The atmosphere in our room is definitely good in spite of the competition," said Sonneborn.

Kohler doesn't see soccer affect the rooming situation either. "I never even think about it. We are usually just joking around in the room, and the topic never comes up," said Kohler.

As conference play begins, the performance of our goalkeepers will be crucial. So far this season, we have had trouble coming out with a high intensity level at the beginning of games. This problem is Coach Dubois' main concern. "We need to pick up the intensity level. We are tentative to start games; we need to be able to get up emotionally," said Dubois.

Sonneborn understands this problem. He knows that we need our keepers to be vocal leaders and to help boost the intensity. "Once we get into the flow of the game we are hard to beat. We have only allowed three goals in the second half through the first eight games. We need to figure out how to get to that level quicker," said Sonneborn.

Coach Mumford feels confident that we are ready to step up. "We're starting to realize our potential. It's there—we just have to take care of business," said Mumford.

Q&A with Coach Smith

Talking about training

Kevin Campbell

How many teams participate in offseason workouts?

Basically all of our teams are involved in offseason programs, some of the teams are more supervised by their coaches. For example, our track team coaches do a real good job of implementing a sports specific program for their sprinters and their jumpers.

Do all teams still lift during their seasons? If so, what is the benefit of year-round lifting?

Well, they should. We will have a preseason, postseason and inseason maintenance program. Now, an example, for the football program, our most important lifting cycle would be our postseason. But that's just important because it builds to our preseason, which builds up to our in season so they come back in shape, ready to play and then we try to maintain it. All three are very important. If you don't have any inseason lifting program, what happens is you're not maintaining. It's all about maintenance. It's also for injury prevention and it helps in recovery. Now, in season we won't crush them like in the offseason, but do enough for recovery purposes.

How much input do individual coaches have on how their teams' workouts are designed?

All the coaches come [to me] and I'll draw up a program. I'll then show it to them and answer any questions they may have. I leave it wide open for them to tweak the program. In general they trust our expertise because that's what we do. They are satisfied with that.

Are there any plans to expand the fitness center? If no, why not?

Right now there is nothing on paper. Mr. Brumbaugh gives us a real nice amount of money every year to replace equipment and right now we are going to take that money and try to turn over aerobic equipment. Then what's left over can be used for equipment that is more athletic specific for performance development but the majority of our money goes to the aerobic [equipment]. That really suits more of the general population of the school.

What can Juniata do to even further develop its strength and conditioning program?

Well, I think we are way advanced. This is one of the first really nice fitness centers that I have ever seen for a Division III athletic center. In order to bring more students into your school the fitness facilities become a big part of that….[The weight room] used to be just a blank room with nothing in there. It is fantastic just the money we are getting in here from Mr. Brumbaugh, it's a blessing. What we really need at sometime and I would really like if we could have some sort of indoor facility. [An indoor facility] where we can actually train, not just with just our strength, power and all the stuff you traditionally do in the weight room, but so we can have a facility that we can do our speed, movement, and agility training.

Some of your workouts are legendary (running the stairs in Knox Stadium, and the tire toss)…which is your favorite workout to do or put student-athletes through?

I like them all to tell you the truth. And they all have a place. I mean just like the tires and the stairs programs they are work-oriented programs that train kids to work. I call them task-oriented programs. They develop mental toughness as well as physical stamina and strength. They are all important. You can have 100different things that are fantastic, but together they can be junk. The trick is to try to get them in the right place, at the right time.

Nutrition can be a very important part to staying healthy & gaining strength. What do you suggest the athletes do to have good nutrition?

There is so much junk out there right now, and when I say junk, it's money making programs. The thing with nutrition is that what was good 100 years ago is still good today. Students here can research that. I understand the importance of protein, but too much is not good. It has to be in the right proportion. I really prefer they do it naturally, but sometimes they can't do that. Always check with the athletic trainer. Do some research.

North lawn in shambles

Intramural teams suffer and plans for the future are on the back burner

Erin McGinley

The condition of North Lawn, constantly used by three intramural teams, is deteriorating.

Men's and women's rugby, as well as ultimate Frisbee, use North Lawn as their primary practice field. The condition of the field is often questionable and always overcrowded.

Due to a lack of space, the teams cannot adequately prepare for games. "During the first 80 minute game, we didn't get the feel of running that far," said Meredith Eatough, a senior on the women's rugby team.

According to Eatough, in order to prepare for game conditions, the team needs to travel to the Lion's Club field. This field, which has been used by both rugby teams in the past, is five minutes from campus on Route 26, but it is inconvenient for daily practices.

Zane Miller, a senior on the men's rugby team, agrees the lack of space is detrimental to his team's success. "We also need a lot of space to do our drills and when we have to share space, it's restricting," said Miller. Each team is also limited to half of the field space. Each day one team is kicked off North Lawn and left to practice on the Campus Quad where people and cement sidewalks run through the field.

In addition to the deficit in space, Miller also feels like the condition of North Lawn is hurting the team. "We might as well as well be playing on blacktop," he said.

The rugby teams are limited to doing their tackling drills off to the sides of North Lawn where there is more grass, fewer rocks and an even surface.

Shin splints, ankle injuries, cuts, bruises and dust inhalation are some of the injuries players suffer because of the field's condition.

The ultimate Frisbee club is also feeling the pressure from North Lawn's condition. With increased numbers in the freshman class, the club has increased to 35 members. Big numbers and smaller field space forced the team to cut down the game size. The normal game places seven players versus seven players. The club practices five versus five. "It limits the ability of all the people at practice to fully play the whole time," said junior

Alison Rihs / Juniatian

The ultimate Frisbee team deals with the dusty and dangerous conditions on its practice field on North Lawn.

Close, but no victory cigar

Tyler Sasala

Going 0-4 to start the season is not what we had in mind as a team when camp started this year. We have had three straight heartbreaking losses. As a team we feel that we should easily be 3-1 right now, if not better.

We start the clock over each week, and head into Saturday's game with full confidence in that we are going to be victorious no matter who the opponent is.

On Sept. 27 we went on the road to play Franklin and Marshall College (F&M). Looking to get our first win of the season, as well as our first ever Centennial Conference win, our hopes were high all week. But, torrential downpours and a lightening delay drowned out our hopes.

The rain forced our offense to the ground game. In the mud we could never get our footing, which resulted in a season low 120 yards of offense.

Our defense battled the entire game. Faced with poor field position we smothered the F&M offense until it finally scored with 18 seconds left in the first half, then once more later in the game. Both F&M scores came off turnovers.

Defensively we were led by senior Josh Roy with 12 total tackles, including seven solo stops. Sophomore Jordan Baird and junior Tyler Hall also added 11 tackles each.

When asked about the feeling after the game, senior quarterback Jay Leonard, said, "As an individual I was totally embarrassed to walk off that field after the way we played and as a team we should feel the same way. There is no excuse for lack of effort and execution when it comes to college football."

On Sept. 20 we traveled to Ursinus College. It was a long awaited rematch for us, since last year we lost after having the lead at halftime.

After trailing 14-3 at the half, we finally found the end zone in the third quarter. We cut Ursinus' lead to 14-9 with a 27-yard pass from Leonard to tight end Ronnie Shrift.

After our defense forced a three-and-out on the next possession, our offense proceeded to march 77 yards downfield. We finally scored on a four-yard TD rush by Dan Zentz to take a 15-14 lead. We then converted a two-point conversion to widen the lead to 17-14 early in the fourth quarter.

Ursinus threatened on its next possession, but our defense once again tightened and forced a missed field goal.

After our offense misfired, we gave the ball to the Bears with a short field and they capitalized to regain the lead, 21-17. For the second week in a row we lost another heartbreaker.

Sophomore Ronnie Shrift said, "We came out slow during the Ursinus game. It's something we can't do as a team. Our level of play improved as the game went on. It was a physical game and definitely a hard loss. We are so close to breaking down that door to measurable success."

There has been one positive moment out of our tough losses. Leonard, who has 6,366 yards passing for his career, eclipsed the old career passing record of 6,215 yards held by Greg Troutman (2001-04). Leonard needs just 4 completions to break Troutman's career completions record, as well.

When asked about breaking the record, Leonard said, "It will be nice to look back on it down the road and to talk about it with the guys that I have played with over the last four years. But the only stat I really care about is in the win column and we haven't been too successful there."

This Saturday, we return home to take on McDaniel College.

JCFH attack returns with fire

Joyce Eveleth

We finally found our fire. After several weeks of tough losses, we have at last generated some strong offensive attack. The satisfying sound of the ball hitting the backboard and the immediate cries of cheering that follow are the only descriptions necessary to explain winning.

After a 3-1 loss to Delaware Valley College, our spirits were low. We were renewed by the thought of opening conference play with a clean slate. Our offensive came through in our first conference game against Moravian on Sat., Sept. 26.

Determination to win and the will to give 100 percent the entire game was all it took to revive the fire. We walked off the Moravian field with a 3-1 win.

The freshmen on our starting forward line proved to be a major factor for our offensive unit. Goals were recorded by freshmen Meghan McGlone and Molly Snyder, who was assisted by fellow freshman Brittany Kauffman.

Our continuous, quick passing was a major part of our game and proved to be effective in generating our attack.

Kauffman said: "We did a lot of one touch passing and we were able to work together and get the ball down the field. We connected really well, and rather than just playing for ourselves, we were playing for the team."

Some new adjustments on the forward line could have been a source for trouble and confusion. However, constant communication and passing led to goals.

We were able to sub players in and out of the game frequently because of the depth of our bench. This did nothing to alter the flow of the game, but rather allowed for fresh legs and renewed intensity.

Our young players' creativity and energy allowed us to harness the win against Moravian. This win proved to be the turning point in our season.

Senior co-captain and goalkeeper Abby Funk said: "Our quick passing game finally came together. The spark starts in the midfield and works its way up to the forward line. Working together really achieves goals."

As a team, we've been put through some major changes this season. Together, we are achieving goals by playing the game we know works for us. Discovering and utilizing that game, however, can take some time.

"We were finally able to utilize smart passing and make use of the talent on the field. We definitely pulled through as a team to come home with a conference win," said Funk.

Sophomore midfielder Samantha Smith, who played sweeper as a freshman last year and made her first collegiate goal against Moravian, said: "We've definitely had to make a couple changes from last year. This season is a lot different, but I think we are proving we are just as strong. We have a lot of talent and we're really beginning to connect. When we do connect and have that energy on the field, we come home with wins."

Even though we struggled through the beginning of the season, we can only look forward with great hope. We have all the ingredients for success—an abundance of talent and a team full of heart. With renewed fire on the offensive end of the field, success is all we can expect.

North lawn in shambles

continued from page 18

CJ Smith.

Weekends are more flexible for the intramural teams. Games and tournaments for all three teams are held on the practice football fields during the weekend. Typically, intramural teams cannot practice on these fields during the week because varsity sports have priority over the intramural sports.

Due to the lack of light during the fall, intramural sports cannot practice after the football team. Also, conflicts in tournament scheduling can cause problems. Since there is only one legitimate field for use, only single games can be scheduled.

Many people blame the deterioration of North Lawn on several years of construction on campus. During the construction of the Susan von Liebig Theatre in 2004, heavy machinery and supplies were stored on the lawn. The aftermath of storage left the lawn with no grass and an uneven surface.

The biggest problem North Lawn faces is that there is no sprinkler system capable of watering the field. Juniata does not possess outlet large enough to handle the capacity of water needed to water that field.

Given this watering problem, North Lawn's grass can be seen growing sparsely in parallel lines. Comparatively, the back lawn of Cloister has an effective sprinkler system and grass has been successfully grown.

Plans for North Lawn to be renovated are in the near future, but are not at the top of the College's priority list.

According to Jeff Meadows, the grounds supervisor, a layer of top soil was added to North Lawn during the summer of 2007, but it wasn't enough for the growth of grass. A load of top soil for that space costs $20,000 for 105 tons.

This past summer, another layer of used top soil was added to the lawn. In order to cut costs, the College purchased used top soil. Although this reduced the cost to $10,000, it was not suitable for grass growth.

Rob Yelnosky, vice president for finance and operations said, "One of the challenges is how hard the use of the lawn turns out to be when you do rugby practice and other things on that space. That's why we really want to take advantage of the summer when it's not being utilized heavily."North Lawn is often roped off to deter foot traffic and promote grass growth.

"We're working on it. We're aware it's not in prime shape, it's a work in progress," said Meadows.

Q & A

continued from page 17

Do you think that most Juniata athletes that arrive on campus have previous lifting experience or are they learning how to lift for the first time?

Some do, some don't. I'd rather work with someone that has real good work ethics. That's one of the biggest benefits of someone who has been part of a traditional, sound program in high school. [They] understand work ethic. Lifting is not simple. You have to be very attentive to detail and mechanics, and a lot of these kids will come here, and if they are doing something wrong it can be real hard to break those motor patters; like pulling teeth. So in one sense it's good to have the work ethic, but it's better to have someone with a blank slate. That way we can teach them from step one. If you ask 10 athletes coming from high school, "How many of you guys have had lifting experience on the platforms doing power cleans or some sort of high explosive lifting movement?," they all would raise their hands; at least nine out of 10. And you know what, out of those nine or 10, you're lucky to get one of them, I mean very lucky, that has really good technique. Technique can determine how effective your lift is. Also if done incorrectly it could cause injury. A big part of our program is not just teaching but re-teaching.

ON THE FLIP SIDE

by Bennett Rea

This year's Mr. Juniata was quite a show. There were dance numbers, scantily clad gentlemen and live snakes. It was like a Britney Spears concert, except with less clothing and more giant inflatable cheetahs.

The theme this year was Legend O' Rock. I liked the unnecessary Irish touch to the name, personally. I don't really remember the theme last year or even if there was one ("Guys Sing, Dance and Take Off Their Pants"?).

The winner this year was sophomore Blake Colaianne, who virtually put on a complete Billy Joel concert. It even featured a few of the Juniata College faculty and staff dancing their little hearts out. This is undoubtedly why he won, in my opinion.

There were some other good performances, but I'm not going to bore you by listing them all. However, I crunched some numbers and give you a rundown of what happened in wonderful list form. Needless to say, it was quite entertaining and quite lacking clothing. As senior Mike Day's act pointed out, it is a requirement to take off your clothes and do something crazy. Clearly, many of the contestants learned this and clearly the judges did not. For whatever reason, those judges just don't like seeing guys take off their clothes and shake their babymakers. Go figure.

I still completely expect future contestants to strip down to their tiny underpants and dance about. It just wouldn't be Mr. Juniata without partial nudity. And from now on, live snakes.

ONE MORE THING

Only a completely unrelated note, I have an extra dollar.

Whoever sends me the best email (reabm07@juniata.edu) that describes why you deserve it will get my lovely extra dollar.

Really.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

OCTOBER 30, 2008 | JUNIATA COLLEGE | VOLUME 90, ISSUE 3

Despite economy, JC 'in a good place'

Plans for debt and endowment remain unaffected

Christina Gongaware

Despite uneasiness across the nation, Juniata's Vice President and Director of Finance and Operations Rob Yelnosky said that the College is currently "in a good place." According to Yelnosky, Juniata can withstand the economic woes for the foreseeable future, though the College will not be left totally unscathed.

Yelnosky summarized the economy's effect on Juniata into two key parts. First, rising interest rates have increased debt. Second, the school's endowment, a fund of donations invested to provide annual gains to the College, is unstable due to market conditions.

Juniata's debt stood at $33 million at the end of last academic year. The debt has amassed from expensive campus projects such as the von Liebig Center for Sciences, Halbritter Center for Performing Arts, Founders Hall, the new athletic track and the renovations

continued page 4

Students face loans and job market

Christina Gongaware

According to the Associated Press, the high school class of 2009 will send the greatest number of graduates to college in American history. Many adults are also returning to school to increase their credentials for higher paying jobs.

However, with soaring interest rates, paying for tuition through loans is becoming more difficult. Private lenders have tightened their credit standards, limiting the number of students who can receive aid.

Funds are unlimited in the Stafford Federal Aid Program, so

Freshmen question CWS labs

Administration stresses lab's value for students

Kristin Rodkey

The stated purpose of CWS lab, according to Assistant Dean of Students Dan Cook-Huffman, is to give students the opportunity to learn time management skills, study skills and school policies.

CWS lab is designed to be a place for students to build confidence and engage in a relaxed social setting. For students who do not become involved in clubs or sports, this may be the first opportunity they have to connect with other students.

Melissa Markham, a CWS lecturer, sees the lab as "a forum for [students] to discuses common situations that freshman face," such as roommate problems, career options and the overall adjustment.

Cook-Huffman hopes that students will "pay attention to these aspects of the college experience that can make it all the more successful for them."

However, many students feel that the discrepancies between sections and other issues take away from the course's value. They also find the lab falls short of its intended goals.

When asked what they have learned or found helpful in lab, many students said they gained nothing. Others said that they "know the campus policies better."

Some students, though, have found it nice to have someone they could talk to on a regular basis and liked the group atmosphere.

But if this is all students are getting out of CWS lab, many wonder if it should be worth a credit.

Cook-Huffman argues yes. He said that lab qualifies to be worth one credit due to its writing component. Students must write one to two journals a week, along with reflections on cultural events. All of these writings are made into a portfolio at the end of the semester.

All labs also have a final project that students must complete. The projects are supposed to have a writing component that, according to Cook-Huffman, is intended to be eight to 10 pages.

However, only about half of the current freshmen have a major writing component with their lab projects.

In reality, lab projects vary depending on the professor. This fall, some classes are doing fundraisers which require no writing component. Others have to write a paper, do a presentation and make a Web site, all for one lab project.

The project is a hard aspect of the course to standardize. Individual professors decide how they are going to teach their sections. Variation is compounded by the large number of CWS instructors.

Even though the lab is part of the CWS course, some students feel that little of what is done in lab corresponds with what they learn in class. Over 75 percent of the

Year-round programs available at Field Station

Summer and spring programs in zoology and wildlife premiere on Raystown Lake

Brittany Moyer / Juniatian

Students take a lakeside hike as part of the fall semester at RFS. The Station now has spring, summer and fall programming.

Ross McMann

Science students now have more opportunities to spend an immersion semester at Juniata's Raystown Field Station (RFS) on Raystown Lake. The newest addition is a spring semester geared towards zoology and wildlife POEs and offers classes in ecology and organismal biology.

With the new spring semester, there are now three programs held yearly at the RFS. The fall semester, presently in its third year, is geared towards environmental science and studies students. The month-long summer "wildlife" program, which premiered this past June, offers classes in mammalogy and herpetology.

In each program, students live in lakeside lodges at the RFS and take courses there.

The spring semester will feature an academic partnership with St. Francis University. St. Francis is in Loretto, PA, about 50 miles west of Huntingdon.

Co-Director of the Raystown Field Station Chuck Yohn said about half of the spring semester students will be from St. Francis and half from Juniata. There will be two faculty members from St. Francis and two from Juniata.

St. Francis professors Lane Loya and Sue Morra will teach general ecology and animal behavior, respectively. Juniata professors Vincent Buonaccorsi and Chuck Yohn will teach biostatistics and vertebrate zoology, respectively.

"We are always looking to enhance the program for our students," said Earth and Environmental Science (EES) Department Chair Dennis Johnson. "One way to enhance the opportunities is to bring in students and faculty from other institutions."

The first three fall semesters at RFS have been enrolled under capacity. This year, however, the EES department saw a dramatic increase in freshmen, which may increase future demand for the RFS programs.

"We typically run 15-20 environmental science and studies POEs. This year we got 50," said Johnson.

Regarding the under-enrollment at the Field Station, Yohn said, "Surveys of students indicated the most common problems were problems working it into their scheduling," such as when a student plays sports or wishes to study abroad.

"One comment that we weren't getting," Yohn said, "was 'isolation' or 'off-campus.' Students haven't indicated that was a concern."

In fact, Yohn says he's heard the opposite concern voiced. "During the first year of the program [at the RFS], students said, 'We were bored more often on campus than we were at the field station.'"

Seniors Amanda Fabis and Colleen Metzger, who both spent last fall semester at the RFS, echoed that sentiment. "We really miss it." said Metzger an environmental science POE. "It was a great atmosphere, especially for an environmental science and studies major. The lake was right there so you could go kayaking whenever you wanted."

Both Fabis and Metzger were quick to point out some of the unique advantages of the field station. "For every class except one, we were outside," said Fabis, also an environmental science POE.

George Braun, a junior zoology POE was one of the students in this past summer's first offering of the wildlife semester.

"I wanted to do a semester out there but it really didn't work out schedule-wise, so it was good that I got a chance to get out there," said Braun.

The RFS is located about 16 miles from the College.

Classes at the Raystown Field Station

Fall semester:
- Geographic Information Systems (GIS), lecturer Alex Metcalf
- River morphology, professor Dennis Johnson
- Sustainability, professor Larry Mutti
- Sense of Place seminar, professor Chuck Yohn
- Field research methods, professor Neil Pelkey

Spring semester, in partnership with St. Francis University:
- General ecology, professor Lane Loya (St. Francis)
- Animal behavior, professor Sue Morra (St. Francis)
- Biostatistics, professor Vincent Buonaccorsi
- Vertebrate zoology, professor Chuck Yohn

Summer program:
Two of the following three will be offered every summer:
- Herpetology, professors John Matter and Roy Nagle
- Mammalogy, professors Uma Ramakrishnan and Douglas Glazier
- Ornithology, professor Chuck Yohn

Where on campus?

Politically speaking: Only five more days

A last look at election issues before Tuesday's big decision

Seth Fox

There are only five days left before Election Day. Barack Obama and John McCain are both moving into their final stages of campaigning. Here are the latest questions on the election and voting issues.

What do I need to bring to the polls on Election Day?

VotePA.com, a Web site set up by the Pennsylvania Department of State, has clear voting guidelines.

•Voters who are voting for the first time or voting at a new polling place (in other words newly registered or reregistered votes) need to bring a form of photo identification. A driver's license, military identification, U.S. passport, or Juniata student ID will be accepted. Voters should bring multiple IDs with them as a back-up.

•If voters do not have any form of photo identification, there are several other options. A voter ID card, firearms permit, current utility bill or bank statement, or any non-photo ID issued by the government will be accepted as long as it displays a voter's name and home address.

•If voters do not have any of these forms of identification, they can still vote on a provisional ballot. Provisional ballots are for anyone who comes to vote and, for any reason, the polling district's workers say they cannot vote. In this case, voters should request a provisional ballot. This is a right that all voters have.

Voters will then receive letters from the County Board of Elections within seven days of Election Day telling them whether their provisional votes were counted or not. In order to avoid this, it is best for voters to find some way to identify themselves at their polling location.

What are the current election turnout projections?

CNN reports that "Officials in early voting states are reporting record turnout with Election Day still two weeks away." This has caused pundits to believe that Election Day turnout will be record breaking numbers.

Michael McDonald, an associate professor of politics and government at George Mason University, projects that early voting suggests that a record 213 million are eligible to vote this year. McDonald believes that the nation has a very good chance of beating 1960's 64 percent Election Day turn out record.

Why did Powell endorse Obama?

On Oct. 19, former Secretary of State and Military General Colin Powell endorsed Democratic candidate Barack Obama, despite serving in Republican President George W. Bush's cabinet.

Earlier in 2007 Powell donated the maximum amount allowed to McCain's campaign. He was also considered to be a viable vice presidential candidate for McCain. Pundits speculate that he was not chosen in order for McCain to distance himself from the Bush administration.

In Feb. 2008 Powell said that he would "vote for the candidate I think can do the best job in America—whether that candidate is a Republican or Democrat or an independent."

Last week Powell said that he was endorsing Obama due his ability to inspire people and his very inclusive campaign. He also felt that Obama is a transformational figure.

Powell said that McCain's campaign has been going too negative of late. He said, "Over the last seven weeks, the approach of the Republican Party has become narrower and narrower [...] I look at these kind of approaches to the campaign, and they trouble me."

What are the current polling numbers in Pennsylvania?

CNN reports that Obama has a 53 to 41 lead over McCain. Political pundits are putting Pennsylvania in the "leaning for Obama" column. This is despite the increased number of rallies that the McCain campaign has held in the state over the past month.

What are other battleground states that are to close to call?

North Carolina, Missouri, Nevada, Ohio and Florida are all considered to be too close to call as the election draws near. Together they cast 87 electoral votes.

What are the current Electoral College projections?

Obama: 277
McCain: 174

What are the current national polling numbers?

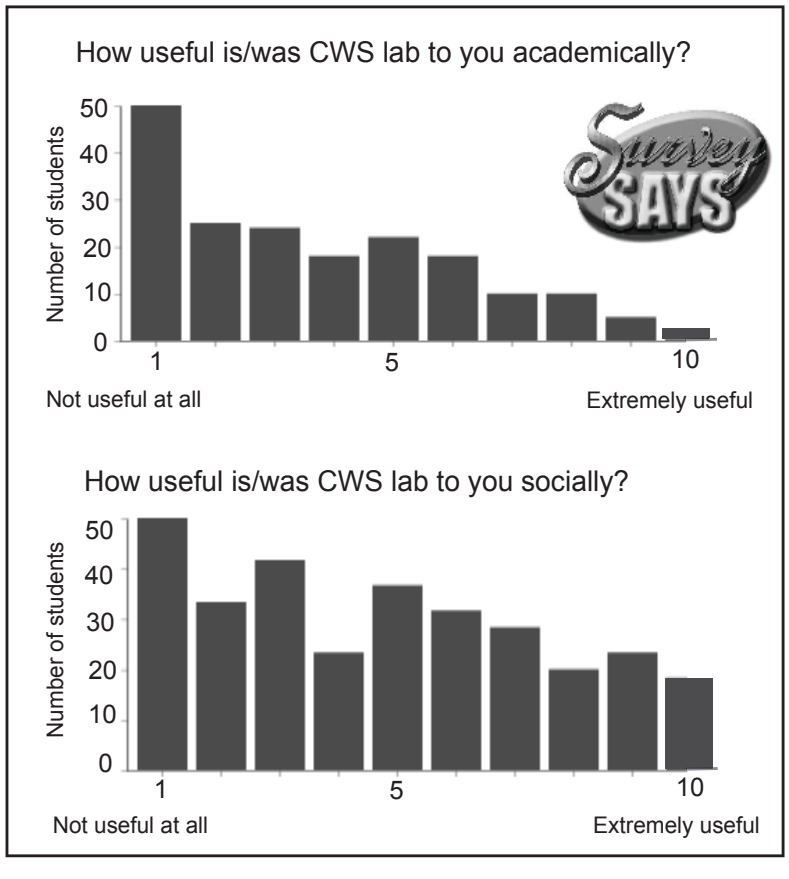
Gallup: Obama, 51 percent; McCain, 42 percent

Rasmussen: Obama, 51 percent; McCain 46 percent

CNN: Obama, 51 percent; McCain, 43 percent

ATTENTION JUNIATA VOTERS!

ELECTION DAY IS TUESDAY!



If you have registered to vote at your campus box address, your voting place is Stone Church (1623 Moore St.).

The polls are open from 7 a.m. to 8 p.m.

Officials expect long lines at the polls. As long as you are in line by 8 p.m., you have the right to wait and vote after the official closing time.

Do not wear canidate-promoting apparel to the polls.

A Juniata student poll watcher will be outside of Stone Church all day if you have questions or concerns.

CWS labs

continued from page 1

students asked said that the lab did not relate to class at all.

The lab curriculum is developed by Cook-Huffman along with faculty, the student affairs committee, academic support and career services.

Another inconsistency amongst the labs is their duration. The lab's allotted time is one hour. Out of the students asked, 46 percent said they only meet for 30 minutes. Thirty-six percent said that they meet for an hour and 18 percent said they meet for 15 minutes or less. Students interviewed raised questions about whether lab should really be a full hour, or if a smaller amount of time would be sufficient.

The length of the lab largely depends on the lab leader. Some lab leaders make students stay for the full hour, while others breeze through topics or barely touch on them at all. If the lab leaders do not take the material seriously, then it sends students a conflicting message. One student said, "We start discussions and then he says, 'Oh this isn't important.'"

Another common complaint is lab scheduling. Lab times are set by the members of the lab, but some students are discontent due to their meetings' late times. With labs set in the evening, students also miss clubs and lose valuable time they could spend studying. One student said, "Mine is at 9:30 p.m., and I don't like walking to Good at night."

Student input is heard through an end of the semester evaluation. Cook-Huffman encourages all current freshmen, whether they love CWS or hate it, to take the time to fill out the survey this fall. The survey is a key opportunity students have to help design what may be in next year's curriculum.

Ten to 20 students also help to make up a focus group that discusses ways to make the lab better at the end of the year.

While there is not major revision done every year to the lab, small revisions are made.

When asked what changes should be made to the lab, one student said it should be "more focused on writing, instead of miscellaneous things." Another student wished his lab leader would be more serious.

As of now Cook-Huffman says that no changes have been put in place for next year, but he suspects there will be in the future.

"It is a very good time for students to make their voices known about what changes they would like to see and how they think [the] experience could be made better or more meaningful," said Cook-Huffman.

Former Senator's visit

Andrew Meloney / Juniatian

President Thomas Kepple awarded former U.S. Senator Bennett Johnston (D-LA) an honorary degree from Juniata College during his visit to campus on Oct. 16.

Johnston gave a lecture to the campus community on his perspective of the U.S.'s energy future, given his experience as a senator and member of the U.S. Congress' Committee on Energy and Natural Resources.

In his view, the U.S. will need to pursue all possible forms of domestic energy sources, including oil reserves in the Alaskan National Wildlife Reserve.

Debt and endowment areas of College's concern

continued from page 1

of Good Hall and some residence halls. At present, the debt is growing as the Founders Hall and athletic track projects continue.

No building project plans will be altered, though, because of the economic crunch, according to Yelnosky.

Given the economic situation, the school's plan to pay off the debt is unclear. "Nothing is definite," said Yelnosky. However, he said that the debt should fall as the College receives pledged donations it has been promised from alumni.

Because the value of the endowment is based on the stock market, it is liable to fluctuation. It is invested in the market; therefore it can gain or lose value based on how the economy is going, according to Yelnosky.

The College's endowment is currently about $70 million. Each year, eight percent of the endowment goes to the school's yearly budget. The school also spends $3.4 million of the endowment each year on various projects, from construction to scholarships.

To determine how much of the endowment is used each year, its average value over the past five years is multiplied by five percent.

Juniata's financial year does not end until May 31, allowing time for the economy to stabilize before an average for the 2008-2009 academic year is taken.

Yelnosky said that in the short-term, the impact of the economic crisis is not significant for the College. But, he said, "We still don't know about the long term. It is still too early to tell."

Economy raises student worries over loans and jobs

continued from page 1

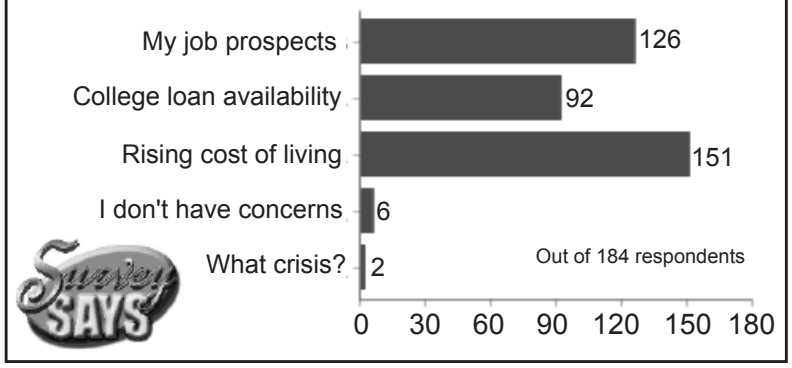
federal loans will remain uninterrupted. The demand for them has increased by 10 percent this year, according to the New York Times.

With many college prices surpassing $40,000, (including Juniata's) many students are worried whether a college education is affordable. A recent survey of 2,500 users of the Web site meritaid.com found 57 percent of students considered a less prestigious school for money reasons.

Though the U.S. is facing a time of economic hardship, Yelnosky said that Juniata is "looking for ways to help students, not pull back."

The College's 2008 Strategic Plan involves increasing the scholarship fund. According to the document, "By 2011 our annual scholarship fund will have increased from $1 million to $1.3 million with a longer term goal of $2 million."

Yelnosky said, "Sending a child to college is a huge decision and one that involves a serious commitment. We are doing all we can to help out our students in this tough time."



Students nearing graduation have problems as well. The average college student graduates with a debt of $21,100, according to the Project on Student Debt.

Those choosing to pursue graduate-level education face even higher figures. Medical and law school graduates have an average debt of $112,000 and $73,000, respectively, according to US News and World Report.

Sophomore Jaclyn Johnson thinks that the financial crisis will affect her mostly after graduation. "I'm pretty sure that my loans are still secured, but like most other students, I'm worried about getting a job, and especially now," she said. "If I'm still unemployed after graduation, I have no idea how I am going to pay off my debt."

Being able to pay off student loans is yet another issue. August 2008 marked the highest unemployment level in five years. It jumped to 6.1 percent and increased the worries of students who will soon be entering the job market.

If you have concerns about the current economic situation in the U.S., what are they?

Survey SAYS

Continuing education beyond college

Juniata helps students apply to graduate school

Alison Rihs

Deciding what to do after graduation is an unsettling proposition for many undergraduates. For some people, graduate school is a good option. However, finding the perfect school and completing the application process can be confusing.

There are various reasons for considering graduate school. Some students hope to delay employment. According to Darwin Kysor, director of career services, a student should not just say, "I'm going to go to grad school because I can't find a job."

For others, specifically those pursuing careers in medicine, law and academia, the extra education is required.

A graduate degree can also help a student find the best career for him or her because it narrows the scope to a specific topic. The more experience one has, the better the chances are of being hired for a well-paying job.

Belle Tuten, associate professor of history, said that students who consider graduate studies "have to be deliberate about [their] career path[s]."

A passion for one's subject is essential to pursuing a graduate degree. Since this education will be more specialized and demanding than undergraduate work, it is important to be very dedicated.

It is possible to start graduate school preparations as late as senior year. However, it is beneficial to begin as a junior, especially when applying to medical school. This will allow students the opportunity to take the GRE (general or subject) or MCATs several times.

Students should first meet with their advisors. They can provide advice about what to look for in a program and offer suggestions for the personal essay.

Also, building a strong relationship with different faculty members can be helpful. Faculty members who have a more personal relationship with students are often better informed to write letters of recommendations.

Liz Schmitt, a senior zoology POE with a minor in anthropology, began preparing for graduate school last summer. She received guidance from alumni and her advisors. In order to find the best university for her, she searched online for her desired program, evolutionary biology. To Schmitt, the most important element to consider was the research opportunities offered at each university. Other points she considered were the faculty, courses offered and available grant money.

Students should use each of these factors to narrow down a list of schools.

To complete the application process, students should write a vita, which is an expanded version of a resume. It includes a list of professional presentations, publications and courses taken.

Many believe that the most difficult aspect of the application is the personal essay. During his guest lecture on campus, Michael Rizzi, counselor and adjunct professor at the University of Pittsburgh, listed several critical elements to prepare for and include. Knowing how the graduate school will help fulfill future goals was a key point. One should also name a faculty member who specializes in the student's area of interest. Explaining how a personal research interest fits into a department's program can distinguish a student's application.

Overall, Juniata provides the necessary classes and support to help students gain acceptance into graduate school. Kysor said, "[We] can always do more, but I think we do a pretty good job." He also said that the health professions department tracks students to assist them as much as possible.

Tuten said that Career Services can help with resumes, and there are also workshops in the fall to aid students with preparations. She said that Juniata continually needs to "encourage students to think earlier and prepare."

Schmitt wishes that she would have started planning earlier. She advises students to allow plenty of time to take entrance exams and find the best programs for the them.

There are differing opinions about the complexities of undergraduate and graduate applications. According to Kysor, "I think it's really pretty comparable." Both entail an application, an entrance exam, letters of recommendation, a transcript and a personal statement, so the processes are relatively similar.

Tuten, however, believes that searching for graduate schools is more difficult. She said it is "tremendously more competitive. … You are applying to a pool of the top graduates."

Universities will accept fewer students in exchange for full funding to their programs, therefore programs can be highly selective.

Schmitt agreed with Tuten. She said that there are counselors and books to help you find an undergraduate education. Conversely, graduate schools are more specific with the research they perform and the students they accept.

According to Kysor, "Thirty to 35 percent of [Juniata] graduates go directly to graduate school." In addition, 50 to 60 percent of the others plan on doing so in the future.

Good Hall Rededication

Andrew Meloney / Juniatian

On Oct. 10, Good Hall was rededicated after last year's renovation. Senior Kelly Gibson cut the ribbon while Dana Professor of Sociology Bob Reilly, alumnus David Andrew ('74) and President Thomas Kepple looked on.

Students forced to rename former Muddy Run

Official name after student vote is Eagle's Landing

Rob Schultz

The votes are in; Muddy Run will be now known as "Eagle's Landing." The online voting process lasted from Oct. 7 through Oct. 10. This voting followed a similar procedure as the student government voting. The name was implemented during homecoming weekend.

Also renamed was the second floor coffee shop. In the student vote, "Java the Hut" was chosen. That name was quickly deemed unacceptable due to possible copyright infringement concerns.

A re-vote was issued for Oct. 20. The student body settled on Mocha Run during the re-vote.

Renaming Muddy Run and the adjacent coffee shop came about after the renovations both spaces underwent this past summer. "We never felt the Muddy Run was a real comfortable place," said Dean of Students Kris Clarkson. Muddy was renovated to make the area more comfortable and to seat more students.

Clarkson said, "The food committee also agreed that this is a nice opportunity to change the name, get away from Muddy Run, which is not a really appealing name for a place that serves food."

Muddy Run was originally named for the creek located in front of the East Halls.

According to student government co-treasurer Meredith Eatough, student government sent an announcement to the student body about a meeting to discuss the name change. No students attended the meeting.

Student government and the food committee selected the names for consideration from a box that had been placed in front of the Ellis coffee shop.

"As far as I'm concerned it can still be Muddy, but that's not what the students voted for," said President Kepple. However students were not given the option to keep Muddy Run as the name.

The student reaction against the name changes has been expressed on the forums.

Freshmen haven't grown as attached to the name, but upperclassmen and alumni are upset. "I always liked the name. I never had any issues. I do think that Eagle's Landing is a little over the top," said Bill Hirt, ('99). "It would be nice to highlight another landmark from the area, not just tie in the word Eagle into everything just because it is the mascot," he said.

"For the old alums they are still the Indians not the Eagles….It will take a little while before it goes away completely, but it will over time,' said Clarkson.

Andrew Waplinger / Juniatian

The recently renovated food court has been renamed "Eagle's Landing" after a vote from the student body. Voting for the name ended Oct. 10.

It is easy being green

You're not Kermit, so suck it up

EDITORIAL

Across the country, Americans who are being squeezed to fuel their cars or heat their homes are realizing that we can no longer rely on fossil fuels alone. They – our parents, our professors, our bosses – are pushing to "go green."

Our generation, though, will let a faucet drip for hours.

Juniata College's administration has taken strides towards a more sustainable campus. For example, winter break is a week longer this year in order to reduce the amount of heating needed which therefore reduces Juniata's carbon footprint. Founders Hall is being renovated as a green building. President Kepple signed a Climate Commitment, which challenges every department to become more sustainable.

Juniata College students, on the other hand, throw plastic bottles into the trash.

Our generation is not evil minded and vicious. We certainly do not have a personal vendetta against the earth. We just cannot bring ourselves to care.

Juniata is supposedly a college "that changes lives." But students seem content to enter Juniata enveloped in apathy and then leave just as indifferent. We, as students, should be pushing the administration to be more sustainable. We, as a young generation, should be pushing our country and our government to be more environmental.

Instead, the administration pushes us towards sustainability, adding more recycling bins and reminding us to turn off our lights.

Our country shoves us towards a more environmental stance. When oil lords like T. Boone Pickens are more vocal about the need for alternative energy than college students, something is wrong.

How deplorable for our generation that the push for change must come from above us. How pathetic that we are content to let older generations worry about the environment. How sad that we continue to just sit back and let adults tell us what to do.

All our lives we have been told that "children are the future," that we are "the next generation of leaders." Well, we're not children anymore. And that future? It's here.

Responsibility is not waiting for us to be secure in life, for us to have jobs and decent tax brackets. The responsibility is ours now, and it's high time we claim it.

We must stop being so lazy. Walk the extra 10 feet to the recycling bin. Take the three seconds to make sure the faucet is firmly turned off. Put some extra time into making a few giant signs instead of printing off scores and scores of fliers (and then leaving them up to rot long after the event has past).

However, even these steps are not enough. Recycling is something that should be as basic and natural to us as brushing our teeth. No one gets a high five or a pat on the back for practicing basic oral hygiene. No one should expect congratulations for basic, knee-jerk sustainability efforts, either.

We must go even further. We can shop with reusable shopping bags, walk instead of drive, use actual plates or bowls instead of disposable ones. None of these things are hard. None of them are shocking. Sustainability is often just a matter of small personal everyday choices.

That is not to say, however, that sustainability cannot be about bigger choices. As a group of 1500 people living in the same place, Juniata students are in an ideal position to make those big changes. The College's administration has taken great steps, but there is much more it can do. For example, more forms and resources, such as advisor change forms and the President's Report, can go online. The College can install composting and water recycling systems, like the ones already being used at the Field Station.

Right now is the ideal time to push for environment causes. The political winds are in favor of sustainability. It is our responsibility to make the environment a priority now, instead of looking back later in regret and disgust. Now is the time to choose between activism and apathy.

Presidential Perspective

Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

Since the last issue of this paper, the global economic system has continued to behave erratically. I have heard from concerned parents, alumni and students about what it all means or may mean for Juniata. While we are certainly challenged, we recently reviewed our financial management strategies with the Board of Trustees, and I am pleased to be able to reassure everyone that the College is in good shape to weather this trying time.

That said, we are concerned that deteriorating economic conditions may be causing significant distress for some students and their families. I remind everyone that Juniata is always ready to help students and families plan for and navigate financial pressures. Though we are working through the challenges created by the financial crises, we are committed to maintaining our affordability and to helping students graduate on time.

We are reminding people that the Student Financial Planning staff is available to help. That office is your partner through your entire four years here. Therefore, if significant changes in your financial situation have you facing substantial challenges in meeting your obligations to Juniata for the spring semester, please get in touch with the office of student financial planning now. Valerie Rennell, enrollment manager and director of student financial planning is available at rennelv@juniata.edu or 814-641-3124.

Our first responsibility is to assist current students in completing their college degree at Juniata. But it is also our responsibility to remind you that in spite of the negative news, there is no better time to invest in your higher education.

I am pleased to be able to reassure everyone that the College is in good shape to weather this trying time.

Consider these numbers: Each year about 1.3 million students graduate from college. Based on declining numbers of high school graduates, that number is unlikely to grow over the next decade. At the same time, Baby Boomers will start retiring in large numbers (assuming they still have pensions), projected to be about 4 million per year. Even if some delay retirement, there will still be a huge disparity in numbers—meaning this: Never in our history have this many people retired with so few college graduates coming into the job market.

Those numbers mean great opportunities for today's graduates. Already, the country needs more teachers, scientists, engineers, physicians and government workers. The Bureau of Labor Statistics forecasts that "employment on science and engineering occupations will increase 70 percent faster that the overall growth rate for all occupations."

In her book "The Quiet Crisis: Falling Short in Producing American Scientific and Technical Talent," Shirley Ann Jackson projected that "25% of the current science and engineering workforce will have retired by 2010."

NASA projects that by 2011 "28% of its engineers and 45% of its scientists will be eligible to retire."

Similar forecasts exist for virtually all POEs. But there's more to it. Retirement-aged people tend to be managers, strategic thinkers and people with broad and diverse professional experiences—meaning retiring Boomers will leave a leadership vacuum. People who will fill the leadership vacuum will likely have had diverse experiences through their educational and professional careers—something we work hard here at Juniata to set in motion for you.

Therefore, the broad, experience-based education you are earning now, through toil and work and stretching and whatever else, is preparing you to compete successfully for great jobs as well as a chance to advance faster than at any time in recent history. For that reason alone, weathering this storm is worth your while.

So if we can be of any further assistance, talk to us. I am committed to this college, and thus am committed, first and foremost, to your success.

Blue vs. Red: In the home stretch

We need Obama. He needs our vote.

Sebastian Brown

Barack Obama cannot become the next President of the United States.

That is, unless young people like you and I turn out in record numbers to vote on Nov. 4.

Obama is our generation's best hope for creating a more just and even-handed America. Over the last couple of years, we've watched him develop into the effective leader that he is. We need a leader that ditches the politics of division and bitterness for a new approach that embraces all people as equally valuable and worthy.

Obama, who only paid off his college loans a couple years ago, has been in our shoes before. He, too, knows how hard it is to stay afloat with the burden of mounting debt weighing heavily on our shoulders. But, his plan isn't limited to benefiting only young people like us. His is a message that transcends all arbitrary lines of age, race and party that have kept us divided for too long. No voice will be ignored under an Obama administration. Finally, we'll live in a country where all Americans benefit equally from his commitment to make government more accountable to the people.

Of course, as we're told growing up, we are certainly the next generation of potential world leaders. But we are also, perhaps more importantly, our country's next generation of tax-payers. Now, because we'll be the ones providing the federal government with a good chunk of its budget, we'll be directly responsible for how it's spent. The power of the purse will truly be in our hands.

Do we want access to cheap yet quality healthcare when we graduate and start looking for jobs? Do we want the opportunity to earn $4000 for college tuition in return for helping out in the community? Do we want to be able to travel abroad and be seen as a friend and not an enemy?

If so, we need to vote for Barack Obama's plan for change. But not only does this plan promise to make our lives a little easier, we'll be paying less in taxes for it. Sound like a pretty good deal? That's because it is.

To all those who've spent even an hour on the phone or walking door to door explaining to college and community members Obama's plan for change, your work has been invaluable. Thanks to these efforts, more than 532 Juniata students were registered to vote at their campus addresses. Believe it or not, we nearly doubled the size of the 5th precinct.

However, for this great work to result in more than just a pat on the back, we need to ensure that all registered voters on campus get to the polls and vote on Nov. 4.

Ever since the voting age was lowered to 18 in 1971, voter turnout for young people has been less than impressive. Except for the 1972 election, when 55 percent of youth cast a ballot, no more than 50 percent of young voters have voted in any presidential election. And, on average, we vote up to 20 percent less than adults 30 and older. This has to end.

The good news is that experts are expecting young people to turn out to vote in record numbers. While Democratic candidates have always been able to rely on the support of the youth vote, never has this been truer than now. With Obama believed to hold more than a two to one advantage over John McCain amongst this important voting block, if young people vote, Obama and other Democratic candidates can't lose.

If you want to ensure Obama becomes the next president, consider volunteering an hour, or two or 10 to our Get Out The Vote (GOTV) effort. I promise you, this will be the most extensive GOTV push that Juniata's ever seen. However, it's won't happen without your help.

If you're interested in helping out in any way possible, come by Good Lounge anytime from the morning of Nov. 1 to Election night, and we'll put you to work. Even if you've never volunteered before, there's no better time to start than now.

An honorable leader in the face of dishonor

Rachel Kern

I was deeply saddened and mortified by the actions of my political party a few weeks ago in Bethlehem, PA. The race-baiting that went on in this small conservative town had people everywhere wondering how we let it get this far.

At a Sarah Palin rally, someone called out, "Kill him!" talking about Democratic candidate, Sen. Barack Obama. At McCain rally, another supporter called out, "Terrorist!" sparking an entire movement of chanting "Terrorist! Terrorist!" The crowd was seething with hatred for the Democratic nominee and blatantly shared their thoughts with television cameras.

I have never felt so ashamed to call myself a Republican. I found myself watching people my parents' and grandparents' ages acting like children. I was rendered speechless and shocked by the whole ordeal.

This campaign has gone beyond negative. I am Republican and I do not believe Barack Obama is a terrorist. He is not incapable of running this country because the color of his skin isn't the color of snow. I can't formally apologize for my fellow Republicans' actions in Bethlehem, but I can assure you that many Republicans were shocked and abhorred by the events. I lost respect for the Republicans in that community, but I want to stress that the actions and opinions of a small group of people should not be viewed as the opinions of an entire national party.

McCain came to Obama's defense after learned of these happenings. He said, "I have to tell you, he is a decent person and a person that you do not have to be scared of as President of the United States."

Although McCain drew angry catcalls from his audience, he defended Obama anyway.

In another shocking moment, when a woman in Minnesota said that she can't trust Obama because "he's an Arab," McCain interrupted her and took the microphone out of her hand. He said, "No, ma'am. No, ma'am. He's a decent family man, a citizen who I just happen to have serious differences with on fundamental questions."

Although some pundits may claim that McCain defended Obama merely for his own political gain, for years McCain has stood his ground and fought for what he thought was right for no other reason than that it was right. He has proven that he not only has the experience to lead our country, but he has the honor as well.

We know that McCain is by far the strongest candidate in terms of foreign policy. Despite his reputation as a war hawk, McCain will not involve the U.S. in senseless interventionalist missions, something the Democrats seem to support doing. If entering a war does not benefit the U.S., McCain will not enter. Although McCain may not get out of Iraq the quickest he understands that there is more to it than just pulling out with a reckless withdrawal. McCain will make sure that our troops end their tours in Iraq the right way, leaving the country safer and making sure that progress is not lost.

Further, McCain will not put up with nonsense from Iran. Any negotiations to take place with Iran will not come before strict preconditions. He will see to it that Iran does not become a nuclear threat to the U.S. Future teachers, this one's for you. You believe in the children of our future or you wouldn't be working so hard to learn how to educate them. McCain believes our schools can and should compete to be the most innovative, flexible and student-centered. He believes we should let them compete for the most effective, character-building teachers. McCain would offer alternative certification methods that would open doors for highly motivated teachers to enter the field, provide bonuses for teachers who locate in underperforming schools, and provide funding for needed professional teacher development.

McCain understands that some programs, like education, deserve full funding. However, he also preaches fiscal responsibility and has a strong record of being against wasteful spending. There are also several projections asserting that of all the major Republican candidates who ran in the 2008 primary, McCain would be the most conservative spender. He understands that lower taxes mean more money in the pockets of consumers, which is essential to putting the economy back on track.

McCain has honor. He believes in this country and the great strides that we can all make as a unified nation. He has the power and experience to help us, as young people, thrive in the future. When you go to the polls on Nov. 4 to cast your vote, check John McCain.

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Anonymity: Letters to the Editor can be printed anonymously per the editors' discretion on an individual basis. Letters printed anonymously must still be submitted to the editors with a name. Note your desire and reason for anonymity when you send your letter, and an editor will contact you.

An apple a day

How to handle the stress levels

by Chelsea Garner

It's midterm. The relaxation of fall break has long since worn off. The exams, papers and presentations are piling up—seemingly with no end in sight. As students, we face a huge stress load and it's important to find ways to unwind from the demands of classes and work.

According to the Mayo Clinic, stress is a biological response to danger that prepares the body for a "fight or flight" reaction. In response to a perceived threat, the body releases a cascade of hormones that increases blood flow to the muscles to prepare to run or battle it out. It causes a surge of blood sugar for energy and decreases the activity of the reproductive, digestive and immune systems.

All of this is great for dodging a car barreling down on you on Moore Street. But when this response goes on for too long, it can pose a health risk.

"Stress hormones are released, which causes people to be very anxious. They begin to hyperventilate, which brings on more anxiety and stress," said Beth Williams, counselor at the Health and Wellness Center. "People don't eat properly, they don't sleep well, they're less motivated, and they don't get their work done. It's a vicious cycle."

To prevent stress from controlling every aspect of life, you need to find ways to cope.

"Stress is triggered by a combination of not taking care of yourself, and not staying on top of the game," said Williams.

One of the most important things is to manage your time. Set a schedule for each class, and don't put off assignments until the last minute.

"We encourage students to work ahead in classes. I went to Juniata, so I realize how hard that can be, but it's a great way to prevent stress," said Williams.

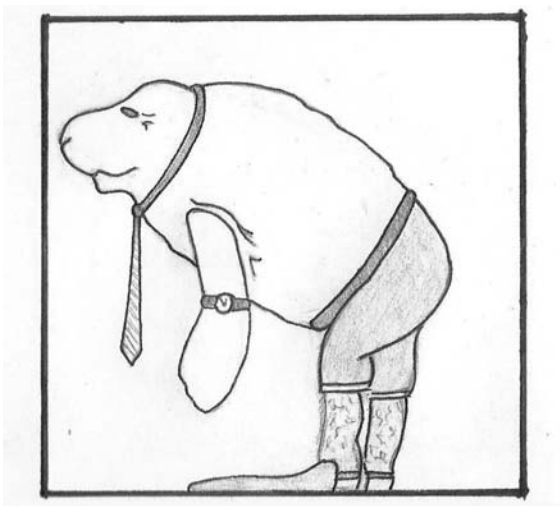
When the pressures are too much to deal with, it's time to relax.

"We try to make students realize that it's going to be okay. You might have a week of hell, but it's going to be alright," said Williams.

There are productive and unproductive ways to unwind from a busy week. One of the best ways to de-stress is to practice deep-breathing and relaxation techniques.

"Deep-breathing can get you centered and in the moment. Connecting with nature also centers you with your surroundings and alleviates stress," Williams said.

Exercise is another effective stress busters. Plus, it comes with the healthy perks. "It's all about balance. Of course we're an academic institute, but you've got to have some down time," said Williams.



In that down time, many students head out to East to party the night away and drink their sorrows under the table.

"Students can sometimes turn to drinking as a coping mechanism. But this doesn't solve the problem. It can lead to poor decision making, worsening the problem," said Williams. She encourages students to party responsibly to realize the healthy benefits of socializing.

While the end of the semester can be one of the most stressful times of the year, you are not alone. The Health and Wellness Center provides counseling services to students who may need them. There is a staff of counselors trained to help students work through problems. "Students have 10 free counseling sessions, and we never turn people away," said Williams.

By using time wisely, taking steps to prevent stress and seeking help when needed, we can all make to winter break with minimal damage.

When Nature Calls

by Brianna O' Malley

From eco-friendly to eco-trendy

There's no denying the popularity of being environmentally friendly. How many commercials do you see that advertise a product's environment benefits? From car companies to laundry detergent executives, everyone's jumping on the eco-bandwagon. Blogs like ecorazzi.com are documenting celebrities' earth friendly behavior, while vapid teen magazines print articles on how to get "the green look." I have no complaint with the impact of this hip movement; but I can't help but be discouraged by the motive behind people's wish to be green.

Do people following these eco trends understand the reason for doing so? They may not know why it's better to eat free range animals, to buy locally or to consume soy products.

I support environmentally friendly lifestyles, but proper education is necessary. Just because a company slapped on a green sticker does not mean the product is improved. Always research before following a trend; you never know what you might find out.

I am not exempt from blindly following these eco trends. Last summer I interned in the environmentally progressive state of Washington, where everyone carried stainless steel water bottles. I was warned against using my plastic Nalgene bottle because of possible health risks. Some plastic bottles contain the chemical Bisphenol A (BPA), an endocrine disruptor that has been found to be cause cancer and birth defects in animal testing. It was a great concern in baby bottles, as plastics tends to leach more when heated.

Returning home I purchased a one liter SIGG brand stainless steel bottle for about 20 dollars. This SIGG brand has become a chic accessory, causing some Web sites to now charge upwards of 40 dollars per bottle. The hundreds of designs also hinted at the company's wish to be trendy. I chose a turquoise model with a pop artsy nature scene.

I learned after my purchase that the FDA determined the amounts of BPA leached by plastic bottles were not a health threat. It released this statement: "The FDA is not recommending that anyone discontinue using products that contain BPA."

Despite the FDA's dismissal of the problem, several states have taken initiative in banning BPA in any plastic bottles or aluminum cans.

In light of the controversy, Nalgene decided to discontinue its bottle production with BPA. What many people do not know is that BPA is also found in the linings of many food products, making it nearly impossible to completely avoid the chemical.

The news made me somewhat frustrated with my purchase. I had never really wanted to spend 20 dollars on a water bottle I didn't need; my frustration grew when I realized my bottle could not fit under my bathroom faucet.

I could not find any concrete environmental benefit of using steel over plastic for the bottles. Using either option in place of disposable bottles cuts waste. According to the America Recycling Institute, only 14 percent of disposable bottles are recycled. The SIGG Web site states that those bottles that are recycled are made into a lower grade of plastic which often goes unused. Still this waste could go avoided with a Nalgene bottle.

It just goes to show that every eco trend has its drawbacks. While I regret not researching prior to my purchase, I will continue my SIGG™ bottle use. It will serve as a reminder to myself and others to understand the purpose of one's actions. So before you switch your wardrobe to all hemp clothing, find out what makes it environmentally friendly.

Thumbs Up, Thumbs Down

to irony. On pg. 7, the Juniatian editorial board called out students for not doing enough to promote a sustainable campus. And then we printed that editorial 1500 times.

to the Huntingdon Police Department for apparently staying awake during its "party dispersal training" last week.

to an e-mail sent by a Lesher RA to her residents which said "showering is a solo activity." So much for sustainability.

Ask the Administration

"There is discontent among students that meal exchange is no longer offered for dinner. If students gathered signatures and petitioned for dinnertime meal exchange, would Food Services consider reinstating it?"

I don't know if we could change it for this semester but definitely would be willing to discuss it for next. We have put together a team that includes student representatives to look at new meal plans for the spring. We plan to have something out for the campus by the first full week of November. We all have a vested interest in making meal plans work for everyone.

-Hal McLaughlin, director of food services

"Is it true that winter break is one week longer than normal (four instead of three weeks) so the College can save money on heating costs? If so, will this be a permanent change?"

Each academic calendar is put together considering a number of variables; fall class start date, graduation date, break dates, finals, etc. This year we have added the variable of carbon footprint and we are extending the break not to save money but to reduce our emissions.

While this will obviously save us money as well, the primary motivation is to allow us to run the plant at reduced load for one additional week and therefore reduce the emissions associated with burning natural gas. The opportunity to do this without significantly impacting graduation date (another key variable in our decision making) is there because of the early start date for fall classes, which is also true in next year's calendar. Students can see the dates of the two years on the Registrar's Web site.

I am pleased that the impact on our carbon footprint is now a variable that is considered as we put together our calendar. We will monitor the impact this year and again consider this as one of many variables as we construct the schedule for future years.

- Rob Yelnosky, vice president of finance and operations

'Angels' a brave statement

Marie Boller

The production of "Angels in America" packs a visceral punch. Written by Tony Cushner, the play takes an honest look at gay culture and politics in the 1980s.

"It's a message about living your truth and the consequences when you don't, when you live a lie," said Juniata director Kate Clarke.

The play shatters some common stereotypes about AIDS. But it is much more than a play about the disease. It asks brutal questions about love and who deserves it. It unmasks the harsh repercussions of secret-keeping and betrayal. It also provides a smart commentary on the American political landscape.

The action circles around two couples: one gay, one ostensibly heterosexual. Both relationships are ravaged by secrets. The characters seem trapped and terrified of the future, of judgment, of each other.

The trust in the relationship between the two homosexual men is trampled by the specter of AIDS.

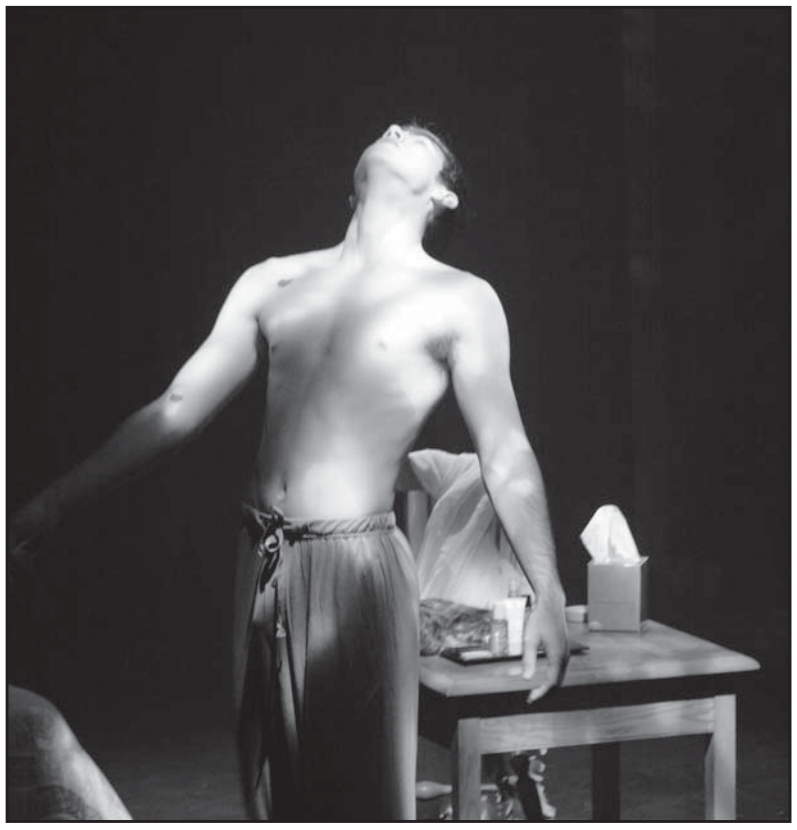
The fine line between love and fear is highlighted by a husband and wife living in mutual terror, slaves to Valium and an empty sex life.

This play does not leave viewers' emotions unscathed. Sometimes, as one character puts it, "Life just sucks shit."

"It was really hard and scary to be dealing with death every night [onstage]," said senior Josh Beckel, who played a man infected by AIDS and abandoned by his lover.

Playing this character made Beckel extremely vulnerable, not only by stripping down to his underwear onstage, but by exposing the depths of agony from loneliness.

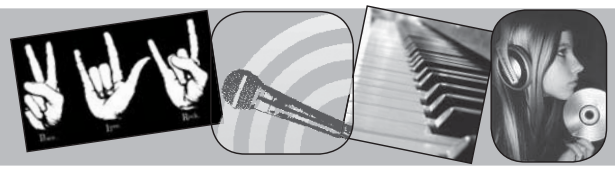
Beckel hopes that viewers grasped the elemental core of the drama: the lesson of love and the infection of bitterness that consumes those who deny love in their lives.



"I didn't want people to show up just to see Josh Beckel get naked," he said. That would be letting the play's shock value obscure the underlying messages.

Most students who did see it appreciated the play, although some did find it shocking.

One student who asked not to be identified said, "I actually wanted to leave halfway through. I have nothing against the gay lifestyle, but I thought the play was too weird, creepy and in-my-face. It scared the shit out of me."



The dialogue does not shy away

continued page 14

Andrew Meloney/ Juniatian

Josh Beckel as Prior in the Juniata theater department's performance of "Angels in America." The play ran from Oct. 16-18 and 23-25.

MUSICOLOGY

BY CAITLIN BIGELOW

AFRO CELT IS A SOUND SYSTEM

I have many fond memories from my childhood that I shared with my dad. Playing soccer in the yard. Watching English Premiere League games. But one of my fondest memories involved driving to school together in the mornings. That 40-minute commute, we found, was the perfect time to listen to music together. One of the bands that I always associate with that drive down the congested 8 freeway in San Diego is Afro Celt Sound System.

Afro Celt Sound System is a pioneer in the genre of global music. The 11-member band boasts diverse and critically acclaimed musical backgrounds. The basic concept of the band is a mixture of traditional African and Celtic music played on top of a techno beat.

Afro Celt has been producing music for over a decade and the evolution of its sound is incredible. What started as a musical experiment morphed into an album.

It's hard to comprehend the complex process that goes into making a single song. This is especially true when the average length of an Afro Celt track runs somewhere around seven minutes.

When asked about the recording process, vocalist Simon Emmerson said, "The only rule is that there aren't any rules. I can't give you a blueprint about how we write the tracks."

"So, you have these stringed instruments, and then you have whistles, pipes and the bodrhan. Then you add talking drums and keyboards. And that's before you've introduced vocals."

He later said in another interview with Anil Prasad, "In order to make an Afro Celts track, you have to combine a lot of elements. You've got guitar, harp, kora and mandolin. So, you have these stringed instruments, and then you have whistles, pipes and the bodrhan. Then you add talking drums and keyboards. And that's before you've introduced vocals."

It seems that magic is almost needed to orchestrate all those elements together. The title of the band's debut album, "Sound Magic," then, seems highly appropriate.

The individual band member's histories are just as interesting as the instruments they all play.

The members of Afro Celt have very diverse talents and ethnicities. Iarla O'Lionard, a vocalist, grew up in a small Gaelic speaking community and has a masters degree in ethnomusicology. James McNally is a virtuoso on so many instruments that he was dubbed, "the Master" by Van Morrison. Among their other members are a self taught dhol drum master and a kora guru, whose dynamic showmanship on stage have led to his recognition as the "Jimi Hendrix" of the kora, an African harp lute.

Another unique factor that sets Afro Celt Sound System apart from other bands is the fact that they are a sound system. The initial idea of a sound system is a hard concept to grasp because it is not prevalent in America. It features the idea that a band uses a wide range of vocalists, guest musicians, DJs, and guest singers. The band keeps the same core members and hosts multiples guests on their albums. This gives Afro Celt a very unique sound and a huge flood of talent.

With that huge flood of talent Afro Celt has become a world-renowned live performance band. Its striking performances have become the hit of global music festivals like WOMAD and the One World Music Festival.

Emmerson described the inspiration behind the bands shows: "It was very much a DJ-based idea, bringing a sound system to festivals and instead of the old kind of turntables, we'd have MIDI gear and stuff. The idea of calling the band an Afro Celt Sound System was to identify us as having a mobile line up with different guests."

Unfortunately, you won't see the band touring in the U.S. any time soon. With over 11 members and a ton of instruments, it's very costly to go on tour overseas and the band had poor economic success while touring in the U.S. a few years ago.

I would highly encourage anyone looking for something a little different to check out this band if not just for the sheer audacity of what it has created. Afro Celt brings a new dimension to world music that is hard to find anywhere.

My personal favorite songs are "Shadowman," "Colossus" and "Whirl-Y-Reel."

The Director's Chair

By Bennett Rea

Burn After Reading sizzles with character

Accidental espionage and idiocy abound in "Burn After Reading," a Coen brothers black comedy that is as twisted as it is funny. The fantastic performances by its stars and the impeccable timing of its directors make the movie good enough to watch multiple times.

The story begins with Osbourne Cox (John Malkovich) being demoted by the CIA. From there, Cox decides to write his highly classified memoirs which somehow end up in the hands of two fitness instructors (Brad Pitt and Frances McDormand). McDormand's character, Linda Litzke, feels that she needs several elective cosmetic surgeries and thinks that she can use this secretive file to pay for them. She and Chad (Pitt) decide to "ask for a reward" for giving this classified file back to Cox.

Things become extremely complicated when Cox refuses to pay them any money. The Russians, the CIA and various spouses are entangled in a huge web of betrayal, confusion and misunderstanding.

The best part of "Burn After Reading" is the great ineptitude of every single character. There is not one character that has a complete grasp of the various overly-complicated situations. From the paranoia of the chauvinist bureaucrat, Harry Pfarrer (George Clooney), to the simple mindedness of Litzke, each person's stupidity leads to even more problems. The movie follows Murphy's Law in that everything that can go wrong, does, and in a hilarious way.

More funny than the situational comedy though, are the characters themselves. Pitt especially does a fantastic job in his portrayal of an over-the-top fitness trainer. Chad, always listening to the equivalent of jazzercise music, is constantly in a peppy mood. He's just like one of those instructors on television who motivate viewers to "sweat to the beat."

McDormand gives Litzke an upbeat attitude and persistent optimism that make her a character you want to root for.

Malkovich does a very good job with Cox, and he allowed himself to go a little crazy with the role.

Halloween: Where it started, what to wear

Neil Neigenfind

Halloween Past

Halloween is fast approaching. Pumpkins are all around and the smell of fresh autumn spices waft out of every coffee shop. Windows and doors are covered with fall decorations as the town is slowly turning a shade of brown, orange and red. Tales of spooky black cats and haunted buildings are everywhere and horror movies are being played around the country. But where did these traditions begin?

Halloween is derived from the ancient Celtic festival, Samhain (pronounced SA-way), a celebration at the end of a harvest season. Samhain was a day of remembrance, where villagers could honor those who died for the community. On this day, the boundary between the real world and the spirit disappeared and the dead could return to their homes where food and entertainment would be provided in their honor. The ancient Gaels would wear masks and costumes during the festival to scare off wandering mischievous spirits.

Eventually the Romans heard of the Gael's festival honoring the deceased and tied it with their own day to honor the dead. Although the Catholic Church was adamant on banning this pagan holiday, people refused to abide by the law. Finally Pope Gregory III and Gregory IV decided to move All Saint's Day to Nov. 1, making Oct. 31 "All Hallows Eve."

Halloween became U.S. holiday during the 19th century, when nearly two million Irish migrated to the States after the Irish Potato Famine. Pranks and mischief were common during All Hallows Eve, so organizations including the Boy Scouts and Boys Clubs started a new tradition. Inspired by the tradition of "guising" in European nations, children would go door to door, receiving treats from households instead of playing tricks on them. Guising itself was inspired by the Gaelic tradition of offering food to the rowdy spirits.

Halloween Present

Still looking for some last-minute costume ideas? Here's a few that might pique your interest: Tape a brown paper bag to your stomach. Kangaroo!

Carry around a mug. Cup holder!

Cover yourself in double sided tape, and roll around in the grass. Chia Pet!

Write "GO CEILINGS!" on your shirt, and you're a ceiling fan! (Okay, that was a bad one, don't do that.)

Tape glasses to your rear end and you'll be a smart… well, you get the idea.

You can find plenty more ideas just by searching the Internet, but please, just please, don't carry around a sign that says "Nudist on Strike."

Survey SAYS

What Juniata personality would you most like to dress up as this Halloween and why?

These were the Juniatian's favorite responses

"Mary Murray. If I could have as much energy as she does everyday I would never have to sleep again!"

"von Liebig, nothing scares the kids better..."

"Norm, so I could hand out delicious Normlets to the trick-or-treaters!"

"Reingold - Because I've never worn a bald cap before."

"Dr. Plane because I look sexy in cowboy boots."

"Xinli Wang because his mind controls the universe."

"The Eagle because it would be warm inside the suit."

"Amy Mathur because she is the only person in the world that Chuck Norris fears."

"Alison Fletcher, because then I could talk in a British Accent all day"

"Triple Decker Peanut Butter and Jelly Sandwich"

"Tom Kepple because its good to be king."

"Amin. He has sweet hair"

"Dr. Righetti as a plate of spaghetti"

"Sodexho's General Manager Hal McLaughlin to trick them into giving us better food."

Anything But Ordinary

Fanged Fantasy

by Claire Williams

Since the mid-nineties a number of books and TV shows have featured vampires. With Halloween drawing near and the "Twilight" movie premiering in November, it feels like the perfect time to discuss vampires.

Recently the "Twilight" series has been everywhere and the frenzy surrounding it has only grown since the movie was cast. Few vampire books have spurred such intense devotion in a short time, which is surprising since the genre has existed since 1819.

The books have received praise and adoration from various associations and individuals. When asked about "Twilight" Mary Murray, head of library instruction, said that it may be because of the impossible situations that Stephanie Meyer manages to write and because of the fantasy of two attractive men fighting over you.

Through these and other characteristics, Meyer has obtained a legion of fans who will staunchly defend the book series. However, in my opinion, the writing lacks complexity in both style and plot that other vampire books have.

One author who approached vampires in an entirely different way is Melissa De La Cruz, author of the "Blue Bloods" series. In this series vampirism has a concrete origin linked to history and religion. The action and conflicts are more intense than those in "Twilight."

While both books came out around the same time, "Blue Bloods" and "Twilight" portray vastly different main characters. While Schuyler, in "Blue Bloods" and Isabella Swan in "Twilight" are around the same age and facing some of the same issues, the girls tackle problems differently. Those who like one series may find the other lacking due to the hugely differing styles of writing.

Another series that paints a unique picture of vampires is the "Night World" by L.J. Smith. In this series vampires are not the classic Dracula stereotype who sleep in coffins and burn up in the sunlight. They are more like enhanced humans, which makes the stories more interesting and enjoyable to read.

These books were published in 1996, but are now being reissued. I'm glad they're being reissued because they have become difficult to find, even online. Although, when I do read them, I find they are well worth the hunt.

One of my favorite series in this genre is Nora Roberts' "Circle Trilogy." The plot weaves skillfully through time and worlds as the main characters fight for the fate of human kind. Here vampires are both good and evil, even though the lines are not entirely clear. The key good vampire is also strongly connected with the humans around him, however much he would like to deny it.

These vampires make a return to Dracula-esque qualities; they are harmed by sun and this shapes the battles in the stories. The vampires are also after something far greater than mere blood, giving them more of a reason to fight.

Even though vampire books have been around for nearly 200 years and in spite of all the myths, authors are constantly finding new ways to portray vampires. Personally, I hope they keep it up. I rather enjoy reading about our fine, fanged friends.

"Burn After Reading" sizzles with character

continued from page 12

Clooney is good, if a little showy, in his portrayal of Pfarrer.

Even the bit parts are excellent. J.K. Simmons ("Thank You for Smoking") plays the CIA superior who is trying to figure out what on earth is going on. He is also the centerpiece of the perfectly done and hilariously drab final scene.

Not all of the credit can go to the actors, however. The Coen brothers, masters of dialogue and pacing, are on their A-game here. The way the dialogue plays out is beautifully done. The movie's pace is done well, too, moving slowly at first and then carefully combining frantic confusion with slow paranoia in the last hour. The Coen brothers simply know how to make a movie technically masterful and darkly funny.

However, that darkness can be a bit much at times. There are too many extramarital affairs to count, and you begin to wonder if any of these people will just stop having sex for a second. The Coen brothers also have no problem killing off major characters, as has been seen in past films of theirs such as "Fargo" and "No Country for Old Men." Since there are so many likable and memorable characters in the movie, it is hard to see some of them snuffed out. At times, all of the darkness, infidelity and murder are a little unpleasant.

If the unpleasantness and craziness are too much for anyone though, the ending of the film truly validates the experience. It is the best ending I've seen to a movie in a long time. "Burn After Reading" won't be for everyone, but for those of you who prefer your comedy black, you won't find any cream or sugar here.

Final Take: ★★★

"Burn After Reading" is playing at the Clifton 5 in downtown Huntingdon. It is rated R for pervasive language, some sexual content and violence.

REWIND

Film Flash Back

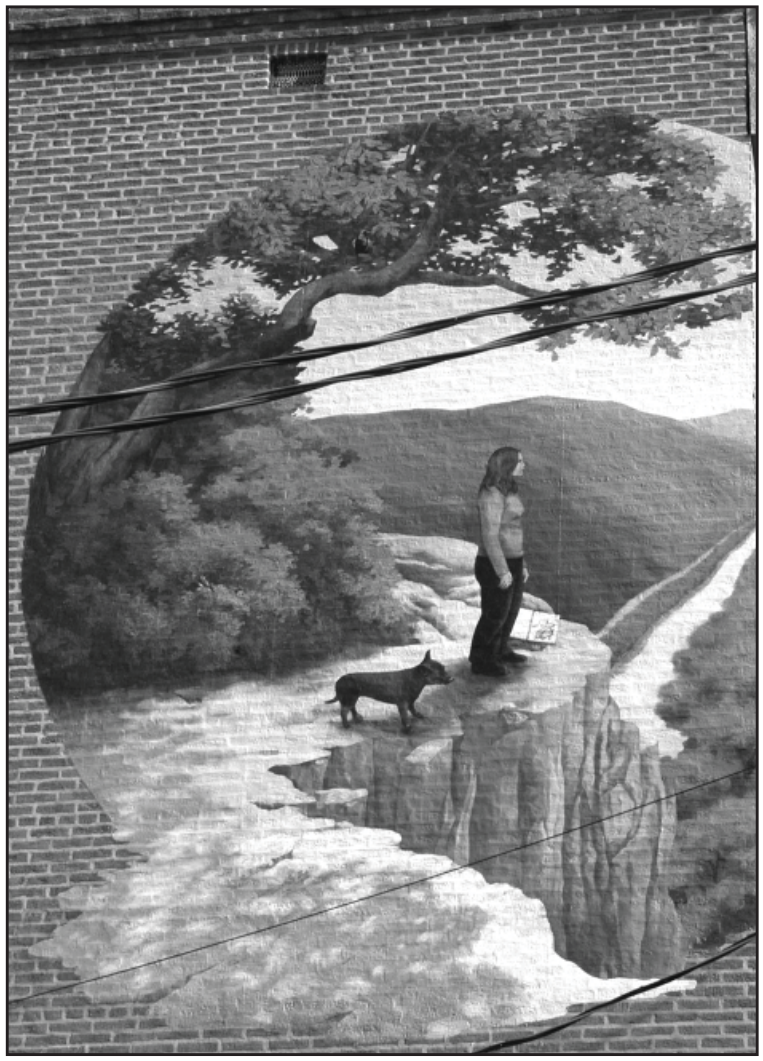
"Psycho" (1960)

There is no better movie for the Halloween season than "Psycho." Though there are many other horror movies out there, "Psycho" is part of the foundation of modern horror films and perhaps the greatest of the genre. It made audience members faint when it first came out in theaters, and it still instills fear in people today.

It is the story of a lonely little place called the Bates Motel owned by Norman Bates (Anthony Perkins) and of the strange things that go on within its walls. Bates is a kind but awkward man who lives with his mother in a huge house right by the motel. It doesn't take too long in the film for you to get the sense that something is just not quite right about this place.

"Psycho" has inspired hundreds of movies since its release and it has some of the most memorable scenes in cinema. The final scene will still send shivers up your spine. Trust me when I say you won't take a shower for days.

Homecoming 2008



Courtesy of Erica Quinn and Andrew Meloney

Alumni, families and students celebrated Family and Homecoming Weekend on Oct. 24-26. Though rain and wind jeopardized plans, Juniata crews were able to salvage the day by moving festivities indoors.

Murals appear in town

Alison Rhys/ Juniatian

Rothrock Outfitters recently sponsored artists to create murals on buildings in downtown Huntingdon. The artwork celebrates the natural beauty of the area. In this mural, created by David Guinn and Philip Adams, a girl and her dog stand at the Cliffs. It was painted on parachute cloth and applied like wallpaper to the Huntingdon Savings Bank at 423 Penn St.

Angels in America

continued from page 11

comes with an advisory of "mature themes."

The play had moments of hilarious comedy, too. "I had so much fun onstage," said freshman actor Kevin Whitmire.

The cast presented a searing and honest performance, stepping up to the challenge of portraying a complex and sometimes surreal world. The characters embraced the pain of their roles, but also the joy which was evident.

The characters exposed raw vulnerability, inviting the audience to connect to the experiences on the stage at their most basic level and to draw their own conclusions. "It was emotionally exhausting," said junior Alison Strausberg.

Quintin T. Hess, a freshman, played a middle-aged office clerk tormented by his repressed sexuality.

"I felt self-conscious in my role," he said. However, Hess drew on that awkwardness to identify the anguish of his character.

Senior Skye Hatton-Hopkins played a hardened man who hid his homosexuality to preserve his political clout.

Hatton-Hopkins stressed the importance of the social aspect of the play. "Tony Cushner rocks people's assumptions," he said.

"I am so proud of the entire cast," said Clarke. Four of the 10 cast members were first year students stretching themselves into very sophisticated roles.

The play is a wake-up call to personal honesty. One of its messages is that repressed sexuality can consume and destroy a person, regardless if they are labeled gay or straight.

Tolerance is a buzzword, but merely tolerating others is not enough. "People need to go beyond tolerance, to acceptance," Hatton-Hopkins said.

"Tolerance is so easy to say," said Strausberg, who played a wife desperate for love.

Strausberg agrees that the play's core message extends beyond tolerance. She said, "It's about opening yourself to others and finding the courage to accept the pain that will help you grow." She hopes that people might be inspired to be "angels for each other."

Classic Juniatian: Hook up with 'phat' college lingo

Quick – someone just referred to you as "phat." Have you been insulted? (No.) What if someone says your homeskillet is cholo ("thanks") or you forgot to momaflauge your crib ("uh-oh")?

If you're as uncertain about this hip speech as most people are, consult a list of the hottest words on college campuses compiled recently in a nationwide survey by Merriam-Webster, publisher of Webster's Collegiate Dictionary.

There, you'll find that being phat, or cool, is a positive thing. A homeskillet is a good friend and a cholo means macho, while momaflauging your crib means hiding anything in your suitcase or room that you don't want your parents to find. As in, "Wait a minute while I momaflauge my stash."

On the other hand, you wouldn't want to be known as an herb (a geek), a long nose (a liar) or a high postage (a conceited female). Once you've got that down, remember that a circle of death is a bad pizza, a jimmie is a condom, a blizz is a crazy prank and a spoink is an indefinite measure.

"We didn't claim it was going to be a wholly scientific survey, but college campuses are often where new words and phrases show up,"she said.

A number of interesting trends became apparent, she said. First, the popularity of some words is strongly regional. Second, many of the hip phrases arise from African-American and Hispanic cultures. Third, there was a small, but interesting increase in the use of product brand names to convey certain qualities, like describing someone as "Nike"or "Quaker Oats."Fourth, certain retroactive words are coming back into use, such as crib (meaning home base). Crib was popular in the 1950s.

"There was a definite regionalism that was coming off," Leslie said. "the absolute hottest word in the East was phat."

Phat, sometimes spelled fat, has appeared in the New York Times several times, and some theorize that its use evolved from the New York fashion industry.

Cholo, on the other hand, is a Western/Southwestern word that once was used to describe a Mexican gang member as being extremely macho. "Fly" is a word that arose from the African-American culture, also meaning cool or good.

"We've had parents from all over calling us up and saying, "I've got to have these words. I don't understand a word they're saying. You've got to help me out,"' Leslie said.

by Diana Smith, Dec 12, 2008

Long road trips bring insanity for JCVB

"Look! It's a puma!" does not even begin to describe it

Michelle Morchesky

It seems that this season we have been on the road more than ever before. Traveling takes a toll on us mentally and physically. Crossing time zones and sitting for endless hours on a bus or plane makes us cranky.

If we don't take the opportunity to laugh at the absurdness of our traveling situation, we'll never make it out of the trip with our sanity.

Our trip to University of La Verne in California was certainly the apex of our road delirium. To kick off the trip, we left Juniata at four a.m. Out of 15 players, two coaches and one bus driver, guess who was the morning person?

The overly talkative bus driver added to our crabbiness from lack of sleep. From telling about the weather to his GPS having a disease, our driver showed that he was apparently unaware of the hour.

Now on the plane to California, the real fun began. This plane ride marked the beginning of a literal drink spilling record. Trip total: seven. Impressive. On the plane, one of the freshmen doused her neighbor's computer with a cup of ginger ale. That same day, one of the sophomores took a strawberry lemonade shower courtesy of the waiter at BJ's restaurant.

The spills continued a few more times at various restaurants. To finish off the spill count, another freshman drenched herself twice, within 15 minutes, on the plane ride back to Dulles.

Along with the drink spills, the effects of our sleep deprivation brought about hallucinations of wild animal sightings. At four a.m. (again) on the bus to return to the airport in L.A., a group of players spotted a giant cat. One asked if the beast could have been a puma. Not 30 seconds later, another player walked onto the bus, saw the cat, and yelled, "Look! It's a puma!"

Of all the creatures in the animal kingdom, puma was brought up twice. It may not seem funny now, but at the time, it was hilarious. We laughed for hours about the fact that the cat was probably a housecat, not a wild animal.

Some of us also found great amusement in the way "puma" sounded. This made for some very intelligent conversations on the shuttle to the airport. The non-Juniata patrons on that shuttle either thought we were obnoxious or dumb. But there was one good sport on the shuttle. For the sake of not knowing her name, I'll call her the puma expert.

This woman took a genuine interest in our ridiculous conversation about what a puma is and what it looks like. A group of us were almost in tears with how absurd our chat was by this time. This woman set our minds straight with an accurate description of what a puma is.

She was either a very friendly morning person or thought that if

continued page 18

Andrew Meloney / Juniatian

Sophomores Lauren Cline (8) and Stephanie Strauss (5) are models of intensity on the court. Their team, though, is insane on the road.

Changes on offense, consistency on defense

Tyler Sasala

It took 10 conference games to finally put a one in the win column for Centennial Conference play. The win, against McDaniel College, ended a rough three game road trip, in which we lost three games by 25 points combined. We felt as though the countless hours spent on the practice field, in the gym and in the film room finally had paid off. For once we got the monkey off of our backs.

Over the first eight weeks, our biggest stumbling block was red zone scoring. We have had the ball 19 times inside the 20 yard line and have only come away with a total of 58 points. Offensively, we have only scored 10 total touchdowns; five in the air, five on the ground. To cure our red zone follies we have been spending extra time inside the 20 at practice. We've put in a few new formations to give our offense more options and looks.

One new formation that we put in we call, "air raid." "Air raid" is an empty backfield set where three receivers and one running back line up in a wide diamond set on one side and the other receiver lines up on the opposite side. This new formation allows us to get a look at the defense before we call the play.

We have also put in a "pistol" formation similar to the one that Arkansas University used with running back Darren McFadden, and that the Miami Dolphins are using this year. In "pistol" running back Kyle McKechnie lines up as the quarterback, with Derek Kramer and fullback Ryan Blanchette also in the backfield. This gives us a different and new look to our offense that teams rarely see.

This year our defense has been

continued page 18

Andrew Meloney / Juniatian

Dan Fenton (28), Jake Skovira (74) and Lance Curry (84) celebrate Curry's touchdown reception at Juniata's game against Gettysburg. The Eagles lost the game 24-20. Currently Juniata has a season record of 1-6 with a Centennial Conference record of 1-4.

Sudden death proves to be major obstacle

Overcoming in overtime

Joyce Eveleth

Seventy minutes is a long time, but during a grueling four game stretch, it wasn't enough to win.

Match-ups against Frostburg State, Susquehanna, Alvernia and Drew all resulted in double overtime play, two of which are conference games. Twice we played to penalty strokes.

With only one win and three losses in overtime play, we are stressing the importance of scoring "early and often." Even though freshman Caitlyn Bowman shouts this before every game, it's something we struggle to remember.

Overtime consists of 15 minutes of "sudden death" play. Only seven players, instead of the usual 11, play per team. This makes overtime an exciting, but challenging change to regulation play. If no one scores after two rounds of sudden death overtime, penalty strokes from five players on each team ensue.

"In regular play there are more people on the field, so you can get some breaks. Overtime can be more tiring. If you stop going 100 percent for one second, you lose an opportunity to score and probably give your opponent time to take advantage," said sophomore forward Carolyn Gibson.

A seven player game requires each player to be smart and deliberate, leaving no room for mistakes. "It's a little more stressful. There's more pressure to make it perfect. You know that if you score you end the game right there," Gibson said.

Exhaustion after several consecutive overtime games was unavoidable. The aches in our shins and legs could only tell us one thing—we have to win in 70 minutes.

Sophomore forward Paula Price said, "We now understand the importance of capitalizing on every opportunity to score so we don't find ourselves in that situation." With three goals under her belt this season, Price knows the intensity and speed required to win.

The formation we use in overtime consists of two forwards, three midfielders and one defensive player in the back. The importance of communication, support and speed intensifies. Every player must fulfill offensive and defensive roles.

Most threatening for both teams are offensive breakaways, which can occur more often with the extra dribbling room and less opposition on the field.

"We never gave up in overtime, and I think that's really important. We showed a lot of strength and heart, but we needed to fix some small kinks to make it perfect to come out with a goal," said sophomore Moira Nugent.

Senior goalkeeper Abby Funk led the defensive unit in each overtime play. She is credited with a total of 62 saves on the season.

Our lone win in overtime is credited to junior Dani Stump, whose penalty stroke gave us a 2-1 advantage over Alvernia.

Conference playoffs are just around the corner, and the skills and strategies we've learned through our overtime battles will help us to defend our title as Landmark Conference champions.

Andrew Meloney / Juniatian

Forward Sam Smith (3) fights for possession of the ball at Juniata's Oct. 18 game against University of Scranton. The Eagles won the contest 3-1, raising its record to 2-3 in the Landmark Conference.

Middle Andrew Steffen prepares to receive a ball from Susquehanna University's goalie during the Eagles' game on Oct. 21.

Wins hard to come by during tough portion of schedule

Team tries new formation and footwear

Chad Kohr

We knew going in to conference play that there were no more easy games. Despite how much tougher the games would get, we still thought we could be successful. After six straight losses, though, it would be much different.

"We had a lot of potential this year, but there's nothing we can do about the tough losses now. We just have to come out in the games we have left and do everything we can," said McNeal.

Many of these tough losses McNeal refers to could easily have resulted in wins. Four of the six losses were by a one goal margin, one being a double overtime loss.

"It's really frustrating. It just seems like the ball won't bounce our way. I'm really proud of the effort we have been putting in. We just can't seem to get the desired result," said junior Andrew Steffen.

Coach Dubois moved Steffen, a junior captain, from midfield to forward in search for a spark to the offense. After Steffen switched positions, he was able to spur a four-goal outburst against Susquehanna University. Despite that performance, Susquehanna was able to put five goals into the back of the net.

In our search for a win, Couch Dubois has even tried sporting different footwear to each game in hopes of finding a lucky pair

"We really like his [Steffen's] size [at forward]. He is able to hold the ball up and allow our other players time to move up the field and make runs off of him to get open," said McNeal.

Position changes are not the we are struggling to find something that works.

"We are playing with a lot of intensity and moving the ball. We just can't seem to score or keep the ball out of the net at crucial times," said senior Fred McNeal.

McNeal, a four-year starter, has been through a lot over his career. After starting out with a 5-4-1 record in 2008, this year seemed like

continued page 17

Men's soccer

continued from page 16

only changes our team is experimenting with. In our search for a win, Coach Dubois has even tried sporting different footwear to each game in hopes of finding a lucky pair. "At this point, I'll try anything. I'm starting to run out of shoes though," said Dubois.

With two games left in the season, we still have the opportunity to move into elite company in Juniata men's soccer history.

"We've never had seven wins in my career here, and it's really important to me to finish my career strong," said senior Bryan Hess.

Hess was able to score a crucial goal against Elizabethtown College. His goal in the 77th minute tied the score at 1-1.

We have never beaten Elizabethtown College. With all the momentum Hess generated off his goal, thanks to a beautiful feed from McNeal, the impossible seemed possible. But, with three minutes to go, Elizabethtown was able to score a controversial goal to seal the game.

Elizabethtown earned a corner kick in the 88th minute. The ball was played high, about two yards off the goal line. Senior goalkeeper Ted Sonneborn jumped to catch the ball, but was run into by an Elizabethtown forward. In most cases, referees protect goalies from collisions in the goal box. But, in this case, no foul was called and Elizabethtown was able to deflect the ball into the back of our net.

"We held them scoreless for 86 minutes, and still couldn't win. That is really aggravating," said Hess.

Despite the trouble we have had as of late, teams are realizing that we are in no way an easy game. Every opponent we face knows that they are in for a battle the entire 90 minutes.

The seniors now realize their careers are coming to an end. Despite marginal losses, the underclassmen understand the commitment the seniors have made over their careers. Through our commitment, we are hoping to help the seniors finish their careers on a high note.

Cross Country team tries to repeat strong conference finishes

Kevin J. Campbell

Winning a championship is an amazing accomplishment, but to repeat is even more difficult. After the women's cross country team finished first in the Landmark Conference Championship in 2007, it was ranked number one in the Landmark Conference's 2008 preseason poll.

However, during the first half of this season, the women's team did not always race well. There are several runners that have recently stepped up and yet others that are waiting to shine.

But is it too little, too late for Juniata to repeat?

Junior Laura Rupprecht, who led the team every meet last year, started slow this year, but was able to finally step it up to move into the number one spot. Also racing well now is junior Megan Peterson.

Most returning runners have improved consistently over the season, but because of race strategy the women were unable to finish better in the early meets.

The men's team is led by juniors Sam Williams and Matthew Wagner and freshman Ceth Parker.

Freshmen can usually be expected to be inconsistent because it is a growing process. However, Parker has consistently become better and has shown great adjustment to college cross country. Parker has never finished worse than third on the team in any race. The young talent offers promise for the future and upcoming events.

Last year the men finished the Landmark's inaugural season second to Susquehanna, losing by only one point. This year's three runners will try to earn redemption at the Landmark Conference Championship this Sat., Nov. 1.

"It should come down to a point or two this year and will be a dog fight the whole race," said head coach Jon Cutright.

Successful fall season in the books

Spring looks promising for tennis

Kevin J. Campbell

Typically tennis is a spring sport at Juniata. This year however, both the men's and women's tennis teams split their season's schedule to play in both the fall and spring semesters.

The change in scheduling was made in order to reduce class conflicts and to avoid the cold and snowy conditions in the early spring.

Playing in the good autumn weather has proved effective for both the men's and the women's tennis teams, allowing them to start their 2008-2009 season off right.

The men's team is led by three seniors, Ryan Navarro Aaron Rhodes and Jonathan Skoner, who hope to end their collegiate careers on a positive note.

This fall they finished 3-1, beating Frostburg State, PSU-Harrisburg and Lebanon Valley, but lost to Division I St. Francis.

The men also played very well in the Landmark Conference Individual Tournament held at the University of Scranton. Two of Juniata's double pairings lasted to the second and final day of the tournament, but were defeated in the semifinal round by Moravian.

The women's team finished the short fall schedule, 2-2, but dominated in its postseason matches at the Drew Invitational in Madison, NJ.

The team saw strong performances across the board, taking six out of seven singles matches and sweeping the three doubles matches.

Healy, who plays second singles and is a good doubles player, won both her singles and doubles matches during the Drew Invitational.

Healy has adjusted to the more talented, faster play of college tennis."Despite the difficult time commitment, I'm glad I decided to pursue tennis in college because I have adjusted well and it has made me a better player," said Healy.

During the winter months, in preparation for their spring season, both teams will work out twice a week with assistant strength & conditioning coach Matt Huntsman as well as traveling to Altoona to practice in an indoor facility.

The Eagles' spring season will begin during the spring break trip to Hilton Head, SC.

This year both teams have talent and depth that will allow them to match up well against their conference opponents.

Head coach Beth Bleil said, "We don't have an easy road, but we can definitely be in charge of our own destiny."

Andrew Meloney / Juniatian

At a match with Frostburg State University earlier this fall, sophomore Arnab Chakrabarti readies himself as junior Jarrad Silver prepares to serve.

Football can't seem to catch a break

continued from page 15

playing lights out for us. Our defense is ranked fifth in the Centennial Conference, allowing 313.4 yards per game.

We are ranked 92nd in Division III in total defense out of 235 teams, placing us in the top third of all D-III defenses in the nation.

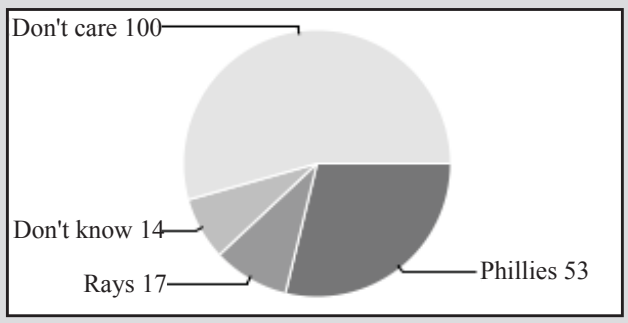
In pass defense, we rank 25th in Division III, allowing just 148.00 yards passing per game.

In six of our eight games this year the defense has allowed 23 points or less.

Against Moravian College on Homecoming, the defense put up gaudy numbers. As a unit it recorded 16 tackles for a loss, totaling negative 58 yards, and prevented Moravian from achieving more than one first down on nine of 10 second-half possessions.

Senior linebacker Josh Roy recorded a career high 18 total tackles. Sophomore free safety Jordan Baird finished with 17 tackles. Freshman Jason Marquis, junior Tyler Hall and junior Brandon Spayd finished with 10 tackles each.

"We are young and fast and have strong upperclassman leadership. Every week we build off what we did the week before and try to make ourselves better," Baird said.



If you would've asked a member of the team three months ago where he thought we would be heading into week nine, the last words that would've come out would be 1-7. In six games this year we have lost by 14 points. In five of those games the score has been decided by less than a touchdown. It stings for us to know that we could easily be sitting at 6-2 right now instead of 1-7.

As a team we are trying not to dwell on our record, but rather keep moving forward because each Monday the game week clock starts over.

This week we travel to Baltimore, Maryland to take on Johns Hopkins University. Then we return home for Senior Day at Knox Stadium on Nov. 8.

We asked students to predict who they thought would win the World Series.

Survey SAYS

Volleyball travels west

continued from page 15

she put our discussion to rest we would shut up. I'll stick with the idea that she was just friendly, because let's be honest, can a group of girls being loud and obnoxious at five in the morning really be that annoying?

Back in the airport for the trip home, we wanted to go through security quickly so that we could sleep at the gate before takeoff. The airport employees at LAX had different plans.

We walked around the Delta check-in, aimlessly looking for the group check-in line for what seemed like forever with our large bags. We must have been quite a sight, because right before we almost gave up our search, a woman came over the loudspeaker and announced that the volleyball team needed to proceed to line eight for group check-in.

With the guidance of our loudspeaker friend, it seemed like we would be at our gate in no time. The partition lady in the security section thought otherwise.

A group of us went up the escalator and headed to where we thought the line for the security checkpoint began. We were wrong, so wrong. This woman of no more than 5'2" came storming over to us and exclaimed that we needed to be on the other side of the rope partition.

At this point, we had succeeded in finding someone crabbier than us. Mission accomplished. Finally at the gate most of us grabbed some breakfast and slept for an hour or so before takeoff. We arrived in Huntingdon around seven p.m. Sunday night, just in time to go to bed.

The trip was well worth it. For some of us, it was our first time ever going to California, so it was a great experience. Plus we saw some great competition throughout the tournament…and maybe even a puma.

Women's soccer in a corner for playoff berth

The feared "sports slump"

Kristen Penska

It is a sad truth that with sports come clichés. If a team begins its season with a losing streak, it is off to a "bad start." If it fails during the middle, the team has fallen into a "slump" and if it loses a nail-biter in the end, they've "choked." Rarely does a fan analyze what may be going on behind the noise of the final buzzer.

For the women's soccer team it's not the game on the field that dictates a slump, but the attitudes of each player throughout the season. Understanding our own talents is the first step to winning, and the first step to self-destruction. If an individual cannot develop a "team" mentality, her squad will suffer the consequences.

Recently we have experienced just this. With a heartbreaking loss against Catholic University, we went on to fall to Drew and Scranton. This makes it hard to picture a future in the playoffs. However, these losses were not because we were out-skilled, but because of deteriorating team unity on and off the field.

The women's soccer team is full of talented leaders. Over 40 percent of the team held captain status during their high school careers. Throughout our lives, we have dominated classrooms, and achieved endless praise from our teachers and coaches.

Though being a leader is an honorable trait, it can be a problem when Coach has to decide what 11 players he wants on the field. It doesn't sit well for any of us to hear that we will be sitting on the bench for a game, that we are not the fastest, most skilled or most respected individuals on the team.

"It's hard to let go of the fact that you aren't the one saving your team. Most of us came from soccer programs where we were the only player on the field holding our squad together; now our team has a lot of talent. Competition is tough to deal with when you're not used to it," said sophomore Sarah Ruggiero.

Many fans also underestimate the pressures that college has on a D-III athlete. We chose this type of school because we are intellectuals, and we chose to participate in a sport because we are athletic.
Both of these aspects require dedication, and both of these can be stressful at times. It is easy to win matches when the school year is just beginning. It is also easy to study when practice does not take three hours out of your day.

This, I believe has a direct correlation with our patience with teammates that we eat, sleep, party, practice and travel with on a daily basis. It is hard to put up with an individual's idiosyncrasies and equally hard to develop a "game face," when you know you have three midterms to study for after a rainy day at practice or after you have just travelled home from a game.

Though this may seem like an assumption, the past few years have supported this theory. When competitive conference play meets mind boggling academic schedules, losses occur more frequently. In the 2006 season, we won nine of 11 soccer matches in September, only to lose six of eight matches in October. In 2007, September yielded six wins out of 10 games, and in October, only four wins in eight games were recorded. This year we went 6-2 in September and 2-4 thus far in October.

All of these stresses create turmoil. At times we begin to play like individuals instead of a team because we are all fighting our own personal battles. We doubt our talents because our coach may sit us for a game, and we are confused about our formation because we were busy thinking about studying instead of soccer at our daily practices.

"It's hard to manage soccer and school. It's a big time commitment and a lot of times it does stress me out. But playing soccer helps me take out those frustrations. When I can play and have fun, soccer can be a great way to let go of all the stresses of my day," said sophomore Caitlin Bigelow.

When this positive mentality is created, our team will be successful. In fact, our Oct. 22 victory against Susquehanna was the best game we played in weeks; simply because our coach and each teammate decided to go out and play soccer for the love of the game.

If we can carry this attitude through our next two games against Mount Aloysius and Goucher, we may still end up in the Landmark Conference playoffs. If this does occur, we need to make sure we focus on the passion and fun each game brings, and not the drama and problems we suffer internally. When we do this, we will be tough to beat.

Andrew Meloney/ Juniatian

Middle Amanda Broadwell swiftly moves past a Susquehanna University defender at the Oct. 22 match-up. Juniata beat Susquehanna 2-0.

ON THE FLIP SIDE

by Bennett Rea

The Halloween season is upon us, and that means that costume decisions must be made. Trick-or-treating was the most important thing when we were little. But now it's costumes.

Instead of going door-to-door asking potential pedophiles for candy, we get to dress up however we want and go to parties. I'm okay with that tradeoff.

There is some pressure, though, to have a good costume. It's quite important, and I'm here to help. So let me let me lay out the costume possibilities for both girls and guys.

For girls who don't mind dressing slutty: Naughty Housemaid, Naughty Witch, Naughty Pirate, Naughty Skeleton, Naughty Police Officer, Naughty Investment Banker, Naughty Professor, Naughty Administrative Assistant, Naughty Cat, Naughty Dog, Naughty Bear, Naughty Princess, Naughty Schoolgirl, Naughty Dinosaur, Naughty Cheerleader, Naughty Sarah Palin, and Naughty College Student.

For girls who won't dress slutty: Pumpkin.

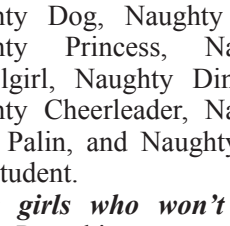
For guys: Guys pretty much can wear whatever costume they want (except a cat), so take your pick.

For guys who want to dress slutty for some reason: Put on girl's clothing or take off boy's clothing.

So those are the basics. Now let's take a look at costumes that are going to be popular this year.

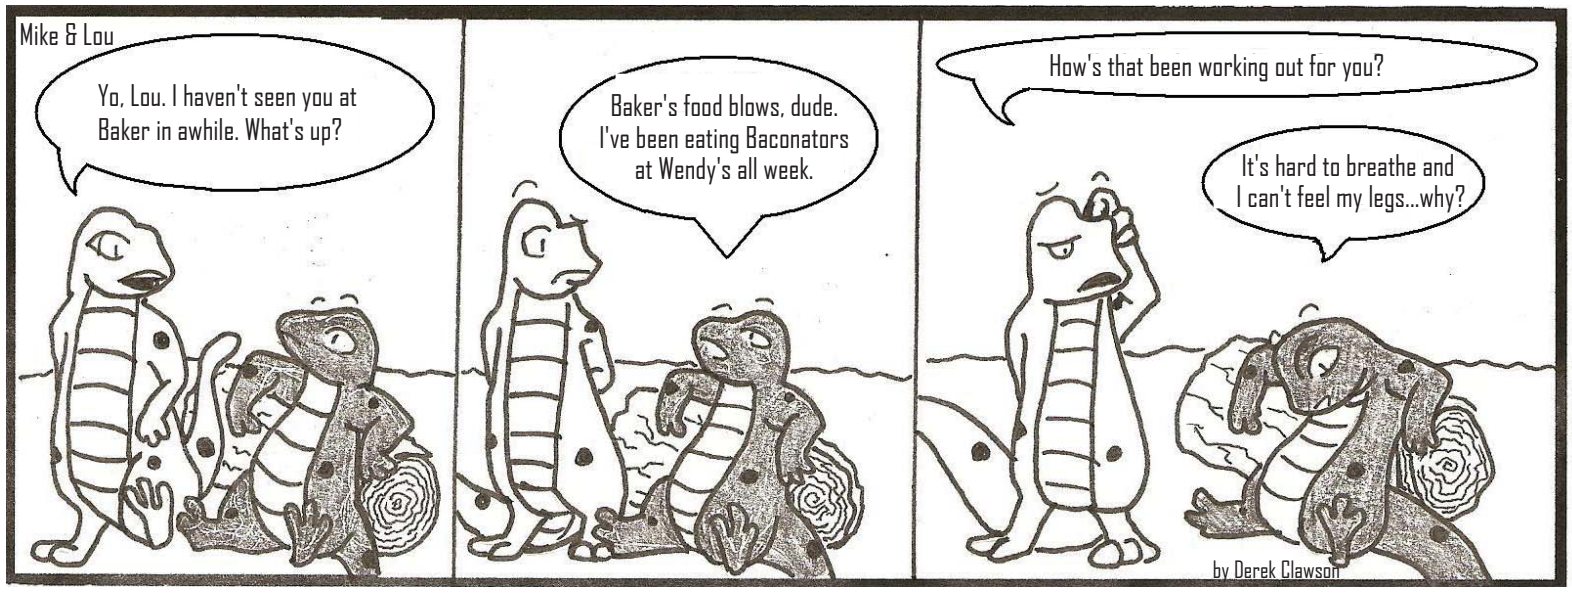
Sarah Palin: Love her or hate her, she sure is funny. With her folksy accent and penchant for wolf-shooting, she'll definitely be a popular pick this year. Joe Biden? Probably not so much.

Girl from the Eighties: If you see a girl in an '80s outfit of any kind, then you know she probably picked it out 10 minutes earlier. Whether it's an '80s prom queen, an '80s workout girl or just an ordinary '80s woman, it is the universal symbol of "Oh s*** I forgot to think of a costume."

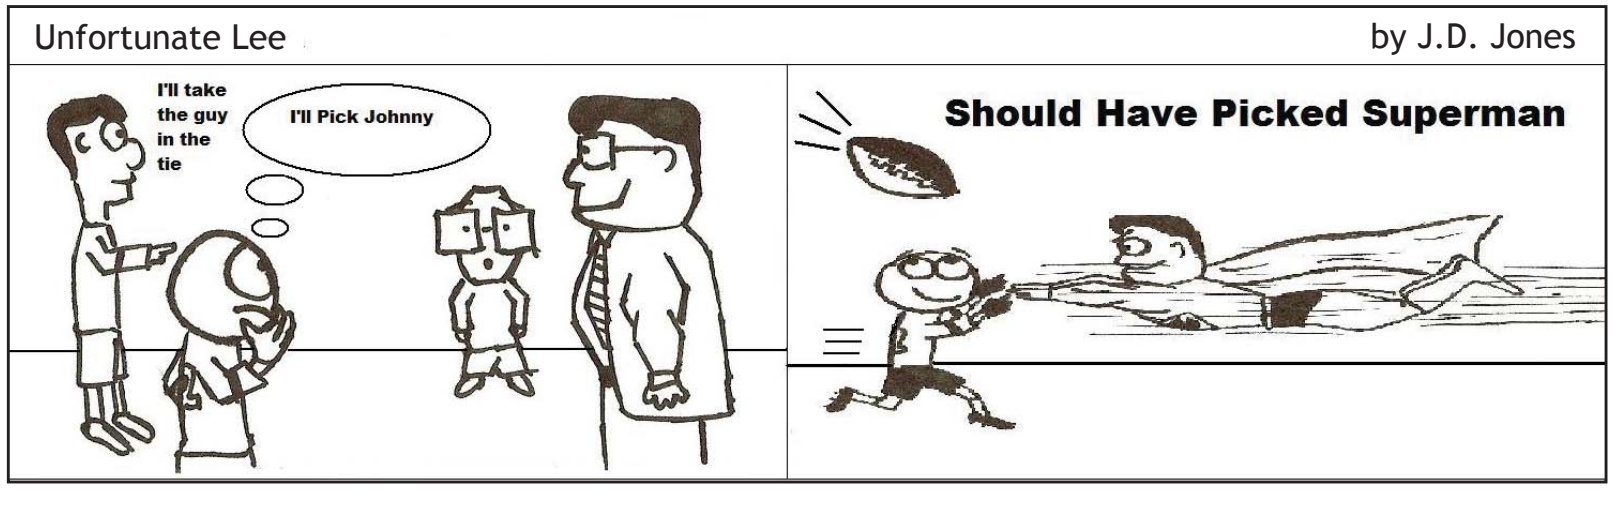


Hippie: Guys and girls both love this costume, as it lets you feel cooler when you do typical hippie activities, if you get my drift. All it takes is some beads, some tie-dye, a bit of earthy clothing and long hair and you'll look just like your parents did 40 years ago.

Batman: Everyone loves Batman. Enough said.



O-Chem Student: You probably won't see the people who don this costume, as they'll be in their rooms studying for O-Chem. It doesn't take a lot of time to make the costume, but it's staying in character that is so time-consuming.



Hopefully these lists of possible costumes and most popular costumes help you in your quest for a great outfit this Halloween.

However, it's Oct. 30, so maybe you should start looking for '80s clothes.

Humanities Building's roof safe, despite initial concerns

Classes and faculty offices in building will not be relocated

The following story developed Wednesday after the Juniatian was sent to press. This insert has been included in the newspaper to provide the campus community with accurate and up-to-date news coverage on the following matter.

Juniatian Editorial Staff

The Humanities Building's dipping roof is safe and will not need to be immediately replaced, as was reported by facilities services early Wednesday.

Within the next two weeks, facilities services will make minor repairs to the roof's substructure. Wooden props will be installed under the roof's dipping areas to prevent further problems.

Faculty offices and classes in the building will be unaffected.

"I know that the solution we came up with will provide a safe environment for students to be attending classes and for faculty to remain in their offices," said Director of Facilities Services Tristan delGiudice.

The initial worry came Tuesday when facilities services investigated a leak in the building and found several "soggy," dipping areas in the roof. It appeared that the roof was unsafe and possibly would not support winter snow loads.

Due to safety concerns, on Tuesday afternoon, facilities services notified the Provost's Office and faculty and staff members within the Humanities Building that classes and faculty offices in the building would need to be relocated until the roof was replaced.

Despite limited space on campus, Registrar Athena Frederick was able to assign temporary classrooms to all classes held in the building.

However, facilities services reevaluated the site Wednesday afternoon and determined that an immediate safety risk was not present and classes would not need to be relocated.

"When we did our initial evaluation, we didn't look at all of the potential solutions. We should have, but we didn't," said delGiudice. "When we realized what impact [the roof replacement] would have on students and faculty, we went back and reevaluated."

When delGiudice later examined the dipping areas, he found that they could support substantial pressure. He assured the Juniatian that the roof is structurally sound and able to support any snow load.

"We stood on the problem areas we identified from underneath, even bounced on them a little, and they could hold all of my weight," he said.

The repairs to the roof will likely take place in the early morning before class hours, according to delGiudice.

Students face 'double-whammy'

Off-campus party busted by HPD, Juniata still punishes students

Christina Gongaware

A recent bust of an off-campus student party by the Huntingdon Police Department (HPD) has raised questions over the jurisdiction of school versus city police departments.

Dean of Students Kris Clarkson explained the presence of the HPD at the party, which occurred Oct. 25 on Oneida Street. After a neighbor observed a student urinating in his front lawn, the neighbor and student began arguing. The neighbor called the police and "demanded that Huntingdon Police be sent to the house because of the attitude and behavior of the student," Clarkson said. "[The HPD] would obviously much rather do more valuable things than break up a party of college kids, but some of the townspeople are starting to be concerned with some of our students' behavior."

Fifty-two students were initially cited by the HPD. The total number of citations has decreased, however. As of press time, 45 students had been cited for underage consumption, proven by officer-administered breathalyzer tests. One student had been charged for underage consumption and furnishing false information, and two more for hosting the party.

Citations are currently being mailed to the offenders by the Huntingdon Police. Clarkson said that students will also be punished by the College for their crimes. "If we only care about [students] on our property, it sends the wrong message to students about what were are expecting of them," he said.

First-time underage consumption offenders will receive an official College warning and a referral to RAC (Responsible Alcohol Choices). RAC, run by Juniata's counseling center, assesses students' behaviors and counsels them to make better choices. A letter is also sent to parents and advisors informing them of the situation. This punishment is the same as a student would receive for an underage drinking citation on-campus. Clarkson said that there are relatively few repeating offenders.

An underage citation has further repercussions that can hinder a student's career. "For the most part, kids with 'under-ages' have a more difficult time getting into medical school. If they have educational aspirations, they have problems, and not too many people want to write a recommendation letter for a student that has one," Clarkson said.

Approximately 40 students pres-

Student meal plans to change again

Alison Rihs

Sodexo and Juniata's food committee are working together to make the meal plan set-up suitable for everyone. With strong student input, they are brainstorming new ideas to implement in future semesters.

The changes were prompted by student complaints about the current food prices, the inflexibility of meal exchange and the fact that it's difficult to keep tabs on used meals.

Rob Yelnosky, vice president for finance and operations, said that the changes made over the summer were not well-received because they were not thoroughly planned out. He said, "Given that we didn't communicate well, we shouldn't be surprised."

One of the first proposals to be considered for next semester is an all-DCB plan. This would allow students more freedom to eat what they want.

Sophomore Britney Lenig would be willing to try this plan because of its flexibility. She said that it would be convenient because she would not have to keep track of the meals she had eaten in a week.

Some students still would prefer more meal exchange over the all-DCB plan for financial reasons. Sophomore Dessie Schwentner said, "I think it [all-DCB plan] would be more expensive but easier to keep track of. Personally, I'd like to go cheaper [by using meal exchange]."

"I like using meal exchange because with DCB, I feel like I'm going to run out of money," said sophomore Melissa Moffat. "In all honesty, I wouldn't try it [an all-DCB plan] out because I eat the same thing pretty much every day."

According to Yelnosky, there is "some trepidation" in the administration because an all-DCB plan may deter more people from Baker.

"We don't want people never eating in Baker, and we can't sit and feed 700 students in Muddy," he said. "The Baker experience is part of the Juniata experience.…It

Online connection speeds throttled by CTS

Academic web resources have bandwidth priority over downloading and gaming

Neil Neigenfind

It is common knowledge that when using the College network, certain online applications run faster than others. For example, Web pages and images will load faster and more efficiently than games or videos.

According to David Fusco, associate vice-president and chief information officer, the bandwidth on campus is prioritized based on the type of application, but not cut off. "It's more an allocation instead of a cap," said Fusco.

The method used for allotting the bandwidth is called bandwidth throttling. Bandwidth throttling is a common practice among large networks where there is heavy network traffic. It is typically done through a method called packet shaping, which delays the amount of information downloaded from certain ports. Ports are different connections that vary by application. Bandwidth throttling limits the speed of downloads for certain ports, which reduces overall bandwidth usage.

According to Anne Wood, director of campus network and security, bandwith throttling not a perfect solution, but it is necessary. "There's no way to distinguish exactly what a user is doing. We can't tell if it's a YouTube or Netflix video or if it's a game or P2P," she said.

Sometimes, though, what would typically fall low on the application priority list is being used for academic purposes. "We realize that if a professor wants to show a video on YouTube for some reason, it will be slow," Fusco says. "That's a challenge for us right now. We try to balance between this and that. We are looking for a solution."

Recently the Camus Technology Service (CTS) released a statement that it will be raising the priority of streaming applications used in classrooms effective Nov. 7. This should improve the speed and reliability of videos professors wish to show in class.

Academics are currently the first priority on the network, and according to Fusco and Wood, this will always remain. "We realize as a department that this [campus] is a home. What we realize also is that we can't give everyone the same amount of bandwidth for everything," said Wood.

Fusco said, "In the first few weeks, people were going to YouTube and Netflix watching videos, and other students were going online and finding out they couldn't reach any Web pages. [Then we] prioritized the bandwidth and now people are going to YouTube and not seeing the download times they were used to. We realize that you want to do it, but priority is with academics first."

Fusco also added that plugging into the Ethernet network directly, rather than using wireless, increases the amount of bandwidth that can be used by a student. The wired connection is faster for all applications.

Peer-to-peer (P2P) downloading is placed lowest on the priority list. This is in part due to the high amount of illegal material shared on these networks. P2P downloading also often consumes a large amount of bandwidth. Wood said, "We specifically cut down the ability to use P2P resources. That was also basically the reason these bandwidth allocations came into place years ago. We can't cut it off completely, though. We still receive notices of people doing it."

The campus network has a higher priority for Apple itunes, due to it being a legal alternative to P2P networks.

Students have noticed the bandwidth allocations, and most aren't pleased. Freshman Joe Aultman-Moore said, "It kind of annoyed me. Sometimes the Internet would go fast; sometimes it would be slow. Web pages went amazingly fast, but basically everything else is slow."

Freshman Stefan Tekel said, "We're out in the middle of nowhere, and they dedicate almost all the bandwidth to research and the library, and then they squeeze out a little bit for everything else. It's impossible to play any games."

Students can contact Wood if they are experiencing difficulties using a game or program. Depending on the application, she might be able to open ports to improve connection speeds. Her office is on the second level of BAC.

Smoking allowed on campus, but where exactly?

PA smoking ban on public campuses lights up investigation of policies at Juniata

Kristin Rodkey

Pennsylvania has banned smoking on public college campuses, both indoors and out, affecting 14 campuses across the state.

According to the American Lung Association, over 130 colleges and universities across the nation have put similar smoking bans. There is the possibility that private schools could follow suit depending on how the bans work out at public schools.

At present, this change is not being considered at Juniata. President Kepple said, "We have never truly talked about it, and it is not high on our list of priorities."

He later said, "It is better to wait to see the effects of the ban on other colleges before implementing it into Juniata College."

Dan Cook-Huffman, assistant dean of students, said one of the reasons why the campus has not pushed for a smoking ban is due to the fact that not enough complaints have been voiced to force action. Unless problems arise with the current policy, the administration will keep the current policies in place.

However, there are some inconsistencies with the current smoking regulations.

The Colleges policy on smoking, found in the "Pathfinder," currently states, "The rights of the non-smokers supersede those of the smokers."

The policy also states, "The designated smoking areas will be located at least 20 feet from the main entrance or at containers provided for the disposal of tobacco by-products."

The fact that it states main entrance means smokers could smoke 20 feet away from a rear or side entrance standing right up against a building.

Statements within the policy also contradict themselves because they make it sound as though if smokers are at a designated waste container, they do not have to be 20 feet away from a main entrance.

Tim Launtz, director of public safety and security and residential life, said that containers for disposing of cigarette butts do not necessarily designate a smoking area. Containers are not always placed 20 feet away from a building due to convenience, but smokers should still smoke 20 feet away. A revision of the policy may soon take place due to these inconsistencies.

Currently the campus smoking policy enforcement falls on the resident assistants and directors for dorm violations. Any student found smoking in the residence halls should, according to policy, be given a citation due to the fact that it is a fire hazard.

The JCPD can enforce smoking polices if they see a student smoking in a dorm. While campus officers could enforce the 20 feet rule, it is not common practice for them to do so. The Juniatian confirmed with the Office of Safety and Security that no smoking citations have been given out by the JCPD.

Launtz said, "We probably aren't doing a good enough job enforcing the 20 foot standards set by the policy."

The penalty for violation on the policy is a warning for first time offenders, but repeat offenders are to be sent to the dean's office where the situation would be addressed.

If a smoking ban were brought to campus, Launtz wonders how enforceable it would be and said it would be an added responsibility for the public safety office. A smoking ban may also increase the number of students who try to smoke inside and get away with it, causing a fire hazard.

Andrew Waplinger / Juniatian

Many of the designated cigarette waste containers are placed directly next to buildings, sending mixed messages to smokers about where smoking is allowed.

One student, a non-smoker, said, "As long as people aren't [smoking] outside the door, I don't care."

A smoker said, "I would probably still smoke on campus," and that he would feel alienated.

Another student would be fine with a campus wide smoking ban saying, "I would so be for that, when it was warmer and our window was open, smoke would come in our window; my clothes smelled like smoke."

Re-cent press for Mathur's research on copper in U.S. penny

Geology professor attracts national coverage in major media outlets

Ross McMann

Geology professor Ryan Mathur is receiving regional and national media attention for his research with copper and the U.S. penny.

Mathur's research initially appeared in a feature article on Discovery.com. The article was later published on MSNBC.com and even made a brief stint on Yahoo.com's list of top stories. Local print sources like the Huntingdon Daily News, and the Altoona Mirror also ran stories on Mathur's research.

Mathur was excited when his article made it into stories cycling on Yahoo's front page. "It was right beside Britney Spears. It was kind of my big moment in the sun," he said.

Mathur's press resulted from an article he wrote for the Journal of Archeological Science.

Students and faculty can access the journal online through the Beeghly Library's subscription to Science-Direct. Mathur expects the article to appear in print in the journal's Jan. or Feb. issue.

For Mathur, who has numerous publications in geology journals, appearing in an archeological journal was exciting. "This was the closest to being Indiana Jones that I could be," he said.

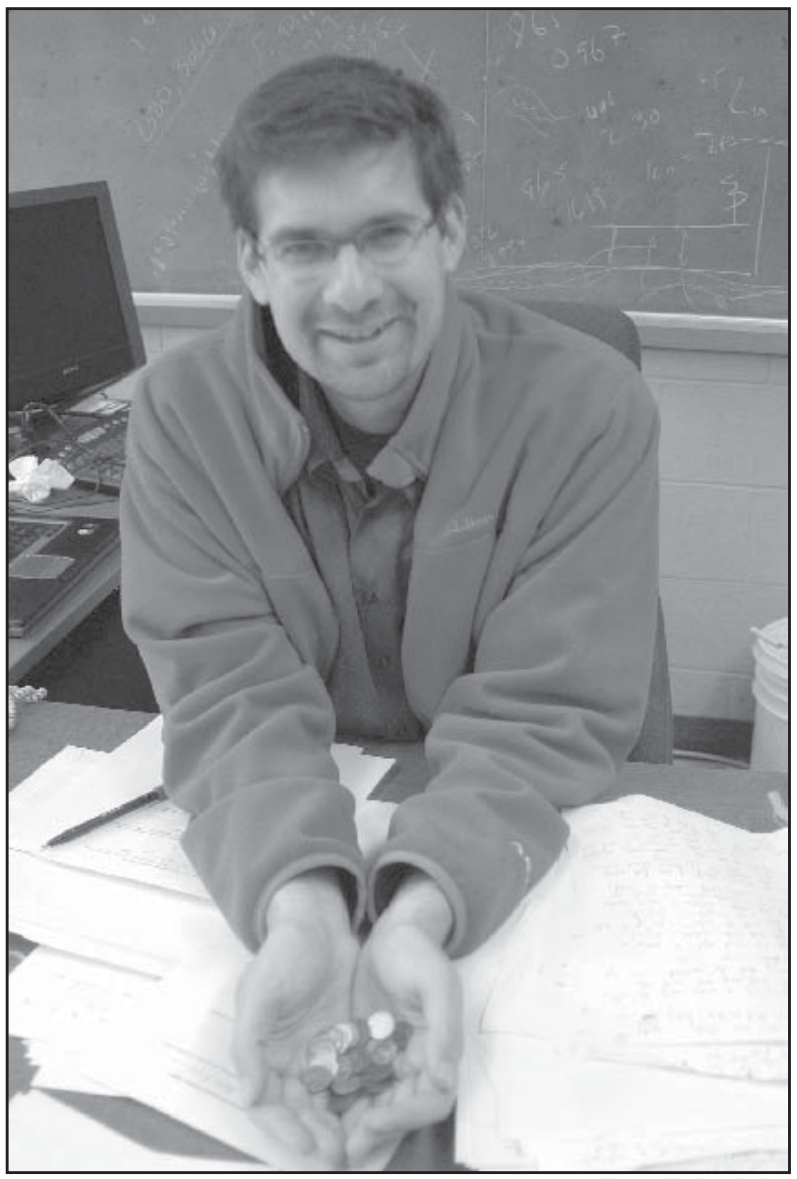
Mathur studied how the chemical signature in copper pennies can show links to specific signatures found in source mines throughout the world.

Mathur's article suggests that the same methodology can be applied to copper in archeological artifacts. Chemical signatures found in artifacts could be linked to the source mines used by ancient peoples. This information could be used to help identify ancient trade routes by following a path from where the artifact was found to the source mine's location.

Director of Media Relations, John Wall said, "This is the perfect Juniata story because it shows how science can be used in an interesting way. It [Mathur's research] illustrates the liberal arts approach because it shows how it affected the historical record."

Mathur's interdisciplinary approach is also indicative of the liberal arts ideal because it applies knowledge across multiple fields of study. He adapted the relatively young field of studying geochemical signatures of copper deposits and verified it with the historical records of U.S. pennies. Using those methods he has opened up a new technique that may have an impact on the way researchers think about archaeological artifacts.

The media draw to Mathur's research lies in the universality of the penny. He said, "That's why it got a lot of press; you know everyone understands the penny."



While Mathur studied copper deposits for other projects, it dawned on him to see if the same chemical properties of the rocks showed up in pennies. He successfully traced the chemical signature in U.S. minted pennies and linked it to the signatures of separate ore deposit mines.

Mathur said, "Once I got the data [from the pennies], it was a while before I could figure out the historical record because I'm not a historian." He employed an archivist to help him sift through U.S. Mint records.

The U.S. Mint keeps meticulous purchasing records where it purchased the raw copper used in minting pennies. Mathur used this historical record to "authenticate the science." His data follows the history of where the U.S. mint purchased the copper for 19th century U.S. pennies.

Mathur's research matched up directly with The US Mint's historical record. The very first pennies, from 1800 to 1848, were minted using copper from a mine in Cornwall, England. In 1849 the U.S. mint switched to developing domestic copper sources in a Michigan deposit. In 1865, the U.S. mint returned to using foreign copper. Both of these historic switches in raw copper ore purchases showed up as separate chemical signatures in Mathur's study.

Mathur's future plans include researching the mine origins of older coinage and examining the links between copper artifacts of local Native Americans and the copper occurrences in Pennsylvania.

Alison Rihs/ Juniatian

Professor Ryan Mathur holds a handful of copper pennies—the subject of his recent research. His work has appeared on Discovery.com, MSNBC.com and Yahoo.

Meal plans to change

continued from page 1

allows you to spend time with friends and interact."

The food committee is also considering a second option of bringing dinner meal exchange back to Eagle's Landing.

Moffat said, "That would be a great idea. Athletes have practice late at night and can't get into Baker."

Moffat suggested that there should be more meal exchange options in Eagle's Landing. She said that the structure from last year should be re-established because currently there is only one weekly option for meal exchange in each food line.

Another possible idea being considered for next year would be the ability to use DCB at off-campus restaurants.

Schwentner said, "That would be sweet! We could go on the weekends to OIP for better food."

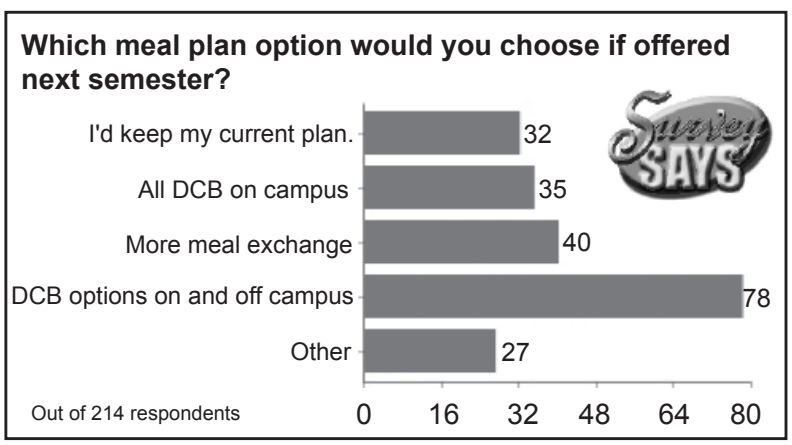
Lenig said, "That would be amazing. We could have a lot of options and get off-campus for a while."

A major complaint against the current meal plans is the pricing. However, the College can do little to remedy the prices. Yelnosky negotiates the contracts with Sodexo and deals with the overall financial aspects of meal plans. He explained that the food committee receives input from the students, and then Sodexo makes the final pricing decisions.

Moffat said, "I think that for campus food, it should be cheaper. It shouldn't be the same as a nice restaurant, especially for Baker."

Another problem facing students is keeping track of remaining meals. According to Yelnosky, the food committee is discussing online meal accounts for next year. Students would be able to lookup their remaining balances.

Also proposed are machines to add more DCB to an existing account via cash or checks.



Lenig said, "I believe we should [have more freedom to] specify how many meals and how much DCB we want. I only wanted 10 meals per week, but I had to get all this DCB that I didn't need."

Primarily, Lenig uses her DCB for drinks and snacks at Jitters. As a result, she currently has $140 balance to spend before the end of the semester.

According to Schwentner, "The worst part is that the DCB is gone [after the semester] if you don't use it. My parents paid all this money for it, but 'Oops! If you don't eat the food, too bad. You paid for it anyway."

Students are encouraged to propose their opinions to the food committee.

Yelnosky said, "We wouldn't be talking about these changes without their opinions."

Straight talk from abroad

From politics to Baker, international students offer perspectives on U.S. culture

Marie Boller

There are 99 international students on campus this semester. While they recognize that the Juniata community is not reflective of the entire U.S. population, many of them have been taking notes on American culture out of class.

Courtesy of Liesje Pfaeltzer

Martin Vasquez, from Ecuador, holds the jack-o-lantern he carved at a campus party in October. "I thought it was only in movies that they did this!" he said of the tradition.

Exchange students offer a fresh perspective on Baker. "In France, this would be a sort of paradise," said French student Candice Dudon.

Students dissatisfied with the food in Baker might be unaware that the quality and variety is superior to the food available college students in other parts of the world.

Anel Bracho from Panama has noticed something else while eating in Baker: the formation of distinct groups, even on a campus without fraternities or sororities. "People sit in separate groups at separate tables. They interact, but they can be so distant from each other," he said.

Some international students have learned about national pride while on campus. Liesje Pfaeltzer, from The Netherlands, has been shocked to discover that "many Americans are not proud to be American." With a crisis in the healthcare system and rising fears of recession, she has seen some Americans lose faith in their own political system and leaders.

Pfaeltzer said, "In Holland, health insurance is compulsory. When I say that here, people accuse me of being communist. Is good healthcare a communist idea?"

Robert Sassen, also from The Netherlands, said that "being here has woken up my patriotism."

Sassen said that he feels very accepted at Juniata, but is surprised by a lack of general world knowledge in many American students. He lost count of how many times he has explained that he is not from "Dutch-land."

American students are superbly educated, he said, but from a limited U.S. perspective. The national and local media is saturated with U.S. news. Sassen advocates a more international world-view.

"Everybody in the world is watching America, but it seems like America is just watching itself," Sassen said.

International students note other distinctions in American education as well. Gulnara Valieva from Tatarstan, Russia sees the education style here as "more modern and more computer-based." Valieva said, "It is aimed more at the individual."

Pfaeltzer said that in The Netherlands, there is less pressure on college students to achieve high grades. Students do not need to submit stellar grades to get into college; having a high school diploma is all that matters. Students strive to be "as academically average as possible."

Here, however, "if you don't study hard, you are screwed," Pfaeltzer said.

"The professors care here," she said, "There are higher expectations. Students are focused on getting good jobs, being successful, making money."

Exchange students see that good grades are more important in America because they can give students an edge in landing a well-paying job.

Pfaeltzer thinks that the American college education system prepares students well for entering the job market. However, it puts pressure on them to measure their success, and happiness, in terms of wealth. Pfaeltzer sees this as a limited understanding of the pursuit of happiness.

"Good grades aren't everything," she said. "Many people can be happy without good grades, doing the things that they love."

Differences in entertainment preferences also stand out to international students. Dudon was surprised by American film preferences, noting a tendency to relish extremely violent films while regarding pornographic films as taboo. She sees this as a strange double standard. "It is always a good experience to adapt oneself to a new culture," said Dudon, "but I think some people need to be a bit more open-minded."

Dudon also commented on different cultural attitudes to drinking alcohol. At her home in France, she has been accustomed to a lower drinking age that is not strictly enforced, and has enjoyed wine at the family dinner table since childhood.

Still underage by U.S. standards, she has been surprised to see teenagers revelling in excessive and unsupervised drinking. "People here do not know how to taste and enjoy alcohol. They simply drink it because it is forbidden," she said.

Basira Peerzada, an Afghani student pursuing a degree at Juniata through the Initiative to Educate Afghan Women, has experienced differences in gender issues. She enjoys the fashion freedoms allowed in the U.S., a stark contrast to the headscarf and skirt that she wears in her native Afghanistan.

She also noted, "Women are not treated badly in Afghanistan," Peerzada said. "They are respected, but sometimes they are considered lower than men. Here, women are more independent."

Peerzada has also noticed cultural differences in social life. "Here, people are so individual. They are isolated sometimes," she said.

A discussion led by two Wilkes University professors exploring what your hairstyle can communicate to others

Politically speaking: Post-election edition

Seth Fox

The results are in. Senator Barack Obama has been declared the next President of the United States. Here is a breakdown of some of the important events from this election night 2008.

What were the final numbers and are they official yet?

The preliminary electoral vote predictions are that Obama won 349 votes and John McCain won 163. The popular vote breakdown was 53 percent for Obama and 46 percent for McCain.

All votes are not officially counted during election night. The results reported by the media are based largely on exit polls. The exit polls are not the official results but are the first indicator of how the state may go during the election.

Presidential votes are usually not done being counted for weeks after election night.

The results of who won are based primarily on concessions made by the candidates themselves if they feel they are going to lose. For example, Senator Jon McCain conceded the election to Obama Tuesday night, after media outlets project a land slide victory for Obama. However, a concession is not permanent and a candidate is not held to it. This was the case in the 2000 election when Al Gore conceded the election to George W. Bush, and then later withdrew his concession when it became uncertain as to which candidate Florida had actually gone.

What was voter turnout for the election?

Not all the votes have been counted yet, so any record of voter turnout is an estimate. However, voter turnout is projected to be at record levels. Many estimates are as high as 64 percent, which is the greatest voter turnout rate in 100 years since the 1908 elections when William Howard Taft faced off against William Jennings Bryan.

What happened in the House elections in Pennsylvania?

Of particular interest to Juniata students was the U.S. House of Representatives race in District Nine, which is Huntingdon's district.. . Democrat Tony Barr was defeated by incumbent Republican Bill Shuster by almost 30 percent. As District Nine is a heavily Republican district, Shuster's win was unsurprising.

Shuster has been in office since 2001 when he won a special election after his father, Bud Shuster, stepped down from the office he held for almost 30 years.

Other House races in Pennsylvania ended with a 12-7 Democratic lead in representatives serving in the House.

There were no Senatorial or Gubernatorial races in Pennsylvania this year.

What is the overall look of Congress after election night?

The Democratic victory for the presidency was also coupled with a large Democratic victory in the House and Senate.

There were 35 seats up for election in the Senate. Republicans secured 14 and the Democrats won 17. The 2009 Congress will consist of 56 Democratic seats and 40 Republican seats. As of now, four seats are too close to call.

All seats in the House were up for reelection. Prior to election night, the House was predicted to have 235 Democratic seats and 199 Republican seats with one open seat. After election night, the break down is now 253 Democratic seats and 172 Republican seats with 10 seats still too close to call. This gives the Democrats a 68 percent majority of the House.

The House, Senate and Presidency are all united under the Democratic Party for the first time since the 1992 elections when Bill Clinton won the Presidency. The Republicans controlled Congress from 1994 – 2006.

Were there any races that stood out?

The Presidential election is still too close to call as of now in Missouri and North Carolina and they remain the only two states not projected to either candidate. However, even if McCain were to win both, he would fall short of the 270 electoral votes needed to become president.

In four Senate elections, the results are also too close to call. Minnesota, Georgia, Alaska and Oregon all have yet to declare winners in their races.

In Minnesota, there was a difference of less than 500 popular votes in the race between Republican incumbent Norm Coleman and Democratic challenger Al Franken. Under Minnesota law, this is grounds for a recall. Coleman has declared victory over Franken, but as Franken has not conceded The recount will continue and may last into next month.

In Georgia, there will be a run off campaign between Republican incumbent Saxby Chambliss and Democrat Jim Martin. Only three percent of the popular vote separated the candidates in this race, making it too close to call by Georgia law.

In Alaska, Democrat Mark Begich ran a tight race against incumbent Republican Ted Stevens, despite Stevens being convicted of seven federal corruption charges in October.

In Oregon, incumbent Republican Gordon Smith and Democrat Jeff Merkley, were neck and neck as well.

No results have been declared for either Oregon or Alaska.

Students face double punishments for underage drinking

continued from page 1

ent at the party were athletes, according to Clarkson. Coaches have turned to several methods to punish these athletes. "Two coaches have banned those students from traveling. Also, some students are not suiting up for home games, and some off-season athletes are not allowed to practice or lift in the gym," Clarkson said.

The hosts of the party will face punishments of their own. The maximum fine that they face is $1000 for each underage person present. "I don't think that they're going to get the maximum fines," Clarkson said. "They have been extremely cooperative with the police for the entire investigation and have behaved maturely."

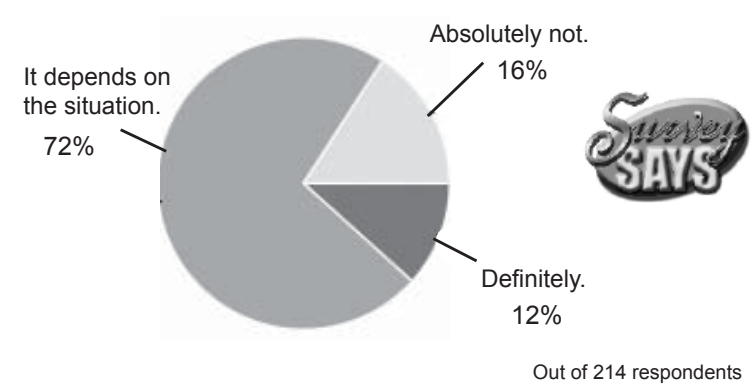
Sophomore Jennifer Wright thinks that Juniata's punishments are unnecessary. "[The students] already have this on their record," she said. "They get the point that they did something wrong. Administration getting into it is like a double-whammy. I think students get the point without them [Juniata] getting involved."

However, Clarkson stands by Juniata's course of action. "We have made it very clear that you are accountable to Juniata codes of conduct both on and off campus," he said. "Students studying abroad are held accountable. Anything that students do that affects this community and reflects our school becomes our business."

> ***Anything that students do that affects this community and reflects our school***

Although Clarkson admitted that crimes students commit in other areas would have a greater chance of going under the radar of the Juniata administration, those that they do discover are dealt with just as on-campus crimes are.

Students committing more serious offenses off-campus are likewise subjected to Juniata rules of conduct. "Students who receive felony charges are often asked to take some time off until their cases are settled. A student with a charge such as DUI could also be punished with driving restrictions," Clarkson said.



One student at the party, who chose to remain anonymous, described the scene. "Some people were pretty rowdy, but when we started seeing the Huntingdon police cars, everyone started freaking out. We were right off-campus, and it didn't make sense for them to be there. They surrounded all of the entrances so there weren't too many ways to escape, even though some people did get away. I did see a few guys mouthing off to the police, but I think they were too drunk to really realize what was going on."

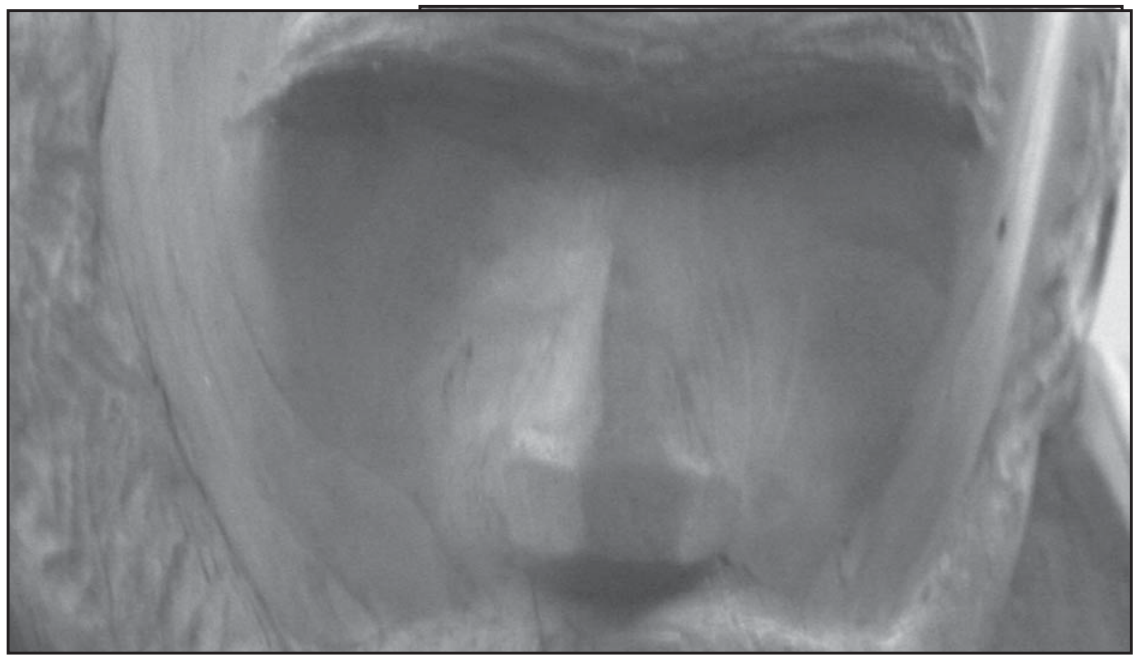
"Several students have already come into see me before they were even asked to talk about what happened," Clarkson said. "I think that for the most part these kids made a major error in judgment, but I do not think that they will let this happen again."

He also noted that the party was most likely not planned. "From what I know a few people were hanging out, and then the crowd just kept getting larger. Some of these partygoers were rude to the police, and that's how we got into this situation."

Clarkson hopes that if anything, party hosts will learn the extent of the responsibilities they have. "They were being reckless, if not careless. Because of the financial punishments, the point of responsibility also often goes to parents and dips into their own financial assets. That in itself shows a great deal of immaturity," he said.

Should Juniata punish students for off-campus infractions?

Out of 214 respondents



NCUR notifications

Students planning on applying for the 22nd National Conference on Undergraduate Research (NCUR) should keep in mind the following information. The group selected to go to Wisconsin for the conference is at this time scheduled to leave April 15, and return on the 18.

Juniata is willing to fund most student expenses for the trip, but Administrative Assistant Christine Sowell must be notified by Dec. 1. Please note that in the case of multiple authors, only one student is eligible for funding per paper. Students who receive College funding are expected to present their research at this year's Liberal Arts Symposium. Students are only eligible to receive funding for one conference presentation per year.

It is the student's responsibility to apply to and be accepted into NCUR. Information on how to apply can be found at http://www.uwlax.edu/ncur2009/. Questions about the application process or funding can be directed to Sowell at sowellc@juniata.edu.

Where on campus?

Andrew Meloney/ Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz. Congratulations to last issue's winner: Linden Will!

Campus skateboard policy explained

Student skateboarders frustrated by rule

Rob Schultz

A recent incident rose questions over skateboarding rules on campus. According to Tim Launtz, director of public safety and residential life, the existing rule is: "Only Juniata students are permitted to rollerblade and/or skateboard on campus, and only on the Ellis Hall basketball courts."

Skateboarding students are frustrated with the campus rule.

Senior Tony Bellucci, who uses his skateboard as transportation, said, "Personally, I think that if and when boarders are causing property damage to the campus, the appropriate actions should be taken. However, if the boarders are using their boards simply for transportation, they should be granted the same rights as those who ride bikes and scooters," said Bellucci.

Bellucci feels that the rules are unclear and inconsistently enforced. One officer may watch students go by and another might say something to him or her, he said.

Students on the Arch claim that they have seen people receive tickets for skateboarding. They find this wrong because they believe the skateboarders should not be punished when the rules aren't clearly stated. One member on the forums wrote, "How are you supposed to follow the rules if you don't know what they are?"

Launtz said that the rule exists to avoid potential skateboarding injuries and to prevent damage to campus property. Skateboarding is well-known for causing damage from people grinding on rails and doing other tricks.

"We don't want to take anybody's fun. There is a skateboard park in Huntingdon," said Launtz.

Huntingdon also has rules that prohibit people from using skateboards on public streets, according to Launtz.

Andrew Meloney / Juniatian

Senior Tony Belluci is one of the skateboarders annoyed by the ban.

On Oct. 23, campus security requested that two local high school students stop skateboarding in front of Ellis Hall. After they did not stop, campus security asked them to leave the school's property. "We could have arrested them for defiant trespass," said Launtz. "They were both sent letters that they aren't to be on College property anymore."

The borough police were notified, but no charges were pressed.

JC's balancing act: tradition vs. business

Financial aid trends in higher education leave Juniata reaching for a new student demographic

Leanna Yeager and Brittany Moyer

Juniata's mission historically has been to provide an opportunity to students with limited means to have a high-quality education, according to Provost James Lakso.

Recently, some students have questioned whether this is still the case.

As more students enroll at Juniata from further lengths away, the demographics of the student population are changing. While in past years nearly all students were from Pennsylvania, now they hail from 37 states, according to the Juniata Web site. These students also generally come from wealthier backgrounds than students in the past.

The office of financial planning declined to give exact family income numbers to the Juniatian, as did two other administrators. However, Lakso said, "Our income profile is probably a little bit different" than in the past.

Lakso explained that because of Pennsylvania's demographics, the College has needed to reach out to other areas to meet financial goals. "There is a business dimension [to Juniata]," Lakso said. Still, Enrollment has tried to recruit students who will work with Juniata's friendly, studious atmosphere.

Juniata's situation is part of a wider phenomenon in the world of higher education. Lakso, also an economics professor, explained that American colleges and universities exist in a market system where a school's quality is inferred by its price tag. If one good-quality school sets its price high, another school must set its price similarly to be perceived of similar quality and prestige. A college or university is constantly pressured to raise its admission price.

According to Lakso, Juniata boosted its sticker price as a way of boosting our face appearance. Lakso said it does not really work to do it any other way. He cited the example of an Ohio college that tried to lower its sticker price from $40,000 to $20,000, and drop most financial aid to have students pay the full amount. But people viewed the school as one of poor quality since the sticker price was so low, and the number of student applicants dropped greatly.

"We're part of a system of higher education where you can't really change things on your own," said Lakso.

According to U.S. News and World Report's rankings, Juniata tuition price will be $30,280 in 2009. The tuitions of Juniata's Pennsylvania competitors' are even heftier, with Dickinson at $38,234, Franklin and Marshall at $38,639, Gettysburg at $37,720 and Ursinus at $36,910.

The result of this price race is that few students are actually able to pay full tuition without financial aid or student loans. If a college really wants a student to attend, it will have to spell that out in financial aid. This leaves colleges struggling to come up with the money to bring good students without financial means to their schools.

This phenomenon of "charging different students different prices for the same educational opportunities" is called tuition discounting. According to College Board, it is a "long-standing feature of private higher education institutions."

At Juniata, only a handful of students pay the full tuition, and the rest are offered tuition discounts, according to Lakso. While some of these discounts come from a particular scholarship fund, many are straight reductions in price, which Juniata must offset elsewhere. Therefore, by admitting more students without a need for a tuition discount, Juniata saves money.

Melvin "Bub" Parker, director of alumni relations and volunteer relations, said that almost all of the alumni are surprised by Juniata's current tuition. "Education isn't cheap," he said, and Juniata has to "branch out to families who don't shudder at the price tag."

Despite Juniata's attempt to reach out geographically, the enrollment team still pays special attention to the 11 counties surrounding Huntingdon, according to Lakso. "I don't ever want this to be a place that thinks it has to turn its back on who has been its chief constituency. We want those students. But there aren't enough to rely solely upon, and we want to balance those areas with wider geographic diversity," he said.

Lakso said the College "could make the case that we better serve" all students by bringing in higher income bracket students, as that allows more money for the students who need it.

But he also cautions that "We can't turn our back on our mission."

Dana Professor of Sociology Bob Reilly, a faculty member of 34 years, has noticed the shift in average family income. He felt that "enrollment strategies are slowly moving us in the direction" of higher income areas.

Parker also spoke to a few alumni who felt the change isn't just in students' incomes, but in the students themselves. "Some of them [alumni] feel they can't identify with Juniata College now," Parker said. "I tell them that what makes Juniata special hasn't changed, just the look."

What's your short response to the presidential election results?

Below is a sampling of the responses.

Survey SAYS

"I'm worried that Obama isn't going to make any changes like he keeps saying."

"Barack Obama: The 46-Year-Old Political Virgin."

"YES!!!!!!!!"

"Yay! Socialism!"

"In a great shock still..."

"The fact that one party controls the government scares me."

"Hmph. Well at least we have a soothing voice to listen to when the apocolypse comes."

"Obamenomenal!"

"Glad that's over."

"Now the real work begins…"

"My momma doesn't know I voted for Obama."

"Let him prove himself before you pass judgement."

Our troublesome smoking policy

EDITORIAL

The Juniatian's article on smoking policies (see page 2) exposes a common flaw with this College's administrative practices. If policies on the books are inconsistent, contradictory or not enforced, what is the point of having them?

Without a clear idea of what the smoking rules are trying to accomplish, it's hard to see their value. Nobody really wants to cause smokers trouble, but sometimes their habit can cause problems for others.

On one hand it seems like the administration has guidelines in place that go along with the Pathfinder's statement "The rights of the non-smokers supersede those of the smokers." In practice, however, these rules are superficial and only enforced if people actively complain about smokers.

Is this really fair to non-smokers? Should they have to complain to see actual College policies enforced? Isn't it the College's responsibility to uphold the policies that it set in place?

The responses the administration gave suggest that they realize that its current enforcement of the smoking policies is subpar. It is pretty common on campus to hear about smokers leaning right up against, or very close to, buildings during their smoke breaks, and it seems like this would be against the stated policies.

However, it's not like the smokers are the ones causing all the difficulties here. The exact wording of the policy is "the designated smoking areas will be located at least 20 feet from the main entrance or at containers provided for the disposal of tobacco by-products."

The cigarette disposal containers scattered around campus are natural gathering spots for smokers, but in many cases the containers are too close to buildings, according to current policies. By sending mixed messages about where smokers are free to smoke, the administration just creates more problems.

Surely the last thing these policies are intended to do is to cause confusion, but this is a prime example of where they do. It is not clear whether the administration wants to follow what is being done in practice or what it has in writing, but in either case it seems like the College is unwilling to take a definitive stand.

It also seems like there is too much ambiguity as to how violations of the smoking policy are to be treated. The Pathfinder stresses that the ultimate responsibility lies on administrative staff, but it emphasizes that all employees are supposed to help enforce the rules. "All employees are encouraged to use peer pressure to assist in the enforcement," it reads.

If a staff member does manage to determine that someone is violating the unclear rules, what is she supposed to do? Yell at them? Say that all the cool kids stopped smoking too close to the dorms?

The lack of citations by the security office highlights that nobody really seems to be interested in enforcing these vague rules.

The simple solution to this issue is to tighten up the policy to make it clear, enforceable and reflective of what the College wants in regards to smoking on campus or to eliminate the policy completely.

If nothing is done, it will suggest to the student body that the rules are there just so that the administration can say we have them.

Ask the Administration:

We're holding the administration accountable by asking them these tough questions. Just for you.

Registration woes

"Many students are struggling to find open courses during the registration period. Some are enrolled for few credits at the moment because they are on wait lists or because they cannot find open courses at all. What is the College's plan to accommodate students' curricular needs this spring?"

The Provost and I have reviewed the enrollment statistics report to see where we can add additional courses for those areas that are most congested. We have increased the caps on a lot of courses and are working with chairs of the Earth and environmental science (EES), art, mathematics and communication departments to add additional sections.

Faculty members are reviewing their waitlists, and once sections have been made available, we will move students into the courses if they are waitlisted.

If conflicts occur or it puts a student in an overload of 18 credits, Registrar Assistant for Registration Carrie Rhodes will be e-mailing the student to make a decision to add the course or drop the waitlist.

We will work our best to get students in the courses that will count towards their graduation.

There is no "waste" in the classes you take; we seem to hear this from new students and their parents. We feel that students overall should be broader in their views of what courses can do for you, especially as a freshman. Sometimes there are really, really good courses that are available and are not seen because of some of the more popular choices with interesting titles.

We are always available to work with students. Our office hours are 8 a.m. to 5 p.m. Monday through Friday.

We would appreciate students calling us first before they talk to their parents. We find parents take it very hard that their children are having a difficult time, and we would like for students to have the best information possible and to be aware of all the choices that can be made.

I think the bottom line is that folks are going to get most of what they want. It just takes us a little time to see how the dust settles. And of course, there is always drop/add starting Jan. 19, 2009, where the dust will move in the air again.

-Registrar Athena Frederick

Registration Numbers for Spring '09

723 courses offered

109 closed coursed (15%)

13,868 seats available in courses

7,290 seats filled as of Nov. 6

517 students on course waitlists

3,674 changes (added, deleted, etc.) to student schedules during the fall registration period

Emergency prep.

"During the past two months, espn.com has reported on two athletes' deaths that occurred either during training or competition. Many blame teams/schools for not having emergency medical equipment on hand, such as defibrillators, which could help save lives in these situations. What kind of medical equipment does Juniata have on hand to deal with emergency situations during athletic contests?"

The athletic department is very aware of the many tragedies that have struck college campuses in the past. We have been very proactive in preparing to deal with such an event if it occurs at JC.

We have three automatic external defibrillators (AEDs) in the athletic department. The AEDs are deployed in locations that make them the most accessible to personnel trained in their use, depending on the athletic events or training taking place and the venues being used on any given day.

We are also fortunate to have a very dedicated group of students, QRS 8, which are able to respond to emergency situations when needed. Among other assistance to Juniata athletics, they provide ambulance standby services at all home football contests.

The athletic department staff includes three certified athletic trainers, who are licensed medical professionals trained to handle a wide variety of medical emergencies.

Our off-season workouts are supervised by certified fitness professionals (Coach Smith and Coach Huntsman). It is also important to note that the coaching staff is required to be certified in CPR.

We have put together emergency action plans for all of our athletic facilities, and the coaching staff is trained in their roles in the plan. We have two-way radio communication at all practices and games that enable the athletic training staff to be notified immediately if there is a medical emergency.

- Jeff Leydig, head trainer

Student loans

In light of the economic crisis, the Juniatian asked Rob Yelnosky, vice president for finance and operations, to comment on the current state of student loans and the College's plan to help students meet their financial needs. He provided the following:

The Office of Student Financial Planning continues to provide information regarding educational loan options to our students.

continued page 11

Blue vs. Red: The aftermath

To change the world, he needs our help

Sebastian Brown

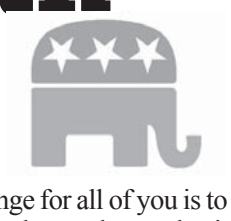
At 11 p.m. on Nov. 4, Barack Obama made history by becoming the first African-American ever to be elected president. This phenomenal achievement represents the pinnacle of a massive popular movement that made his victory possible. Left dormant for four decades after the end of the Civil Rights struggle, our country's collective conscience was re-awakened by the young Senator from Illinois who called upon us to once again believe in our potential as a nation. Motivated by the hope that he and his unique life story represented, we, the people, decided to rise up for change.

Convinced of the fierce urgency of now, millions of Americans stood up and made countless phone calls and knocked on thousands doors on his behalf. Thanks to such efforts, the Obama campaign managed to contact over 15 million voters. Unpaid and underappreciated, this national army of grassroots organizers and volunteers would stop at nothing to make sure that Obama's message of change was extended to every corner of this country.

Even those who didn't volunteer, but did take the time to cast their votes for Obama, made this historic movement possible. Consider this: in the 2004 Presidential Election, barely 500 people voted at the Stone Church. This year, nearly 1000 did. A majority of those voters were students like you and me who'd had enough of the status quo. This victory is ours.

But our work is not over. In fact, it's only begun. Like Obama explained on election night to the exuberant crowd of 125,000 in Grant Park in Chicago and to the nation watching via satellite, all we've done up until this point is make change a distinct possibility. Now, it's our task to make it a reality.

Those of us who have been Obama's biggest cheerleaders over the last two years must now become his biggest critics. Only we can make sure that all of his ambitious campaign promises and slogans don't fade with time, but instead are made into strong policies that help all Americans. Only we, the people, can do this.



We've heard everything there is to hear about Obama's plan to reform healthcare, to end the war in Iraq and to make our tax structure more fair. The plan looks great on paper. But unless we demand it, the plan on paper won't translate into the change in policy that we need.

Fortunately for us, after being trained by the most sophisticated grassroots campaign in the history of American politics, we're up to the task. But if we don't keep holding the Obama administration accountable, the status quo will remain unshaken. Fifty million Americans will continue to live without health insurance. Ten billion dollars a month will continue to be spent on a costly and pointless war, while our schools and roads languish in a state of disrepair. The wealthiest Americans will continue receiving tax breaks while the majority of the country struggles to get by. This can't - and won't - do.

But what I'm saying doesn't apply only to those who spent time volunteering directly for the campaign. Obama made this clear in his acceptance speech. All Americans, even those who didn't cast their votes for Obama, can and must do their parts in putting this country back on track. Government alone can't solve our problems. Whether it's being more energy conscious by turning off the light behind you and riding your bike to classes, or taking a few hours each week to volunteer at the local soup kitchen, we all must pitch in if we want our country to change for the better.

Times are too tough right now, and the stakes are too high, for us to rely on a President Obama to be able to change the world on his own. He's made clear time after time that he needs our help. Finally, the opportunity has arrived for all of us to be part of something great. As it always has been, Obama's success has little to do with Obama, but everything to do with our desire to positively change this country. Let this same desire lead us to be an active public that works with its new president to change our country and our world.

The maverick's missteps

Rachel Kern

Congratulations future President Barack Obama. I think that we can all agree that we're happy this election is finally over. No more negative attack ads or signs dividing neighborhoods. We can stop being red vs. blue and once again focus on uniting as red, white, and blue.

In one of the most heartfelt concession speeches I've heard, McCain congratulated Sen. Obama saying that he inspired "the hopes of so many millions of Americans who had once wrongly believed that they had little at stake or little influence in the election of an American president."

McCain told his supporters to give Obama their help "to help restore our prosperity" and to defend the country. He said, "Whatever our differences, we are fellow Americans."

If only McCain had been this classy on the campaign trail, he may have had a better shot at winning the presidency. The maverick and Vietnam War veteran, who has often said that honor represents his highest ideal and who has lived his life to serve, showed a defeated soldier's nobility as he praised Obama. It had many wondering where that man was throughout this election.

McCain was extremely proud of the way he waged his campaign in 2000, and some part of him must be stunned that it was Obama taking the high ground this time instead of him. On election night, the old McCain reappeared and like magic, we saw the chivalry and honor that we were so desperately hoping for. Why didn't this McCain show up for the election?

I think the major lesson McCain learned with this campaign is that when candidates go out of their ways to reshape themselves to please the electorate, they lose. The John McCain of 2000 disappeared this time around and it cost him the election.

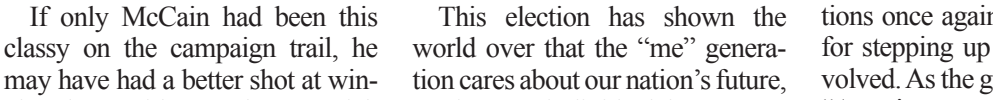
This election has shown the world over that the "me" generation cares about our nation's future, not just our individual futures. We banded together and had a record turnout of young voters. My challenge for all of you is to not stop. Let's keep the enthusiasm that we've had throughout this election – on both sides of the aisle - and take it into the next four years and keep our politicians honest and hold them to their words. Together we can go into the future with our heads held high knowing we changed history.

Obama has a long road ahead of him. When he steps into the shoes of the presidency, he has to prove that he can change things. He cannot fail or our country will fail. His economic policy will have to improve and his tax policies have to help everyone and bring equality to peoples of all economic backgrounds.

All I can say to our President-Elect now is that we're expecting a lot of change and I wish you all the best in upholding our high expectations for you. Congratulations once again to my generation for stepping up and becoming involved. As the great maverick said: "Americans never quit. We never surrender. We never hide from history. We make history."

Ask the Administration

continued from page 8



Federal support of the Federal Family Education Loan Program (FFELP) continues to be guaranteed for the upcoming year, 2009-2010. Therefore, students will continue to receive Stafford Loan funds, and parents can secure funding through the PLUS loan program.

Although there are some lenders that have chosen to discontinue processing educational loans, there are many lenders in Pennsylvania who are still participating in the FFELP programs through American Education Services (AES/PHEAA) guaranteed loans.

The Office of Student Financial Planning will work with the students who may experience a change in loan processing due to a lender exiting the student loan business.

Students who have questions or concerns about financial planning issues are encouraged to meet with a counselor in the Office of Student Financial Planning in the Enrollment Center.

THUMBS UP, THUMBS DOWN

An apple a day

The adverse affects of tanning bed use

Rays vs. Sprays

by Chelsea Garner

Pennsylvania's frigid winter months are quickly approaching. With this in mind, many students are frantically scheduling appointments with tanning salons to maintain a summer bronze through the next four months.

A survey published in the Archives of Dermatology found that the use of tanning beds has risen from only one percent in 1988 to 27 percent in 2007. This rise in tanning salon use has been accompanied by an alarming increase in health ailments linked to ultraviolet light exposure.

A little biology behind tanning: there are two wavelengths emitted by the sun and tanning beds. Ultraviolet A (UVA) rays have a longer wavelength that penetrates skin and causes the highly sought after golden-brown hue. Ultraviolet B (UVB) rays have a shorter wavelength often associated with a pink color from burning skin.

While many co-eds go into a pre-madrigal frenzy of these tanning rays, UV rays have many long-term health consequences.

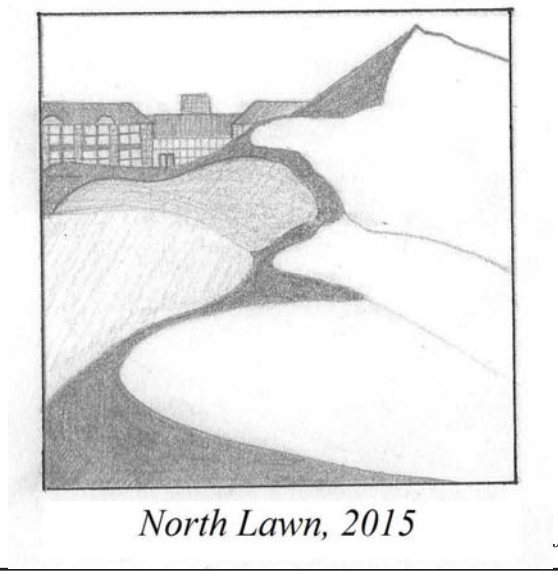
"You're being exposed to the UV damage and there's a risk for skin cancer and premature aging," said Dr. Laura Siems from the Health and Wellness Center.

"UVB rays are typically thought of as the 'burning' ray, and the ray that is more important in inducing skin cancers. But in fact, UVA rays are significant in cancers as well," said dermatologist Dr. Jeffrey Poole in an interview with the Virginia Journal.

Students need to realize that ignoring the risks of skin cancer associated with UV exposure does not make the risks disappear. An FDA study documented the risk for melanoma, the deadliest form of skin cancer, increases 24 times when using a tanning bed 100 times a year.

"Young people don't pay attention to the dangers of skin damage, but they need to know that 80 percent of skin damage occurs before the age of 18," said Dr. Stephen Webster in an interview with the McClatchy-Tribune Business News.

Another misconception is that tanning beds are safer than the sun-tanning. According to Tracy Cornforth, author of a women's health column, the UVA rays emitted by tanning beds are two to three times stronger than the UVA rays from the sun.



Many systemic problems can arise from long-term UV exposure. According to Cornforth, in addition to premature aging and skin cancer, UV exposure can lead to eye damage, including the formation of cataracts.

Also, long-term UV exposure can suppress the immune system's ability to fight off skin infections, leaving the skin susceptible to infections like the Herpes Simplex I responsible for cold sores. According to all-tanning-beds.com, UV exposure's effect on immunity can render some vaccines ineffective as well as slowing the healing process.

There are some ways to protect against UV damage. In the tanning bed, the risks are virtually inevita-

Winter skin care

-Continue to wear a low SPF sunscreen. Sun reflection from snow can still cause sunburns.

-Use lotions to keep skin moisturized.

-Take cooler showers to prevent skin from drying out.

-Use hypoallergenic soap to keep skin from being dry and sensitive.

-Layer clothing. Sweating and overheating are leading causes of dry skin.

When Nature Calls

by Brianna O' Malley

Don't stop bee-lieving

A strange and scary phenomenon has been happening recently, and it's not Paris Hilton's reality show. Over the past three years there has been a noticeable decline in honey bee populations nationally. Many theories have arisen regarding the species' disappearance, ranging from cell phone signals to pesticides. Regardless of the cause, if this trend continues Winnie the Pooh won't be the only sad bear.

I sat down with Larry Mutti, professor of geology, who has been a beekeeper for 10 years. He described to me what is known as Colony Collapse Syndrome—a phenomenon where seemingly healthy hives are abandoned. The syndrome has been observed in both commercial and wild hives.

"There are very few wild honeybees anymore; most bees can be tied to commercial use," he said.

While beekeepers are certainly suffering from their economic losses, if this persists, the real problem will be in the food industry.

"One third of all we eat rests on bee pollination," said Mutti. If there are no bees to pollinate crops, then fruit development will decrease.

"Some fruits can't fully develop properly without the pollination of a bee," he said. Examples of this include squash, almonds and most fruit trees. Less viable crops means a jump in market prices.

What many people may not know is that other food products indirectly rely on bees as well. Without bees to pollinate alfalfa, there would be less food for cows, meaning less milk produced.

The bee shortage factors into the global honey market as well. China is the biggest producer of honey in the world. China does not have the same bee decline due to a different bee species. This allows China to sell honey at a cheap price. This forced many American honey suppliers to keep prices down to stay in competition.

Having few bees to study, scientists are baffled by the cause of these collapses. Mutti explained two accepted theories have emerged from this problem.

The first theory purposed is that recently many bees have been exposed to parasites. "There are two kinds of invasive mites that will live on the bees," said Mutti.

These mites weaken the bees' immunity causing them to be more susceptible to other parasites. These parasites are extremely contagious and can pass through a hive quickly.

"The lowered immunity from these parasites creates the equivalent of bee AIDS," said Mutti.

The weakening of the bees means less honey produced and leads to lower larval survival. Mutti explained how it is nearly impossible to find any hive now without parasites. The hives with the most parasites are from migratory commercial beekeepers. These beekeepers take their hives from farm to farm to pollinate crops.

"Since these hives are on the move, they are more susceptible to parasites," he said.

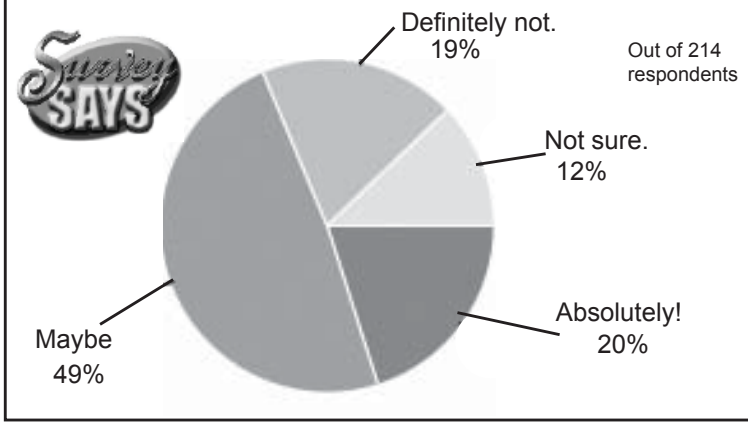
There have been attempts to counteract this problem. "There are many types of herbal treatments and heavy pesticides that can eliminate the mites," said Mutti. There are many beekeepers, though, that do not wish to introduce chemicals into the hive.

"There's always the possibility of the mites creating immunity to the pesticides," Mutti said.

He also explained that there are laws surrounding pesticide use and honey harvesting. "Honey can only be harvested after a certain amount of time after pesticide use," he said.

There are also cross breeding projects taking place to cross the European Honeybee with pest tolerant Asian bees. The Asian bee grooms itself, eliminating some mites which helps the bee survive.

The second theory has more support from commercial beekeepers. This is the idea that a new kind of insecticide used on crops is killing the bees. Farmers use a chemical known as a neonicotinoid on their crops to deter insect infestations. However, the chemical is persistent in the life cycle of the plant, and is passed to the bee through pollen.



"The pesticide is very attractive to an agriculturalist," said Mutti. These neonicotinoids are harmless to humans, targeting only insects. Effects of this pesticide include neurological development problems and navigational problems.

"Some commercial beekeepers won't use their bees on farms that use this pesticide," said Mutti.

Juniata is doing its part to maintain bee populations with the beekeeping club. Currently the club has two colonies on the roof of Brumbaugh Academic Center, but would like to acquire more. Club members hope to produce honey in the coming year and install colonies at Raystown Field Station.

This newspaper continues to grow and change. As we explore future possibilities, we asked readers what they thought about the idea of an online-only newspaper. We'll keep the below results in mind going forward.

If the *Juniatian* became an exclusively online publication, would you read it?

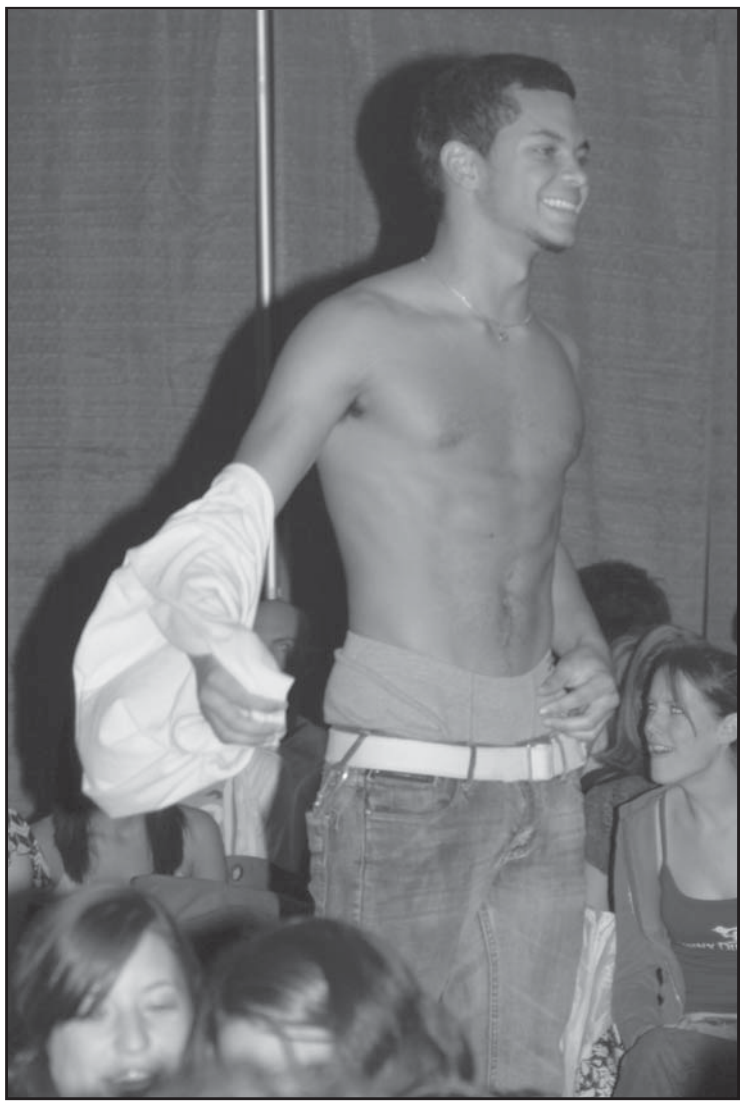
An apple a day

continued from page 10

ble, but following the recommended time allotments can prevent further risks. Also, always wearing provided eye protection can prevent the risk of eye damage.

"We prefer not to use the word 'safe' when we're talking about tanning. We advocate smart tanning, but we don't say that it's safe," said Kate Moll, vice president of public relations for a tanning salon.

Protection is the key to prevention. Covering skin with clothing and wearing sunglasses significantly reduces the risk of UV damage.



The essential protection from the sun is sunscreen. But it's important to select the right sun block. According to the Massachusetts Telegram and Gazette, not all sunscreens protect against both UVA and UVB rays. Most sunscreens block UVB rays, but only lotions with titanium dioxide or avobenzone protect against UVA light.

For students wanting a tan without the risks of UV damage, spray tans are a viable option. The key to a good spray tan is even distribution of the tanning agent. With professional help, a natural glowing tan is probable.

"There are professional places you can go and get a tan airbrushed on, and they're safer," said Dr. Siems. Tan Matters, Inc. in State College offers spray tans.

"The only safe tan is from a bottle," said Dr. Poole.

Takin' it off for good cause

Andrew Waplinger / Juniatian

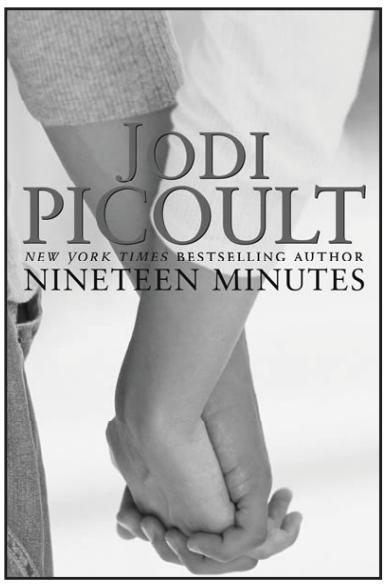
At the Third Annual Man Market on Nov. 8, freshman Gabe Castro rocked his six pack on the runway to rake in the biggest bid of the night, $115. The Market, sponsored by the Juniata men's rugby club and JAB's JC: UpLate, is an annual auction for dates with eligible Juniata bachelors that raises money for the Huntingdon Food Pantry. Spectators also brought canned food items to the event to be donated to the pantry.

Anything But Ordinary

Change comes quickly

by Claire Williams

"In nineteen minutes, you can mow the front lawn, color your hair, watch a third of a hockey game. In nineteen minutes, you can bake scones or get a tooth filled at the dentist; you can fold laundry for a family of five….In nineteen minutes, you can stop the world, or you can just jump off it. In nineteen minutes, you can get revenge."



This is quote begins the book, "Nineteen Minutes," by Jodi Picoult. The novel focuses on a school shooting that takes only 19 minutes and the effects it has on the small, fictional town of Sterling.

The story is told through various characters' points of view, which shift from one person to another between sections. The people who are directly related to the case are the key characters and it is from these people that we learn various details until we can see the whole picture.

While it may have been possible to tell the story conventionally, Picoult wove a deeper narrative with these techniques.

I enjoyed reading from the point of view of several characters. It made me feel like I knew more about them. Also, by seeing two different people's thoughts at the same time, the reader doesn't have to guess or assume anything.

Keeping with the idea of a more intense narrative format, the timeline varies. In one section, the plot takes place three months after the shooting and then jumps back 17 years before the event. This was a little confusing at first, but then I began to love these jumps since they often provided information in a more real way than having a character retell a story from the past. Seeing how the parents and children thought about the same event opens a window that isn't always there in real life; it bridges a gap between generations.

This book is worth reading because of the reality of it. While we often turn to fiction to escape the real world, this book provides a very plausible situation. With a less skilled writer the topic could have been handled poorly, but Picoult keeps the reader involved and illustrates issues like bullying and parenting, in addition to the shooting.

The reader also sees the depth of human emotions and the complications that arise from them. Unlike some works of fiction, this book made me feel like I might be able to understand people better after I finished it.

As the characters figure out their relationships with each other, the reader might find ways that they could fix their own relationships. Picoult shows how complex life is, but how simple we could make it by simply talking to each other.

Even though this book deals with a heavy topic, readers of many ages can benefit from it. Whether they connect with the judge, her daughter, the shooter, his parents, the detective or the DA, they learn something. Any book that can give people something more than they started with is worth reading.

Though real drama isn't a genre I typically read, I enjoyed this book. While it made me think as well as a little sad at times, the story overall was well-crafted and kept me involved. By the end I cared about the characters as well as outcomes and I wish things could have been different for most of the characters.

I would highly recommend the book to anyone, even those who normally wouldn't pick it up.

MUSICOLOGY

BY CAITLIN BIGELOW

MOZART. . NOT SO MUCH

It's a perfect summer day and you are driving to the beach. You have the windows down and Sublime's "What I Got" is blaring from your speakers. That classic song and others like, Third Eye Blind's "Semi Charmed Life" and Rusted Root's "Send Me On My Way" just make you feel good while listening to them.

Music is a vital part of most people's lives. We get pumped to music before sporting events. We dance to it in East. And we often relax to it at night. It is no surprise to learn, then, that music has a physical impact on our bodies.

Scientists have become increasingly interested in the correlation between music and our bodies. They have been investigating the theories about the beneficial effects of music on our bodies to see how many of them are true.

An example of this would be stories about soon-to-be parents who played Mozart for their young children while in the womb. It is said that this increases IQ and memory. Maybe more than once you have wished your parents did that for you after you failed yet another O-Chem test. Although the results of the Mozart effect are scientifically disputed and inconclusive, music has been shown to have a direct correlation to brain activity, attitude, mood and personality.

Researchers have found that listening or playing music has many beneficial effects. Music with a fast pace and strong beat can sharpen concentration and lead to more alert thinking.

Also, many studies have conclusively shown that people exposed to playing an instrument at a young age have mentally benefited from it. Some test show that kids who have played instruments score up to 34 percent better on IQ and memory tests.

Johns Hopkins University recently completed an interesting study about how music can lead to creativity and spontaneity in musicians. By recruiting trained jazz pianists, they used MRIs to study the effects of playing music has on the brain. Johns Hopkins had to build a special keyboard without any metal pieces so that the musicians could play inside the MRI. What they found was startling.

When the musicians played, spontaneously a large part of the front of the brain, the dorsolateral prefrontal cortex, showed a drastic

The Director's Chair

By Bennett Rea

'W.' may be blurry, but it's seen through a unique lens

George W. Bush isn't even out of office yet, and already a film, "W," has been made about his struggle to the presidency. Oliver Stone, known for making semi-biographical films on the presidency ("JFK", "Nixon"), decided to tell Bush's story before it ended.

While the movie is interesting and the acting is mostly very good, it feels incomplete and leaves you wondering where Stone would take the film if he had just waited a few more years.

The film leaps through different points in time, interspersing scenes of Bush's time in the White House and his rise to the presidency. We are shown his wild college years, his Christian and conservative adulthood and his time in office. Bush (Josh Brolin) grows from a heavy drinking frat boy into a self-made man who captured the most powerful position in the world. There are many references to his drinking problems earlier in life and there are a lot of scenes which show the tenderness between Bush and his wife, Laura (Elizabeth Banks). The movie ends in early 2004, before the war in Iraq became a national debacle.

Almost all the acting in "W." is superb. Brolin is fantastic. He gives the character depth and emotion that makes you sympathize with Bush more than you probably ever have before. The mannerisms and intonation of Bush are captured perfectly.

James Cromwell is great as George H.W. Bush. He plays the former president as a reserved and quiet man with a good sensibility,.

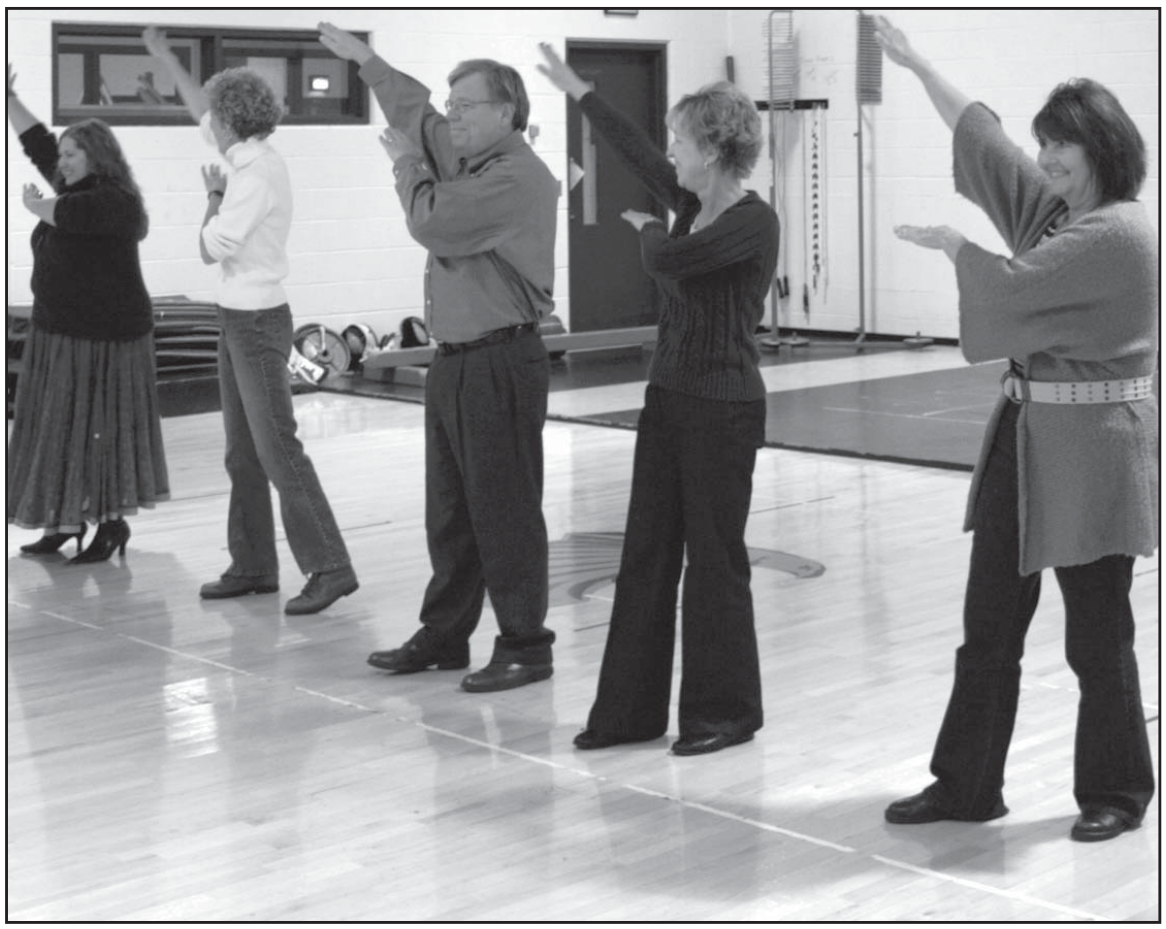
Other supporting roles are also done well. Banks is wonderful in her portrayal of the sweet and faithful Laura Bush. Jeffrey Wright does Colin Powell justice, and Richard Dreyfuss is a good, if caricatured, Dick Cheney.

One performance that was not so stellar was Thandie Newton as Condoleezza Rice. She simply made Rice look like an idiot. . While what Newton was saying was at times intelligent, the way she spoke and her voice were grating and cartoonish. Newton's portrayal of the character did not mirror at all the way Rice presents herself in real life and was a poor representation. A glaring problem with "W." is that it is very disjointed. The film feels like a lot of small, interesting stories thrown together rather than a flowing and connected piece. With biographies, it can sometimes be hard to focus on a common theme in a person's life. It was even more difficult to find a theme in "W." because the time period switched constantly, without any on-screen reminder from Stone. There were no dates at the bottom of the screen and the audience needs to be well-versed in Bush family history in order to fill in the gaps left by the film.

One theme which did run throughout the movie was Bush's struggles with his father. The elder Bush constantly compares his son to his brother, Jeb, and blatantly favors Jeb much of the time. He also talks about how disappointed he is in George for various reasons.

Stone sees that relationship as the binding thread which explained many of Bush's decisions. The war in Iraq? Stone suggests that it is just a son continuing what his father started. Cheney and others' strong influence? They feed on his insecurities about Jeb Bush being the better son. Stone's take on Bush's decision-making is fairly interesting and somewhat unique in that way.

The biggest problem with "W.," however, is that Bush's presidency is not finished; he is still in office. As you're watching the movie, you want to know what happens after the year 2004. While Stone's purpose may be just to show Bush's path to the presidency, he still should have waited until Bush completed his term. That way, Stone could have made a more connected narrative and would have had the advantage of hindsight when looking at Bush's life and presidency.



Instead, "W." ends with many unanswered questions. The film doesn't touch upon the past four years which have made Bush such a hated figure. As a result, it feels incomplete. However, "W." is still an interesting look into the life of the man who has led our country for the past eight years. Stone shows George W. Bush a great deal of sympathy and provides a unique view on his motivations. It's still a watchable movie for its great acting and interesting perspectives, but you'll come out of the theater feeling deeply unfulfilled.

Final Take: ★★

"W." is now playing at the Premiere Theatre 12 in State College.

It is rated PG-13 for some language including sexual references, some alcohol abuse, smoking and brief disturbing war images.

Faculty and staff step it up

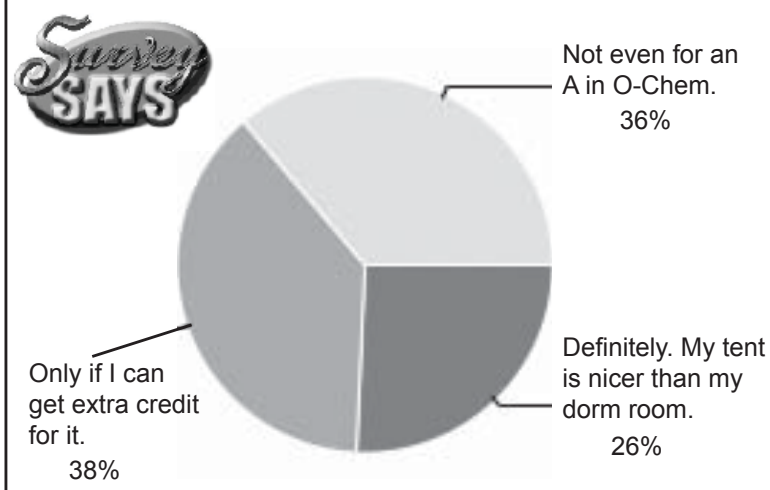
Andrew Meloney / Juniatian

The Juniata Step Team has enlisted faculty, staff and administrators to perform a number in its shows on March 20 and 22, 2009. Given the unknown dancing abilities of these Juniata personalities, the Step Team started rehearsals in October (five months before the show). Eighteen faculty, staff members and administrators are participating in the routine. Above (left to right), Special Assistant to the President for Diversity and Inclusion Rosalie Rodriguez, First Lady Pat Kepple, President Tom Kepple, Nurse Connie Peters and Marketing Assistant Norma Jennings work on perfecting the moment that they put their hands in the air--because they really do care.

REWIND

Film Flash Back

101 Dalmatians (1961)



In a time when the economy is bad and future may look a little bleak, "101 Dalmatians" is a wonderful old movie that will cheer you up. You probably watched this original cartoon version when you were young, and it still is fun to watch today, both for nostalgia and entertainment.

The plot of the movie is pretty simple. Cruella De Vil goes after a family of Dalmatians, which includes Pongo, Perdi and their 15 puppies, in order to use their spotted fur for making coats. The puppies have to run away from De Vil and her cronies with the help of miscellaneous animals they encounter on their trek. Along the way, the little Dalmatian family becomes huge and takes in many more puppies, becoming 101 in number in the end.

It's a heartwarming story with lots of wonderful little moments, such as when a puppy is thought to be stillborn and then comes to life when one of the dogs rubs him with its nose. There are plenty of cute moments like that in the movie. The bottom line is that if you're looking for some happy nostalgia in a time where the world seems dark, "101 Dalmatians" is a perfect choice.

The 2008 Madrigal tenting line began on Sunday. We asked students just before the fog horn started blowing:

Will you camp out for Madrigal tickets?

Sharing the experience

Former professor brings personal art collection to museum

Christopher Burlingame

Former Juniata art professor Steven Barbash returns to campus with an exhibit of works that he has amassed.

From Nov. 13 to Feb. 28, 2009 "Shared Experience: The Steven Barbash Collection" will be on display at the Juniata College Museum of Art.

Barbash will open ceremonies on Nov. 13 with remarks at 4:30 p.m. A reception will follow.

From 1961 to 1970, Barbash was a professor of art at Juniata before becoming a professor emeritus at SUNY-Cortland. A respected painter and etcher himself, he has returned to Juniata to exhibit his own work several times, but this collection is the first time he will be sharing the work of others with the College. However, the exhibit includes one piece by Barbash, a triptych entitled, "The City."

Barbash began collecting art over 50 years ago while still a student at Bard College. He admired the works of his teachers, but didn't realize he could afford art.

"I always wanted a memento of people I really loved or whose attitude and work I loved," Barbash said in an interview with Andrew C. Weislogel.

The exhibit contains over 40 works collected from artists with whom he has studied, taught, shared studio space or admired. The collection has pieces that range from etchings to lithographs to oil on canvas and include works from artists such as Louis Schanker, Neil Welliver and Michael Mazur. It debuted at the Herbert F. Johnson Museum of Art at Cornell University.

Barbash describes his collection as a library of works with a wide range of subject matter as well. The works have the potential to be forceful and commonplace, harrowing or whimsical. But beyond all else, the works have been described as "simply, lushly beautiful."

He studied art at Bard College before earning his bachelor's and Masters of Fine Arts of Painting from Yale University.

Mozart

continued from page 12

decrease in activity. This part of the brain is associated with planned actions and self-censoring. It is also responsible for motor planning, organization and regulation. Researchers suggest that improvisation while playing an instrument leads to lowered inhibitions and the ability to spontaneously and creatively produce music.

In addition to the changes in brain waves and activity, music also affects the autonomic nervous system and heart. Athletes have learned to take advantage of this by listening to "pump up" music before games. "Jock Jams," anyone? The increase in heart rate helps to prepare athletes physically and mentally.

Music also has therapeutic benefits. The field of music therapy has grown in recent years. According to the American Music Therapy Association, music therapy has several goals including: promoting wellness, managing stress, alleviating pain and expressing feelings. Activities can range from playing the guitar, to singing or writing song lyrics.

So the effects of music on us are profound. Music can be used to control and influence our emotions, heart rate, brain activity and spontaneity. So consider yourself lucky that Reingold lets you listen to your iPod while taking your tests. And before that next O-Chem test crank up that stereo and sing. It will help de-stress you or even help increase your memory. Fingers crossed.

Fall choral concert

Andrew Waplinger / Juniatian

Juniata College Concert Choir members smile as they receive a round of applause following one of their pieces during their fall performance in the Halbritter Center for Performing Arts on Nov. 9.

Head football coach resigns under pressure

Sarah Ruggiero

On Mon., Nov. 10, Darrell Alt resigned from his head football coaching position. Alt was a member of the coaching staff for the past seven years.

Alt completed his head coaching career with a 5-45 record, including a 1-9 record this season. He has a 10 percent career winning average.

According to a College press release, president Tom Kepple said, "In his seven years at Juniata, Coach Alt dedicated himself to our student athletes admirably, and for his efforts he has my thanks and the thanks of the entire Juniata community. Darrell has led the team to improve its performance, providing an excellent foundation on which the next head coach can build. We will now work as quickly as possible to fill the head coaching position, to continue the good work Darrell started, on the way to returning football to the winning tradition for which Juniata athletics is known."

Ultimately, Alt was given a five year time period to prove his coaching abilities. Originally an assistant coach, Alt took over head coaching duties during an interim period prior to the 2004 season. After a year in this position, he was named the official head coach.

Concluding his interim year, Alt was allowed two years to adjust and recruit, another two years to establish himself as a prominent coach and acquire staff members and an additional year to perform successfully.

"I regret that a man that I respect and admire will not be coaching this football team anymore," said athletic director Larry Bock. He also said that he regrets that everyone did not do more to prevent this. "This isn't the accumulation of the past few years, it's been the past 20 years," said Bock.

In a conference Monday involving the football players and staff members, Bock attempted to explain the reasoning behind the decision.

"He said that it was the accumulation of losing seasons, not the way this year's team played, that caused the administration to feel a new coach was needed to take the football program to the next level.

Many players are upset about Alt's resignation and believe that Alt's resignation was forced. Players are upset that their opinions were not valued and their dedication to improvement this year was not considered.

"I think it's a shame that such a good man and a great coach should be forced to resign at a time when the whole football program was gaining momentum and showing signs of turning the program around," said junior Matt Dunker.

"No one sees us at practice and they don't see the improvements we have made," said a senior player.

Bock said that Alt would never quit on the program. He told the team that the resignation was not Alt's choice, but would not reveal who called for it.

"In a proper world the people that it affects would be consulted. But that's not the way it works. Gripes go up and orders come down. And I'm here for part B of

Juniata's defensive line springs into action against the Dickinson College Red Devils on Nov. 8. Despite a strong second half comeback, the Eagles fell short 53-41, dropping its season record to 1-9.

Season ends, coach resigns

Team disappointed about both

Tyler Sasala

"Disappointing," "frustrating" and "annoying" are some words you may hear a Juniata College football player say when he describes the 2008 season. But one word you won't hear him say is "unsuccessful."

There is quote in the movie "Friday Night Lights" that says "There ain't much difference between winnin' and losin', except for how the outside world treats you." Even though our record was 1-9, and that's how everyone but the coaches and my teammates see us, we know that it was a successful year and we did a lot of great things together.

The final week of the season was a week of firsts and lasts. For 40 freshmen it was the first time a season was coming to an end. It was the first time they could say, "It's the last full padded practice" or "It's the last game of the season." But for 10 seniors it was a week of lasts. It was the last time they would step on a practice field as college football players and the last time they would strap it up on a Saturday.

Senior wide receiver Chad Steiner commented on his final week. "It's really bittersweet. Every day you play football you never think it will end. Now that it is, my body has told me it's ready to be done, but my mind never wants to stop playing. Each day this past week after practice, it sets in that it's one more [day] closer to never putting that helmet on again."

When asked what he'd take away from his years as an Eagle, Steiner said: "After Saturday, all the memories I've made with all the great guys I now call family will be what I'll never forget. We are lucky to play this sport; if it was so easy, everyone would do it. Not to be cliché, but that's so true. Everything at the end gets put into perspective. A football team is a family and through these years in college I have made the best family a guy could ever ask for. That's all that matters in the end, the relationships you make and the memories you won't forget."

As we move into the offseason the 2009 campaign is full of questions that need to be answered. The biggest question mark is who is going to be our coach. Before the last game Coach Alt was asked to resign by the administration. As a team we felt blindsided by the situation, and disappointed that they [administrators] would make a decision like that, especially after a season where we were starting to build into a great football team.

Sophomore Ronnie Shrift said. "It's a decision that is disappointing and disheartening; Coach Alt recruited me personally and had a great personal relationship with me as well as my teammates. Coach Alt definitely will not be forgotten anytime soon. With the conclusion of [Saturday's] game, the team will have to rely on each other now more than ever."

The next biggest question is who is going to lead our offense next year as quarterback. Whoever the guy may be, he will have to fill the shoes of statistically the greatest quarterback to ever wear a Juniata College uniform. Jay Leonard threw for 7,610 yards in his career, 477 of those yards came in our last game; a 41-53 shootout with Dickinson College.

Offensively, we graduate four seniors, and on defense we graduate six. Six of the 10 graduating seniors are starters. As a team we will return eight starters on offense and eight starters on defense. However, we will look to our younger guys to step in and fill key positions. In a season that we relied on a lot of freshmen to step up and take on important roles, moving forward, we will need them to step up even more as sophomores.

This offseason is definitely going to be different for our team. The coaching change could really change our program from top to bottom. As of right now, there isn't a single coach on our staff that is guaranteed to come back, which could really mess with the progress that we have gained. As a program we are disappointed with the decision and the situation. But we also have an obligation to continue what Coach Alt began to build, and we will…because you never forget what your family has done for you.

Women's volleyball goes mountain climbing

Team looks to peak at the right time

Michelle Morchesky

Our season has not been picture-perfect. Littered with losses, we have experienced many valleys in our performance. But with the regular season over, we are entering playoffs with a new sense of anxious determination.

Our sense of desperation is apparent in every practice. We have three weeks to pull ourselves together in the strongest way possible. Three weeks. The past year of training, conditioning and lifting have been for these next three weeks. For those of us who were on the team for the 2006 season, a winning feeling is still fresh. Yet the memory of a national championship is distant enough to make us hungry for a title. We began the playoffs and our quest for the national title by winning the Landmark Conference championship over Susquehanna on Nov. 7. The ascent of our first mountain.

Perhaps you have seen the shirts that have three mountains and the phrase, "The ascent" around campus and wondered what it means. To us, mountains are a symbolic figure of our playoff run for that Nov. 22 national championship match.

Before every game, we have a team meeting to go over the game plan. During playoffs, there is an addition to our pre-game ritual. At practice the day before a playoff match, Larry assigns a "mountain" to one of the players. For the Landmark Conference playoffs he typically assigns the highest mountain in Pennsylvania or the highest mountain on the East coast. These mountains are meant to symbolize not only the difficulty of the upcoming match, but the idea that this mountain is just one ascent closer to our ultimate goal.

The player who is designated a mountain researches everything she can find about that mountain and presents it to the team before we leave the locker room on game day. The player fills the rest of the team in on the elevation of the mountain along with facts like the weather conditions, good times to visit and if there are any perilous obstacles on the ascent. Oh and how could I forget? We also require a picture of the mountain as well. We prefer hand-drawn to computerized images.

As we move from the conference to regional playoffs, the mountains become higher and more treacherous. By the time nationals come around, we are climbing the highest mountains in the western hemisphere. But there is no mountain that rivals Mount Everest.

Mount Everest symbolizes the national championship match, the most dangerous, yet most rewarding of ascents. Many teams have tried and failed before us. The risk is great. An entire season hangs on the outcome of one match. If the ascent fails, it brings devastation, but it is the possibility of a successful ascent that drives us everyday in practice. The reward of climbing Mount Everest is a feeling that cannot be explained. It is the ultimate victory, the last frontier in college sports.

For those of us who have experienced this before, reading this article brings chills to our skin. We strive to achieve that feeling again, not just for ourselves, but also for the players that came before us. They are the ones that made our success possible. We strive to give the younger players the same opportunity we achieved two

continued page 19

Andrew Waplinger / Juniatian

Freshman Collin Wallace (18) goes for a kill against Susquehanna University in the Landmark Conference championship match on Nov. 8. The Eagles beat the Crusaders, 3-0, to take their second Landmark title. Juniata has won 94 straight conference tournament matches dating back to 1980.

Landmark Champions: Shaky season ends in important victory

Joyce Eveleth

It was amazing we even made it here. After an inconsistent and often heartbreaking beginning to our season, we were once again competing against Catholic University for the title of Landmark Conference Champions. Once again, we came out victorious.

Sophomore Paula Price is credited with both the goals in the 2-1 double overtime win on Sat., Nov. 8. The first came off a corner, assisted by freshman Caitlyn Bowman late in the first half. The second goal was not made until the second overtime and was assisted by freshman Meghan McGlone.

Although Catholic held a 17-5 advantage in corners and an 11-3 advantage in shots, relentless determination ultimately proved that we held the real advantage.

The victory could not have been sweeter for seniors Abby Funk and Erin Smith. After losing a base of seniors last year and gaining 19 freshmen, there were many doubts to the success of our season.

"Nobody thought we could do it but us. We never gave up, even when other teams would have. It was a perfect ending to senior year," said Smith.

During the season there were stretches of losses that could have deterred us from our ultimate goal of winning the conference. Yet, key conference wins earned us a spot in playoffs.

We entered conference playoffs as the third ranked team. Although we lost to both Catholic and Susquehanna Universities in regular season, we defeated both teams when it really counted.

"We pulled it together when we really needed to," said junior Dani Stump.

"No JCFH team has had so far to come in one season. We came into playoffs with a record of 7-12. Very few teams with this record have a championship mindset.

Nobody thought we could do it but us.,. it was the perfect ending to senior year

But I don't think for one second we believed we couldn't do it," said Coach Caroline Gillich.

Our victory over Susquehanna University in the first round truly encompassed our traditional cheer of "a winning team beats with one heart." We utilized our continuous passing game and capitalized on offensive opportunities, especially penalty corners.

Both playoff games started off with goals from the opposing team. Yet, continuing the underdog story, we answered with a succession of two goals.

Goals in our game against Susquehanna were scored off a corner by junior Melissa Gorman,(assisted by freshman Molly Snyder) and freshman Kim Amrod.(assisted by freshmen Shauna Deschenes and Erin Smith).

The championship game proved intensely competitive and at times frustrating. We fought all the way into double overtime. Sophomore Sam Smith said, "We came in as the underdogs and just put everything we had on the field. When we scored, we just collapsed on the field. It was incredible."

Our previous experience with overtime play aided in organization and endurance. When Smith was asked by the referee if she was tired, she simply said, "We're used to it."

The struggles, losses and upsets throughout the entire season finally came to resolution on Saturday. Both teams came onto the field with prior knowledge of championships, and our experiences as a team prepared us for this moment. Nothing was going to stop us from defending our title as champions.

Coach Gillich said, "We believed in ourselves, each other, and our team. We graduated so much knowledge. We had so much to learn as individuals and as a team. And we did it."

Once our victory was sealed, Kyra Lehmann led us in a finally appropriate chant, "Who am I? I am a champion!"

Men's basketball to reload in '08-'09

Looking to continue success on the court

Chad Kohr

The 2008-09 Juniata men's basketball team will have a very different look than last year's squad. The three top scorers are gone. Only two starters return. There are nine newcomers. Although these facts may sound like they add up to a rebuilding year, the men have other ideas.

After two straight 17-win seasons that included consecutive trips to the Landmark Conference championship game, the Juniata men's basketball team has established itself as a force in the conference. With the 2008-09 season approaching, the Eagles are preparing to continue their recent string of success.

Head coach Greg Curley feels like the team will need to formulate a new identity to continue this success. "Our players are going to have to develop new roles; we will have to be a more balanced team. I am really excited for seniors Dave Thompson, Justin Baker and Eric Muessler. They have been playing supportive roles and working very hard for their teammates over their careers, so I'm eager to see them step up as leaders," said Curley.

Senior Dave Thompson, a returning starter from last year, feels like the team will compensate for the loss of key players. "Last year we relied on one guy to go out and get 20 points every night. It will be more of a team effort to score this year; I expect the scoring to be spread out," said Thompson.

Along with the senior leaders, Curley looks for several newcomers to contribute immediately. "We told the freshmen that they have six weeks to put two years of work in, because they cannot play like freshmen. The term 'inexperience' is not something we will use and is not an excuse," said Curley.

This preseason has been devoted to hard work and developing chemistry among the returning and incoming players. Senior Justin Baker, a returning starter, says the team has focused on building trust and adapting to playing together. "We are trying to get the young guys adjusted to the way we play. Things look promising. We have a lot of young talent, we just have to learn how to work together," said Baker.

Baker will provide size and consistency in the paint. He was the second-leading rebounder, team leader in blocked shots and shot 51.5 percent from the field in 2007-08.

Despite the loss of the three top scorers, the current roster boasts a formidable combo of outside shooters. Senior Eric Muessler and junior Jeff Berkey shot a solid 39 percent on a combined 146 three-point attempts last year. These two will be looked at to step up from their supportive roles and be relied on every game to put points on the board.

Thompson, whose defensive intensity doesn't show up as much in the box score, understands what

continued page 19

Junior Dave Thompson (32) looks for an open teammate during a preseason scrimmage versus McDaniel College.

Women's soccer focusing on consistency for future seasons

Squad learns from its mistakes

Kristen Penska

Our season is not over yet.

In fact, we are up for a possible bid into the ECAC conference tournament, which will give us more games as Thanksgiving break approaches. The ECACs are a chance to keep the glory of our team alive and to make a name regionally for what a great program we have. However, in the end, each of my teammates knows what we really wanted, and that was the Landmark Championship.

The recent loss to Moravian in the playoffs was frustrating to say the least. We put 12 overall shots on goal during the game, four of them corner kicks; none resulted in a point. Two goals were scored on sophomore goalkeeper Lauren Auster-Gussman; the team could have been prevented both.

This defeat, and many others during the year, left us scratching our heads. But now it is time to learn from our mistakes. We have to look toward next season with optimism. Most of all, we need to focus on winning whatever challenge we are put up against and on being ready at every match.

"Our fall season has been filled with spectacular achievements, but equally spectacular failures. Now we need to focus on being more consistent," said head coach Scott McKenzie.

And he is right. When we show up, we are hard to beat. Victories against nationally ranked Gettysburg and Dickinson prove that our team is not something to ignore. However, if we are not prepared when the match starts, we are almost always destined to crumble. Stunning losses against Moravian, Catholic and Scranton showed us that.

Nevertheless, the fall season was not full of only frustration. Every class grew more confident in their abilities and understood more as the year progressed.

"Each of us learned a lot about one another. We learned what will happen if we don't train, and what will happen if we don't get along. As a freshman, I had no idea what was going on, and most of the time I felt out of the loop, but this year I am right in the mix. Now I am a part of every loss and every win," said Auster-Gussman.

Though there were confrontations and, at times, we were not the best of friends, we came together to make the season a memorable one. For the second year in our history, we qualified for the Landmark Conference playoffs.

This year, two graduating seniors left their marks and contributed to this legacy. Christine Schott was a part of our solid defense for four years, and scored her first goal in her career in our 2008 season opener against Elmira College. Alissa Murphy fought hard and was a part of our aggressive midfield for four years. Her solid foot skills calmed the midfield when situations became stressful.

Though neither player held captain status, both led the team with their positive attitudes, great performances on the field and admirable achievements in the classroom. They were a part of the soccer team when talk of making the playoffs was barely a whisper, and they helped carry the program to the success it has experienced today.

When asked what their favorite moments were with the team, they could not respond with one defining thought. They love each tradition that comes with being a women's soccer player at Juniata College; particularly preseason scrimmages, hiking up 1,000 Steps, the overnight trip at Raystown Field Station and breaking a piñata before every conference match.

With a loss of only these two seniors, our team's future is not in shambles. With large junior and sophomore classes most of the starting line-up will return in 2009.

Therefore, it is time for the underclassmen to begin training mentally and physically for next year. Injuries this season have proven that we need to be more durable. If we wish to continue beyond the first round of the playoffs, we have to ensure that we are as healthy and strong as we are at the beginning of preseason.

The challenging competition we face in many future matches requires that we condition and lift throughout the holiday and into the spring. With a solid lifting program from Coach Doug Smith and weekly conditioning and swim workouts with assistant strength and conditioning coach Matt Huntsman, our team has the opportunity to be the strongest in the conference.

We plan on implementing a new winter program to maintain our soccer skills as well. While we would usually travel to Altoona to play in an indoor league, this year the men's soccer team will join us for scrimmages at Juniata. This will increase our foot skills and our intensity.

Next fall season can result in success if we mentally and physically prepare ourselves for the task. We cannot expect to get farther in the Landmark Conference if we cannot maintain consistency. Hopefully each of us will dedicate time and effort to this goal, and ensure victory for the Lady Eagles in 2009.

Seven freshmen to contribute to JCWB

Erin McGinley

Five state championships in 15 state qualifications, 14 district championships, 35 tournament championships and a whole lot of passion. This is what seven freshmen bring to the Juniata College women's basketball (JCWB) program in 2008-09.

The freshman basketball players, affectionately known as "Scooter Girl," "Knee Pads," "Anne Hathaway," "Marathon Runner," "The White Russian," "Colorful Headbands" and "Pinkie" were recruited to our program following our 18-10 season last year. Our 2007-2008 campaign included a Landmark Conference runner-up finish and an at large bid to the NCAA tournament, making it the second most successful season in JCWB history.

This year we return three starters, senior captains Kelly Ashcraft and Claudia McDowell, and sophomore Jen Hnatuck. The returning roster also includes two more seniors, one junior and one sophomore—who all saw some playing time last season. We also brought in an eligible sophomore transfer from Shippensburg University, Jenny Cunningham, who brings collegiate experience from the Division II level.

The coaching staff is pleased with the make-up of the 15 person roster, even though half of them are newcomers.

"All seven [freshmen], I don't think we've ever had a whole group work [this] hard from the start. They've all stepped up, gelled as a class, a meshed with the existing team," said assistant coach Shawna Little.

Head coach Danny Young-Uhrich and her assistants Little and Anne Millar all return to the coaching staff, bringing a combined 12 years of experience to the team.

"We're a new team despite our returners, but I still expect to do what we did last year and more. We just have to figure out what works and put it together. It's a work in progress," said Coach Young-Uhrich.

Not only did we graduate a big part of our team, but also all of the mediocre expectations of JCWB. Last year's five seniors took us from a 5-19 record their freshman year to an 18-10 record in their senior year. The graduates passed on their pride and their ability to do more when someone thought nothing else could be done. Our current captains have to continue that legacy, using their leadership and ability to communicate to motivate the new team.

With the season beginning on Oct. 15 with no games scheduled until a month later, you would think that practice would be repetitive and boring. This doesn't even come close to describing it, especially when we have two practices a day.

Some of our "favorite" practice days include specifically sequenced events in which no one could talk during the drills and then two hour competition days.

In basketball, it is necessary to be able to communicate verbally. Ironically, we improve in this area by doing silent drills. An onlooker from the mezzanine might think that the coaches left us on our own with strict instructions to run around the gym with basketballs flying everywhere, including directly into faces. This difficulty of this drill reinforces Coach's words: "You can't do it unless you open your mouth." Another favorite practice day is filled with two hours of straight competition. Points are tallied for everything. No ball goes loose for long because two players are already chasing it down. This occasionally ends up with a few body slams against the end mats, but these are the bruises we're the most proud of. We're a tough team and we're not afraid to step up.

Both of these practice days hold something in common. They are team building days and that is exactly what our team needs the most. Building chemistry through communication and playing will only make our team better. To build new chemistry with half of the team can be overwhelming at times, but the freshman class is definitely putting its best foot forward.

"They're hard workers. It's tough to have high expectations for freshmen, but coming into this program they should be able to rise to the occasion and these freshmen definitely have the ability to do that," said McDowell.

We open the season at Gwynedd Mercy College on Nov. 15 at 2 p.m. Our first home game will be on Nov. 25 vs. Penn State-Altoona at 8 p.m.

Swim team: slow start, great hopes

Kevin J. Campbell

Last year the women's swimming team, with only four swimmers on the roster, finished last in the Landmark Conference. This year the team has three times as many swimmers and a new head coach with a fresh philosophy.

Coach Tom Benoit's goal for this season is to bring the Eagles "out of the basement of the Landmark Conference." He plans to do this with an intense practice regimen that consists of eight practices a week, including meets.

Benoit was named the head coach in early August, which did not allow him enough time to recruit new swimmers for his first season. However, he has already started recruiting for next year.

In 2008-09, the newly elected captains, Kristin Musselman, who is the only senior on the roster, and junior Paige Black will help lead this emerging team. Benoit believes that, behind these leaders, his team will be able to work hard and finish better than last place in the conference this year.

In addition to the great leadership, Benoit feels that the freshman have been adjusting well to college swimming and have been able to manage their time with classes and the tough practice schedule.

The Lady Eagles have started off slowly with three losses in non-conference meets. Benoit thinks that the first few meets went as expected and understands that the team is not where it wants to be. He said that improvements can be made in the swimmers' stroke techniques, turns and breathing patterns. He is incorporating videotaping with underwater shots to improve the team in hopes of having more first place finishers.

"I think the season is going really well, and the new coach is doing a great job. We have such an improvement in numbers over last year, and we are looking forward to swimming well at championships" said Black.

Benoit graduated from Westminster College in 2008 where he majored in broadcast communications. His swimming background began in high school. During his collegiate career he received first team All-Presidents Athletic Conference honors, as well as second team All-PAC honors.

Major changes for future of football

continued from page 16

that," said Bock.

President Kepple, Provost James Lakso, Dean Clarkson and Bock will combine to interview for a new coach. Bock will make the final hiring decision. He told the team that the new coach will be from outside the program and have no prior affiliation with Juniata.

Juniata has hired the firm Alden and Associates, Inc., a company focusing primarily on hiring athletic coaches, to conduct a national search for a new head coach.

As of now, the administration is relying on potential coaches' experience and reputation for interviews. Many players fear the administration is relying on a group of people to select a new coach, yet those people don't know what qualities a new coach should possess. Lakso is the only one on the hiring committee with football experience.

After the players revealed these worries, Bock agreed to allow the team to create a profile of a prospective coach. They may go as far as having a focus group where players can consolidate their thoughts and opinions.

The new head coach will appoint all new staff members or keep past assistant coaches. With the loss of a coach, current players are worried about recruiting. Bock said Juniata is prepared to "take a hit recruiting wise." Former defensive coordinator, Tom Gibboney, will work with current recruits until a new head coach is appointed.

Bock released a timeline for the selection of a new coach. On Nov. 24, interviews will begin, calls will be made and applications will be accepted. By Dec. 19, the administration plans to have a selected a new coach. He said it's not a promise, but a plan.

Bock understands that players are upset and those who came into the program to play for Alt may consider transferring. At the team meeting, he told players, "If you're going to transfer, we're going to do anything we can to help in that regard. We'll do the releases. We'll waive the transfer eligibility requirement. We'll make sure you're in contact with the right people. We'll help you work through that if that's your choice."

Bock said this loss is part of reality but encouraged the team to stick together.

"Know what realities are. Know what you can have control of and of what you can't. All you've got is each other right now," said Bock.

We have to accept the business part of the game, but it will give us a great opportunity for a fresh start to move on. Wins and losses do matter. This change will give us a chance to win," said a player who wishes to remain anonymous.

Alt currently accepted a role as the associate assistant of athletics under Bock and will remain on campus.

Men's basketball

continued from page 17

is expected of him and his fellow returning players. "We have big shoes to fill, but we are up to the task. We are all capable of stepping up at crucial times," said Thompson.

Players that did not see much playing time last year will also play significant minutes. Baker feels that sophomore Johnny Martinez is ready to take on much more responsibility. "Martinez is a natural athlete and he learned a lot last year. A lot of guys are going to have different roles this year, but I think Johnny's defensive ability will give him the opportunity to fulfill a hole in our lineup," said Baker.

Coach Curley's goals for this team are no different than any other year. "Our goal is to develop into the best team in the league. We want to prepare ourselves by putting the most time in so when we hit the floor, we deserve to win through hard work," said Curley.

Baker's goals are similar to Curley's. "We want to be the toughest team every game; by doing that we'll have a shot to win. Our main goal is to win the Landmark Conference," said Baker.

With the season opener on Nov. 15 at Penn State Altoona coming up, Curley is confident that he is putting a tough team on the court. "We are getting better. Our guys really want it. This team is committed to being successful," said Curley.

continued from page 16

years ago.

Thinking about Mount Everest and that Nov. 22 date with destiny consumes our thoughts. However, we must focus on the games that will get us there first. There are a lot of challenges that need to be met before we step foot onto the court at the end of November. We cannot look past the teams that dare to get in our way. We prevailed in the conference championship, but we must maintain our focus through next weekend's regional playoffs to even make an appearance at Nationals.

The "Juniata" on the front of our uniforms brings great animosity to the athletic stage during playoffs. Everybody wants to be "the team" that beat Juniata and ruined its playoff run. We welcome the challenge. We dare our opponents to play their best games. We walk onto the court with a swagger and scream, "Try to beat us, we are Juniata!"

There is no stopping us now. With every loss during the regular season came a well-learned lesson. It's time to show the nation what we've learned.

ON THE FLIP SIDE

by Bennett Rea

No doubt you've seen the massive collection of camping enthusiasts in front of Ellis. This, as we all know, is the ritual of tenting for Madrigal. Yes, those random and delightful air horns will go off and people go running from their tents, like kids on Christmas. But this is much more important than Christmas. Not missing a roll call will get you rights to the famed Five Golden Rings table.

Now, tenting is not exactly an easy task, so there are some requirements that a tenting person should meet before venturing all the way out to the front of Ellis.

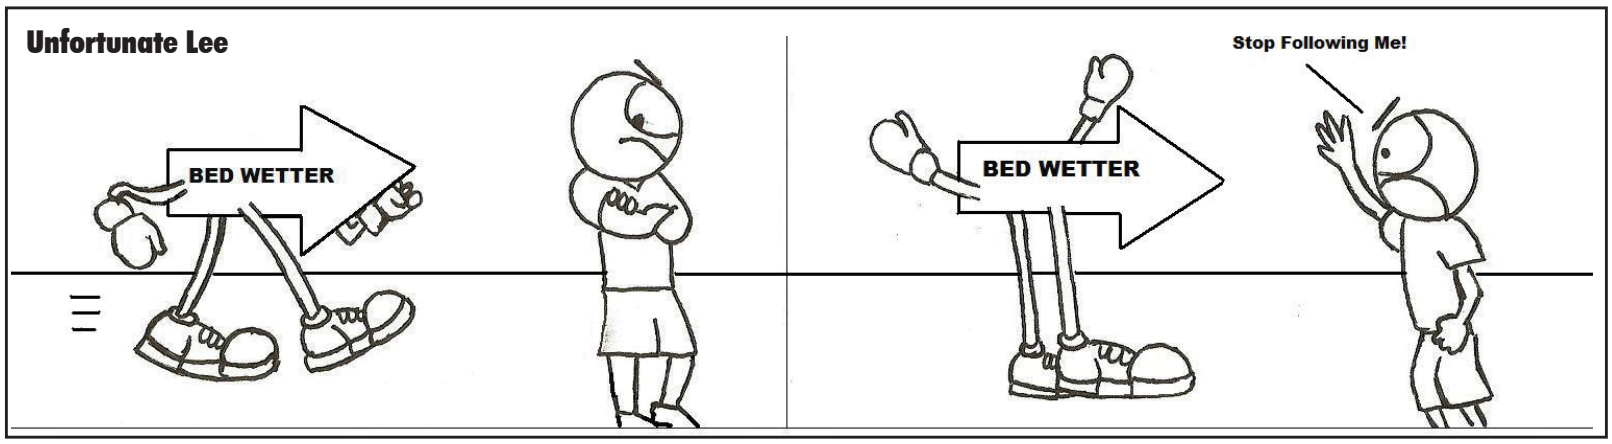
Number One: You must value a Madrigal table over your GPA. Somebody has to sleep in that tent overnight as the horns go off, and there's a small chance you'll oversleep and miss a class. Or three. However, odds are you won't oversleep and miss a class because in order to do that, you'd have to fall asleep.

Number Two: You must value a Madrigal table over your health. As most of you may have noticed, it is, in fact, November. This means that winter is fast approaching, and I would go out on a limb to say that the majority of the tents in front of Ellis do not contain furnaces. I'm not saying you can't survive the night. It's just better that if you're tenting, you are actually a polar bear.

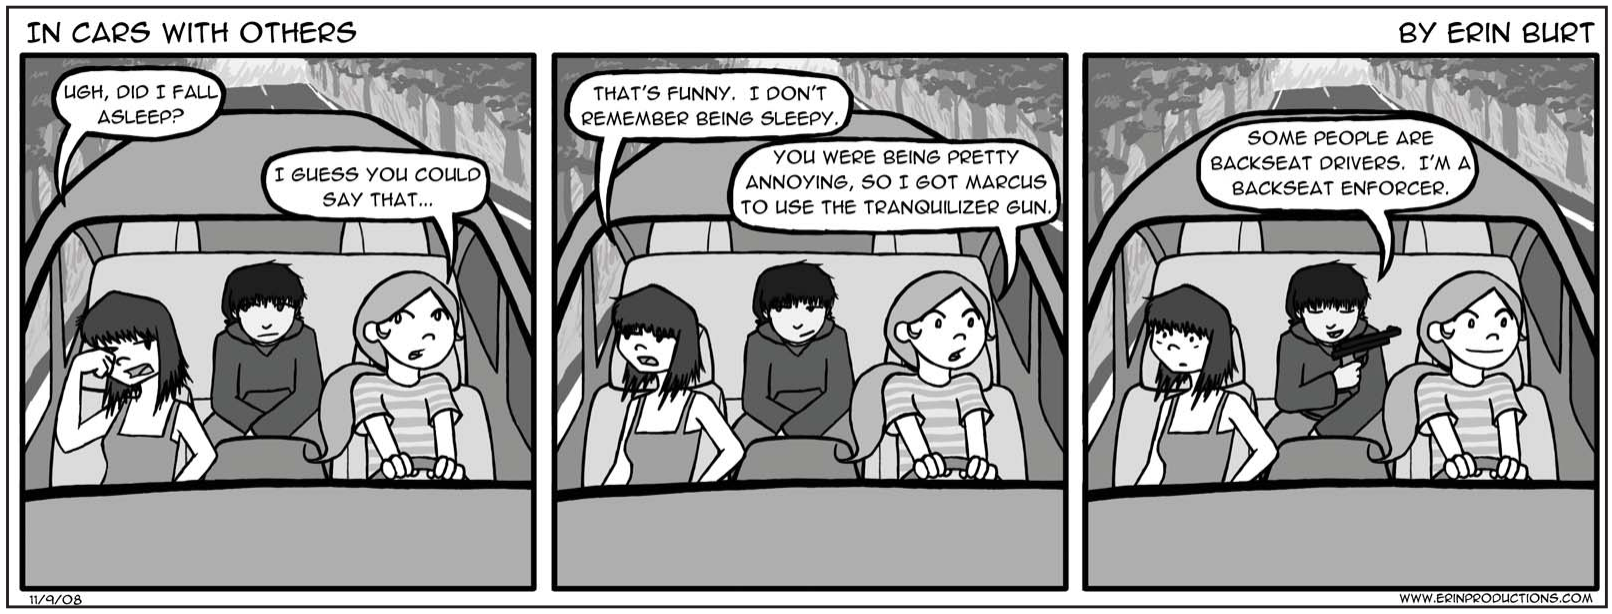
Number Three: You must be fast. When that horn goes off, you've got to shake the icicles off of your body and bolt out of that tent. You would think that track athletes and runners would have the advantage here, but unfortunately for them, they will be weighed down by 60-80 lbs. of extra blankets and clothing to keep their slender selves warm.

Number Four: You have to be crafty. I know there are some tents out there that have luxuries because people are using very long extension cords. I have no clue where the hell they found enough cords to be able to do it, but now people can have stuff like TV, lamps, a Wii and for those larger tents, an electric stove.

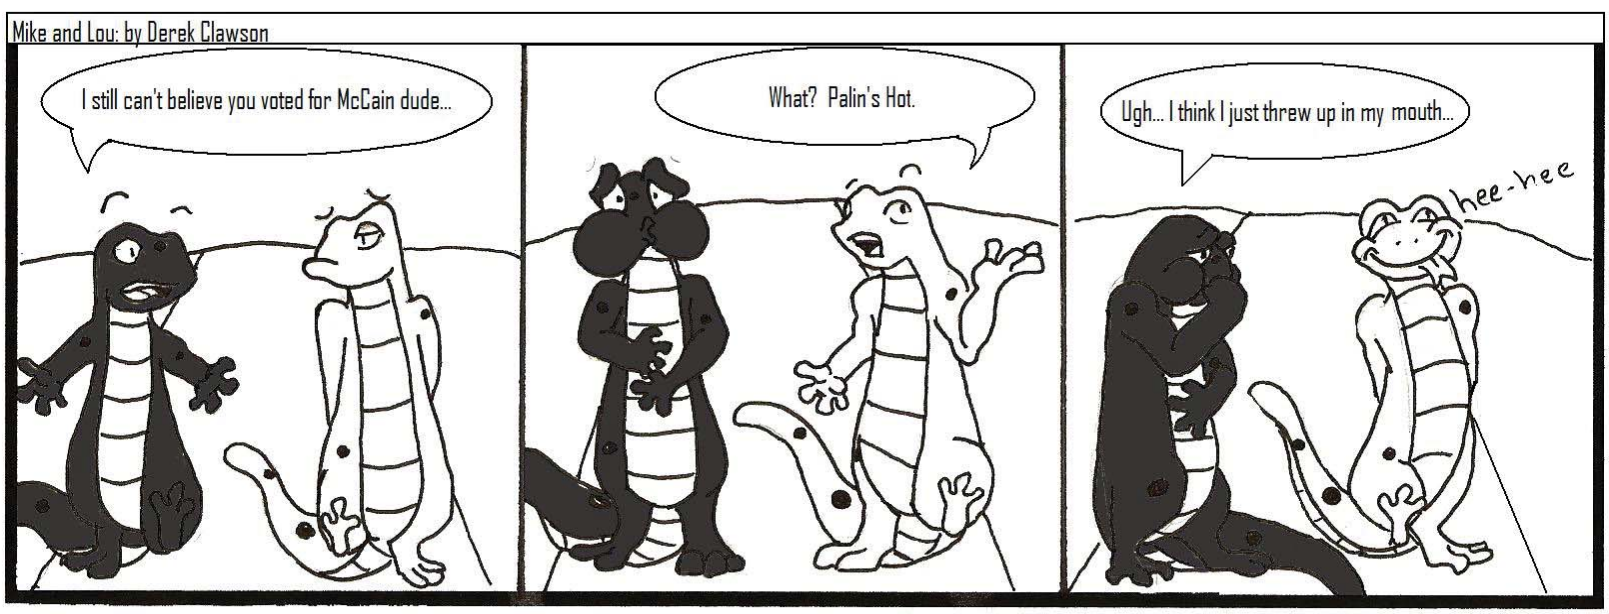
Now that the ideal tenting person has been described, I think it's really important you know the advantages and disadvantages of tenting before you go out for two more nights.



Advantage: You form great bonds of friendship with fellow tenting people.
Disadvantage: You may freeze to death.



Advantage: You'll most likely get a good table at Madrigal.
Disadvantage: You may freeze to death.



Advantage: You're very close to Muddy, so if you're ever hungry you can get there nice and fast.
Disadvantage: You're also very close to Baker.

Advantage: You get to say you successfully tented at Juniata for Madrigal!
Disadvantage: No disadvantage in that! (Awwww. Hold onto this warm and fuzzy feeling; you may need it out there in the tents.)

So if you were thinking about tenting in these final two days, now you can be prepared. I'm not really worried about offending any of the people tenting out there, as it is already Thursday and unlikely that any of them have survived.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

NOVEMBER 25, 2008 | JUNIATA COLLEGE | VOLUME 90, ISSUE 5

Two students dismissed from residence halls

Multiple write-ups led to rarely used disciplinary action

Christina Gongaware

The banning of two students from residence halls for repeated disruptive behavior has led some students to question Juniata's judicial system.

Dean of Students Kris Clarkson said that although this specific punishment is not often used, "If they [students] are causing a disturbance and have a blatant disregard for College property, we will do all we can so that this will not happen again."

The Pathfinder lists dismissal from residence as a punishment for "willfully causing damage or destruction in College residences or for repeat minor misconduct in College residences."

East Hall Resident Director and Assistant Director of Residential Life Matthew Lovell said that the repeated nature of these students' actions led to the judicial sanctions.

"My main problem was that I had spoken to them days before," Lovell said. "They had been loud a lot lately and had been warned after some troublesome behavior beforehand. This happened in the middle of the week and something had to be done about it."

Lovell also noted that both students were extremely intoxicated. "The situation became endangering when there was broken glass in the hallway," he said. "We are not trying to write people up, but there was an incident and it technically had to be reported." According to and the students' roommate, one of the students had already been on social probation at the time of the write-up. The other had been written up four times the previous year. The reasons for write-ups ranged from fleeing from the JCPD to an off-campus theft of a lawn chair. Although Clarkson said that he could not speak about specific cases, he did say, "Students who are creating a disturbance have forfeited their right to live on campus. Their parents will then have to pay for these kids to make other accommodations, which can be costly and difficult."

According to their roommate, both students struggled to find other housing. They now have relocated to friends' houses off campus. The students' roommate does not believe that the two students deserved the punishment they received. "Obviously you could say I am a little biased because I'm their friend, but getting kicked off campus for being a little loud just seems ridiculous to me."

He stressed that the students were not causing a disturbance serious enough to cause a visit to the Dean's Office. "I thought that it was a pretty weak write-up myself," he said. "It was only about 10 minutes after quiet hours and you kind of expect these kinds of things to happen when you choose to live in East."

He also said that the two students were visiting in a room above whose residents did not mind them being there. "The [residents] tried to find a way to talk to the RD and tell him that they didn't care that they were up there, but it turned out to be pointless," he said.

"They didn't harm anybody and there has been a lot worse done on campus. Kids get caught with drugs and don't get as harsh of a

After a night of sad songs, senior Wylie Earnhart took the mic and made it better. He belted out the Beatles' classic, "Hey Jude," on his way to being named "Juniata Idol" on Nov. 22 in Baker.

Education professor takes stand against state board

Glosenger represents liberal arts colleges at hearing

Kristin Rodkey

The new teaching certification guidelines mandated by the state have been met with strong opposition from colleges across Pennsylvania. Representatives from different colleges were given the opportunity to voice their concerns during a hearing held Nov. 13 in the state capitol. The majority of the representatives at the meeting spoke against the new changes.

Kathleen Shaw, deputy secretary for the education department's Office of Postsecondary and Higher Education, defended the new guidelines by saying they will help provide more qualified and prepared teachers. She also said that school districts, principals and seasoned teachers were dissatisfied with quality of incoming first year teachers. Kathleen Biddle, assistant professor of education, attended the hearing and said that Shaw had no data to back up such broad claims.

Fay Glosenger, Martin G. Brumbaugh Professor of Education, was chosen to represent all private institutions within the state in the hearing. In her testimony, she disagreed with the claim that school administrators are dissatisfied with incoming teachers. She gave an example of one "administrator from Huntingdon [who] applauds the recent graduates and teacher candidates who work in his build-

Students pant for a pet-friendly campus

Large change in pet policy is 'highly unlikely,' according to administration

Alison Rihs / Juniatian

Sophomore Emily Miller holds her guinea pig, Buddy. The cuddly critter currently lives with a friend off-campus. Miller is one of the students who wish for a policy change that would allow small pets on campus.

Marie Boller

As the temperature plummets, many students dream of cuddling up with an absent loved one. For many, this loved one might be a dog, cat or hamster. In some cases, it may even be a snake.

"When you feel helpless and overwhelmed, having a pet relieves a lot of stress," said sophomore Emily Miller.

At present, Juniata has a fish-only policy in dorms and off-campus housing. Miller spearheaded an initiative to push the administration to allow other pets as well. "You can't hold a fish," Miller said.

Aside from the lively thread on the Arch forums, Dean of Students Kris Clarkson and Residential Life Director Tim Launtz have not been directly petitioned by students regarding the possibility of pets on campus. As an issue of concern, Clarkson said, "It's not even in my top 100."

Clarkson said that a change in policy to accommodate pets was "highly unlikely" to happen. Juniata's transient student population, including many students coming and going from abroad, would make it difficult to designate any specific dorm as pet-friendly. Even designating one off-campus house would place limitations on the room draw and be unfair to many students, Clarkson said.

Clarkson cited several problems that could arise from a pet-friendly policy, including allergies, pet-phobias, hygiene and pet abandonment over holiday periods.

In more recent years, however, an exception was made for a student with an animal behavior POE who was training a guide dog and kept it in her Cloister dorm room.

About a dozen colleges across the nation have a pet-friendly policy. Eckerd College in Florida, where one of Miller's friends attends school, allows pets under 40 pounds in designated dorm rooms, including snakes under six feet long. Eckerd has a strict policy requiring freshmen and transfer students to wait one semester before bringing a pet to campus. A pet council issues ID tags to all live-in pets and manages pet registration, requests and complaints.

Miller, along with many other students, feels that such a set-up could be feasible at Juniata. She suggested making one of the dorms or an off-campus house into a pet-friendly zone.

She said that having a pet-friendly policy might increase Juniata's appeal to prospective students for whom pets are important, and contribute to a friendly, communal campus atmosphere.

Initially, Miller wanted a policy change to accommodate pets like dogs and cats. She has since narrowed her proposal to include "small, caged, non-venomous animals," such as hamsters, gerbils, guinea pigs, rabbits, chinchillas, rats, mice, small snakes, iguanas and lizards, non-water turtles,

continued page 7

Lock system deemed a success despite trespassing incidents

Piggybacking and lack of reporting cause problems

Rob Schultz

It has been a year since the residence hall locks were installed. The administration has deemed them a success, but students have had some concerns with safety related issues, including non-students finding their ways into residence halls. Security related issues this year, popularly known among students as "creeper" incidents appear more common, despite the installation of the locking system.

One incident at the beginning of the semester involved an intruder in Sunderland Hall. An unidentified male who was approximately 30 years old removed an individual's computer. He then returned it to her roommate about an hour after taking it.

On the same night another safety incident occurred in the East Houses parking lot. Another unidentified male asked students if they wanted to party with him and asked them to get into his vehicle.

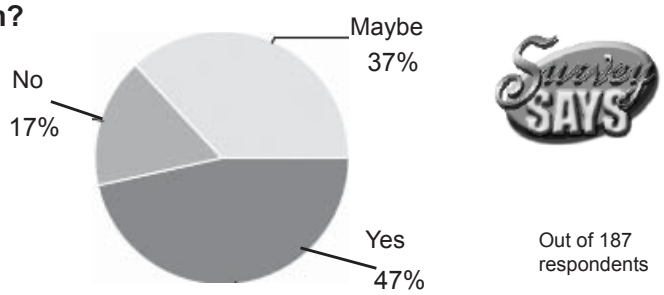
"Our biggest problem has been students allowing people to piggyback…We find very few doors propped," said Tim Launtz, director of residential life and public safety. Piggybacking occurs when a Juniata student holds a door open for a person walking behind her, allowing an unauthorized person to enter a building.

Piggybacking is the biggest threat to the lock system the College has in place currently. "Don't allow strangers into the building, or if there is someone standing at the door, don't you come in. Contact public safety immediately," said Launtz.

The most recent incident involved four individuals piggybacking into Tussey. When a resident assistant confronted them, three of the individuals decided to walk away. The fourth individual punched the RA in the face when the he tried to use his walkie-talkie.

Of the Tussey incident, Launtz said, "Three individuals were initially apprehended. The individual in question, who struck the RA in face, was able to avoid apprehension. Of the three detained by Public Safety, one was found to have four outstanding warrants for his arrest and is presently in the Huntingdon County jail. Another of the intruders was found to be in the possession of an illegal substance while being searched and was arrested. The third individual was found to have no outstanding warrants and was not arrested. The investigation is ongoing by both the Juniata College Public Safety Office and The Huntingdon Police Department."

Students' answers varied when asked how they feel about the locks here on campus. "I think that they [the locks] work for the most part. The only times they don't are when people are stupid and leave doors open," said freshman Marilyn Cobiseno.



"There have been some issues with the locks. I saw the Joker walking around Sherwood and he scared the (expletive) out of me… I knew he wasn't a student here," said freshman Harrison Grubb. According to students, a non-student was seen walking around campus dressed completely like the Joker, including the hair and face paint. Students said that the man did not appear to talk to anyone, but just kept stuttering and laughing as he walked through campus and other dorm buildings.

Another issue is that students don't report incidents immediately after the incidents have occurred, if they report them at all. "When somebody sees something, they don't report it immediately, and for public safety to maintain that effectiveness, we need to know immediately. Cold trailing it two hours after it happens doesn't help us," said Launtz.

Launtz feels that the lock system has been a huge success thus far. "We're pleased. It has been working and it's a credit to the students. For all the things we envisioned and thought that could possibly happen…it hasn't happened, and it's because of student cooperation," said Launtz.

When asked about future changes to the lock system on campus, Launtz said, "We will always be reviewing and looking at the things we could possibly do better, but I think you're going to see this locking system in place for several years before we look at something else."

Do you/would you hold residence hall doors open for others to enter those buildings even if you don't know them?

From Pennsylvania to Pennsylvania Avenue

Juniata alumnus to run for president in 2020

Alison Rihs

Patitsas ('07) has never planned several years into his future. He always preferred to live day by day. However, he is currently mapping out the next 12 years. Patitsas, who has always dreamed of holding a leadership position, plans on running for president of the United States in 2020.

Last year, while Patitsas was in Athens, Greece, he kept track of the U.S. primaries. He was captivated by Ron Paul, but unimpressed by the other candidates. He said, "Why can't we produce someone with a Nobel Peace Prize, someone with a legacy [for president]?" At that moment he decided to announce plans for his presidential campaign.

This past October, Patitsas rented a billboard on Route 22 for $650 to showcase his campaign. It read, "The Longest Presidential Campaign in History: Patitsas 2020. Calling Generation Y to the Countdown." The "Y generation" refers to the demographic of people born between 1982 and 1995. This time range varies depending upon the source.

2020 will be the first year that Patitsas is eligible to run for the presidency, but he said it is just "part of the spin on the marketing campaign to be the youngest president ever." As a result, he may wait until a later election in order to gain more experience.

According to Patitsas, "My first step is education and finding mentors, and going from there."

Patitsas began his Juniata career as a pre-med POE, but after being introduced to the Juniata College Center for Entrepreneurial Leadership (JCEL), he made the transition to entrepreneurship.

His Web site explains his plans to obtain a Masters of Business Administration (MBA) and law degree from "esteemed universities." He will then focus on raising money for his campaign.

To increase his popularity across the country, he will focus on "organic viral marketing." He said, "Most of it will be Internet Web-based."

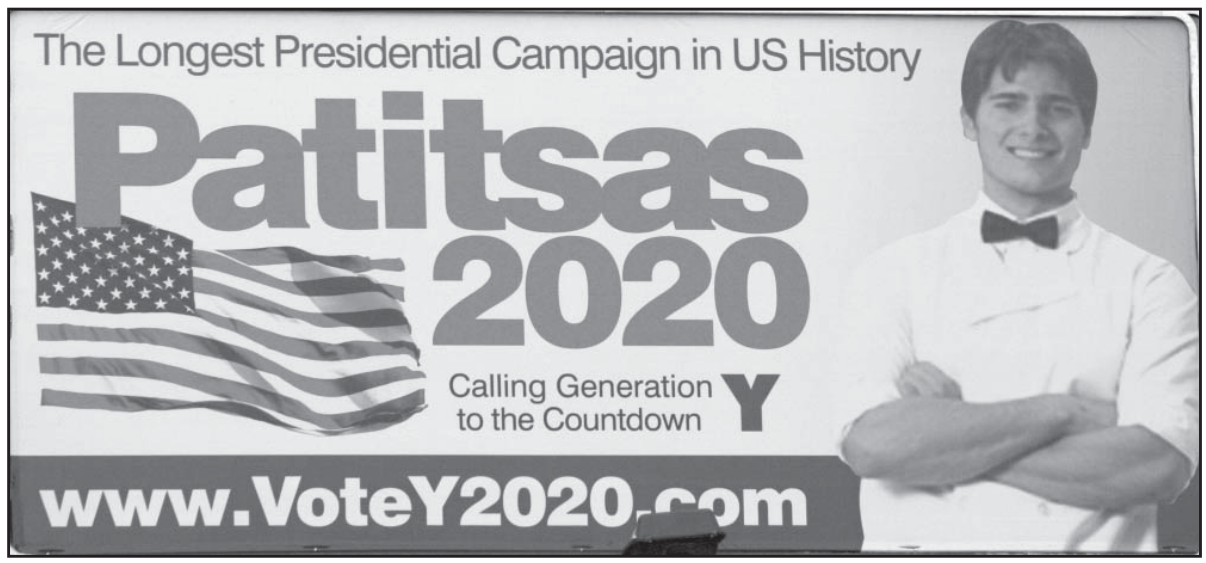
So far, Patitsas' campaign Web site has allowed him to gain some popularity. Since its creation, it has received 11,000 hits.

Patitsas expects to face many challenges on his 12 year road to the presidency. One difficulty, he said, will be "having people take you seriously…People expect very little of you. When you prove them wrong, you blow them away."

Although he lacks political experience, he wants to use his youth to his benefit. He said, "We have an advantage we don't even realize by being young."

In addition, he wants to "call America's bluff that anyone can run for president."

Patitsas believes he has many favorable traits that would aid his campaign. "My work ethic. I'm a man of my word. My public speaking has been a strength, too," he said. He also said that he appreciates different walks of life. This would allow him to relate to many types of people.



The political issues Patitsas would try to resolve as president are unclear. He said, "The political and global climate will be very different [in 12 years], but the concept of accountability will not change."

Though it will undoubtedly be a tough road, he is willing to devote the next decade to his campaign. "It's a huge burden. It's a life commitment, but if you break it into steps, you can enjoy it [the experience]."

He also said, "To be president at this time, you can only do better." Our economy is failing, and he believes that we cannot do much worse—we can only improve from here.

Patitsas knows that, through it all, he will receive much support from family, friends and colleagues. "I will be standing on the shoulders of others. They will be able to help me along the way."

To find out more information about Demetri Patitsas' campaign, visit his Web site at www.votey2020.com.

Andrew Meloney / Juniatian

Demetri Patitsas ('07) announced his campaign for presidency on a billboard outside Huntingdon on Route 22. Patitsas hopes that the initial $650 advertising investment will eventually lead to big returns in 2020.

Write-ups led to residence hall ban for two students

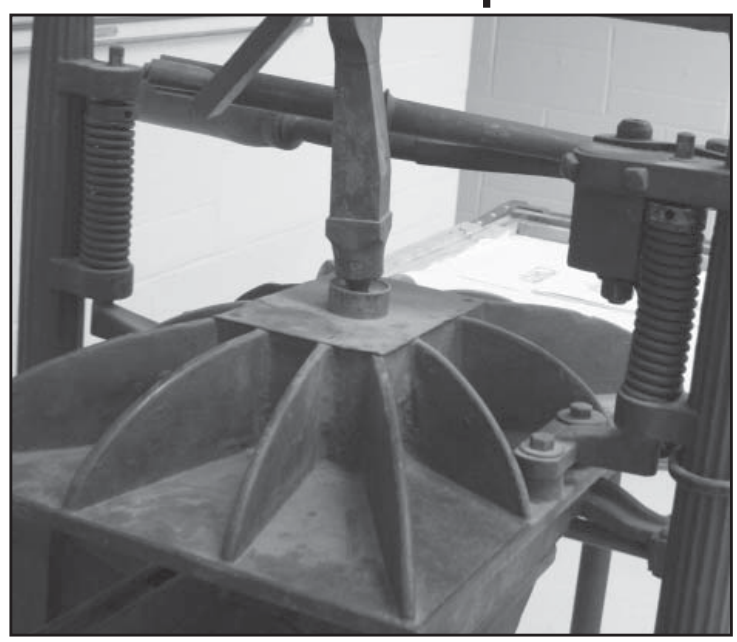
continued from page 1

punishment. I just think that for getting kicked out of the dorms, the reason should have been a lot worse," the roommate said.

Clarkson said that the judicial policy as a whole is "a holistic thing." He said, "There are definitely some circumstances that we take into consideration."

Clarkson denied that students whose grades are high receive different treatment from those who are struggling. He said that "just because a student is doing very well in school does not mean that his punishment will be any different than anyone else's." While both of the students were athletes, Clarkson said that athletes do not enjoy preferential treatment, and more likely suffer from a double-whammy punishment. "They are first punished by us, and secondly by their coaches. Athletes have a lot more on the line if they get in trouble than the average student," he said. Where a student stands in his or her academic career does have a bearing on the punishment. However, Clarkson said, "If a student is nearing the end of a semester or graduation, we try to let them at least finish out their term."

He also noted that if the offenders are honest and cooperative, that also has a bearing on the punishment that is handed down. Sophomore Jake Weller believes that the judicial system at Juniata can sometimes be unfair. "I know that they keep saying they have a zero tolerance for drugs or violence, but I don't see that policy being carried out fairly," he said. "I'm not really sure what they base some of their punishments on, but it would be news to me." Clarkson said, "We do work hard to be kind and considerate. It's not that we do or we don't like you, we are just trying to be as fair as possible."



How many disciplinary write-ups should a student be able to receive before s/he is expelled from the College?

Where on campus?

Andrew Meloney/ Juniatian

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz. Congratulations to last issue's winner: Charlotte Houck!

Education department fights new state certification rules

continued from page 1

Andrew Meloney / Juniatian

Professors Fay Glosenger (left) and Paula Beckenbaugh are working to stop new teaching certification rules.

ings." He said that the new teachers have helped his "district gain national and state recognition."

Several congressmen and women voiced their concerns that if teachers were unprepared for their first time teaching, the solution might be mentoring programs instead of mandating more undergraduate course credits.

Within her testimony, Glosenger said that she and those she represented support the goal of producing highly qualified teachers, but that they disagree with excessive credit mandates guaranteeing quality.

Glosenger said, "While standardization appeals to some, we maintain that a move to uniformity across teacher preparation programs will breed mediocrity and limit innovation."

Many colleges view the new guidelines as a way to standardize curriculum. The state argued this was not its main objective.

Glosenger expressed concerns about the negative effects the new guidelines could have on college students. "Liberal arts institutions attract students who want to combine teacher preparation with studies in another discipline or with a strength or unique program offered by the college, and these students also expect to graduate in four years," she said.

If trying to fulfill the new requirements, students will have little room for electives, errors or exploring different options. They will need to know when they arrive on campus if they want to go into teaching. Studying abroad will also be difficult if a student expects to graduate in four years.

Another concern brought up was whether or not students who earned their degrees in PA would be able to teach in other states. Currently 48 states accept the PA teacher certificate, but that could change.

Shaw addressed the concern by saying that the state will have to renegotiate with other states, but that she does not think it will be an issue.

No decisions were made at the meeting on whether or not the new guidelines would be changed; as of now the changes will be implemented next fall.

However, there is still hope that the guidelines could change or be delayed. The Pennsylvania Department of Education (PDE) issued these guidelines but did not go through a legislative procedure with the education committee, which is made up of congressional representatives. Therefore, congress never had the opportunity to vote on the new certification program. If the PDE has passed guidelines that should have gone through the legislative process, it will take a lawsuit by advocacy groups to resolve the situation.

Mike Fleck, Pennsylvania state legislator for the Huntingdon area district, also opposes the new certification program, saying that it takes away the autonomy of programs.

When asked why he felt the PDE was pushing so hard for changes, Fleck said, "Education is critical and it is easy to blame education [teachers] if students aren't doing well, but teachers can only do as well as parents do at home."

While Fleck agrees that Pennsylvanians want their teacher programs to be the best, he questions whether standardizing curriculum is the best way to accomplish this goal.

To help stop the changes from occurring, Fleck has sent a letter containing his concerns to the state board.

To fight these changes several Juniata students have already started doing their part. They attended the hearing and voiced their concerns. Fleck suggests that Juniata students contact other colleges and encourage their students to contact their local legislators about the issue. They could also write letters to Shaw expressing their concerns.

Senior Gina Piccolini, an education POE who attended the hearing, said that she would not have come to Juniata if it did not have the unified certificate. "And I think that if it was across the board in Pennsylvania, I would [have] definitely been looking at out of state education," she said.

Piccolini also said, "You come to a liberal arts school to get a well-rounded education, and with the new guidelines you are completely eliminating that."

Juniata is currently revising its curriculum in an effort to meet the new guidelines. The education department is working with other departments to create programs so that students would be able to meet the new guidelines while also fulfilling their liberal arts education.

To meet the needs of both current and new students the College will offer two different curricula, one that follows the old guidelines for current students, and one that will follow the new guidelines for incoming freshmen in 2009.

The education department has considered dropping or limiting the options for the Middle Level Certification. Biddle said, "As a department we have looked at the viability of offering the math and science at the middle level as well as the English and social studies."

As of press time, a firm decision had not been made, but will need to be made by this semester. The Middle Level Certification covers grades 4th through 8th grade but would require 120 education credits, which exceeds Juniata's limit of 63 credits for a POE.

Juniata has until the end of December to submit its intentions for the program in review and then the program itself must be submitted to the PDE in March.

Students win big in national and international awards

JC students earn scholarships and fellowships

Ross McMann

Juniata students are academically competitive for national and international awards. Below, the Juniatian has highlighted the national achievements of five exceptional students, referred to the newspaper by department chairs.

These five students have shown they can out-compete their fellow undergraduates across the country, and in one case even graduate students.

The following is a description about each of those students and their respective awards.

Travis Hull (Senior)
Summer Hill, PA
POE: Biology

Senior Travis Hull recently won the American Society for Microbiology's Raymond R. Sarber Award, a nationally competitive award scholarship that, according to the ASM Web site, "recognizes students at the undergraduate and pre-doctoral level for research excellence and potential."

Hull was also a recipient of the 2008 Barry Goldwater Scholarship Award. He is one of two Juniata students (see Zacariah Page below) to win this national scholarship, which was awarded to 321 students across the U.S. this year. This award is one of the most prestigious in undergraduate science.

Hull had a plethora of research experience to showcase in his application for the Sarber Award. His research experience started with an ASM undergraduate research fellowship for 2007-08 that funded summer research in 2007. He continued that research experience during his junior year under his research advisor, professor Jennifer Bennett, the von Liebig fellow in biology. Last summer, Hull was selected by the American Heart Association for a fellowship that provided funding for a summer of undergraduate research at Harvard Medical School.

A stipulation of the award is that applicants must give a commitment to further education. Hull is applying to MD PhD research graduate programs to start in the fall of 2009.

Emily Hauser (Senior)
Mount Lebanon, PA
POE: Political Science

Emily Hauser won an academic year-long Rotary Ambassadorial Scholarship to study abroad in Abuja, Nigeria. The Rotary Foundation is an international volunteer service organization.

"Their mission is to create peace and goodwill through understanding," Hauser said.

In Nigeria, she will be "an ambassador of goodwill." She received tuition for an entire academic year to study at the graduate program in political science. She will leave this upcoming August and stay in Nigeria for approximately 10 months.

Hauser will be work with an international partner rotary club in Abuja. Her application proposal was to volunteer with a university-run tutoring program to benefit elementary school students.

Hauser applied this past July and interviewed this past August. Once they had approved her, her application was sent to the national level where she was also endorsed.

Professor Emil Nagengast helped Hauser in her application process. "He [Nagengast] gave insight into the Rotarian foundation. He is very involved with the Rotary International program," said Hauser.

This scholarship aligns with Hauser's plans beyond her educational career which include a goal of working with international development in sub-Saharan Africa.

Andrew Meloney / Juniatian

Junior Molly Dendas, who was recently awarded a grant to complete work on copper isotopes, stands beside the x-ray diffraction machine used in one phase of her research.

Molly Dendas (Junior)
POE: Geology
Nazareth, PA

Last spring Molly Dendas and her advisor, geology professor Ryan Mathur, were looking to secure grant funding for a summer project through several institutions. Their efforts resulted in Dendas winning a grant from the Society of Economic Geologists (SEG), a professional society whose goal is to further the understanding of minable geologic ore deposits.

Dendas was the only U.S. undergraduate researcher to win a grant this year from the SEG. The SEG typically awards research grants to help students with their graduate school work.

Dendas' grant, called the Hugh E. McKinstry Award, allowed for her first research experience. She and Mathur looked at how chemical signatures varied in different sections of a copper mine in Silver Bell, Arizona.

The McKinstry Award funded supplies and travel expenses for the project.

Zachariah Page (Senior)
POE: Chemistry
Rochester, NY

Zachariah Page, who has a POE in chemistry, was a recipient of the Barry Goldwater Scholarship. He has been doing research in organic synthesis under research advisor professor I. David Reingold, the H. George Foster chair of chemistry.

Page and Reingold are working on making organic precursors to a polymer that has implications with solar cells and LED lights. These types of efficient light and energy are currently hot topics in science and national policy.

The Goldwater is given to students who demonstrate research excellence and potential in the fields of science, engineering and mathematics. The award money went toward tuition and books.

To apply for the award, Page had to write an essay stating what he had accomplished in chemistry research and what he plans on doing with respect to research in the future. As a condition of his application Page had to make a

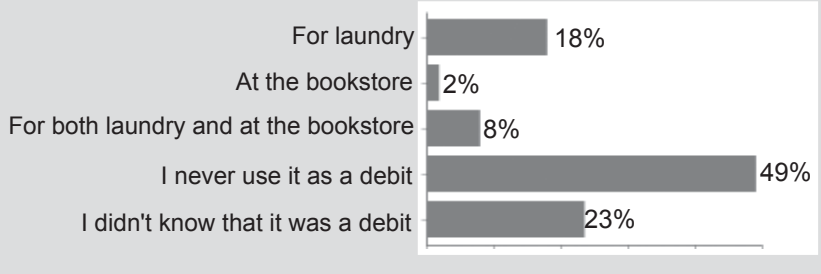
What can Gold do for you?

Leanna Yeager

Besides the well-known functions of Gold Cards (DCB, dorm access, Baker entry), the cards can serve several other functions. At the beginning of the semester every student has the opportunity to put money into a laundry account and/or a bookstore account. The Gold Card is used to access both, and the money comes from the account associated with the service being used. For example, using the Gold Card in the laundry room takes money from the laundry account alone. If there isn't any more money on that account then it can't be used in the laundry room.

Money can be switched between the laundry and bookstore accounts by visiting the accounting office. Starting in the spring semester, students will also be able to use an online account to transfer money. "By next fall all of the statements will be online," said Doreen Flasher, a customer service representative.

Any extra money in these two accounts can be refunded at the end of the semester.



However the DCB account is part of the meal plan with Sodexo and cannot be changed or refunded. At the end of the semester any unused DCB money is forfeited. Sodexo, when negotiating its contract with Juniata, changed that policy from the one last year. Previously DCB did rollover to the next semester.

The main barrier preventing all funds from being located in one account is that each service provider needs to be able to monitor the account balances. The biggest issue is tracking individual spending because each account is independently owned.

"We need to know where money is going and how much for auditing purposes," said Flasher.

She also said that the "account software was limited" and unable to track what was being used where. "We're looking into a [general] account in the future," she said.

When do you use your Gold Card as a debit on campus?

Politically speaking: Obama's first duty is to fill the Cabinet

Seth Fox

When does Barack Obama officially become president?

The inauguration ceremony that will change Obama's title from president-elect to president is on Jan. 20. This ceremony will take place on the west front terrace of the United State Capitol building.

Who are confirmed appointments to the Obama administration?

As of press time, Illinois Representative Rahm Emanuel, had been chosen to be the new White House chief of staff. The deputy chiefs will be current transition team personnel director Jim Messina and career foreign services officer Mona Sutphen.

Who are emerging as possible picks for Obama's secretary of state?

Several key positions of Obama's cabinet have very well known front runners. Obama has publicly stated that he does not want to choose cabinet members who will only agree with him. The following people are only speculated to be candidates by major media organizations.

The highest ranking position in the Cabinet is the secretary of state. Names that have been considered include former primary opponents Sen. Hillary Clinton and Gov. Bill Richardson, former presidential candidate John Kerry and key Obama-Biden campaign advisor Susan Rice.

Clinton would appear to be one of the most popular picks amongst the Democratic Party. Choosing her could appease Clinton supporters who were upset with Obama's nomination as the Democratic candidate for president. Clinton has significant influence in the Senate and is very familiar with the White House environment.

Some suspect that Bill Clinton could be a political liability, preventing Hillary Clinton from being asked to take the position. Recently the Democratic National Committee has been investigating Bill Clinton's post presidential finances including his charitable dealings and his presidential library. Richardson is also a viable candidate. He is a very popular government official and his endorsement of Obama was considered key to Obama winning the Hispanic vote. Richardson previously served as the ambassador to the United Nations in the Clinton administration.

Who are potential candidates for secretary of treasury?

Due to the financial crisis, many pundits consider secretary of treasury to be the most important position in the cabinet. Its potential nominees, however, are not as well known as those for secretary of state position.

The front runner seems to be the CEO and president of investment banking firm JP Morgan and Chase, Jamie Dimon. Dimon has worked in the financial market since 1982. In the past several months he has been a major player on Wall Street with his acquisition of Bear Sterns and Washington Mutual. These acquisitions have made Dimon's company the second largest investment banking firm in the United States.

Other potential candidates include New York Federal Reserve Bank president Timothy Geithner, former Secretary of Treasury Robert Rubin and former Federal Reserve Chairman Paul Volcker.

Who is being considered for secretary of defense?

There are three main candidates for secretary of defense. Current position holder Robert Gates is considered to be the front runner. He was sworn in as secretary of defense under the Bush administration in 2006 after Donald Rumsfield stepped down.

Republican Senator Chuck Hagel of Nebraska, a serious critic of the Bush administration's handling of the Iraq War, is under consideration as well as. Democratic Senator Jack Reed, a West Point graduate who holds a seat on the Senate Armed Services committee

What is the current situation of the Senate races in Minnesota, Alaska, and Georgia?

The recount continues in the Minnesota senatorial race between Republican Sen. Norm Coleman and Democratic challenger Al Franken. At the time of publication, Coleman is only 206 votes ahead of Franken.

In Alaska, the race between embattled Republican Sen. Ted Stevens and Democratic challenger Mark Begich has ended. Begich was declared the winner. Based upon the absentee ballots that were received from around the state, Begich garnered enough votes to win this normally Republican state.

Georgia's Senate race will hold its run-off election between Nov. 24 and Nov. 26. Incumbent Saxby Chambliss (R) and challenger Jim Martin (D) have been campaigning heavily over the past weeks. Both have brought in major political figures to campaign for them. Bill Clinton has cast his support behind Martin. Both Mitt Romney and John McCain have endorsed Chambliss.

Sodexo goes sustainable with "Trayless Tuesdays"

Initiative working well on other campuses

Kristen Penska

On Nov. 18, students participated in their first ever "Trayless Tuesday." By removing trays from food lines in Baker, students are encouraged to eat only what they can carry on two plates at a time. This initiative is supposed to decrease waste and increase mobility of diners.

However, many students wonder if goals of sustainability will be achieved, and are unsure that Trayless Tuesdays will produce different behaviors.

"Ever since I came to Juniata I have used one tray for a ton of [friends'] plates, and I really don't use a tray when I am getting food," said senior Christine Schott.

It seems that few students have expressed major problems regarding Trayless Tuesdays, other than skepticism as to how it will work. Some feel that Trayless Tuesdays will be rebelled against, or easily thwarted.

This idea is not new, however. It has been implemented by Sodexo Food Services in colleges nationwide. Trayless Tuesdays have produced positive results both environmentally and economically.

For example, Georgia Tech saves over 3,000 gallons of water each day by transitioning to trayless dining services. Prairie View A&M University participates in the activity, and its food cost has dropped four percent, while its number of total customers has increased 10 percent per 15 minutes.

"At some schools, different types of food lines have been created because of the food and waste saved from Trayless Tuesdays. So results are anticipated," said Tom Sheeder, Sodexo daytime supervisor and marketing manager.

"Eventually we hope to switch to sustainable dining, such as Trayless Tuesday every day. That way results will be quicker and the benefits will reach students sooner," said Sheeder.

Sheeder also encourages feedback from students and faculty.

"We love to hear what the students think of new ideas. We like to know if our attempts to make dining at college more beneficial are working," said Sheeder.

To learn more about Trayless Tuesdays and what the initiative is doing for Juniata, contact Sheeder at sheedet@juniata.edu or Hal Mclaughlin at mclaugh@juniata.edu.

Academic excellence leads to awards

continued from page 5

commitment to continue research at a graduate institution.

Aubrey Cyphert (Senior)
Erie, PA
POE: Biology

Aubrey Cyphert won the 2008-09 American Society of Microbiology Fellowship. She worked with research advisor Jennifer Bennett.

Their research entailed looking for genes involved with cell division in bacteria. The goal is to find novel genes in bacteria reproduction so that future research might be able to target those genes in pathogens with medicine.

Cyphert's 10 week summer research fellowship started in the beginning of June. The award money paid for Cyphert's stipend for the summer and for research materials.

Cyphert plans to continue research after Juniata at a Masters of Public Health graduate program. Cyphert is particularly interested in studying infectious disease in microbiology.

Other notable award-winners include:

Dan Dorazio: Goldwater Scholarship Honorable Mention
Erin Satterwaite: Goldwater Scholarship Honorable Mention, NOAA Hollings Award
Nicholas Sepulveda: St. Andrews Society's 2008 Andrew Mutch Scholarship Award
Justin Schultz: Fulbright Fellowship, Australia, 2008

**Award information provided by various academic departments*

Pets on campus likely to remain in bowls

continued from page 2

frogs/toads and hermit crabs.

Freshman Crystal Bittinger currently keeps her guide dog, Echo, in her dorm room. Echo is not a pet, however. She performs a vital professional service for Bittinger, who is blind. "I don't think I would recommend dogs on campus," Bittinger said. Navigating a campus full of distractions is difficult enough for Echo without the presence of other dogs to distract her from her work, although Bittinger hopes there will be more blind students with guide dogs on campus in the future.

While many students are in support of a pet-friendly campus, other students raised concerns over a new pet policy.

Senior Chelsea Winder said that cleaning up pet waste is a big concern. Sinks for pet waste would have to be installed, and students would have to know the correct chemicals and cleaners to use. Winder said that a pet policy would have to include a contract in which students would release the College of all liability and pay a fee to cover potential damages.

Freshman Erin Burt commented on the Arch, "You'd be surprised how long and how tenaciously pet dander can cling to furniture, mattresses, etc. It's just not fair to people that are highly allergic, when cramped quarters like dorms are even more likely to stir up allergies."

A representative from a local professional cleaning service advised the Juniatian that the tab for thoroughly cleaning an apartment used by pets can easily cost thousands of dollars.

People backing the pet proposal "have a better chance of making it through the arch during storming than getting this one even considered," wrote junior CJ Smith on the Arch.

"College students in general should be focusing on adjusting to real life and should (theoretically) be focused on doing well academically as well as extracurricular.…If I heard someone's cute little puppy or kitten barking/meowing at four in the morning before an exam, hell would be raised," Smith wrote.

The Society for Prevention of Cruelty to Animals and the Humane Society of the United States are cautious about endorsing the idea of pets in dorms, noting the cost and commitment that pet ownership requires.

At present, pet-lovers can channel their interests into a new club that visits the Humane Society shelter in Huntingdon. A no-kill shelter, the Human Society affords ample opportunities for students wanting to spend time with animals, be it cleaning up kitty litter or playing with a roomful of abandoned cats. Miller stressed that the shelter is always in need of volunteers.

College retirement community in the works

Leanna Yeager

Juniata has been looking into the creation of a small retirement community that would be affiliated with the College. Residents would be able to attend classes and seminars at Juniata as well as volunteer for mentoring or career advising.

The proposed community would be located west of West Minster and has planned at least 100 homes along with a community club house. Although alumni are logical prospects for the community, residents would not be required to have been associated with Juniata in the past. All residents would need to be over 55.

While the community will be affiliated with Juniata, it won't actually be part of the College. The Campus Continuum, a marketing group that focuses on university-linked retirement communities, would run the project. Campus Continuum works with the contractors to build the homes, and then sells and manages them. Juniata would just coordinate with Campus Continuum to provide the residents with access to the College.

Currently the project is on hold due to "unfavorable economic conditions," according to a letter sent to President Thomas Kepple by Gerard Badler, the managing director of College Continuum.

If funding resumes, the project could become a reality. "It's hard to get loans for such a unique project," said Kepple.

"This began with a student internship project that looked at whether or not Huntingdon was a good retirement community," said Kepple. The students, Michael Brown ('04) and Frederick Taber ('03), found that low taxes, proximity to a train station and nearby recreation areas like Raystown Lake, made Huntingdon a suitable retirement community.

Brown and Tabor also gave a survey to alumni about whether or not they would like to retire in the area. "We got a positive response," Kepple said.

Later Kepple was approached by Campus Continuum.. The group was approaching several different colleges about creating retirement communities linked to their institutions. "When they asked us if we'd ever thought about a retirement community, we said yes," said Kepple.

Juniata was the first college to agree to this proposal, although several other colleges have also agreed since then, including Saint Francis University in Loretto, PA.

Thank you will never be enough

EDITORIAL

Before sending each Juniatian issue to print, the editors and our advisor, English instructor Amy Mathur, meet for what has been dubbed "Party Night." Fueled by Sweet-Tarts and candy cigarettes, we pore over the paper mock-up, making final additions, catching rascal typos and cracking jokes to maintain some sanity. The clock pushes 1 a.m., and we continue.

Only when everything is close to finished, Amy bids the editors goodnight and sneaks home to her sleeping husband and three-year-old son. But she can't fall asleep until she mentally recalls each page of the newspaper, scavenging for forgotten to-dos. She slyly slips out of bed, whispering to her husband, "I'm going to get a drink of water." Then she darts down to the kitchen, past the microwave clock blinking 3 a.m., and dials the editors.

"Don't forget to fix the headline on page 5!" she says when the editors answered the phone.

For the past six years, no matter the time of day, Amy has devoted her energy to the Juniatian newspaper and its student reporters. Through her devotion to the Juniatian, Amy has inspired and empowered hundreds of students to use their voices to address campus issues that mattered to them most.

Now, we must sadly announce that Amy is stepping down as advisor of the Juniatian. Next semester, she will take a sabbatical in Arizona, and will return to Juniata next fall to teach English courses, but not to advise the newspaper.

Amy's mantra has always been 'Stir the pot.'

"It's time for her to develop more of her own talents and interests," said associate professor of English Judy Katz.

"When I heard [Amy] wasn't going to run it anymore, I just assumed they'd be ending the paper as well. I can't imagine it without her. I can't see anyone putting in that amount of time, or being that patient, or caring that much," said Tommy McConnell ('06), a former sports editor.

To understand Amy's influence on the newspaper, we only need to look back one decade. At that time, there was no regular campus newspaper; a lack of student interest had allowed it to go defunct. In 2003, Amy volunteered to work with a group of students to restart the paper, essentially from scratch.

"She has brought this thing a long way," said Provost Jim Lakso. "It is so much better than it was before she took it over. If you look at those old issues, it was embarrassing. She has done a terrific job."

"She has managed to enlist students, inspire them, teach them and help them in all aspects of the process. She's willing to have her students ask the hard, scary and funny questions," said Katz.

Indeed, Amy defined the role of the Juniatian as a critical voice on campus. She encouraged students to discuss campus events openly, praising the good things and questioning the bad things. She empowered students to discuss difficult issues that really mattered to them, not only the fluff. Her mantra has always been "Stir the pot."

"She helped us be more critical, to develop those critical thinking skills and the ability to be a journalist," said Nate Drenner ('06), one of the first editors under Amy.

As a Juniata alum, Amy is genuinely interested in the College and its students.

"She brings such a depth of knowledge and understanding to this job because she knows every aspect of this community," said Katz.

"She really loves the school. She developed our abilities to bring out the issues that would really benefit the campus community," said Drenner.

"There is a tendency for people to think the newspaper should act as an arm of public relations, which means that the newspaper should never cover a controversial topic," said Lakso. "Amy made the case, and I think rightly, that it needed to be free of interference, and she held her ground on that. I admire her toughness."

Under Amy's guidance, the Juniatian has addressed contentious issues such as Juniata's disciplinary policies, co-ed rooming, the marketing department's tactics and students' sexual activity.

Of course, there were times when the newspaper was challenged and questioned for its material. But Amy always went to bat for her student reporters.

"Just knowing that Amy was there to support us was very important," said Drenner.

"She showed me what it was like to really be treated as an equal," said Nick Carney ('07), former news editor. "That's something that I'll always and forever look for in all of my relationships and jobs."

Working under Amy is more than just stirring the pot. It's incredibly fun.

"Amy is so dynamic," said Katz. "It's the way she reads, the way she writes, and the way she teaches."

"Her sense of humor made working on the paper fun. No matter how ridiculous things got, she could always laugh about it or make you laugh about it. I don't know too many profs who would be laughing about staying up until five in the morning," said Tommy McConnell ('06), former sports editor.

"She was able to have high expectations for us and at the same time be fun to work with," said Drenner. "Now I'm a teacher, and I know that these are two things very hard to do at the same time."

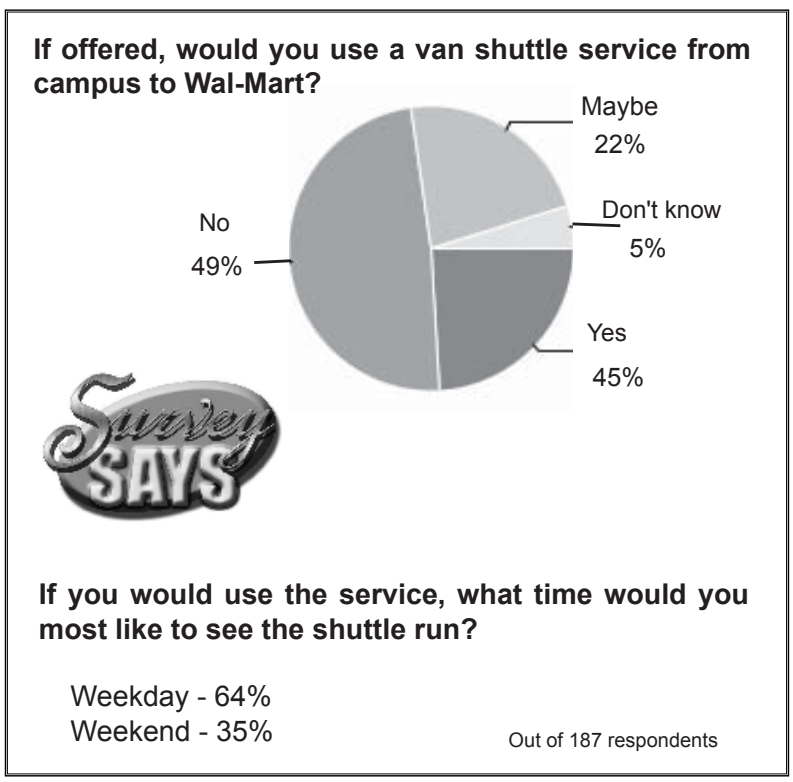
Throughout the years Amy has meant a lot to those of us at the Juniatian. Although, we may try, we'll never be able to capture her larger than life personality on newsprint. We've attempted here (and believe us, keeping this a secret from Amy was one of the hardest tasks we've ever attempted). Perhaps McConnell said it best:

"Amy was the best, the absolute best. I would say she really went the extra mile, but that doesn't even do it justice. She ran an extra marathon for me."

Ask the Administration

"Is Sodexo still trying to use local produce in Baker meals? If so, which products come locally? If not, why did this effort cease?"

We still are using local produce from at least three different vendors. Some examples would be mushrooms, baby carrots, yellow squash, cherry tomatoes, snap peas, zucchini, asparagus, baby bok choy, etc. As the weather turns colder, some supplies obviously will cease.



-Hal McLaughlin, director of food services

"Recently, on the forums, a student introduced the idea of starting a weekly (or bi-weekly) shuttle from campus to Wal-Mart for students. Is there any likelihood that the College would consider such a service? If so, what would students need to do to support/start this? If not, why not?"

We could certainly consider such a service and I am sure it would be popular. Currently, the Office of Student Activities (OSA) offers shuttle bus services to State College (which usually sell out). With limited access to vans and shuttle buses on the weekends, if we offered bi-weekly (or monthly) runs to Wal-Mart, we would not have the means to offer trips to State College. If we could fill the shuttle bus to Wal-Mart on a weekday, rather than the weekend, offering the service would be more feasible.

If students would utilize a Wal-Mart shuttle, I would encourage them to e-mail me the day of the week (Monday-Thursday) and times (morning, afternoon, evening, late night) that they would like to see the shuttled offered. If there is enough interest, OSA can look into starting the service in the spring.

-Staci Weber, director of student activities

CORRECTION

The article "Campus skateboard policy explained" in the Nov. 13 issue of the Juniatian incorrectly portrayed the campus skateboarding issue, with respect to skateboards versus longboards. Senior Tony Belluci is a longboarder and uses his board for transportation only, not for tricks.

An apple a day *To worry, or not to worry*

by Chelsea Garner

As the semester draws to an end, a student's list of things to worry about grows larger than an eight-year-old's Christmas list. Some things you can mark off your health-related worry list, but then add on a few.

Things you worry about that you shouldn't

Flu-shot making you sick

During a visit to the Health and Wellness Center, I observed a student interrogating Nurse Connie and the doctors about whether he could get sick from the flu-shot.

The simple answer is not really. "Less than five percent of people who get the flu-shot will get a reaction from it, [and] usually those reactions are flu-like symptoms. Just a little bit of body ache or a low grade fever," said Dr. Barry Jordan of Evens Medical Group in an interview with NBC.

This flare up is the body's immune system gearing up for battle with the inactive strain of the virus. It forms antibodies so if exposed again later, the immune system can kill off the virus before it does any damage.

Also, many sicknesses are not the result of the flu virus. "People seem to expect flu shots to protect them from every type of respiratory illness and that is just not realistic," said Teristna Doda, R.N. in her article about cold and flu.

Bottom line: get a flu shot. True flu symptoms are miserable.

Getting Pregnant

Disclaimer: this does not mean sex has no consequences.

That said, the odds are in your favor, provided that some form of oral contraceptive is used with a condom. Revolutionhealth.com found that eight unplanned pregnancies occur among 100 typical users of birth control pills, and 15 pregnancies of 100 for condom use. Some simple math here: 15 percent of eight percent is 1.2. Meaning there is a 1.2 percent chance of pregnancy when using both methods.

Again, stress can negatively affect the situation. Stress affects the hormones controlling menstruation.

"In some cases, a women's period might actually stop if she is worried about if she is pregnant, "said Dr. Phillip Owen in an article about the menstrual cycle.

Hair loss

Young adults sometimes are concerned about hair coming out in the shower or while brushing. Rest assured that hair loss due to normal shedding ranges from 100-125 hairs per day, according to American Hair Loss Council (AHLC).

For the ladies, certain factors can lead to above average hair loss. According to AHLC, hair loss follows a dramatic hormonal change. One example is stopping the use of a birth control pill. An abrupt change of hormones leading to the loss of locks is not uncommon. Fortunately, once the hormones settle down, hair should return to its normal pattern.

At any age gentlemen fret over a receding hair line. While it may be a bummer to look in the mirror and see your father's famous forehead, rest easy with these facts. Stress has been linked to hair loss. The body stops hair production in an attempt to conserve energy according to AHLC. To slow the scalp show, stop wigging.

Of course, male pattern baldness, the most common cause, happens due to the hormone dihydrogen-testosterone (DHT). Many men inherit the gene that causes their hair to be more susceptible to the effects of DHT. The bright side is DHT is the precursor for the testosterone responsible for male characteristics and sex drive. So to quote Charlie Sheen in the movie "Good Advice," "The more hair you lose, the more 'head' you gain."

Things you don't worry about that you should

Beer Goggles

So we've all heard the adage that the more one drinks the better people start to look. Well the results are in and the rumor is true.

A recent study published in "Live Science" found the phenomenon of beer goggles to be real. After one drink equivalent to a beer or a glass of wine, a group of 84 college students found people to be 10 percent more attractive.

"It's also surprising to see this effect is happening at lower doses than you might think," said researcher Marcus Munafo in an interview with "Live Science." These students were seeing effects after only one drink.

Moral of the story: Bring a sober friend to keep you from waking up next to ____ (insert name of last hook-up gone wrong).

Moles

Mole, beauty spot, birthmark or freckle. Whatever you choose to call them, we've all seen them. Since the average person has between 10 and 40 of these marks, why worry about something so common? With the increased prevalence of skin cancer, it is important to be vigilant with questionable moles.

There are several types of moles according to WebMD. Congenital nevi are moles that occur at birth. These are more likely to become melanoma than a mole that occurs after birth. If a mole is larger than seven millimeters and has any of the ABCDEs of melanoma (see box) then it should be examined.

Another type of mole is the Dysplastic nevi. These are larger than average and have different colors and irregular shape. These hereditary moles can become melanoma as well.

Any mole that occurs after age 20, looks different from others already on the skin and changes color, size or shape, should be checked by a doctor.

When Nature Calls

by Brianna O' Malley

Monkey Business

Like it or not our society is heavily reliant on science and technology. Everyday there's some new gadget or technology invented, a new thing claimed to cause cancer, and it's something we've accepted

However, evolution, considered to be one of the most important foundations of modern science is still debated. No scientific theory causes more controversy than evolution. According to recent polls, less than half of Americans believe in the theory of evolution. What's baffling to a scientist like me is how a concept around which most of biology is based is something many people won't accept.

I discussed this issue with Don Braxton professor of religion, and Randy Bennett professor of biology. The two co-teach the IC class God Evolution and Culture along with philosophy chair Xinli Wang.

"You have to be careful with how you phrase the question," said Braxton, "When some people hear that question [do you believe in evolution] they hear a question in the belief of God."

Bennett agreed with Braxton's sentiment saying, "Some people equate evolution with atheism."

While people may say they don't believe in evolution, it does not necessarily mean that they reject the idea that people developed from lower life forms. They may only disagree with what the force driving this process is.

"You don't have very many young earth creationists anymore," said Bennett. Young earth creationists are those that take the genesis creation story literally. "We know the earth was formed millions of years ago instead of thousands," he said.

America has a deep history and value of religion. These resonate in our government and ultimately our school system. However there are few people that still completely reject evolution's ideas.

One counter to evolution is the theory of Intelligent Design. Intelligent Design (ID) states that all life was created by a "designer," and that the designer's existence can be proven by "fingerprints" left by the designer. ID is often posed as a science. This is controversial because there is no way to prove the existence of anything in science, let alone God.

"It's a pseudoscience," said Braxton. "It says there is intelligent presence in the universe and [ID advocates] hope they can slip it into a science classroom," he said.

Many ID supporters have hoped to have the theory taught in the classroom. In recent cases this fight has gone to court. In 2005, Bennett was chosen as a witness in the Kitzmiller v. Dover Area School District case. The Dover Area school board had passed a curriculum of teaching ID in public schools.

The case was taken to the federal court under the argument that teaching ID was going against the separation of church and state.

Bennett said, "ID is not a scientific concept, but an attempt to return science back to a form of Natural Theology, and therefore does not belong in the science curriculum." The verdict was in favor of the plaintiff.

"It became apparent that they just wanted to teach creationism," said Bennett.

Cases like this have been popping up all over the country, with the latest in Texas and Kansas.

Earlier, in 2001, former senator Rick Santorum proposed an amendment to the No Child Left Behind Act by promoting the teaching of ID in schools. The amendment was never passed but has drawn attention.

Teaching the controversy is the goal some have of teaching the arguments for and against evolution. "This is a problem because there are some pieces of evolution not taught in high school because of their complexity," said Bennett.

In teaching the controversy, anti-evolutionists end up scrutinizing minute flaws in the theory. "They basically take any little thing that's unknown about evolution, and say we don't know anything," he said.

So where does Juniata stand in all this controversy? I created a survey a few weeks ago to gauge what student's beliefs were in regards to evolution. I asked students if they fully believed, didn't believe or were unsure of various creation ideas.

Of the roughly 200 students surveyed, 74 percent said that they believed in evolution. Seventeen percent believed in ID and 29 percent believed in creationism.

Braxton said that our school is not a random sampling of the country. "Juniata students are part of the intellectual elite. We are a primarily a science based school, and will have strong science backgrounds, so our stats may be different to other schools such as Messiah," he said.

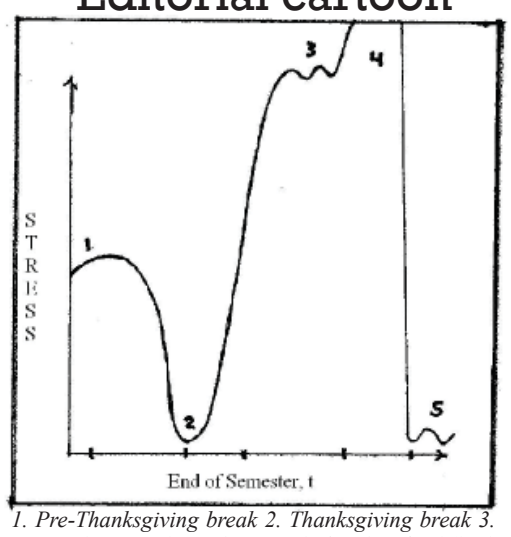
Letter to the Editor

Dear Editor,



I would like the students in Juniata College to be more aware of the existence of a non-profit organization, called "Health and Wellness Association." Its main goals are to enhance wellness of mind, body and spirit as well as to inform and educate individuals at Juniata and those in Huntingdon community about the new movement in medicine called "Alternative, Complementary, and Integrative Health Care." The organization's mission is to empower individuals to be more aware of their life choices and to encourage them to engage in a healthy lifestyle through the promotion of wellness activities and tutorials.

Since this association is formed for charitable and educational purposes, it is solely running on donations. One of their main fundraisers is an annual fundraising dinner, which futures healthful and delicious homemade entrees and desserts. Also, on the third Saturday of October, this organization participates in their biggest annual event, Healthy Harvest Festival, where they promote wellness, healthy diet, free tai chi classes, and lead healthy talks that make people more aware of their health and nutrition. Another way that this organization branches out to the public is through a monthly column called "The Natural Connection" in the Daily News whose articles pertain to many interesting holistic aspects of health, such as yoga, massage, stress reduction, etc.

This organization has just purchased a property on 4th and Mifflin Street and soon will be ready to give free tai chi classes every Friday as well as teach techniques for dealing with the stress, very essential for students who stress out a lot before tests, papers, and exams. Overall, this organization is gradually making a vision into a reality, offering services and other health-conscious benefits to individuals in the Huntingdon community. It is a great source for health-profession students because it gives a glimpse on the emerging type of a medical branch that has never existed before, and this forefront practice system is right in Huntington! If you would like to learn more about what this organization does, email Tetyana McCain at mccaitx07@juniata.edu.

1. Pre-Thanksgiving break 2. Thanksgiving break 3. Dec 11th 4. Finals week 5. Just before last final (high brain death)

Jake Weller

Thumbs Up, Thumbs Down

to the CWS lab group who is running a "water pong" tournament. Hello, amateurs...nobody plays pong for the splash.

to gas prices going down faster than the Freshman Fun Bunch.

to Black Fridays sales. Put Guitar Hero IV on sale for $19.99 at 4 a.m. and Best Buy turns crazier than a cockfight.

to Leann Foster who sang the Little Mermaid's "A Part of Your World" at "Juniata Idol." Sure the judges fileted her because she cracked like a crab leg at every high note, but not us. Nope, we won't to destroy her for two reasons. 1) It takes guts to sing a capella ever and 2) We refuse to disparage anything associated with the mermaid who first taught us that "it's always better down where it's wetter."

Blue vs. Red: Looking ahead

Obama's new era of honest government

Sebastian Brown

Week after week, via radio, the humble voice of Franklin D. Roosevelt reassured the American people, reminding them that better days lay ahead. More than a half-century later, Barack Obama is using similar tools to calm a similarly uneasy citizenry. Well, sort of.

For months as the Democratic presidential nominee and for the last 20 days as the American president-elect, Obama has been delivering Roosevelt-inspired weekly radio addresses. But for the first time ever, on Fri. Nov. 15, he took his message to the Internet. So from now on, in addition to hearing directly from Obama over the airwaves, America can watch the address in video format on YouTube.

Obama's decision to take the simple, yet unprecedented step of making his "Weekly Address" available online is just the latest sign that he's serious about making government more accountable to the people. And he accepts, as did Howard Dean in his revolutionary bid for the Democratic nomination in 2004, that the Internet is our country's best hope for doing so.

For two years the Obama campaign has proven itself adept at taking advantage of existing online tools, as well as creating new ones, in order to mobilize supporters—sometimes, ironically, in opposition to his policies.

Late last July Obama was wavering on whether or not to throw his support behind the controversial Foreign Intelligence Surveillance Act (FISA) that his progressive base argued violated American civil liberties. Immediately, the base organized a group on Obama's homepage demanding that the Senator oppose the bill. Within days, the group had thousands of supporting members. As a result, at the end of the week Obama released a formal statement acknowledging and even sympathizing with the online group's concerns.

Although Obama ended up voting for the FISA, which he saw as an imperfect, yet noble display of compromise between Republicans and Democrats, progressive blogging community didn't let him off the hook. For weeks they went back and forth debating whether or not Obama's momentary betrayal of progressive values was grounds for his losing their backing. In the end, the left stuck by Obama. But only after having first learned an important lesson about a potential Obama presidency: accountability can't be equated to submission.

No, I don't doubt that at times Obama will make decisions that you and I might disagree with. But more importantly, as the blogging community learned firsthand, Obama's will be a transparent, and therefore honest, administration. And that's exactly what this country needs now more than ever.

President Bush's approval rating of a measly 22 percent can be attributed in large part to his support of short sighted and disastrous policies. But equally as damaging to both his reputation and, more importantly, to Americans' faith in government has been the frightening degree to which secrecy and behind-the-scenes deal making has defined his time in office.

Obama offers an alternative, both in substance and in style. In his first YouTube video version of his "Weekly Address," he left little doubt as to what his plan will look like. Above all else, upon being sworn into office on Jan. 20, he's going to make it his top priority to show the average hard-working American family the same amount of concern and respect that was shown to corporate bankers on Wall Street in last month's bailout plan.

But don't take my word for it. Discover Obama's economic plan for yourself. Whether you check out the "Issues" tab at his easily navigable Web site (www.BarackObama.com) or watch his "Weekly address" online, keeping tabs on our soon to be president will be easier than ever before. Thanks to Obama's warm embrace of the very online tools that have come to define our generation, we won't be led astray into a futile war or a preventable economic meltdown.

This is our country. If we do our part and hold our government accountable, it's ours to reclaim. Let's get to work.

What now, GOP?

Rachel Kern

As thrilling as the 2008 presidential election was for 53 percent of the population, 46 percent of Americans were in political mourning after Barack Obama was declared our nation's next president. With Democrats not only controlling both ends of Pennsylvania but now Pennsylvania Avenue, too, the Republican Party is doing some serious soul searching. Where do we go from here?

We should respect Obama and the Democrats, but fight like hell anytime they promote a policy in which the government makes decisions to usurp an economic or personal liberty that we enjoy in this country. These are the principles on which we should frame our policy positions.

More than that though, I think the answer is complete restructure. Our Republican leaders need to develop ideals that appeal to youth voters, minorities and the college-educated. This does not mean restructuring our traditional Republican values. It just means that we need to do some serious thinking about what it is we really do stand for. No more running a moderate candidate who is merely a puppet for conservative strategists.

One of the biggest problems confronting Republicans is the fact that we have built our party on the basis of an America that no longer exists demographically. That's why a restructure and major renovation is in need. We must finally shed this old world brand of the "party of white people" and make the leap into the 21st century.

The future of the Republican Party does not lie in abandoning our principles, but in finally standing up for them. GOP leaders can't be afraid to be bold in embracing new ideas or condemning the failing policies of the Democrats. When the Democrats falter, we have to be ready to jump in with policies that work. We have to give voters something to rally around and we can't cave to the elites or to the religious fanatics.

We have to look at our Party with a critical eye and find our mistakes. We must fix the way we handle certain policies. Although, we owe wilderness and wildlife preservation and environmental protection to Republican presidents, the current party has treated the biosphere as a virtual antagonist.

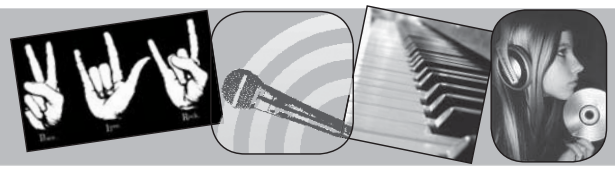
Environmentalism is just one area where the Republican Party could start to clean up our act. GOP leaders must own up to the failing state of our nation and not necessarily apologize for it, but fix it.

The GOP's traditional support for business turned into an exuberance for unchecked greed. From this developed an indifference to the lagging incomes and waning livelihoods of laboring and middle class households. These ideals are not the ideals that the Republican Party is supposed to represent. We're supposed to value family and be willing to stand up and work hard to keep families together. Low incomes, or complete lack thereof, puts strain on families. If Republicans focus on helping small businesses and communities grow and work on stabilizing the workforce, then perhaps families won't be under so much strain.

It's good for conservatism that GOP conservatives will have to develop refreshed ideas and regenerate their political skills. Election defeats should be seen as the lifeblood of a political party. They allow it to renew its leadership and rethink its agenda. Like any failure, we pick up the pieces and put together a new life. The Republican Party has been dealt a new hand in the political sphere and should use these next few years to really do some character redevelopment.

For right now however, the Democrats should be careful, because we'll be watching their every move with eagle eyes.

Presidential Perspective



Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu, and the editors will forward them anonymously to Dr. Kepple.

This semester, the administration has seemingly departed from our usual good record of consulting with the student body about changes.

For example, the new food plan was developed too late last spring to have a good discussion on campus about all its new options. We then introduced a new Juniata athletics logo with thorough consultation with the athletic staff, but not enough consultation with our students. An unfortunate information leak resulted in former football coach Darrell Alt announcing his resignation before the Dickinson game rather than afterword as had been planned. Our process to rename Muddy Run was also not thought through well. And we did not prepare as well as we should have by adding sections to spring semester classes for our larger-than-normal freshman class.

In the end, this president is responsible, and I take all the blame. These five examples are not the way we normally do business at Juniata. We will do better, starting with revising and better communicating the meal plan.

I also appreciate your patience when we occasionally go off without more thorough discussion. So do enjoy the rest of the semester; I promise not to change anything!

MUSICOLOGY

BY CAITLIN BIGELOW

KAUCASIAN KRUMPING

Krumping may not be a word that is familiar to you. So you may be wondering how it comes into play on this mainly white campus where the greatest diversity, that I see daily, is my roommate's last name (Wakabayashi), on our door's nametag. I am here to spice things up a bit and bring a little hip-hop culture and diversity to this bland campus. Ladies and gentlemen, let me present to you…krumping.

According to Wikipedia krumping is, "a relatively new urban dance form that began in South Central Los Angeles and is characterized by free, expressive and highly energetic moves involving the arms and chest." This highly emotionally charged dance is quite a spectacle, especially if you have never seen it before. Krumping, according to Urban Dictionary.com, is intended as an outlet for anger and replaces violence.

I decided to try to master the art form myself. I enlisted the help of another roommate, Elizabeth Van Blarcom and we started our research. After scouring YouTube for videos (which took forever because of the slow campus connection), we felt we had enough material to get a basic idea. Here are the main points we pulled from it.

First, it's all about rhythm. Almost all krumping videos involve more than one person so that a krump battle can ensue. Usually there is a circle and two people are selected to step inside to krump battle.

Consequently dance style is fast and aggressive. The right kind of song makes all the difference. We found that Missy Elliot has some great krumping songs, high energy and fast paced. Savage's "Swing" was also a good one.

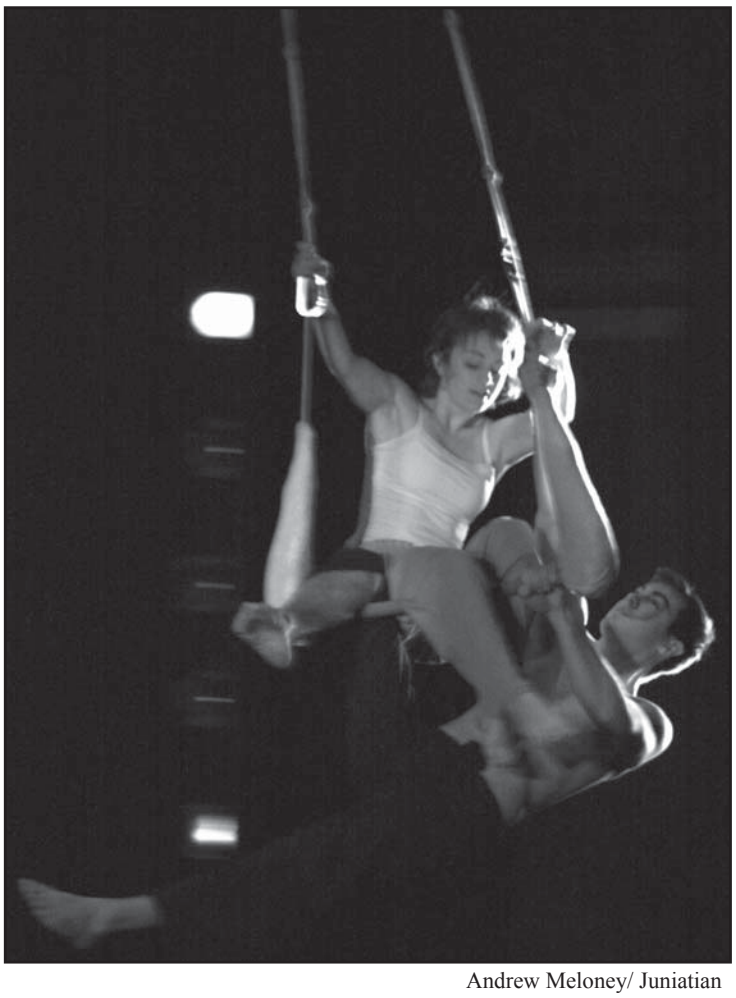
Elizabeth and I decided to put into practice all that we had learned. For all you non-krumpers out there it can be difficult to know where to start. If you are still having a hard time picturing it you could compare it to moshing, assuming that the mosh doesn't turn violent.

Here is what we learned through direct experience: For your first krumping experience it is helpful to get into character. It builds confidence. I donned two pairs of soccer shorts, so that I could sag one pair, a baggy shirt, baseball hat and some sneakers. We found that having some kind of prop, like a jacket to wildly throw off or a hat is also helpful.

There are two basic moves all krumpers should master. The first is the air punch. The air punch is best utilized when you have a krumping opponent. Swagger up to him and pretend like you are going to punch him but sail the punch above his head. It looks intimidating and shows that you mean business.

The second move, the two step, is a combination of foot movements that shows you know what's up. Jump back on your right heel while simultaneously moving your left leg forward landing on your heel. Just repeat this move a couple times. Don't be afraid to let loose a little and come up with original stuff. It's about being creative and feeling the beat.

Now it was time to krump. We pumped up Savage's "Swing" from the iPod speakers and lost all inhibitions. I ended up getting kicked in the head, but for the rest of the night no major injuries were sustained. As the next song began our common room filled with suitemates, curious about what the commotion could be on a typical Tuesday.



There were several things that happened that night. First, a lot of calories were burned (we krumped for a total of two hours). Second, we felt completely refreshed and original. And last, we were able to completely enjoy the music while get into it. With such positive results we decided to replicate our efforts on a larger scale. That's where the Juniata women's soccer team came into play.

The next Wednesday we had almost the entire team in East 201 in "krump gear" ready to battle. We named only five rules for the night. Rule One: Everyone must krump. Rule Two: You can only krump in the center for 20 seconds. Rule Three: No one else can make fun of anyone's krumping abilities. Rule Four: You must come dressed to krump. Rule Five: Keep it rated G (we aren't about the slutty dancing). We formed a circle and the madness ensued...madness even the pages of the Juniatian can't handle.

So have you grown bored with your life? Maybe you're looking for a new outlet to release your anger? Krumping is the answer.

Advisory Warning: Krumping should NEVER be attempted while intoxicated and can be extremely dangerous. Pregnant women should not krump as it can cause complications at birth. People with a history of heart attacks or asthma should be cautious when krumping.

'And They Lay'

Andrew Meloney/ Juniatian

Seniors Brittany Moyer and Josh Beckel dance on a trapeze during Juniata theater's performance of "..And They Lay, Not Awake, Yet Dreaming Without Sleep," a show directed and created by Gravity Project member and dancer Nathan Dryden. The performance, which ran from Nov. 20-23, was based on a collection of images Dryden thought of while falling asleep.

The Director's Chair

BY BENNETT REA

'Zack and Miri Make a Porno'

There's a reason "Zack and Miri Make a Porno" had to fight not to receive an NC-17 rating. There are many reasons, in fact. However, despite its crudeness and risqué premise, the movie succeeds in winning over your heart.

The beginning of the movie finds platonic friends Zack (Seth Rogen) and Miri (Elizabeth Banks) in dire financial straits. Their jobs only pay so much and the bills are piling up. Eventually, their water is turned off, followed by their lights and finally, their heat. Faced with having to leave their home, Zack and Miri decide to do the one thing that could earn them money – and cost them their dignity – make a porno.

Though the plot may be about making a porno, the story is really about Zack and Miri. The two friends epitomize anti-heroes. They're both crude and brash, and they don't really care what other people think. Yet their willingness to go against the grain and be in your face is refreshing, and even cute, when they do it together.

Rogen and Banks have very good on-screen chemistry, and you root for them to be together. There are several truly tender moments between the title characters that are surprising considering the premise of the movie. Their endearing relationship drives the whole film.

With all that said, "Zack and Miri" is still a comedy, and a dirty one at that. Originally, the MPAA (Motion Picture Association of America) slapped the movie with an NC-17 rating, the kiss of death for the box office. Eventually, director Kevin Smith ("Dogma," "Chasing Amy") appealed for the R rating, but it is easy to see why an appeal was necessary in the first place. The movie swears constantly, has male and female full frontal nudity and a whole lot of sex. At some parts, you may even feel embarrassed watching because it is so raunchy.

There is humor in that raunchiness, though. While many jokes will not appeal to the grandparents out there, for the most part, the foul dialogue is genuinely funny. However, the movie isn't funny simply because of how dirty it is; it's a funny movie that just happens to be about dirty things.

continued page 14

The Naked Truth: The "Twelve Days of SeX-mas"

The following article appeared in Dec. 2006. The Juniatian reprints it for your reading pleasure and to pay tribute to its author, Rebecca DeHass. Over the last three-and-a-half years Becca has acted as sex columnist, back page humor columnist, layout editor and editor-in-chief. She has filled these pages with much more ease than we will be able to fill her place.

Rebecca DeHass

I believe the Chipmunks sang it best: "We've been good, but we can't last. Hurry Christmas, hurry fast." I know we're all busy writing papers and studying for finals at the start of this holiday season, so I've decided to write this column in a new-old fashioned way. A way that will save everyone a little time by making a SeX-mas list for all Juniatians who are busy crossing off their to-do lists.

You already know that no one wants a lump (of coal) in his or her stocking. We want candy canes to suck on, the biggest Christmas tree and of course a ride in a one horse open sleigh. So rock out with this list to the tune of "The Twelve Days of Christmas."

On the first day of Christmas, you should put beneath the tree…

A present from on one's knees. I just thought we should start the first night off with a bright light to guide our way this season. "Fall on your knees. O hear the angels' voices! Oh night divine!" You'll go down in history, for sure.

Two dainty dice. Sometimes the best treats do come in small packages. For example, if he rolls a three, you have to stripe his candy cane (remember, this is the season of goodwill toward men). For a five, you have to jingle some bells. If you do not enjoy giving such gifts, your hearts are just as small as the Grinch's. Now jingle bell, jingle bell, jingle bell rock before someone has a "Blue Christmas."

Three French maids. Who doesn't want three French maids? I realize that in the original song, there were eight maids a milking; however, I have a different version of the eighth day. Therefore, we should simply keep in mind that heedless of the wind and weather, they are still quite skilled with their hands. Fa la la la la la la la la.

Four soundproof walls. Please don't "Go Tell It on the Mountain." We like to hear Santa yell, "Ho ho ho!" from the rooftops, but we don't want to hear you. Give the impression that not a creature is stirring, not even a mouse… Let there be peace on Earth, okay?

Five jingling rings. You can always use vibrating spares, right? It's as good as figgy pudding, "We won't go until we get some, so bring some right here!" Now that's how you spread for holiday cheer.

Six kinds of sugar. Start with whipped cream. You can pretend that it is icing and decorate your snowman or woman with five more sugars of your choice. I suggest chocolate icing, Hershey kisses, gummies, peppermints and a cherry for the top. Later, you can melt Parson Brown's sugary-goodness by the fireside.

Seven sultry stripdowns (at least). We can only hope that you're getting a daily dose of sugar and spice. 'Tis the season to be giving, so glide along with a song of a wintery fairyland and make those cheeks nice and rosy so you can get comfy and cozy. "Giddy-up giddy-up giddy-up, let's go!"

Eight Energizers. Please see number five. This brand is apparently good for when you just keep going and going…Well, does anyone else find it amusing that the Energizer's mascot is a pink rabbit? It'll keep the vibrations long-lasting and if you enjoy banging the drum as much as the bunny, then "pa rum pum pum pum" to you, too.

Nine 69s. Snuggled up together

continued page 15

What gift would you most like to receive this holiday season?

A sampling of your responses...

GPA Booster.

Sidney Crosby.

Love... awwwww.

Spring Mountain Day from T-Kep.

Xbox 360 Games

Tuition, please!

A Donna action figure with sweet Gold Card swiping action.

A "Get Out of Recession Free" Card.

Coach Madison Bag.

A warm, good, home-cooked meal.

Leather bathrobe.

My degree so I don't have to come back in the spring.

Amy Mathur staying on the Juniatian. My stockings will be filled with tears.

Gift certificate to Borders.

No Creepers Creeping.

Engagement ring.

iTunes Gift Card.

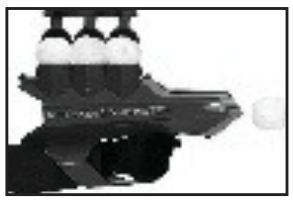
Low unemployment, low inflation, cheap gas, world peace.

A nice stocking-stuffer. If you know what I mean.

Admittance to med school!

Dear Santa, forget the socks. I need the cure for hangovers.

Editors' Picks: Christmas gifts for the collegiately challenged



Want to feel like James Bond this Christmas season? Then get the USB Hidden Flash Drive Watch. A 4G USB card can be hidden discreetly in the watch. It's perfect for conducting seeking missions and make yourself feel clever. It's only $49.99 and can be found at thinkgeek.com.

Tired of your roommate watching his loud anime 24/7? Elevate your passive-aggressive warfare to the next level with a TV-B-Gone Universal TV Power Remote Control Keychain. Turn off the TV randomly with a push of a button. Act just as confused as he is for even more fun. Available at Amazon.com for $19.99.

The Hangover Handbook is the perfect gift for the typical alcoholic college student. It contains solutions for those stubborn holiday hangovers and can be purchased from Amazon.com for $8.95.

The Snowball Launcher. Clipping a freshman walking across North Lawn -- a beautiful sight. Pegging the JCPD truck as it endlessly circles the Kennedy parking lot will make you happy tonight. We'll be launching in a winter wonderland. (Snowball launcher shoots softball sized snowballs 50 feet. No batteries needed.) Find yours at Target, in stores and online for $29.95.

Yes, that is a Hillary Clinton Nutcracker and those are some powerful thighs. She must follow a Coach Smith workout. Only $14.95 at perpetualkid.com

Anything But Ordinary

Perception changed your life

by Claire Williams

Sometimes when you pick up a book for a class, you instantly dislike it. This may be because you have to read it, but the truth is, you probably wouldn't like it even if you had picked it up randomly at the library. Unfortunately, this might be the case with the great works of Tennessee Williams.

In both "The Glass Menagerie" and "A Streetcar Named Desire," the characters are unhappy. Either their lives make them miserable or the people around them cause them distress. Throughout the stories, the characters deal with their issues in differently but ultimately resolve their problems in ways that the readers might not agree with..

"A Streetcar Named Desire" focuses on Stella, Stanley, Blanche and Mitch. Blanche, Stella's sister, comes to stay at her apartment, which is where the reader learns of Blanche's mentally unbalanced problem.

The story is interesting because it is set in a small apartment, moving between two or three rooms on one floor. While the reader is told about events in other locations and "hears" what is happening upstairs, the main action happens in a space that has curtains instead of doors. This adds to the tension that Williams builds throughout the play and gives the impression of being trapped.

While the beginning of the play foreshadows a possible violent conclusion, the reader hopes that things will end differently and that these people might find some happiness.

The reader experiences cultural norms that have long been cast away. The story is set in a time when it was acceptable to hit your wife and send her away so that the men could have a poker game. In "Streetcar," Williams doesn't criticize these actions and it forces us to think about uncomfortable ideas.

"The Glass Menagerie" allows the reader to see another issue entirely. This work focuses on Laura, who collects glass figurines. In the play, Laura rarely leaves the house. Instead she plays with her glass menagerie. Her favorite figurine is a glass unicorn.

This work, like "Streetcar" is set in a limited space. Part of this can be attributed to the work required to have many sets in a stage show, but it also helps with the feeling of both works. In the small apartment, the reader might feel as though Laura has shuts herself off from the world.

"Glass Menagerie" also focuses on general issues of life. Here we see ideas of uniqueness, love and youth. These themes press the reader to think about their own lives and relationships, possibly bringing change to them.

Williams writes his characters in a way that doesn't make the reader feel for them. Instead, he allows readers to see parts of themselves in the characters while making those players people the readers don't want to be. Instead of making one character obviously good or right, each character has his or her own flaws. This gives the reader an indifferent feeling and leaves them questioning themselves when the story is complete.

While these works might not be the lightest reads, they give insights into people that are hard to come by. Readers might not like these works or feel like going to a party after reading them, but they may gain something more valuable than pleasure. If you're up for learning something about yourself or the human experience, both of these plays are excellent places to start.

Percussion Ensemble

Andrew Waplinger / Juniatian

The Juniata College Percussion Ensemble performed a variety of pieces using an assortment of instruments at their performance on Nov. 23 in the Halbritter Center for Performing Arts.

Couple's relationship focus of big screen "Porno" (no, really)

continued from page 12

Very good supporting roles boost the humor in the movie, especially Craig Robinson ("The Office," "Pineapple Express") as Zack's coworker, Delaney. He delivers his lines perfectly throughout and uses those deadpan serious expressions just as well in "Zack and Miri" as he does on "The Office." Justin Long ("Accepted") also has a very funny cameo as a snobbish gay porn star. Jason Mewes, known for his role as Jay in most of his collaborations with Smith, plays a stupid, if well-meaning, actor in Zack and Miri's porno. His role provides a lot of laughs as well.

Despite all of the good acting, the movie sometimes gets bogged down in its brashness. Smith is not afraid to throw the crude and the disgusting right in your face, and sometimes it's just too much. There are one or two particularly cringe-worthy scenes that I am completely prohibited from describing here. There are also a lot of lines that aren't funny, but just gross. While most of Smith's dialogue is very good, when he has a bad line, it's quite noticeable and it detracts from the film.

The movie is definitely worth seeing if you don't mind the randy subject matter. Just keep in mind that while the film may be called "Zack and Miri Make a Porno," the heart of the story really revolves around the "Zack and Miri" portion, not the latter part.

Final Take: ★★★

"Zack and Miri Make a Porno" is now playing at the Clifton 5 in downtown Huntingdon.

It is rated R for strong crude sexual content, including dialogue, graphic nudity and pervasive language.

REWIND

Film Flash Back

The Seventh Seal (1957)

"The Seventh Seal" is a powerful meditation on death and the meaning of life. Directed by Ingmar Bergman, this Swedish film is not for everyone. It's subtitled, black and white, philosophical and challenging to watch. But if you have the taste for that kind of film, this one is a masterpiece.

The film follows the journey of a knight in the medieval era, Antonius Block (Max von Sydow) and his sarcastic squire Jons (Gunnar Bjornstrand) as they trek across Europe. Europe has been decimated by the bubonic plague and disease and despair are everywhere they go.

All the while they are traveling, Antonius is playing a game of chess with Death (Bengt Ekerot). It is one of the most frequently borrowed images of film and television and it began with "The Seventh Seal."

Guitar Hero Tournament

Some people are easy. Some people are hard.
And some people are juuusssst right. Or medium. Whatever.

Come out and show Juniata how you roll. Or rock. Whatever.

Single elimination tournament
Three screens featuring head-to-head match-ups
December 9
Ellis Ballroom
10 p.m.-12 p.m.
Registration: $3 at preregistration (in Ellis lobby after Thanksgiving), $4 at the door
Participants encouraged to bring their own guitars

Prizes include gift cards and issues of Kvasir
Baked goods for sale

*Special shred off: Amy Mathur vs. William "Axel" Dickey

The Naked Truth

continued from page 13

like two birds of a feather would be, or whatever other little twist you'd like. Frolic and play the Eskimo way or just go for a good old fashioned sleigh ride. If you can't agree, go conspire by the fire (it's sure to melt your cares away).

Ten tantalizing teasers. It can't hurt to hide in the bushes naked, even if it leads to freezing. It worked well in "It's a Wonderful Life," and really who doesn't love a good tease to warm up with when you're running low on steam for your cocoa? This plan has additional benefits: I've heard the best way to gain heat when you're extremely cold is to get naked with someone and huddle. Of course, movement is also helpful, so find a stick and start creating some friction to get a fire going. Begin with Jack Frost nipping at your nose and work your way toward roasting chestnuts on an open fire. You will hear a pop!

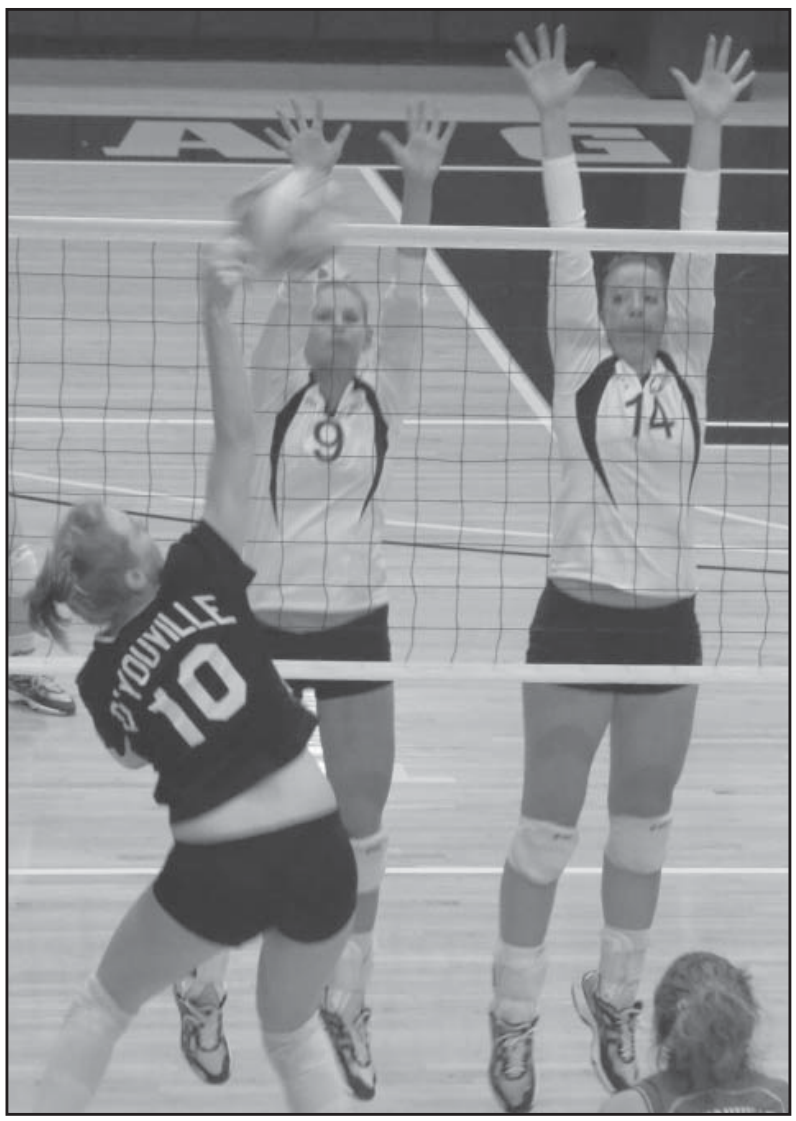
Eleven stocking stuffers. Inside your stocking amongst the Chapstick and Hershey's candies, you'll find a ribbon attached to a little note that reads, "Put this on and meet me under the tree. I promise I'll unwrap you." If there are 10 other surprises like that ribbon, I know I'll be home for Christmas! That's better than a Fundip and a pack of candy cigarettes.

Twelve pack of Trojans. Hopefully, one pack will be enough to keep you rockin' around the Christmas tree longer than the electric train set.

Now, everyone please join in chorus with me: "On the twelfth day of SeX-mas my true love gave to me, a 12 pack of Trojans, 11 stocking stuffers, 10 tantalizing teasers, nine 69s, eight Energizers, seven sultry stripdowns, six kinds of sugar, five jingling rings, four soundproof walls, three French maids, two dainty dice and a present from on one's knees!"

I hope that you all have something special slipped down your chimneys this year. And now, I'm off to sing my favorite carol, "Oh come, oh come Emmanuel!" Merry Christmas, JC!

Wind Symphony



Andrew Waplinger / Juniatian

The Juniata College Wind Symphony performed on Nov. 16 in the Halbritter Center for Performing Arts. Among the pieces played were five composed by guest conductor Dr. Frank Ticheli. Professor James Latten was the Juniata conductor. The Symphony included members of the Huntingdon community and students from area high schools and middle schools. During the event, Juniata sophomore Anne Staudenmaier was honored for winning the Juniata College Concerto Competition.

Juniata volleyball leaves it all on the court

Thank you for a great season!

Andrew Waplinger / Juniatian

Junior Paige Johnston (9) and senior Erin Albert (14) block a kill attempt from D'Youville on Nov. 13. Juniata's 3-0 win over D'Youville puts the Eagles into the Regional Semifinals.

Michelle Morchesky

It's strange. When I went to nationals, I already had half of this article written. My intent was to update the article every night with a recap of our epic matches. The article was filled with strong words that attempted to describe our confidence and determination. I now sit here on the bus the morning after our five game loss to La Verne, staring at my original article, thinking that it doesn't seem right to publish it.

It's not that the words I wrote weren't true. We all knew we were winning this year. You could've asked anyone. This was our year. But, for whatever reason, there were other things in store for us at the end of the season. None of us understand now, with the pain from the loss still fresh, but we may have still come out winners.

In the end, volleyball is just a game. Wins and losses do not define us. We are still sisters, daughters, girlfriends, students, friends and Juniata volleyball players. We might be a little broken right now, but our spirit is still alive and well.

Writing for the Juniatian about something that I love so much and hold so dearly to my heart has been nothing short of an honor. It's been an opportunity to show everyone what Juniata volleyball is all about and I think I have succeeded in portraying that so far. So, I would like to take this final opportunity to do something a little bit different.

I am going to spend the rest of this article not talking about volleyball. I'm not going to talk about our playoff run, our crazy pre-game superstitions or post-game thoughts.

I want to take this opportunity to talk about my 20 best friends that have practiced, lifted, laughed and cried with me everyday for the past four months. In the end, what you really take away from sports are the friendships.

To the beloved seniors, what a phenomenal career! Your strength as players and leaders on this team will live on. As technical volleyball "seniors" now, the juniors will use the lessons you've taught us over the past three years to lead our team as best we can next year. All we can hope for is to make you as proud as you have made us. To say that playing with seven of the best players in the nation for the past three years has been an honor would be an understatement.

To my fellow juniors, it's our turn. Three years have flown by and I'm sure our final year as players won't be anything different. We've learned leadership from the absolute best. With the lessons and tests we've come across in our careers, there is no way that we can fail as leaders. All we can ask for now is the blessing of the graduating seniors and the promise of commitment from the underclassmen. The rest is up to us.

Sophomores, your journey is rapidly changing. You are no longer underclassmen. You now own the faces of veterans. Take that role with great care and responsibility. We need you now more than ever.

Freshmen. Your careers are just beginning. With one year under your belts, you will begin to understand what Juniata volleyball is all about. Hopefully by now you've realized that being on this team is about so much more than being great players.

Every player has something different to offer to the success of this team. There is not one player that is more valuable than the next.

I tried to stay away from making this article too sentimental, but I fear that I have failed in this respect. What I want people to take away from this article is that our final loss does not define our season, ourselves or our success. We are still Juniata volleyball. We still walk onto the court with a swagger. We still own that chip that lies on each of our shoulders.

Those who may believe that our spirits are broken are sorely mistaken. Yes, we all shed tears standing on that end line for the last time this season, but I do not believe that they were tears of devastation. I would like to believe that on that end line we all experienced a type of bond that can never be matched.

At that instant, we experienced a great moment of sorrow, but it is from that sorrow that we will grow to be even stronger as a group. Don't get me wrong, it is incredibly hard to be positive about losing in the national semifinals, but once again, in the end, it is just a game.

There is so much more to sports than winning and losing. We may not believe that now, but someday, someday we will. Thank you for a great season ladies, and thank you Juniata for your support. We'll be back.

We are still Juniata volleyball.
We still walk onto the court with a swagger.
We still own that chip that lies on each of our shoulders.

Congratulations, Amber Thomas

Juniata senior outside hitter Amber Thomas closed out her collegiate volleyball career on Nov. 21 as one of the most decorated athletes in the program's and the College's histories.

On Nov. 19, Thomas was named the American Volleyball Coaches Association (AVCA) Division III Player of the Year. Thomas also won the award in 2007, making her the first Juniata player ever to claim the honor twice. She became only the fourth volleyball player in NCAA history to be named DIII Player of the Year in consecutive seasons.

Thomas was also named a First team All-American for the third straight season. She earned a Third team All-American nod for her freshman campaign, making her only the second Juniata athlete (Christy Orndorff, volleyball, '95) to be named an All-American four times.

On Nov. 24 Thomas was chosen as ESPN The Magazine's College Division Women's Volleyball Academic All-America of the Year and a First team Academic All-America. According to a Juniata press release, "She is the second Eagle women's volleyball player to be named Academic All-America of the Year in the sport as well as a First team Academic All-America." Carli Dale ('04) accomplished the same feat.

Of the 19 Juniata College athletes who have earned Academic All-American honors to date, Thomas became only the fifth to be named to the Academic All-American First team.

Thomas also collected her second consecutive Landmark Conference Player of the Year and First team All-Conference honors this month.

She is a four-time Division III AVCA All-Mid Atlantic-Region honoree.

Thomas was a member of four straight Final Four teams and the National Champion squad in 2006.

Juniata men's basketball working out the kinks

Chad Kohr

All teams deal with adversity. The Juniata men's basketball team already faced some in its first game of the season.

In a very hostile environment, the Eagles dropped their season opener to Penn State-Altoona. Senior Eric Mueseler believes simple things did the team in.

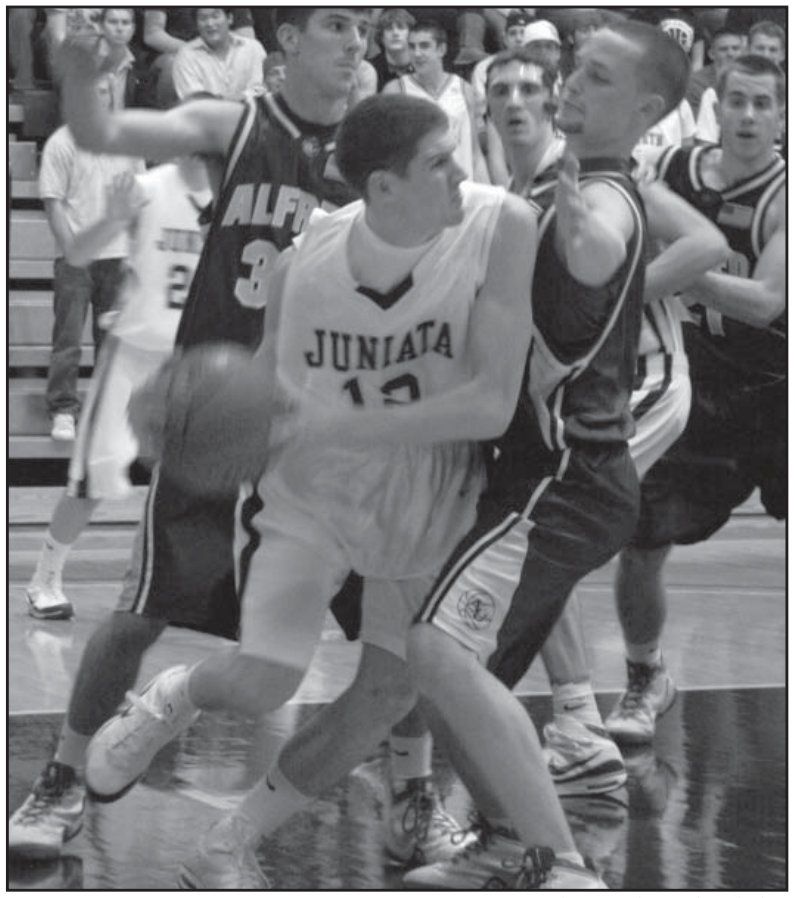
"We didn't execute defensively and were poor fundamentally. We have to go back and work on our defensive positioning and make sure we stay focused," said Mueseler.

Coach Greg Curley sees the game as something to learn from. "We were put in a very tough situation early. We have to learn from it and it will help prepare us for what we'll face in conference play," he said.

There is no reason for the team to panic. The last two seasons, which both produced 17 wins and appearances in the Landmark Conference championship game, both featured a loss in the road opener. Junior Jeff Berkey is confident that the team can overcome the loss quickly.

"It's really early and playing on the road at this level is difficult. We can't dwell on early season losses. If we work hard in practice and learn from them, it's possible to overcome them and have success," said Berkey.

Being thrown into this type of environment so early may pay off. Mueseler thinks this was a good experience for the several newcomers on the team. "The young guys got to see the speed of the game. It gives them a good base to learn from in the upcoming games," he said.



Juniata opened its home schedule with the Doc Greene Invitational on Nov. 21 and 22. Juniata lost a tough game in the opener to Alfred University, but beat Penn State-Dubois in the consolation game.

The Eagles are already improving on the defensive end. After giving up 81 points to Penn State-Altoona, in the Doc Greene tournament Juniata allowed 71 points and 58 points to Alfred University and Penn State-DuBois, respectively. The teamwork the Eagles displayed on defense helped them play much better.

Coach Curley understands that this may be a slow process, but he is confident his team will continue to get better."Teamwork and understanding takes experience and time. Our philosophy is a loss isn't a loss unless we fail to learn from it," said Curley.

The Eagles' four leaders are performing well in their adjusted roles. The team is being led by Mueseler, who is pouring in 17 points per game while shooting 58.6 percent from the field and pulling down 7.3 rebounds per game. Other upperclassmen are doing their jobs, as well. Seniors Dave Thompson and Justin Baker, and Berkey combine with Mueseler to contribute 77.8 percent of the scoring for the team.

Berkey, who is averaging 13 points per game thanks to his high shooting percentages from behind the three point arc and the free throw line, has stepped up to be one of these leaders during his junior season. "I'm trying to set an example for the younger guys. I was one of them in the past, so I understand the impact I can have," he said.

Andrew Meloney / Juniatian

Juniata freshman guard Dan Sekulski looks to pass out of an Alfred double team. The Eagles dropped its first home game, 65-71.

As the team continues to establish its identity, Curley is confident the leadership will keep having an impact. "I'm happy with the leadership. In the first game, the guys coming back may have tried to do too much. Once we figure everything out, if we keep together, we can be a better team," he said.

The Eagles return to action tonight at 6 p.m. in the Kennedy Sports and Rec Center against Dickinson College.

By The Numbers

2

years in a row that Amber Thomas (women's volleyball) has been named the Division III Player of the Year. Only four women in NCAA history have won the award in back-to-back seasons

.600

shooting percentage of senior forward Eric Mueseler from behind the three point line through the first three games of the season

13

steals in four games for senior guard Claudia McDowell through four games this season

109,000

people who sat outside in subfreezing temperatures on Nov. 22 to watch Penn State clinch a Rose Bowl berth. That is the equivalent of 70 Juniata College student bodies.

JCWB: It's not how you start that matters

Learning and improving from early struggles

Erin McGinley

In season openers, learning is more important than winning. We began our season 1-3 this year, but we're okay. These games exposed what we have as a team and showed where we stand after the first month of practice and two scrimmages. We learned that time is necessary for us to become one functional unit.

Our first win of the season came during the consolation round of the Wilmington College Tournament in Ohio. The first day of the tournament we fell to Denison College, a strong basketball program. The second day we posted an impressive 88-49 win over SUNY-Geneseo. A 39 point win over any team is striking and our success came through a team effort. Twenty-one assists to 34 made baskets illustrates how well we played as a team this past weekend.

Freshman starter, Brittany Ryder said, "Although we had high expectations for our first games, our record doesn't show all of the talent and potential we have. With our last game, we have turned a new leaf and have begun playing the way we know we can."

Our first four games have been on the road. The first two games took us to the Philadelphia area for both Gwynedd Mercy College and Widener University. Any four hour trip via minibus or college van is always interesting. For our next trip to Wilmington College, we traveled eight hours on a charter bus. Having a charter bus is heaven. We went on the road often in the early season to meet our goals later. Since the Landmark Conference does not have an automatic bid into the NCAA tournament until 2011, our non-conference strength of schedule must be at a competitive level if we want to gain the attention of the selection committee. By scheduling competitive non-conference games we are learning to play at the level of very good teams. Win or lose, we are benefitting from the games played solely because of their competition level.

"Playing tough opponents now helps to expose our weaknesses and is a good simulation of our strong conference schedule," said senior captain Kelly Ashcraft. "Although it's frustrating to play harder teams in the beginning of the season, we have to be able to look ahead and know that it's going to help us out in the long run."

This year Moravian College is picked to win the Landmark Conference by a slim margin. We are picked to finish third, 10 points behind Moravian.

Conference games begin on Dec. 6 at Susquehanna University. After a short winter break, conference games will resume on Jan. 9, 2009. While the rest of Juniata is at home enjoying winter break, we will be on campus working hard on improving our game.

Winter break is long, but it is only a portion of the season. Every portion of the season has a purpose.

The purpose of the season opening games is to test out what we have, take the results and improve upon them. After that initial test, there are no excuses. As our coaching staff always says, "It's a marathon, not a sprint."

Our season is the longest season for a college sports team; it runs mid-Oct. into March, depending on how far we progresses into the NCAA tournament. Six months is a long time. We have five months left. In those five months we will come together and play to our full potential. We will be what we are expected to be and more.

Men's volleyball looks to return to championship form

Back on track after injuries and inexperience in 2008

Kevin J. Campbell

After five straight winning seasons, including four consecutive Molten National Championships (2004-07), the men's volleyball team only finished 10-15 last year. The Eagles finished .500 in the conference, only good enough to tie for third place.

"We are coming off of a disappointing year in the aspect that we did not reach our goal of winning another national championship. We are maturing as a team. This year those young guys are sophomores and with experience already under their belt, they will be so much better off," said senior Matt Werle.

Nine freshmen made up more than half the 2008 roster.

This season the Eagles are still an extremely young team. After losing only two seniors from last year, 13 of the 19 players are either a freshman or sophomore.

The difference between this year and last is that the team has gained valuable experience in key situations, including the Final Four and Eastern Intercollegiate Volleyball Association (EIVA) playoffs. "I'm excited that they are going to come back strong, and they have already shown that they are a lot more comfortable and that the game has slowed down for them," said head coach Jeremy Price.

The return of senior Chris Gass will make the Eagles that much stronger. "Chris will be returning this year after tearing ligaments in his knee last fall and missing the entire season. He is back on the court now and will be a tremendous part of our team this season," said Werle.

The biggest impact on the roster, though, may be the possible loss of All-American setter Werle. He tore his Achilles tendon in May, and was initially told by the doctor that it would be a year before he would be back to 100 percent. However, Werle said, "I plan on being ready in January. I believe I am a little ahead of schedule, but it is still too soon to tell if I will be back this year or not. This is one of the toughest injuries to come back from."

In the conference Juniata faces tough Division I programs such as George Mason, Princeton, St. Francis and Penn State, who won the NCAA National Championship in 2008. In order to prepare to compete in such difficult conference matches, the Eagles will also play challenging non-conference opponents, such as a top Division III ranked teams, Santa Cruz in California, and Ohio State, a Final Four team last year. "This years' schedule might be the toughest a Division III school has ever faced in any sport," Werle said.

"Penn State will obviously be our toughest competitors this year, but we also play Ohio State home and away. The majority of our games are against Division I schools. We only play the required Division III matches and we don't schedule any other. This year has a lot in store and we are truly ready for the challenges yet to come," said Werle.

According to Coach Price, his team has just finished a very successful fall season by improving from week to week. "The guys are really motivated; they're fit, they're staying in shape and finished the fall playing at a high level. They just have to come back and have a good preseason," said Price.

Some keys players to keep an eye on this season can include middle hitters, Dan Powers, Chris Gass and Evan Halteman, who Price considers some of the best middles hitters on the east coast besides Penn State's hitters. The team is fortunate to have good depth with freshmen and sophomores stepping up.

Outside hitter Zack Wanner possibly could be the best attacker in Division III, according to Price. Wanner is an exciting player to watch, getting up off the ground fast and being able to jump to touch 11 and a half feet.

At libero is junior Anthony Damiano, who will compliment the skillful offense with his lockdown.

With the season opener on Jan. 18 at Ohio State, the men have to play half of last year's Final Four: Ohio State and Penn State. Price is convinced that his young team can bounce back from a disappointing season last year and compete at a high level this year to be one of the best teams in its conference and possibly the nation.

"If we can compete how we are capable of, then I think we have enough talent to be one of the better teams Juniata has ever had," said Price.

Track not at the finish line

Delays cause budget increase

Tyler Sasala

A major question that has been brought up by athletes around campus all year has been, "When is the track ever going to be completed"? The answer to that question is in fact the track is done… for the most part.

When asked what stage the track was in, Jeff Meadows, grounds supervisor, said, "It's finished, except for the lines. The crew is on standby. We have to wait for a day that is in the 40's."

Some setbacks, beyond weather, did delay the completion. Meadows said that every hold up resulted in a week delay. The problems ranged from waiting for the equipment in the summer, to waiting for the paving company to show up in September.

Some wonder if the delays caused an overrun in the budget. When asked about the budget situation Meadows said, "We are about where we should be, but we did have to make some minor changes." Meadows wasn't sure of an exact amount, but he estimated the budget increase was around $40,000.

When asked if the administration was pressuring him or if they understood it would take time Meadows said, "A little of both. It was a bigger project than everyone thought. I don't think anyone but the contractor understood how long it was going to take."

The only question that remains is when the track is going to open to the public. Meadows didn't want to comment on a date but said, "The track won't be open until the lines are done. The painting should only take two or three days once we have good weather and the track is dry."

For now, the only people permitted on the track are the track teams.

Former Eagle playing professionally with Washington Generals

Erin McGinley

Former Eagles power forward Brian Cannon ('08), is pursuing his basketball career with the Washington Generals. The Generals, a professional basketball team, tours the world alongside the Harlem Globetrotters. The Globetrotters are known worldwide for their spectacular basketball tricks and techniques during their games.

Usually a basketball game is fairly matched at a professional level, but playing for the Generals doesn't come with many wins. The Generals are hammered nightly by tricks that the Globetrotter players have acquired over many years.

Last year Cannon ended his Juniata career with 1,391 points and 579 rebounds. He earned First team All-Landmark Conference honors and was a Second team All-Region selection by d3hoops.com. He also led the team to back-to-back conference championship games in 2007 and 2008, which both led to ECAC Division III South Region game appearances.

Men's basketball coach Greg Curley contacted the general manager of the Generals, John Ferrari, in effort to help further Cannon's basketball career. Ferrari was interested in Cannon once he saw him on tape and was impressed with Cannon's skill and personality. After the initial judging process via tape and phone it was virtually a done deal.

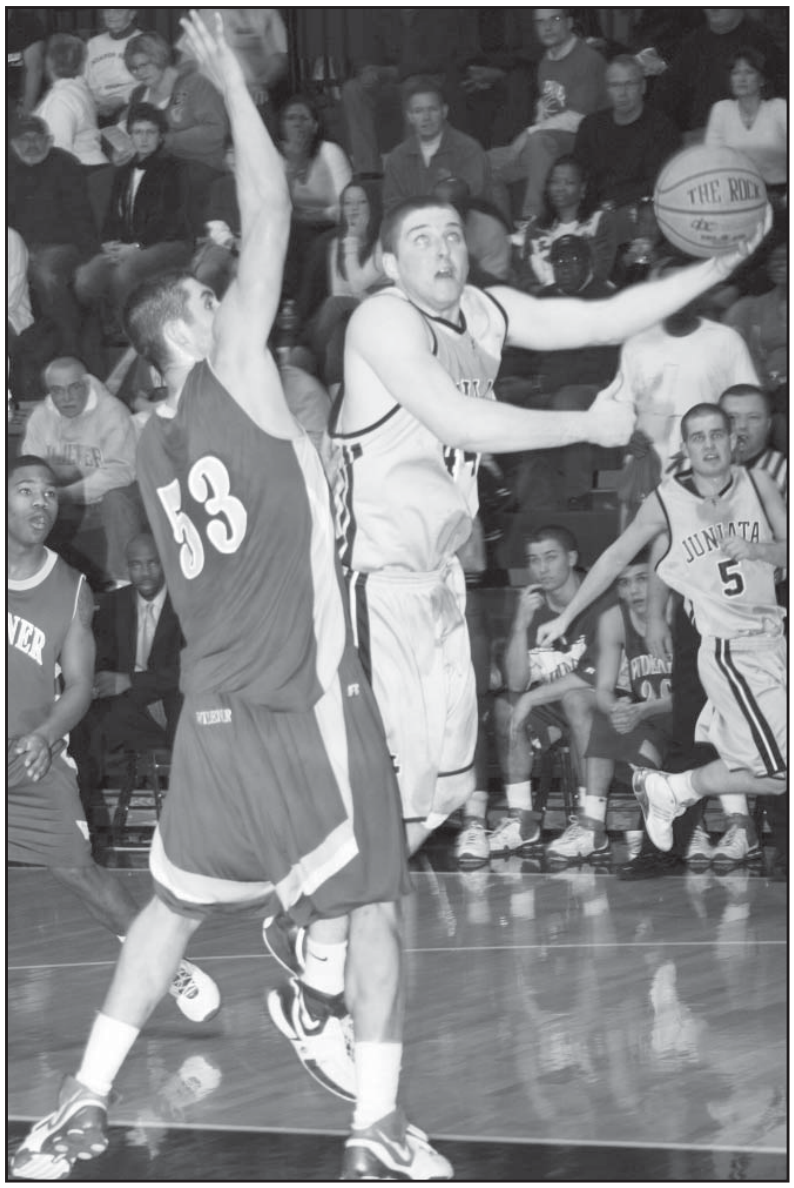
"It didn't really occur to me this was all really happening until I got on a plane to New York on Oct. 3. Before this, it didn't actually seem real," said Cannon. The plane ride to New York for training camp began Cannon's journey as a General.

First year Generals players are required to complete training camp, consisting of three to four hour long practices twice a day for a few weeks. After the completion of training camp, regular season practice begins.

Cannon and the Generals started their season on a tour overseas in Israel, Turkey, Bosnia, Romania and various European countries which lasted until mid-November. Daily practices leave little time for sightseeing during tours though.

"I really wanted to pursue something with basketball [after Juniata], either as a player professionally or as a graduate assistant somewhere to get my master's degree," said Cannon. "I get to get paid to do what I love. The greatest benefit is that I travel for free and I get to see the world."

Cannon knows what sacrifices it takes to make a team successful and he is willing to go the distance to maximize the experience.



The Generals have two sets of teams when it comes to traveling in the United States. From Thanksgiving through Christmas the Generals run separate east coast and west coast teams so that the players are closer to their homes and families. This also helps to break up the number of games played. Instead of playing two games every three days, they play one every three days over the holidays.

The biggest transition that Cannon had to go through between college basketball and playing professionally is the amount of traveling, especially overseas. "It affects seeing my family and friends a lot. It's difficult, but hopefully the experience will be worth it," said Cannon.

The Generals' Web site boasts its record of winning one game against the Globetrotters, while losing possibly thousands. Even though they have one win, they also have many other statistics. The Generals, along with the Globetrotters, have been to 119 countries on six continents and have played before 128 million people.

The Generals will finish out the year in Pittsburgh on Dec. 26. In 2009 Cannon and his teammates will travel even closer to Juniata, such as Altoona on Feb. 1 and Lewisburg on Feb. 8. Ticket costs range from $15 to$140, depending on the location of the game and seats.

More information about the Washington Generals can be found at www.washingtongenerals.com. Tickets can be purchased atwww.harlemglobetrotters.com.

Christopher Shannon/ Juniatian file

Brian Cannon goes up for a layup in the Commonwealth finals in 2007. Cannon is playing professionally in 2008-09.

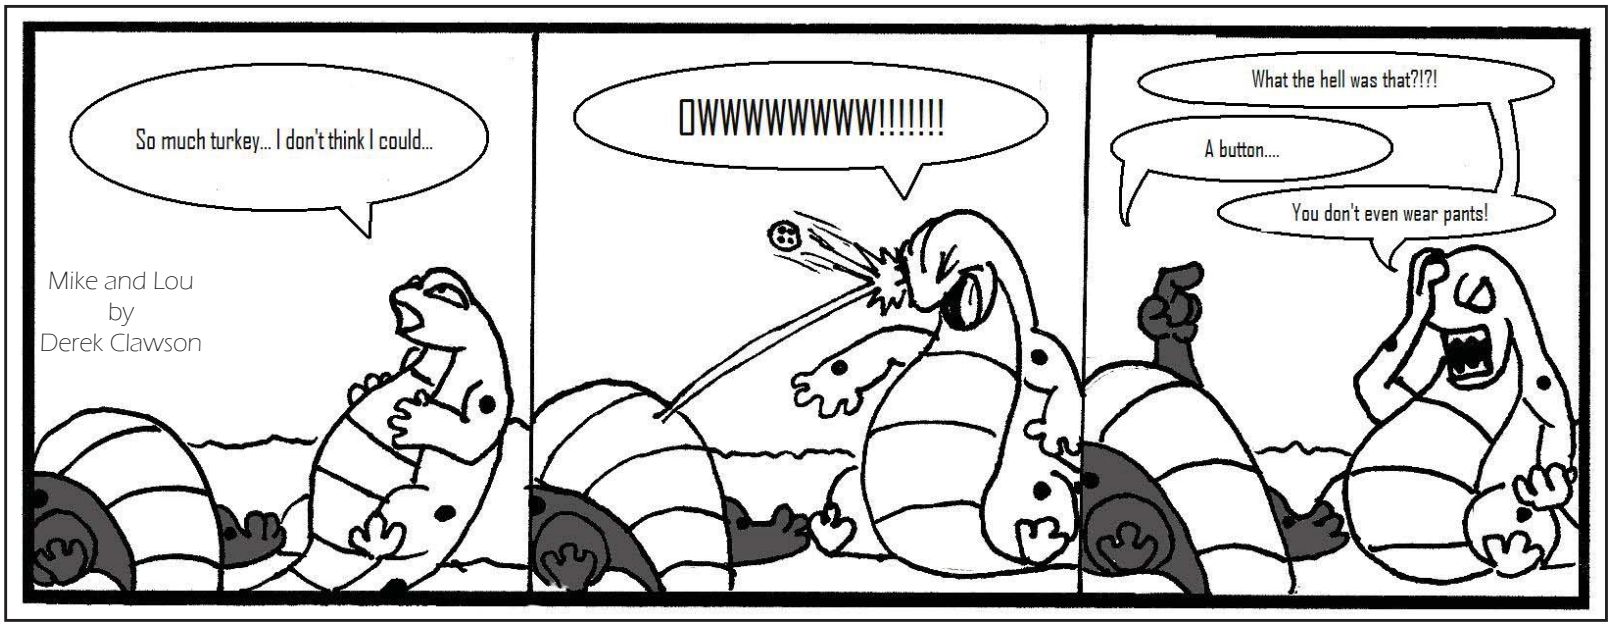
ON THE FLIP SIDE

by Bennett Rea

The holiday season is right around the corner, and whether you celebrate Kwanzaa, Dhu al-Hijja, Boxing Day, Festivus or whatever the hell else, you will probably need to buy presents. Now, I won't give you a guide for what to get for your family. You can make your own choices there and have them blame you, not me.

However, I will give you a guide for what to buy any fellow Juniata students here. If you're looking for gifts for Juniata friends or if you're in need of ideas for your own Christmas list, here is a comprehensive inventory:

1. Snowmobile – It's the winter season, and you've got to get to class somehow.
2. Quarters – For those students who don't put money on their Gold Card for laundry, quarters are like oxygen; necessary to live. Otherwise, the dirty clothes just become a massive pile that takes up half the room and you start to notice your roommate has been missing for days.
3. Fiction Books – Ha ha! Just kidding! No one has time to read for fun here.
4. Fabolous' latest CD – I heard he was very popular here last year…and punctual too.
5. Gift card to Sheetz – This is literally one of the greatest presents a Juniata student can receive. I'm not kidding.
6. A Paper Shredder – This is a necessity, especially for the sheer amount of Obama literature laying around.
7. More Time – If you can actually find More Time in stores somewhere, every Juniata student could use it for lots of different things.
8. "40 Colleges That Change Lives" – This is a shameless plug for Juniata (since it's included in the book). I figure I should toss in something that doesn't tease our lovely school.
9. Pennsylvania Lottery Ticket – Those commercials say it's the perfect gift…so it has to be, right?
10. A copy of the Juniatian – The price tag is very cheap (free), and it will entertain them for hours upon end! You can just give them this copy when you're done reading this line, actually.



Memorable Madrigal

Take the pledge!

Join the men of Mr. Juniata on Dec. 3-4 in Ellis by signing the Memorable Madrigal pledge. By signing you promise to abstain from alcohol or drink responsibly before, during, and after Madrigal on Dec. 6."

Is the POE losing its luster?

Employers and graduate schools focus more on transcripts than POE titles

By **KELLY O'SHEA**

Recent economic hardships have called attention to the Program of Emphasis (POE), questioning its importance and value in the working world. Some feel that it is the classes taken, not the name of the POE, that will ultimately define a college experience. Juniata's unique way of learning is leaving students with unanswered questions.

Chair of the Politics Department Emil Nagengast shared some advice for all students regarding their POE choice and its ultimate importance.

Nagengast said, "Some students do really good things with their hand-crafted POE, but the majority of personalized POEs are misguided." In order to avoid this, he recommends not naming POEs after job titles.

"Students often do this to convince themselves there is a purpose behind their POE," he said.

Nagengast also advised not to fit every course ever taken into a POE title. Students are warned not to fall under the common misconception that if the course is not included in the POE title then students have wasted their time.

Employers and graduate schools will still know what courses students took regardless of the POE title. Students need to remember to let their transcript do the talking.

"If you take joke courses, no POE will be able to save you but if you have a strong course selection, you could have the stupidest sounding POE in the world and you'll still land the job," said Nagengast.

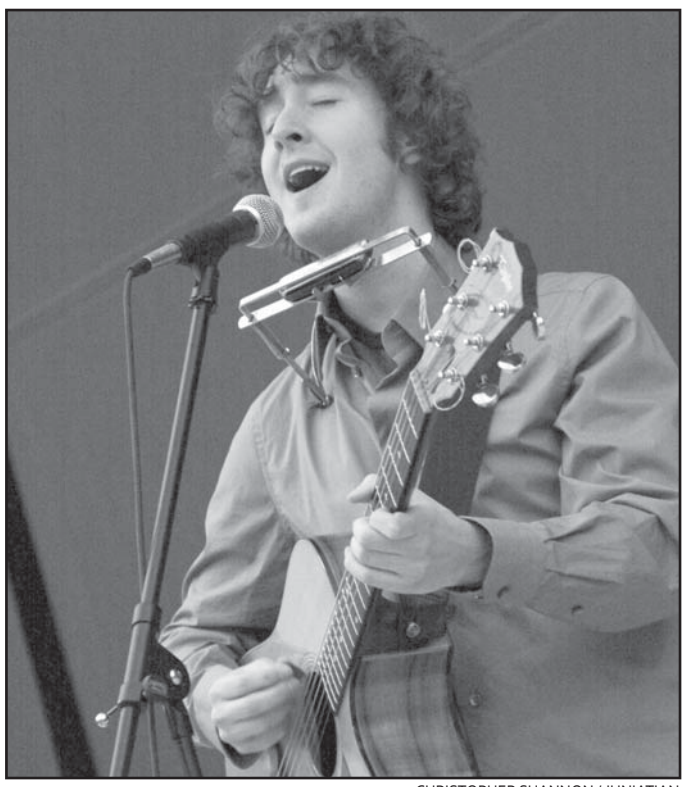
JC students touched by war

By **STEVEN GOEHRING**

American troops have been fighting in Afghanistan and Iraq since 2001. In that time, the effects of these wars have reached people far and wide, including Juniata students.



Students with family and friends abroad, or who have been deployed in the armed services themselves, are the most affected by the conflicts. Since the invasion of Afghanistan, daily life for soldiers and their families has not been the same.

Lauren Auster-Gussman is a sophomore whose father was recently deployed to Iraq on military service. He originally enlisted in the Army as the Vietnam War was ending and retired in 1982. After the attacks on the World Trade Center on Sept. 11, 2001, he wanted to re-enlist. Changes to enlistment laws allowed him to re-enlist in the National Guard at age 54. A year later, he is leaving for a yearlong tour of duty on an airbase in Iraq. A member of the National Guard 20th Aviation Brigade, he left Feb. 1 for a training base in Oklahoma.

"These past couple days it's been hard to focus on school, but you do the best you can," Auster-Gussman said. In support, the

Israel: a homeland for a fractured world

Students explore their connections to Middle Eastern land

By **MARIE BOLLER**

It was an unexpected homecoming. Juniors Chloe Pott and Michelle Yockelson identify as Jewish but had never been to Israel before. Over winter break they spent ten days immersed in Jewish Israeli culture, sponsored entirely by Jewish organization Taglit Birthright. The group sends thousands of American Jewish college students to Israel yearly. Birthright believes, in the words of founder Avraham Infeld, "Every Jewish child should be born with a ticket to Israel attached to their umbilical cord."

Pott was apprehensive about travelling to an already volatile region that has recently seen the worst surge of violence in sixty years, as Palestian Hamas and the Israeli army face off in an increasingly bloody race to wipe each other off the map. Her primary goal was to return alive. Upon arriving in Israel however, she was overwhelmed by a "feeling of hope and a spiritual uplift."

Staci Weber, director of student activities, traveled with the group. Weber said that many of the Jewish young people that travel with Birthright are not religious, but carry a deep pride of their culture nonetheless. Many arrive weighted with innumerable questions, only to find that there are no easy answers to questions of cultural and spiritual identity found in the harsh Israeli desert.

"The part that's beautiful is that you're the majority," said Weber. The students embraced open expression of their Jewish heritage, a refreshing shift from the streets of Huntingdon where the only synagogue is unmarked for fear of defacement. On the streets of Jerusalem, they could simply be people, without standing out as Jewish people.

Birthright aims to instill a sense of pride in the young people. Groups are required to spend some time learning about the Holocaust and spend time reflecting and building a shared identity. One of the questions addressed on the trip was "Is there a God?" said Weber. And if there was a God overlooking the Holocaust, "Where was He?"

During the trip, there is a subtle emphasis on recruitment to a Zionist agenda. The trip is "free"

Aiming for fame, the job market game

Opportunities for students at Career Day's job, internship and networking fair

By **Kat Pearce**

On Feb. 27, Career Services, Alumni Association and Student Alumni Association (SAA) are hosting Juniata Career Day—an annual job, internship and networking fair. The event is open to all Juniata students and will be held in the Intramural Gym from 11 a.m. to 3 p.m.

This year, emphasis is placed on networking—the act of developing contacts to help with career and life goals.

"Seventy percent of all new jobs come from networking," said David Meadows, the assistant director of Alumni Relations and a 1998 Juniata graduate. He has his own job because of networking.

Darwin Kysor, director of Career Services, said he has seen students receive positions because of the job fair.

Over 100 alumni and employers are expected to attend this year's Juniata Career Day. Representatives from the PA Office of Attorney General, the PA state police, the Peace Corps and Washington University will be present, among others. Alumni will be publicizing jobs and internships and advising students on career and life decisions.

All students should dress professionally, bring their résumés and career questions and come prepared to take the experience seriously. "There are very few chances to practice being professional," said Meadows. "This is a safe but real chance to do it."

While at Career Day, seniors should focus on the job market, Meadows suggested, by "making connections that should lead to a job after graduation." They should also talk with alumni, who can give guidance such as how to obtain an internship in a big city or what it is like to be a doctor in rural Pennsylvania.

Juniors should focus on graduate school, internships and building their networks. Sophomores and freshmen should also build networks, learning about fields of interest and gathering general information.

Sophomores should look for internships; many are unavailable to freshmen.

Senior Renee Stiehler, a member of SAA, said that the best time to start networking is as a freshman. She explained that it is best to have the network in place before it is needed. Kysor advised that by the time a student needs a good network, it is too late to make one.

Students applying for jobs and internships should get a business card from the employer and ask how they can apply, Meadows suggested. Then they should follow up via e-mail. "The next day is the best time," said Meadows. He advised students to remind employers in the e-mail how and where they met, and then ask them more about their career. Students not seeking career contacts should try to find common ground with alumni and follow up in the same way.

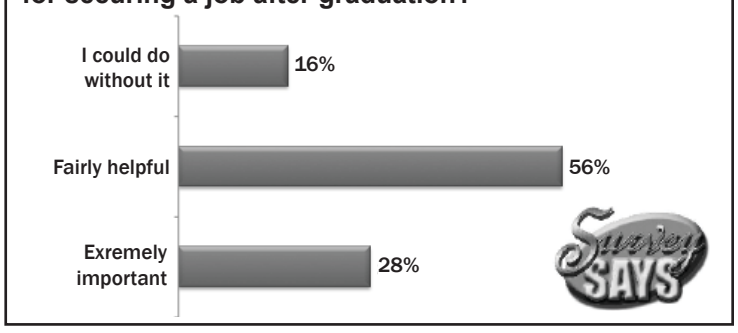
The first 500 students who preregister for Career Day will receive free personalized business cards and business card holders.

Students are also encouraged to attend the Networking Workshop on Feb. 26 from 8 to 9 p.m. There will be presentations and activities that will help prepare students for Career Day.

A Wine and Cheese Networking Reception will be held March 6 from 4 to 6 p.m. in the Sill Board Room of the von Liebig Center for Science. Students 21 years and over are invited to attend to follow up and network with alumni from Career Day.

Even students who are looking for jobs not offered at Career Day can find useful information, said Kysor. "You may learn something that changes your mind," he said.

It is also a way to practice presenting yourself professionally. "Force yourself to be more outgoing then you normally are," advised Meadows, "and don't treat it casually."



Career Day Events:

Preregistration: ends today

Networking Workshop: Thursday, Feb. 26, 8-9 p.m., Sill Board Room, von Liebig Center for Science

Career Day: Friday, Feb. 27, 11 a.m.-3 p.m., Intramural Gym

Wine and Cheese Networking Reception: Friday, March 6, 4-6 p.m. Sill Board Room, von Liebig Center for Science

Polte retires; interim study abroad advisor in position for semester

Concerns over transition period in study abroad office

By **Alison Rihs**

Juniata College's study abroad program has changed faces. Jarmila Polte, former director of study abroad, held the position for 20 years until retiring after last semester. On Jan. 5, Elena Hart was hired as the study abroad advisor on a temporary basis. By June, a new person will be hired permanently.

There are concerns that three individuals severing as the Study Abroad Advisor over a short period of time will create confusion and instability for students.

Junior Danielle Brenizer said, "It will be tough. Students might be unsure of whom to go to [for information]. By the time Elena is well-informed of the programs, she'll be leaving. How is the third person going to know all of the information right away?"

Sophomore Ashley Bauer said, "I don't think it will be negative for the study abroad program but it will be confusing for the students. They will have to get used to a new [advisor] and the way they run the program."

Hart also believes that this will not have any negative effects. "I hope not. As long as we keep our answers consistent and keep up with our communication, it should be fine."

Students who studied abroad in the past often sought out Polte's guidance. "I worked with Jarmila closely. She was a great resource for helping me pick a program," said junior Dustin Gee.

"Jarmila was always helpful. She always had time to answer questions for me. I received all the information I needed for the entire application process," said Brenizer.

Although students are used to asking Polte for advice, Hart is still relying on Polte's expertise to smooth her transition.

Hart said,"[Jarmila and I] have been in contact on the phone and e-mailing back and forth. She's explained the formalities with VISAs and has been available to answer my questions. …Everyone's been very wonderful and very helpful."

Hart will not make vast changes to the program, but she wants to advertise the international oppor-

▶ *see* **HART** *page 4*

What the POE means to employers

▶ *from* **POE** *page 1*

cover letter to prospective employers instead of trying fit everything into their POE.

Politics professor Jack Barlow spoke of the false premise many students have of the POE. "Your POE is not a career decision," he said. "Mick Jagger was an economics major."

Even after taking these tips into consideration, many students still question the POE's value. Some, like freshman Kara Buda, ask if the strength a POE depends on the College's reputation.

Darwin Kysor, director of career services, said that even though Juniata College is known for its sciences, this doesn't mean the College is not well respected in other areas as well. "Like its students, the College is a well-rounded school," he said.

Students often find themselves wondering whether a specialized POE is held with a higher regard then a standard POE. Director of Academic Services, Sarah May Clarkson, notes the contention within the college community regarding this subject.

"Biology POEs may look down on hand-crafted Biology Research POEs because it's seen as the easy way out," says Clarkson.

In order for a potential employer to understand the benefits of the specialized POE, Kysor said, "you have to sell the skills you acquired in this unique process."

With the U.S. in economic turmoil, the question many students ask is if they will be able to land a job with their handcrafted POE. Clarkson predicts, "The secondary emphasis will become more popular" in these desperate times. Clarkson says that a secondary emphasis that is "broadly applicable and easily translatable" will bring security to students who are having their doubts.

Frederick said the typical phone call the Registrar's Office receives from a graduate school or prospective employer consists of the following: verifying the student's name, asking if the student received a Bachelor of Arts or Science degree and the year the student graduated.

"Only about two thirds of callers will ask for a POE clarification," said Frederick.

Despite this, Frederick speaks highly of the POE system. "The POE strikes up a conversation and gives students that 'edge' that everyone looks for."

Regarding the future of the POE, Nagengast does not foresee any change in the system. It is "one of the College's most powerful recruiting tools," he said.

In the end, the POE is a reflection on the student, which validates individual academic strengths. Clarkson said, "The POE is your personal stamp, your signature at JC and I have a lot for respect for that."

Inside JAB: How it works

Invited acts previewed before performing at JC

By **LEANNA YEAGER**

Many students have heard of the Juniata Activities Board (JAB) but few actually know how it works. Booking each of the acts takes more time and energy than just calling the performer on the phone.

Every semester JAB chooses several student members to attend a national conference hosted by either NACA (National Association of Campus Activities) or APCA (Association for the Promotion of Campus Activities). The conferences last about a week.

"Attendance is open to all members. We choose how many can go based on the size of the hotel rooms. Then we choose some experienced members who have been to these conferences and a few new members who might be future leaders," said Staci Weber, director of student activities. "Either Josh [Lingenfelter, assistant director of student activities] or myself go along...we help the negotiation process run smoothly," she said.

During these conferences, JAB members watch hundreds of acts. "It's not unusual for us to be there at eight in the morning and leave at one a.m.," Weber said.

"We go into these performances with a basic idea of what we'd like to see based on past experience, but we also like to keep our minds open to new ideas," said junior Dustin Gee, executive officer of external relations.

The experienced members choose acts based on those that have done well in the past as well as getting ideas from talking to other students.

In the past, JAB tried to preview and commit to acts from the office on campus, but that did not work out as well as hoped. After the conferences, the members brought back DVDs of different acts for students to view but did not get many volunteers.

"What people don't realize is that we have to go through hundreds of acts and that takes a lot time. But the great thing is that if anyone really wants to be a part of that process they can always join JAB," Weber said.

After seeing acts and make their decisions JAB representatives meet with the performers and their agents. Members try to book the performers that they like with nearby colleges so they can get a discounted price.

These conferences are not just about watching and booking acts. They also have workshops on things like leadership and management for the students to attend. "It's a great learning process… they [the students] really get some great experience," Weber said.

Weber and Gee both feel that JAB has been doing very well this past school year. "Compared to where we were when I first joined JAB [two years ago] we've come a long way," Gee said.

"We've had a few events that were standing room only," Weber said.

Each year JAB officers their goals are for the coming year. "Right now we're thinking about branching JAB out into the community…maybe holding events for the entire community," Gee said.

Incoming freshman class to be smaller

By **TALIA C. VALENCIA**

Juniata's class of 2012, made up of 473 students, is the largest class in Juniata history. Worry has been expressed that Juniata plans to continue recruiting exceptionally large freshmen classes. However, Juniata's class of 2013 will not be as large as the current freshmen class.

"If we had 473 [students], it would not be a good situation. We are not made for 473 this year," says Dean of Enrollment, Michelle Bartol. Next fall she is hoping for 430 incoming freshmen, a considerable nine percent drop in enrollment.

With the class of 2012, problems have surfaced due to its size including class availability and living space. This year there are freshmen living in the East apartments, something that is normally never done.

Similarly, when scheduling for classes freshmen must plan extremely well to ensure they get the classes they need, especially those students who already have a four-year plan laid out.

"It's not fair that the students who have to register during the last time slot do not get into the classes they want simply because classes were full," said freshman Chelsea Homes. "I had to go through a lot of work to make sure I got into the classes that I needed. I had to personally go to the professors and ask them to let me in." Homes is currently on a Pre-Medicine track, and her schedule does not allow for any diversions.

For next year's freshmean class, Bartol is hoping for 68 percent acceptance rate. The current freshman class's acceptance rate was 69 percent, four percent higher than previous years.

The purpose of boosting recruitment numbers is not to increase Juniata's student population. To Bartol, Juniata being a national institution is very important.

In addition, being able to pick from a vast pool is vital to achieving diversity on campus. According to Bartol, having diversity and being able to choose from all over the country can only make Juniata a better community.

Students experience Israel

▶ *from* **ISRAEL** *page 1*

because its sponsors expect that their investment will show enthusiastic returns through young people willing to reclaim their birthright, "make Aliyah," and settle in Israel.

The generation of donors—many with vivid Holocaust memories—are rapidly dying, however. Birthright is scaling back its trip budget by 80 percent this summer.

The sense of urgency is made all the more palpable by the rockets falling on Israeli soil. No patch of ground is safe. With echoes of the Holocaust ringing in their ears, the Jewish young people are charged with a newfound sense of purpose.

"I don't know when, but I want to go back," said Pott.

"I established a connection, even though I shy away from Zionism," Yockelson said. A peace and conflict studies POE, she had been hoping that the conflict between Israelis and Palestians would be addressed. Both girls, however, returned roused and energized.

Pott and Yockelson did not meet any Palestinians during their trip. For safety purposes, they were never closer than 50 kilometers to the border of Gaza and the West Bank. Pott said that she saw one Palestinian man. "He was your stereotypical Palestinian, riding on a camel and wearing red robes," she said. She asked her armed escort, "Don't you hate him?"

"No," the soldier replied. "We don't like his people, but I don't hate him."

Seven Israeli soldiers, on a brief holiday from active duty, provided a 24 hour armed guard. "I felt completely safe," Pott said. "Spending time with the soldiers, I gained a new awareness of what is really going on in Israel," she said. When a ceasefire was announced shortly after the girls returned to America, Pott contacted her new friends, who were upset by the news. "They do not want to give up," she said.

• • •

Junior Dustin Gee also spent part of his winter break in Israel. Gee joined a Christian pilgrimage to Israel this January for the opportunity to "find myself in the footsteps of Jesus." His tour encompassed parts of Syria and Jordan as well. He spent a week in North Israel; two days after he left, rockets fell in the area he had stayed.

The constant awareness of danger was balanced by a sense of awe in the beauty of the landscape. Standing in Nazareth, he watched the smoke rise from the hilltops where rocket-fire was falling, saddened to see beauty, history and culture "ripped apart by hatred and greed."

He stayed in the homes of both Palestinian people and Jewish people. For him, the experience of Israel was about absorbing the essence of his faith. Even if bombs and rockets destroy the holy sites that he visited, his trip affirmed that his faith would not be destroyed.

• • •

Nick Brown, a freshman, went home for the holidays. He has lived in Jerusalem for the past four years, until starting at Juniata last semester. Outside his front door, a path goes steeply down towards a neighborhood grocery store on Jerusalem's outskirts. Palestinian boys wait along the road to throw rocks at the passing jeeps of Israeli soldiers – ineffectual missiles, but stamped with a fierce pride nonetheless.

One November day in 2007, the cavalcade of jeeps circled back and the Israeli soldiers stepped out, looking for the boys. One small boy ducked quickly into the grocery store. The manager stood protectively at the threshold, denying the soldiers entry, saying that there was no boy inside. The soldiers smashed his skull with a rifle butt, loaded their jeeps and left town. The action was ruled an act of self-defense, as an Israeli judge declared months later. The courts have forgotten the incident, but it burns in the memory of the community, those who were there and those who knew the man. Brown remembers it well.

To Brown, the rocks thrown by the boys are not unlike the rockets fired by Hamas. "It's a dumb gesture," Brown said, "But it's the only thing that gives the Palestinian people a sense of self and a sense of country."

One of the pillars of Jewish faith is the significance and sanctity of all human life. "No killing for the sake of killing," Weber said. She explained that it is customary for Israeli bombers to fly over an area twice: once to drop scraps of paper, warning Palestinian residents to flee, and the second time unloading their deadly cargo of bombs.

Brown does not see this as an act of mercy. "Imagine being crammed into a tiny area of land, with more and more continually being taken from you. And then being told that you have seconds, minutes to leave your home. Where would you go? Fourteen hundred Palestinian people were killed during the four weeks of winter break; 60 percent of these people were innocent civilians."

If there is a God overlooking Israel today, one could well ask, "Where is He?"

Ultimately, none of the wandering peoples who claim the Holy Land as their own will renounce their birthright. Whether they travel to Israel to shove folded prayers into the cracks of the Western Wall, to kneel in the shadow of the Dome of the Rock, or to press their fingers to rocks smoothed by the passage of two thousand years, they grasp at fragments of hope.

Juniata is home to some these wanderers who return with immediate and unavoidable questions. In the end, Huntingdon is not as far from Jerusalem as it might seem.

Students hold a leg-lift during the Dance Ensemble's Thursday night abs class in Ellis Ballroom on Feb. 12. Over 65 people were in attendance.

Dance Ensemble classes a hit

New classes bring men and women alike to tone up and shake it down

By **Kat Pearce**

Juniata Dance Ensemble is providing students with great opportunities to get up and move by offering several dance classes.

The most popular by far is the Flexibility and Abs class, which takes place from 8 to 9 p.m. every Thursday in Ellis Ballroom. Over 65 students came to the most recent class. All students are invited and no commitment is required.

Dance Ensemble teaches several other classes, which are now closed. Some classes, such as "Men and Women's Hip Hop, Tap, Jazz and Beginners' Lyrical, are offered for those with little or no dance experience.

Other classes require experience and/or a try out. These upper level classes include the Kick Line (performed at basketball games), Advanced Lyrical, Contemporary Dance, Ballet/Pointe and Intermediate Ballet. Most advanced performers have eight or more years of dance training.

Another popular class is "Man Wanted." This routine was originally preformed during Inbound 2008 and at Mr. Juniata.. The first "Man Wanted" meeting, is scheduled for Feb 23 from 9 to10 p.m. in the mat room.

Classes range is size from seven to twenty-six. Classes are based on who wants to dance. "It's really open," said Molly Dendas, a senior and co-president of Dance Ensemble. Everyone is invited "as long as you're willing to try."

Juniata Dance Ensemble will be performing a dozen different dances in their recitals, March 20 at 7:30 p.m. and March 21 at 2:00 p.m. The Ensemble has invited other dance groups to perform as well.

For more information, contact Molly Dendas at dendamm06@juniata.edu.

Dates to remember:

Abs classes:
Thursdays, 8-9 p.m.
Ellis Ballroom

First "Man Wanted" meeting:
Monday, Feb. 23, 9-10 p.m.

Dance Ensemble performances:
March 20, 7:30 p.m.
March 21, 2:00 p.m.

RIAA to cease file-sharing lawsuits

Association will work with Internet providers to catch illegal downloaders

By **Seth Fox**

On Dec. 19, the "Wall Street Journal" reported that the Recording Industry Association of America (RIAA) would stop pursuing mass lawsuits against file sharers suspected of illegally obtaining music. Current lawsuits will be carried out, but the RIAA's legal campaign will go through several changes.

This represents a major shift in policy. Since 2003, the RIAA has engaged in legal proceedings against 30,000 individuals. Critics say that the lawsuits did little to stop the illegal downloading of music. The new strategy of the RIAA will be to work with Internet service providers (ISPs) to control their users' file-sharing actions.

The recent lawsuits of the RIAA have not been seen favorably in the public eye. Its targets have included single mothers, young teenagers and several deceased individuals.

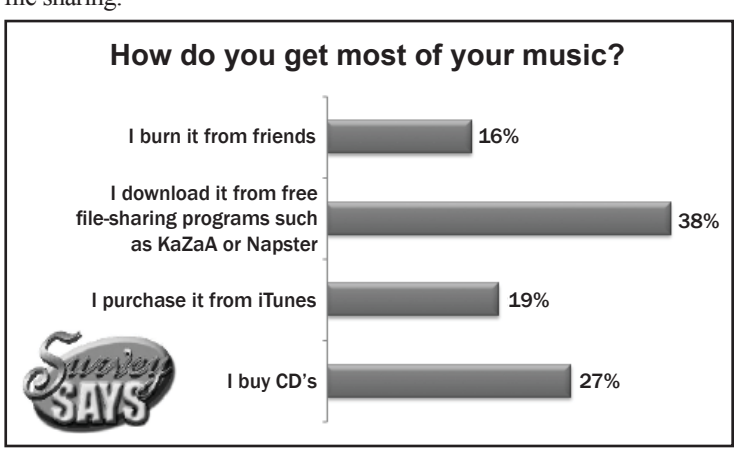
The largest target age group of the law suits was college-aged students. The Pew Internet & American Life Project reports that 45 percent of the 18- to 24-year-old age group engages in downloading music.

The RIAA reports a higher number on their Web site, which reads: "According to some recent surveys, more than half of the nation's college students frequently download music and movies illegally from unlicensed Peer to Peer (P2P) networks."

The "Wall Street Journal" reports: "Depending on the agreement, the ISP will either forward the note to customers, or alert customers that they appear to be uploading music illegally, and ask them to stop. If the customers continue the file-sharing, they will get one or two more emails, perhaps accompanied by slower service from the provider. Finally, the ISP may cut off their access altogether."

The RIAA had previously been working with college administrators across the country to monitor college networks for illegal downloading. Most college campuses manage their own private networks, and thus can track downloaders' activities.

When students use the Internet, such as the wireless Internet provided by Juniata, the Internet protocol (IP) number of the user is registered as well as the history of where they have been on the Internet. Tracking this number is much easier in an organized and private system such as a college campus than it is in large commercial access areas.



Under former strategies, the RIAA would contact a campus administrator to uncover the identity of this IP number. Under the Digital Millennium Copyright Act, administrators are obligated to provide copyright holders with information about network users who have violated the law.

In the new policy, colleges will deal with the ISP providing their entire networks with service. This shifts control from the RIAA to the individual ISPs, which are not legally obligated to report file sharing or illegal downloading. Independent ISPs and the RIAA could make private deals regarding file-sharing and downloading.

The RIAA's official position on file-sharing has been: "Plain and simple: piracy is bad news. While the term is commonly used, 'piracy' doesn't even begin to describe what is taking place. When you go online and download songs without permission, you are stealing."

The RIAA has maintained that its actions have always been in defense of the record industries' employees, songwriters and the artist themselves.

The "Wall Street Journal" reports that since 2000, when file sharing and downloading became widespread, record sales per year dropped from close to 800 million to around 550 million through the end of 2008. The RIAA maintains that this was evidence that something had to be done to stop illegal file sharing.

Changes in Eagles Abroad

▶ *from* **HART** *page 2*

tunities that Juniata offers.

"It won't be a big change in the program structure, but I want students to be more active in study abroad. I'd like [former abroad participants] to be more available to talk to new students. They could set up blogs and post photos. Other than that, there won't be much change," said Hart.

One of Hart's goals is to make course and program date information more readily available. She also plans to set up a mentor program for underclassmen. This will involve presentations to the freshmen and sophomore classes that provide details about their international options. There will also be an International Perspectives event on Feb. 22-23 to make incoming Juniatians aware of opportunities to study abroad.

Finally, she is rearranging the resource room in the Center for International Education office. She hopes to create a more engaging setting. "We've been trying to get a couch and computer so it's more comfortable…We want the students to be more aware [the office] exists," said Hart. Also, they are updating all of the brochures, some of which are from programs in the 1980s.

According to Brenizer, "[Elena] is really nice and welcoming. She seems to be very motivated and well-educated. She is interested in her position and has an overall positive attitude. I think she has the potential to do well."

Bauer said, "She seemed very nice and personable. She answered my questions to the best of her ability. I think she's trying her best at her new position because it's a very big job to fill."

Hart is completing her Masters degree in French Studies with a concentration in International Education Administration at the University of Wisconsin-Madison. She also worked as an advisor in their study abroad office.

Hart's first main undertaking was a debriefing party with those who studied abroad during the fall semester. According to Brenizer, it was a nice welcome back get-together where they could talk with others previous participants.

Gee also enjoyed the meeting. They discussed aspects of their programs they enjoyed, issues they faced and reflected on their experiences.

"I think I've done a pretty good job. It's a hard act to follow. [Polte] had 20 years of experience, but everyone's been very helpful and welcoming, so it's gone smoothly," said Hart.

College installs warning siren system

By **SARAH DOTTER**

Juniata College recently installed a new Early Warning Siren as a part of its Early Warning System. The siren is meant to alert Juniata students, staff and faculty to threats on campus. The siren system, along with the locked dorms and the arming of the JCPD, is on of several security measures the College has taken in the wake of the shootings at Virginia Tech.

The siren system is roughly equivalent to the "Code Red" procedures implemented in many US high schools after the Columbine shootings.

When the siren is sounded, students, staff and faculty are to get themselves and others to a secure place, such as a classroom or dorm room. Once in place, the door should be locked, blinds closed, and people should remain quiet, low and out of sight of windows.

Students and staff should not leave the secure area for any reason – even a fire alarm - until instructed to do so by a Juniata administrator.

The siren system was tested five times on Feb. 18 and will be tested three times on Feb. 20. The siren is tested during the change of classes so as to create as little disruption as possible.

Additionally, the siren will be tested every Saturday at noon starting Sat. Feb. 21. During each test, the siren will be sounded for one minute. In the event of a real emergency, the siren will sound for longer than a minute.

Where on campus?

CHRISTOPHER SHANNON / JUNIATIAN

Do you know where the above picture was taken? Send your guess to the Juniatian at juniatian@juniata.edu. The first correct answer will receive a free Espresso Bar drink from Sheetz.

Wars in Iraq and Afghanistan hit home for Juniata students

▶ *from* **WAR** *page 1*

Juniata women's soccer team, of which Auster-Gussman is a member, is adding American flags to next year's warm-up uniforms in honor of her father and other family and friends of Juniatians serving in the armed forces.

Senior Renee Stiehler has seen several friends and family members ship out for military service overseas. Her brother has served in Iraq, Bahrain and aboard a ship. In Iraq, he was part of the guard for the Green Zone, the heavily protected section of Baghdad containing government offices and Army headquarters.

While serving in the Green Zone, Stiehler said that her brother stayed in one of Saddam Hussein's palaces. "He was able to sit in Saddam's throne, and everything was plated with gold," Stiehler said.

Having a family member involved in a war can entangle daily life with events occurring thousands of miles away. Auster-Gussman and Stiehler keep in touch with their deployed family members through e-mail or phone, depending on their locations. "For the times [my brother] was gone, we didn't watch the news," Stiehler said. "Hearing what's going on in the news, I know a lot of it is just what the media is telling us."

"During my brother's second trip [in 2004], he did go back to Iraq, and he said he could see a lot of positive improvements, but that's not what's been portrayed in the media," Stiehler said.

Families like hers, with relatives overseas, often notice changes in events overseas before they are reported in the news. Most recently, the media is reporting security improvements that have made Iraq a safer country than Afghanistan. Stiehler and Auster-Gussman already knew about that change from what their family members in the military told them.

"Iraq was the hardest place to be," Stiehler noted, adding that often times enlisted troops go where the fighting is hardest, like her brother going to Iraq in 2002. Reserve troops, like Auster-Gussman's father, tend to protect the more stable areas and contribute to reconstruction. Auster-Gussman said that Iraq is now safer than Afghanistan, and she feels better that her father is in Iraq.

One Juniata student, sophomore Brian Nevel, offered a firsthand look at the war in Iraq. Nevel enrolled at Juniata in 2007 after returning from military duty in Iraq. He was deployed in the Army for the initial invasion, serving on teams that moved out ahead of advancing American troops and set up the communication bases on which the Army depends. Nevel's team was very good at its job. "What should've taken three hours to get a radio shot, we got it down to 18 minutes," he said. "We were the most jumped signal unit," referring to his frequent relocation all over Iraq as the unit deployed communications equipment to both Americans and Iraqis.

> *"These past couple days it's been hard to focus on school, but you do the best you can."*

Nevel told of how the Americans and Iraqis often got along quite well. "We would get care packages from home, and we'd take the pens and stuff and give them to the Iraqi kids," he said. "We were basically funding their schools." In addition to providing for Iraqi children's education, Nevel mentioned that Americans also helped with everything from finding employment for Iraqi workers to helping them with the daily laundry.

"We're really not that different. You have a family, you have kids," Nevel said. "You get into the Kurdish areas and although you're used to head scarves, you'd see women in jeans, slacks and stuff." He remembers that many of the hostilities still originate from centuries-old religious conflicts. "If people were less involved in their religions, there'd be less war in the Middle East."

Now back home and working at Huntingdon Customs, his metal-working business, Nevel has acclimated well to civilian life. He has found counseling in the area for the lingering psychological effects of war. "You're conditioned for this hyper-vigilance," Nevel said, and that hasn't gone away. He still notices many sounds or movements that others miss or ignore.

During the interview in his metalworking shop, Brian opened the door to see if his wife was calling him. It turned out that a neighbor a few houses down was yelling for her dog. Brian had noticed a nearly imperceptible sound and checked to make sure that he wasn't needed in the house.

Nevel has encountered some hostility towards the war from politically motivated campus groups. He remembered finding that some students were out to protest the war, in his opinion, without a clear idea of the issues they were arguing over. He also described a PAX-O "What it's Like to Be a Soldier" seminar, for which he agreed to serve as a panelist. The event developed into a debate between him and a touring anti-war public speaker.

There are things that people at home can do to make families of deployed soldiers feel better in the uncertain situation of having loved ones in a war. Stiehler mentioned that Juniata students could support organizations that send letters to the troops. "My brother just loved getting something from home," she said.

Another useful way for concerned Juniatians to help American soldiers is to support charity groups such as Cell Phones For Soldiers, which collects used cell phones to give to soldiers.

Auster-Gussman suggested that Juniata students can support students whose lives are now intertwined with the conflicts abroad by simply being a good friend. Juniata is a campus known for its close-knit atmosphere, which can be helpful to students dealing with the stress of war. People can do much to help simply by standing by their friends in times when they may be worried about loved ones overseas, or even just taking time to talk.

"My friends here have been a big help," Auster-Gussman said.

of the Juniata community has had a family member deployed for military service in Iraq or Afghanistan.

According to the Juniatian's online survey of 165 people.

The threat of the devaluing diploma

Recent admissions and staffing decisions are a menace to Juniata's reputation

EDITORIAL

With the economy waning and the job market looking abysmal, college higher-ups have started turning schools into businesses rather than environments conducive to education. We Juniata students cannot let our College fall in line with the current trend in higher education.

At Juniata, there is another proposed tuition increase planned for next year, and the College is pushing for the second-largest class in JC history. Large student populations can force unprepared colleges to hire more adjuncts at the last minute. Juniata has a reputation for excellent faculty members who lead engaging classroom discussions, but this could be threatened when professors are hired just so there is someone standing at the front of the room.

This understaffing and overcrowding has further implications, with many core requirement classes closing before registration even begins. It creates problems for all students just trying to meet graduation requirements and get out before their financial aid expires.

In this way, our campus community could feel the chain reaction of bringing more students to keep JC out of the red financially. It may be necessary to keep afloat during this time of economic woe, but the fact is, it can be detrimental to the student body.

It's especially unfavorable to upperclassmen entering the job market. If this trend reaches us, our Juniata degrees, which hold an air of academic excellence, could reek with the stench of settling for mediocrity. For the longest time, Juniata's high stakes scholarships have brought in higher caliber students to continue promoting our school as one of the "Colleges That Change Lives." But flooding enrollment with too many students could counterbalance those efforts and leaves Juniata with only the middle of the bell curve remaining. This could potentially result in a loss of respect for our degrees in the greater world.

> *"The reputation of mediocrity spreads very quickly, and employers will compare you with every other person holding a JC degree. If they decided that Juniata is simply falling in line with other colleges to hold the business end, our degrees will no longer be as impressive."*

For upperclassmen who think this problem will disappear as soon as you hold your diploma and schedule your first few interviews, think again. The reputation of mediocrity spreads very quickly, and employers will compare you with every other person holding a JC degree. If they decided that Juniata is simply falling in line with other colleges to hold the business end, our degrees will no longer be as impressive. Our individualized POEs and ability to think critically will no longer command so much respect.

Thankfully, that's not quite the state of things yet. However, if we don't proceed carefully, we will fall in line with so many other colleges that are lowering standards.

Don't let your Juniata degree fall victim to the economy and overcrowding. Our Juniata degrees should be a testament to all the time and effort that we invested in our four years on campus. Our degrees should not represent another school with lowering academic standards. We cannot let Juniata become a dud in the strand of firecracker colleges.

When Nature Calls

Examining President Obama's commitment to our present environmental concerns

By **BRIANNA O'MALLEY**

We saw him take the oath. We heard him give his first speech as commander-in-chief. We watched him boogie at one of the many balls held on inauguration night. President Obama has definitely started making changes for this country. But dancing and fashion aside, the president has made some serious promises regarding environment and energy concerns.

The Environmental Protection Agency (EPA) was under fire during the Bush administration. Many criticized the agency for focusing on business policies rather than environmental issues.

An example includes former head of the EPA Stephen Johnson blocking 17 states from creating lower greenhouse gas emission standards. The Bush administration itself was also criticized by the EPA for not prioritizing climate change.

"I don't think there's a commitment in [the Bush] administration," said Bill Ruckelhaus, the first manager of the EPA.

Obama is trying to change this image by appointing Lisa Jackson as the administrator of the EPA.

Previously, Jackson worked as the head of New Jersey's Department of Environmental Protection. Her past work focused on stopping construction of coal plants and reducing carbon gas emission in her state.

"I will administer with science as my guide," she said to the Senate Environment and Public Works Committee before her nomination. "Political appointees will not compromise the integrity of EPA's technical experts to advance particular regulatory outcomes."

With the announcement of her nomination, some New Jersey environmental groups criticized Jackson for her record. But Dena Mottola, executive director of Environment New Jersey, responded to these accusations and said, "There are hundreds of environmental groups in New Jersey, and if you called all of them up, I think 99.5 percent of them would say that Jackson is a great pick."

During his campaign, Obama supported the creation of what he called "green collar jobs." These jobs would result from increasing efforts to convert energy usage from oil and coal power to more sustainable methods. Obama hopes that financial encouragement in these areas will strengthen our economy and bring more jobs to people that need them.

Obama's new energy plan has elements that many environmentalists are excited about. The main goal in the plan is to end the US's dependence on foreign oil. One short-term solution proposed was creating energy rebates.

Oil companies will pay a share of their profits towards residential gas and heating payments during an energy crisis. The plan also emphasizes better fuel efficiency in cars, and pushes for electric vehicles by 2015.

Other goals include US involvement in the Kyoto Protocol. This treaty was the result of a summit held by the United Nations to address human effects on global climate change.

In this meeting, countries were asked to reduce their greenhouse gas emissions. The US is the only developed nation that has currently not signed the treaty. This controversial decision has led many environmental advocates to question our country's intention and dedication to environmental health.

Also planned under the new administration is the creation of a cap and trade permit program on greenhouse gas emissions. Companies would be allowed to produce only a certain amount of greenhouse gases. This is designated by a credit system. If a company exceeds this amount, it is fined. Companies that produce less gas emissions than the credits allow are permitted to sell excess credits to companies producing more.

Permit programs have worked well with air pollution in the past and could potentially improve the nation's air quality. This plan is aimed to make the US one of the leaders in combating climate change.

While many of these plans may not be completed in four years, our hope is that Obama leads the nation into a new era of environmental policy and protection. For now, the environmental community at least has hope that Obama can make a change.

Huntingdon as America's coolest small town?

Huntingdon is one of 22 finalists in Budget Travel's search for America's coolest small town. To vote go to www.budgettravel.com/bt-srv/coolestsmalltowns and click on the central star in Pennsylvania. Voting started on Feb. 16 and will continue to the end of the month. Votes can be placed from 10 am until 8 pm.

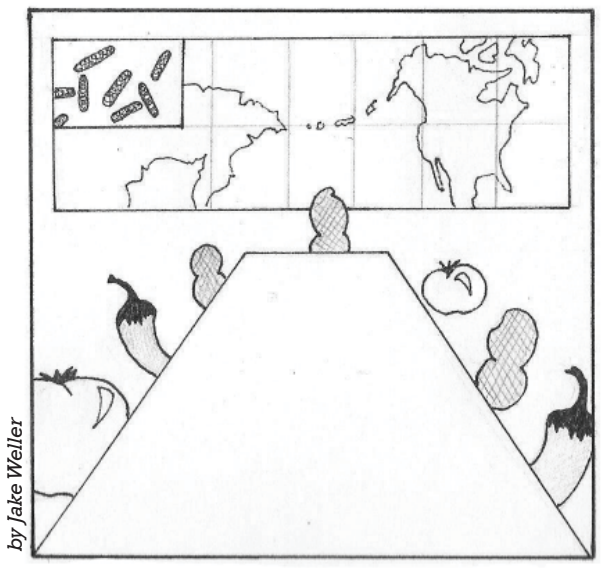
As of press time, Huntingdon is currently in second place behind a town in New York.

Into the future

By **ALEX LOUGHRAN**

This issue of the Juniatian will mark a time of transition. Not only has the print format of the campus newspaper changed, but for the first time the latest issues will be available online at juniatian.com.

The online component will allow the Juniatian to reach a wider audience, including alumni, students studying abroad, family and other JC community members.



In addition to having all of the content found in the print version of the paper, the site will include an editor's blog and a technology blog.

New sections, additions, and updates will be added during the next few weeks, such as an archive of past issues, and updates to the interface. The website will contain links to sections that correspond with those present in the print edition, i.e. News, Opinion/Editorial, Art and Entertainment, and Sports. Comment boxes below each article provide an forum for reader responses and reactions to the articles.

The decision to use a third party host was made in order to keep the name from having to use the complicated, "juniata.edu" preface. Additionally, keeping the site on a third party host ensures that the content will remain censorship free.

So please, enjoy the new site, create an account, read and comment.

Ask the Administration

E-mail your question for an administrator to us at juniatian@juniata.edu.

Books, classes, and costs

"Throughout the semester, can professors require students to purchase additional materials, such as books, which were not required on the syllabus? Is there a financial limit to how much professors can require students to spend on materials for a class?"

The short answer is that this is not an issue which is governed by formal rules. There are no rules that limit the amount a faculty member can require a student to spend. Faculty are required to have a syllabus for each class on file at the start of the semester. While I have never heard of a case where faculty have added requirements after the semester began, I can understand how that might happen.

That said, I do think that faculty generally understand the impact of the rising costs of texts on students. We are often caught up in a system where the text book publishers do not make that information readily available. When I talk about a text with a publisher's representative, she or he is often surprised when I ask what the cost to students will be. In the case of new texts, it is often the case that the reps don't know or won't say what the price will be. While it is not the most important factor in making a decision, many faculty do take cost into consideration when making decisions about texts. We are often asked to do so, however, in the face of incomplete information.

-Jim Lakso, Provost & Executive Vice President for Student Development

Length of winter break

"Winter break was extended this year by one week in order to reduce Juniata's carbon footprint. How does the faculty and staff feel about this change? Will it be permanent or will Juniata return to longer summer breaks and shorter winter breaks? What was the main rationale behind the decision?"

We committed to a two year trial on the revised calendar unless the change was very negatively received in the first year.

Faculty response was overwhelming positive. Student response has been mixed based on the survey results gathered by the Dean of Students' office.

We had three things in mind for this change. The first was that there would be an energy saving if we gave up one week of classes in January and added one more in May. We don't know for sure whether or not that was accomplished. We are still gathering the data and we don't know if the saving in January will be offset by increased cost in May.

The second thing was related to spring athletic schedules. The conference championship events and playoffs for the spring sports often conflict with final exams. By moving final exams back one week we eliminate that conflict which affected a large number of students and a large number of classes.

Finally, some faculty and students wanted to experiment with some intensive short courses during the longer January break. I have had informal conversations about some of those ideas, but have nothing specific to report at this time.

There were also negative effects of the change. One which was unexpected came from administrative offices. At Juniata we rely heavily on student help in many offices. Several of the offices made the observation that having student workers available for a part of the longer break would be a good thing. If lots of students came back early to work, however, that would negate the energy savings.

While we hope for a benefit to spring athletics, the impact on winter athletics was somewhat negative. We had small crowds for home events. The student athletes were isolated and there was a budgetary impact of feeding them while Baker was not open. (On the other hand, they missed fewer classes.)

Some students reported that they felt the break was simply too long. A few faculty, staff and administrators felt the same way. Most faculty and a few of the students responding to the survey thought the longer break was a very good idea. Many students thought the length of the break was "about right." There are obviously lots of things to consider.

-Jim Lakso, Provost & Executive Vice President for Student Development

Major Event 2009: Music with a conscience

State Radio is known for social action; Band will open tomorrow night for Matt Nathanson

C. TAYLOR CROTHERS / STATE RADIO WEB SITE

State Radio, which will play in Juniata's Major Event concert tomorrow evening at 7:30 p.m. in the Intramural Gym, tries to organize and participate in service projects in every city on its tour.

By **AMIN KHOSHNEVISAN**

Chad Stokes, lead singer of the rock/reggae band State Radio and formerly of the popular band Dispatch, was busy when initially contacted by telephone for an interview.

"Amin, I was wondering," he said on the phone, "I am working right through a service project here at a homeless shelter in Houston; could I call you back in three hours?"

It is no surprise that Stokes was caught volunteering. State Radio is known for its commitment to social action both on and off stage.

The band will be playing at the Juniata Activity Board's (JAB) Major Event tomorrow night at 7:30 p.m. in the Intramural Gym, joined by Rebelution and Juniata's own Susan Von Leebig and the Halbritters, opening up for acoustic star Matt Nathanson.

Stokes' volunteer activity started early, but not voluntarily. "I was arrested and had to do community service. …Arrested for stealing street signs all over my town in Massachusetts," said Stokes. At the age of 17, he volunteered at a summer camp for children with disabilities, and after graduating high school, he volunteered at a school in Zimbabwe. Thus began Stokes's interest in public service.

Since his early volunteer service, Stokes has gone on to do many socially conscious deeds. "There is always a lot to get riled up about," he said. Among these, he lists the situations in Zimbabwe, Darfur and Burma, as well as the case of Troy Davis in Georgia and veterans coming back to America "and being treated like shit by their own government," he said.

The band founded an organization called Calling All Crows, which provides humanitarian aid for the people in Sudan. It is also a public service initiative, in which he and the band do projects revolved around the environment, hunger, public service and justice.

Stokes has dedicated time and money into projects for the people, especially the women, of Sudan, the children in Zimbabwe, homeless shelters and more. State Radio started and is involved with a few organizations that aim to address these very issues.

Calling All Crows has raised money and awareness about the women in Sudan. Because of the civil unrest there, women "risk their lives when they leave the camp" in search of firewood to cook, said Stokes. The money that Calling All Crows raises will go towards buying stoves for these women, so they do not have to leave their camps and face potential violence.

Furthermore, Calling All Crows also has a domestic service agenda for the U.S. It organized projects to remove invasive plants from forests in California, help out at soup kitchens and build houses.

Calling All Crows has become an integral part of the band's tour. In every city State Radio plays, the band tries to set up a service project. Anyone can propose such a project through the band's Web site.

Fans can also sign up to volunteer and/or receive information on the projects that will be going on in their area.

Stokes said he hopes that by asking people to come out and do some community service projects with him and the band that it may "expand your mind so that you are not just in your own little bubble, and you are thinking about other things."

No plans for a service project have yet been made for the band's visit to Huntingdon.

In the spring, Stokes will be touring with the socially active folk singer Ani DiFranco for seven shows. Stokes announced that he will donate 100 percent of his earnings from these shows, including merchandise sales, to the Calling All Crows foundation.

In addition to the band's Calling All Crows foundation, Rock for a Remedy, a separate organization, is also joining the band's tour. Rock for a Remedy joins concert circuits in an effort to gather food for local shelters and pantries where the shows are held and to encourage charitable works. In the four years it has been running, Rock for a Remedy has facilitated the donation of 85 tons of food and thousands of dollars.

Stokes and State Radio are also involved with other projects. One such project is the Elias Foundation. This started off as a scholarship fund for Zimbabwean children to go to school, but due to the deteriorating conditions in Zimbabwe and the shutting down of its schools, it has become a food program.

The Elias Foundation also helped start a new MTV show that features disabled reporters touring the U.S. to talk to regular people and celebrities. The show, "How's Your News?" premiered on Feb. 8 of this year.

In addition to all of these service projects and humanitarian causes, State Radio also plays music that Stokes described as rock with a little bit of reggae.

If you could bring any one band to play live at Juniata's Major Event, which would it be? *Your responses:*

OAR	Breaking Benjamin
Coldplay	MGMT
Taylor Swift	U2
Squirrel Nut Zippers	Clay Aiken
Bright Eyes	Britney Spears
Third Eye Blind	

Survey SAYS

Huntingdon's Hollywood

Reality TV star, Academy Award winner make community star-struck

By **BRIT MOYER**

Seniors Erin Albert and Mariel Little had only planned on having a small Friday night get-together on Feb. 6. But then Jon Gosselin, star of the popular reality TV series "Jon and Kate Plus Eight," unexpectedly showed up at their house on Mifflin Street.

"I was in the kitchen, and someone came in and was like, 'Jon from "Jon and Kate Plus Eight" is here!' And I was like, what? I walked to the front and he was standing in my living room," said Albert.

Gosselin was in Huntingdon for the weekend visiting a relative in the area. He told students he was on a break from filming his show, which features his and his wife's life as parents of eight small children. That Friday night, he went to the bar alone and was recognized by two Juniata students, who struck up a conversation and invited him to the party.

After Gosselin arrived, word spread. "All the sudden there was a large flood of people coming to our house," Albert said.

Over the course of the weekend, Gosselin was seen at Mimi's, Memories Bar and Grill, Standing Stone Café and several Juniata student parties. Dozens of Juniata students met and talked with the TV star.

At Albert and Little's party, many students were skeptical that the unexpected guest was really Gosselin.

"One of my roommates looked up stuff on the Internet about his family and was quizzing him to make sure it was him," said Albert. Gosselin passed the test—he was able to correctly state his birthday and showed a picture of his eight kids on his cell phone.

The party guests were eager to take pictures with and talk to Gosselin.

"It was like the paparazzi at my house," said Little. "But he didn't seem annoyed."

Senior Evan Heisman, who watched Gosselin's show with his ex-girlfriend, was one of the partygoers that documented his star encounter. "I went up and got a little picture. It's my Facebook picture now 'cuz it's hilarious," Heisman said. He also took some short videos on his cell phone, in which Gosselin is shown playing beer pong in a room glittering of camera flashes.

After setting his Facebook profile photo as his shot with Gosselin, Heisman was flooded with messages from curious friends. "I got like three or four wall posts that were like, 'Is that Jon Gosselin? Is that for real?' And I was like yeah, he was randomly in Huntingdon, and I was randomly at a party, and he was there," Heisman said.

Albert posted five photos from the evening in a Facebook album titled, "YES, jon from jon and kate plus 8 was my pong partner last night," which prompted numerous comments from enthralled and jealous friends.

"I feel like I'm the most popular person ever because he was at my house on Friday night," said Albert.

Friends and alumni who had seen the Facebook album also contacted Little. "People really wanted to know what was going on with the famous guy," she said.

After about an hour of beer pong and partying, the star and his student following moved to the Memories Bar and Grill. Heisman describes how it happened. "I was sitting on the couch, and he came over and was like, 'Hey dude, do you want to go to the bar?' And I was like, 'Really? Okay.' That was the highlight of my night. And that's when everyone was like, 'Bar!' and pretty much everyone cleared out."

At the bar, "Everyone thought he was going to buy them drinks because he was on TV," said Little.

According to Heisman, "[Gosselin] bought like 20 people drinks. He was buying drinks left and right. I felt bad and didn't ask him for one. I heard the bill wasn't too much though."

PHOTO COURTESY OF ERIN ALBERT

Senior Erin Albert poses with reality TV star Jon Gosselin after he was brought to her house party unannounced on the evening of Feb. 6.

Some students, especially males, gave Gosselin a hard time for socializing with college students. "The big question of the night was, 'Where's Kate Plus Eight?'" said Heisman.

But Heisman vouched for how a father of eight must feel. "It seemed like he just wanted to come out and have fun. I think if you have freaking eight kids and a show, I'd go party with some college kids too. Who knows."

"He [Gosselin] said it was nice to have a break because it was 'back to wiping butts on Monday,'" said senior Alex-Rae Campbell, a "Jon and Kate Plus Eight" fan who met Gosselin at another party on Saturday night.

Senior Courtney Goss had a funny encounter with Gosselin over her "basic, black" Ann Taylor LOFT shoes. "He was able to note what brand of flats I was wearing because his wife models for them,"

A piece of hair on your tongue

Thumbtacks and scarves

By **BRANDON WOLFE**

You can do a lot of things with thumbtacks. You can put a calendar on a wall. You can also hang up a tapestry. However, you cannot pick them up one by one. That, is the lesson I learned.

I spilled a container of tacks in my desk the other day. My roommate asked me if I had any. So using my overwhelming enthusiasm, I showed him that I did indeed own thumbtacks. Unfortunately, in my attempt to be his savior, they spilled inside my desk drawer. I tried picking them up one by one. I ended up poking myself and cursing like a shuttlecock, several times.

That is when I realized that thumbtacks would make for a humorous weapon in a wartime situation. My enemies may have sabers or glocks, but I could poke them with two thumbtacks until it gets mildly annoying. My opponent would have to eventually give up. That's a good fight.

Anyway, after poking myself in the hand five to ten times I was a little annoyed. My senses were heightened. That is when I saw that kid again—the one with the scarf and tight jeans. He has to listen to The Music. Not just any music—The Music. You know the kind with all those weird tribal sounds, done by non-tribal white men.

I'm not denying that I listen to the same music. It's really good stuff. But, it's the scarves that bother me. People wear them as a signal. The scarves, they speak to me. I can hear them say, "I listen to artsy music, and I like it enough to show it profusely."

Could I use thumbtacks against that kid with the scarf?

Then again, not every one who wears a scarf is an artsy-indie kid. There are the people that genuinely love scarves. They love the warmth that scarves provide for the human body. When these people are cold, they don't grab the scarf to accessorize. Scarves are not really an image for them; scarves are just a way of life.

There really should be some distinguishing factor between the two, but I can't seem to find it yet. It was like a piece of hair on your tongue. If we could not tell what kind of music a person listened to by looking at the way they dressed, what was the point in casually mentioning a band's name in a conversation? No one wants to sound like a pretentious shuttlecock. What are we to talk to others about now, our life philosophy?

I am currently lost in this world of obscurity. In my youth, it was simple. My mother would dress me in the typical Americana attire—a white tank top with red shorts and a red hat. I vaguely recall my mother saying, "You look cute enough." I guess she was right, but where has that place gone?

Everyone was cute once. I believe that all of us still have at least one white tank top, a pair of red shorts and a red hat. It's just that sometimes, in our attempts to be overly enthusiastic about frivolous stuff, like thumbtacks and scarves, we lose sight of ourselves in tank tops.

We're living in a world filled with lists of favorite movies. Sometimes we even see ourselves as the characters living out the story of the film. I remember I was a schizophrenic Russell Crowe for a week. My friend was a fallen Roman general turned Gladiator-Russell Crowe for three months.

But we weren't those characters. We never became Russell Crowe. I was still me—which is a shame because in a way I've always wanted schizophrenia. Unfortunately, we are much simpler than the characters Russell Crowe tries to play. We are not defined by a movie or a scarf. Whether you own thumbtacks or not doesn't matter.

People have nothing to do with thumbtacks and scarves. That is why the tacks are still laying in my desk. That is why my scarf is crumpled on the ground in my closet. It's not laziness. It is that I'd rather have a cup of coffee with a friend—at least that is what I should have told my mother in high school.

Russell Crowe once said, "I really feel sorry for people who divide their whole life up into 'things that I like' and 'things that I must do.' You're only here for a short time, mate. Learn to like it." He's probably right—even if he is a shuttlecock.

Friday Night Live

CHRISTOPHER SHANNON / JUNIATIAN

CHRISTOPHER SHANNON / JUNIATIAN

Freshmen Steven Cohn and Zach Risso (top) and senior Mike Wilson (bottom) perform during the open-mic portion of the Friday Night Live Coffeehouse on Feb. 13 in Baker Refectory. After students performed, the headliners for the evening, Tad Dreis and Rebecca Loebe, took the stage.

Fashion Forward

The best and worst dressed at 2009 awards

By **KELLY FERGUSON**

Awards season is upon us, which means that I am on high alert. The Golden Globes and the Screen Actors Guild Awards (SAG) have already given celebrities a chance to flaunt their fashion on the red carpet. While some celebrities have proven their sense of style, others have failed miserably.

My pick for best dressed female at the Golden Globes has to go to Eva Longoria. Her red, form-fitting, Reem Acra gown was the talk of the night, and rightly so. The gown had a wavy neckline and was a mermaid cut with a flowing train. It flattered her curves and the deep red complimented her skin and hair color. Longoria kept the accessories to a minimum, pairing the dress with diamond earrings and a silver bracelet.

My favorite gown of this year's SAG Awards was Taraji P. Henson's white Herve Leroux gown. Henson was last seen in the role of Queenie in "The Curious Case of Benjamin Button." The actress looked flawless in her white halter dress. Taraji completed the look with a gold bangle or a large bracelet. The simple gown was stunning and proved that less can always be more.

The best-dressed male goes to none other than "McDreamy" himself. At this year's Golden Globes, Patrick Dempsey sported a classic, black suit with a white shirt and black tie. Dempsey's suit was designed by Versace, for whom he is currently the spokesperson. The suit's snug cut helped show off his assets. The designers at Versace definitely knew what they were doing when they chose Patrick; the man looks "dreamy" in a suit.

Now onto the bad…

She's an amazing actress with a great body, but that won't keep Angelina Jolie off of the worst dressed list. The Academy Award-nominated actress committed a major faux pas when she decided to wear a billowy, dark blue Max Azria gown to the SAG Awards. The gown hung off of her, failing to show off her gorgeous figure. She did say that the gown was "comfortable," but an awards show is one instance in which elegance should come before comfort. Just because Angelina can make a sack look good doesn't mean that she should wear one to an awards show.

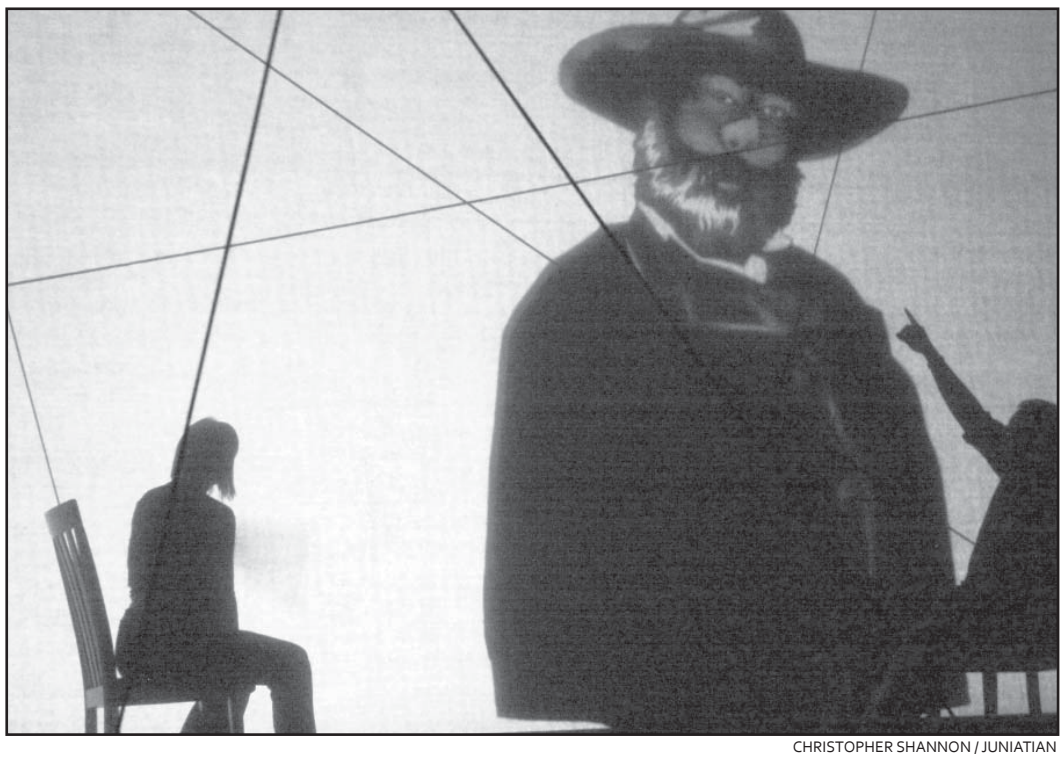
Next, on the worst dressed list is Renée Zellweger. Zellweger is known for her daring fashion sense, but that did not work in her favor at the Golden Globes. Renée wore a see-through Carolina Herrera blouse with a black silk skirt. The floor-length skirt looked wrinkled and didn't lay against her body well. The barely-there blouse was worn over a corset that was practically invisible. Renée tried to go for the Victorian-era look, but in the Victorian era they didn't try to look topless. The typical stunner missed the mark with this combo.

The worst dressed male has to go to Mickey Rourke, who at the Golden Globes wore a velvet black suit with a dark blue paisley tie and a sparkly sash. The mix and match of colors and prints made the award winner's outfit look cluttered. A velvet suit is never going to get you to the top of any best-dressed lists – unless you're an Elvis impersonator. Suits should be basic. A mixture of colors and prints is too much for this classic look. Rourke has always had his own sense of style, so I can't blame him for his eccentric outfit. I can only hope that next time he will stick to one fashion "don't" instead of committing multiple offenses.

The Academy Awards are approaching and I'm hoping that the biggest awards show of the season will bring out the best dresses and suits so far. I'm predicting that Angelina Jolie will go back to being the fashion maven that I know her to be. I predict that Angelina will wear something close fitting and elegant.

I'm also hoping that Renée Zellweger will make a fashion comeback at the Oscars by remembering to put a top on.

I foresee the worst dressed for the Oscars will be Tina Fey. Even though she is funny, intelligent and a multi-award winner, she has no fashion sense. I'd be scared if she were that perfect.



Make sure to watch the Academy Awards on Feb. 22 starting at 8 p.m. and as always, be sure to check out the latest trends on the red carpet.

Left: best dressed Eva Longoria
Right: worst dressed Renée Zellweger

'Return' now playing

CHRISTOPHER SHANNON / JUNIATIAN

Freshman Nate Frieswyk and professor Kate Clarke perform a scene from 'Return.' A Gravity Project and Juniata Theater production, 'Return' is a play about a man returning to his childhood home and confronting his family and his past. 'Return' is playing Feb. 19-21 and Feb. 26-28 at 7:30 p.m.

Celebrity encounters in Huntingdon

▶ *from* CELEBRITIES *page 8*

she said.

Gosselin is not the first celebrity to make an appearance in Huntingdon. Academy Award winner Robert Downey, Jr., whose 74-year-old mother lives locally, is spotted in town on occasion.

Katie Dickey, assistant director of Alumni Relations, ran into Downey at the old Giant supermarket in 2006. She described the humorous encounter.

"It's really kind of funny. I'm just in the store, and there was clearly this guy that was dressed a little too cool. I think it was his cool, funky black sneakers that caught my attention. The shoes looked like something you wouldn't get around here, or that you'd get in a big city," Dickey said.

Downey, dressed in all black, was pushing a shopping cart around with his mother. Dickey, pushing her own cart, coincidentally passed him several times and confirmed it was him—or at least looked uncannily like him. She ducked into the toilet paper aisle, called her mom and said, "Mom, I think that Robert Downey, Jr. is in Giant!" From the other end of the phone, her mom and sister egged her on, saying, "You have got to talk to him!"

Caught between her curiosity and respect for the man's anonymity, Dickey was ambivalent about approaching him. But in the end, she said, "I had to know."

"We ended up in the dairy aisle. I pushed my cart up, and there he was, looking at the eggs. He was looking at the Eggland Best eggs," she says. "And I said, 'Those are really silly commercials, aren't they,'" referring to the company's throwback advertisements targeted at "Wheel of Fortune" and "Jeopardy" viewers.

"Then I kind of look at him and said, 'Are you?' And he said, 'Am I what?' He was so coy. I just looked at him expectantly," Dickey said. Then she outstretched her hand and said, "I'm Katie. It's a pleasure to meet you." And he replied, "I'm Robert, and this is my mother Elsie, and it's a pleasure to meet you."

Then they each went on with their own shopping. Star-struck, Dickey decided she did not need the eggs and ran out of the supermarket to call her mom, who asked if she had gotten an autograph or picture.

"I didn't want to ask for his autograph. I didn't want to have a picture taken. I know that it was definitely him and that's all I needed to know," Dickey explained.

"Your evening goes from so blasé—walking through the supermarket to get something to eat—and suddenly there I was on the hunt to find this star," she laughed.

Downey has not been seen in the area recently.

The celebrity visits were considered especially exceptional for having occurred in small-town Huntingdon.

"It was something you never ever would have thought would happen in Huntingdon, PA," Little said of Gosselin's visit.

Dickey felt likewise about her Downey run-in. "Any time I tell anyone about it, they say, 'Really? In Huntingdon?' It shakes loose some of the preconceived notions that Huntingdon is a place that is really sleepy or that nobody should visit. It's just kind of neat to be able to say we've got stuff going on here and say, 'Oh yeah, we have celebrities that stop by too.'"

During her party with Gosselin, Little cracked jokes about which star would make a Huntingdon appearance next. "I kept on telling people that next weekend Britney Spears was coming over," she said.

Of her time spent with Gosselin, Campbell said, "It was pretty cool. Maybe we'll see some more celebs."

But after a moment of thought, she said decidedly, "Nope."

MUSICOLOGY

Best albums of 2008

By Caitlin Bigelow

There are a lot number of reasons to celebrate the coming of the New Year, like being able to say goodbye to Mr. Bush. But lets not forget that 2008 was a wonderful year. There were plenty of people who kept it all funky and fresh. That is especially true in the music scene. So here are my top ten albums from the late, great 2008.

10. "Fearless" by Taylor Swift

Although I cringe at the thought of starting my list off with a pop country artist, I feel like Swift is deserving of the position. I find myself belting out her catchy songs in the car, shower, and even on my way to class. This Pennsylvanian has come a long way from Reading where she grew up. Swift had the largest debut sales week of any female artist in 2008 in any genre. And on top of that "Love Story" and "White Horse" are just plain good.

9. "Keep Your Eyes Ahead" by Helio Sequence

This band is highly underplayed and underrated. Like their album title suggests they should keep their eyes ahead because they have big things in line for their future. This dynamic duo, Benjamin Weikel, former drummer for Modest Mouse, and Brandon Summers seems to be able to do no wrong. I first heard their song "Lately" off an Indie/Rock podcast. It instantly caught my attention and turned out that the rest of the album was just as good. The song lyrics are poignant and sharp, the layered guitar sound is enchanting, and the band describes a newfound "appreciation for minimalism" that makes me want to jump for joy.

8. "Shwayze" by Shwayze

The theme of summer 2008 was a low key chill song called "Corona and Lime." The band's funky off beat combination of Malibu local Aaron Smith and off kilter Cisco Adams seemed to just work. You could find the irresistible tune while listening to the radio, plastered all over MTV and as your best friends ring tone. I saw this band at XXX and witnessed a half-naked guy cloaked in an artificial weed boa crowd surf to the front of the stage and place a blunt in Shwayze's fingers. The crowd loved it. And I love this band for their laid back California attitude. Their lyrics of weed, women and beautiful California sunny days make me smile and hum along.

7. "Only By the Night" by Kings of Leon

I was full of anticipation for this album to drop. For the most part it fulfilled all the high and mighty expectations I had. Caleb Followill, on lead vocals, continues to give me goose bumps with his unique voice and the way he howls into the microphone. This band should be careful though of over manicuring their sound. I like their old, more rough stuff better. Their hit single, "Sex on Fire" sounds a little too polished and mainstream. However, "The Bucket," "Molly's Chambers" and "Fans" are all definitely worth a listen.

6. "We Have Cause To Be Uneasy" by Wild Sweet Orange

The first song I ever heard by this band was "Ten Dead Dogs" as I was driving with a friend to the airport. Their unique and completely individual and captivating sound convinced me to pick up the album. I guess I wasn't the only one because later the song was NPR's song of the day. NPR described the sound as "Soft and lovely but not exactly upbeat." With increased press and recognition this indie rock band caught their big break when their song "Land of No Return" was featured on Grey's Anatomy and later landed them on David Letterman.

Check out the top five in the next issue! In the mean time enjoy listening to these awesome bands.

What is your top music album of 2008?

Your responses...

"Fearless" by Taylor Swift
"Viva la Vida" by Coldplay
"Tha Carter III" by Lil' Wayne
"Circus" by Britney Spears
"Vampire Weekend" by Vampire Weekend
"The Glass Passenger" by Jack's Mannequin
"Day & Age" by The Killers
"Fleet Foxes" by Fleet Foxes
"Oracular Spectacular" by MGMT

Surley SAYS

The Director's Chair

"Taken" could take on Chuck Norris

By **JORDAN YEAGLEY**

"Taken" is Rambo, "Hostel," James Bond, and the Bourne series all wrapped into one. This movie is an over-the-top thriller that will make students question whether they should study abroad.

The movie begins with former government preventer Bryan Mills (Liam Neeson) leaving his job to be closer to his teenage daughter Kim (Maggie Grace). However, Kim decides to take a trip to Paris with some friends, despite her father's wishes. She is kidnapped in Paris and forced into the sex trade. It is now up to her father to find and rescue her before time runs out.

Though Liam Neeson seems a little aged to be playing the part of government spy, he somehow makes it believable. As you watch him leading car chases and jumping through plated glass, it reminds you of your grandfather out for vengeance. The daughter, Kim, seems a little juvenile for the role in which she is cast. She wears sundresses with high tops, and constantly refers to Bryan as "daddy." If you can get past the ages in question, and just accept that father time is out to save his twelve-year old daughter, the rest of the movie is phenomenal.

I must offer a word of warning for those individuals who are faint of heart. The movie has many scenes where the audience is shown young women who have been kidnapped, drugged and forced to participate in prostitution. These scenes are very intense and can leave your stomach a little queasy. It's difficult to watch students, who are on study abroad, be kidnapped and sold to greasy old men.

The "bad guys" in "Taken" are unfortunately a little too predictable. The main action in the movie takes place in France, which is apparently filled with crooked French police. Next, the girls are kidnapped by renegade Albanians. Finally, they are sold to a Middle Eastern Sheikh. I think its time that Hollywood move past the cheap shots at the French and Arabs. Why don't we ever see the world's worst villain from Norway?

Despite the few pointed flaws in the movie, it is one of the best films I have seen in months. In fact, it has joined the ranks of films like the "Departed" and "Smokin' Aces." If you are looking for fast-paced action and gut wrenching visuals, go see this movie. You will not be disappointed.

★★★★★

OUT OF 5

"Taken" is now playing at the Clifton 5 in downtown Huntingdon.
It is rated PG-13 for intense sequences of violence, sexual content, drug references and language.

"If vaginas could talk..."

ALISON RIHS / JUNIATIAN

Senior Jess Maxon introduces Senior Marci Chamberlain at the Vagina Monologues on Feb. 13. This event raises awareness about violence against women and benefits the Huntingdon House. Chamberlain's speech was called "The Flood."

Worth the Rent: "The Weather Man" (2000)

By **JORDAN YEAGLEY**

"The Weather Man" is about a divorced and dysfunctional family and a man who struggles just to be something more than average. The film stars Nicolas Cage ("National Treasure") as an unhappy weather man. He believes if he could just land the meteorologist job on national television he could earn the respect of his father and win back the woman of his dreams.

His father (Michael Caine), a Pulitzer Prize winning author, has never shown much support for his son's work, and provides a loveable villain for the film. With two children, one an overweight beauty queen and the other victim of a dangerous pedophile, Cage must try to balance his career goals and his longing to be a good father.

I must warn possible viewers that this is an independent film. If you are looking for cars to explode and women in heels this is not the movie for you. This is a character study of an average family and their struggles to make it through the difficulties of everyday life.

The plot line is fairly straightforward and doesn't have many confusing twists that will keep you guessing. Though many action seekers would see this film as stagnant, it is a true depiction of the "American dream."

Great acting, a solid storyline, and believable characters make this movie definitely worth the rent.

Anything but ordinary

Humor from a wit

By **CLAIRE WILLIAMS**

There are many different kinds of humor. Some of it is direct, not causing a viewer think, and reminiscent of the Three Stooges. Although entertaining, viewers often feel they have come away without anything lasting. Other humor points out absurdity using wit and word play. This is more the style of Oscar Wilde in "The Importance of Being Earnest."

The story centers on two men, Algernon and Jack, bachelor friends who both end up pursuing women within the story. While Jack takes life more seriously and prefers things to be proper, Algernon likes causing mischief to see what he can get away with.

Divided between three acts, the story centers on several misrepresentations by the men. As their lies play out, the women they love question their commitment, leading to more outlandish requests from the men.

The trouble begins when Jack asks for Algernon's cousin's hand in marriage. Her response, reasoning and mother serve as jumping off points for Algernon's trouble-making as well as Jack's problematic situation.

As readers move through the acts of the play, they see the characters get themselves into increasingly ridiculous situations as they go "Bunburying." This is the act of using an imaginary person to get you out of trouble. By the end of the relatively short work the reader comes to understand the importance of the title of the story, which only adds to the humor of the piece.

While the play is an entertaining story, it is also a social commentary. When reading the dialogue between the characters, especially Algernon and Jack, the reader understands the state of the world at the time. While Wilde never directly mocks anything, he points out various elements of life and human nature, getting the reader to think about how society functions.

Wilde, known for saying things like "Always forgive your enemies; nothing annoys them so much" shows his wit in his writing. In this work, lines like "To lose one parent, Mr. Worthing, may be regarded as a misfortune; to lose both looks like carelessness," are almost always present.

These lines often point out the silliness of the upper class and the class system as a whole. While both of the male characters are well off, they help to drive these ideas while serving to prove the point Wilde seems to make. He also points out the silliness of life and education, as well as taking hits at his own profession.

Throughout this story Wilde builds a tower of crazy plot points, such as being found in a handbag, and stitches them carefully together with improbable situations to create a piece that has stood the test of time. Despite the outlandishness, the writing pulls the plot together in a way that appears seamless.

While some stories collapse under the weight of years, "The Importance of Being Earnest" has humor and ideas that readers can still identify with, keeping them current.

While people might not think Wilde would be their cup of tea, I think everyone can get a laugh from this play and come away with a few things to think about. The material is light and keeps the story flowing quickly, but the thoughts are crafty and stick with you. Who doesn't love learning something and laughing at the same time?

Q&A: Football Coach Carmen Felus

New coach expected to take Juniata football in new direction

By KEVIN CAMPBELL

What attracted you to Juniata? Why did you want this particular coaching job?

"Well, number one, obviously the history and tradition of the school, the success that it has had in the football program and some other sports; the outstanding academic reputation of the school. Academically, it's such a great school and our athletic tradition and our history, and it's a chance for me to be close to my family."

How do you feel about relocating your family to Huntingdon?

"Well, I'm from a small town and my wife is from Johnstown, which really isn't a big city, and it's a comfortable setting. It's a setting we are used to. The people of Huntingdon are great people. It's a close-knit community just like Juniata is a close-knit community. It's nice to come back to a place where you're not just a name and everyone knows who you are. We are enjoying coming back and coming back to our roots."

When it came time for Juniata to select a new head football coach, they used an outside recruiting agency. Can you explain what that contract process was like?

"Well that's a hard question. What happened with the agency is that a lot of colleges and universities, they use an outside agency, almost like recruiters to help them with the process to go ahead and narrow the application field. Once that's done they allow the institution itself to go ahead and pick and choose whom they interview and whom they offer the job to."

Are there any coaches from this past season that you have decided to keep on staff? Who are the new coaches you have hired? Have you worked with any in the past?

"We maintained most of our staff. The one new coach that we brought in was J.C. Harmon. He will be our offensive line coach and offensive coordinator. I was able to work with J.C. Harmon at (The University of Tennesee of) Chattanooga. Coach Gibboney is still here and he is a big part of the things we will do here, as well as all the other assistants with just the addition of J.C. We have a great staff here; we have guys with a lot of years of experience. So we look forward to working with all of our guys."

After coaching at a higher division school, what approach will you take to coach here at a Division III program?

"Same approach. Coaching is coaching, no matter if they do it in the NFL, Division I, Division II, Division III. All that coaching is is teaching. Obviously, we will take the same approach, how we build a football program and the things we do in our football program, from recruiting to academics, to off-season training, to how we travel, to our academic policy. There is no difference from what we are doing to what Penn State is doing. They just do it on TV."

How do you feel about coaching a team that hasn't had more than a win a season?

"Our approach to our guys is that the past is the past. I am not concerned about it because I'm not there. The future is ahead of us. We don't know what's going to happen in the future, but what we can control is right now, the present, what we do now and our attitude. I don't want our guys to worry about wins and losses because that's not what we are trying to do right now.

We've got to understand that success is process. It's not a final destination. You need to do a lot of things; there are a lot of details that you have to do in order to be successful before you even worry about wins and losses.

So what I'm trying to get our staff to understand and our players to understand is what that process is all about. What is it? It's doing what you are supposed to do on a daily basis. It's going to class, it's meeting with your tutors and advisors. It's being on time for study table. It's making sure you're working hard in the weight room. It's controlling your attitude and having a positive outlook on everything we do. So if we are able to do that on a daily basis and we do that on a consistent basis, then winning will take care of itself."

Were any expectations or requirements set when you were hired for the 2009 season?

"The thing with any coaching position, especially true of football, is there are certain criteria that obviously the College wants me to follow and that we are going to follow, and we are not going to jeopardize the integrity of the institution.

We will always be in compliance with what we do and the NCAA. We are trying to represent the College and the community with class and integrity with everything we do.

That's not only a requirement of Dr. Kepple and the people here, but that's a requirement of our program, that's expectations of what I expect us to do, not only as a staff but our players."

CHRISTOPHER SHANNON / JUNIATIAN

Womens swim program takes team conflict in stride

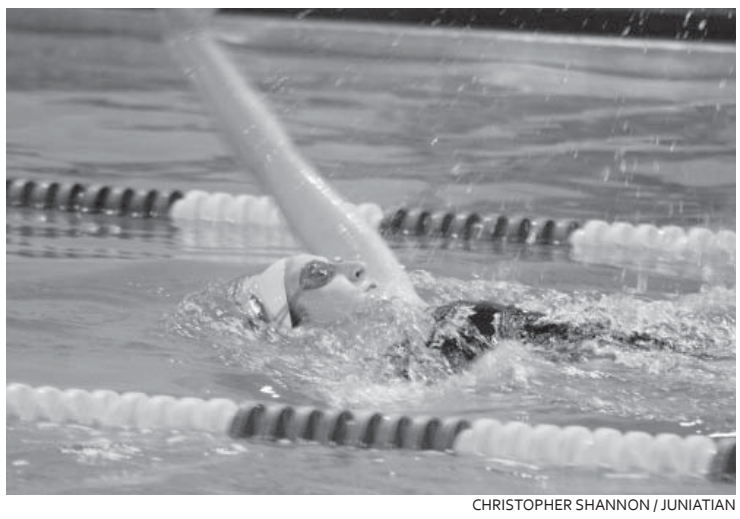
Despite loss of captain and 3 other swimmers, team competed at championships

By AIMEE RADIC

The Juniata swim team attended the Landmark Conference Swimming and Diving Championships in Kings Point, New York on Feb.13 through Feb. 15.

Although the team had a losing record this season (1-7), Juniata was predicted to do well at championships. However, due to internal conflicts, senior captain Kristen Musselman was dismissed from the team on Feb. 7. As a result, three other teammates, junior Paige Black, junior Colleen Cribs and freshman Evan Beatty, walked off the team in protest.

CHRISTOPHER SHANNON / JUNIATIAN



Junior Colleen Cribs swims freestyle during Juniata's meet against Susquehanna on January 21.

All four swimmers were predicted to swim well at the championships and felt that their absence cost Juniata a chance at the team medal.

In order to compensate for the loss of several strong swimmers, Coach Tom Benoit had to reassign several of the races and relays. Benoit took the swimmers with the best times throughout the season and placed them in the open spots. The only race Benoit had to cut was the 800 freestyle relay.

Benoit was proud of the accomplishments of the team, stating that nothing was more satisfying than being able to help the girls reach their true potential. Despite the team conflicts, the girls swam well.

Sophomore Lindsy Cooper got a personal best time of 1:08.16 in the 100 backstroke. Freshman Jessica Stocker placed eight in the 100 backstroke. Cooper, Stocker, freshman Elise Ebert and sophomore Rachel Gipe placed fifth in the 200 and 400 freestyle relays. Cooper, Ebert, Gipe and freshman Marysa Milinichik placed sixth in the 200 and 400 medley relays.

CHRISTOPHER SHANNON / JUNIATIAN

Junior Kelly Serfling swims the backstroke portion of the 200 IM during Juniata's meet against Susquehanna on January 21.

"They were right in there with [the other teams]," said Benoit of the girls' success. Benoit said that the team score could have been better if Musselman, Black, Cribbs and Beatty had been there, but the team still had a successful meet.

Benoit hopes to continue training his team to become stronger, faster and improve upon their personal best times. His goals include breaking a school record and eventually, a Landmark record. Benoit believes that with new training routines and recruits the Juniata swim team will continue to develop into a successful program.

JCWB qualifies for playoffs

Strong second half of season pulls Eagles through

By **ERIN L. MCGINLEY**

With one game remaining in regular season play, things couldn't look any brighter for women's basketball. In the preseason poll the Landmark Conference released, we ranked third. Today, we are tied for third with Susquehanna. It hasn't been a pretty ride, but we couldn't be in a better position come post-season.

The path to our 14-10 record hasn't always been a journey above 0.500. Currently, our conference record is 8-5, with a 14-10 record overall. The first cycle of the conference left us with a 3-4 record. Our goal for the second cycle was to improve upon that record by beating the teams that we lost to the first time through.

"We started off as a young team, so we had to find a compromise with everybody's playing. But now that we've progressed into the season, we know each other's game," said freshman point guard Ashton Bankos. "With the playoffs coming up, we have a lot of experience with the upperclassmen's experience last year and with the freshmen's past successful years in high school."

Thus far, the two biggest highlights of the season came with upsetting then nationally ranked Moravian. The first time we played them they won. However, after our next meeting, the outcome of a 64-58 win over such a great team was an amazing feeling to take into the second half of conference play.

During the game, senior Kelly Ashcraft broke the 1,000 point scoring mark. Although her 1,000th point was special and well earned, it was her 1,002 point that helped us gain a substantial lead on Moravian at which they couldn't chip away.

Although originally recruited for defense, Ashcraft is now one of the top offensive threats on the team. As of press time, she is currently ranked fifth in the Landmark in scoring (12.5) and third in field goal percentage (.505). Ashcraft has also surpassed the 500-rebound barrier this season with a career total rebounds amounting to 531. Congratulations, Kelly!

"It's easy to [win] with this group of people. Everybody wants to go the extra step to be great. It's easy to say something and have this group respond to it well," said Ashcraft.

As a captain on the team, Ashcraft leads by example. Even first time spectators at JCWB games know that Ashcraft is our leader. Ashcraft has stepped up her game to make her final season at Juniata one of the best. She inspires us to work as hard as we can in practice, even if it means giving teammates some bruises.

As the bruises are being handed out, everyone knows that we're making our teammates better; that we're making JCWB better. We need to keep on improving. Ashcraft reminds us of that every day and always tells us not to settle, but to want more.

"Ashcraft's energy is contagious," said sophomore Jen Hnatuck. "When she is pumped up, the whole team capitalizes on the positive energy."

With the last home game of the season approaching, it is also hard to imagine the team without our four seniors. Ashcraft, Claudia McDowell, Emily Hauser and Gina Piccolini have been our leaders since pre-season workouts, and none of us can imagine it any other way. Whether it's some swift words of confidence or a senior teammate stepping up and challenging you, they're always there. The next game and the ensuing post season will be their last games as players and as our teammates.

To finish out the year how we wanted to start it, to accomplish the goals we have set, will be the best gift to give our seniors. Every time all 14 members of JCWB step on to the court from now on could be the last time we do it as all 14. Each time we do it, it's for the few who will be leaving us. We have to play hard, strong and smart to keep all 14 of us in it.

"The underclassmen know how big this is," said Ashcraft. "All the freshmen are in it for the long haul, they want to win just as much as the seniors, even though it's their first experience."

Come out and support JCWB for our last home game of the season. Saturday, Feb. 21 at 5:30 p.m. we will host sister-school rival Susquehanna, followed by the men's game.

Not only will we be playing for the number three or four seed for conference playoffs, but we will be playing for our seniors, our team, our family.

CHRISTOPHER SHANNON / JUNIATIAN

Senior guard Claudia McDowell shoots over a Moravian defender during Juniata's upset win over the then #16/17 Greyhounds on Jan. 31.

Keep the Fitness Center a clean, safe environment

By **SETH FOX**

The Juniata Fitness Center, located in the Kennedy Sports and Recreation Center, is frequented by more than just student athletes. In addition to use by off-season athletes increasing strength and agility and in-season athletes maintaining theirs, the Fitness Center also accommodates non-College athletes as part of Juniata's wellness initiative.

With this in mind, people often forget that the Fitness Center is a busy room, and without adherence to proper rules, it could be dangerous for individuals.

Strength and conditioning coach Doug Smith has developed and implemented rules designed for all students to use the Fitness Center safely and to their best ability.

Smith said, "The rules in the Fitness Center are designed so that users keep themselves safe and the equipment in the best condition possible."

Smith keeps a vigilant eye to make sure that students and faculty are using the equipment in a manner not only that is safe for them, but also others.

Smith would like to remind everyone that the cleanliness of the Fitness Center is part of this safety measure. Keeping the equipment wiped clean of sweat, not bringing food or open containers in the room and prohibiting muddy athletic shoes are all parts of keeping the Fitness Center at its peak and most safe condition.

The gym gets busy during the day, and Smith reminds individuals that they should still always respect the space of other fitness-goers. Also, cardio workouts are asked to be limited to no more than 45 minutes so that all visitors have a chance use the ellipticals, treadmills and stationary bikes.

The Fitness Center's particular rules and regulations can be found posted around its facilities and at the entryway.

Fitness Center hours

Monday & Wednesday
6 a.m. - 8 a.m., 10 a.m.-9 p.m.

Tuesday & Thursday
10 a.m. - 9 p.m.

Friday
6 a.m. - 8 a.m., 10 a.m. - 8 p.m.

Saturday
10 a.m. - 2 p.m.

Sunday
1 p.m. - 5 p.m.

Mens basketball realizes potential late in the season

Seniors finish season strong and pass valuable lessons on to underclassmen

By **Chad Kohr**

Many teams have to deal with the frustration of never reaching their potential. The Juniata men's basketball team is coping with the disappointment of reaching it too late.

Coming into this season, each senior on the team was a part of one of the most successful classes to compete for the men's basketball team. The high expectations these seniors entered the season with have not been met, but according to senior Dave Thompson, the player's attitudes have been nothing but positive.

"It's been a tough year, but I couldn't ask for my teammates to have handled the losses any better. We never stopped working hard and none of these guys have given up," said Thompson.

The team's work rate and collection of positive attitudes have been the motor behind the team's recent string of success. After starting off the season 3-16 overall and 1-6 in the conference, the Eagles rattled off four straight conference wins before a heartbreaking overtime loss in the midst of a bittersweet season-ending run.

Freshman Matt Regan has been taking heed to the lessons the seniors have to offer on and off the court and contributes much of the team's success to them. "The seniors have been there in the playoffs and know what it takes to be successful. They have done a great job teaching the freshman. They've been very patient with us and haven't grown too frustrated, and it's paying off," said Regan.

Regan is one of a few freshmen who have been stepping into bigger roles late in the season. Senior Justin Baker and his fellow seniors have nothing but confidence in the young players and are pleased with the progress they have made. "We have a lot of really good young players. It took a while for everyone to gel, but the freshman are now getting a grasp on our system and are learning to consistently play well," said Baker.

After two straight 17 win seasons, the seniors are obviously disappointed this season's record is not up to par. But, Thompson says that his career has exceeded his expectations. "I am pretty satisfied with my career. I can't say I expected to be this successful over my career, and I'm really proud of what we've accomplished," said Thompson.

Thompson has stepped up from last year, emerging as a legitimate scoring threat. He has increased his point per game average by 9.5 to become the team's leading scorer, pouring in 14.7 points a game. This improvement has not taken away from his identity as a defensive sparkplug though, as he also leads the team with 1.2 steals per game.

Baker is also pleased with his career and appreciates the support the team has received this year. "Overall I'm satisfied with my career, even though I wish my senior year could have gone differently. Despite our struggles this season, the students here have been very committed as fans, and it has been great to play in front of them," said Baker.

The struggles of this year are already being looked at by several underclassmen as motivation heading into next year. Freshman Dan Sekulski will keep the losses in mind, along with the valuable lessons he picked up from the seniors.

"We (the freshman) now understand how much work it takes to be successful at this level, and we have a lot of determination to beat teams. We believe we can win every game, and the seniors have taught us to stay positive because even if we're losing, we're never out of a game," said Sekulski.

The motivation the seniors have to finish their season with pride and the desire the underclassmen have to improve are making Juniata a legitimate team for contenders to face late in the season. Along with his aspiration to finish strong, Baker is excited to see what the underclassmen are capable of in the upcoming years.

"The young guys are really good players. I think if they keep the work ethic up and stay committed in the offseason the sky is the limit. The only way to go is up, and with so many solid players coming back, I see a very bright future the next few years," said Baker.

Senior guard/forward David Thompson takes a jump shot over Goucher defenders during Juniata's game against the Gophers on Jan. 24. Thompson leads the Eagles with 14.7 points per game on the season.

Football program welcomes new coach

▶ *from* **FELUS** *page 12*

What goals do you have for the team, short-term and long-term?

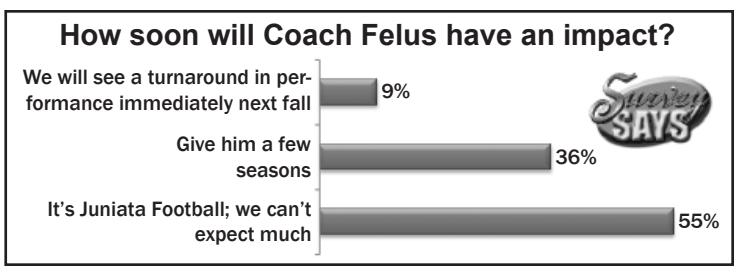
"Well with the success that the program has had in the past and the success that a lot of the other sports programs have, ultimately we want to compete at the conference and national level. So that would be a long-term goal.

"Our short-term goals are very simple. Right now, here is what we are working on: Number one, our guys are working on getting bigger, faster and stronger. Number two, they are working on their academics. Number three, I want these guys to get better as individual players and individual people, and if we all make a commitment to better ourselves individually, we can collectively come together and be better as a team.

"Our focus with our guys right now is to take individual responsibility, self determination, and we are just trying to establish the work ethic, the attitude and the mindset. I want those guys to understand about competing. That's what life is about: competing. No matter what we do, whether we are an athlete, whether we are businessmen, whether we are a lawyer or whether we are a doctor. We all want to be the best at what we do. So that's what we are trying to focus on right now."

Since you were hired late, how has the recruiting process been affected?

"Recruiting. We are off to a little bit late of a start, but are not letting it be a factor. That's not an issue. What we are trying to do is focus on a core group of guys that we have identified and with my contacts and the other coach's contacts throughout the state of Pennsylvania. We feel that we have a great core of kids, especially locally within the two-hour radius of Juniata.



We have had a bunch of people on campus to visit—a bunch of recruits and their families—and everything has been positive so far. Signing day was yesterday for DI and DII, so after this week we will have a better understanding of who is available. That's going to help us too."

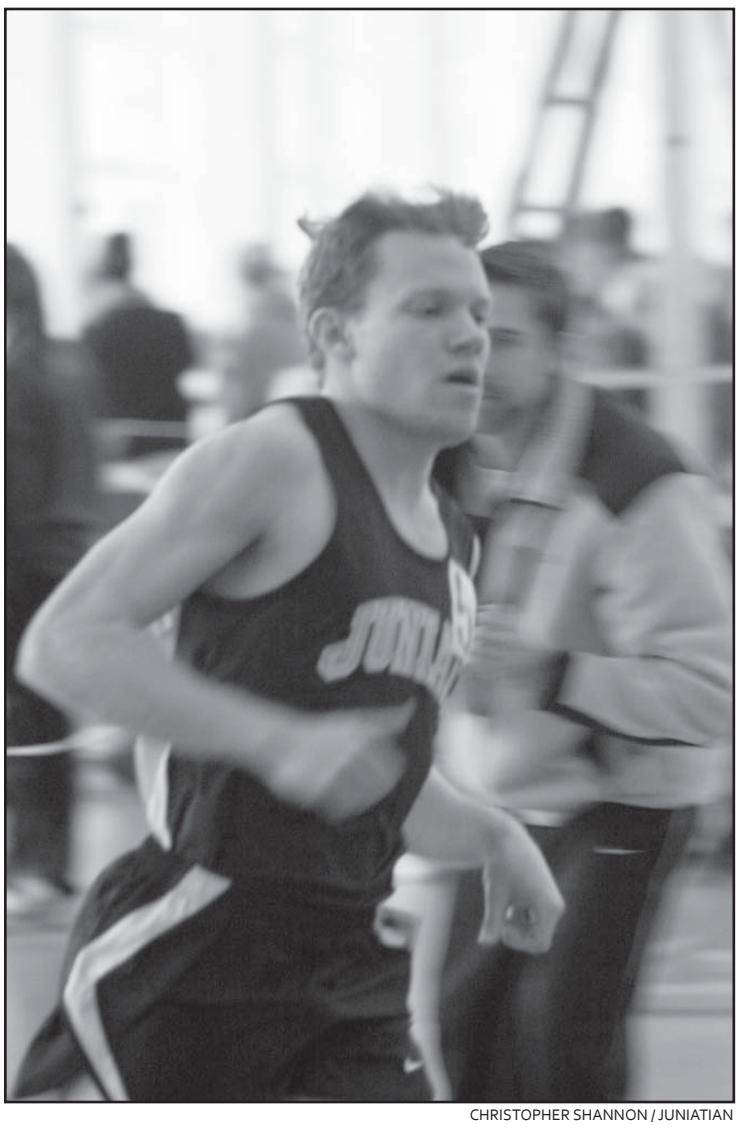
What kind of offense do you plan to run this year?

"We are going to have balance between the run and the pass. Our offense is going to be an NFL-style offense. A lot of people call it a 'West coast system.' It's complex, but not complicated. Its goal is to go ahead and get the ball in the hands of the playmakers but have a balance between run and pass.

Defensively, we are going to be a 4-3 scheme like we have been. We are going to do a great job of stopping the run. On offense you want to run the football, and on defense you have to be able to stop the run. We are going to do a good job of that. We are going to get aligned correctly; we are going to run to the football.

We are going to institute some new things. On both sides of the football, it's going to be an aggressive, attacking style, even on our special teams, which is one-third of the game as well. We are going to be physical in everything we do. When people play Juniata, when the game is over, they are going to know they were in a football game and that it was a physical contest. They better button their chin straps a little bit tighter, put some extra air in that helmet, lace the shoes up a little bit tighter, because we are going to be physical in everything we do."

Track coach sees bright future for team



Led by strong upperclassmen leadership, freshman runners show much promise

By **NICK TALISMAN**

Truth be told, Juniata's track and field team has had their share of struggles in recent years. However, Head Coach Jon Cutright holds onto some optimism about future success for his team.

Besides the success of senior Kelsey Buffenmeyer and sophomore Erika Brown, who have achieved phenomenal results recently finishing second and third respectively in the high jump, there has not been many victories for Juniata.

"There weren't too many individual successes at the Susquehanna Invitational, but it's a starting spot to help them either get in shape or work on their technique." However, things sometimes get worse before they get better. And although Buffenmeyer graduates at the end of the year, the future still looks bright. One reason for this is the help upperclassmen, such as Buffenmeyer, have given to the underclassmen.

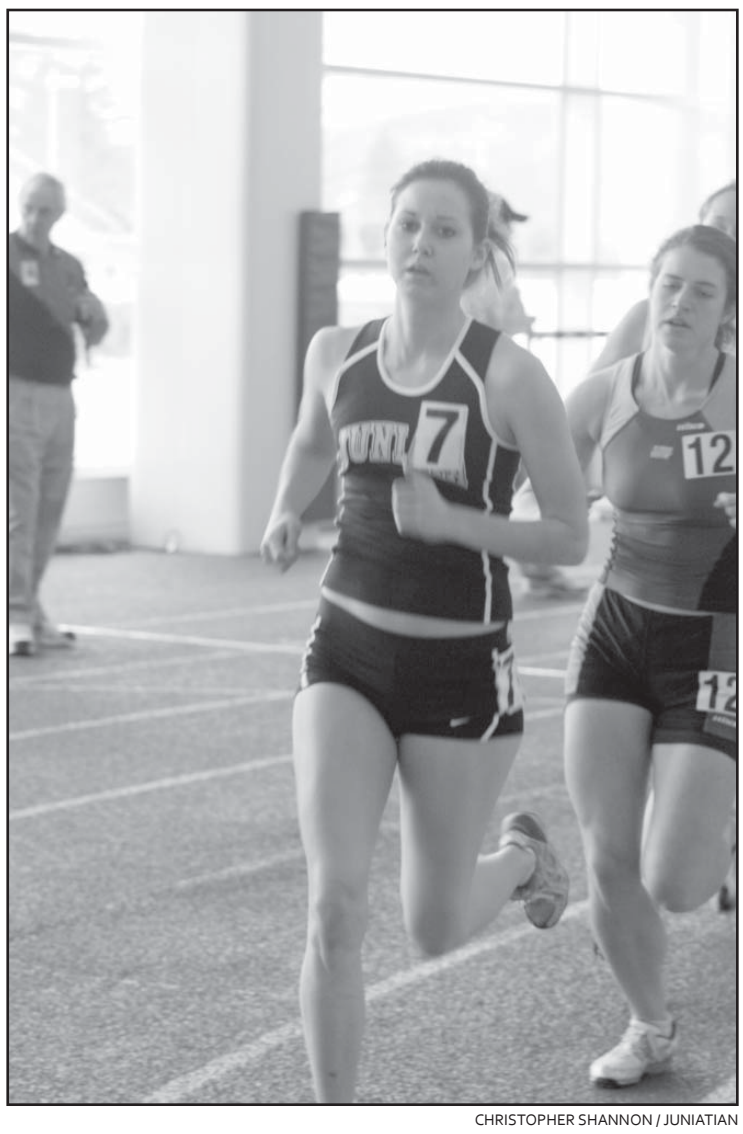
CHRISTOPHER SHANNON / JUNIATIAN

Senior Tripp Rudolph runs the mile during an indoor track and field meet at Susquehanna on Jan. 17.

"I know that with Erika, Kelsey has helped because they watch film together, and even by watching Kelsey she gets experience," Coach Cutright said.

With budding freshman stars such as Brown and decathlete freshman George Bodziock, there is a strong chance of improvement. "They've got a lot of talent. As the freshmen learn and get better they will be major contributors," said Coach.

By showing leadership upperclassmen such as Buffenmeyer will accelerate their development. In fact, considering the rate some freshmen have grow as athletes, this year may not be as bleak as the Susquehanna Invitational results suggest.



Although the team's strongest event is the high jump, Coach Cutright believes that they have other areas of strength. Cutright said, "I believe we can excel in middle distance, especially the 500 and the mile. They've run much better than they've shown in competition."

Yet perhaps the greatest sign for the team's future is the camaraderie the coach feels his team shares. "I feel we know each other better as a team than most teams in years past. Which is important because so far in practice we split up into our different groups pretty much as soon as we assemble," said Coach.

The team should be proud of the work it has done to become close to one another as this is a indication of good things to come. A team with talent is not necessarily a successful one, even when it comes to an individual event based sport like track and field.

When an entire team supports the individual performances, such as on a close team like this, it can easily lead to success. It is easier to perform with support from fans, especially when those fans are teammates.

Despite the current lack of success, there is still much young talent on the team, as their coach attests to. All of these are excellent signs of things to come.

Mens volleyball underclassmen add to team's fresh start

Two new players added to starting lineup

By **SUZI LINDQUIST**

After losing two starting seniors, the Juniata men's volleyball team looks to better their season this year with the help of 13 underclassmen. The five-time National Champion Eagles are currently ranked number three in the Bison/AVCA Division III polls.

Juniata has five returning starters; two seniors and three juniors. After losing Zach Bock and two-time All-American Matt Fritz, the Eagles had to find two new starters. Sophomores Chris Vrooman, Chris Harvey and Dan Follett split time last year to gain experience.

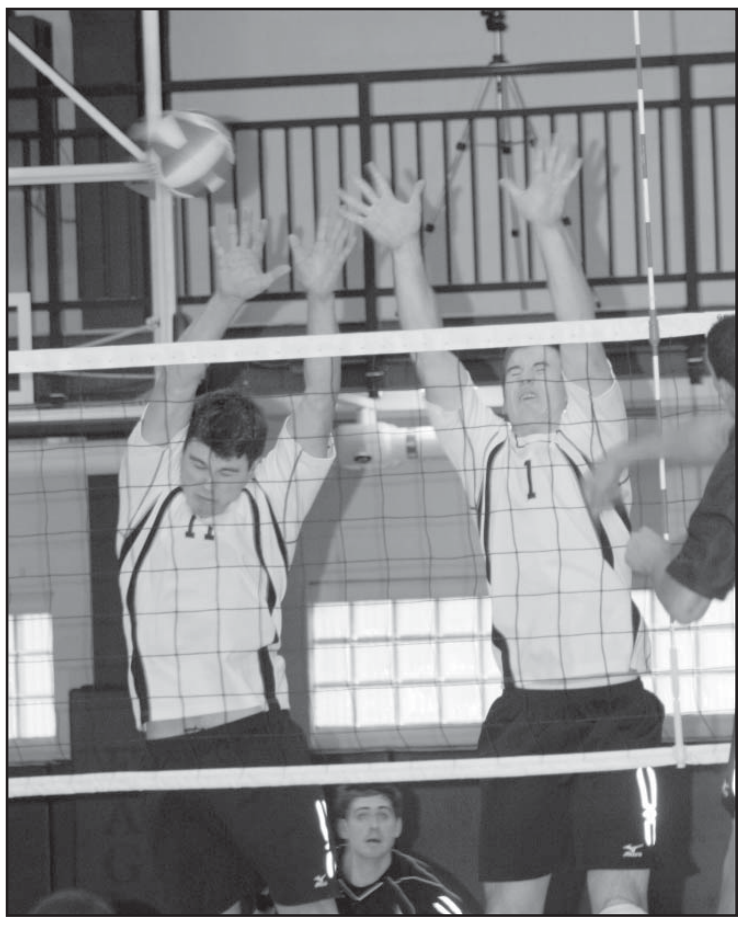
"We didn't get much floor time, but now we have to step up and take over the starting roles," said Follett.

This year's underclassmen had to really step up during the fall season to prove what they had to offer. But it was a combined effort that helped the coaches find their new starters.

"There was a little bit of everything. I know all the sophomores are really competitive with one another, really helpful, we give lots of constructive criticism, but if one of the guys sees you doing something, they'll say something," said Follett.

Key contributors so far have included 3-time all-America senior setter Matt Werle, senior middle hitter Dan Powers, junior middle hitter Evan Halteman, junior outside hitter Zach Wanner, junior libero Anthony Damiano, sophomore outside hitter Chris Vrooman, and sophomore outside hitter Dan Follett among others.

This is the senior's second year as captain. With their help, the team has bonded really well, Follett believes.



"There's definitely more of a team aspect. We play together as a team better than we did last year," he said.

Freshman Alex Bahn has been seeing some time on the court this season, coming in to serve during different games.

"I'm really glad I get the experience, because as a freshman you don't feel like you'll get in much, but it's nice to know what it's like to be in. It's a good feeling, and it's cool because you get to prove yourself, and it's a good opportunity to show yourself to the coach," Bahn said.

Juniata is 5-3 so far and have 13 more games this season to try and better their record and win another Molten Championship.

The Eagles beat the fourth rated Stevens Tech Ducks 3-2 in an overtime match. The team plays at 7:30 tonight at George Mason University.

CHRISTOPHER SHANNON / JUNIATIAN

Senior middle hitter Dan Powers and sophmore outside hitter Craig Harvey go up for a block during Juniata's match against Mount Olive on Jan. 24.

ON THE FLIP SIDE

By **Bennett Rea**

Valentine's Day is over. St. Patrick's Day isn't happening for weeks. Even our beloved President's Day, which the Post Office so gladly celebrates even though Juniata College does not, has come and gone. So what is there to look forward to in the coming weeks? What can you do to keep busy?

Normally, you could look to the weather to figure out fun things to do. So, judging by the weather of the past few weeks, you have several options: sledding, tanning, mud wrestling and trying not to get killed by a tornado.

1. **Sledding -**
   There aren't any fantastic sledding places nearby in particular, but it is very easy to grab a garbage bag (I find that empty ones work best) and just throw yourself down a hill of snow.

2. **Tanning -**
   Yes, the weather was warm and sunny enough for tanning just a few short days ago. There's no better place to just lie out and get that summer tan than Huntingdon, Pennsylvania. And there's no better place in Huntingdon than Juniata College! That is, until the weather inevitably changes to "Below freezing with a chance of hail" the next day.

3. **Mud wrestling -**
   Okay, so there aren't a ton of activities to do in the rain. Mud wrestling is the only one I could come up with and not many people actually do that. The only real activity that most people do in the rain is shielding their hair from the rain. The point is that rain has visited Juniata recently and no one can figure out what the hell's going on with this weather.

4. **Trying not to get killed by a tornado -**
   For a few days, this was all the rage here! You couldn't go outside without seeing someone fighting 60 mph winds with all their strength. They looked like they were having a great time! You could tell because they could barely stay along the marked paths! Crazy kids.

If you're not the outdoorsy type, or if for some odd reason you're just not into the extremely fun activities I mentioned, there are plenty of indoor activities to take part in, including: counting your DCB, getting sick and trying not to get killed by a tornado.

1. **Counting your DCB -**
   As you may remember, everyone ended up with way too much/way too little DCB at the end of last semester. There were a few Mensa members who figured out how to ration their DCB perfectly, but overall, people ended up with either $250 on the last day or went three weeks without food. This time, be smart and calculate how much DCB you need to spend each day until May. Do that, or end up asking everyone you know for dinner in April. Or buying 68 bottles of Sobe on the last day so you don't "waste" your money.

2. **Getting sick -**
   This has become very popular as of late, and it's just the season to jump on this fad's bandwagon! See those people who look exhausted, achy, miserable and completely drained? Well, those are just your fellow students, actually. If they cough too, then they're sick.

3. **Trying not to get killed by a tornado -**
   This activity can be enjoyed inside, too!

I hope you'll take part in these fantastic activities in the coming weeks. Take out your sandals/mittens/bathing suit/umbrella and have a blast!

Doutrich warned that the U.S.'s window of opportunity to formulate a national energy plan and avoid crisis is closing. Sophomore Callandra McCool and senior Jen Barry placed second and third, respectively.

Eagle Eyes not 20/20

Students confused over Residential Life's campus safety initiative

By **SETH FOX**

The offices of Residential Life and Public Safety have instituted the Eagle Eyes initiative to promote positive behavior on campus.

Public safety officers and residential life staff members can reward individuals doing good deeds with cards that can be entered in a drawing at the end of the year for prizes like a TV and an iPod.

The e-mail sent to students said, "The 'Eagle Eyes' card distribution program will acknowledge people whose actions go above and beyond regarding college policies, obeying laws, making good decisions, being active, preventative, relationship-orientated and otherwise taking actions that set a good example and build a safer campus community."

This e-mail received mixed reactions, and some students are confused by the program's intentions. Posts on the Arch Forums reveal two interpretations of what the program asks of students. While some students see Eagle Eyes as a reward for good acts, other posts explain that the program encourages students to turn in or "snitch" on each other.

Director of the Writing Center, Carol Peters, explains misconceptions of the program could be a result of the name. Peters said, "I think that the problem is in the title. 'Eagle Eyes' gives off a 'Big Brother' vibe. It implies someone is watching us. We see that as negative."

Tim Launtz, director of public safety and residential life, said, "The program is designed to develop the sense of community at Juniat and to create positive relationships between residence life and public safety staff with students. It is not designed to make people snitch on other people. It is too reward good behavior."

Launtz also said, "We already have a criminal hotline in place. If anyone feels something unsafe or illegal is going on, they

Force-fed meal plans

On-campus students required to buy in to College's meal system

By **STEVEN GOEHRING**

Despite recent changes to meal plans, students are still voicing concerns with Juniata's meal plan system and calling for further change.

In January, Marcin Jaroszewicz, a freshman living in Tussey Hall, sent a letter to the dean of students requesting a smaller meal plan than normally granted to on-campus students. Jaroszewicz wanted to reduce or eliminate his meal plan out of a decision to support local food sources over Juniata's large-scale food service provider, Sodexo, Inc.

The Dean of Students' office denied Jaroszewicz's request. "We really need to feed most of our students in Baker," Dean of Students Kris Clarkson said. "We really are not set up for a lot of meal preparation in residence halls." He cited fire code and insurance regulations as key reasons why he did not freely grant Jaroszewicz the small meal plan.

According to College policy, first-semester freshmen are

All ways of rooming

Campus considers co-ed housing as way to help address LGBT concerns

By **MARIE BOLLER**

Sophomore Peter Mike-Mayer and freshman Josh Raymond, co-presidents of All Ways of Loving, are working with Dean of Students Kris Clarkson to draft a proposal for gender-neutral housing. Juniata hopes to follow the lead of universities like Harvard, University of Pennsylvania and Swarthmore in allowing students the freedom to specify a preferred sex and gender for potential roommates.

Senior Jess Maxon, who identifies as lesbian and is an advocate for safer environments for sexual minorities and transgendered students, feels that gender-neutral housing would benefit the entire campus community.

"It would be more comfortable for both sides," Maxon said. "A person who identifies as straight could find it intimidating to have a roommate who is lesbian. I grew up around my brother, so I wasn't really used to living with girls when I started college," said Maxon. "Moving into Lesher was death. I was really intimidated at first, before I got to know the community."

Students who identify as a member of the LGBT (Lesbian, Gay, Bisexual and Transgendered) community may feel more comfortable rooming with someone of the same sex.

These students may find stability through relationships that are not necessarily sexual in nature with a friend of the opposite sex or gender. Gender-neutral housing would provide a strong sense of safety for these students.

Clarkson is acutely aware of the necessity of treading carefully on such a sensitive topic. "It's taken us way to long to get beyond the language," he said. Even coming up with a name for a new policy

JCEL: The hidden treasure down Moore St.

Business incubator offers entrepreneurial start-up tools to students and Huntingdon community

By **Kelly O'Shea**

The building across from Sheetz, the one that looks like an abandoned prison, is home to one of Juniata's hidden assets: JCEL.

The Juniata College Center for Entrepreneurial Leadership is designed to help undergraduate students create their own sustainable businesses. The program began in 2003 and is open to all students, faculty and community members.

When asked what JCEL has to offer students, Nick Felice, executive director of JCEL, said, "Essentially any tools, be it advising, equipment or capital, needed to move a business idea forward [are provided]."

Demetri Patitsas, an alumnus, used JCEL to help start his ice cream truck business, which he still operates. Patitsas said that JCEL relieves the pressure on students who might not be able to afford their own start-up capital.

Patitsas said, "JCEL has a framework which accounts for a college student; most students have little money and little time but with the help of JCEL, students can still start their own business."

The staff urges everyone to make use of these assets, from brand new startup ideas to a twist on something already established. Felice said, "We can engage at just about any stage in the business development process."

CHRISTOPHER SHANNON / JUNIATIAN

A local to the Huntingdon area works at his space inside JCEL and the Sill Business Incubator on Feb. 27. JCEL works to promote entrepreneurship and business leadership.

The student seed capital is one opportunity that only a handful of student's have used. This is a fund put together by JCEL and active alumni for students interested in starting up a business. A major benefit of this capital is that no repayment is required if a business fails, provided that business owners put forth a solid effort.

Felice said, "It's an investment we could very well lose and we're more than willing to take the risk."

"You have to remember: you came with nothing. So if you leave with nothing, you haven't lost anything," said Patitsas.

Junior and entrepreneurship POE Cassandra Hale urges students to take advantage of the unique "Starter Kit." The Starter Kit is designed for the student with an idea for their own business venture and who is looking to flesh out a business plan, develop a product or service and decide on the appropriate legal structure for the business.

Hale said, "Students don't seem to realize it is a legit $5,000 of capital they could receive through this program."

JCEL has been keeping students of the Young Entrepreneurs' Society (YES) busy this year. In November, JCEL brought YES students to a Collegiate Entrepreneur Organization (CEO) student conference in Chicago for the fourth year in a row.

CHRISTOPHER SHANNON / JUNIATIAN

The Juniata College Center for Entrepreneurial Leadership (JCEL) is located at the corner of 14th and Moore Street across from Sheetz.

As a faculty advisor at the conference this year, Lorenn Schouppe-Wright, Huntingdon county business and industry director of Keystone Innovation Zone, said, "It's a real nice networking event for the students."

The conference hosts founders, owners, and several entrepreneurs who have had success and are eager to share their advice.

Schouppe-Wright said, "It's inspiring for the students to hear you can start from nothing and form a successful business."

The appearance of the building is a turnoff to some students. However, JCEL has plans to turn its unreceptive facade around, as the building is currently being renovated.

Felice assured students that after the renovation, "the character of the site will get to change quite a bit."

Landscaping, paved parking lots and a completely revamped second floor will help JCEL lose its prison-like stigma.

Felice said that after the renovation, "They'll no longer be able to call me the 'Warden.'"

Aside from its unapproachable exterior, the toughest barrier JCEL has to overcome is the false premise that the program is available only to business students.

Felice said, "These opportunities are not restricted to business POEs, your expertise or value you have in a certain area can be expanded and sold as a strong business idea."

Campus explores housing proposal

▶ *from* **HOUSING** *page 1*

up with a name for a new policy has presented a thorny problem. Some suggestions include "Blind-eye housing," "Open Housing," and "Friendship Housing."

"It's a necessity to iron out the different possibilities and living situations and create an official and encompassing policy," said Mike-Mayer.

As of yet, no location for a test pilot of a new policy has been specified. The policy is still in the planning stage and would not be implemented until fall 2010 at the earliest. Mike-Mayer likes the location idea of South, as it is already co-educational to some degree. Both he and Clarkson shy away from the idea of designating an off-campus house as "The Queer House," or isolating LGBT students and allies on a certain floor.

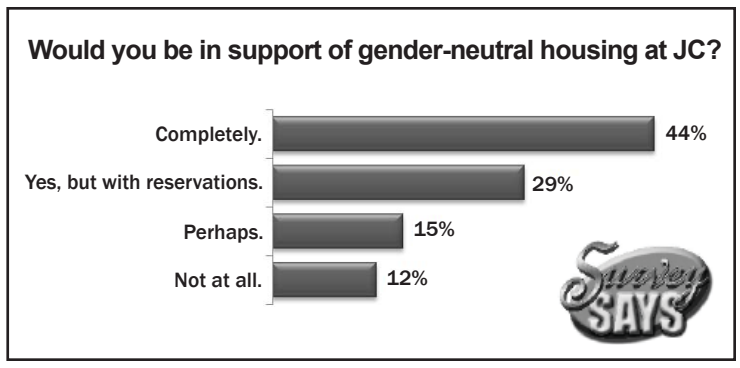
The first step in the process of drafting a proposal is a campus-wide student survey. Although there were problems with the wording, since language has not evolved to keep pace with the variations that describe sex and gender, the survery went out earlier this week.

"The terminology can be elaborate," said senior Hannah Everhart, the sexual and gender minorities College Senate Representative. Accurate phrasing is crucial. "Gender-neutral housing will not happen until gender identity and gender expression are explicitly listed in the College non-discrimination policy," said Everhart.

Furthermore, any proposed change in policy must be submitted to the board of trustees.

Approving gender-neutral housing would open up an array of possibilities for students, including heterosexual couples wishing to live together. Board members may be reluctant to sanction sexual activity among college students. However, universities that have implemented the model have not observed a rise in sexual activity as a result of the policy change.

Some worry surrounds increased potential for sexual assault, and break-ups made more traumatic for students who have been living with their partner. Advocates point out that since gay and lesbian couples have always had the option of living with their significant other, this concern represents a qualitative disparity in the way these relationships are viewed.



Raymond has done extensive research for the new proposal. He has spoken to representatives from many universities with a gender-neutral housing policy.

"In almost all cases, the reaction from faculty, administration and students has been overwhelmingly positive," said Raymond. Most universities who make the option available to students find that only a small percentage of the student body (less than one percent for Wesleyan University) actually request to live in gender-neutral housing.

Clarkson stressed that selection for gender-neutral housing would be on a case-by-case basis. It may also not be an option for freshmen in their first semester.

Juniata strives to be an environment of acceptance. "It is important, however, that we do not accept homophobia," said Clarkson.

"Juniata is not a scary place," said Mike-Mayer, "nobody should feel intimidated here."

Walking the catwalk for a good cause

Fashion show spreads awareness about eating disorders and challenges body image portrayals

By **KAT PEARCE**

As part of National Eating Disorder Awareness Week, Health and Wellness intern senior Cassie Dickmann invited female students "of all shapes and sizes" to participate in a fashion show.

Sixteen young women strutted their stuff in Sill Boardroom on Feb. 25. Their clothes were bold and flattering. Some models wore cute flower prints and shy smiles. Others sported bold colors and flirted with the audience. Still others matched professional models in their saucy walks and form-fitting outfits.

However, these were not professional models. They were Juniata students of different sizes, shapes and heights who were volunteering their time to a Health and Wellness Center awareness campaign.

About ten percent of the female student population, as well as some male students, seek help or are referred to the Health and Wellness Center for an eating disorder, according to College Counselor Beth Williams. Nationally, ten percent of women develop an eating disorder in their lifetimes.

"Everyone can name a friend who has or has had an eating disorder," said Dickmann.

Julie Cramer, a freshman who is "in recovery" from an eating disorder, was a model in the fashion show. She said that the media sends the message "everybody is losing weight. Why aren't you?"

Dickmann agreed, saying, "Body image is horribly portrayed in the media."

The student fashion show aimed to send a different message: "It's okay to feel confident and feel attractive and be attractive at a body size that isn't two," said Cramer. "We have a lot of normal-looking people with kinds of bodies you see every day."

"You don't have to be stick thin to be gorgeous," said Dickmann.

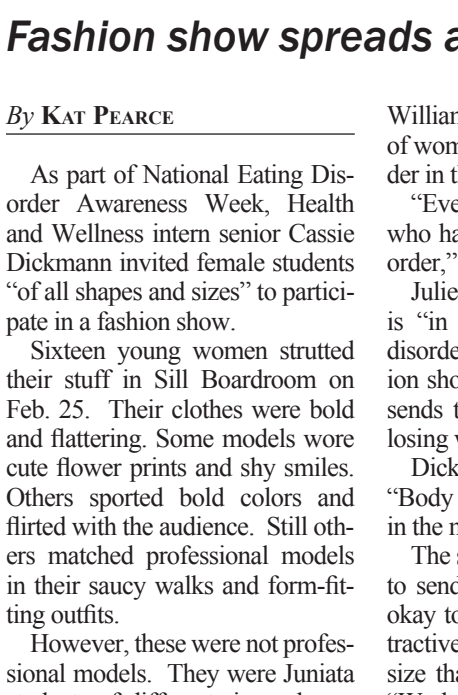
Williams said that there is "more awareness" of the disorders than 10 years ago, which is "always a good thing." She added that whether it would change anything "remains to be seen."

Williams stressed the importance of prevention efforts, such as the fashion show. "Most of the time, we intervene when the disorder has already become very apparent," she said. Once a patient seeks help, it can take months, years or even a lifetime of recovery, according to Williams. "The disorder takes over someone's mind, body and soul," she continued. In fact, disorders "become someone's very best friend" and, like anybody trying to beat an addiction, it is "very frightening to change."

It is easier to resolve the issue, according to Williams, if students seek help before their "disordered eating" evolves into an eating disorder. Disordered eating involves daily decisions to eat in a particular, disordered way. It can include eating only one kind of food for long periods of time or weighing every bit of food eaten.

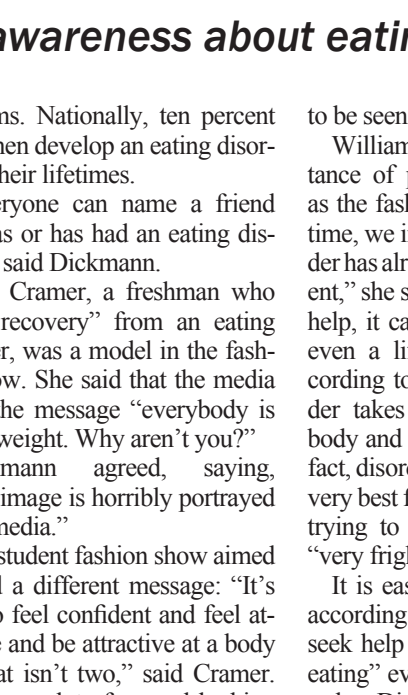
Even after eating habits have returned to normal, there are still long-term effects that eating disorder patients must face, according to Cramer. "Consequences do not just go away," she said.

Cramer stressed how important it is for people who think they have a disorder to seek help as soon as possible. "You don't want to have to deal with this for the rest of your life. It sucks!" she said.



It can, however, be difficult to seek help because of stigmas surrounding eating disorders. "I think a lot of people think it's a choice, a weakness, a character flaw," said senior Alison Tyler, president of Juniata Active Minds, a campus club devoted to combating mental illness. However, she explained, "There are chemical and structural differences in some that make it easier to fall into an eating disorder, or make it worse, once it is there."

"Watch out for yourself and your friends," said Tyler.



"There's almost always a social component to eating disorders," said Cramer. "You have to know if a situation is triggering you, and you have to get out."

Along with the show, on Feb. 23, a Health and Wellness Center sponsored speaker, River Husten, came to Juniata and spoke about body image and HIV. On Feb. 24, Juniata sponsored a health fair with information about eating disorders, among other things.

Williams explained the importance of looking at a magazine picture "for what it is: an airbrushed photo of a model who is selling a product."

Organic chemistry 1 slated to be a fall-only course offering

Change effective immediately; faculty expect benefitial outcomes

By **MARIE BOLLER**

For the past four years, the chemistry department has offered Organic Chemical Concepts 1 (O-Chem 1) in the fall and spring to allow students increased flexibility in course scheduling. After careful consultation with all related departments, the Chemistry department has decided to eliminate the spring O-Chem 1 section.

O-Chem 1 is a crucial building block course for POEs in chemistry, biology or pre-health professions.

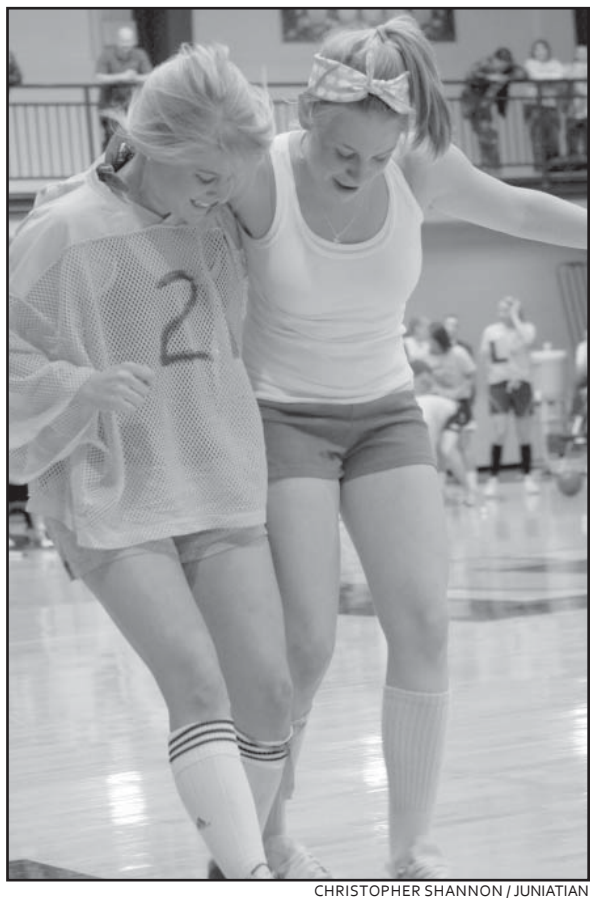
Richard Hark, chair of the chemistry department, said, "We are always trying to help our students, and we simply couldn't make a case that it really did help [to offer O-Chem in the spring as well as the fall]."

In the past, students like freshman Jared Clark have retaken O-Chem 1 in the spring in the hopes of earning a better grade. Clark initially took O-Chem 1 last semester. "I didn't keep up. I slacked off," said Clark. He is now taking the class for the second time this semester.

Some students delay until the spring because they want to pursue other interests during the fall semester or to lighten academic workloads the first semester at college.

"The students who were going to get slammed got slammed regardless," said Dr. Debra Kirchhof-Glazier, Professor of Biology and Director of Health Professions Programs.

This is the last spring semester that O-Chem 1 will be offered for the foreseeable future.



Starting next academic year, the class will be offered in the fall only. One large class will be taught by Hark. Both Hark and David Reingold, H. George Foster Chair of Chemistry, will be leading smaller discussion groups. Students who wish to delay the start of O-Chem 1 will now be putting off their core science requirements by a full year instead of one semester. First year students who fail to make a "C" in the course will have to wait until the fall of their sophomore year to retake it.

Sophomore Jenn Wright changed her POE midway through her freshman year, so she took O-Chem 1 for the first time at the start of her sophomore year.

"Because I started O-Chem a year late, it's going to be tough to fit in all the classes that I need to graduate on time," said Wright, "but it is possible to do it."

Hark said that freshman who start O-Chem right away "generally find out sooner whether they can handle a college science course."

T-Kep: The big man on campus

A peek into the life and work of Dr. Thomas Kepple, Juniata's 11th president

CHRISTOPHER SHANNON / JUNIATIAN

President Dr. Tom Kepple talks with Assistant Vice President of Marketing Gabriel Welsch during Campus Fest this past summer. As president, Kepple is the College's chief strategist and main public face.

By **Amin Khoshnevisan**

Coffee with creamer, no sugar. This is the drink of choice for Juniata College President Dr. Thomas Kepple, as he sets out to complete his daily presidential duties.

But what exactly does Juniata's 11th president do?

"They probably have no idea what I do; they just see me walk around campus and go, 'Hey, there's the president,'" Kepple said.

For the most part, he was correct. When asked what our College president does, nine out of ten students simply replied, "I don't know."

"Students probably think he just sits in meetings all day, and that is true on some days," said Jo Ann Isenberg, President Kepple's executive assistant, who has worked with the president for almost nine years.

Provost Jim Lakso provided the president's job description: He is the College's chief strategist and main public face to the world. The president is ultimately responsible for what happens at Juniata. He also supervises the College's three vice presidents, who are in charge of Enrollment and College Advancement, Finance and Operations and Academic and Student Affairs.

President Kepple's vision for Juniata has been to increase the endowment, improve the quality of the campus and make Juniata's name better known. Both Isenberg and Pat Kepple, the president's wife and Manager of the Juniata College Press, said that he has accomplished these goals. They expect these things, especially the improvements on the campus, to be part of his legacy when he leaves Juniata.

"He has an unbelievable vision for the whole big picture. He sees it all," said Isenberg.

When in the office, President Kepple's work revolves around strategic planning to bring his vision to reality. Isenberg described that he is constantly communicating, whether by e-mail, phone or in person at meetings.

The president's job also includes much travel. "Twenty to 25 percent of my time is out somewhere else," said President Kepple.

The president travels for many reasons, "but mostly for financial/fundraising" purposes, such as raising money for the endowment and campus campaigns. He travels to meet and build relationships with alumni, other donors and particular foundations.

The president has traveled to places from Pittsburgh to France and Italy. He also goes to Florida twice a year, once in the winter and once during spring break, said Isenberg.

President Kepple's only regret about spending time away from campus is that he misses student events. The Kepples enjoy frequenting sporting and performing arts events.

Alumnus Dwight Bard, class of 2008, experienced the College president's profession first-hand. Bard won a raffle contest last year that allowed him and the president to switch places for a day. "I had no idea what to expect going in the first time with T-Kep," said Bard.

On the agenda for the day were meetings with Sodexo and Facilities Services, as well as e-mailing and phone calls and the Bailey Oratorical contest in the evening.

The biggest part of Bard's day was a strategic planning meeting with Facilities, which discussed the locking system implementation and an emergency management plan in the event of a flood caused by the Raystown dam breaking.

"He's a strategic thinker, so he likes to plan," said Mrs. Kepple.

Senior Nisha Pulimood said she did not know what President Kepple's job actually entails, but that she has seen him pick up trash around campus. She recalled one summer, when there was no one around, she saw him picking up pieces of trash as he was walking in between buildings.

It is said that character is what you do when you think no one is looking. Mrs. Kepple said that the president does these things because, "to him, [Juniata] is his world, and if there is trash out there, that means somebody needs to pick it up. And if he is the one doing it, then so be it, he is going to pick it up."

Senior Stephen Alexander was wondering, "Does [President Kepple] ever eat in Baker, and what does he think about it?"

"He likes Baker food," said Mrs. Kepple. She went on to qualify her statement by saying that he is not a very picky eater.

When asked about his favorite food, she said, "He loves meat." The president enjoys his barbeque, and he would "eat a steak and salad every night if I would let him," said Mrs. Kepple.

The Kepples also like to hike, read, walk their dog Ben and travel. Last year they took a trip to Spain.

The last major concerts President Kepple attended were performances by B.B. King and either Billy Joel or Bruce Springsteen, depending on whether you ask the president or his wife.

Mrs. Kepple also said that President Kepple could watch anything on the History Channel, especially about WWII. Even though he knows it's going to end the same way every time, said Mrs. Kepple, "he just loves the whole strategy thing."

Hear from President Kepple each issue in his "Presidential Perspective" column in the Opinion & Editorial section.

Eagle Eyes rewards good deeds

▶ *from* **Eagle Eyes** *page 1*

time."

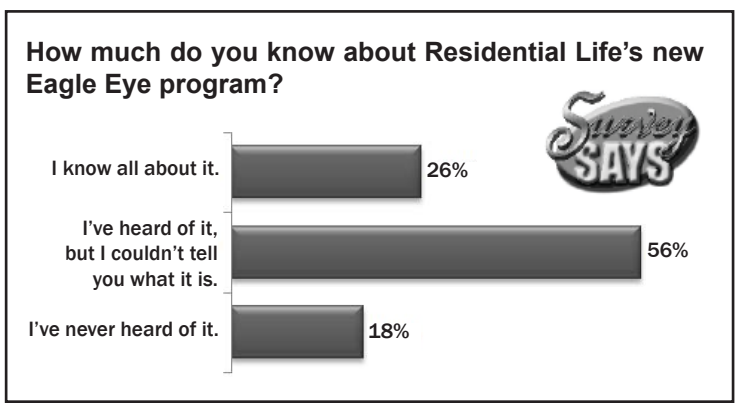
Senior Sherwood Resident Assistant Dan Albaugh said, "Eagle Eyes promotes rewarding people for positive things. It's about saying 'good job' for making Juniata a nicer place."

With the confusion about the program, some attempted to find the original e-mail.

Sophomore David Vogel said, "I heard somebody make a comment about it. I wanted to know more about what they were talking about. But by then I had already deleted the e-mail."

Despite Launtz's support, some students still feel that the program is designed to encourage the betrayal of peers.

As one forum post read, "It's like in 5th grade when we got gold stars put on a giant piece of cardboard so we could see what children read, and which children were the bad ones. Do we really need to encourage a good community spirit by giving 'good' students 'eagle cards?'"



The student body's mixed reactions have made those who did not read the initial e-mail take note of the situation.

Sophomore Kyle Roberts said, "I didn't really know anything about it. All I know is that the reaction I hear from most students is that it's rewarding snitching. I haven't heard anybody support [Eagle Eyes] yet."

Launtz feels that nothing could be farther from the truth. "I gave Dan Cook-Huffman an Eagle Eyes card on the day that he called in a house that was smoking and had caught fire while sitting in Baker. And he wasn't the only one who called that in. Many students also called it in that day. I wish I knew who they all were so that I could give them all a card."

Though this program has garnered attention on the forums and in student conversations, Launtz does not see the Eagle Eyes program as a significant change in policy. He said, "The cards register you for a drawing. If you get one and enter it in the drawing you are eligible to win a flat screen TV. That's not too big of a policy change."

Though these rewards may entice some, a few forum posts suggest that the program is a misuse of funds. One poster wrote "Anyways, should JC really be using its money to give flat screen TVs et cetera to good Samaritans?"

In Memoriam:

Andrew Arden 'Drew' Roth

Dec. 25, 2005 - Feb. 25, 2009

The Juniatian dedicates this issue to the life and memory of Drew Roth, the son of Assistant Professor of Mathematics Kim Roth and Lucas Roth and brother of Nora Roth. The campus community reaches out to the Roth family in this time of grief.

In lieu of flowers, donations in memory of Andrew A. Roth may be made to Juniata College, 1700 Moore St., Huntingdon, PA 16652, for the benefit of the ECEC (Early Childhood Education Center); or to Miguel Angel Asturias Academy, the Guatemala Partner School, in Xela, Guatemala, c/o Stone Church of the Brethren, 1623 Moore Street, Huntingdon, PA 16652.

Students challenge Juniata to 'Think, Evolve, Act' on meal system

▶ *from* **MEAL PLANS** *page 1*

required to buy plan one, the largest meal plan. In the following semesters, on-campus students must choose between plans one through four. Off-campus students have the additional choices of plan six, seven or no meal plan. Meal option five is required for student residents at the Raystown Field Station.

Jaroszewicz petitioned for plan six, which is reserved for students living off campus. Plan six is the second-smallest meal plan, which includes 60 meals and $100 of declining cash balance (DCB). Students who buy this plan rely on their own cooking for most meals.

> *"I'd like the option of not buying in to Sodexo and having your own meal plan."*

"I'd like the option of not buying in to Sodexo and having your own meal plan," said Jaroszewicz. He found a collection of farms that formed a group called Plowshare Produce, a subscription system in which the farmers send a weekly supply of fresh vegetables to customers. Located 15 miles from campus, the farms ship produce for 27 weeks for a cost of $375, which Jaroszewicz noted is far below average grocery costs for that amount of food. In fact, that $375 is less than a fifth of Juniata's most expensive meal plan, which costs $2,000.

In a note more familiar to some Juniatians, Jaroszewicz mentioned that the people behind Plowshare Produce also run Boxer's Café in Huntingdon.

Dean Clarkson handles much of the work of instituting meal plan policy, contracting with Sodexo and coordinating with the members of the College's volunteer Food Committee to assess student feedback and enact changes. Asked about why he would not allow an exception for Jaroszewicz, Clarkson replied, "We can't do too much [changing]."

In his petition letter, Jaroszewicz argued for the choice to opt out of meal plans if it is in line with a student's social justice beliefs. He cited United Nations studies of the environmental effects of meat production and other research reports from American universities and government agencies. Noting from the 2006 UN study that "the meat industry is responsible for more greenhouse gas emissions than all the cars, trucks, planes and ships in the world combined," Jaroszewicz requested the ability to not buy in to the Sodexo plan.

Clarkson said that Sodexo, Inc. is already working towards sustainability. Local vegetable dishes are available at lunch and dinner, and Sodexo is noted in the corporate world for its involvement in charity operations and relieving world hunger.

Furthermore, Clarkson said that his office and Sodexo have investigated ways to bring more local food into campus meals. However, Sodexo's efforts were severely limited by insurance and food safety regulations intended to prevent food poisoning and ensure food quality.

Jaroszewicz and other students are skeptical of Sodexo's use of local foods. Particularly, Jaroszewicz noted that the baskets for local foods in Baker Refectory are seldom full.

The lack of meatless options was not what bothered Jaroszewicz, a vegetarian. "There's a misunderstanding of vegetarians," he explained, saying that concern for animals is not the sole issue. He noted that the environmental impact of meat production and concern for the safety of meat are a significant part of the decision to stop eating it, too.

Freshman Toria Schrayer agreed that vegetarians do not simply change their diets out of mercy for animals. A vegan, Schrayer cited environmental and health reasons for refraining from animal products.

Other students share Jaroszewicz's concerns with Juniata's food service system. A group of students is working towards founding an environmentally conscious campus house, much like Juniata's Alternatives to Alcohol and Intercultural houses.

A more widespread complaint with campus food services is the expensive and much-maligned meal plan one. Comprised of 185 meal credits and $100 of DCB money, plan one is required for all freshman students' first semester. "In all honesty, I hated that," said Schrayer. "We all overpaid on that, it was done intentionally, and it was designed to rip us off."

This sentiment is widely shared through the Class of 2012. Hal McLaughlin, General Manager of Juniata's dining services, keeps extensive statistics for Sodexo on student eating and customer service. He reports that meal plan one's popularity dropped roughly by half between the Fall 2008 and Spring 2009 semesters. Many freshmen dumped the costly plan for cheaper, more flexible plans with fewer meal credits and more DCB.

DCB has been successful in giving students more meal flexibility, and it has been more widely implemented this academic year than ever before.

The Class of 2012 is the first to enter Juniata under the new meal plan system. Upperclassmen will remember the system of meal credits that were issued on a weekly basis, with plan 1 giving 21 meals per week. "There wasn't one student here that ate 21 meals per week," McLaughlin readily shared. He estimated that 58 percent of students' weekly meal credits went unused.

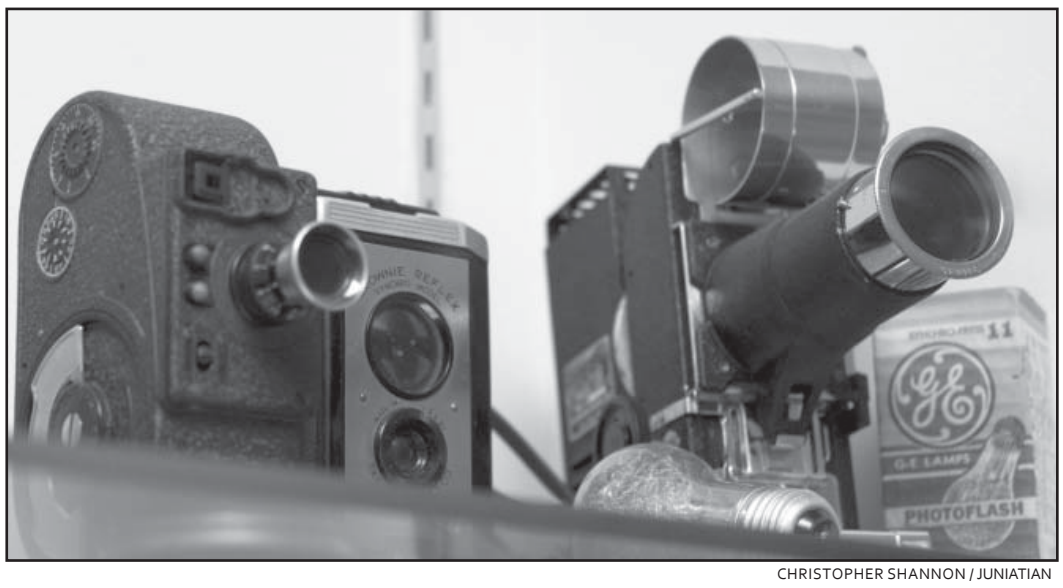
First-semester students are forced to take the most costly meal plan to ease their college transition. Dean Clarkson said that for new students, "that transition is difficult enough, confusing enough." He defended the practice as a key way to give students access to plenty of healthy meals without having to think about what meal plan to choose.

Jaroszewicz's continues to urge administrators to make the meal plan system more practical and focused on a 21st-century sustainable economy.

In particular, Jaroszewicz challenged the administration to live up to Juniata's proud school motto. "I'd like to see them live up to 'Think, Evolve, Act,'" he said.

CHRISTOPHER SHANNON / JUNIATIAN

Jaroszewicz petitioned Juniata for a smaller meal plan in order to circumvent the Sodexo-supplied food system, but was denied. He wished to conscientiously object for social justice and environmental reasons.



Survey SAYS

78%

of the Juniata community believes students who live on campus should have the right to opt out of a meal plan and prepare their own food.

According to the Juniatian's online survey of 250 people

Where on campus?

East converted to freshman-friendly housing

First-year students adjust to living in traditional 'party dorm' with help from Res. Life staff

By **Alison Rihs**

The large freshmen class created a housing crisis that required more upperclassmen to live off campus this year. To allow for enough on-campus housing, Residential Life assigned several freshmen to East.

According to Launtz, director of public safety and residential life, "We've had freshmen live in East before, but not this number. …We had to do this this year. That's where beds were available."

In the past, East has been a popular place during room draw. This year, more housing was available off campus. Launtz said students opted out of East so they could live off campus instead.

Though interest in East has decreased, Residential Life is working to make it a more comfortable place to live. According to Launtz, "The RDs and RAs need a lot of credit. The quality of life at East has improved."

In addition, he said, "Over the past three or four years, there has been a decrease in vandalism and it's cleaner. Everybody has worked at improving the way of life."

To keep the incoming freshmen consolidated, most were placed in one tower. However, there are a few who live with upperclassmen. Assistant Director of Residential Life and Resident Director of East Matt Lovell said, "The upperclassmen they were with weren't intimidating. [The freshmen] look to them as leaders."

Last semester, freshman Matt Schmidt stayed in a room in East while another student was abroad. He did not mind living with upperclassmen because they were fellow volleyball players.

KEVIN DUNDORE / JUNIATIAN

Freshmen Dale Rubury and Vicky Thornton are two of the first-year students placed in East Towers, a traditionally upperclassman dorm.

He said his older teammates aided his adjustment to college. "I think it helped having upperclassmen around because I could see them get settled down and see their habits."

According to Lovell, the living arrangements are much different than other dorms. "It's the fact that you have seven roommates as compared to one. It's a little more independent."

Because it is hard to find seven suitemates, Residential Life has tried other methods to fill rooms in East. "[In past years], we used the 'Noah's Ark approach' and considered taking it two by two and filling it up," said Launtz. As a result, each room would be "just like a floor in another dorm, except [the eight people] would share a bathroom."

Freshman Dale Rubury said, "I love the setup. I love the common room where we can get away from our two-person bedroom. It's a fun dorm; it's the party dorm."

Living with seven other roommates has proven to be difficult for some students, but enjoyable for others.

Freshman Maeve Neiswanger resided in East before moving to South this semester. She had mixed emotions about the living arrangements. "I didn't volunteer to live there, I didn't volunteer to clean my own bathroom, or walk [across campus] in the cold." She also did not like the fact that Residential Life matched her with her roommate, but not her suitemates.

Because each room is secluded from the others, students may have difficulty making new friends. "It doesn't have the same feel as other dorms. There's not as much interaction between the towers," said Rubury.

Neiswanger said, "It helped because I became independent quickly. It was almost like an apartment. [However], I also wish I could've had a hall of freshmen girls."

"At times it would be nice [to live in another dorm] because you could meet more people," said freshman Vicky Thornton.

Rubury said, "I thought it was going to be tough. I thought there would be lots of drama, especially with all the girls. But there wasn't. We get along great."

Though the environment of East is unique, students have not found it difficult to transition into a college environment. According to Schmidt, "It's nice having a family atmosphere and having your own bathroom." He also said that once you get to know a core set of people, it is easier to live there.

According to Thornton, she feels lucky because her suitemates get along well. "The fact that I like my roommates helped. It's not much different than the other dorms."

Although it was difficult, Residential Life found a room for everyone. Launtz said, "It was a trying summer. It wasn't the norm in anticipation of this large [freshman] class."

"The intended number for next year is not as large. We have a plan in place, and we have a good handle on it," said Launtz.

Study abroad does matter

Employers place value on 'global citizenship'

By **Kat Pearce**

Forty percent of Juniata students—compared to an average of two percent of students nationally—study abroad, even if a foreign language is not in their P.O.E. However, with such a big push to study in another country, some students question what the benefits of studying abroad are. In the end, do employers even care?

According to Director of Career Services Darwin Kysor, studying abroad shows that you are a "risk taker" and "take advantage of opportunities."

"Business is done all over the world," said Kysor. "There is a value placed on global citizenship." He explained that there are times when knowing a foreign language is directly related to success in a career. Some languages have stronger benefits in particular places or professions. However, many careers are not language-specific.

"Any language is good [to know]," said Kysor "The world is becoming a global market place."

"It's very important today to have a second language, or a study abroad experience," said Elan Hart, Interim Study Abroad Advisor. Study abroad gives participants cross-culture awareness, tolerance and sensitivity. "It is a good resume builder," said Hart.

Studying abroad is "one more positive thing you have that can put you over the top" in employers' eyes, said Kysor.

It is not, however, a magical solution.

"If you're stupid here, you're going to be stupid abroad," David Sowell, professor of history, said, quoting Jaramila Polte, former study abroad advisor. "And you're going to be stupid when you get back," he added.

"I don't think studying abroad will get you a job," said politics professor, Emil Nagengast.

Sowell explained that if students go just to have fun, they won't get much out of it. However, he said that "when you do it for a purpose," when it is "part of your career program" than it is "more likely to have tangible effects."

"It is how that experience affects you; that's what makes it a powerful vocational skill," Nagengast said.

"Study abroad builds personal qualities," said Hart. "That is something you can really adapt to applications for jobs, internships and graduate school."

"Employers like study abroaders," said Sowell.

"It is a life-changing experience," said Hart, remembering her own time studying abroad. "It gives you a new perspective on foreign countries and also your own."

"More important than a line on your résumé are the lifelong vocational skills that [studying abroad] will give you," said Nagengast.

Keep talkin' or stop snitchin'

EDITORIAL

The recent controversy over the new Eagle Eyes program (see page 1) highlights the great paradox in our society surrounding whistle blowing. Despite the fact that turning informant is considered doing the right thing, almost all the words we use for it carry an overwhelmingly negative connotation. Most moral decisions can be influenced based on the individual situation, but snitching is highly subjective.

It is hard to say whether a definition for snitching can even be agreed upon. It is safe to assume that everyone can describe a situation that they feel is snitching, but it is hard to pin down an objective description of what it is.

Research has indicated that most people feel snitching involves the snitch taking initiative in reporting acts when they had the option to passively remain silent. For instance, people are more likely to consider going to the police to report a crime than answering questions at the scene of a crime. But what amount of initiative makes the divide between answering questions, and "ratting" someone out? What one considers snitching is going to vary a great deal based on personal experience and attitude.

Every time someone is in the situation to snitch they also face balancing a complex array of factors. The person they are snitching on could be a friend or colleague. They might have to consider whether the act is really worth reporting in the first place. There is no clear answer on when someone should keep quiet, or come forward.

Despite this ambiguity, society says that we should be Good Samaritans and report to authorities.

On the other hand, at a more personal level, we are expected to follow a code of silence. In many cases there has to be incentive or risk of harm for the snitch to even come forward.

The Eagle Eyes program is a great example of how these pressures play out. The people in authoritative positions tend to view a situation like this as doing the right thing, while in some instances students might feel like this is telling to rat on their friends.

The dialogue surrounding Eagle Eyes showcases just how differently the program is seen based on who you ask. Tim Launtz, director of public safety and residential life, said that the program was never intended to come across as a reward for snitching. The ambiguity in how the program was introduced no doubt played a heavy role in this problem, especially considering many are getting the information on a rumor basis.

The official e-mails actually say next to nothing about whistle blowing. They do, as Launtz and others said, focus more on rewarding good behavior. However, the vague actions described in the e-mail do not go far in explaining what the administration really wants students to do.

These issues of clarity are probably one of the root causes of these suspicions. Nonetheless, to many on campus, it the program appears to come across as encouraging students to snitch on each other. It might not have been the original intention, but the pressure is there. Ultimately, whether or not the Eagle Eyes program rewards snitching is going to come down to what you think as an individual.

Ask the Administration

E-mail your question for an administrator to us at juniatian@juniata.edu.

"What effects will Obama's stimulus plan have on Juniata? Should students and faculty expect to see many changes?"

Juniata students and their families will benefit from President Obama's stimulus plan. However, it is still early to know just how the plan will specifically impact Juniata.

Federal Pell Grant program funding has been increased. The maximum Pell Grant will be $5350 in 2009-10 and $5550 in 2010-11. The eligibility criteria have also been modified slightly to increase the number of eligible students.

Additional funding will also be provided through the Federal Work Study program. Institutions will be notified later in the spring about the actual increase per institution. This additional funding will be a benefit to Juniata students as Juniata looks to provide additional student employment opportunities on campus as we did for this semester.

Another part of the President's stimulus package includes an increase in the federal tax credit that families can claim while a student is in college. This initiative temporarily replaces the existing Hope tax credit program. This includes a credit up to $2500 per year for tuition, fees, books and course materials.

-Valerie Rennell, enrollment manager & director of student financial planning

From Senior Brian Pearson:

"What is the Juniata Activity Board's (JAB) budget for the Major Event, Friday Night Live shows, and other JAB activities? How does the budget get divided?"

The for various JAB events which make up the majority of JAB's budget are as follows:

Friday Night Live	$20,000
Major Event	$33,500
Travel	$4,000
Madrigal	$6,000
Mountain Day	$8,000
Springfest	$14,000
May Day	$3,000
JC: UpLate	$5,000
Movie Nights	$5,000

In order to divide the budget, every year, the JAB execs plan out the following year's budget and petition Student Government for funds like other RSOs. We take into account the money allocated from Student Government as well as projected revenues from events like Madrigal and the Major Event. JAB execs make changes to the various traditions and committees based on JAB chair, member and student feedback from the previous year(s). The execs also have to take increased food, gas, and artist costs into consideration when divvying up JAB's budget of about $90,000.

-Staci Weber, director of student activities and Amin Khoshnevisan, JAB Treasurer

When Nature Calls

Franken-fruit and mystery meat

How much do we really know about what goes into our food?

By **Brianna O'Malley**

Sad to say, but probably what my friends and I talk most about is food – food we miss from home, edible Baker options and the ever important MTO from Sheetz. But how much do we really know about what goes into the food we eat?

The U.S. produces about $100 billion worth of crops a year. Most of the food is grown in large scale farming operations. Problems such as pests, disease, drought and nutrient loss in these operations are increasingly counteracted through genetic modification. These genetically modified organisms (GMOs) may be taking over your kitchen one genetic splice at a time.

GMOs receive both praise and criticism. They are often easier to grow, which means more production at a lowered price. Some GMOs, like enriched wheat, provide extra vitamins, which may supplement one's diet. Golden Rice is a plant that has been modified to naturally produce beta carotene; a precursor to vitamin A. Its production was intended to combat vitamin A deficiencies in undernourished countries.

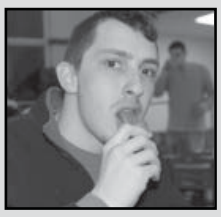
Many GMOs grown in the U.S. are bred for pest resistance. Some of these plants are modified to produce compounds toxic to insects. In basic terms these plants are producing their own pesticides. This is much cheaper for farmers because less money will be spent on pesticides, and less synthetic pesticides are released into the environment.

However, most environmental activists oppose the use of GMOs. One complaint is that usage is thought to lower local biodiversity. Aside from their environmental impacts, little is known about what long-term human effects GMOs may have.

Genetic modification of crops might be responsible for some allergic reactions. Starlink, a pest resistant corn, was approved by the FDA for animal feed use only. However, traces of Starlink were found in taco shells sold by Taco Bell in 2000. There were cases of Asthma attacks and allergic reactions that some attributed to the eating of corn products containing Starlink. As a result, the use of Starlink seed was soon discontinued.

Fruits and vegetables are not the only foods open to genetic modification. In Sept. 2008, government officials said they were "considering industry proposals to sell genetically engineered animals as human food." Currently, farmers and companies do not need to specify whether the product contains GMOs.

Just last year the FDA approved the use of foods produced from cloned swing cattle and goats. Animals that are cloned are bred for better quality of milk and meat. There is still a debate about the sale of cloned meat; however, milk from cloned animals may now be making its way into your cereal.



Many people are unhappy with the meat industry's practices. Currently there is opposition to aspects of the trade such as the use of antibiotics in animals, as well as the unnatural housing that animals are kept in. Web sites such as "The Meatrix" provide an entertaining yet informative look at how the meat industry has changed in this country.

For those that do not want their vegetables tampered with, organic options are available. However, even organically grown crops are facing unintentional modification.

The spread of pollen by air currents, known as pollen wind, has the potential to ruin some organic crops. In 2004 a Canadian farmer named Percy Schmeiser sued the biotech conglomeration Monsanto for contaminating his crops with GMO canola pollen. The court ruled in favor of Monsanto because the cross pollination was unintentional and deemed unpreventable.

It is hard to avoid GMOs, especially when dealing with large food corporations. Sodexo is one of the leading food service companies in the world. According to their website, Sodexo offers sustainable food options, "Our menus focus on variety and authenticity, including vegan, vegetarian, organic, and locally grown items." However, pre-made products such as cereals, sodas and breads are not likely to hold the same organic standards.

Roving Reporter: What should President Obama do first?

Dylan Belnavis '12

"Come speak at JC because there are a lot of people here that need to be more informed about politics."

Kim Amrod '12

"Bring the troops home cause we need to end this ridiculous war and worry about our own problems."

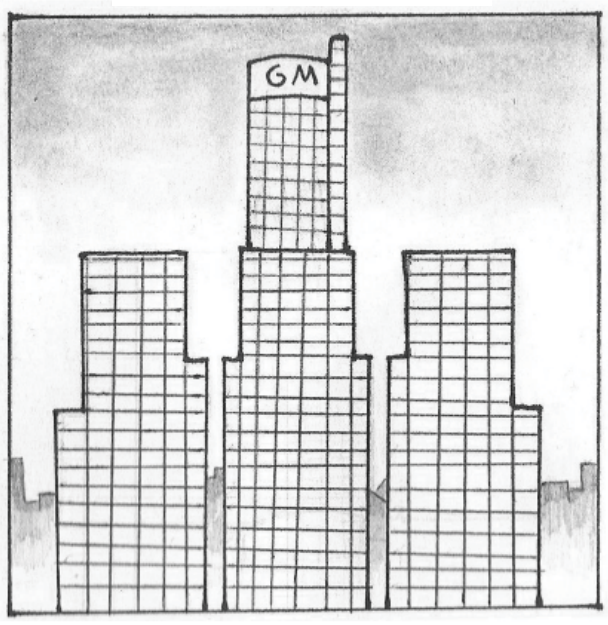
Andrew Sinnes '09

"Expand the Supreme Court, load it with liberals to support Roe vs. Wade and over turn proposition eight."

Anne Staudenmaier '11

"He should not forget that the economic problems that we face are affecting the global economy, so he needs to also work on our foreign policy."

Matt Wagner '09



"Make a mandatory plan to convert from oil to alternative fuel because it's necessary because of the depletion of crude oil."

Becca Shuke '12

"Change the national ice cream flavor to strawberry because it's always been an argument between chocolate and vanilla and I'm tired of it."

Presidential Perspective

Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.

As I'm sure you are aware higher education is not immune from the current economic crisis. This is especially true for high endowment funded institutions like Harvard and high state-funded institutions like Indiana University of Pennsylvania. Just a few recent headlines: Dartmouth is reducing 60 positions, Harvard is seeking 1,600 employees to take early retirement, Yale, Princeton and Washington University have stopped all construction projects, Dickinson College is reducing its budget by five percent.

At state institutions the news is generally worse. Budgets of most state universities around the country have already been reduced this year (down six percent in PA) and will likely be reduced again next year. Penn State is freezing salaries and reducing positions. Some state institutions have had to increase tuition in January.

While the impact on Juniata has been less than at most institutions, we have also suffered a 30 percent loss in our endowment at a time when there is a clear need to increase funds for financial aid. So what is Juniata doing?

First of all we are guided by a set of principles:

1. Our first priority is to deliver the quality education we have promised to our students. Whatever steps we take we will do so by first judging its impact on the core quality of a Juniata education.

2. We have an obligation to help our current students graduate from Juniata and thus we have already taken steps to assist our current families by providing lower cost food options, adding 30 campus jobs including some new higher paid positions for seniors, creating a two million dollar emergency loan fund for families, adjusting financial aid packages when families lose income and working toward more career service/alumni connections to assist students in obtaining internships and jobs.

3. We are implementing cost reductions that do not reduce quality (sustainability and especially our energy conservation efforts are examples).

4. We are developing a balanced budget for next year with a $500,000 contingency. We know from experience that not balancing the budget simply makes it even more painful to balance it in future years. We are also looking at many other prudent financial moves.

5. We lowered the tuition, room and board increase for next year from the 4.9 percent approved by the Board of Trustees in October to 3.9 percent approved by the Board last week.

6. We intend to keep our outstanding team in place by not reducing positions.

Vice President Rob Yelnosky, in collaboration with many across the campus, had a difficult task in coming up with a budget for next year that lived within these principles. Once we covered lost income from the endowment, adjusted financial aid, increased non salary budgets by one percent and covered increased health and food costs there were no funds left for salary increases for administration, faculty and staff with the exception of our 44 facilities services employees under their union contract and about 10 others who are being promoted.

Some ongoing capital projects that are paid for by gifts will be completed. Examples include: the planned new entrance to Dale Hall from Moore Street, football and baseball locker rooms, some continued refurbishment of the main floor of the library and Alfarata.

There is also good news in the stimulus package recently signed by President Obama. Nearly 18 percent of our students will be eligible for higher Pell grant awards which will increase on average by $500 over the next two years. In addition, families with incomes up to $160,000 will be eligible for a $2,500 tax credit.

Earlier this week I sent a letter to your parents describing all that we are doing. So should you and your family need additional assistance to remain at Juniata, I encourage you to visit with the Student Financial Planning Office located in the Enrollment Center. Together I believe we can successfully get through this economic downturn.

RSO Watch: ART ALLIANCE

Club spreads joys of art around campus

By **Leanna Yeager**

The brightly painted snow that appeared earlier this semester was quite a surprise to students on their way to class. This was not just a freak accident. The painted snow was created by Art Alliance, a small club dedicated to spreading the joys of art throughout the campus.

This group of about eight members meets weekly to plan new ways to create and spread art. "At meetings we talk about what we'd like to do, but we also hang out and make art…we have a lot of fun," said Claire Wakefield, a senior who has been the president of Art Alliance for the past two years.

In the past, Art Alliance has been instrumental in organizing projects such as Post Secret and Body Art. Post Secret is a project where people anonymously submit a secret about themselves to be posted as a way of getting it off of their chest. For Body Art student volunteers agree to have their bodies painted in a variety of designs. "We like Body Art because it's a way of creating art that is very outside the box," said Wakefield.

Currently Art Alliance has an exhibit in the Good lounge where students can alter book pages to create a new story. "All you do is just cross out the words you don't want and add in a few more, and you've got a new story. We started it just as a fun project at meetings, but we were thrilled when other people started doing it too," Wakefield said.

Art Alliance began about 15 years ago under the name Art Allegiance. Students in different areas of art study started the club as a way to gather various interests into one place. "The art students felt the need to connect with one another and see who was interested in and who was passionate about art," said Karen Rosell, professor of art history. Rosell was the club advisor until two years ago when she took a sabbatical. Jennifer Streb, assistant professor of art history, is the current advisor.

Recently Art Alliance has been trying to encourage non-members to display their artistic side. "Right now we're working on creating a student gallery," said Wakefield. Art Alliance is seeking permission to put up a display of art pieces submitted by students in a public area. Ultimately, the organization is hoping to get a space in von Liebig, but still in the planning phase. "We wanted a place [to display art] for students who don't have time to take regular art classes but still create art in their spare time," said Wakefield. According to Art Alliance the von Liebig entrance would be ideal for the gallery because a number of display cases are in place and many students pass through on their way to class or Jitters.

Despite the rumors, Art Alliance does not have any plans to decorate the fence surrounding the Founders Hall construction site. "We had mentioned in passing that [the fence] was an eyesore, but we weren't really serious…we're focused on the gallery right now. Maybe later we'll do something about it," said Wakefield.

Keep an eye out for this brand new gallery and more exciting creations from Art Alliance in the future.

The Director's Chair

'Slumdog' is worth the million bucks

By **Jordan Yeagley**

The Oscar goes to… "Slumdog Millionaire." More just words have yet to be spoken. "Slumdog Millionaire" is one of the best films to hit the screen in years and deserved to win every award it was given.

Going to the theater, I had no expectations for the film. Although "Slumdog Millionaire" had won thousands of awards at the Oscars, winning is not always the sign of a good film.

I will try my best to avoid giving out any major plot points, as it would be a great disservice to the film, which must be seen to truly understand how wonderful it is.

As the opening credits role, audiences are transported to Mumbai, India. The visual makeup and the audio quality of the film are outstanding. It is easy to become enthralled in the narrative because the surroundings are so believable. As the children run across airplane hangers and swim in the communal laundry pools you feel as if you are experiencing life with them. This connection helps propel viewers into the brutal, young lives of children in India.

The main story line follows two brothers, Jamal (Dev Patel) and Salim (Madhur Mittal), as they struggle to survive in the dangerous environment of India. Along the way they meet Latika (Freida Pinto) and Jamal falls deeply in love with her. Each event in the lives of these characters is played out in a series of flashbacks, as Jamal now competes to win the top prize on India's version of "Who Wants to be a Millionaire?"

At times the storyline may seem confusing and disjointed; however, it is one of the strongest screenplays I have ever seen. As an audience member, you experience the joys and horrors of life on the streets of Mumbai.

"Slumdog Millionaire" is also a wonderful love story. Jamal meets Latika at a very young age, and they share in the atrocious experiences of life on the street. Though separated throughout the film they never give up on rediscovering the love they share for one another. When all else seems lost, these two characters cling to their love as a safe haven from their difficult lives. This is a great movie to share with someone special.

The film contains scenes of lightheartedness. As the main characters search for money, they begin offering tours to unsuspecting visitors at the Taj Mahal. They feed tourists false information all of the while collecting large sums of money for their services. These scenes, along with others, will have you laughing out loud in the theatre.

"Slumdog Millionaire" offers everything you are looking for in a film. It is a riveting storyline with humor, horror and love all wrapped into one. I would recommend this film to anyone. It is not often that an international film of this magnitude gains the recognition it deserves. Though movie award shows are not always the best indicators of good films, they got this one right.

Leaving the theatre, I understood that is film had deserved the awards it had won.

★★★★★

OUT OF 5

"Slumdog Millionaire" is now playing at the Clifton 5 in downtown Huntingdon.

Rated R for some violence, disturbing images and language.

Sweet songs and sing-alongs

Fashion Forward
A stylish spring break at affordable prices

By **Kelly Ferguson**

Spring break is on its way, which means that we can say goodbye to those puffer coats and hello to a hot new bikini, at least for one week.

Want a trendy bathing suit without spending a lot of money? No need to break the bank for these fabulous suits. Wal-mart has a great variety of cute bikinis, flattering one-pieces and fun swim trunks. If you want more options, Target, Kohl's and even Victoria's Secret have great suits at affordable prices.

One-pieces: not just for your mother anymore.

Swimsuits this season have trends ranging from colorful bikinis and classy one-pieces to animal print and Bohemian embellishments. And for all of you with a Y chromosome, board shorts this season are featuring everything from neon colors to funky prints.

One of the biggest trends this year is incorporating embellishments, which can be anything from seashells on bikini tops to a brand name written in rhinestones on your bottoms. These small additions can make a plain suit stand out from the rest of the crowd.

Another trend that has been very popular recently is animal print. Flirty animal prints can be found in a range of colors. If animal print isn't really your thing, try a hint of print. Mix and match Daisy Fuentes Zebra Skirtini bottoms from Kohl's with a plain black top to try out the animal print craze.

If you're looking for something simple, bright colors are very popular. Try colors that are reminiscent of summer, such as yellows, oranges or reds. Purple is also a popular color this year, so try to incorporate a little into your swimsuit palate.

Some colors go better with certain skin tones and hair colors. So, if you're a brunette, go for light colors, such as yellows or pale pinks and blues. If you're a blonde, darker colors such as purple or dark reds will play off your hair's light tone. If you're redheaded, go for very light blues and yellows, or darker blues and black to really make your hair color pop.

One-pieces aren't just for your mother anymore. One-piece suits are one of the biggest trends of the year, and now they are fresh and sexy. The most popular look is the cutout. One-pieces can have cutouts on the side or the entire back can be open.

For a sexier look, try a low cut one piece that shows off your goods. Cut-outs and other modifications can help bikini-lovers transition to the one-piece look without diving in head-first.

My favorite one-piece style is the addition of a skirt. A skirt makes the one-piece more appropriate for younger women. It can make a suit more girly for those who shy away from a one-piece. One of my favorite skirted one-pieces is the "Croft & Barrow" one-piece polka-dot swimdress from Kohl's. Another fun piece is the "Beach Sexy Retro Skirted" one-piece from Victoria's Secret.

Another great way to save some cash this spring break is to combine older tops or bottoms that you may already own with a new top or bottom. Most places sell these separately, so look for a top that matches something you already own and only spend half of what you had intended.

Ok, guys. Board shorts this year are embracing colors such as blue, green and yes, even pink. These bright colors can be worn as solids, stripes and plaid. When choosing plaid trunks, go for a lot of color. "Op Men's Print" board shorts from Wal-Mart have fun designs and patches of prints. Pair this look with a tank tops or T-shirts with solid colors. Don't over-do it; limit the designs to only one article of clothing.

Ladies, if you're not looking to prance around in a bathing suit all day, throw on a cover-up. Flowy tops and long dresses are comfortable cover-ups and are great for lounging. Pair matching flip-flops and beaded necklaces with your cover-up. You can easily make the transition from a day at the beach to a night on the town.

If you're going to be somewhere and a bathing suit isn't quite warm enough, translate these fun trends to other clothing. Ladies, pair an embellished top with plaid pants for a combination of the popular trends. Guys, bright colored, graphic T-shirts are always comfortable and in-style.

This spring break, try to incorporate some of these great new trends. Whether you're buying something new or combining old favorites, always remember to make the outfit your own.

Anything but ordinary
Spring break reads

By **Claire Williams**

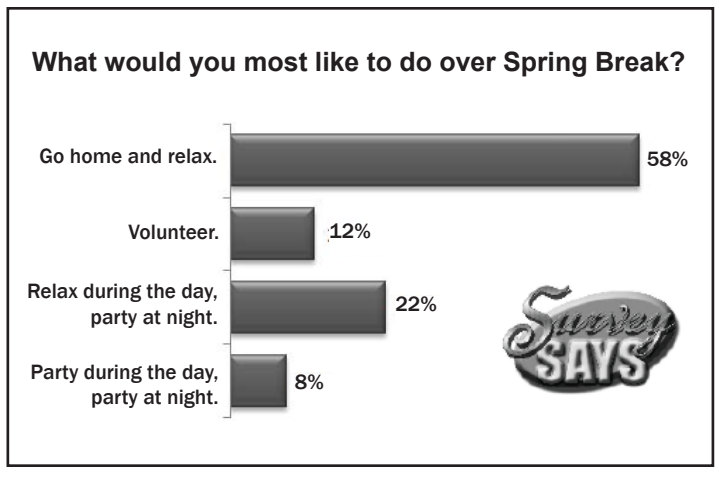
As spring break quickly approaches, it's that time of year to figure out how to spend your week away from Juniata. You shouldn't have much work to do. A trip is probably in your future, whether it's to home or to some nice warm beach and if you're lucky, you're not the one driving. Whatever your plans, there should be some free time in which case a little reading may be nice and relaxing.

Generally, there are two kinds of books to read on a break. First is the light, fluffy book that makes you happy. These books are cute, sweet or flat out funny and make you feel better about life. The other kind is the thinking book. These books are a good read, but make you think for quite some time about what you've read. My picks for break will be a mix of these plus a few more.

"Bless Your Heart, You Tramp: And Other Southern Endearments" by Celia Rivenbark – This book is both hilarious and easy to read. Written as a series of short pieces, the book is great if you only have 10 or 15 free minutes. The only problem with this plan is the addictive nature of her writing and humor. This and one of her other books, "Stop Dressing Your Six-Year-Old Like A Skank: And Other Words of Delicate Southern Wisdom," kept me laughing.

The "Harry Potter" Series (Even if you've read them before) by J.K. Rowling – These books aren't hard to read, but they have amazing lessons. They're enjoyable even if you don't like fantasy novels. If you haven't read them I would recommend starting with book one, two, or three. Obviously, the first would be the best to start with, but the first three are all pretty understandable without reading the previous ones. If you have read them, read one that wasn't your favorite over again. You might have grown to like it more, or at least caught a detail you missed.

"His Dark Materials" Trilogy by Phillip Pullman – I think everyone should read at least the "Golden Compass" whether or not they agree with the theme of the books. This series really made me think, and I hated to put them down when I finished them. The stories are wonderfully engaging and the issues about religion and life have the potential to lead to great debates.



Any book on the ALA banned or challenged book lists - Usually books that end up on this list are quite good. They have subject matter that some people object to, so they should make you think. Two of my favorites on the list are mentioned here and others include "Deadline" by Chris Crutcher, "Bridge to Terabithia" by Katherine Paterson and "Blood and Chocolate" by Annette Curtis Klause. The full lists are available at www.ala.org with the search term "banned books" or by searching on Google.

That boring book you have to read for class, but have been putting off – I think we all have one of these. You've been putting it off because you've had a mountain of other work or because you weren't interested in it. It could be that you haven't even bought it yet. Whatever this book is, it's probably not your top choice, but it would probably be good for your GPA.

That book you've wanted to read since 9th grade – Most of us have that one book. It may be one you bought with good intentions or just a title in the back of your mind, but there is THAT book. You think it sounds good, the cover is lovely and it keeps calling to you. You might have read a few pages or it might look brand new. This week would be a good time to show that book some love.

Something by Shakespeare or one of the other people you were forced to read in high school – You might not have liked these authors at the time or you might have bitterly hated the piece you had to read, but pretty much all of them have good stuff. Really. Even William Faulkner.

Hopefully something on this list will catch your eye and you'll hit the bookstore or bookshelf before catching a flight or settling into your couch coma.

TONIGHT!

A piece of hair on your tongue

Old people cereal

By **BRANDON WOLFE**

The worst epiphany is a food epiphany. It ruins the sustenance. A new understanding on life is difficult to appreciate when you can't recall the taste that triggered your mind's response. That is the problem with old people cereal—there is no sugar to hide the whole grain.

Cereal used to be very important to my daily routine. I remember trying to have a bowl of cereal before elementary school. It was fun to see Cap'n Crunch, Toucan Sam and Count Chocula every morning, however my mother would always buy a box of Cheerios. It did not provide the sugar fix and fun I needed. It was boring.

Instead of following Cap'n Crunch on a mission to save the Crunch Berries, Cheerios opted to excite its viewer with a picture of what you were about to eat. I wish I could have been in that General Mills meeting when they decided on the cover art for Cheerios.

"What best represents Cheerios?" After ten seconds passed, somebody yelled out, "A picture of cheerios with a yellow background. Let's go on a snack break."

You can't have a conversation with a Cheerios box. Therefore, I stayed away from Cheerios—the old people cereal. Inevitably, when I couldn't wake up in time for breakfast I stopped having sugary cereal every morning.

It became even more infrequent as the years dragged on, and I have a feeling puberty is to blame.

Puberty is a strange time for boys. That is why I decided to name the stages of my puberty experience.

The "Gettin' Jiggy Wit It" years, during fifth and sixth grade, were marked by music and the realization that girls exist. This was when I stopped eating cereal every morning.

It was more important to me to put gel in my hair. Then there was the radio music. Who cared about food when I could listen to Will Smith on the radio—the greatest musician since that dude who sang "I Believe I Can Fly?"

I was starting to sing along with the people on the bus every morning. Joining the in-crowd scene gave me a sense of comfort much like the Peanut Butter Crunch puzzles I used to solve each morning. I was moving further away from those things.

Cap'n Crunch was officially out of my mind once I entered the "What's happening to my armpits" phase of the puberty experience. When I entered Middle School, hair started to grow between my armpits. I didn't know what to do, but my mother did.

She would always suggest loudly, normally at family functions, that it might be time to trim my armpit hair. My mother scared me into believing that an armpit is the first place a potential lover will look. I became obsessed with armpit maintenance. My mother had subtly taught me the art of manscaping.

My armpits took priority because my outside appearance was the only way I could truly be normal. Occasionally, if I would wake up on time, I would have a quick bowl of cereal—something simple like Cheerios. It's healthy, you can have it anytime, and it makes you feel mature. It is old people cereal.

I have come to like old people cereal, but when I took a bite of Cheerios the other day, I could not help thinking about Count Chocula. Then I realized that every cereal I have enjoyed was made with a whole grain guarantee. In other words, each bowl of Cap'n Crunch was made out of a bowl of Cheerios.

That is when I began to look both ways to see if anyone was around when I was eating Cheerios. I went to the cupboard, and I took a little bit of peanut butter and put it in the bowl—ghetto cereal. Sometimes, you have to learn how to make a bowl of Cheerios into Peanut Butter Crunch.

In the end, a little bit of sugar can always enhance the mundane. You may be slowly moving away from the things that used to entertain your less active mind, but sometimes you have to put on a theatrical production. Even though everything is whole grain underneath, you might as well as say, "Crunch-a-tize Me Cap'n!"

It is nice to know you can make anything out of nothing. Whether you're gettin' jiggy wit it or just trimming your armpit hair, you can make your life your own—even if your mother told you to do it.

MUSICOLOGY

Top five best albums of 2008

By **CAITLIN BIGELOW**

5. "808s & Heartbreak" by Kanye West

Kanye, who is always about keeping it original, continues to impress me with his creativity. Part of the album title comes from the use of an 808, also known as a Roland Transistor Rhythm 808 Composer. It was manufactured in the 80s as a tool for bands to create demos, the idea being that the sound roughly imitated a real drum kit. Kanye used this old school piece of equipment to help produce most of the album. Listen for its unique sound throughout the tracks. The second half of the album stems from a row of tragedies he suffered first with the death of his mom and then with his broken wedding engagement. Let's hope that his luck picks up and continues to produce more great hits.

4. "Wagon Wheel Blues" by War On Drugs

This Philadelphia band sounds eerily similar to Bob Dylan, which may be why I like them so much. They put a heavy emphasis on raspy vocals and have a folk rock sound. But War on Drugs does more than emulate the sound of the past greats like Dylan and Springsteen. They add new twists to a classic sound that really seem to work. And if you really like the idea of Springsteen meeting experimental ethereal rock, then you may have just found your new favorite band.

3. "Feed the Animals" by Girl Talk

Girl Talk, aka Greg Gillis, makes my short list of heroes, up there with Bear Grylls and Bob Dylan. You may wonder what he has accomplished to make such a distinguished list. Answer: His latest album, "Feed the Animals." This crazy Pittsburgher has given a whole new concept to remixes. He takes mainstream pop, rap and rock songs that we know by heart and mixes them, splices and overlaps different songs. The result is extremely catchy new versions of past hits. Where else could you hear Red Hot Chili Peppers and Missy Elliott in the same song? But buy the album now before he gets shut down for violation of fair use laws seeing as all the music he uses is copyrighted.

2. "LP3" by Ratatat

This band first caught my eye with their edgy and innovative song "Wildcat," from their older album "Classics." I haven't stopped jamming out since. Imagine techno, weird noises, off-kilter beats and indie rock coming together to form a quirky video game sound track and you have Ratatat. This band has zero vocals throughout their album, making it a refreshing listen at just about any time or place. I often find myself jamming to them in the library when I just can't seem to focus on my Macroeconomics homework and need a lift.

1. **"Vampire Weekend" by Vampire Weekend**

If there was ever a band that could instantly put me in a good mood it is Vampire Weekend. This band combines afro-pop with Indie rock for a killer combination. Their upbeat quirky sound and short lyrics make me want to stroll around in the sunshine. They have been described as, "refreshingly laid back and uncomplicated." I am especially fond of the intro to the song "M79" and "Oxford Comma," but the entire album is full of winners. You will find yourself unable to resist the temptation not to listen all the way through. That is why Vampire Weekend comes in at the top album of 2008.

Enjoy, and cheers to hoping 2009 produces more great music!

Big kids 'spare' some change

CHRISTOPHER SHANNON / JUNIATIAN

Juniata's quarterback goes pro in Europe with Budapest Cowboys

CHRISTOPHER SHANNON / JUNIATIAN

Juniata senior Jay Leonard will play professional football for the Budapest Cowboys in Hungary.

By **KEVIN CAMPBELL**

Senior quarterback Jay Leonard will no longer be a Juniata Eagle come April 4 when he plays his first football game in Europe. Leonard will be substituting the Juniata gold for silver when he plays quarterback as a blue and silver Cowboy in Budapest, Hungary. Although he figured his football career would come to a close after this past fall season, he said that he "didn't want to stop playing football."

Leonard was a two-time captain who finished his collegiate career with five Juniata records, two Centennial Conference single-game leader awards and the 2008 NSCA Strength and Conditioning All-American Award. Leonard put up 47 career touchdown passes, seven career rushing touchdowns and even one receiving touchdown at Juniata.

The quarterback was presented with a potential opportunity last December. A coach from Germany contacted Darrell Alt, associate athletic director, about Leonard playing for a European team in April. However, by the time Leonard had arranged to graduate early, another athlete had filled the quarterback position. Despite the initial disappointment, he maintained an interest in playing football after graduation and outside the U.S.

After talking with two coaches from the Arena Football League 2, he was encouraged to go abroad and play. In addition, he talked with other Americans who had played in Europe who told him that it was an incredible experience.

Leonard then learned of a website that most European teams use to recruit players, and he submitted his résumé. Soon after, about 11 different coaches contacted him. He decided to play for the Budapest Cowboys, who offered the best deal.

The Cowboys play in the Central European Football League (CEFL), which has seven teams from around Europe. Leonard left for Europe March 2 and has started training with the team in Budapest. Leonard and the Cowboys will play 11 games before taking July off, and then they will resume practices, finish their season and start the playoffs.

During his month off, Leonard plans to do some traveling around Europe as well as possibly getting a visit from his parents.

"I've never been out of the country before, I'm young and it's a great opportunity," said Leonard. Leonard plans to return back home to the states November 10.

Leonard is not the only new addition the Cowboys are making. The Cowboys recently hired a new head coach, Wally English, who has many years of experience coaching in the U.S. English has coached for NFL teams such as the Miami Dolphins, New Orleans Saints and Detroit Lions. English has also coached for some NCAA Division I teams. With the combination of a new coach and new quarterback, hopefully the Cowboys can improve on their .500 record last season in the CEFL.

Not only does Leonard get to continue his football career, but this opportunity also allows him to get a head start on his coaching career. "I figured if I'm going to get into coaching this is a great guy I can network with," said Leonard.

Leonard will be one of three North American "import" players on the Cowboys' roster. His roommates will be from Canada and New York. Although most of the other players will be native Hungarians who speak Hungarian most will also speak English.

In Budapest, Leonard will be provided housing, meals, internet, cable TV, all local transportation and 150 Euros a week, which is about 191 dollars. They will practice three to four times a week since others on the team may have full time jobs as well. Leonard also expects to be one of the younger players on the team.

Werle still dominates court after ankle injury

Quickest Achilles tendon recovery seen by doctors

By **SUZI LINDQUIST**

At the end of last year, Matt Werle's senior season looked grim. Even though doctors said he would miss this season, Werle's presence on the court this year has been anything but absent.

Just after finals last year, while playing basketball, Werle completely tore his Achilles tendon.

Doctors initially told Werle that he would be able to play again in a year, which would be this coming May. He was not willing to wait that long.

"It felt like someone kicked me in the back of my ankle real hard, but no one was near. I looked down at my ankle and saw an indent in my Achilles tendon. I knew something pretty serious had happened because I tried to stand up and couldn't put my heel on the ground," said Werle.

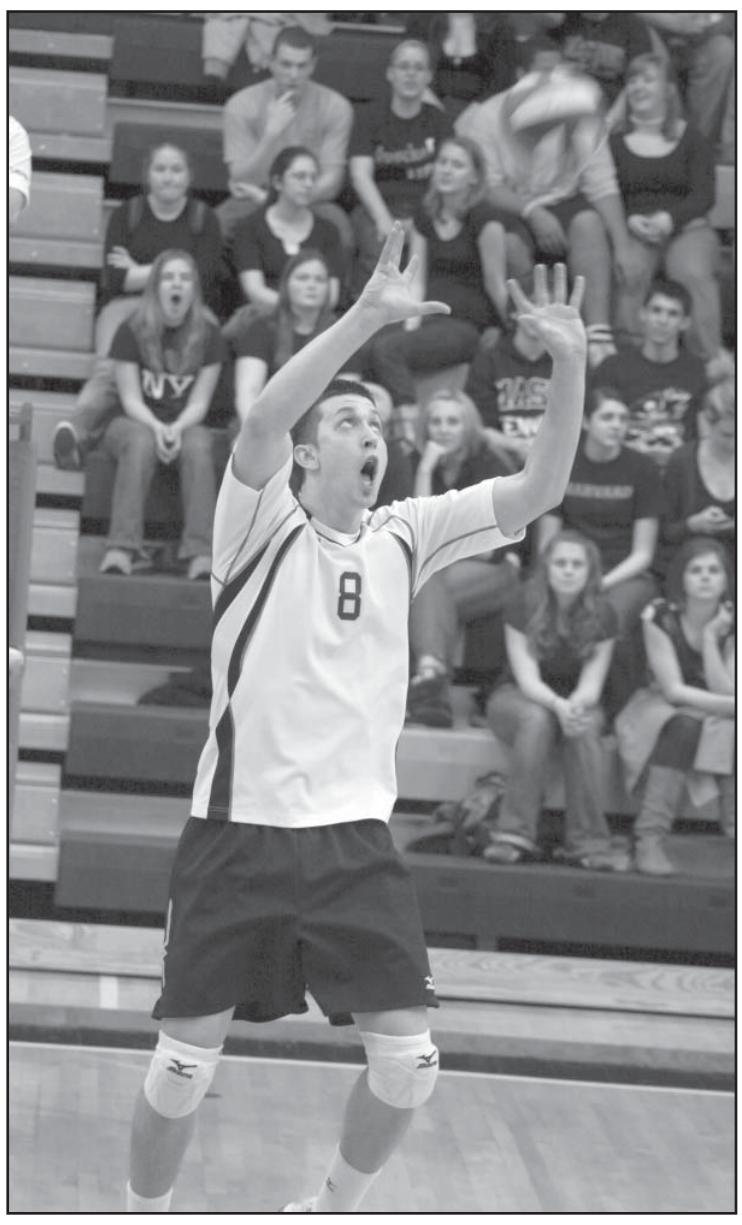
However, after eight months of rehab and physical therapy, just before Christmas break and two weeks before volleyball's preseason, Werle's doctors cleared him for all activities. His doctors said they had never seen such a quick Achilles tendon recovery, and some people never fully recover.

"I did everything my physical therapist at home wanted me to do and then some. I really didn't want to let my team down and not be able to play," Werle said.

"The Juniata trainers also worked wonders. They were with me every step of the way and I couldn't have done it without their support. Because I worked so hard during physical therapy, I was able to start running and jumping a lot sooner, and the more I was able to do those things, the quicker the recovery time would be."

While he is back on the court, Werle can still feel the injury in his ankle. Since his release was so close to the time that preseason started, confidence was an issue.

"I was real nervous to push off of my right foot at first as well as land on it. Being that I am a setter, it hasn't affected as much as it would have if I were to be a hitter. Jumping is not as important for a setter. I can't make excuses for not setting a ball well because of my ankle, but it sure would have been nice to have been able to play during the fall non-traditional season. I do not run as fast or jump as high as I did before my injury but it seems that every day my calf muscle is getting stronger and I am becoming more confident in myself," said Werle.



As the season has continued, Werle has felt more confident about his ankle, as well as with his game. While his athleticism may have been down, his experience and knowledge of the game helped him keep his starting spot on the team. Coach Jeremy Price, who came in during Werle's sophomore year, knows that even though Werle's injury was extensive, he is an elite player that has played at the highest levels for his age group.

"I believe he is the best setter in the east coast and in the Midwest. When he tore his Achilles, we really didn't know until mid December for sure if we'd have him for the season, but he was able to go Jan. 9, and obviously from my perspective, that was the biggest piece of the puzzle for the starting lineup," said Coach Price.

"He can make good hitters look great, average hitters look good, and bad hitters look average. Not every setter can do that. Getting him back was obviously very important to what we can accomplish, which is to win the DIII final four and advance to the DI final four."

Both Werle and Coach Price believe that the team this year has started off well, but the team gets

▶ *see* **VOLLEYBALL** *page 14*

CHRISTOPHER SHANNON / JUNIATIAN

Senior setter Matt Werle sets a teammate during Juniata's match against Springfield on February 27. Werle had 56 assists on the evening, putting him over 4,000 for his career and moving him into third place in career assists in Juniata history, and first during the rally scoring era.

Season ends early for women's basketball

Loss in conference semifinals leaves JCWB with hope of making ECAC bid

By **ERIN L. MCGINLEY**

An 11 point disapointing loss on Feb. 26 left the women's basketball team heartbroken. This loss came in the semifinal round of the Landmark Conference Championship against number two seeded Moravian College.

The loss hit us hard. Unlike last year, losing in the championship game, we knew the team would get a bid into the Eastern College Athletic Conference (ECAC). One year later, we don't have that same confidence. We dropped in the semifinals and that could have been our last game. Now we can only hope for a bid for ECAC's.

CHRISTOPHER SHANNON / JUNIATIAN

Junior forward Kelly Rotan and senior guard Claudia McDowell 'jump-bump' at Feb. 21's match.

The ECAC tournament is a step down from the NCAA tournament but is still very competitive. Juniata College enters the Southern subdivision of ECAC's along with many other schools that we have played during regular competition.

To be able to qualify for ECAC's, the team must put in a bid and hope that they will be placed into the eight team bracket for their subdivision. ECAC tournament brackets are created after the NCAA tournament brackets. Teams that wish to continue on with their season after not making the NCAA tournament enter the ECAC tournament with hopes of ending their season on a good note.

"Going into last week's game it didn't even cross my mind [that the season could possibly end]. I didn't approach the game with this fear that we would lose, that it could have been the last time that we stepped onto the floor, said senior captain Emily Hauser. "We were on such an upswing, and it just felt like everything was working in our favor. Even though everything didn't work out in the end, it's still a surreal feeling; it hasn't sunk in yet."

As we sat in the locker room after our game, we were speechless. With our dreams of NCAAs crushed and without the confidence of an ECAC bid, we did not know if there was another game to look forward to. Having an undecided future isn't the best thing for our team. Towards the end of the season we began to control our own destiny. Once we got a feel for what it was like to be in control, we could not let it go; we liked the feeling too much.

"I feel like we had the right attitude going into the game, but things just didn't work out way," said freshman Kelsey Roman. "Going into that game we had so much to play for. Now we're on the bubble [of continuing our season]."

Since we don't know if our season will continue on or if it came to an abrupt stop right before our eyes, we still need to practice. Practices are quite different now considering we don't have any specific team to focus on or a particular game plan. Although we can't focus on things specifically at practice, this leaves us with some options.

Practice can be fun and entertaining with options. At one practice we used all six basketball hoops in the gym and the coaches threw us a ball. They explained the goal was to score, while playing seven on seven, using all the hoops with possession changing. Over the course of 45 minutes rules were added, such as scoring at the opposite end of the court, no dribbling and negative points for turnovers and missed layups.

CHRISTOPHER SHANNON / JUNIATIAN

Sophmore forward Jen Hnatuck jumps for the tipoff at Juniata's game against Susquehanna on Feb. 21. The Eagles won the matchup 65-58.

Some of the teams that put in a bid for ECAC's have fewer losses than us, but their schedules are not as competitive. Hopefully, having a stronger schedule than other teams will give us give the edge in becoming one of the eight teams to make the Southern bracket out of the 18 teams that applied.

The best we can do for now is to practice…and wait.

T&F seniors pass the baton

By **NICK TALISMAN**

The Juniata Track and Field team has several experienced seniors on the roster, from Kelsey Buffenmyer to Pat Filamor. However, the more recent headlines have featured underclassmen.

The announcement that Erika Brown had won Landmark Field Athlete of the Week last week is an indication of how the younger team members have been improving at a phenomenal pace.

However, it would be a mistake to say that they are doing this alone. The upperclassmen have been a very important catalyst in their younger teammates' growth. "All the freshman base their behaviors on the seniors, and having an upperclassmen to train with makes you more likely to train and to train harder," said Buffenmeyer.

Freshman decathlete George Bodziock agreed. "Pat Filamor and John West have helped a lot with my training," he said.

The seniors have accepted their leadership roles with open arms, happily helping their less experienced counterparts from the beginning of the year. "Since being consistent with training is the biggest thing, a lot of ground work for successes is laid down in the fall, before the season starts," Buffenmyer said.

Buffenmyer and her fellow seniors made sure that the fresh faces, who probably did not experience training like this in high school, understand it is a year round training program, and that they have to stick to it.

Brown's success may mark a changing of the guard for the team, as a good portion of their team graduating is in May. Buffenmyer herself won Landmark Field Athlete of the Week three weeks ago, but is excited to see her teammate win it. Buffenmyer says, "It's really encouraging to know that Juniata's success in the high jump will continue, as Erika has already improved a lot this year."

The freshman are not lacking in confidence either. Bodziock says, "I believe I am the hidden strength of the team. The caged tiger, if you will."

This is not to suggest the seniors will defer all successes to the freshman as the indoor season ends and the outdoor season begins. It is a safe bet that the seniors want to finish strong. Buffenmyer thought the women's team could finish as high as second in the Landmark Conference Indoor Track and Field Championships.

They placed third with a strong showing of 91 points, and Buffenmyer won the high jump after last year, winning the award for Field Athlete of the Year at this event. Freshman Rebecca Shuke, sophomore Courtney DeGemmis, junior Melissa Johnson and senior Amy Reynolds combined to provide Juniata's other individual win, with a 4 x 400 time of 4:15.45.

On the men's side of the tournament, senior Pat Filamor won the long jump with a phenomenal leap of 6.77 meters. Juniata also won the men's distance medley as freshmen Nevin Diehl and Ceth Parker, junior Sam Williams and senior Tripp Rudolph combined for a time of 10:48.37.

With three team members already winning weekly honors, there have been plenty of individual successes to applaud. The third place finish for both men and women at the Landmark speaks to the success of the team as a whole.

With the success the seniors are having, maybe the caged tiger has already been released.

Swim team grows with new coach

Despite setbacks, swimmers have high hopes for season's finish

CHRISTOPHER SHANNON / JUNIATIAN

A Juniata swimmer dives off the starting block at the beginning of a race during the Susquehanna meet earlier this season.

By **Aimee Radic**

The swim team finished the season with seven girls and a record of 1-7. Although the season was a rocky one due to internal conflict, the girls and new coach Tom Benoit grew together as a united team and competed strongly at Championships.

Commenting on working with a new coach, sophomore Lindsay Cooper said, "[Benoit] learned a lot, and next year with more experience and confidence, he should be even better. We have a lot of faith in him."

Freshman Jessica Stocker agreed. "As the season went on, he grew tremendously as a coach."

Although Benoit could not be contacted for an interview, the girls said that walking into the season, Benoit had high expectations.

"We wanted to improve our record," said Stocker.

"We just wanted to win some meets because we had more people than just the four from last year," said Cooper.

During meets, the swimmers sometimes felt intimidated by how many members were on other teams. "Quality, not quantity," said Cooper, saying that it did not matter how many girls there were on other teams, only that the Juniata girls were strong.

"The girls adjusted very well when we needed to," said sophomore Rachel Gipe.

One meet during the season stands out above the rest. Juniata lost to Drew University by one point, 94-95 on Jan. 23. "It was very disappointing," said Stocker.

"A few things could have been changed," said Cooper. "Stats are stats."

"It is always easier to look back and say 'if so,' but we cannot put all the blame on Tom," said Gipe. "It was a rookie mistake."

With no wins and nearing the end of the season, the team was full of tension. Finally, the girls won their first meet against Penn State Altoona, 107-83 on Jan. 31.

"It was nice that we won on our own turf," said Stocker. However, Cooper said the win was "bittersweet."

"Our accomplishment was undercut by the distractions," said Gipe.

After the win, senior captain Kristen Musselman was dismissed, and three other team members, junior Paige Black, junior Colleen Cribbs and freshmen Evan Beatty, had quit the team before Championships.

"The atmosphere at Championships was different without those four girls," said Gipe. The loss of four team members was 'very sad and upsetting,' but in the end Gipe said her swim times remained "untouched."

Cooper said, "Having certain teammates gives competition, so having them there would have pushed me. But having some relaxation was nice, too."

"I was disappointed in myself with not getting any personal bests, but I did surprise myself in the butterfly," said Stocker.

"I was happy with Champs. I had some of my best times, which surprised me," said Cooper. "After everything was over and calmed down, I am looking forward to next year getting new girls and hopefully bringing this program to what it used to be."

> *"As the season went on, he grew tremendously as a coach."*

Volleyball off to strong start

Fans help to keep JC energy high on the court

▶ *from* **volleyball** *page 12*

better as they continue on. Coach Price believes that the team has made steady and tremendous improvements in the fall, and that was without Werle, and since his comeback they have become even better.

"We're a little better this week than we were last week, and you start to see that when you don't play your best match but you can still win," said Price.

"We have started out this season strong. Our young pin hitters have matured, which is a tremendous help this year. Our middle hitters have always been good but its tough relying on just a couple players," Werle said.

"This year our passing has improved, which allows me to set the middles when I want and it opens up the pin hitters. More often than not our pin hitters are hitting against a single block and that is really allowing them to hit for such successful numbers. Anthony Damiano, our libero, is playing next to perfect. He has been leading the country in digs per set and has been passing great. He is arguably the best libero on the East coast," Werle said.

At the halfway point this season, the Eagles, who dropped a match to number one ranked Springfield and then beat number four ranked NYU, are 8-4 overall and 4-3 in the conference. With half the season still to go, and a trip to California during Spring Break, the team is looking to improve even more. But Werle notes that it isn't all about the players.

"The fan support, as usual, has been great. We could not be as successful without the fans. Not only do the fans get in our opponents' heads but they are also a big part of keeping our energy high on the court. Much thanks to the fans," said Werle.

CHRISTOPHER SHANNON / JUNIATIAN

Senior middle hitter Dan Powers, powers a spike past a NYU defender during Juniata's match against the Violets on February 28. The Eagles defeated NYU 3-0 (30-26, 30-24, 30-29).

2009 Juniata baseball preview:

Leadership, determination will be key

By **CHAD KOHR**

Baseball teams that rely solely on talent can only go so far. The 2009 baseball team has talent that stacks up with anyone, but it will be work ethic, determination and team chemistry that take the team to the next level.

Tom Gibboney returns for his second year as head coach after an extremely successful 2008 season. Coach Gibboney feels like he has a special group of guys who are ready to compete at a high level.

"We've got a lot of quality players coming back that have experience. This is a group of dedicated, passionate players who enjoy the game and work very hard," said Gibboney.

Senior outfielder Adam Spadafora believes the key to the team's success will be a cohesive team mentality and strong desire to win. "Unity is a huge strength for this team, everyone is gelling nicely. Everyone is working hard and doing what they need to do in preseason and no one is complaining," said Spadafora.

Gibboney feels like a few changes in philosophy from last year will give the team a much better chance to win this season. "We will have to score runs differently this year because we aren't going to hit as many home runs. We will rely on getting a lot more base hits and by doing this we have the ability to score just as many runs," said Gibboney.

Spadafora, who returns after a historic junior season, will lead the new offense. Spadafora set the College's single season record for hits with 73, enabling him to hit for an astounding, team leading .465 batting average.

The offensive machine also lead the team in runs, doubles, total bases and steals. Despite all of the success, his main goals for this year are to be a leader and make his teammates better.

"I want to be an even better leader than last year. I expect us to play harder than anyone we face and I'm going to let everyone know they can do just as well as I did last year. I want everyone to do well," said Spadafora.

Another change Gibboney and his staff will make is how they operate the pitching staff. "This year we'll have a different style of pitching. We are going to use a pitcher by committee philosophy. We will be using different guys more frequently as opposed to wearing a couple of them down," said Gibboney.

Junior pitcher Tyler Clifford will be expected to anchor the staff of young pitchers. Clifford returns with the most experience on the mound from last year with 10 starts, four complete games and a 6-1 record.

Besides being relied on as the ace of the staff, Clifford will be expected to teach the younger pitchers and pass on the knowledge he has picked up throughout his career.

"We have a lot of young pitchers without much experience, but the talent is there. My goal this year is to go out and win every conference game I pitch, but I also want to help the younger guys to learn how to be better and pass on everything I know," said Clifford.

The Eagles' pitching staff has the advantage of an experienced upperclassman behind the plate. Gibboney expects junior catcher Greg Hoffman to help the young pitchers improve.

"Having Hoffman back there is a major advantage because he knows the pitchers. He's not only focused on being a good catcher and throwing people out, but he wants to learn the strengths of our pitchers so he can call a better game," said Gibboney.

Hoffman will also be a big stick in the lineup and will be expected to drive in runs. Hoffman was second on the team in runs batted in last year with 41, along with batting a stellar .322. The team mentality is so transcendent that Hoffman, along with Spadafora and Clifford, is mainly concerned with helping teammates improve as well.

"Along with continuing to improve at the plate, I want to help mold and craft the young pitching staff. I want to use my experience to mold the young guys into the college pitchers they can be," said Hoffman.

The team will need to feed off the leadership and motivation when they kick off the season in Florida starting on March 7. "We only won one game in Florida last year, we want to do better and pick up some momentum coming into the year," said Spadafora.

Hoffman is confident that the team is ready to start the season better this time around. "There's a lot of positive energy on the team, guys are really getting after it. We are very excited and optimistic about the season," said Hoffman.

CHRISTOPHER SHANNON / JUNIATIAN

Junior short stop Andrew Kriss takes a swing at a pitch last season. The Eagles start the 2009 season on March 7 with a game against Northwestern College in Fort Pierce, FL.

Eagle soars

CHRISTOPHER SHANNON / JUNIATIAN

Senior guard Jeff Berkey drives to the basket against a Drew defender on Feb. 21. Berkey led the Eagles in assists on the season with 55 and was second on the team in scoring, averaging 13.3 points per game for the season.

The men's basketball team finished its season last weekend with a game against Susquehanna University.

The season in review:

Eight freshman saw playing time.

There was an average of 421 fans at every home game.

Senior Dave Thompson was the team's leading scorer, at 14.6 points per game.

Junior Jeff Berkey was the team's leading scorer during conference play at 14.8 points per game.

Senior Eric Muessler led the team with 153 rebounds (6.1 per game).

The team won four of the last six games.

Six different players led the team in scoring in a game.

Coach Curley now has 96 career wins at Juniata.

North Lawn will undergo facelift

Reseeding will rejuvenate the field, create practice space for club teams

By **TALIA C. VALENCIA**

After talks with student government and other authorities on campus, the reseeding of North Lawn received approval. According to Juniata's grounds supervisor, Jeff Meadows, the process will take place in April as soon as temperatures become favorable for grass growth.

The treatment began in December when the field was dressed with compost.

In April, the field will be seeded and roped it off until the field has been restored to a more acceptable state. It will remain roped off until it is ready to endure the wear and tear of rushed college students headed to class and intense athletic practices.

In the future, special attention will be given to any worn areas that will need reseeded from excessive use said Meadows. This will require plots to be sectioned off, but hopefully it will not be to the extent as that in April.

Although it has not been confirmed, Meadows believes club practices will have to be relocated to the fields behind Ellis Hall. He was unsure of any conflicts with other teams.

Despite possible conflicts, Zane Miller, a senior on the men's rugby team, said the teams have to be patient now and realize how great it will be in the years to come.

"As far as the spring goes," said Miller, "We try and use the football fields as much as possible so hopefully we can avoid conflicts there."

Miller said he actually prefers practicing behind Ellis because there is more room and the general conditions of the fields are much better. The rugby team does not practice there in the fall because of conflicting practice schedules with the football team.

Unfortunately for Miller, this is his last year at Juniata. "I won't get to reap the benefits of the reseeding, but it will be a good thing definitely. I'm excited to hear that."

ON THE FLIP SIDE

By **Bennett Rea**

One of the downsides of going to a small school is that sometimes there's nothing to write about. Oh sure, people get busted for growing pot in their rooms and sometimes students fall off cliffs, but nothing major. Those big campuses have all the luck. There are fights, riots, couch burnings, etc. But no, I'm not lucky enough for that to happen here.

I considered writing about Spring Break, since it is almost upon us. But honestly, most Juniata students are just going to go home and take an eight-day nap. Those that don't will probably take an eight-day nap when they get back. The people that are somehow going to stay awake over break will:

1. Enjoy a nice hot week in the sunshine of their home state or a beautiful beach or;

2. Freeze to death.

St. Patty's Day is coming up, too, but it's always the same old thing; drink green beer and then in the morning, forget everything that happened after the first beer. There's nothing wrong with that (at all), but it's pretty tough to write about extensively.

I thought about writing about those people who stand at the windows in Baker and stare at… something. But I pretty much just described the entire thing in that sentence….

The Career Fair was another topic I considered. You know, the event in the gym where half of the students know what's going on and the other half wanders aimlessly? The first group is all about "networking" and "getting a job" and "not living on the streets after college." The second group is confused and can get hooked into talking to employers that they have absolutely zero interest in. They take a lap or two around the gym, look around a lot, talk to a few people and get the hell out.

After all my deliberating on what to focus on in this column, I finally came up with a good idea. I decided to write about the fact that I have absolutely nothing to write about. I hope it works.

Thumbs Up, Thumbs Down

to Matt Nathanson. Not only was he way funnier than any comedian who's visited JC, but he wasn't Fabolous-ly late.

to the Career Day organizers for bribing us with lame business cards and not even delivering 100 percent. If you're going to make us an offer we can easily refuse, at least come through with the goods.

to National Sleep Awareness Week. Unfortunately, nobody at Juniata noticed since we were all too sleep deprived to read.

to the hacks at Star Magazine for dragging Juniata students into the dookie they're digging.

Freshman set to be mayor

Two politics students launch campaigns for local government positions

By **SETH FOX**

Two Juniata students are taking steps to enter local politics. Freshman David Sill and sophomore Zach Gordon have plans to run for Huntingdon mayor and prothonotary, respectively.

Sill, who unsuccessfully ran for freshman class president this past year, is running to be the Mayor of Huntingdon Township. Sill is running unopposed, and the deadline for handing in registration papers for a mayoral campaign has passed.

Mayor Foster Ulrich, who has been Huntingdon mayor for the past two terms, has been a role model for Sill through this entire process. "...Ulrich told me he was retiring, paper work was due in several days, and he and I both felt like I was qualified for the job," said Sill.

Ulrich did respond to requests for comments.

The primary elections are on May 19 and the general elections follow on Nov. 3.

Although Sill is running on the Republican ballot, he does not want to represent only the Republicans of Huntingdon or only the Democrats.

"Government for me is about helping people, whether they are Democrat or Republican," said Sill. He is organizing a write-in campaign for the Democratic primary. Sill's goals as mayor will focus on policies that help members of all parties.

"In these tough economic times, I want to make sure none of our local taxes go up at all. I want to keep the municipal government running as best as possible without raising taxes. I may even find ways to

Endowments falling

Nationwide, university funds reflect sour economy

By **KAT PEARCE**

Eight percent of Juniata's annual budget could be in jeopardy. This crucial percentage comes from the College's endowment, a fund invested in the stock market to accumulate interest over time.

Due to the economic downturn, Juniata's endowment fell 21.5 percent—from $71.1 million to $56.3 million—from May 31 to Oct. 30. Nationally, university endowments fell about 23 percent from June to November, according to the New York Times.

The Times reported, "The steep declines are forcing colleges and universities across the country to contemplate wage freezes, layoffs and a halt to construction projects."

At Juniata, salaries are frozen for the next year, and new construction projects will only occur if paid for by donations. However, there are no plans for layoffs, current construction projects will be completed as planned and tuition will only raise 3.9 percent.

"We will continue to paint, maintain and landscape what we have," said Rob Yelnosky, vice president for finance and operations. "We do not have plans to cut the level of services we provide."

Juniata's endowment is smaller than most of its competitors, which during healthy economic times can be a burden. However, "in down times, it means we're not as affected,"

▶ *see* **ENDOWMENT** *page 5*

Club sports fight for field space

Teams and administration work together to address problem

By **KELLY O'SHEA**

Club sports teams are working with the administration to ensure better access to field space for their practices and games.

This year, the Men's and Women's Rugby Club and the Ultimate Frisbee Club have faced difficulties finding space where all three teams can practice comfortably. "We're all frustrated and in the same boat," said Junior Emily Boyd, co-president of Ultimate Frisbee.

In previous years, the three teams have shared North Lawn. However, with the re-seeding of this space under way, the teams are without a reliable practice field.

The Ultimate Frisbee club was pleased with the large turnout this year, but the increased size created a greater demand for field space.

Sticking with an old tradition

JC Sapsuckers wrap up another maple sugaring season

By **STEVEN GOEHRING**

A group of students have been working since February to continue the long-standing tradition of making maple syrup at the Raystown Field Station. The Sapsuckers club recently celebrated another season with their annual Maplefest.

On March 21, club members invited the student body to participate in a demonstration of maple syrup making. They served waffles, ice cream and their own maple syrup. The event took place at the Grove Farm location of Juniata's Raystown Field Station.

"It was the best Maplefest we've had so far," said Sapsuckers club co-president Adam Bell. According to Bell, a senior, attendance was around 150 or more people. "We had people from all over. People from

CHRISTOPHER SHANNON / JUNIATIAN

Huntingdon County resident Peggy Ann Bradnick, who was kidnapped by a deranged neighbor in 1966 and held for seven days in the woods, is now director of the Standing Stone Senior Center on Washington Street.

The survivor of Shade Gap

Local kidnap victim reflects on being held hostage

By **Brittany Moyer**

In 2002, it was Elizabeth Smart. In 1991, Carrie Lawson. In 1974, Patty Hearst. And in 1966, it was Peggy Ann Bradnick.

Over the years, the names of these kidnap victims have entered American households, each with its own unfortunate story to grab public attention and urge a prayer for safety. Only one of these names, though, bears special significance to this Pennsylvania region.

Peggy Ann Bradnick was a 17-year-old junior at Southern Huntingdon High School when she was kidnapped on May 11, 1966. A native of Shade Gap, a tiny township 40 minutes south of Juniata College, Bradnick was walking home from the bus stop with her five younger siblings, as she did each afternoon.

Without warning, an armed man, disguised by a mask and sunglasses, jumped down from a pine thicket by the roadside and grabbed her.

"I want no sass from any of you," he told her brothers and sisters. Then he dragged Bradnick, dressed in a white blouse, red jumper and brown suede shoes, into the woods.

Reported to have known the rugged area surrounding Shade Gap "like a book," the kidnapper, 44-year-old William Hollenbaugh, strategically dragged Bradnick through the Tuscarora Mountains for the next week. During the day, he held her on a leash as they trampled through the woods and hid in caves. At night, he chained her to trees as he slept on the ground nearby. The two barely exchanged words.

"You didn't talk to him. He wasn't a person you could relate to and talk to," said Bradnick.

Despite the largest manhunt in Pennsylvania history, which at its peak swelled to almost 1,000 active searchers, Hollenbaugh eluded capture for seven days.

On the third day, with police urgently calling for volunteers, Juniata College President Calvert Ellis cancelled classes and encouraged male students to volunteer for the effort. Over 150 Juniata students participated in fruitless searches.

Bill Alexander, former vice president of finance and operations and a Juniata alum ('66), was a student involved in the search. "The way I remember it, word came in that they thought they had seen him, and I can remember the brilliant directions we were given, and the directions were: 'If you see him, tell him to stop. If he doesn't stop, shoot him,'" said Alexander.

Hollenbaugh was the one to fire the first shot, however. On the sixth day of searching, Hollenbaugh fatally shot an FBI agent and as he approached Hollenbaugh's hiding place.

Hollenbaugh was no longer just a kidnapper; he was also a killer. "That certainly changed the tone of it when people were getting killed," said Alexander.

Then, on May 18, Hollenbaugh ran into a police roadblock near the Pennsylvania Turnpike. Amidst a flurry of gunshots, one blast caught Hollenbaugh in the shoulder, killing him.

Bradnick was finally free. Amazingly, she was in good condition, with only minor scrapes, bruises and blisters from her week spent traipsing the woods at her kidnapper's hand. Hollenbaugh did not physically abuse her.

In a prepared statement given two days after her release, Brad-

Not thy brother's keeper: Brethren's wild child

Unshepherded, Juniata College is the black sheep of the Church's flock

By **Marie Boller**

Deep roots in the Church of the Brethren have shaped the College and left a stamp that endures today. Of the six liberal arts colleges affiliated with the Church of the Brethren, Juniata rests on the liberal end of the spectrum.

Although founded by Church members, the College has remained independent since its beginnings. It has always been co-ed and open to non-Brethren students, and throughout Juniata's history, the Church has never fully embraced the College.

"The Church of the Brethren has always been skeptical about higher education," said College chaplain David Witkovsky. Historically, the Church has prized steadfast faith and simplicity over the "worldliness" of higher learning.

Over the years, support from individual Church of the Brethren congregations has fluctuated, reflecting shifting College policies.

"The Church is quick to be critical," said Witkovsky. Many Church members have been reluctant to swallow Juniata's reputation as a wet college campus, permitting alcohol use for those of age. A strong contingent voiced opposition to the arming of the College police department. This was seen as a defacement of the nonviolent belief system that Juniata's founders espoused.

Despite the disagreements between the College and the Church, the Church of the Brethren has a continued influence on the college.

Juniata's unique Peace and Conflict Studies Program springs directly from the nonviolent tradition of the Church of the Brethren. Elizabeth Evans Baker, an active Church member and ardent peace activist, was the driving force behind the creation of the program.

The Baker Institute for PACS is named in honor of her contribution. Her commitment to non-violence was passionate, and she envisioned the Juniata community as a springboard for nonviolent action through learning.

Celia Cook-Huffman, professor of peace studies and associate director of the Baker Institute, said that the program is still enriched by the influence of Church of the Brethren sponsors and speakers.

One of the most profound values imbued by the Church into the PACS program is "the notion of a conscience, of an ethical core," said Cook-Huffman.

During World War Two, Church of the Brethren members helped to set up alternative service camps for those who refused to serve in the military. This emphasis on service and volunteering lives on in the Brethren Volunteer Service and is reflected in Juniata's service learning programs.

Erin Smith, a senior PACS POE, comes from a background in the Church of the Brethren. "The things that Juniata emphasizes stem from the Church of the Brethren tradition: sustainability, simple living, service and peacemaking," said Smith.

> *"This is not a Brethren College anymore."*

Many students from the Church of the Brethren attend Juniata today, although few are active in campus ministry.

"It's not the Church of the Brethren's way to force religion on anyone," said Smith. Although other colleges affiliated with the Church of the Brethren offer classes on the Church tradition, Juniata does not.

Senior Sara-Beth Stoltzfus, a member of the Church of the Brethren, was drawn to Juniata by the PACS program. She described some Church of the Brethren traditions still popular with students, such as the annual Love Feast, where students sing together, eat together and participate in a foot washing ceremony .

Individual congregations from the surrounding area provide funding for 20 different scholarship funds for Brethren and non-Brethren students. College regulations stipulate that three of the 40 members of the College Board of Trustees must be Church of the Brethren.

"They definitely have a voice, but they don't sway any decisions," said Witkovsky.

Fiona Grugran is a Juniata Valley High School senior and member of the Church of the Brethren who currently takes classes at Juniata. She feels that the College has lost touch with its roots.

"It makes me mad," Grugan said. "Juniata used to host the Eastern Regional Youth Conference for Church of the Brethren students. A few years ago, it was cancelled because of a sporting event. This is not a Brethren College anymore, it's a sports college."

Forget the map, pick up a GPS

Students 'cache in' on geocaching, a new-age treasure hunt

By TALIA C. VALENCIA

Geocaching is an updated version of treasure hunting where enthusiasts use GPS technology to explore nature.

"I like to think of geocaching as treasure hunting with a GPS; like a pirate searching for where 'x' marks the spot on an old map," said senior Elizabeth Danforth.

All that is needed to pick up the hobby is a GPS and a membership to a geocaching Web site. One of the most popular sites is geocaching.com. Geocachers search online for caches in a desired area, get the coordinates and plug them into the GPS. After that Geocachers head outside and follow the coordinates.

Geocaching relies heavily on Web sites devoted to the hobby. Each cache typically has its own page online stating the coordinates, the type of cache, seeking difficulty, hints and much more useful information.

"The Web site [geocaching.com] is really great because it connects to Google Maps. You can see the image of your area, and they have little icons where different caches are located," said Danforth. Enter the zip code on the homepage and all geocaches in the area are identified.

There are some rules involved. Senior Kevin Scheib said, "You can't destroy anything out in the woods and you have to have permission to place geocaches around." Other common rules can be found online.

"Geocaches are usually little boxes hidden in different nooks and crannies outside," said Danforth. "They are disguised so that if you are looking for them you will be able to find them, but if you are not looking for them you'll look right over them; you won't be able to see them at all."

GPSs are necessary tools; however, they cannot lead the person to the exact location of the cache. Danforth said, "You get within 40 or 50 feet sometimes and then you have to actively search for it. Sometimes there are hints as to where to look and other times you are just blindly searching. What you are looking for can be as small as a film canister, as big as a chest or it can be the place itself."

There are many types of caches. A multicache is a string of caches that lead the geocacher on an adventure. Danforth explained that one cache leads to another, until the end of the sequence is found.

Another type is the virtual cache, in which the destination itself is the reward. Assistant Professor of Education, Kathleen Jones, said that a virtual cache implies "people want you to see the site." There is something about that particular place that is unique.

Jones went to Cape May and found a virtual cache. She said the site was, "the most incredible sight you could imagine. It was a beautiful, hidden lake in the middle of a beach area. Most people had no idea it was there. It was a tough one to get to and [the Web site] said that." She said it was worth the difficult trek and inside the box there were binoculars and information describing the area.

Sometimes a cache contains a travel bug. These tags have a tracking number on them so people can view their travels online. Danforth found a gnome statue with an attached travel bug behind a shooting range in Texas that held its story.

"This bug's goal was to find peaceful forests and to someday make it to Germany," said Danforth. "I haven't brought it to the Peace Chapel yet, but I plan on bringing it up there because it is a lot more peaceful up there than behind a shooting range. If one of the international students happens upon this and brings it to Germany then its missions will be fulfilled."

In addition to a logbook containing notes from other geocachers who found the cache, there may be little knickknacks that can be taken as long as they are replaced with something else. Scheib said most trinkets are quite inexpensive.

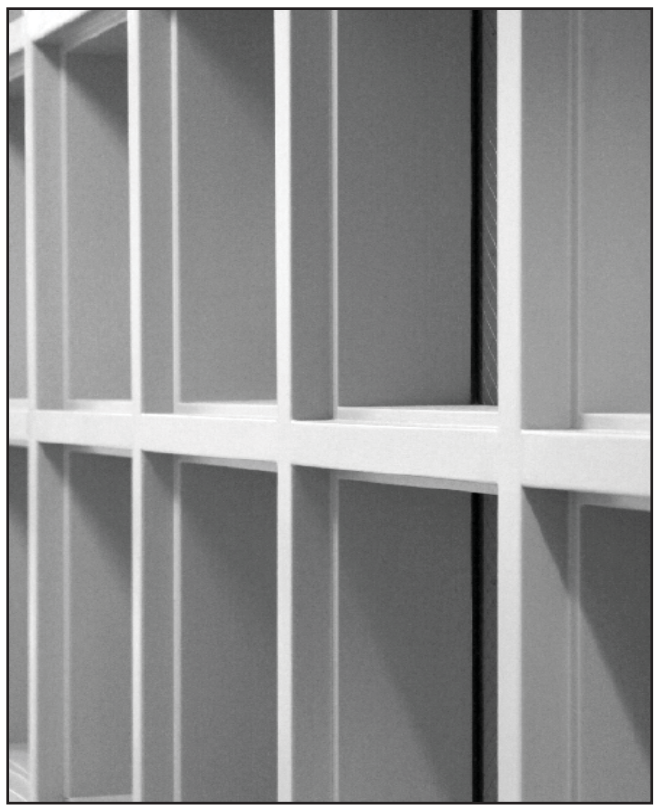
There is a "take something, leave something rule," said Jones. She always leaves behind the Massachusetts quarter in caches because that is where her family lives.

Danforth said, "Sometimes there is a gift for the first person who finds the cache like a small radio or something like that. Sometimes people put disposable cameras in there. People take pictures of themselves and bring it to another box."

Sometimes geocachers plan other events. "It's like a secret party in the woods," said Danforth. "There was one in Altoona that happened awhile ago. You were supposed to bring something orange and exactly at 3:15 in the afternoon if you were there for the event you would put on your orange t-shirt. …Suddenly there were 50 people with orange shirts. It's supposed to last 13 minutes or something and then they took off their orange shirts and disappeared. It's just for fun."

Although there is not a formal group on campus that goes geocaching there is interest. In fact, Jones is working on receiving a grant to install five geocaches in the Raystown Lake area.

"We will use the grant to purchase GPS units that will be housed at the visitor's center and some of the caches may contain binoculars...along with educational information about the flora and fauna of the surrounding 100 meter area," said Jones.



"[Geocaching] is going to hopefully get more people back outside again and enjoy the outside by trying to find these geocaches that people have placed," said Jones.

Maplefest a sweet success

▶ *from* MAPLEFEST *page 1*

the community, Juniata staff and we even had a family from Oregon." Bell added that nearly 20 people from his family were there as well.

The festival allowed guests to learn about and try out the process of making maple syrup.

"We made maple syrup, we made maple candy, we had waffles," Bell said. He added that the Sapsuckers and their guests made 10 gallons of syrup during the festival. They have made more than 30 total gallons this season.

Maple sugaring is the term given to the general craft of boiling down sugarwater from maple trees to make it into food items. Some products often made from maple sugaring include syrup, maple hard candy, spreadable sweet cream and maple flavoring that can be added to anything from salad dressing to spicy barbeque sauce.

Maple festivals at Juniata have taken place since 1973, but maple sugaring has been a tradition at Grove Farm for much longer. Dean Grove and his younger siblings first tapped the trees on the Grove farm in 1928. The Grove children started making maple syrup as a side business, and continued to do so for many years.

Maple sugaring ceased in 1970, when the Groves were forced to sell the farm because of plans to develop Raystown Lake. Juniata College secured a deal by which the college could lease the old farm property, and the Raystown Field Station opened in 1974. Maple syrup production resumed that same year, under the guidance of one of Dean's siblings.

The Sapsuckers have organized the sugaring season into a scheduled set of activities, making student participation easy. "Our big active season is in the spring, but usually we're out [at Grove Farm] in the fall at least once or twice," said Bell. "We have a meeting in February, and that's when things really get started."

"Once things get rolling, we usually go out two or three times a week, depending on the weather," said Brian Pearson, also a senior and co-president of the Sapsuckers.

Once the sugaring season starts, it is vital to be quick in tapping the trees. When temperatures rise above freezing in the day but fall below freezing at night, a light, sweet sugarwater starts to run up the trunk of Sugar Maple trees. If a small length of metal pipe is inserted into a hole drilled in the tree, that water can run out of the trunk and into a bucket for collection. Once the nights begin to stay above freezing, though, the sugarwater thickens and loses its sweetness as the tree starts adding nutrients to the sugarwater. This thicker sap indicates the end of the sugaring season.

As larger sugaring operations have streamlined to be more competitive, the Sapsuckers remained largely traditional, preserving the practice as it was when the Grove children began making syrup in 1928.

"Very few people do it the old way like we do it," said Bell. "A lot of people have now switched over to where everything's run on lines, and reverse osmosis to keep their syrup light."

In keeping with their traditional approach, Sapsuckers' student helpers carry sugarwater from the trees in buckets, and augment that with a few trees connected by tubes.

For boiling down the syrup, they use a four-section finishing pan over a wood fire, a process that requires great precision to prevent damage to the pan.

That traditional approach is what attracts students to the club. "It's about being outdoors," said Bell. "That's where I'm most happy, is out in the woods."

Bell added that the opportunity to make maple syrup played a part in his decision to attend Juniata.

Pearson agreed that the lure of the outdoors is one of the Sapsuckers' best assets. "We both hunt and fish and stuff. We grew up on it."

Sapsuckers continues to be run mostly by a small yet dedicated group of students. Alumni also help, coming from various parts of the country and many graduating classes.

"We have a handful of dedicated people, and outside of that on a given weekend, we might have 10 people at most," Pearson said. "We feed them, though."

Juniata offers students a unique historical and outdoors activity.

"I thought that was really cool," said Bell. "Where else can you do that?"

CHRISTOPHER SHANNON / JUNIATIAN

Dave Blair strains finished maple syrup before it is bottled during Sapsuckers' Maplefest on March 21.

Lack of field space frustrates club sports teams

▶ *from* **CLUB SPORTS** *page 1*

Freshman Aaron Jackson, co-captain of the club, said, "People lost interest because of the limited space we were forced to work with."

"It's great to see the team improving but at the same time, frustrating to see the lack of field space negatively effecting this growth," said Boyd.

The River Rats Rugby also struggled to find practice facilities. Practices often spilled over onto the quad next to Cloister Hall, but the team's captains had many reservations about that.

Junior Cody "Papabear" Fulton, vice-president of River Rats Rugby said, "We're concerned about damaging the quad, and it's disheartening to have people walk through practices."

In the past, the River Rats could only host games on Ellis Field if a varsity team was not practicing. Varsity sports often overruled intramural use of the field.

However, the football team's new head coach, Carmen Felus, has given the three teams full access to East Field. "Coach Felus has been very accommodating, and we appreciate that," said Fulton.

According to Scott McKenzie, the soccer coordinator and liaison between the athletic department and club sports, there is no official written policy on scheduling field space. "It's a collaborative activity between Staci Weber, Jeff Meadows and myself to accommodate as many events as possible while doing as little damage to the fields," he said. Weber is the director of student activities, and Meadows is the Facilities member responsible for care of the fields.

On March 17, team captains met with McKenzie, Felus, Meadows, Weber, Dean of Students Kris Clarkson and Director of Finance and Operations Rob Yelnosky to address the ongoing problem. "It was a great step in the right direction," said Boyd.

At the meeting, stakeholders discussed how to share and care for present field space, as well as possibilities to create new field space.

McKenzie agreed to coordinate an alert system to let teams know when field conditions are poor and they should not practice outside. The teams would be informed of a new practice time and location.

The teams and the administration also discussed the good "stewardship" of the fields. Good stewardship means that teams make good decisions like not practicing when it could damage the field.

It takes about 15 sports events to "ruin" a field, which is why many practice fields are in such poor condition, according to Facilities. The Winton Hill soccer field will have 120 events in a regular fall season.

ALISON RIHS / JUNIATIAN

The Ulitmate Frisbee Club plays a game on Ellis Field, which it may use when the football team is not practicing. Head Football Coach Carmen Felus has been accommodating in allowing intramural use of field space.

"Jeff Meadow's done a great job of closing one each season to allow it to recover," McKenzie said.

Unfortunately, this limits practice space. According to McKenzie, it takes about four months for newly-seeded grass to be matured enough for regular practices. Spring is a good time to care for and reseed fields.

The group discussed renovating the space the behind Brumbaugh Academic Center for use as another field, but the high renovation cost and lack of ideal conditions prevented that from being an effective solution.

The use of community fields, such as Detwiler Field and Lions Field, was also discussed. The College must assess the fields' availability, size, condition and any fees that might be associated with use.

The group agreed to meet at the start of every semester to continue to iron out any scheduling difficulties.

"There wasn't a lot of communication between teams or with the administration, but it's really helping us now," Boyd said. "There's no short-term solution to the field space problem, but we're making some good improvements."

One-credit labs: Fair or not?

Administration explains why multi-hour labs are one credit

By **Leanna Yeager**

Some courses in departments such as chemistry or physics require students to enroll in four-hour, one-credit labs.

A four hour a week course worth only a credit may seem unbalanced to students, but the course guidelines have not been created by looking at a credit-per-hour ratio. Instead they have been chosen by the Curriculum Committee, which individually assesses each course to determine what will best serve students in the long run.

"We deserve more credit for the work we do," said freshman Heather Kostick. Like other students, Kostick is confused about why the labs are worth only a credit.

Some students feel that the overall workload of labs are similar to other classes, but they count for less. "All of the lab reports we have are time consuming...one credit really isn't enough," said sophomore Brittany Rusczyk.

"Course credit is assigned according to the Registrar's guidelines," said James White, the William I. and Zella B. Book physics chair. The Registrar's guidelines are created by the Curriculum Committee with input from each department as well as a student representative.

There are many different factors that affect how much credit is assigned to a course. One consideration is how other colleges budget labs. "What a lot of students don't realize is that [the lab credit amount] is like this at other colleges as well. And many other courses require a lot of work to be done outside the classroom that isn't factored into the credit," said Richard Hark, chemistry department chair.

Another factor is that the labs are viewed as additional instruction or a part of the course, not actually as a course itself. "You don't get credit for the group work that you do [outside of class]. This is a similar sort of thing," said White.

KEVIN DUNDORE / JUNIATIAN

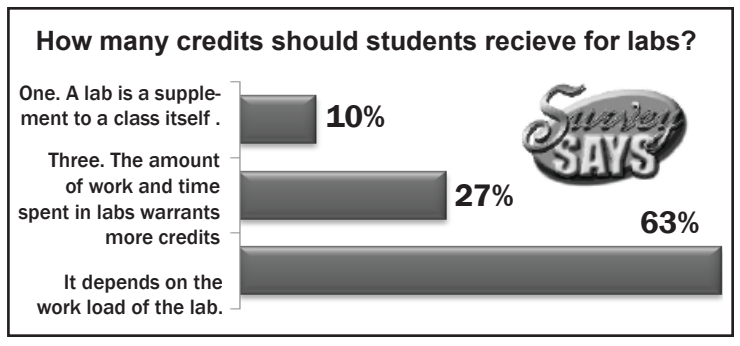
Sophomores Linden Will, Sam Bristol and Mark Berguson perform an experiment as part of their lab courses.

"Overall we do the same work in each lab as [we do in] other classes...[but] there is less credit," said junior Dustin Hollern.

"You should also consider the fact that you don't spend the whole time in lab. Often labs will give a week off for writing up the report…you don't spend as much time as you think actually in class," White said.

Some students contend that given the one credit value, the labs are relatively time consuming. "The grade doesn't affect our GPA too much, but it takes time away from other classes," said Kostick .

Adding more credit value to each lab may be an option, but not necessarily the best one. "If we added more credits to the labs we would be adding to the POE total…that would mean a student wouldn't have to take as many non-POE classes to graduate, which in turn would take away from the liberal arts education that this college is all about," said White.



Lab credit value will probably be left alone. The Curriculum Committee and each department believe that the current set up best prepares students for either jobs or graduate schools.

"Juniata students get an edge from spending so many hours in lab…they're usually better prepared for using the equipment than other college students," said Hark.

KEVIN DUNDORE / JUNIATIAN

Junior Zach Page rummages for reagents while working in the lab.

The creation of a new POE

Buzz over the birds and the bees of POEs

By **TALIA C. VALENCIA**

One of the most distinct aspects of Juniata College is the Program of Emphasis or POE. Most people outside of the Juniata network do not know what a POE is. Those who do are probably unaware as to how POEs are formed.

There are two choices for a Juniata student: a designated POE such as environmental science or an individualized POE where students create their own path with help from faculty advisors. For a new designated POE to be created, substantial interest has to be shown by students and faculty.

Environmental science and studies professor Uma Ramakrishnan knows the process of creating a POE very well. Prior to Ramakrishnan being hired, there was a wildlife conservation committee exploring the possibilities of a new POE. However, she helped fill the gaps in the curriculum, allowing the POE to take shape. She brought connections and flexibility in her course load to take on classes needed for the POE.

"[Juniata] actually surveyed students and asked what program they would be most interested in. They found there was an interest in having a wildlife program of some kind. They set up a committee and explored different options of wildlife and looked at the wildlife Web sites," said Ramakrishnan.

"When you have many students coming in with an individualized interest in, say, wildlife or any other field, it's easier to get it designated because we, as faculty, know what skills or courses are required for students to continue in the field or profession," said Ramakrishnan.

It is also important that a new POE will lead to practical career options for graduates. "You don't start a POE unless there is a future for students who graduate with it," she said.

The next step is to look at the resources available to the college." The committee looked at the courses already offered and figured out which ones would fit into the wildlife conservation POE. In her case, she started a course in wildlife management, "one of the most basic courses required for the wildlife POE."

Proposals for new POEs must be submitted to the curriculum committee. This committee oversees all courses, POEs and academic programs. It is comprised of Juniata students, faculty and administrators.

The proposal has to lay out everything involved in the POE. Ramakrishnan said this might range from required courses, staffing issues and to how it conflicts with other programs.

One of the main questions that must be addressed in the proposal is what the rational for creating the new POE is. For Ramakrishnan, it was "student interest and there is a market for graduates with [wildlife conservation]."

The curriculum committee will respond with its questions and concerns. A revised proposal will then be resubmitted. The wildlife conservation proposal was submitted three times before it was passed.

David Hutto, associate professor of english, is in the process of developing a new professional writing POE. He has created four new classes involving what he said "was a stunning amount of work."

He sent a list of what he had in mind to the curriculum committee including credit hours and prerequisites. "I'm using classes from two other departments; from IT and from communications," he said. The IT classes will be geared towards human and computer interactions, a class that will be taught to fulfill the POEs requirements.

"I didn't necessarily put this all together because students kept saying 'Oh, geez if only we had professional writing,'" Hutto said. "I have seen some interest. For instance, the types of classes that I'm teaching that go into this, and I think some of the other classes as well. Students do sign up for the classes. There is interest there."

"My own interest is I want my department to give students an option for a kind of training that will get them a job," said Hutto. "There's a lot of lousy writing out there and in the working world, the business world and all that. If we can help train some students who can go out and do a better job, it's needed."

Contrary to recent rumors, a forestry POE does not have a future at Juniata. "We don't have enough classes for a forestry POE," said Ramakrishnan. "There is a whole curriculum that's required. We're not lacking in just a few classes. We would need to hire at least one more faculty for something like that to become reality. I don't think we are close."

For those still interested in the subject, there is a new forestry class offered at the Raystown Field Station.

Exploring Fe-men-ism

CHRISTOPHER SHANNON / JUNIATIAN

Tchet Dereic Dorman talks to a group of students at a recent lecture as part of Juniata's Beyond Tolerance Series on March 23. Dorman's talk, titled "Real Men are Feminist: The Roles, Challenges and Power of Men Eradicating Sexism," was about men's role, and challenges, in reducing or ending sexism.

Economy slashes college endowments

▶ *from* **ENDOWMENT** *page 1*

said John Hille, executive vice president for advancement and marketing.

Because Juniata's endowment is smaller, the College only relies on it for eight percent of the annual budget. Some other universities with larger endowments pull up to a third of their budgets from their endowments. These universities have been hit especially hard by the economic downturn.

However, "It's still painful," Yelnosky said.

At Juniata, the money pulled from the endowment each year goes toward scholarships, professorships, academic support, instruction and more. The largest portion, 41 percent, goes to various scholarships. Despite this fact, there is no plan to decrease financial aid. In fact, the school recently created a two million dollar loan fund for students with financial trouble, according to Yelnosky.

Fourteen percent goes to professorships, 11 percent to academic support and eight percent to instruction. The remaining six percent includes Science in Motion and other divisions of the school.

Endowments are funds made up of long-term investments given as gifts to the college. The school then uses a percentage of the money each year, letting the remaining amount accumulate interest.

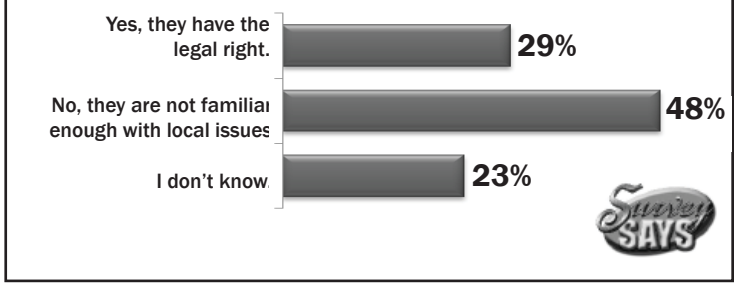
"It's a way for people to give to the college in perpetuity, so you have the ability to have an immediate and long-term effect on whatever particular facet of the college is important to you," said Yelnosky.

Seventeen percent of gifts to the endowment are for a designated area, such as scholarships or Science in Motion.

Universities differ on what percentage of the endowment is spent each year. Juniata uses about five percent of the endowment each year in the operating budget. It is a balance, Yelnosky said, between using enough and saving enough. Juniata has been slowly lowering the percentage it uses from six to five percent over the past decade.

"The intent of an endowment is that it goes on forever and ever," said Hille.

Juniata uses a "five-year moving average" to calculate the amount that is pulled from the endowment and used in the operating budget each year. Every May 31, the total value of investments for the past 12 months is calculated. It is then averaged in with the investment's value over the last five years. Five percent of the second average is taken out and used by the school for the operating budget.



Using a five-year moving average helps to soften the blow of extreme fluctuations in the value of the endowment. This means that the burden of a low endowment year will be carried over five years, not all in one year.

This economic condition reminds everyone to be careful with resources. "I think it will reinforce for us the need to always be thoughtful about the resources we have," said Yelnosky.

Students wishing to help should turn off lights and stereos when they are not in use, take shorter showers and waste less food. "We're paying all the same bills Mom and Dad pay at home," said Yelnosky. "Recycle. It costs more to put things in a landfill than to recycle."

Students can also help demonstrate a gift's positive effects. "We ask from time to time for students to help document the impact of a donation," said Hille. "It helps us to generate more giving."

Should Juniata students run for Huntingdon public office?

All Class Night

CHRISTOPHER SHANNON / JUNIATIAN

CHRISTOPHER SHANNON / JUNIATIAN

All Class Night, the annual event where classes compete to best satire the College's quirks, took place in Rosenberger Auditorium on March 22. As in previous years, the seniors won first place. Sophmores came in second place, the freshmen came in third and the juniors came in fourth. Students were asked to donate $1 or one canned food item at the event to benefit the area food bank.

Survivor speaks out

Bradnick reflects on week in the wild

▶ *from* **KIDNAP** *page 2*

nick said, "[Hollenbaugh] treated me as well as he could…He did not purposely harm me in any way. It was a hard trial, but with the help of God, I was able to come through and am able to be back in my good health."

Bradnick's week in the woods received national news coverage, including feature stories in "Time" and "The Saturday Evening Post." In 1991, NBC worked with Bradnick to produce the made-for-TV movie "Cry in the Wild: The Taking of Peggy Ann." After the movie's release, Bradnick appeared on national television on "The Oprah Show." She is now in the planning stages of an "inspirational and educational" book about the kidnapping and her life.

> **"He really felt that he wasn't accepted, and so therefore he had to take someone."**

"I think out of every tragedy comes good, and this book will reflect that," she said. "I think it will be help other people learn from their bad experiences that you don't have to be a victim… You can move on from the most tragic thing in your life and make it a beneficial thing down the road."

Now 60 years old, Bradnick lives with her husband in Three Springs, only a stone's throw from where Hollenbaugh captured her 43 years ago.

"It's home to me," she said. "This has always been my home, and I have no fear or trouble being here because of the past. The past is who you are; you live with that, you learn to adjust to it, and I'm proud to say that I think I've done a really good job of that."

Each day she drives past the Tuscarora Mountains, where she was held captive, to Huntingdon, where she is director of the Standing Stone Senior Center.

Working amidst seniors bustling about on March 26, Branick reflects on Hollenbaugh. Surprisingly, she is not hostile.

"I had no ill feelings towards him," she said. "I felt sorry for him." While condemning his actions as "unacceptable," she sympathizes with the tough life he had.

"Being with him for eight days, you got the sense that there was a lot missing in his life; that his life had never been fulfilled as a child," she said. "He was very angry, very aggressive, very loud, a very verbally abusive type person. Just totally angry. Totally angry with life, angry with himself, angry with everyone. The anger flew out of him just like water flows out of a brook. He lived under a cloud of hatefulness."

Hollenbaugh's neighbors in Shade Gap never associated with him. He earned the nicknames "Bicycle Pete" and "Bicycle Bill" by riding his red antique bike around town.

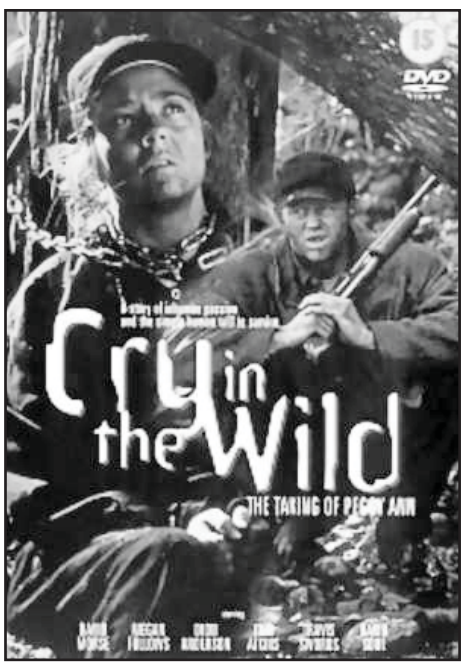
Few in the community knew that, in fact, he was an ex-convict who spent 13 years in Farview State Hospital for the criminally insane under a diagnosis of schizophrenia. In 1959, after clinical assessments showed his symptoms had subsided, Hollenbaugh was released to a correctional institute in Pittsburgh. When his sentence finished, he moved to Shade Gap, where he lived a solitary existence in a shack in the woods.

"I think his purpose [in kidnapping me] was to have someone that he could control, and relate to that person on a level that he understood," she says. "He really felt that he wasn't accepted, and so therefore he had to take someone."

According to a 1967 folk song by Russ Edwards written about the kidnapping, "Peggy told her parents at the very end that all the Mountain Man wanted was to find a friend."

In 1966, with a population of 140, Shade Gap was a small town. However, it was no stranger to odd criminal occurrences. In the two years preceding Bradnick's kidnapping, an elusive "Mountain Man" terrorized the community on five separate instances. Police investigated the episodes, which included sniper attacks at passing cars, but they never found evidence to convict a suspect. During Bradnick's captivity, Hollenbaugh confessed to her that he was the Mountain Man responsible for those shootings.

"It's sad to think that a person would feel so unacceptable in society that he would have to lower himself to shooting at people, terrorizing a community and then taking a 17-year-old girl. I mean, that's a sad life, a sad existence," said Bradnick.



Dr. Joseph Moiland, resident psychiatrist at Farview, called the Bradnick kidnapping a "return of an acute psychotic episode," but Bradnick believes Hollenbaugh's illness never left him. "I don't feel that the prison system did him justice all those years," she said.

During his stay at Farview hospital, the hospital superintendent described Hollenbaugh as a "model inmate."

Bradnick points out the paradox. "[They say that] if you're a model prisoner and you're a model patient, you can move out," she said. "But I think we overlook what really happens inside those people. I don't think you can just take them into a facility and work with them for 90 days and say, 'Oh, you passed all the tests. You can go.' We have to learn to be more understanding and more beneficial to them."

Because of her experience, Bradnick is resolved to work in the prison system after her retirement.

"It would be quite an accomplishment for me if I could just get to understand why one person did what he or she did," she said. "I think it's a valuable piece of information to help the future generations of people experiencing these mental or psychological problems, whatever they might be. That's the joy of being a survivor. Because God gave me my gift of life back, the least I can do is use it wisely."

In 1991, NBC produced "Cry in the Wild: The Taking of Peggy Ann," a movie based on Bradnick's story.

Students run campaigns in Huntingdon elections

▶ *from* **CAMPAIGNS** *page 1*

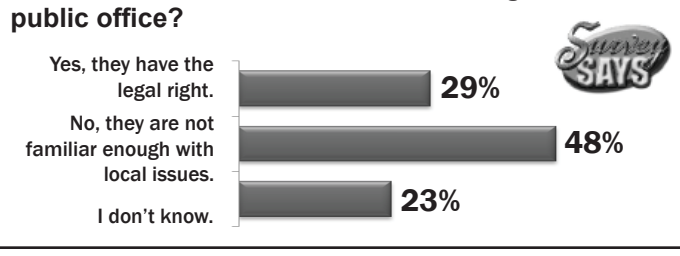
make it even more cost-effective."

Sill also sees his candidacy as a bridge between the College and the community. "As Mayor, overseeing the police department, I think that I can help build a more positive relationship between the local law enforcement and the College itself," said Sill.

Though only age 19, Sill feels that he has had plenty of experience working in government offices. "I have done internships in Bill Shuster's office and Representative Jerry Stern," said Sill. "These gave me a lot of insights into government processes. I know that I am completely qualified to be the Mayor of Huntingdon with my experience level." Sill also served as the student borough council representative to Hollidaysburg Borough Council.

Gordon, a Democrat, is running for the office of prothonotary. This is a court house position that is largely involved with notarizing papers, delivering court documents and administering certain oaths of office.

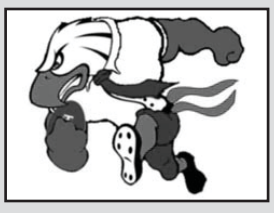
"This is a great first step for future plans," said Gordon. "Not sure where it will take me, but as someone who is interested in being a public servant, this is a definitely a great opportunity."



Gordon's future political aspirations are not the only reason he is running for the office. "I'm very involved with St. John's church in Huntingdon, and I volunteer with them often," said Gordon. "I feel that public service is the best way that you can get involved in the community. Public office is about helping as many people as you can. And that is my goal when running for prothonotary."

Gordon is running against Republican incumbent Kay Coons. Considering his opponent, Gordon said, "I plan on running a positive campaign about me. I hear Kay Coons is a wonderful person and does a great job as prothonotary."

Gordon, also age 19, knows that some people would criticize his age as a criteria for the position, but he feels that his youth is not a problem. "I'm a little younger than most. The Huntingdon Country Democrats have full faith in my ability to perform the duties of the office as well as or better than Coons."



Freshman Nick Brown also had plans to run for local office. Brown had hoped to run for the sheriff of Huntingdon County, but did not get his paperwork in on time. Incumbent sheriff William G. Walter is a Republican, and Brown felt that more than one option should appear on the ticket.

Should Juniata students run for Huntingdon public office?

SOB flag football tournament April 5th!

Come support the teams, enjoy some hot dogs and food at the east pavilion around lunch, or buy a cool t-shirt for only $8!

The Empty Bowls Dinner will be taking place on Saturday, April 4 from 5-7 p.m. at Most Holy Trinity Catholic Church. Tickets are $10 for adults and $5 for childrens. Tickets are available at the Info Desk All proceeds from the event benefit local food pantries. -- Sponsored by Catholic Council, Mud Junkies and Pax-o

Unlock Your Voice: A Celebration of Women Writers will be on Thursday, April 16, at 8 pm in the Ballroom.

Small press set to assume big role

EDITORIAL

The newspaper is dying. Earlier this week, "The Chicago Sun Times" filed for bankruptcy, joining the ranks of "The Los Angeles Times" and "The Chicago Tribune." "The Rocky Mountain News" and "The Christian Science Monitor" have ceased production entirely. Even "The New York Times" and "The Washington Post" have had to cut costs and staff members.

However, while large scale newspapers are turning smaller and smaller profits, "The Huntingdon Daily News" and other small, local newspapers are thriving.

Print media is the dinosaur of the news industry, and the great big meteor of the Internet is speeding its way to Earth. However, "The Daily News" is not really a dinosaur, more like a cockroach. And cockroaches can survive anything.

The difference is the type of stories each paper covers. "The Times" covers global and national issues, like political campaigns and wars. Everything it covers can be found online, in some blog or on CNN.

"The Daily News" covers local events of almost no interest to someone outside the Huntingdon area. "The Daily News" has what "The Times" does not: a niche. When "The Daily News" does cover a national or global event, it always has a local angle, a spin on why the story matters to Huntingdon residents.

This is what people want to read with their morning coffee. There are a thousand other sources to tell them about Obama's latest speech. There are few sources to tell them about the Bearcats' latest victory.

Although our editors may not like to admit it, "The Juniatian" is more similar to "The Daily News" than to "The Times." Our stories cater to a very specific audience. Our value as a news source comes from our small size.

All of this, of course, could be accomplished with a Web site. Is it time for newspapers, "The Juniatian" included, to recognize the current news media trend and get with it? Perhaps it is time to become modern, economic and sustainable. Should the newspaper industry abandon its print editions and become solely Web-based news sources?

Absolutely not. Print media is also the most portable form of media. Newspapers do not run on batteries and do not need a good signal to share information. A newspaper can be folded up, written on and stuffed inside a backpack or briefcase.

More importantly, print media is the most reliable form of media. Because printed news is by necessity a less immediate form of media than Web sites, TV and radio, the content of a story is often more substantiated, more fully researched and has greater accreditation.

Newsprint offers more permanence. Radio waves and television waves are recorded onto tapes, but tapes can neither be viewed or listened to as effortlessly as a paper can be scanned. An article on a Web site can be easily viewed and skimmed, but it can also be edited at any time. The original article can easily become lost forever.

Once something is printed in a paper, it is indelible. There, in black and white, is tangible and physical proof of what has been written. Newspapers create and enforce a greater sense of accountability for both reporters and public figures. A well-written, well-researched article can put an end to rumors and confirm the truth.

The dinosaurs of the print industry might be facing their extinction, but the small sprited papers will outlive whatever catastrophes come their way.

Letters to the Editor

Sustainability:

Dear Editor:

Juniata is a great college, and I love it here. However, there are some easily accomplishable changes that could significantly improve the campus, which are not difficult or expensive to accomplish. Actually, if implemented, these changes could save the college money and make life easier for its students.

The administration continues to lag behind on sustainability. They have instituted a Seal of Sustainability program. This program is great. If departments, offices, and student organizations follow it, Juniata would become considerably more sustainable. However the administration has failed to adequately tell anyone about it. At the last open forum there was only one applicant for the seal.

For more information on the seal you can visit: http://www.juniata.edu/services/sustainability/wordmark.html. Or simply search for "Seal of Sustainability" on Juniata's Website.

Additionally, there is a great amount of paper wasted simply because people print to the wrong printer. Since the open forums during the 2007-2008 school year, the administration has promised that there would be a second window that pops up to ask, "Did you mean to print to the Library (or wherever you are printing to) Printer?" This would cut down on paper wasted because someone is printing 30 copies to the wrong printer. This saves the college from paying for wasted copies of the same document, and it spares students the frustration encountered when their document goes to the wrong printer.

Another issue raised at the open forum last semester was the idea to have Muddy, Jitters, A la Cart, and other food places on campus not print receipts for every DCB purchase. At the open forum every panelist seemed to think that this was a fantastic idea, yet when we buy things with DCB this semester we still get a receipt. This is not needed, because the cashier can just tell you your remaining balance. There is no need for all that paper to be wasted, and Sodexo can save money on their ink costs. Also, students would not have to deal with a receipt every time they use DCB.

Sustainability is a cause that many people can get behind. That is why I felt compelled to write this letter to the editor. If Juniata publicizes its Seal of Sustainability, institutes a double check pop up for printing, and stops printing receipts for every DCB purchase then the college will not only be more sustainable, but will save money and make life easier for students.

Sincerely,
Zach Gordon, Class of 2011

Blood Drives:

Dear Editor:

According to American Red Cross guidelines, people who participate in homosexual sex are restricted from donating blood. Due to this, many students refuse to donate because their friends and other homosexuals cannot. People are standing by their principles and not donating blood, while possibly increasing the national blood shortage.

As a result of this, I, Angela Riotto, coordinator of the Juniata College Blood Drives, am writing a letter to the American Red Cross National Headquarters petitioning them to accept blood from homosexuals. Along with this letter, I am sending in a signed petition from Juniata College students.

I urge all students and faculty to sign this petition which will appear at Ellis during lunch and dinner hours.

This may be a small step but it is an important step and I hope everyone will stand up and help!

Angela Riotto, Class of 2010

Thumbs Up, Thumbs Down

to the Giant Colon. As if we didn't feel like crap coming out of Baker already.

to the Facebook group "50 Pathetic Things about Juniata" for creating a stir about various social justice issues while also highlighting its creator's very nonexistent sex life.

to Huntingdon politicians for getting shown up by some random teenager. They can't complain when they have to answer to someone who's as young as their kids.

to Giant Microbes® for making STD's "fun and fuzzy." Contract them all!

to freshmen who got to exchange easy high school credits and snag senior status for room draw. Next thing we know, they'll be running for mayor!

Ask the Administration

E-mail your question for an administrator to juniatian@juniata.edu.

"Recently, students have had experiences with food in Baker that was not quite fresh (specific complaints have included old fruit, moldy bagels and bad milk). What precautions and procedures are in place to ensure that all food that is served is fresh?"

We have many programs in place to prevent these kinds of issues. However, we have had occurrences that are not up to our standards (A new milk supplier is one…). As the largest provider of food and facilities management services in North America, we are deeply committed to providing the highest quality, safest and best food products possible to our students and all guests at Juniata College. If at any time you feel there is a problem, please do not hesitate to contact our offices so that we can remedy the situation and assure your satisfaction as soon as possible.

- Hal Mclaughlin, Director of Food Services

Juniatian Policies

Corrections: The Juniatian makes every effort to avoid errors in its articles. However, some mistakes will inevitably occur. The Juniatian will print a retraction for any printed, factual item proven to be incorrect. Readers who believe they have spotted an incorrect fact should e-mail juniatian@juniata.edu with "correction" in the subject line.

Opinion: Unsigned editorials published in the commentary section reflect the opinion of the Juniatian as determined by the editorial board. Views expressed in commentary, arts & entertainment and sports columns reflect the opinion of the writer and not necessarily the opinion of the Juniatian.

Letters to the Editor: Points of view which differ from those presented in any Juniatian article should be expressed to the editors in the form of a publishable letter to the editor. Students, faculty, staff alumni: send letters to juniatian@juniata.edu. We print all letters to the editor that are of interest to the campus community – in response to one of our articles or on a separate topic. Please limit letters to about 300 words, and note that longer submissions may be printed partially due to available space.

Presidential Perspective

Have a topic that you'd like President. Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.

This June all the refugees from the old Founders Hall and the departments of English and History will be moving into a building that has been truly transformed. Founders, originally completed in about 9 months with the use of student labor, has gone through a 15 month renovation and expansion to bring it up to today's standard for energy efficiency, accessibility and high technology.

I'm particularly delighted that the English and History departments will be soon be at the heart of the campus with the novelty of having both department offices and classrooms in the same building. Also having classrooms there will certainly add vitality to what would otherwise be just an office building.

The idea of relocating English and History to Founders was Provost Lakso's. (He wanted to keep an eye on them!) Well not really, he just thought that a building at the center of the campus should have some academic purpose and bring more students in contact with all the administrators located there.

In addition to the classrooms and offices we will have a History room just inside the Moore Street porch door.

Junior Cody Fulton is busy working on what will be initially displayed there.

My hope is that Founders will be far enough along that all the seniors will get a chance to tour the building before graduation.

When Nature Calls

Green Reads

By **Brianna O'Malley**

I'll be the first to admit my 'geekdom' when it comes to nature. However, what baffles me at times are people's assumptions of how obsessed I truly am. Seeking to appease my interest, my mother puts on National Geographic documentaries on elusive animals. Plus, I've lost track of how many plant and animal field guides I've received as presents from family.

While I do find nature interesting, many of these gifts go unused because they feel like work to me. The same goes for classic nature books; you won't find me reading Thoreau for kicks. In fact, I find most classic environmental literature presumptuous and dry. However, I have come across many interesting "green reads" that have stuck with me.

Here are some of my favorites. I've purposely avoided some books such as "Into Thin Air" and "Into the Wild" because, in my opinion, they are over done. Jon Krakauer; the author of both books is a great writer, and I recommend both to those that have never read them.

"The Last American Man" by Elizabeth Gilbert - Author of the bestseller "Eat Pray Love," Gilbert follows the life of Eustace Conway, an outdoorsmen that could give Davy Crockett a run for his money. "By the time Eustace Conway was seven years old he could throw a knife accurately enough to nail a chipmunk to a tree." Gilbert writes about the 30-something-year-old man in his attempt to live outside of today's technological advances by hunting and growing his own food, to living in a teepee. The book is interesting because it not only looks at Conway's amazing way of life and rejection of society, but the emotional motivations behind his near hermit living.

"A Walk in the Woods" by Bill Bryson - This book tells the story of Bryson's adventure hiking the Appalachian Trail with his couch potato buddy. While I had never really thought about it, the Appalachian Trail can be counted as one of the most grueling hikes. During his three-month adventure Bryson meets a variety of interesting characters. Bryson's book also interjects humor alongside the educational information on nature. This book is absolutely hilarious and is a nice perspective on the outdoors from a decidedly non-outdoorsy point of view.

"How to Stay Alive in the Woods" by Bradford Angier - The title says it all. I picked up this book because of the rubber, waterproof covering (I know, never judge a book by its cover). The book's cover allows the text to experience the same extreme conditions as its owner. Drop it into Muddy Run, and I wouldn't be surprised if the book remained unblemished. This is a field guide; but it is the Bear Grylls (Man vs. Wild) of field guides. Its content ranges from identifying safe plants to eat, to fire starting and even the best way to steal food from a bear. Thankfully, I have never had to put any of the book's teachings to practical use. This is great for anyone interested in wilderness education but wants to skip all the feel good, tree-hugging stuff.

"The Animal Dialogues" by Craig Childs - This book explores Childs' experiences with many species of animals, ranging from coyotes to red spotted toads. Childs's stories of his animal adventures are captivating as he tries to share each animal's perspective with you. This book also discusses animal behavior, a topic I didn't think I would like. However, what drives other species' minds is surprisingly similar to our own. Everyone loves animals, but this book is more than a cutesy look at our furry friends. I also liked this book because it taught me about each animal encountered. Child's narrative voice also makes this book easy to read. "The Animal Dialogues" makes you want to write an essay every time you get close squirrel on the quad.

"The Earth Moved" by Amy Stewart - Alright, with this book I admit I am a nerd. This one is probably not for those with a weak stomach or anyone grossed out by creepy crawlies. I read it for a high school project and was blown away. Stewart investigates earthworms and their importance to our planet. I never would have thought I would find worms interesting, but this book did just that. Written sort of like a diary, the book goes through the author's adventure learning about an important and often overlooked part of the environment. Stewart talked about worms from a non-science perspective and explained their relevance in the cycle of life. This should be interesting to anyone who gardens. I myself do not, but I still found it fascinating.

Concert Choir's Tour de France

Four-day international tour provides student choir with a noteworthy experience

By **Alison Rihs**

For the Juniata College Concert Choir, rehearsing music and spending time together for several months inevitably creates a bond. This semester, the choir toured New York, performed a concert on campus and recorded a CD of their songs.

The most anticipated event for the choir is always the spring break tour. Last year, they traveled to several cities in the Eastern United States. In the past they have gone to Trinidad and Mexico. This year, the choir was able to travel to France for the week.

After riding a bus to Philadelphia on March 7, they took an eight hour flight to Paris. They drove north to Lille, where they spent most of their time. The choir also spent a free day in Bruges, Belgium.

Performing six concerts in four days did not allow much time for sight-seeing. However, they did briefly see the Eiffel Tower, the Louvre Museum and Notre Dame.

The atmosphere of France is different than some may expect.

Choir conductor Russ Shelley said, "I think people stereotypically think of the French as a little bit snobby and arrogant. …However, in the north of France, [citizens] go out of their way to help you. They encourage you to stumble with their language… and we found them to be some of the nicest people on the face of the earth."

The group stayed with host families while in France. Sophomore Erik Dulick said, "I loved living with our host family. …They spoke English which was another nice aspect of our experience."

The couple also had a 22-year-old daughter.

"It was nice to have someone our own age there because we got to talk to her about what she liked to do in her free time. One morning we went out to a flea market with her and got to know her. We're Facebook friends now," said Dulick.

The food was another unique aspect of France. The families cooked traditional French meals for the students.

"We had quiche and we had goose liver. …Then we had lamp fish eggs on bread and salmon paste on a flower petal. It was just interesting to experience their food because it's different from ours," said Dulick.

The escargot, unlike most of the other food, was not as popular.

Senior Angela Tribus said it was, "really slimy and tasted like a balloon."

Although the choir enjoyed experiencing a new culture, their favorite part was singing together. They performed in four churches, a chapel in a mental hospital and a physical care hospital. Everyone believed they improved with each concert.

"By the end of the week, they were 35 percent better than the beginning of the week," said Shelley.

Before each concert, "the choir got together and shared our stories about how much choir meant to us. Basically, some people shared very personal stories about themselves and how to connect to the music, and it brought us closer together as a group. And so when it came time to perform in the concert, it was amazing," said Dulick.

Freshman Ann Ziegler thought the last concert was very meaningful. She recalled the final song, which the choir performs every year.

"That was obviously really hard for a lot of the seniors because it was…the last time they'd be singing it on tour, and we always sing that song in a round and hold hands. …When it was the last concert, it just really seemed important. You can't not hold hands for this song because you need each other to be able to do that."

Shelley's favorite memory of tour was "the reception of the audience in the last concert." It was in Pont-de-Marq, a small French town outside of Lille.

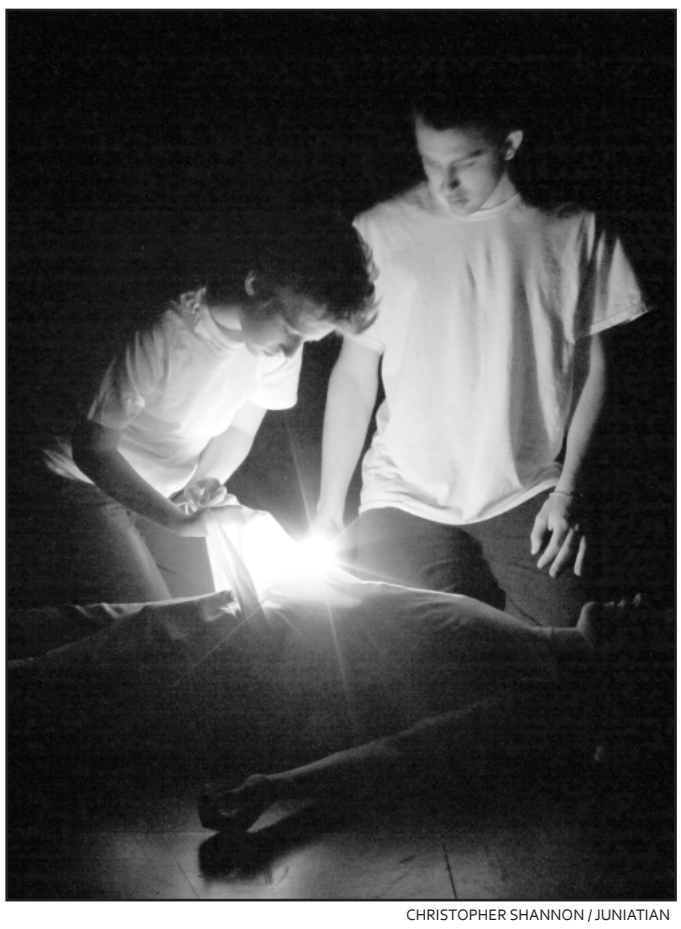
He said that small-town audiences are the best audiences.

"Their love for the choir, reception of the choir, appreciation of the music, engaging with us with their energy, all of the above, was a great, great final night."

After the final song of the tour, the audience clapped progressively louder, begging for an encore. Even after the choir had left the room, they continued to clap.

Though concert choir is a huge time commitment, the rewards are worth it.

"That's why we do it over and over and over. The sacrifices are very large, but it is always the case that the rewards are more. Those two things, in my opinion, are related," said Shelley.



Tribus agreed. "You don't do it for the credit. It's for the end result. I think that it is definitely really time-consuming, but I think that's necessary in order to produce the product that we do at the end… The more the sacrifices, the more the reward. I think that's true every time in all parts of life. If it doesn't cost you anything, it's not going to be worth anything…That's the way it works."

Seniors in the spotlight

CHRISTOPHER SHANNON / JUNIATIAN

On March 19-20, seniors Skye Hatton-Hopkins, Sean Mahoney and Megan Monahan put on their Senior Capstones in the Black Box Theater. Pictured here, juniors Allison Strausberg and Brandon Wolfe and freshman Dylan Belnavis perform in Mahoney's Capstone, "Innocence Ignited." The piece is about innocence in all periods of life and incorporates visual effects made by a flashlight. Hatton-Hopkins wrote "Inquiries," a series of monologues from multiple characters. Monahan wrote "Of Real and Imagined Moments," a piece that explores love and intimacy.

A piece of hair on your tongue

Dear God (or Ninety-Five Percent)

By **Brandon Wolfe**

Dear God,

Why are midgets farming? I just don't understand anymore, Girlfriend; but it's hard to get angry when everything around me makes me laugh.

I don't watch television on a regular basis, but I enjoy some shows. So I'll turn it on and flip around. The commercials are what usually amaze me. Oh, the options I have for dinner. Not only can I order a Dutch apple pie at Burger King, but I can also get a midget advertised mini-burger.

They wanted a subtle way of giving people heart disease—not only from the greasy burgers but also the shock of seeing a midget farmer riding a tractor on American television. But it is funny.

That's when I started to pay attention. Are You also frightened? Well, I'll give You two words to get You there: Bret Michaels.

When you find yourself watching a forty-year-old wearing a bandana and shiny lip-gloss, it's probably a good time to question the meaning of life.

But how can You fault someone for looking for a little silicone love? Bret is legitimately trying to entertain me with an idiotic publicity stunt. It may be a stupid show, but I was entertained for about three minutes—five percent of the show. Not bad.

Maybe I could tolerate it because I heard Bret Michaels once say, "Any band that is out there chasing it is doing more destruction to music then someone who is out there playing what they truly feel." Even though he is a clucking shuttlecock, he's right.

We are different people, Girl. I can never understand Bret Michaels, and I can never understand You. That is why 95 percent of everything is a nugget of stool. We just don't understand each other, so I am always searching for the other five percent. I find it in some things Bret Michaels has said and by watching more television.

Did You know Mike Huckabee now has his own tv show? I remember how he always used to mention You, God. He would act like You had junk. I mean, You are full of girly-girl qualities. You just need to shower more and put on make-up every now and then—You could at least try.

Anyway, just listen to what he said: "The fact is, my friends, most Americans don't want more government. They want less government." I think that is generally true. So why doesn't he shut up?

You know what I'm talking about, God? If he really meant that, he wouldn't have called his show "Huckabee" and ejaculated his political views on stage.

It's more than politics. He even had his band "The Little Elkharts" playing on the show. I'm sure he started playing for the love of the music. He may even think he is a governor for his love of helping people, but he started screaming too loud.

You can't promote Your own band on Your own show that is named after You. It's like bragging about meeting some mildly famous celebrity on the weekend. Shouldn't the product of the ideas we create as people mean more than the individual?

Do people actually want to watch clucking shuttlecocks?

I know this is going to sound weird, God, but I want to watch them for just about three minutes. I always need to be reminded about 95 percent.

What ever happened to communication? Did we get so good at it that we got bored and experimented with manipulating others? I think it was the ego. I get selfish and so do You.

We all have ideas filled with fleeting laughter, but sometimes we forget that it is those things that

Art with heart

CHRISTOPHER SHANNON / JUNIATIAN

The Student Art Exhibition at the Juniata College Museum of Art opened on March 19. Pictured here is senior Diahann Mosier's self portrait, titled "You take it. I don't need it," which won first place. The exhibit features art in a variety of media, including paintings, photographs, ceramics, computer art and found art. The exhibit is open until April 25.

A piece of hair on your tongue

▶ *from* PIECE OF HAIR *page 9*

will always survive instead of the self.

I am sure those girls with bleached hair and fake breasts, pining for Bret Michaels' love, would agree with me. I'm sure each girl would rather be remembered for that one thing she was really good at.

It's just like You, Girl. I haven't seen You in so long, but I know You'll always be there because Bret Michaels and Mike Huckabee need You. Clucking shuttlecocks, I need You, Girl.

Sometimes all it takes is an evolutionary idea that is always present. It is hidden underneath Your 95 percent.

I guess that's why, in the end, every rose has its thorn Dear God.

MUSICOLOGY

The low down on Girl Talk

By **Caitlin Bigelow**

If all Americans listened to Girl Talk no one would be obese. Then again we might not get much done, we would be too busy raving and dancing till we just couldn't move.

Girl Talk aka Greg Gillis is a mash-up king (but don't let him hear you call him that). He has expanded to a new genre of music that was largely unexplored by artists. Although, he says, "there were a lot of people that came before me." Basically he takes mainstream songs, cuts and splices them with other songs. He mixes lyrics, rhythms and sounds into samples.

By combining the sample loops we get crazy and energetic songs. This can lead to witty and often comical combinations like the background to "Under the Bridge" playing while Lil Wayne sings "She lick me like a lollipop/Shawty wanna thug" and somehow, against all odds, it works. I mean really works.

Girl Talk is one of the catchiest artists I've heard in a long time. His latest album, "Feed the Animals," should come with a warning label: "You may be unable to stop listening to this. Or you may be unable to suppress urges to dance!" "Feed the Animals" is his best album yet. It's more polished, and the sound is smoother. It is less likely to give you an epileptic fit, which "Night Ripper" his previous album, can't promise.

When I asked Girl Talk about the evolution of his albums he said he was finally able to put all his work into the music. Previously, he worked on Girl Talk material in college when he could. Then he became a biomedical engineer, spending time in a cubicle and lab by weekday and creating mind blowing raves by weekend. He said he never told his coworkers what he was working on at first because it seemed too complicated to explain. Later he didn't tell them because he didn't want them to think he was some "weirdo liar."

Following along with the evolution of his albums, he also said, "I played so many shows after 'Night Ripper.' With computer based music you naturally get better with practice. Plus, I had more time to dedicate and more source material. With 'Night Ripper' I threw everything I had into it. I had more options with 'Feed the Animals.' I had established more of a sound, so I was more patient with it and could be picky about what samples I chose."

So, with Girl Talk's growing success and talents, he is no longer under the radar. He has a big European tour set up that begins soon. I wonder how long he will be able to operate using only other people's copyrighted music in his songs? He doesn't seem too concerned about it though. He explained to me that, "We haven't had any problems with legal issues. It really falls into a gray area. We would fight and argue in court if it became an issue because we believe and my record believes that this is original."

He also acknowledges the reality of the new digital age that we are in. The dynamics of creating and especially downloading music are completely changing. He said this was largely the reason why you can pay whatever you want to buy his album. "My ultimate goal was how quickly can we get this ("Feed the Animals") out there? I was hoping it would open up a new demographic of people. Maybe people who don't buy music, can't afford music, or just don't listen to Girl Talk. I don't have problems with people downloading my music for free. It's the reason why I get to play shows all over the place. You might not be making as much money, but your music is being spread everywhere on a much larger level." And isn't that music to my ears.

Live shows are about the only thing that Girl Talk is worried about or has time for. He said, "I'm not concerned with the next album and building new stuff. I am having the time of my life, but it's insane." He went on to say, "I stay so busy that I rarely take a step back. It's always time to move onto the next step. But there was never any chance in my mind that I thought that I could sell out shows or make money off this or even live off it… It really is insane."

Anything but ordinary

Summer Reading

By **Claire Williams**

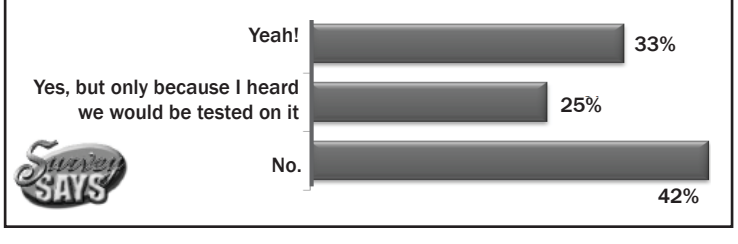
We have all gone through orientation and been told a book to read over the summer. Some have had to read the book for CWS, others have read (or tried to read) the book for enjoyment. Love them or hate them, there is a process behind selecting that special book.

Sarah May Clarkson, director of academic support services, shared how the books are selected. The process begins with an announcement asking for submissions of recommended books or authors. This list can contain 30 or 40 books that then must be narrowed down.

Through a series of meetings, the list is cut down to 20 and then to about six or seven. In the third or fourth meeting, the final book is chosen. That title is typically announced on Reading Day.

At each meeting those attending advocate for the book they like or against their least favorite. From my own experience at these meetings, books that have little to no support fall by the wayside. Only those with strong support will survive all the way to the finals.

In the past, runners up have included "The Book Thief," "Three Cups of Tea," "Mountains Beyond Mountains" and "Persepolis." Some of these books may end up on the list again, as they had strong support before.



Personally, I would love to see a good fiction book this summer. The past three years have been heavier nonfiction type books. "Collapse," "A Long Way Gone" and "Complications" were not exactly typical 'fun' reads. While the summer read book does need to bring about discussion, I don't think the subject matter needs to be incredibly heavy.

The plus side of having a good fiction book is a memorable story that involves the reader. The downside is the possibility that the novel doesn't hook readers, preventing them from reading the entire book. I think the risk is worth it, since the same thing can happen with a book like "Collapse" or "Long Way Gone."

I would also enjoy a more humorous nonfiction book such as one Clarkson mentioned during our interview. "Stiff: The Curious Lives of Human Cadavers," by Mary Roach, sounds incredibly interesting and quite funny. The book explores what is done with cadavers and most reviews mention Roach's use of humor. What better book to read at Juniata than a book taking a humorous look at something half of the graduates will deal will? With other books like "Bonk: The Curious Coupling of Science and Sex" and "Spook: Science Tackles the Afterlife," this author seems like a great choice.

Long story short, it's up to you what we read. Find a good book and watch for the announcement. E-mail your idea and come to meetings and defend it. Everyone might end up reading your favorite book.

As an incoming freshman, did you read the recommended summer reading book?

The Director's Chair

Coraline: An animated nightmare

By **JORDAN YEAGLEY**

There are movies I would pay seven dollars to see, and movies I would pay four dollars to see; "Coraline" is definitely a four-dollar movie. "Coraline" is an animated film about a young girl who discovers a door in her home that opens to an alternate reality. At first, this other world seems perfect. Her "other" parents are loving and attentive, and the neighbors couldn't be nicer. However, in this alternate reality nothing is what it seems, and the only way for Coraline to stay in this "perfect" place is to sew buttons in place of her eyes.

With Henry Selick ("The Nightmare Before Christmas") directing this film I expected something much greater than what was delivered. Although it featured major actresses like Dakota Fanning ("Man on Fire") and Terri Hatcher ("Desperate Housewives"), this movie was anything but noteworthy.

The characters in the film were interesting to watch as they maintained their own eccentricities, but overall the film was very bland. The animation was poorly done, and reminded me of a high school computer science project. However, it only makes sense that the animation would be bland when paired with the dull screenplay. In addition, the dialogue between the characters was choppy and unrealistic. With these unfortunate factors I found it difficult to make it through the entire film.

The all-encompassing word that I can use to describe this film is: weird. There are scenes where naked old woman "unzip" themselves to reveal young former actresses. Voodoo dolls are used to capture the spirit of children living in the "real" world. Perhaps if someone were on illicit drugs (not that I am suggesting them) this film would be interesting, but otherwise it is hardly worth the hour and a half of my life. Half way through the film I wanted to sew buttons in place of my own eyes.

I would suggest that someone go see "Coraline" if they first meet some qualifications. It is Tuesday night, all of your friends are busy with homework and you just found four dollars lying on the street. Also, be prepared to be utterly confused, bored and terrified. Perhaps if you need a nice place to take a nap you could sleep on the chairs in the theatre, while the movie plays in the background.

Coraline is now playing at the Clifton 5 for matinees only.

Worth the Rent: Role Models

By **JORDAN YEAGLEY**

"Role Models" is a hilarious comedy that centers around two friends, Wheeler (Seann William Scott) and Danny (Paul Rudd), as they serve out their court-ordered time at Sturdy Wings, a mentoring center for children. After being fired from their jobs as energy drink salesmen / Anti-drug motivational speakers both Wheeler and Danny must figure out how they can survive while at Sturdy Wings.

To round out the cast Christopher Mintz-Plasse ("Superbad") plays Danny's "little." He is a social outcast who finds his only place of belonging in a medieval reenactment society. Then there is Bobb'e J. Thompson ("Cellular"), who plays Wheeler's "little." He is a foul-mouthed child who loves ruining the life of his "bigs."

This film is one of the funniest comedies I have seen in a long time. Both Scott and Rudd are brilliant actors who can somehow make the audience feel bad for these seemingly loser characters. Then, to see McLoven take to the battlefield and attack the king with a foam sword, what more could I ask for? This week instead of going down to the Clifton on Tuesday stay home with a group of friends and rent "Role Models." You will not be sorry.

The annual dance ensemble performance was held on March 20-21 to raise money for a local family. The Kickline Team, Step Team, Social Dance Club and Men's Hip Hop Team performed several dances.

Fashion Forward

Top 10 must-haves for spring

By **KELLY FERGUSON**

Now that it is officially spring, it's time for some spring-cleaning! As you clean out your closets, make sure to keep a few items that will compliment your wardrobe. Below are my Top 10 Must-haves for spring. You may wish to splurge on these items or may even find some crumpled in your closet after you pack away those winter clothes.

First is my top ten for the ladies:

#10. **Layered Jewelry**: Accessories are an important part of any outfit, but sometimes it is hard to choose the perfect piece. Layering jewelry is a great way to enhance an outfit. Mix and match short necklaces with long ones and wear an assortment of colors. Don't worry about picking between gold or silver, wear them both!

#9. **Embellished Headbands**: Blair Waldorf brought these back last year, and this year they are better than ever. Some popular additions to headbands include feathers, flowers, beads and bows. Not only do headbands look elegant, but they allow for a quick and easy hair fix.

#8. **Gladiator Sandals**: Though most people find these shoes unattractive, comfortable gladiator flats are a great way to add a bohemian feel to any casual outfit. You do not have to jump right in to knee-high sandals with lots of straps; look for flip-flops that have straps across the top or that simply wrap around the ankle. Do like the Romans do and sport some gladiators!

#7. **Rain Boots**: Rain boots, or "Wellies," are essential in Pennsylvania during the springtime. April showers make it difficult to wear any kind of shoe that soaks up water. Rain boots are the perfect fix, and they are becoming more stylish and comfortable. Pair these boots with some jeans and a light sweater for a waterproof outfit.

#6. **Cinch Belt**: High-waisted belts are a great way to show your curves through a flowy dress. Pair a thin belt with a chunky sweater dress to make it more figure friendly. Thicker belts are great over a high-waisted skirt. Belts are also a great way to add more color to an ensemble, so don't worry about matching perfectly.

Next up are the Men:

#10. **Loafers**: These shoes used to only be seen on your grandfather, but now they are a staple of most spring fashion lines. Loafers can be worn with shorts, jeans or slacks. Choose a basic color such as black or brown. This gives the shoe some versatility with many different types of outfits.

#9. **Checkered Ties**: Spring is a time for job interviews, so it is only logical that students flaunt some classy business attire. Ties instantly make a casual outfit business ready and can also be worn out of the office. A popular style this spring for ties is a checkered pattern. Instead of stripes, buy a colorful checkered tie and pair it with a solid colored button down shirt.

#8. **Plaid Shorts**: These have been popular for a while now, but this year the colors are even brighter – the more colorful, the better. However, be careful when pairing theses shorts with a top. Try and wear a solid color or one with few patterns. Too many patterns can make an outfit look cluttered.

#7. **Rain boots**: Most people think that rain boots are only something that girls can wear, but why should guys have to deal with wet shoes while the ladies are keeping dry? Men's rain boots are similar to the women's, but they have a more masculine look to them. If you don't wish to stand out, choose a dark colored boot, such as black or forest green.

#6. **White pants**: Once the weather begins to clear up, white pants can be worn with many different tops. For a laidback, beachy look wear white jeans or slacks with a polo shirt or T-shirt. If you want a classier outfit, wear a button down or throw a blazer over top of your tee. White pants are extremely versatile and give the ensemble a light, springtime feel.

Add these pieces to any outfit to give your look a touch of spring. Check out the next issue for my top 5 must-haves!

Maxing out your workout

Not just dumbells: Jacked-up suggestions for your old routine

By **AMIN KHOSHNEVISAN**

With nice weather approaching, more students are hitting the gym. Despite all the hard work put in, some may not be achieving desired results. In order to keep work outs productive, The Juniatian sat down with Doug Smith, strength and fitness coordinator, and asked about ways to get the most out of a workout.

KEVIN DUNDORE / JUNIATIAN

Senior Alissa Murphy is maxing out her work out in the KSRC.

For those that are new to the gym or working out, Smith suggests doing a structured total body program, as opposed to only focusing on certain parts of the body. Start slowly suggests Smith, the key is discipline. When you are disciplined and maintain a set program and frequency of workouts, results will show.

"Warm ups are always necessary," said Smith, who suggests a low impact exercise to start. A quick 10 to 15 minute exercise will increase heart rates and prepare students for any workout. "The elliptical is fantastic," said Smith. It is a low impact replacement for jogging and will still help achieve similar results.

Flexibility is also a crucial aspect to a good workout. A good stretch prepares the muscles to go through a full range of motion during the workout. According to Smith, stretching helps with "injury prevention and performance enhancement." A good workout will also increase flexibility by going through a full range of motion.

To keep seeing results, do not let the body adapt to the workout. "You can work the same machines and just switch up the rep/set/interval amounts," said Smith. A repetition (rep) is the amount of times one does an exercise. A set is the number of times one does that certain number of reps, and an interval is the amount of time in between sets.

Here are a few of Smith's key elements to incorporate into your daily routine.

Bench Press: Instead of the traditional bench press, Smith urges dumbbell use with alternating push-ups. "A bench press is nothing but a push up," says Smith. For beginners, a regular push up is a good start, progress to doing push-ups with either one's hand or feet up on a bench.

The gym also features hanging chains, along with physio balls for a more advanced push-up. According to Smith, more advanced push-ups will not only work the main muscles, but provide for greater shoulder stability.

Abs: Smith believes in working the entire core when considering an abdominal workout. He suggests beginning with the upper abs, then the lower abs and ending with the obliques. This can be accomplished through variations of crunches, sit-ups and rotating movements.

Smith stresses that symmetry of a work-out is key and this is an area that many neglect. The lower back is also part of the core, and should receive as much attention as the abs.

There are three levels to address in the core; stability, strength and power. To gain stability Smith suggests postural workouts such as Pilates. Once a good stability level is reached, strength can be addressed by doing resistance workouts using either bands or weights.

Squat: When performing a squat, the hip complex is working. Smith suggests a few workouts that can supplement or compliment the squat. Smith recommends the front squat, where instead of the bar being placed on the upper back, it is placed on the front shoulders. Squat jumps are a series of jumps done in succession, where the weight is reduced from the regular back squat, and focus is placed on agility.

Lunges, the leg press and one-legged squats also attack the same muscles as a traditional squat. To increase difficulty, medicine balls can be held while squatting and physio balls can be used as instability. "Put your back against the physio ball, the ball against the wall and go down real slow and it'll burn, it's a good workout," says Smith.

Bicep Curls: "I really like the cables," says Smith, which are located in the fitness room and consist of rubber cables attached to the wall which can be used for resistance training. Smith says that one must control the weights on the way up and on the way down.

"You want to contract a muscle while letting [the weights] down. Always keep the muscle under tension," said Smith.

Also, the way the hand is positioned determines which part of the bicep is used. Using a straight bar with different grip widths, weighted barrels or a towel if working out with a partner, provide manual resistance.

Do not perform any exercise without the supervision or technique required to perform the exercise.

Women's 'mafia' runs racket

Underestimated girls' tennis team guns for Landmark Championships

By **AIMEE RADIC**

"Go Mafia," shout the girls before every tennis match. That saying symbolizes their goal as a team to destroy and surprise their opponent as if they were the Mafia. At 5-2, the Juniata tennis team has reversed their past season record and their potential has risen as a surprise.

Coach Beth Bleil explained that the team is ranked fifth out of 17 teams in the poll this year

Bleil feels that this ranking is not matched up with the true potential of the team. "We have a new freshmen, Jenny Wang, that just transferred into Juniata and our talent as a whole is underestimated," said Bleil. "I think we will be a surprise success."

Sophomore Lauren Perow also added to this confidence when she said, "I feel confident that with our wins, instead of getting over confident, our mindset will stay and we will continue to surprise and do well. Last year we were timid going into matches. That is not the case this year." To start off the spring season, the team went to Hilton Head, South Carolina for a tournament. While there, they were 2-2.

"We played really well and competed against some really good teams," said Bleil.

At these tournaments, the whole lineup gets to participate in matches and team bonding is very important. "We went everywhere together. We cooked dinner and went out to dinner together every night along with other activities," said Perow.

Bleil said that it is great to see everyone bond together and play, and it is even better that, "non-starters get to develop competitively and have success."

Bleil's most memorable match was freshman Hilary Walsh closing one out at 7-5. "It took a lot of courage and now I know I can trust her when it comes to conference matches," Bleil said. "Closing out a match means fighting the rising momentum of the opponent and to be able to stay concrete mentally. It is very impressive."

Just recently, the team beat Scranton 7-2 and IUP 8-1. Scranton was ranked second in the polls last year with a record of 5-1. Bleil said about the win, "Scranton did not lose many players and their talent is just about the same as last season so I know that we are capable of great things this season. We are better than estimated already because of that win." IUP, a division II School also walked into Juniata underestimating the girls.

The team is made up of "sassy" strong-willed girls. Along with a strong mindset, the team is the deepest it has ever been. "Underclassmen pull their weight and are really strong," said Perow. She feels that the team should remain talented for at least another three years.

Along with, "Go Mafia," the team has some other interesting rituals. Perow stated that their team song is, "I'm on a Boat," by On a Lonely Island. She cannot remember how this song came about, but the team listens to it before every match to get them prepared for the upcoming matches.

Along with the song and saying, the leadership on the team is very effective. Perow described the two seniors as, "very serious and determined in pulling the team together." She also said, "Juniors Amanda and Maggie are very important in our teams' leadership. Maggie emotionally leads the team making sure everyone is always being taken care of and considered. Amanda is really up on fitness. Together the captains and upperclassman plan trips to Patrick's Lodge to do team hiking, camping, and other bonding experiences to better the attitude on the team."

"We are showing that we have a lot of potential and talent in the beginning of the season and now we have to perform to that potential everyday," said Bleil.

This is the mindset the team will need for the next few weeks as number one ranked team Moravian, comes into view. "Moravian should be a great match, and I feel confident that we should be able to compete and have a great chance at surprising a lot of people," said Perow.

"If we perform well, it is possible for us to be in the top four," said Bleil. If they keep up their clear determined mindset Juniata could potentially be looking at another Landmark Championship participant.

Junior Maggie Wolenter returns a shot from her opponent from Frostburg during her match on March 23. Juniata won with an 8-1 win over Frostburg State.

JCWB captures ECAC championship title

By **ERIN L. MCGINLEY**

While the rest of campus was enjoying their first weekend of spring break, we were celebrating a championship. JCWB captured its first ever post-season title in women's basketball history during the Eastern College Athletic Conference Association (ECAC) South Region Tournament. As the last team to qualify for the tournament, there was nothing holding us back. We were ready for our last run of the season.

In the first round we traveled to Reading to upset the number one seed, Albright College, by 21 points. The momentum that followed us throughout the game was crazy. It never left. We held onto it through the entire tournament.

"Once we defeated Albright, we knew things were only going to go up from there, we knew what we were destined to do," said junior Kelly Rotan.

We defeated Alvernia College by eight points to make it to the championship round, which consisted, ironically, of the number seven seed, Wesley College, playing our eighth seed.

"We knew we had something to prove and by being the eighth seed, had nothing to lose. So we went out with reckless abandon," said Rotan.

As the final seconds ticked down and the seniors retired from the game one by one, the tears couldn't be held back. We won our final game by 20 points with the help of tournament MVP, senior Claudia McDowell. McDowell, also the Landmark Conference Defensive Player of the Year, scored 46 points through the three games, accompanied with nine steals.

The emotions of winning the last game of their career was apparent on the seniors' faces. The tiny gym was filled with palpable excitement. It's moments like these that teammates never forget. Very rarely do programs finish their seasons with a win. We are among the lucky few.

When we could finally stand still enough to take a championship picture, with our championship sign, we smiled so big, not caring how we looked. In that moment we were so proud of ourselves and all of our accomplishments that we couldn't hold it back. In a championship picture most people would hold up one finger to signify winning first place. We didn't forget where we came from, we held up eight to represent our eight seed in the tournament.

Along with those eight fingers, our fingernails were painted bright, obnoxious colors. Our seven freshmen started the trend. During one of the first practices, coach commented on how terrible the freshman's choice of nail polish was. She said this would lead to getting called for extra fouls since their hands stuck out more. The freshmen ignored her, and as the season went on, they recruited more and more players to paint their nails outrageous colors.

By the championship game, everyone's nails were painted. It just goes to show what some feisty little freshmen can do to a team.

Having the first post-season title in program history is more than any of us could have asked for. Our goal this season was to win the Landmark Conference title, but that dream got cut short. When we were rerouted in the direction of ECACs we took advantage of it since it was all we had left. Nobody thought that was where we would end up, as tournament champions, but we did it.

PHOTO COURTESY OF JEN HNATUCK

Eighth-seeded women's basketball blossomed at ECAC South Region Tournament on March 8.

The four seniors that will be leaving the program this year have certainly left their mark. Ever since their freshman year, JCWB has had a winning season. Over their four years, the seniors leave with an 84-43 record. In the past two years, they compiled a 36-21 record with two regular season tournament championships, two berths to the Landmark Conference Playoffs, a birth in NCAAs, and now ECAC South Region Champions.

Freshman Casey Hoffman said, "It was hard watching them [seniors] lose in the conference semifinal game and it was inspiring seeing them not give up, knowing we had more games to play. When we went on to ECACs they had a drive to win and I'm happy for them. It makes me and the rest of the girls want to do big things for next year."

Beyond all of these words describing their legacy, they leave so much more: memories, laughs and a shoulder to cry on. Some of these memories are the best times we've had. These four girls are strong, and they're going to accomplish great things. I couldn't be any more excited to have had the opportunity to be their teammate. Congratulations, girls, way to go out in style.

Stars shining for Track and Field

Now outdoors, team burns rubber and toasts records

By **CHAD KOHR**

The arrival of spring has been marked on the Juniata track and field team's calendar for months. Spring means the transition from indoor to outdoor track and, in the first meet outside, the Eagles looked more than comfortable.

The men's track and field team put on an incredible performance and won the Roanoke College Maroon Invitational on March 21, while the women took a respectable third place.

The men were led by senior Kyle Mazur, who had a day to remember. Mazur, who throws the javelin, returned from a year and a half throwing hiatus due to illness and achieved his personal best throw of 209 feet 10 inches, 13 feet beyond his personal best. This throw also automatically qualified Mazur for the NCAA Division III Championships in May, he is not yet satisfied.

"When I released it, I didn't feel like I threw hard, it just went. I went over to the side and when I was told the distance, I was kind of shocked.

"I threw it far but there is still plenty for me to work on. I can still definitely improve. My goal is to be the first NCAA champion in Juniata track and field history," said Mazur.

While Mazur was the great spark the team needed, senior Patrick Filamor continued to do what has become expected of him, scoring in three individual events. Filamor won the 200 meter dash, placed second in the 100 meter dash and finished fourth in the long jump. Filamor feels the hard work he has put in during the offseason has made staying on top of his game easy.

"It was the first meet outside and the weather wasn't great, but I was still hitting my personal record times. I've been working hard for this since last year. The team lifts and conditions a lot and I put in the work so that my times would be where I wanted them for the first meet," said Filamor.

The women were led by junior Laura Rupprecht. Rupprecht, like Filamor, scored in three events and was the highest point getter for her team, highlighted by a victory in the 1500 meter run. Despite her success, Rupprecht is more focused on the potential the team has and the possible success for the rest of the season.

"It was fun to go to a new place to compete and run in warmer weather, but we were a little disappointed with the lack of competition in the middle and distant running events. Even though we won a few of the events, our times were slow.

"We would like to have a top two finish at the Landmark Conference Championships because we've been stuck on third, so we need to just keep working hard. The seniors are doing a great job with leadership and are helping to motivate everyone to improve," said Rupprecht.

Senior Kelsey Buffenmyer takes her role as a leader on the squad very seriously. Buffenmyer has been one of the most consistent and outstanding performers recently and is very excited about exceeding personal and team expectations in this outdoor season.

"I try to lead by example at practice by maintaining a positive attitude and showing the underclassmen what they can achieve if they take things seriously and train hard. I'm really excited to continue to improve personally and hope to compete in nationals this year and I'm confident we'll be successful as a team as well," said Buffenmyer.

The upperclassmen aren't the only motivating factors for the team, as the members are extremely pleased with the new track to practice on. Junior Melissa Johnson feels like the renovations will give the team an edge they might not have had before.

"Having a new track is really helping us practice. The jumpers have a new pit, the pole vaulters have their own area and runners now have a steeple pit. We have the resources that will help prepare us for every meet so that nothing is unexpected," said Johnson.

Things are definitely looking up for the Eagles and there is a buzz amongst the team about the prospects this year has to offer. "The talent we have in the freshman class combined with the ability of our returning runners, jumpers and throwers is really exciting and we can only expect a great turnout come the conference meet," said Johnson.

Tennis team has sights set on contending

Doubles leading the charge; singles volley to contribute more

By Nick Talisman

The men's tennis team has been consistently improving in recent years. This year they believe they can go farther than ever before. The team's strong bonds have propelled it to reach new heights.

The Landmark Conference had been consistently dominated on the men's side by Drew University and the University of Scranton. However, the team showed they could contend with the tough competition when they narrowly lost to Scranton 5-4 in the first match of the spring season.

"We kicked off conference play with a sweep of doubles against Scranton. Although we narrowly lost the match, we've shown the conference we are a contender," said Coach Bleil.

Freshman Ross Imbrie said, "Our doubles team is a dominating force that will wreak havoc in our conference."

The heart and soul of the team resides in a single word, "Sut." The tennis team was the originator of the word, which has made its way around the campus and become a regular in the vernacular of many students.

Senior Casey Chew says, "Sut is the magical word. As for the origins, it just came to be. 'Sut' can be congratulatory, it can be motivational, it can be a mind trick, it's a very versatile word."

"Sut" is used to give a pep talk, or yell out congratulations. Aaron Rhodes and Chew, the five and six singles players respectively, especially use the word.

When one teammate misses a shot, the other is always there to help him shake it off. Cries of "sut" ring out after every winner.

Coach Bleil makes it a staple of practice to work on team dynamics in doubles, and recent results show that she has the right idea.

But this team forged their bonds of teamwork far from the tennis courts of Juniata. Every spring break Bleil leads an excursion to Hilton Head, where the team plays some unofficial matches and have fun in the tropical weather of South Carolina.

Imbrie says, "We had some absolutely superb team bonding sessions on the spring break trip and are now much more united because of it."

Whatever it was, it seemed to work as the team responded with their phenomenal cooperative doubles play against Scranton.

The team's next match was with the other perennial power, Drew, and they knew that early season matches do not get much bigger. Unfortunately, they weren't able to pull out a win, but believed they played to the best of their abilities.

Imbrie said the match with Drew really tested the team as Drew has been the best team for a long time.

The team had a successful fall season as well, going 3-1, and improving its confidence headed into a long break in between seasons.

Perhaps the key ingredients to the chase for the playoffs are the four seniors on the team: Jonathan Skoner, Rhodes, Ryan Navarro, and Chew. All four bring their own unique brand of leadership to the team.

Skoner leads by example as his attitude and tennis technique are everything a coach could dream for. Navarro eases tension with a truly unique sense of humor. Finally, co-captains Rhodes and Chew form the spiritual center of the team, breakdancing for every pre-match introduction, and making sure there is plenty of "sut" to go around.

Imbrie says, "The four seniors have never wavered from their dedication to the team and there is no doubt in my mind that they will go out with a bang."

It does not seem like the team is getting ahead of itself when it considers itself on par with Drew and Scranton. Only time will tell, but for this team its playoff success or bust. They're confident they will be giving congratulatory "sut's" deep into the spring.

Men's tennis won 7-2 Tuesday against Penn State Harrisburg.

CHRISTOPHER SHANNON / JUNIATIAN

Senior Aaron Rhodes returns a hit during Juniata's match against Penn State Harrisburg on March 31.

Softball sweeps Landmark opener against Drew

With 11-5 record, Juniata leads conference

CHRISTOPHER SHANNON / JUNIATIAN

Senior pitcher/outfielder Pam Mansell delivers a pitch during game two of Juniata's doubleheader against St. Vincent on March 23. Juniata won game one of the double header 10-2 before falling to the Bearcats in game two 5-2.

By Sarah Ruggiero

With a solid 11-5 record, Juniata softball is setting the bar for conference competition. Opening conference play against Drew University, Juniata heated up the field with an outstanding display of athleticism.

Senior Tara Carl heads the team as the March 23 Landmark Conference Player of the Week. Carl is batting an impressive .533 with 23 hits in 46 at-bats, helping the team to their conference sweep against Drew, while also knocking in her first career home run.

Junior offensive threats Sarah Eckard and Callandra McCool have combined for 48 hits, while junior Rachel Nagy leads the team in runs batted in.

Junior Alyssa Erb has manned the pitching mound for six total wins, flaunting an intimidating 2.23 earned run average in over 51 innings pitched.

"I'm pretty happy with our 11-5 record and our current top position in the conference. Our hitting finally came around to go along with our solid defense. Our plan is to continue to improve and win some more!" said junior Stacy Nagy.

Eagles hope to soar despite slow take-off

Baseball steps up to plate with high expectations to regain conference lead

By KEVIN J. CAMPBELL AND CHAD KOHR

The Juniata College baseball team is heating up, winning five of their last seven games after a 3-7 start as of press time.

Despite a slow start, the team is now 8-10.

"We are only a little behind schedule, but we seem to be making progress as the season goes on," said Head Coach Gibboney.

> "It's very encouraging to see that they are working hard through some growing-pains and coming along."

We have been able to learn our strengths and weaknesses, one of our ultimate goals. It was apparent that our main weakness is pitching. The team is made up of a young pitching staff, lacking experience. As the season progresses and more of the young pitchers are able to gain time on the mound, pitching is becoming more stable.

"It's very encouraging to see that they are working hard through some growing pains and coming along," said Gibboney.

Offensively, we are strong at putting pressure on teams in terms of getting on base. In the beginning of the season we were hitting too many fly balls, giving the other team easy outs. Now we're adapting by putting the ball on the ground and forcing opponents to make plays.

Although we are not hitting as many homeruns as we would like, with only two this season by senior second basemen Kevin Small, we are on schedule as far as hitting is concerned. The middle third of the line up is starting to get key base hits and drive in more runs than in earlier in the season.

As we progress into conference play we must maintain intensity and focus, especially when playing multiple games in one day. As of press time, we are 2-4 in the conference.

"When you play two games in one day and win the first game you better tighten the screws down so you can win the second or the day is ruined. If you win the first game, I'm always concerned about losing a little bit of intensity for the second game. It's key for us to get off to a good start in a short three game series. The Sunday game is a marathon of nine innings, which you have to be very patient in hopes that something breaks to help you out," said Gibboney.

If we can start winning two to three games of a one day series, we will have a legitimate chance of making the playoffs.

Out of the seven teams in the Landmark Conference, we were ranked fourth in the pre season polls. Now with only Scranton behind us, we need to make a run to finish in the top four in order to make the conference championship in May. Twelve of the sixteen games left are conference games.

As a team we have high expectations for the second half of the season. Senior Kevin Small has been a force at the plate, leading the team with a .382 batting average, two home runs, and 34 total bases. Small shares a team leading .507 on base percentage with fellow senior Adam Spadafora, who has been extremely effective in getting on base in the leadoff spot.

Spadafora, who leads the team in hits, has been able to create opportunities for runs that Small, sophomore John Martinez, junior Greg Hoffman, and senior Dane Ott have capitalized on. The foursome has combined for 68% of the team's total runs batted in with 58, giving the team an opportunity to win every game.

"Everybody has a very positive attitude and awesome work ethic. We have a good mix of upperclassmen leadership combined with underclassmen youth and enthusiasm. Everybody is willing to give 110 percent knowing that the rest of the team is doing the same. This is the most fun I have ever had playing baseball because of our good team chemistry," said junior catcher Greg Hoffman.

The other teams better watch out because in the second half of the season we're comin' in hot with a little yatty ya!

CHRISTOPHER SHANNON / JUNIATIAN

Freshman pitcher Matt Regan throws a pitch during Juniata's game against Lycoming College on March 31. Regan struck out five Gator batters over five innings of work, but the Eagles fell to Lycoming 11-3.

Eagles fly in California

By SUZI LINDQUIST

Over Spring Break, the second ranked men's volleyball team made a trip to California to play fourth ranked Santa Cruz and the University of the Pacific. The Eagles came home from the trip with many memories.

Juniata played University of California, Santa Cruz on March 11, dropping no games, but coming close in points. While winning the first game against the University of Pacific, Juniata went on to lose the next three and the match.

Dan Follett, who had no errors against Santa Cruz, said "at Pacific we didn't play very well, we were still a bit jetlagged, but it was non conference so it didn't really mean anything. Santa Cruz, we beat them pretty bad, it was a big win for us for DIII seeding. It was the game we needed to win and we won. With Pacific I wish we would have played better so we could have said we beat a DI team on the west coast, but we didn't play particularly well – I hate losing, but it doesn't really affect seeding any, or standings."

But the trip was more than just volleyball. It was about playing together, competing at a higher level, but most importantly, being together as a team. Though it was only a four day trip, the team was able to see the sights a little bit.

"We got one day to hang out in Santa Cruz, it was a very interesting town. Overall, we were either traveling or playing volleyball," said junior Zach Wanner.

The team, however, was able to go to the beach, hang out in groups, and relax between games.

"Well we were in Santa Cruz, our hotel was a mile from the pacific ocean, and we were able to go walk around on the beach and they had a really cool pier, so that was neat going there, and going downtown. We went all together and walked around and broke off separately from there, and we'd all go somewhere to eat or all meet at the beach or something," said Follett.

At the pier, the team noticed something a little odd to those hailing from central Pennsylvania.

"The sea lions were out of control!" said junior Anthony Damiano.

Follett added, "They were perched on the pier – we were freaking out because sea lions to us are weird."

"Abnormal. The sea lions were abnormal," commented Wanner.

For some of the team, the cross country journey was their first to the West Coast, while to others it was the first time on a plane. California is the farthest trip made by most of the players, but the 2005 team was able to make a trip to the Virgin Islands.

"Chicago is really the farthest place other than California that we've gone to. But we didn't really get to see the city. Just volleyball," said Wanner.

The win in California was one of the best for the season.

"Santa Cruz is our west coast DIII rival. They're the best team on the west coast for DIII, and Pacific is the first [Division I] California team we've ever played."

At the Santa Cruz match, two of the hitters recorded error free matches, while three had kills in the double digits. Matt Werle set for 48 assists, and Anthony Damiano recorded 8 digs. Many members of the team think it was one of the most important matches of the season and has set the way for the road to come.

Follett agreed, adding, "It was fun; a good experience. I wish we could have played better and played some more teams out there, but it was a good little trip."

Last weekend, men's volleyball beat number-one ranked Springfield 3-1 last weekend, clinching a spot in the Molten Invitational tournament, and beat NJIT 3-0. Senior Dan Powers was named EIVA Tait Player of the Week and the Sports Imports/AVCA DIII Player of the Week.

On the Flip Side

By **Bennett Rea**

All this talk about David Sill becoming the mayor of Huntingdon has gotten me thinking: what would I do if I were the mayor of Huntingdon? There are definitely some first actions I would take. In fact, I've compiled a comprehensive list of all my future mayoral actions. I'm not exactly sure what power the mayor of Huntingdon has, but I'm guessing unlimited. And I will use and abuse that power to no end.

1. First, I would drop the hell out of Juniata. Who needs college when you're the mayor of the freaking town? I'll get myself an honorary degree instead. Works the same way, I bet.

2. I would also order Huntingdon Police to lighten up on underage students they catch drinking off campus. This would give me the coveted Basketball House-vote in my next campaign in two-thousand-whatever-the-year-is.

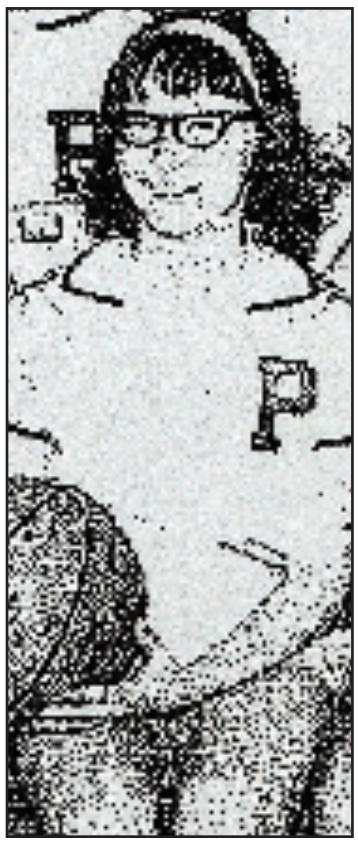
3. I would put a Sheetz in between Little Sheetz and Big Sheetz. It would be medium-sized.

4. I would bribe Budget Travel to make sure Huntingdon gets the distinction of Number ONE Coolest Small Town in America. Do we deserve it now? We sure don't! But after I'm through using my mayoral powers, this town will deserve that title…even though I will have to blackmail people to make Huntingdon that cool in the first place.

5. I would attempt to make Huntingdon a hot spot for celebrities. Yes, that's right, next time we'll get Jon AND Kate (and maybe the eight, but I doubt they'd chill with any one of us at East). With Robert Downey Jr. and Jon Gosselin visiting town, I'm definitely seeing a hot vacation spot for famous faces in Huntingdon's future. And by hot vacation spot, I mean freezing-cold vacation spot.

6. I would place speed bumps every 12 feet along Moore Street so people would slow the hell down. Not only would it save student lives and all that, but it would make for some very entertaining walks to class. It would be like a low-speed, very annoying obstacle course. Everyone loves those!

7. I would put safety nets up near the cliffs so that those who take a tumble will be just fine. Tax money would be well-spent there, as I know of at least one (and at most, one) person who's had a dangerous fall there.



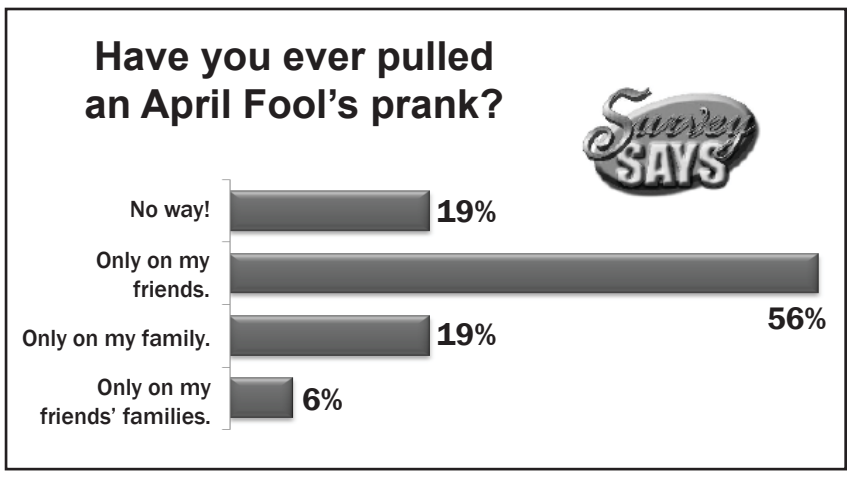
8. I would mandate that businesses be open on Sundays. I mean, honestly, how many places here are actually open on Sunday? Two? I don't have anything funny to say about this; it's just a completely legitimate complaint.

9. I would ban students from running for mayor of Huntingdon.

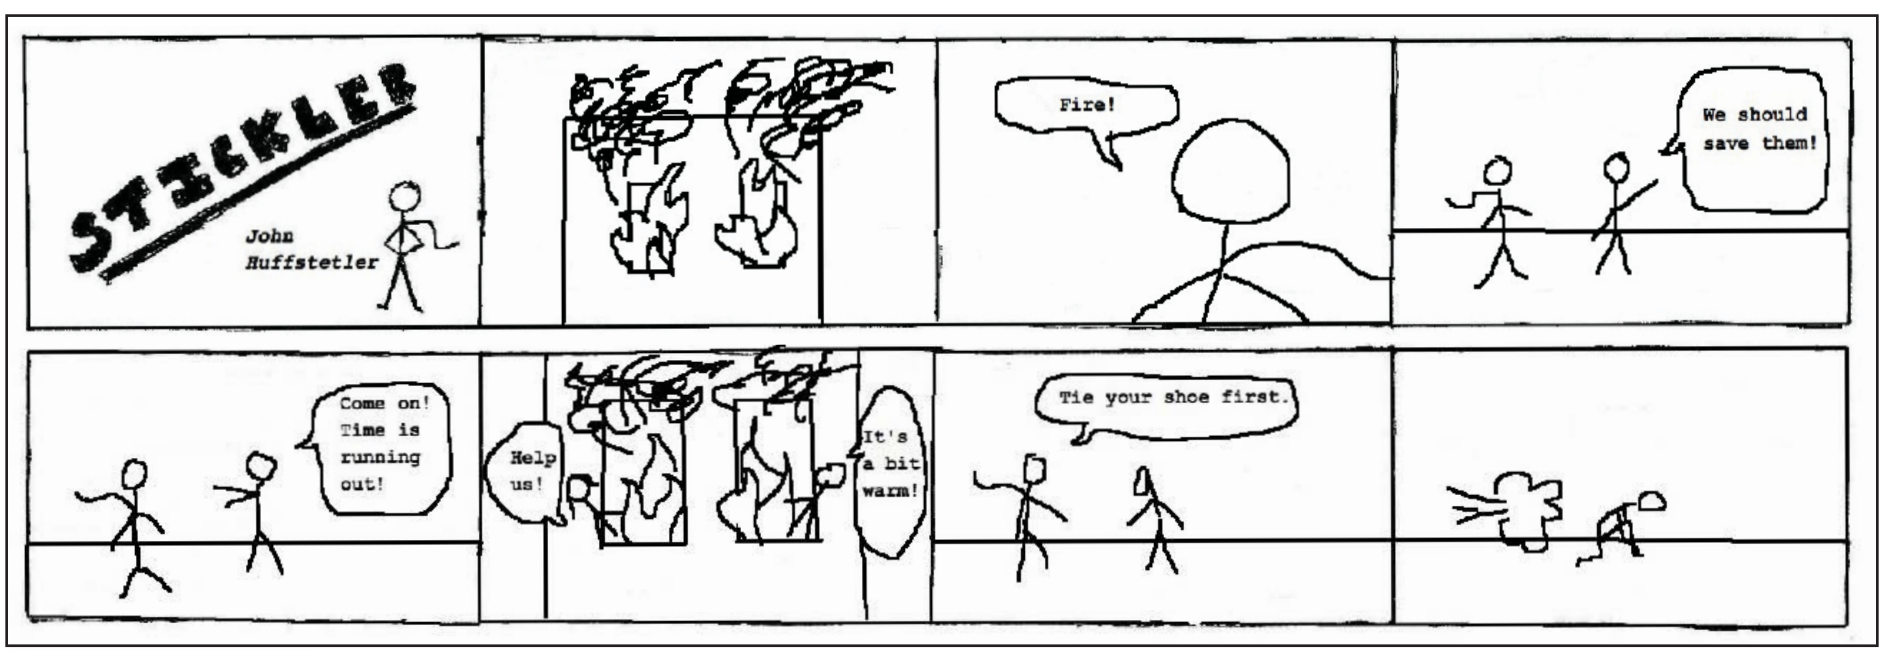
Now, I'll eventually get to problems like the economy, the war in Iraq and world peace, but I'll need a little time. I'll focus on the very small, and often, fabricated problems of Huntingdon I just discussed. I can't help but think that I would really help Huntingdon with all of these ideas. Why, in just a year, it'll be full of celebrities, speed bumps and safety nets! If that's not the definition of improvement, I don't know what is.

(EDITOR'S NOTE: **im-prove-ment** [*im-proov-muh nt*] a person or thing that represents an advance on another in excellence or achievement)

Guess who?



Can you name this Juniata professor?



This campus personality will be revealed in the next issue.

Last issue's "Guess Who?" (pictured above) was Bob Miller, chair of the religion department.

College plays vital role in hometown's health

Futures of Juniata and Huntingdon linked

By **MARIE BOLLER**

No one entering the town will miss the bright banners. The College, in partnership with the Huntingdon Chamber of Commerce, has contributed $16,000 to print them. There will be forty scattered throughout the community, each featuring smiling college students at play in and around the town. The tagline will read: "Welcome to Huntingdon County, Home of Juniata College."

Juniata College is Huntingdon's key asset. The College employees pull up the per capita income level of the town and have expanded the real estate market. The Juniata community, including students, staff and faculty, comprises 30 percent of the town's population, packing a substantial consumer punch for local businesses.

And it is the smiling faces of Juniata students, larger than life on the banners, which will add a splash of color to the streets in the coming weeks. Senior Josh Beckel is on one, with another student perched beamingly on his shoulders. Beckel had no idea that his face was to be used on a banner. "As long as I don't have to see it when I'm walking across campus in my pajamas," he said. "That could get embarrassing."

The banner project indicates a growing connection between the College and its surrounding community. David Sill, a freshman

The 'Sophomore Slump'

Second year students face academic and social stressors

By **KELLY O'SHEA**

There is a contagious phenomenon on campus. Juniors and seniors can attest to it, sophomores are currently battling it and freshmen are trying to avoid it. The Sophomore Slump is affecting many students on this campus as well as others.

According to a Cornell University study, "Sophomores experience a whole new set of stressors as they return to the college campus." The study claims that a newfound set of expectations and fewer warnings can lead to challenges for second-year students.

The University of Central Arkansas concluded, "For sophomores, college is no longer new; the excitement and thrill of a new experience has worn away and they now face the reality that college will be three more years of hard work, courses, papers and significant financial investment."

Common symptoms of the Sophomore Slump include: trouble with studies, personal crisis, social alienation and dissatisfaction with one's college and its courses.

Sophomore Sam Smith said, "I lost motivation for a little. It was out of necessity that I finally realized I needed to buckle down and start studying again."

Sarah May Clarkson, director of academic services, referred to freshmen year as the "Honeymoon Period." After this period ends and students return for a second year, Clarkson said, "You know the routine: the food sucks, the dorms suck, everyone knows you."

Junior Dan Kraft remembers this feeling. "I just felt bored. I felt like I had done everything I could on campus."

According to Clarkson, "The Sophomore Slump is legit for reasons that are intellectually valid and emotionally real."

Sophomores tackle the stresses of POE decisions, foreign study and internships.

Freshman Kim Amrod said, "Next year is going to be tough. There's so much pressure to declare your POE, and I'm really worried about fulfilling all of the FISHN requirements by the end of my sophomore year, too."

There are a number of reasons why Juniata students experience this phenomenon. Clarkson said, "The College spends a lot of re-

▶ *see* **SLUMP** *page 2*

Student to make home in 'bio-dome'

College approves dorm alternative

By **LEANNA YEAGER**

Next year, a student will live in a bio-dome instead of a residence hall. Sophomore Jacob Weller has had his proposal approved.

The dome will be west of the observatory behind Brumbaugh Academic Center. Weller will come back to Juniata about a week early to assemble his bio-dome and have it inspected for safety.

"There are a lot of different reasons why I want to try this… but mostly it's because I want to," said Weller. He also said that he had "always been interested in the concept and architecture." It will allow him to "live in something [he has] created."

Weller will pay for and build the dome with money that he has saved.

"A bio-dome is something that can be assembled by a few people in one or two days," Weller said.

One important part of Weller's bio-dome is the environmental aspect. The materials have not been completely decided on, but Weller intends to find things that are on the eco-friendly side. "I want to try and avoid things like

Juniata clubs unite to combat cancer

Student organizations contribute to arsenal aimed at cancer awareness

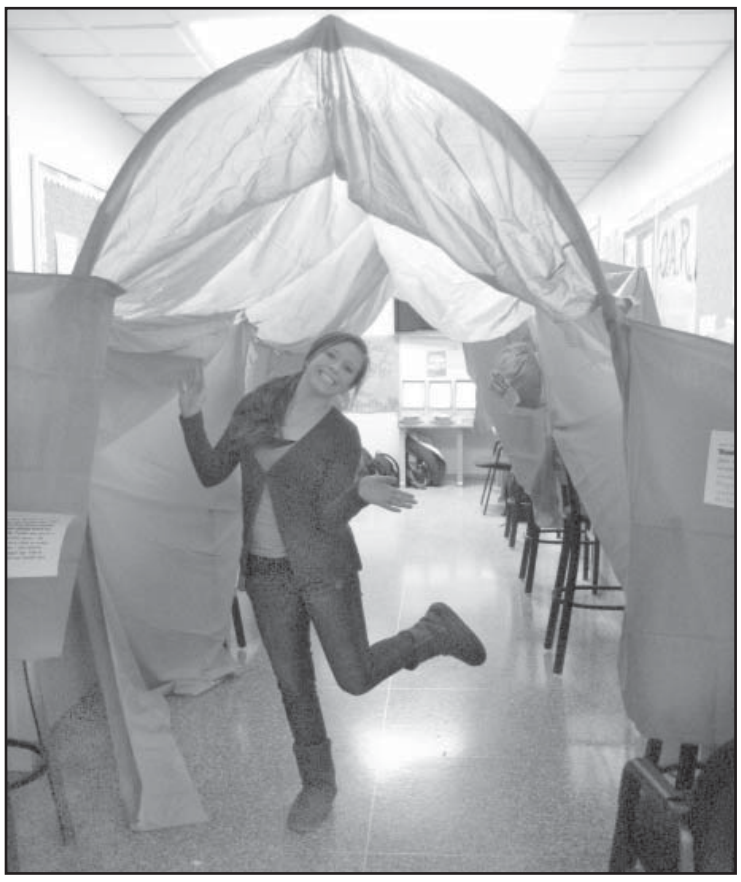

PHOTO COURTESY OF ZAC CUPLER

Sophomore Alicia Dahl, secretary of Juniata's Colleges Against Cancer club, waltzes through the colon display that the club set up outside of Baker Refectory.

By **Talia C. Valencia**

Over the past few months students have taken the fight against cancer to new levels. Events and fundraisers have become a common sight, and activists are pushing for more cancer education. Student -run clubs, including the new Colleges Against Cancer (CAC), are behind most of these events.

"Colleges Against Cancer is a student chapter affiliate of the American Cancer Society," said the club's co-president, senior Anna Bloom.

"[Our goal] is to integrate the American Cancer Society mission into Juniata College and to make more college students aware of cancer-related issues," said Bloom.

March was Colorectal Cancer Awareness month. To acknowledge this, the club created a giant colon display in the entrance to Baker Refectory. It was a tunnel of pink sheets to represent the colon and brown pillowcases were intrusive polyps. Once inside the passageway, there were colon cancer facts attached to the lining of the colon.

"We got people talking. That was what we wanted to do," said the CAC secretary, sophomore Alicia Dahl.

Bloom said CAC has four major divisions: advocacy, cancer education, Relay for Life and survivorship. All four of these goals have been or will be touched upon by the end of the semester.

Advocacy, according to Dahl, is "reaching out to elected officials and [the] campus to influence policymaking."

At the end of the colon display, there was a petition for students to sign. Its purpose was to "encourage PA congressman [Bill Shuster] to join in on legislation concerning free colorectal screenings for the uninsured," said Dahl. "We got 300 signatures by the end of the night."

The second division, college education, is meant to provide "education and awareness," said Dahl. Under this division, she said CAC has held "events like the giant colon and paint the campus purple, [which] were to catch people's attention and spark conversation. …At all of the events, there are cancer facts posted on the display and the tables in Baker."

Relay for Life is the third division of CAC. According to the Relay for Life Chair, senior Jen Kline, JAVA and JAB are also involved in the event.

On April 18, Relay for Life is being held on campus. Instead of the typical 24-hour relay, this year it will be 12 hours. Kline said, "We feel like it is much more doable for students who do 12 hours as opposed to being up for 24 hours."

Relay for Life has also teamed with The American Red Cross. "For every unit of blood over our historical average, which I believe is 67, the Red Cross is going to donate two dollars back to Relay for Life," said Kline.

In addition to the blood drive, Standing Stone Coffee Company gave 15 percent of their proceeds on April 6 to Relay for Life.

Kline said the club's goal is to raise 20,000 dollars that will go to the American Cancer Society. Due to the weak economy they are not expecting to reach their goal. As of the second week of April, 10,764 dollars was raised.

The last division of CAC is Survivorship. Dahl said Survivorship is about "bringing together survi-

▶ *see* **CAC** *page 4*

Sophomores face 'Slump'

▶ *from* **SLUMP** *page 1*

sources on freshmen to make their transition easier. Then we focus on saving the souls who can be saved."

She believes that the College needs to be more proactive instead of reactive. "After students have successfully completed freshmen year, we start to respond only to crisis," said Clarkson.

> *"You know the routine: the food sucks, the dorms suck, everyone knows you."*

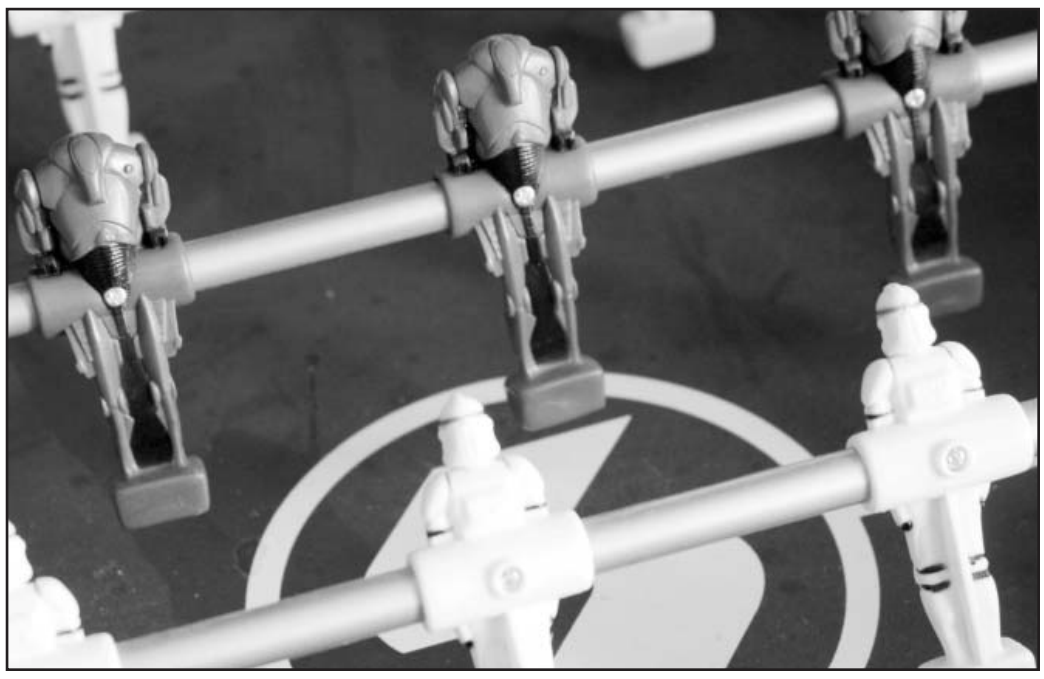
To stave off the Sophomore Slump, Clarkson feels the College could put sophomores into leadership positions that keep them active in the community or designate specific on-campus jobs that will keep them connected.

Accounting, Business and Economics Department Chair, Pat Weaver suggests that first year students come to college worried if they will fit in academically and socially, but then they do.

Weaver said, "When sophomores return, they think they know the ropes, and they start making mistakes because they forget the things that made them successful. It's really just a matter of over-confidence."

Kraft said, "By the time I was a sophomore I was so sick of playing that game to get the A and doing whatever the professor wanted. I wanted to do things my way."

According to Weaver, sophomores are also the toughest students to advise. Weaver said, "The problem is getting sophomores to meet with me. They either don't want to or they don't feel like they have to."



Juniata College students are not the only one's coping with the Sophomore Slump. Clarkson said, "I would think this is a fairly common sentiment and experience for sophomores and faculty in many schools."

There are numerous ways to avoid the Sophomore Slump. According to Clarkson, one way to keep your second year interesting is to set two or three doable, attainable goals. Join a new club. Learn Spanish. If you're shy, take public speaking.

Clarkson said, "In your second year, you're totally comfortable with college life so you have to step out of your comfort zone again to keep this year fresh."

Weaver said, "Don't forget the things that got you to be a sophomore."

Where on campus?

Student continues JC's scholarship dynasty

Sophomore is tenth consecutive Juniata student to win prestigious study abroad award

By CHRISTOPHER BURLINGAME

For the tenth year in a row, a Juniata student has earned the prestigious Andrew Mutch Scholarship from the St. Andrews society of Philadelphia. This year sophomore Acer VanWallendael opted to spend his next academic year at the University of Aberdeen in Scotland's northeastern region.

"I wanted a smaller city experience and knew that Aberdeen would offer more research and hiking possibilities," said VanWallendael.

The St. Andrews Society of Philadelphia awards scholarships to five students in order to "promote understanding between the US and Scotland by providing scholarships for students from both countries." The 30 schools in the applicant pool often include students from the University of Pennsylvania, Swarthmore College, Temple University and St. John's University.

"We have always tried working students so that they come across their strongest. I always believed that our students could match Penn, Princeton and Swarthmore, and I wanted the committee to see how strong our students were," said professor and former faculty supervisor for the St. Andrews scholarship, Kim Richardson.

Juniatians have a standing tradition of earning this honor, winning it for the tenth year in a row and for the nineteenth time since 1984. Currently, junior Nicholas Sepulveda is studying at the University of Aberdeen.

Winners of the scholarship receive $17,000 to cover tuition and living expenses while in Scotland at either the Universities of Edinburgh, St. Andrews, Glasgow or Aberdeen.

Aside from money, the committee has spaces reserved specifically for scholarship recipients at each Scottish University. The scholarship committee is comprised of Philadelphia lawyers, doctors and other city and state government officials.

"It's an amazing networking opportunity," said Study Abroad Advisor Elena Hart.

Few students take advantage of the opportunity for the St. Andrews Scholarship. At Juniata, there were only two applicants this year. Many competitive scholarships on campus have seen a decline in applicants.

"Students always say, 'Money's a problem. Especially with the exchange rates, how can I afford to go abroad?'" Hart said.

She wants to make students aware of opportunities like the St. Andrews Society Scholarship because they can open doors that students may not have even known existed. Many students do not take into account that these scholarships can potentially fund study abroad experiences they could not have otherwise taken.

"People don't think they are qualified enough. It must have been a down year, but people shouldn't assume study abroad is out of the option," VanWallendael said.

Juniata students are typically successful once they reach the Philadelphia interview due to a solid preparation process on campus.

Although serving as faculty supervisor for over a decade, Richardson has recently passed the responsibilities to Jack Barlow, Charles A Dana professor of politics. Richardson, however, still contributes by briefing the candidate at the etiquette dinner.

"It's been a wonderful experience," said Richardson. "I've vicariously enjoyed Scotland with each of these students."

"It's kind of scary to take over for Kim Richardson who has done such a terrific job," said Barlow. "It will be a challenge to prepare students to continue the phenomenal success that we've had in the past. We're just going to keep going with what works."

Students interested in the scholarship must first submit an essay, list of accomplishments and other materials to Juniata's scholarship committee.

If the candidate's materials are in order, they are called before the committee in a competitive roundtable interview. From this interview the candidate is selected and then prepared by Barlow and Richardson. The candidate has an etiquette dinner with the professors where he or she is briefed on current events and the proper way to carry oneself at a luncheon interview.

From there, the candidate leaves for Philadelphia where they are expected to mingle with the scholarship committee during a cocktail hour. The candidates are then removed from the room and brought in one by one for the interview. After the interview students return to their schools and are notified by a committee representative if they have received the scholarship. They are then asked to choose one of the Scottish Universities.

"I must confess that I was a little nervous. With Jarmila leaving, I was worried I'd be lost in translation, and I didn't want to let the school down. Everyone at Juniata was really helpful, and the committee recognized that I was from Juniata. We have a tradition of strong candidates," VanWallendael said.

CHRISTOPHER SHANNON / JUNIATIAN

Sophomore Acer VanWallendael recently won the Andrew Mutch Scholarship from the St. Andrew's Society of Philadelphia. The scholarship will help pay for his study abroad at the University of Aberdeen in Scotland next year. VanWallendaer is the 10th Juniatian in a row to win the prestigious scholarship and the 19th Juniata student overall.

Seniors troubled by depressed job market

Facing poor economy, students look towards graduate school and volunteer work

By JASON NAJARIAN AND STEPHEN GOEHRING

As graduating seniors prepare to enter the workforce, they face heightened competition and fewer jobs due to the slumping economy. Many students are left with the question of what they should be doing to prepare for job searching, and where they can get help.

Job searching is a time-intensive process, and students should not expect securing a job to be easy in this economic climate. Donna Weimer, chair of communication, runs workshops on campus and in the classroom to help students with resume writing and interviewing. She said that students need to be realistic about their expectations.

Job positions and paid internships are drying up as companies try to cut costs and survive market pressures through hiring freezes. "To get the job [students] want, it is going to take more than one interview or a couple of letters sent out," she said.

Being realistic also means that students may want to consider changing their search strategies. "I'm not suggesting they lower their sights. I'm asking them to be more realistic about their goals in the economy," said Weimer.

Weimer said that it might not be likely to obtain a dream job right now, but students can try to work their way up. Students who are interested in marketing might want to consider working sales or retail. "Get your foot in the door, somewhere, at some level," she said.

> *"I'm not suggesting they lower their sights. I'm asking them to be more realistic about their goals in the economy"*

Another option students should consider is volunteer work. Weimer said that AmeriCorps, Peace Corps, Teach For America and volunteer-based organizations all look good on resumes for when the job search continues. "If nothing else comes up, make sure you are volunteering in a local organization," she said.

Weimer said that it is important for students to remain active. Even if students are unsuccessful in procuring a job now, they can prepare themselves for when the market improves. She said that now might be a time to consider continuing education past the undergraduate level. A master's degree can give students more leverage in their search when the market bounces back.

The Career Services office has seen an upswing in students seeking graduate schools. Juniata graduating classes typically have around 30 percent of its members go directly to graduate school. This year, roughly 35 percent of seniors are expected to pursue a graduate degree. Often grad school admission rates rise in a recession, as students seek extra qualification or plan to wait out the recession.

For those looking for help in their search, Weimer said that they should not be shy about asking their advisors and faculty. Many professors are willing to give advice, and can help students figure out what they need to be doing to best prepare. "Don't be afraid to ask more than one of you professors for help. Try to find out what the advice is centering on," said Weimer.

Senior Kevin Scheib, a computer science and information technology POE, said that his resume required a lot of work, but it was key to getting a job at Raytheon Inc. in State College. He wrote 15 drafts of the resume before attending an off-campus job fair, and then went through another seven drafts before sending it to Raytheon.

Scheib credited Juniata's career advising with making the resume writing process much easier. He said that Career services and help from faculty were very helpful in crafting his finalized resume.

Students should also take advantage of the resources Juniata has available to students. One of Career Services' most visible aspects is its participation in job fairs throughout Pennsylvania and the surrounding region. Director of Career Services Darwin Kysor listed at least a dozen job fairs that Juniata participates in or hosts.

A career fair is what introduced Scheib to his employer. "In the fall, I went to the WestPACS [Western Pennsylvania Career Services] job fair and spoke to a recruiter from Raytheon," he said. In addition to Raytheon's offer, Scheib said a Seattle-based company flew him out to the west coast for a job interview.

"Our biggest challenge is to get students to utilize [our resources]," said Kysor. "I think students that do use it get something from it."

Hot or cold? Student to sell micro-fridges

JCEL sponsors business venture offering energy-saving dorm appliances

By **Kat Pearce**

Sophomore Doug Jackson is starting a business through the Juniata College Center for Entrepreneurial Leadership (JCEL), which would make environmentally friendly Energy Star microwave-refrigerator combination units available to rent to students. The units use much less energy than conventional appliances, especially older ones.

"They're great units: a fridge, a freezer and a microwave," said Jackson. "It's a greener solution."

Since many upperclassmen already have fridges and microwaves, Jackson's target audience is incoming freshmen. He hopes to come to an arrangement with the school to formally offer a renting option.

Would you consider renting an environmentally friendly fridge and microwave for your dorm room?

Survey SAYS

39% **are in favor of the energy-saving units.**

Out of 190 respondents

"From what I've seen in East, it's not uncommon for one person to have two fridges to himself," said Jackson. This leads to higher energy costs for the school and more strain on the environment.

"[The Energy Star units] save energy, because if the microwave is on, then the fridge isn't," said Tim Launtz director of public safety and residential life. Launtz has been working with Jackson on this project.

Eventually, Jackson hopes the school mandate Energy Star appliances. "It's done in numerous schools around the area," said Jackson, naming Moravian College, University of Pennsylvania, Cornell University and Villanova University. "It is very satisfactory for the students."

If students wanted appliances, they could purchase their own Energy Star units or rent from Jackson.

"I think it's really good that they're trying to do something sustainable," said sophomore Danielle Fulmer. She added that if people buy Energy Star units in college, they would be more likely to buy them afterwards.

Some students, however, are skeptical about the cost of renting.

"The price right now, per room, is $198 per year," said Jackson. If two roommates split the cost it would be about $99 per person. "I don't care if three people want to go in on it," said Jackson. "Four people can go in on it."

"I think the prices are way too high," said junior Danielle Brenizer. "If the business is going to work, I think they need to adjust the prices."

Freshman Becky Bennet agreed. "Not everybody wants refrigerators or microwaves, and a lot of people can get them from family members or second hand stores for much cheaper."

The cost for Jackson to purchase these units has yet to be determined. "That is a negotiating factor," said Jackson. "Obviously, my goal is to have a financial statement that [the units] would be paid off in two years."

JCEL gives $5,000 to each person starting a business. "No one has ever asked JCEL for more than $5,000 per head," said Jackson. If this is not sufficient funding, Jackson has other plans. "I may also look to go through private investors." The money private investors loan has to be paid back, unlike JCEL funds.

Professor of Economics and Business Administration James Donaldson said that JCEL is not against giving away more money; it has simply never yet had the chance.

Each appliance comes with a seven year warranty, and Jackson would move them in and out of dorms, fix them and replace them as needed.

Jackson plans to hire JC students to move the units at the beginning and end of the school year. "My idea as of right now would be to keep the majority of the expenses in Juniata," said Jackson. "I would hire students who want to make a little money."

According to Jackson, there are many things that have yet to be worked out.

"This is still an ongoing process," he said. "This is not something that is necessarily going to happen, but in terms of maximizing profit, this would be the best option."

Jackson's direction comes from a class that he is taking this semester, New Venture Creation with Donaldson.

ANDREW WAPLINGER / JUNIATIAN

Freshman Alex Bahn reaches into his mini-fridge to pull out some grape juice. Juniata and Res Life are debating renting out environmentally-friendly fridges and microwaves to students.

"The purpose of the course is to create a business. It's very nontraditional," said Donaldson. "Right now I have seven people involved in my 207 and 307 classes. Each of them has very different ventures in very different stages of development. Doug's is probably the most likely to happen."

"Professor Donaldson has been working on this with me. He's been very helpful, meeting with me once a week to go over this," said Jackson.

Sophomore Dan Allen has also been involved with the project. "I started getting involved right when [Jackson] started writing his business plan," said Allen. "I really liked his idea."

Student to live sustainably in bio-dome

▶ *from* **BIO DOME** *page 1*

PVC," he said.

The overall shape of the dome will look like five-eighths of a sphere, rather than half of a sphere that most people imagine. Small tubes in triangle shapes will form the framework and then be covered.

"This project is supposed to look at the feasibility of sustainable living while being a full-time student," Weller said.

The entire dome will be attached to the ground by large stakes driven into the ground. The flooring will consist of a plastic barrier a nd reused carpeting. This makes the dome easy to transport and set up.

"These structures are generally designed to sit lightly on the earth, with no permanent foundation," Weller said.

The dome will also be fairly spacious. "My [double] room in North has a volume of about 1125 cubic feet. The dome will have a volume of about 1071 cubic feet, so I have quite a bit of room," Weller said.

"I want to try and keep things very simple," Weller said. He will build or buy several basic amenities for himself such as a composting toilet, a kerosene heater, a 45-watt solar panel system and possibly a water catching system. "The water might be harder; I have to see if I can find something that is pretty safe for continuous use," Weller said. He also plans to have a desk, bed, chair and lighting within the dome.

To get approval for his plan Weller had to go to Dean of Students Kris Clarkson with his proposal.

"Jake came to me in the fall with his idea…he made a good case for it," Clarkson said.

Clarkson then brought the proposal to the College for approval. After a few points were clarified, Weller's bio-dome project was approved, given its "academic merit," siad Clarkson.

After getting approval from the College, Weller had to get permission from the zoning board. Weller also met with Robert Yelnosky, vice president for finance and operations, to discuss his plans.

Weller's amended proposal was brought before President Thomas Kepple, who also approved the plan.

"I think it's really amazing… [that he is bringing] awareness of environmental concerns," said freshman Ellen Santa Maria.

"It's kinda cool and creative," said sophomore Michael Ross.

Students also addressed potential problems. "I would be interested to see how sustainable he would be able to make [the bio-dome]," freshman Julie Cramer said.

"I'm wondering how well he will be able to make his experience 'authentic'…He will still be close to civilization," said Santa Maria.

"I'm wondering about how well it will be built if he's making it himself," Ross said.

Weller plans to share his experience with others and encourages anyone with questions about his project to contact him. "I'm going to be documenting almost every aspect of the project," Weller said.

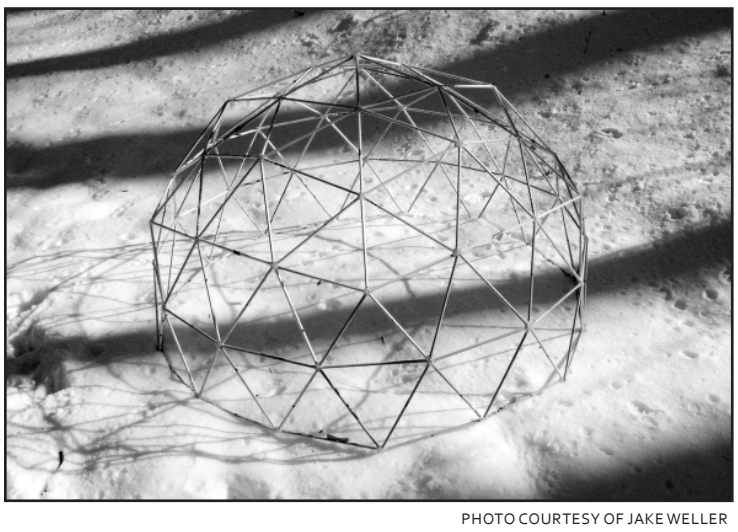

PHOTO COURTESY OF JAKE WELLER

Sophomore Jake Weller is currently working with a model of his bio-dome to test covering ideas.

Student groups fight cancer

▶ *from* **CAC** *page 2*

vors and celebrating their inspiring stories."

To celebrate, the club made Valentine's Day cards to send to cancer survivors. For the future, she said, "Our goal is to begin a survivor's tea... bringing survivors together and celebrating their successful fight against cancer."

Another group on campus, Health Occupational Students of America (HOSA), sponsored a volleyball tournament on March 29 to fight cancer.

"Half [of the proceeds] will be going to St. Jude's Children's Hospital. The next half will go to Geisinger Hospital Systems and we will donate it in the name of Erin Dodson," said HOSA President, Travis Hull.

Erin Dodson, a former student at Juniata, is a cancer survivor who was treated at Geisinger. "We are donating [the money] in honor of her and her survivorship," said Hull.

Although he did not know how much money was raised minus event expenses, Hull said they made more than they would have at the annual Wing-Off event they usually hold.

"Everywhere on campus different departments are stressing health and wellbeing and healthy living. Cancer obviously fits into that," said Hull. "I think it's just a coincidence that there are different clubs and departments that get together to raise money for cancer and raise cancer awareness, but I think it comes from the common theme at Juniata of health and wellbeing and humanitarianism."

Survey SAYS

87% **of those polled have had a friend or family member with cancer.**

American chestnut program & planting event

Tree lovers and those interested in forest conservation are invited to learn about the crisis facing the American Chestnut tree and participate in Juniata College's chestnut conservation efforts at 2:30 p.m., Thursday, April 23, in Room B200 in Brumbaugh Academic Center (BAC).

The program, which is free and open to the public, will start with a 20-minute presentation about the American Chestnut tree and how the species has nearly disappeared from America's forests due to the chestnut blight. The program will then move outside to the Juniata College Chestnut Orchard, which is planted just beyond the boundary of BAC, where participants can see Juniata's chestnut project in action and help plant new chestnut saplings in the orchard.

Weekend visitors vandalize Pink Houses

Univited guests disrupt campus parties, leaving students to pick up the pieces

By SETH FOX

On the weekend of March 28, a group of visitors from Mount Union, PA, were involved in an incident with Juniata residence life staff, JCPD and the Huntingdon Police Department.

The visitors were initially involved in a confrontation with Residential Life staff that ended when someone threw a rock through the window of the Pink House on Moore Street

Students at the Pink house were hosting a party that evening when the visitors arrived. Earlier, the visitors had been in the East residence halls. Senior Justin Doutrich, who lives at Pink, said, "We had no idea who they were. They were causing a little bit of trouble at the party. Doing things like trying to light cigarettes inside."

The visitors kept claiming to be friends of a Juniata student, but Doutrich didn't see the student anywhere at the party. The visitors were asked to leave when the party reached the 2 a.m. limit for parties on Juniata's campus.

Doutrich said, "When we shut down at two, they didn't want to leave. They pushed [on-duty Residence Assistant] Nick Reiter. We got bottles thrown at us. Some of them drove off when that started."

After the visitors pushed the RD that night, Reiter had called the Juniata College Police Department. Members of JCPD declined to comment on the incident.

JCDP in turn contacted the Huntingdon Police Department. "When [the visitors] drove off, they were pulled over by the Huntingdon PD just down the street from our house" said Doutrich.

Later that evening, Doutrich and roommates were relaxing in their common room when a rock came through their window. Doutrich said, "Our reaction was initially confusion. Mike Day was almost hit by the rock. Sean Friedly and Kevin Dundore instantly ran outside and started to chase down the car we saw driving away. They caught up to the car and began pounding on it trying to stop it. We got a description of the car in order to give to the police. We eventually decided that we should block off the exits around campus. We even ran by the police when we split up around campus. They asked us what we were doing, but didn't help us because they were already occupied with the kids they had pulled over earlier."

Incidents of vandalism like this are uncommon at Juniata according to Director of Residence Life Tim Launtz. He said, "I believe that in terms of vandalism we are probably on the lower end of the spectrum."

Launtz, when asked about the March 28 incident, said, "The rock being thrown through the window is still under investigation. We haven't concluded that it was thrown by a Juniata student or a non Juniata student. You know, from time to time we have senseless vandalism, but I think our students take pride in our community and the respect that comes with not doing these acts. It seems when these acts happen, other students step forward and speak to the proper public safety officers in order to get this rectified."

The fact that the initial incident on March 28 was facilitated by non Juniata students is what really bothers Launtz. "Students have a responsibility when their guests are here. Whatever regulation is broken by the visitor, the student who they are visiting would face the same consequences as the offender." Vandalism has a cost to more than just those directly affected by the act according to Launtz. "Vandalism has a direct affect on the financial cost of higher education. When vandalism occurs to Juniata property and no one is held responsible for the damages, it cost the school money, which in turn cost the students money."

KEVIN DUNDORE / JUNIATIAN

Sometime after Juniata Residential Life staff, the JCPD and the Huntingdon Police Department confronted a local resident, a rock was thrown through a window in Pink Two. The incident is undergoing investigation by JCPD.

Launtz who dislikes this idea said, "We have good students here, and during my tenure here in this office, we have really tried to avoid the idea of community damages. When something happens we don't want to nickel and dime students for costs that they don't have to pay for it." While Launtz says that incidents of vandalism are uncommon at Juniata, he added that on the previous Friday night "Somebody in a completely senseless act, vandalized the laundry room in the south basement. This is under investigation right now. That's just senseless and that's a violation again to the community as a whole."

The investigation of vandalism at Juniata is a process that involves gathering information from around the area where the act occurred.

"The officers will talk to the person reporting the incident of vandalism as well as interviewing people in the area. From there we develop the information made available to us," said Launtz.

Huntingdon helped by Juniata community

▶ *from* HUNTINGDON *page 1*

running for Huntingdon mayor, has spent time walking door to door in a suit and tie, getting to know Huntingdon residents.

Sill said that many town residents are wary of college students. "In the same way that students might stereotype [Huntingdon residents as] 'townies,' many people in our area think of Juniata students as careless spoiled brats who make too much noise going to and from the bar on weekends," said Sill. "I'd like to fix that." Sill wants to present a clean-cut image through his candidacy to counteract the stereotype of students and reach out to the community.

Sill believes that the relationship between the College and the town will continually be strengthened through his duties as mayor and through the efforts of student volunteers in the community.

John Hille, Executive Vice President of Juniata College Advancement and Marketing and immediate past president of the Huntingdon Chamber of Commerce, is uniquely placed to comment on the fluid relationship between the town and the College.

"The future of the College and the future of the town are inextricably linked," said Hille. "If the town prospers, we prosper. If the town fails, we fail."

Hille is working to devise an action-oriented plan to revitalize the county, alongside county commissioners and representatives of major corporations from the area. Together, they form the Partnership for Economic Progress (PEP). PEP started about eight years ago, "to collaboratively move the county forward," said Hille.

Some members of PEP have joined forces with a group of committed town residents who have a vision for building Huntingdon into a stronger, more vibrant town. They call their committee "Boomtown," and they are applying for state grants to rejuvenate downtown into a mixed commercial and retail area.

If Pennsylvania Governor Edward Rendell were to approve a grant for the town, "it would be a miracle," Hille said. Several years ago, the governor gave the town $1 million to build a parking garage downtown. However, the town was unable to scrape together the $300,000 needed to make up the difference, and the project was scrapped. Town executives returned the $1 million.

The situation is complicated by party politics. Rendell is a Democrat, and Huntingdon County is overwhelmingly Republican. "We're going to have to wait two years," said Hille, in reference to election year.

Two years ago, one could have declared the efforts of PEP and Boomtown a great success. Businesses were hiring, and unemployment rates were the lowest in eleven years.

Now, in the grip of recession, "this momentum has slowed, in some cases stopped altogether," said Hille. Unemployment rates are now in the 10 percent range.

Savvy Huntingdon businesses have teamed up with the Juniata marketing department to capitalize on a pool of potential customers: prospective Juniata students. Slipped into the sheaf of promotional materials handed to prospective students by the College is a sheet entitled, "Your town and beyond," offering discounts at local boutiques, restaurants and other businesses. This encourages students to explore the area and helps local businesses. "If they can get people in, good things happen," said Hille.

The College has paid to print large fold-up maps of Huntingdon County for county-wide distribution, with the Juniata College logo emblazoned front and back.

Two landmarks just across the Juniata River are not mentioned in packets handed to prospective students: the correctional facilities that sprawl on the town's outskirts. The marketing department writes detailed directions guiding visitors onto routes that bypass the unsightly barbed wire. But Huntingdon's seemingly dirty little secret is also one of its greatest assets. The prisons provide stable employment for many town residents.

The town is ideally located on a train line. Released prisoners can easily return home by train with a boxful of belongings. Juniata students and visitors use the train to get to and from Huntingdon.

Recently, lobbyists in State College have been clamoring for a high-speed eastbound train. This could signal a rerouting of Huntingdon's train tracks, an idea that unsettles the town's residents. The prisons are a strong lobbying force to ensure that the train tracks will remain beside the Juniata River, for now.

Hille is optimistic that Huntingdon will continue to prosper. "It's a safe town; it's a beautiful town," he said. "I'll admit that I have a strong bias. I love it here ."

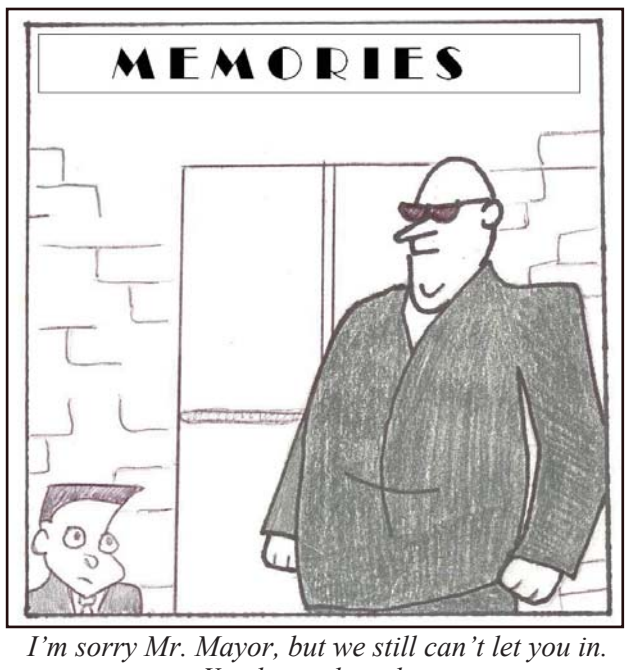
Bad blood: relationship between gays and Red Cross 'A negative'

EDITORIAL

According to the American Red Cross's Web site, there are certain factors that make individuals ineligible to donate blood. One of these factors, buried in a lengthy list, is a prohibition if donors "are a male who has had sexual contact with another male, even once, since 1977."

The practice of banning homosexual men, as well as those who have had recent sexual contact with homosexual men is outdated and discriminatory. The reasoning behind banning gay men is based on their statistical higher risk of contracting HIV/AIDS. While it is true that gay and bisexual men are at a relatively higher risk of acquiring aids, it is necessary to put this data in the proper context.

According to the Center for Disease Control, during the year of 2007 37,041 people in the United States were diagnosed with AIDS. About half of these cases occur through male-to-male sexual contact. While this group is the highest transmission category, high-risk heterosexual contact formed about 30 percent of the new diagnoses. The Red Cross tries to weed out groups that engage in risky sexual behavior, but is it really fair to put a blanket ban on all those involved in male-to-male sexual contact?



Virtually the same statistics exist for the African American community. In 2007 African Americans were about half of the new AIDS cases, compared to Caucasians who were about 30 percent. The Red Cross would never even consider banning African Americans from giving blood simply because of their race.

This policy has ramifications beyond turning away those who have had sexual contact with gay and bisexual men. It encourages people to lie about their sexual history and turns away those who would donate but do not because they feel it is unfair that their gay friends cannot. Whenever a Blood Drive starts on campus, we are inundated with the message that we need more people to donate. Is it worth turning away perfectly healthy donors because they are simply assumed to have had risky sex?

It is time to seriously reconsider the ban on male-to-male sexual contact regarding qualified blood donors. We may not like to admit it, but by participating in blood drives that ban based on sexual practices, we tacitly discriminating against those groups. People on campus honestly want to help others by giving blood, yet we turn an unknowable amount away by keeping such an unfair policy.

It is understandable that the Red Cross wants to protect people who receive donated blood, but this is not the way to go about it. We send out a contradictory message when the call for blood donors go out. We ignore those who would answer it without really weighing the costs and benefits.

Editorial cartoon

I'm sorry Mr. Mayor, but we still can't let you in. You know the rules.

by Jake Weller

Letters to the Editor

Student Food Initiative:

Dear Editor,

We are the Student Food Initiative. Concerned with the quality and availability of food on our campus, a few of us got together and have since planned and are holding the Juniata College Food Symposium.

On Tuesday, we screened the documentary "Processed People" and held an open discussion to gather thoughts and brainstorm about what we think about our food. This includes what food means to us, what we think about the food we currently eat, any concerns we have about the food available on campus, as well as the drain of the local farming community caused by the outsourcing of our food. Last night, Wednesday, we screened the documentary "King Corn" and held a similar discussion.

On **Monday, April 20**, we will entertain a faculty panel, including professors Neil Pelkey and James Tuten, who will provide valuable information pertaining to food, nutrition, our environment and ourselves as we relate to food. The panel will be held in Neff Auditorium at 5 p.m.

Using the Food Symposium as a starting point, the Student Food Initiative wishes to generate interest in food sovereignty on campus. We believe that food is an integral part in human development, both physically and mentally, and can play an enormous role in defining a healthy learning environment.

We hope to raise interest on campus, and we hope to be able to channel that energy into positive change. This change will undoubtedly affect the food we eat on campus, which for every student living on campus, under Juniata regulations, must include Sodexo. Though not our main focus, the practices and policies of Sodexho are certainly of concern to us. This is due to the fact that we are forced to eat the food that they provide us.

If we find interest in the Juniata community, we look forward to working with Sodexo to encouraging a more environmentally and socially responsible food service program at Juniata. The Student Food Initiative is pleased with the attempts of Sodexho to adopt more environmentally conscious policies, such as 'Trayless Tuesdays' and making bags optional in Eagle's Landing. We note these preliminary measures as signs that Sodexho agrees with our concerns and will be willing to take more proactive steps towards a better food system.

We also believe that food should not travel long distances to reach its ultimate destination, as transport generates enormous carbon emission. We believe that people should be given the opportunity to eat the food they choose to.

The Juniata College Student Food Initiative is very pleased with the Food Symposium thus far and looks forward to Monday's panel. Until then, enjoy the food you eat.

To contact the Student Food Initiative, e-mail us at JC.foodintiative@gmail.com or brownnm08@juniata.edu.

For more information, look out for announcements and come to the faculty panel!

-The Student Food Initiative

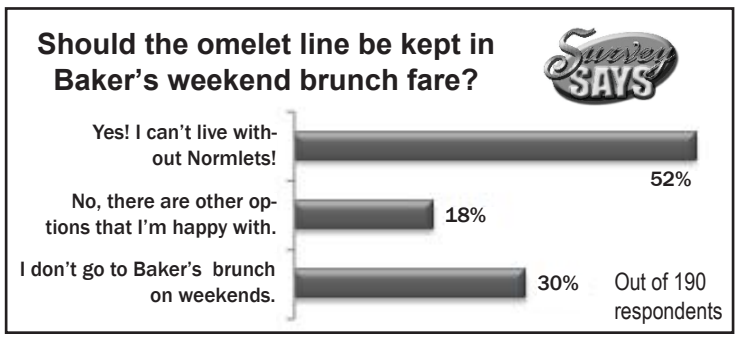
Ask the Administration

"What is a student's reasonable expectation of privacy within his or her dorm room? Can the Juniata College Police Department search a room at anytime or must the student be notified beforehand? Is it required for students to be notified if their room is searched?"

As stated in the Pathfinder and Juniata College Residence Hall Contract: Juniata College respects a student's right to privacy, but the college reserves the right to enter any college room when necessary and appropriate.

The college conducts periodic health and safety inspections and maintenance visits to all college residence hall rooms-including at least one(1) health, safety and maintenance inspection during each semester. Room inspections also occur during fall break, Thanksgiving break, semester break and spring break. These inspections do not involve any type of search of the rooms; inspections involve only what is visible in the room, no searches are conducted.

The only time Juniata College Public Safety would search a student's room in regards to seizure of items would be if there is reasonable cause to believe that a student(s) is using his or her room for a purpose in violations of federal , state, or local law or College regulations. Unless conducted by law enforcement, any search or seizure would need to be authorized by the Dean of Students or a designee. Juniata College would give the student(s) involved the opportunity to be present during the search unless the student is unavailable. The student would be informed of the purpose of the search and notified of any findings that violate laws or college policy.



We reserve the right to enter any Juniata College room in event of an emergency. An emergency is defined as a situation in which a person's health or well being is threatened and/or personal or college property is thought to be in immediate danger.

-Tim Launtz, Director of Residential Life and Public Safety

"Has the Saturday/Sunday omelet bar been permanently removed from the brunch options? If so, what was the rationale behind removing such a popular brunch choice?"

The brunch change came from the food committee as a way to break the status quo. They had heard that many students didn't want breakfast and they and we were trying to be reactive

-Hal McLaughlin, Director of Food Services

When Nature Calls

Green living

By **BRIANNA O'MALLEY**

The following ideas, while environmentally friendly, are meant for the purpose of humor only. For your own safety, please do not try them on the Juniata College campus.

The words "sustainable" and "green" are thrown around a lot on this campus. The administration is ever urging us to think and live sustainably. I agree with this sentiment. If we cannot change our habits, how are we ever going to live forever? As zombies, perhaps?

The average American is not doing his or her part to counteract our negative effects on the planet. Being a student can also make this task seem even more daunting. With our already heavy workload, it seems nearly impossible to be green, but we should still try our best. We all know we should shut the lights off when we leave rooms or turn the faucet off when brushing our teeth. I propose we can take this even further. Using some innovative tactics, we can build on our college's eco-friendly reputation. Follow my tips, and the earth will be happy you cared enough to help.

I know we recently spent a bunch of money on new water-saving washing machines. However, those machines still produce waste water. Instead, try washing your clothes in Muddy Run. Beating your jeans against a wet rock will not only save water, but also save you money. Plus, you'll never have to wait for someone else's clothes to finish the spin cycle. And you'll avoid having to pull someone's underwear out of the machine as you hastily try to throw your clothes in. When it comes time to dry, I suggest setting up communal clotheslines between dorms, and letting the Pennsylvania sunshine warm our JC hoodies. Prospective students on tours will see what a close-knit community we are with our garments flapping in the breeze.

The average toilet uses five gallons of water per flush, and the average person flushes the toilet four times a day. All that water is like our school's money being flushed down. Instead, we should have a communal outdoor latrine, which consists of a hole in the ground. Since a construction like this is likely to be unsightly and probably smelly, I suggest building it next to Sherwood. No one goes over there anyways. Residential Life can then turn all the unused bathrooms into dormrooms for incoming freshman.

Another water-wasting activity is showering. No one wants to be the smelly kid on campus, so showering daily is a must. Even if everyone took short showers, the amount of water the campus would collectively use is enormous. This is why I suggest group showering. You're not standing under the water the whole time, so why not let someone else rinse their hair while you lather up? Most of the showers on campus are large enough to accommodate three or four people. Think of showering groups like one of your study groups. If you are opposed to group showers for "moral reasons," bathing yourself during a rainstorm should prove effective.

Many students engage in weekend festivities involving what I will call "liquid celebration." What you may not realize is the amount of waste produced from all the containers and cups used. My idea for this would be home brewing.

Yes, brewing is a class on campus. However, the products made in lab are small in quantity and are restricted to beer. Students could save on resources and money if they were to brew large vats of moonshine. Brewing moonshine can't be that difficult; they did it all the time during Prohibition. Not only would this last way longer than any handle of cheap liquor, but you could personalize what you make. Brewing in your room could be a great activity for you and your friends before the Friday parties start up.

The final idea I would like to recommend to campus is something that I call "Plateless Thursday." We all know of the success of Trayless Tuesday in its efforts to decrease our over-consumption. Plateless Thursday would be one notch up from that. Everyone must walk around to each line in Baker and have their hands form a plate or bowl depending on the dish. That way, no one would be able to get more food until they have finished what they're holding. Plus, everyone will get more out of their dining experience if they're holding it in their bare hands. Think of how much you'll appreciate loaded potato soup once it's seeping between your fingers. I guarantee you'll never neglect a drop!

Presidential Perspective

Have a topic that you'd like President Kepple to write about? Simply e-mail your suggestion to juniatian@juniata.edu.

One exceptional feature of Juniata is your ability to come here and then seamlessly explore many other places and opportunities through our partnerships.

From world class cities as diverse as Dalian, China and Barcelona, Spain; to incredible environmental places like the Galapagos Islands and the Four Corners region of the US; not to mention centers of government from Brussels to Washington -- there is hardly a quality experience around the world you can't find through Juniata.

Our intention is to expand these opportunities even more. In a few years, Juniata students will be able to complete a Juniata bachelor's degree and a master's degree in international business through one of our German partner universities. The program will take five years, but will cost only slightly more than a Juniata bachelor's degree alone. The model is so compelling that we are already looking for similar BA/MA programs with other partner universities around the world.

We also offer you the opportunity to do many more internships, either for credit or as a notation on your transcript, than other colleges. We have done it for a long time, and this faculty clearly sees the importance of real experience as an important part of a real education.

Finally, Juniata alumni are getting into the game by providing a growing range of summer research and internship opportunities for Juniata students. So do take advantage of all that JC offers!

CORRECTIONS

In the April 2 issue, an article about the College's relation with the Church of the Brethren misrepresented the reason behind the cancellation of a Brethren youth conference that Juniata planned to host. The Eastern Regional Youth Conference for Church of the Brethren students was not held at Juniata because of liability concerns, not because of a conflict with a sports event.

Also, in the April 2 photo story about All Class Night, the Juniatian miscredited the winners. Seniors recieved first, sophomores second, juniors third and freshmen fourth place.

The Juniatian regrets the errors.

THUMBS UP, THUMBS DOWN

to a JC volleyball team member for being in the right place at the right time and scoring with his head when a George Mason spike went awry. It was definitely the climax of the match. Who knew a little head could go so far?

to worm genocide. All this rain is killing millions of innocent worms and we have to hopscotch our way to classes so we don't desecrate their smelly graves.

to Jake Weller's bio-dome. Not only does he avoid paying room and board, but his lack of a flushing toilet will provide him with plenty of fertilizer for future fruits and veggies.

The Director's Chair

"I Love You, Man"

By **JORDAN YEAGLEY**

"I Love You, Man" is a great comedy about the struggles of finding a guy friend. I entered the theatre a little worried about how Hollywood was going to portray the intricacies of a male best friend relationship; I must say it was a home run. This film did an excellent job of showing how men relate and interact with one another in the absence of women.

Peter Klaven (Paul Rudd) is a newly engaged realtor who has always been closer to the women in his life than the men. Now he has to find a best man for his wedding before time runs out. Klaven suffers through numerous "man dates," which keep the audience in stitches, before finally meeting Sydney Fife (Jason Segel). Sydney is a "man's man" and takes an instant liking to Peter. The two of them begin hanging out over beer and fish tacos; bromance ensues. This film is a hilarious twist on the classic romantic comedy.

I must admit, I feel as though this film is too long for the plot line. A romantic comedy is supposed to be about meeting, fighting, getting back together then rolling credits. The movie was not trying to develop an intricate plot line with hundreds of characters, but rather a funny love story about two guys' friendship. As I sat in the theatre and noticed that almost two hours had passed, I grew a little bored. If they wanted to make the movie longer they should have supported it with a stronger plot line.

I would, however, recommend this film to any guy looking for a good laugh. There is projectile vomiting and the writers do a fairly good job at depicting the dialogue between men. For the ladies, this movie might give you a better look into the minds of guys when you are not around. I am not saying that it is an intelligent place or even a good place to understand, but it certainly does help create a picture of what goes on inside a male's head. This is a must-see movie, and if it starts getting too long go out to the concession stand, get some food, stretch your legs and come back ready to laugh.

★★★★

OUT OF 5

"I Love You, Man" is now playing at the Clifton 5.

Worth the Rent: "Training Day" (2001)

When I sit down to write my Worth the Rent column I usually think of a funny movie that would keep the audience laughing. However, since "I Love You, Man" is a great option for a comedy, I thought I would offer something different this week. "Training Day" is one of Denzel Washington's best films. Washington plays Alonzo Harris, an undercover narcotics officer, who takes Jake (Ethan Hawke) out on his first day on the job.

This film is an intense drama about life on the street. Alonzo is a crooked member of the Los Angeles Police Department, who has adopted the lifestyle of the criminals he works to arrest. Jake on the other hand is a straight-laced newlywed who wants nothing more than to clean up the LA streets and make detective. The two of them battle throughout the entire movie in what seems to be the classic battle between good and evil.

I will warn readers that this movie has explicit language and intense situations. I think it would be difficult to show life on the streets without these things, but it is important that viewers be prepared for what they are going to see. So, if you are looking for a gritty drama or simply like Denzel Washington this film is a must see.

Mocha Run barista brews sustainability

By **ALISON RIHS**

Students admire Sodexo employee Maureen Wolfing and say she brews the best coffee in Mocha Run.

"I think she's so sweet; I love her," said junior Jennifer Snider. "I don't care if she takes a little extra longer to make my drink. I like to think that she puts a little extra love in it."

But her coffee-making prowess is not all that makes Wolfing noteworthy. She is also a strong proponent of environmentally friendly food practices, and her ideas could be the catalyst for a greener Juniata campus.

Wolfing, who has worked at Juniata for the past two years, promotes sustainable practices among students. According to freshman Marcin Jaroszewicz, she always asks him if he wants a ceramic mug instead of a paper cup.

"I'm really pumped about what she's doing," said Jaroszewicz, a sustainability advocate himself. "I'm so happy she's getting the recognition she deserves because it's a small act, but you need to celebrate good things where good things are found," he said.

Wofling, who has frequent contact with students, promotes the use of green techniques whenever she can.

"She has a lot of interesting ideas. She really keeps up on politics and knows what's going on, and she's very aware of sustainability and the environment," said Instructor of English as a second language Claire Holzner, a good friend of Wolfing.

At home, Wolfing uses many environmental tactics regarding

CHRISTOPHER SHANNON / JUNIATIAN

Seniors Justin Guyer and Wylie Earnhart have been working on two separate movies for their Senior Honors Thesis. Pictured here, senior Neil Perrin (top) films a scene of Guyer's movie, "Over the Rainbow," from the catwalks of the Suzanne von Liebig Theater. Guyer explains a scene from "Over the Rainbow" to junior Grace Canfield and senior Josh Beckel (bottom). With regards to his directing experience, Guyer said, "I wanted to make a movie because I love movies and have always wanted to make something really creative with my friends who are passionate about film too. Having so many people willing to help as cast and crew was a unique opportunity that I wanted to take advantage of while at Juniata."

A piece of hair on your tongue

I hate you, Andy Warhol

By **BRANDON WOLFE**

Pop Art is like opium. Actually it's not, but it brings up an interesting correlation: people can easily become addicted to factories.

What is a factory? Andy Warhol had many factories. Assembly lines of silk screens were made for the general public. Warhol hired other artists to do most of the work for him—they worked in the infamous "The Factory."

Sitting at the end of the line, presumably with an opium pipe, Warhol would stamp his name on a piece and scream, "This is my genius! Now Repeat!" This mass produced matter was made purely to generate money.

Andy Warhol once said, "Being good in business is the most fascinating kind of art. Making money is art and working is art and good business is the best art."

Unfortunately for Andy, art has nothing to do with money. Let me show you why.

His factory was covered in phallic bananas pasted to the wall, tin foil wrapped around everything, Marilyn Monroe repeated in different colors and even more phallic bananas conspicuously placed on the paintings of Marilyn Monroe's—particularly on her mouth.

They took a lot of drugs.

Essentially, Warhol's artistic process was turning on an American television set. He saw a Coca-Cola bottle and thought to himself, "Repeat!" He saw Campbell's soup, ate a bowl of condensed noodles, forgot that he had already

More power needed for Power 92.3

Juniata College's WKVR could get lost in the airwaves and fade into static

By **AMIN KHOSHNEVISAN**

Since the late 1950s, Juniata has had a radio station for students and staff. WKVR may now be shutting down, due to a lack of listeners and participation.

"Unless there is more interest within the next semester or the next year, it's very well a possibility that WKVR will not continue," said Matt Salvitti, senior and general manager of the radio station.

Across the country, radio stations are forced to compete with the iPod for a listener's attention, which has caused many radio stations to shut down. This may be a source of the problems here at WKVR as well, suggests Donna Weimer, communication department chair and advisor to WKVR.

WKVR is a student run organization and is dependent on students to make it "happen or not," said Weimer.

Weimer cites two main benefits to having a radio station on a college campus.

The first benefit is for those students who "seek out an opportunity to be heard. To have their music be heard, to be able to talk about the music that they love." The second benefit is that the school gets to promote and show support for free speech.

Salvitti believes the radio station brings a sense of community among the approximately 20 to 30 DJs on the air.

"It's not something that a student goes in and gets paid for, that means they just want to do it, and so the DJs are all motivated," said Salvitti.

Yet the radio station has not reached its full potential according to both Weimer and Salvitti. Weimer recalls when professors used to have radio shows and Peter Goldstein, chair of English, would announce the football games every Saturday.

Weimer had a few suggestions regarding programming, such as weekly updates from student government, as well as programs sponsored by clubs getting on air and talking about what they do. "It would be interesting to have different groups do interviews," said Weimer. Due to advances in radio technology, the radio station could even stream speeches and presentations made by guest speakers.

"I wish we had more political shows on, where people would dialogue," said Weimer. "We have a lot of experts on campus… we have a lot of faculty who are extremely good and why not get a sense of what they do?"

When asked about what is keeping WKVR from reaching these potentials, Weimer said that it was a "double edged sword."

There is the freedom and independence of being a student club, which allows people to come and go on a volunteer basis. Also, students are usually involved in more than one thing, taking time away from WKVR.

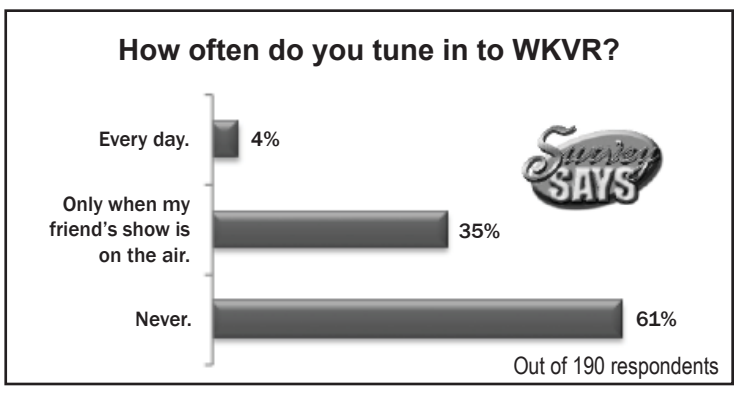
"This is the nature of the beast," said Weimer.

Structural support is yet another limitation. Weimer stated that if the station were tied academically to a broadcasting POE the programming would be more consistent. Unfortunately, this is not possible because the appropriate faculty are not available.

Weimer also states that she is glad that we do not rely on advertisements to get on the air, "It's nice that college radio doesn't have the whole corporate business influence."

The radio station needs to have strong leadership to continue, and Salvitti said, "we have a group of officers that know what they are getting in to and are motivated."

The radio station has had a rich tradition, and "I hope that we would find a modern way to continue that tradition," he said.



The graduating class of 2007 raised 13,337 dollars, which was matched by president Kepple, and added to alumni donations to total a gift to WKVR worth about 30,000 dollars. This money was used to get new equipment and change locations from the basement of Ellis, where leaky conditions were a regular occurrence, to the second floor by Eagles Landing.

To listen to WKVR, tune in to 92.3 FM or go online at clubs.juniata.edu/wkvr.

CHRISTOPHER SHANNON / JUNIATIAN

Senior Casey Shaw puts on an impromptu radio show in the WKVR studio. WKVR is facing the possibility of being shut down due to a lack of listeners.

MUSICOLOGY *Spring, love and sunshine (finally!)*

By **CAITLIN BIGELOW**

Last year, when spring finally came to Huntingdon, I was so overwhelmed and excited. For me it meant an end to the cold and depression called winter. It also was my first spring. The San Diego climate I grew up in left little to be desired, and I never appreciated the end of winter like I do now.

So in tribute to this beautiful time, full of budding flowers, fresh air and love, here is my spring playlist. I'm ready to sit outside barefoot under the trees and skip class because it would be a sin to stay inside on a day like this.

"Steal My Sunshine" by Len was one of the most far-out songs of the 90s. The 90s was one of the best times for music and movies. You can't beat "Ferris Bueller's Day Off" and "The Breakfast Club." They are classics just like this up-tempo, catchy song.

"Sugar Magnolia" by the Grateful Dead is also a classic. "Sunshine, daydream, walking in the tall trees, going where the wind goes/ Blooming like a red rose, breathing more freely/ Ride our singin, I'll walk you in the morning sunshine." The lyrics simply speak for themselves.

"Springtime" by the Annuals starts off sweet then explodes into a delightful tribute to budding love and spring time singing. I recently found one of their CDs tucked behind my desk and have enjoyed discovering them all over again.

"(Nothing But) Flowers" by the Talking Heads is a charming song about finding love and beauty in nature. It's got a content, upbeat feel. David Bryne happily sings, "I fell in love/ With the beauty of the highway/ This used to be real estate/ Now, its only fields and trees/ Where, where is the town/ Now, it's nothing but flowers."

"Sunlight" is off the Harlem Shakes debut album "Technicolor Health." I excitedly bought it the other night and cannot wait to listen to the whole thing. This is a great song with a catchy beat, a lot of energy and an infectious sound.

In the dead of winter when I trudge from East in the ice and snow no song rings truer than **"California Dreamin"** by the Mamas and the Papas. "All the leaves are brown/ And the sky is grey/ I'd be safe and warm/ If I was in LA." This is also the time of year when I get asked, "Why, exactly did you come here?"

"Watermelon Sugar" by the eccentric and experimental band, The Robot Ate Me, is about love. (I guess the birds and bees are on my mind). They sing about picnics, watermelon and wasting time together, all the things I want to do when spring arrives.

Of course I had to throw Bob Marley into the mix. **"The Sun is Shining"** may contain some of my favorite lyrics, "Sun is shining, the weather is sweet, yeah/ Make you wanna move your dancing feet now." Ain't that true!

"C'est la Vie" by forgettable band B*Witched. Ok ok, I know what you're thinking, you haven't listened to this song since you rocked jelly shoes and you and you're best friend thought snap bracelets were all the rage, but it's so irresistibly catchy. Put it on and tell me you don't start singing it.

"Tulips" by Bloc Party doesn't have the same cheerful sing songy beat that the last couple of songs have, but it's a great song nonetheless. (It also happens to fall in with the love theme). Plus, Bloc Party is a solid band and always a good choice to listen to.

"It's All Over Now Baby Blue" by Bob Dylan wraps up this playlist. I couldn't have a playlist without my favorite Bob.

Winter is officially over. Hooray! Now add these to your iPod and go frolic in the grass. Enjoy that sunshine!

Fashion Forward

Must-haves for spring: Part II

By **Kelly Ferguson**

There are only a few weeks left of school, which means that many students are finding summer jobs or internships. In order to impress possible employers, one must dress accordingly. My Top Five Must-haves for spring include pieces that are essential for any working guy or gal.

For the ladies:

#5. Fitted Blazer: When I refer to a fitted blazer, I am not talking about the bulky, shoulder-padded suit jackets that were popular in the 1980s. Today, blazers are more chic due to a feminine, snug cut. The new style of blazers are much more lightweight. They can be paired with shorts and a tank top or suit pants. Instead of wearing customary black, choose a striped blazer with neutral colors, such as beige and pale blue. Wearing a fitted blazer over a blouse will instantly make an outfit appropriate for work.

#4. Fitted Button-Down: One of the easiest ways to dress up an outfit is to couple pants or a skirt with a button-down shirt. A classic white button-down can be worn with a skirt, slacks or khakis, and can be fashioned in black, brown or gray. For a casual look, roll up the sleeves and pair the button-down with jeans or shorts.

#3. Pencil Skirt: After a long winter of wearing pants and sweaters, I know I would want to wear something that is less concealing. Pencil skirts are an excellent way to show a respectable amount of skin in the work place. Owning a black pencil skirt can double your outfit choices and will give your ensemble a completely different look that is perfect for spring.

#2. Black Pumps: In my opinion, a durable pair of black pumps is the one thing that every woman should own. These shoes will never go out of style. Pairing black pumps with any outfit can instantly take it from drab to fab. I would suggest spending a little extra money to get a nice, comfortable pair of pumps. Then they will last forever. For those shopping on a budget, Nine West sells great black pumps that are well made and relatively inexpensive.

#1. Trench Coat: A major fashion "Do" for as long as I can remember, trench coats are spring's top must-have. Lightweight and classy, these coats are the icing on the cake when it comes to the ultimate business outfit. You may be wearing the perfect pencil skirt with a fabulous button-down, but a ski jacket over top will definitely detract from your ensemble. Finalize your outfit with an elegant trench.

And now for the guys:

#5. Fitted Button-Down: Like I have said before, a button-down paired with nice pants is simple, but always classy. A fitted button-down is more important for guys to own because they do not have nearly as many shirt options as women. A basic white button-down matches everything. Spring colors, such as yellow and pale blue, are also "in" this season. Always wear a button-down with khakis or other nice pants. If you want to dress up your outfit even more, try adding a tie and a blazer.

#4. Lightweight Sweater: Unfortunately, it's still not warm enough to go without a jacket. Throw a light sweater over your button-down or wear it on its own instead of wearing a bulky jacket. A sweater isn't meant to simply keep you warm; sweaters can add a refined look to your work ensemble. Knitted cardigans are a great way to combine comfort and class in the workplace.

#3. Fitted Suit: Some businesses have a more conservative dress code than others, so be prepared. Find a suit that fits your body. This will make employers think that you put some time and effort into searching for the best and most expensive suit. Even if you are not required to wear a jacket to work, it is a good idea to have one on hand for future interviews and formal events. Choose a cotton suit instead of wool for ultimate comfort.

#2. The Perfect Watch: As small as they are, watches can make a big impression on employers. A nice watch will subtly enhance an outfit. Don't worry guys, it doesn't have to be a super-expensive Rolex. A watch that isn't too flashy is an acceptable way to accessorize for work. Looking for one? Skagen makes excellent timepieces and Croton sells stylish watches at a great price.

#1. Trench Coat: This month's GQ (Gentleman's Quarterly) dedicated an entire section to the art of choosing a trench coat. Therefore, it is only fitting that trench coats are my top must-have for both men and women this spring. The most popular style for men is a trench that can also double as a rain jacket. Find a coat with a waterproof exterior to stay dry and equally stylish through April showers.

Put all of these pieces together for a sophisticated, colorful and comfortable look that is sure to impress your business cohorts.

A piece of hair on your tongue

▶ *from* **piece of hair** *page 8*

said repeat, and again screamed, "Repeat!"

He took something with no soul, advertising, and repeated it one-thousand times. By commenting directly on what he saw outside of himself, he made art finite; he made it about money. But, the world keeps telling me you have to love an innovator.

Money is an opiate. Eventually the high you get from it will fade. The sense of empowerment you feel over an individual who has less than you is finite—like a Marilyn Monroe diptych.

Still, throughout time there has been many Andy Warhols. Apparently the world loves to pause, not think, and scream, "Repeat!"

For instance, one of the largest Andy Warhols I have ever heard of was the British Empire.

One of the most notorious of their accomplishments was the Opium Wars in China. England was getting poor people in China, who could not afford opium, addicted to the poppy. The Chinese were upset that England was creating a bunch of crack heads. Nobody likes a crack head, especially a couple million of them, so they fought Britain, and lost.

Here is an example of how the British got these poor Chinese people addicted:

Rich English Guy: Oh hello there, would you like a butterscotch krumpet? It is the finest of our desserts in my homeland.

Poor Chinese Person: Of course! I always wanted a taste of English culture.

Rich English Guy: (gives krimpet to Poor Chinese person; eats krumpet) Enjoy it, yes? Do you know what we Brits like to have after every meal?

Poor Chinese Person: No. But I would be delighted to find out.

Rich English Guy: Opium! Want some?

Poor Chinese Person: No.

Rich English Guy: Oh, butterscotch! Too late.

Poor Chinese Person: I'm addicted to opium now?

Rich English Guy: (shifts eyes) Yes?

The British raised tariffs on opium immediately after the war in order to get more money. That made the price of opium go up, and that is just not fair. If an entire nation is going to get addicted to a drug, it shouldn't be expensive; it's only fair. The opium should be for the people.

That is why I hate the idea of Andy Warhol. He did not make art for the individual. It was about the idea of money.

I'm sure there were poor Chinese people who were upset about the opium price. Sitting in their dens, they smoked out of elongated pipes. They sat and curled their moustaches in a humorous fashion. They sat and were far too comfortable to get up and say anything. They were also high on opium.

Maybe that is why so many Andy Warhol's are allowed to repeat. The piece disguises what it is truly selling, and we allow it. It is like a piece of hair on your tongue. One you notice, you pick it off, but it always seems to return. You then proceed to do nothing because it becomes a common, repeated occurrence.

No strings attached

ANDREW WAPLINGER / JUNIATIAN

Lecturer in Music Danielle Gaudry conducts the wind symphony during their concert on April 5. Pieces played included "Toccata" by Girolamo Frescobaldi, "Choral Prelude: So Pure the Star" by Vincent Persichetti, "Scenes from the Louvre" by Norman Dello Joio, "Marche des parachutists belges" by Pierre Leemans, "Irish Tune from County Derry" arranged by Percy Aldridge Grainger, and "Puszta" by Jan Van der Roost.

Sodexo employee promotes sustainability in food and living

▶ *from* **WOLFING** *page 8*

food. Nothing ever goes to waste at her house. "She does composting and gardening, and [she] eats local foods," said Holzner.

Last summer, Wolfing and Holzner worked together on a small Huntingdon farm. Now, Wolfing is an advocate for a Juniata College garden. While a suitable space for the campus garden is still lacking, the idea is worth pursuing because, according to Wolfing, it could increase environmental awareness in the College community.

"There's a lot of kids that I've seen that are into fresh food, or are vegetarian, or just like home-grown food. I know that Sodexo does buy local when they can," said Wolfing. However, having a garden would allow the campus to be more self-sufficient and "stay within your community, as opposed to going out of your community to purchase things." If people are more self-reliant and less dependent on outside sources, it is possible to sustain the environment, she said.

ALISON RIHS / JUNIATIAN

Sodexo employee Maureen Wolfing hands sophomore Lauren Dovey a cup of coffee. Wolfing is working with Sodexo on its sustainability practices.

Wolfing is also a vegetarian. "She's vegetarian because eating meat is really bad for the environment in many ways," said Holzner.

Outside of food, Wolfing is an adamant recycler and has been for many years. "Originally, when I first came here, which was in the 70s, the recycling movement was just sort of getting started in Huntingdon," said Wolfing. "There always has been a group of people who have been into recycling and sustainability, eating local and not spending huge amounts of time to get your food." She is one of those people.

Wolfing said that awareness is the key to sustainability. "If everybody does just a little bit in their own little way, it makes a huge impact in the long run. There's the Chinese proverb that says, 'The journey of 1,000 miles starts with one step,' and…I think we're maybe ten steps along the path. …You have to just keep plotting along and do the best you can."

Like Maureen Wolfing, Food Services is working "towards a common goal" of sustainable food practices, said Director of Food Services Hal McLaughlin. Some of its initiatives include:

Coffee grounds

Since January, the Food Services team has collected 30 pounds of coffee grounds for staff and faculty to use in their gardens. The grounds are in a barrel next to Mocha Run, open for the taking.

According to McLaughlin, the grounds have added nutrients to his soil, enriched his plants and kept pests away.

"Some people just go to the store and dump potting mix in their beds. [The coffee grounds are] more of an organic base. … I know it's sought after for people that grow rose bushes and gardens," said McLaughlin.

Trayless Tuesdays

The Trayless Tuesdays program saves a lot of water and utilities, according to McLaughlin. There are, however, some problems with the system. Since the conveyor belt in Baker Refectory is not designed to carry a single piece of silverware or cup, students must use another tray to send their dirty dishes down the belt. A future solution is to change the conveyor belt so that trays are not needed.

Sustainable cups

Juniata's coffee bars also offer a "sustainable cup" option. For the discounted price of $1, ask for a hot beverage in a ceramic mug. The mug can be returned to the coffee shop to be washed. A refill costs another dollar.

Compost

At present, a student group is working to improve the composting system already in place at Raystown Field Station. McLaughlin also hopes to create a compost pile on campus to be used on Juniata property.

Anything but ordinary

Short Fiction

By **CLAIRE WILLIAMS**

We're all busy. Sometimes we would like to read something just for fun, but when could that happen? In the three minutes between studying for a test and falling asleep? There's a solution to this problem. Short Fiction. Here are some that should suit just about anyone.

"Horse Camp" by Ursula LeGuin – LeGuin has pretty much run the gamut of writing styles. Here she takes what seems entirely normal and twists it. The story is fairly short and easy to read but gives a sense of depth that is hard to achieve in a small amount of space.

"The Story of an Hour" by Kate Chopin – If you've ever had something taken away that you dearly wanted or needed, this is an excellent story to read. This story is very short, fitting on two pages in most books. It is literally the story of one hour in the life of a wife. In this hour she gets news twice, once that pleases her and once that makes her deeply sorrowful and takes away what she wanted and needed most.

"The Yellow Wallpaper" by Charlotte Perkins Gilman – Feeling trapped? Do people think you're a little crazy? This story is a little longer and more involved, but is well worth the read. The plot is interesting and something many can relate to in one way or another. The issues discussed are still relevant and the story is gripping and maybe a little disturbing. A thoroughly enjoyable read.

"No One's A Mystery" by Elizabeth Tallent – Based on a song by Rosanne Cash, which looks at dreams and reality and how belief can shape that. In less that an 8.5" x 11" double-sided page, we meet characters and get an amazing understanding of why they are where they are. The story leaves the conclusions up the reader, giving you something to fill the time with even after you're finished the story.

"Love Letters" by Patricia Zelver – Here a daughter gets her mother's old letters to a soldier. This is a story about the generation gap and having your own life, but with a touch of slightly bitter nostalgia. For anyone who isn't quite sure where they want to be or where they really are, this is a good story to put things into perspective.

"A Rose for Emily" by William Faulkner – I once mentioned that even Faulkner has some good stories. This is one of them. The story is a little odd and slightly twisted, but sweet in its own way. It takes place after a woman named Emily has died and what the town finds out after that. Of all his work, this is the one story that most people can agree is good so give it a try.

"Happy Endings" by Margaret Atwood – A story about getting from point A to point B and how that really doesn't matter that much. Atwood gives various scenarios and what would happen with each in a marriage and continues from there. A great story for writers to read.

Last, any work by Edgar Allen Poe – Most of Poe's work is fairly short and well crafted. Most people who enjoy a good story with solid characters and surprise endings will enjoy Poe. Either read a few of his poems, like "The Raven," "Eldorado" and "Annabelle Lee," or stories like "A Descent into the Maelstrom" and "The Black Cat."

Most or all of these stories can be found within 30 seconds on Google so find one that strikes your fancy and take a break from your other work.

Getting folk-ed up

KEVIN DUNDORE / JUNIATIAN

Sponsored by the Juniata Environmental Coalition, the Earth and Folk Fest took place on April 5 outside the Kennedy Sports and Recreation Center. Earth and Folk Fest included an organic bake sale, recycled jewelry and quilt making, live music, games of 4-Square and student's blowing biodegradable bubbles.

KEVIN DUNDORE / JUNIATIAN

Sports teams balance athletics and academics

Study programs create and maintain positive support for student athletes

By **CHAD KOHR**

Every college student participating in school-sponsored athletics carries the label "student athlete." At most Division I, Division II and even some Division III programs, it can be argued that the "athlete" part comes first, but at Juniata College an unquestionably bigger emphasis is placed on the "student" part of that equation.

Juniata College participates in Division III athletics, meaning that although its sports teams compete at a very high level, no participant is attending school on an athletic scholarship. Students attend Juniata with the mentality that academics come first, viewing athletics as a privilege and a way to continue enjoying sports after high school.

No one understands this philosophy better than Juniata's coaches. Coaches here realize an essential part of their job is to convey the importance of academics to their players, all the while creating a support structure conducive to both academic and athletic success.

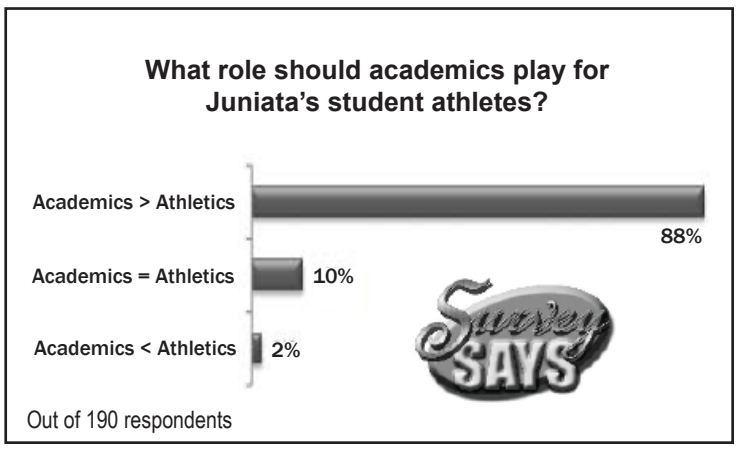
Women's head soccer coach Scott McKenzie has led his team to back-to-back appearances in the Landmark Conference playoffs, but is most proud that his teams have maintained an overall GPA of 3.0 or above for the last seven years. He attributes his team's success to creating an academic culture that his players understand and work hard to uphold.

"We create a culture for academic success from day one. Our athletes know that their coaches are invested in their academic success, not because we have specific meetings or speeches, but because we talk about it casually and consistently. I'm notified by mid-term notices when the players are struggling, but I'm rarely surprised because the culture we've created promotes talking about these things openly," said McKenzie.

Other coaches use more specific tactics to ensure their players' success in the classroom. Greg Curley, head coach of the men's basketball team, has implemented an "Academic Improvement" program for freshmen and players with a GPA below 2.75. He feels this program forces players to place a greater emphasis on academics.

"The program teaches study skills, time management and planning through academic meetings, guest speakers and promoting and highlighting academic resources. We have Sarah May Clarkson come talk to our freshman about how to be an athlete here, including how to communicate with professors and pointing out valuable academic resources such as the Writing Center. We also have our guys come in and fill out a "Truth Statement" every week, where they tell us whether or not they attended their classes and if they received a grade of C or below so we can catch it right away and stay on top of any problems," said Curley.

While Curley and McKenzie have well-established and understood cultures within their teams, new head football coach Carmen Felus is currently developing an academic mentality on his team through new innovative programs. Felus goals, strategies and tactics are all based around the football team's newly adopted philosophy, "What you do speaks so loudly that I cannot hear what you say."



"As the football coach here, my primary role is actually as an educator. The number one goal for our players is to obtain a degree, and I promise families of the guys we recruit that we as coaches will do everything we can to make sure that if they stay four years they will graduate.

"The strategies we are utilizing to ensure this success is, number one, a mandatory class attendance policy, which we mandate by checking classes on a daily basis. We also have a required hour and a half study hall for our players three days a week during the spring and four days during the fall. Also, each player meets every two weeks with an academic mentor coach to go over how their classes are going. Finally, our guys must know where help is, so we work closely with academic supports such as the writing center and tutors and encourage our players to seek those out," said Felus.

When a team has players that struggle academically, each coach agrees that handling these situations must be done positively. Coach Felus believes that handling these situations optimistically pays dividends in more ways than one.

"When a player is struggling, we take every positive measure we can to correct it and explore every avenue to get the young man the help he needs. We do it positively because we don't want our guys to feel that it is a negative thing for them to ask for help. We want them to be comfortable with meeting with us about any problems," said Felus.

Coach McKenzie shares a similar attitude. "The biggest support group on campus to our players is the team. If a player is struggling academically, we do everything we can to keep them around the team and to keep things positive," said McKenzie.

Eagles volleyball fishishes strong

Second in EIVA behind PSU; bye into EIVA semifinals

By **SUZI LINDQUIST**

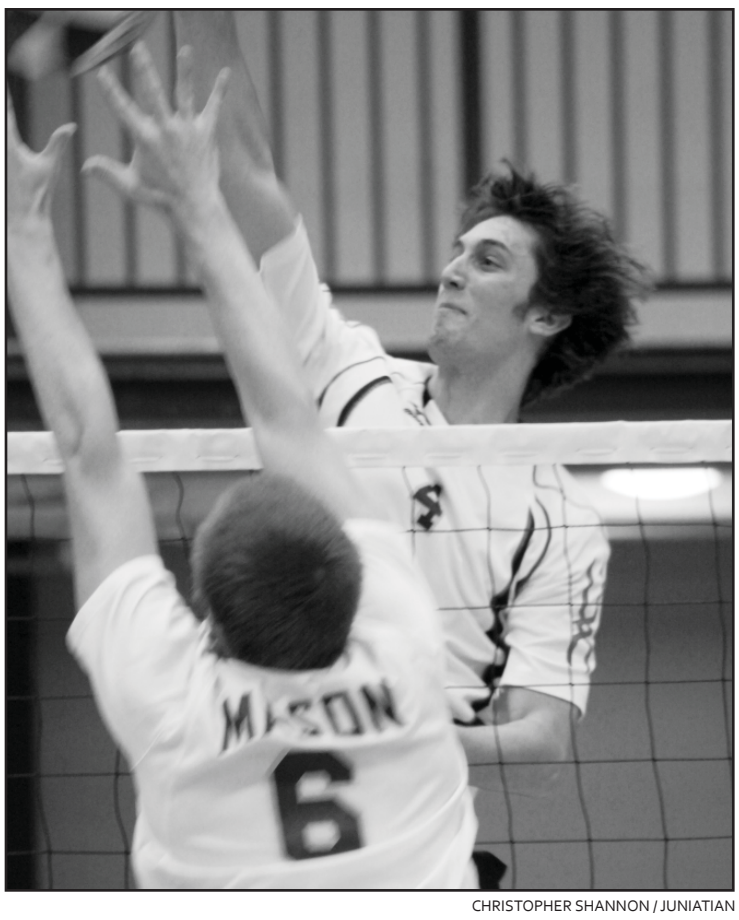
Last week, the Eagles went on a winning spree that helped them grasp the second place ranking in the EIVA Tait division. This puts the Eagles just behind Penn State University at second place in the conference: something that Juniata has never achieved before.

"What makes it significant is that it will give us a bye all the way into the EIVA conference semifinals," said Coach Jeremy Price.

A key element in securing these wins was senior Dan Powers, who was also chosen as the EIVA Tait Player of the Week for the second time in a row and as the Sports Imports/AVCA Division III Player of the week.

Powers was chosen based on statistics and wins. "But as a team, we played so well that it helped boost my stats, so everyone contributed to it. It makes it easy when you have such a good setter that you've been playing with for four years," Powers said.

Coach Price said, "Players are nominated by committee...I think we deserve five All Americas. Whether we get that or not we'll see."



The Eagles finished their season on April 8 by beating East Stroudsburg University with a 15-7 record overall. The Molten National Championships are April 17 and 18, but the team's main goal is winning EIVAs and beating Penn State.

"We consider EIVA a higher goal. Moltens is really nice, great setup they have, and we push for that, but we have higher goals which is the EIVA, which would be playing Penn state. We play very well at home; their teams do as well. Penn State plays better at their place. It's a credit to our fans, credit to the environment that we bring. To win a national championship then refocus is tough, but they're both great opportunities.

"Things are coming together towards the end of the season. Everything is in our hands really, so we're in a very good place – as good a place that we could ask right now at this point in the season, being able to control everything," said Powers.

"As a coach you always hope that when it comes time for your team to make plays in the matches that matter most they're able to do that, and I think you can't argue with the success we've had, and to win four straight in conference means you're doing something right. Now what we have to do is refocus, win DIII champs, refocus again and win EIVA. I think we peaked well at this point, and now we've got to find a way to keep getting better. We have got some things that we're excited to work on," said Price.

After the Molten National Championships, the Eagles will have to win one match to get into the EIVA Championships because of a bye for the first two rounds. Who they will play will not be known until Saturday before the Thursday match.

CHRISTOPHER SHANNON / JUNIATIAN

Junior outside/opposite hitter Zach Wanner spikes the ball during Juniata's match against George Mason on April 4.

CHRISTOPHER SHANNON / JUNIATIAN

Junior libero Anthony Damiano receives a serve during Juniata's match against George Mason on April 4. The Eagles defeated the Division I Patriots 3-1 to earn a #2 seed in the EIVA Tournament and a bye into the tournament semi-finals.

Oller Track christened in first home meet in 4 years

At much-awaited meet, Eagles rack up 19 first place wins but finish second overall

By NICK TALISMAN

After four years with no home meets, the track and field team was finally able to enjoy the advantages of performing on their home turf. The old track was substandard and needed resurfacing and restructuring. But after a lengthy wait, the new track was finally ready for April 4's meet against Messiah and Elizabethtown colleges.

The event was especially meaningful to the loyal track and field seniors, who have spent four years sitting on long bus rides to get to each and every meet.

Senior Kelsey Buffenmyer said, "It was really nice to not have to travel on the bus. It affects the younger classes less, because this was so different for the seniors. I was also excited to have my friends see me compete, because a lot of people would come if the meets weren't so far away, so it was great that the fact that it was home brought with it a level of support."

Senior Pat Filamor agreed when he said, "It was nice to compete in front of friends and family. It was nice to see people I knew come and support us. It was a big meet, not in terms of conference, but in terms of competing in front of family."

Both Filamor and Buffenmyer won two events on the day, with Filamor taking the long jump and 100-meter dash. Buffemyer beat her competition in both the high jump and long jump. Both managed to qualify for nationals, and Buffenmyer also managed to get a personal-best and school record 15.96 in the 100 meter hurdles.

Senior Katie Tavenner had major success in the brand new hammer cage, winning both the discus and the hammer throw, earning Landmark Field Athlete of the week honors.

Senior Kyle Mazur also enjoyed success winning the javelin throw, and the shot put, having already qualified for nationals for the javelin.

Despite losing only two field events all day, both the men's and women's teams finished second. The women placed slightly behind Messiah College, while the men fell just short of beating Elizabethtown College. The individual successes were many, however, as the Eagles received 19 first place finishes on the day.

Filamor said, "There was nothing greater than winning the 100 meter in front of friends and family. That was the title I wanted that day. After all, when someone thinks of track and field at the Olympics, they first think of the 100-meter champion."

CHRISTOPHER SHANNON / JUNIATIAN

Senior jumper/hurderler Kelsey Buffenmyer leaps over the bar during the high jump competition on April 4 during Juniata's first home meet on the resurfaced Oller Track. Buffenmyer placed first in high jump and long jump, and set a new school record for the 100-meter hurdels. The Eagles finished second overall in the meet.

One of the biggest worries the team had going into the meet was whether the newly remodeled track would hold up well enough. In order to make sure that the track would be ready for competition, Coach Cutright held off on the scheduling of the event until he was sure it would be ready.

Only three other teams could attend, because most teams already had something scheduled. Houghton College in New York was an unfortunate absence, due to its campus getting snowed in, but the consensus was that even with only three teams the meet was a success.

"Not only did the track work, but several members of the other competing teams commented on how easy the track was to participate on," Buffenmeyer said.

With five more wins, softball will break last season's record

Team sits fourth in Landmark conference

CHRISTOPHER SHANNON / JUNIATIAN

Senior outfielder Liz Schmitt takes a cut at pitch during game one of Juniata's doubleheader against Moravian on April 4.

By AIMEE RADIC

With a 2008 record high of 21 wins, Juniata softball is on its way to yet again go down in program history. Currently standing at a 17-7 record, only five more wins will shatter their 2008 record.

Fourteen games remain in the regular season. Presently, Juniata is positioned fourth in the Landmark Conference, with two conferences losses, both to Moravian. Moravian sits on top of the conference, a long time foe to the Eagles.

Nonetheless, Juniata is still a legitimate threat, with six more conference games to play. This leaves considerable room for improvement before the Landmark playoffs in May.

Landmark playoffs have been a season-long goal for the Eagles. As long as the team continues to see success, playoffs are attainable.

Sophomore Melissa Moffat feels like the team has improved since day one. "I feel that we have improved a ton since the beginning of the season. We have become closer as a team and that has really made us play better on the field," said Moffat.

Junior Rachel Nagy is leading the team with 30 runs batted in. With 33 hits in 73 at bats, Nagy leads the team with 30 runs batted in. Another junior, Sarah Eckard,

▶ *see* **SOFTBALL** *page 14*

At season's midpoint, baseball still struggles

Eagles lose six of last seven games, but still hope for a qualifying spot in champs

ANDY WAPLINGER / JUNIATIAN

Senior Dane Ott hits a homerun during the third inning of game two of Juniata's double header against Merchant Marine on April 4. Ott finished the day 3 for 7, but it was not enough, as the Eagles fell to the Mariners 9-7 in game one and 9-4 in game two.

By **Kevin Campbell**

With only nine games left in the regular season, we are wavering, losing six of our last seven games. Still in sixth place in the Landmark Conference, there is now a sense of urgency as a result of our 9-15 record, as the season is more than halfway over.

Currently, we stand with more season losses than the total in 2008 (13). "We aren't where we expected to be at this point in the season, but we still have a shot at playoffs, so we are expecting to make a serious push here at the end of conference play," said junior Tyler Clifford.

In order to make the conference championship in early May, we will need to finish fourth in the conference. With six more conference games left, we have a chance to stay in the hunt for a qualifying spot.

Having a 7.90 as the team earned run average (ERA) is a difficult issue that we must improve on during the road to playoffs. The pitching staff has given up 121 walks, which we need to minimize. Giving batters a free base allows opponents to put runners in scoring position.

Another concern is that our opponents are confident stealing bases, having 63 successful stolen bases on 79 stolen base attempts. We will need to cut this number down if we plan to make playoffs.

A very crucial win was the win in our second game over Susquehanna University to help turn around the season and snap a five game losing streak. Clifford pitched a great game and earned his first career shutout with the 6-0 win.

"It always feels good to accomplish something like that on a personal level, but for where we are as a team right now, it meant a lot more to me that we got a critical conference win that keeps us in the chase for a playoff birthe," said Clifford.

Knowing that the season is on thin ice and every game could mean the difference in a playoff spot, a new approach had to be taken in hopes to win more games.

"Throughout this season our team has been relatively inconsistent. As a team we have decided to direct focus to our defense, and we have created a goal of playing scoreless defensive innings. This helps relieve pressure as hitters, knowing that the main goal is defense. At this point in the season every game is crucial. If we play one game at a time and perform to our potential, playoffs are not out of reach," said senior second baseman Kevin Small.

When we are able to execute this new philosophy and hold our opponents to under five runs, we have only lost once. However, when we loose focus and allow opponents to score nine or more runs, we could not seal a victory.

Seniors Adam Spadafora and Kevin Small continue to lead the offense in batting average, hits, slugging percentage and on-base percentage. Spadafora has an on-base percentage of .475 and once on base he has used his speed to steal 12 bases on 13 attempts. Senior outfielder Dane Ott has taken advantage of Small's and Spadafora's ability to get on base by driving in 20 runs on 24 hits.

"We have a lot of young guys stepping up to fill big roles. We have a lot of young talent this year like freshman Matt Regan who gives us that edge everyday by providing quality pre-game pumpers. Things like that are going to pay off in the end. Our team is coming together well, and it should contribute to more wins in the future. We have better team chemistry than every team we play," said Small.

We will face a tough stretch of games this weekend, playing five games in the next three days. Three of these games are against conference rival Scranton University, which are much needed wins in order to salvage the season.

Softball team continues record-breaking season

► *from* **softball** *page 13*

is currently leading the team with a .513 batting average and senior Liz Schmitt is holding strong with two homeruns.

The Eagles continue to see success on the mound with dominating right-handed pitcher, junior Alyssa Erb. She is currently displaying an impressive 1.86 ERA with a 10-5 record during 16 appearances. Freshman Pam Heinrichs is also proving to be reliable, holding a 3.19 ERA and 6-1 record during 11 appearances. Senior Pam Mansell rounds out the pitching staff for this season with a 1.93 ERA.

Leadership has played a pivotal role in the team's success and is well divided among the upperclassmen.

"As seniors, we're a pretty core part of the team. When we came in as freshman, it wasn't a very good situation. We stuck around, and we've been working harder and harder every year. We've been working with the coaches on our communication on and off the field. As seniors, we're proud of where we've come," said senior Liz Schmitt.

Although the softball team is comprised mostly of upperclassmen, the freshmen have also had an impact on and off the field. "The freshmen are amazing," said Moffat. "They are always positive and always find a way to contribute even if it's not on the field."

Along with strong leadership, the team attributes success to their tight bond and close friendships. Throughout the season, the players learn more about each other through locker room games and decorating each other's lockers.

Moffat feels that team bonding activities have brought the players together in a competitive aspect as well as helped to build friendships, especially through time spent in the locker room.

"It's a time to get to know your teammates better, while also being able to use inside jokes to put your friends in a good competitive mood," said Moffet.

For the seniors and returning players, the upcoming games against Catholic University will prove to be somewhat of a battle. Although Catholic currently sits higher in the conference than Juniata, the Eagles are confident in their play. Last year's loss to Catholic cost Juniata a trip to the playoffs, and this year they are not planning on letting that happen.

Schmitt is positive about the future. She says the team plans to "keep relaxed and keep going out and having fun. That's when we play our best games."

Senior day is at home April 25 against Catholic University in a doubleheader at 1 p.m. and 3 p.m.

Women's tennis breaks 21-year-old school record

Tennis program continues strong season; men's team keeps morale up with team-building rituals

By **AIMEE RADIC**

Both the women's and men's tennis teams are showing their true potential as they compete for the playoffs and conference titles. The men get serious while still having fun, while the women want to hold on to their number one conference title, while keeping it cool.

Currently 4-0 in the Landmark Conference and 11-4 overall, the women's tennis team has broken the record for the most wins ever. The previous record was set in 1988.

Coach Beth Bleil feels very confident that they will break that record with their five matches left. "We are doing and performing well and beating teams we were never able to beat before," said Bleil.

One concern for the girls is the weather. Tennis is not a cold sport and with the postponing of the Stevensen match, Bleil is worried that this schedule may not be beneficial for the girls.

"We have to come back from this pause and keep our performance levels as high as they have been since the beginning of the season," said Bleil.

Junior Maggie Wolenter feels that the pause will be good for the team because it will be match after match when they return from the break and the team is hoping for better weather. "The upperclassmen try to motivate a positive attitude while on the court dealing with the weather and rough practices," said Wolenter.

The men have a different motivation style about them. Bleil said, "They are performing well against some top level opponents, and although we have lost to those opponents, we are realizing that we can compete at that level and that experience is providing fuel for our upcoming matches."

The boys have set their goals high since the early season in the fall. "They have not wavered from working towards those goals," said Bleil.

Bleil believes that even though they are serious in their goals, the men are very fun-oriented. "Two words to describe them would be: focused and determined, with a little bit of crazy fun. One can see this in their pre-match ritual, which involves break-dancing and nicknames," said Bleil.

Senior Aaron Rhodes went into more detail about the rituals. "They started before I came here. Adam Messner who was two years older was deemed the break-dancer, and ever since, we just pass the job down," said Rhodes. "After line-ups, we start a slow clap and then [senior] Casey Chew will start his break-dancing."

Everyone on the team will participate in this with Chew. One can slow clap, yell, or dance around Chew.

A newer addition to the pregame warm-up is Chew's hair. Early in the season, Chew and Long cut their hair into mullets. While Long still sports the hairdo, Chew cut his off and has kept the hair. It is now a team icon that he now waves around during the prematch rituals.

Another hilarious ritual are the player nicknames.

"Assistant coach Brandon Long, announces names at every match. He comes up with the most creative names using their last names as the pattern to follow. I was called 'Follow the yellow brick Rhode' one game," said Rhodes. "We tend to overshadow the other teams' pregame ceremonies and always have fun. It is our type of motivation. It is so lighthearted, but we still get excited every time."

Only one other college, Drew University, challenged the boys' pre-match ritual. After they did their break dancing, Drew went to break-dance challenge them. "It was a lot of fun," said Rhodes.

People describe their rituals as very entertaining. "They are so entertaining that our opponents stop what they are doing and watch the show with as much enjoyment as our team," said Bleil.

The team is very proud of their four senior boys: Casey Chew, Ryan Navarro, Aaron Rhodes and Jonathan Skoner.

"Our four seniors have a lot at stake. The whole team, including myself, are going to do everything we can to reward them for their dedication and passion for JC Tennis," said a proud Bleil. "'Sut.' You can quote me on that," said a confident, smiling Bleil.

ON THE FLIP SIDE

By **Bennett Rea**

I've been hearing a lot about this "sophomore slump" concept lately, and having been a sophomore for five percent of my life, I think I know what to do about this very real/very made-up issue.

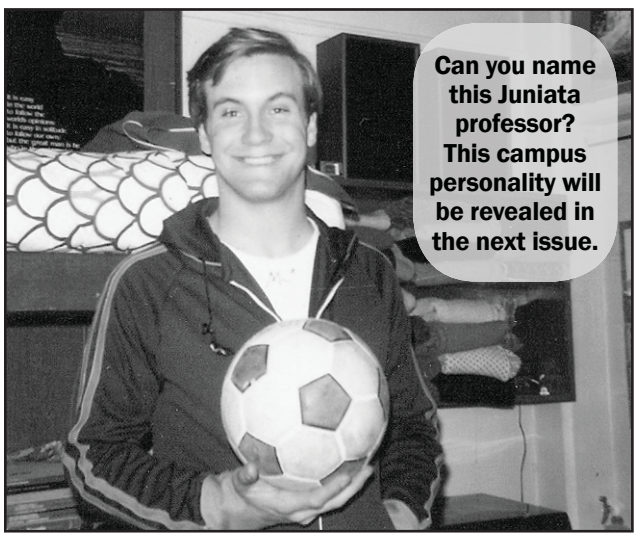
The sophomore slump is a phenomenon which has been recognized by many important people, I'm sure (If you want actual truth and facts, go to page one because you will get none of that stuff here). Apparently, sophomores feel like crap because the "thrill" of freshman year is over and there are lots of things to worry about as a sophomore, like POEs, internships and a massive freshman class that will steal their dorm rooms.

Every student, regardless of class, has experienced bad moods, hopelessness and a need to attack the library because the computers or printers are broken. Why are sophomores the class with a special name for it? Probably because of the alliteration. Either way, I am going to give you some tips about how to get through the slump.

Freshmen can gain valuable information from these tips, and sophomores can use them for the last 15 days of the semester. Juniors and seniors can use these tips as an opportunity to laugh at freshmen and sophomores for complaining even though they do not have to do a 1,000-page thesis and look for a job during the second Great Depression.

Tip #1: Join a club or something. Isn't that everyone's answer for everything in life? It doesn't matter what mood you're in; you should join a club. Are you lonely? Join the Checkers Club! Are you sad? Join the Wakeboarding Club! Are you not sad? Join the Wakeboarding Club! Are you not drunk yet? Join the Rugby Club! That's the message. So, if you've got the sophomore slump, join a club or something.

Tip #2: Stop worrying about the future. Apparently, sophomore year is more stressful than most things in the world. This is because sophomores have to start worrying about the future. Yes, the horrific and dark future that awaits them as upper-middle class graduates of a well-respected liberal arts college. It is depressing. Sophomores need to stop worrying about the terrors that await them and live in the moment. Quit thinking about internships and study abroad for a minute. It's okay. (Disclaimer: it's actually not okay. You will most likely get screwed over.)



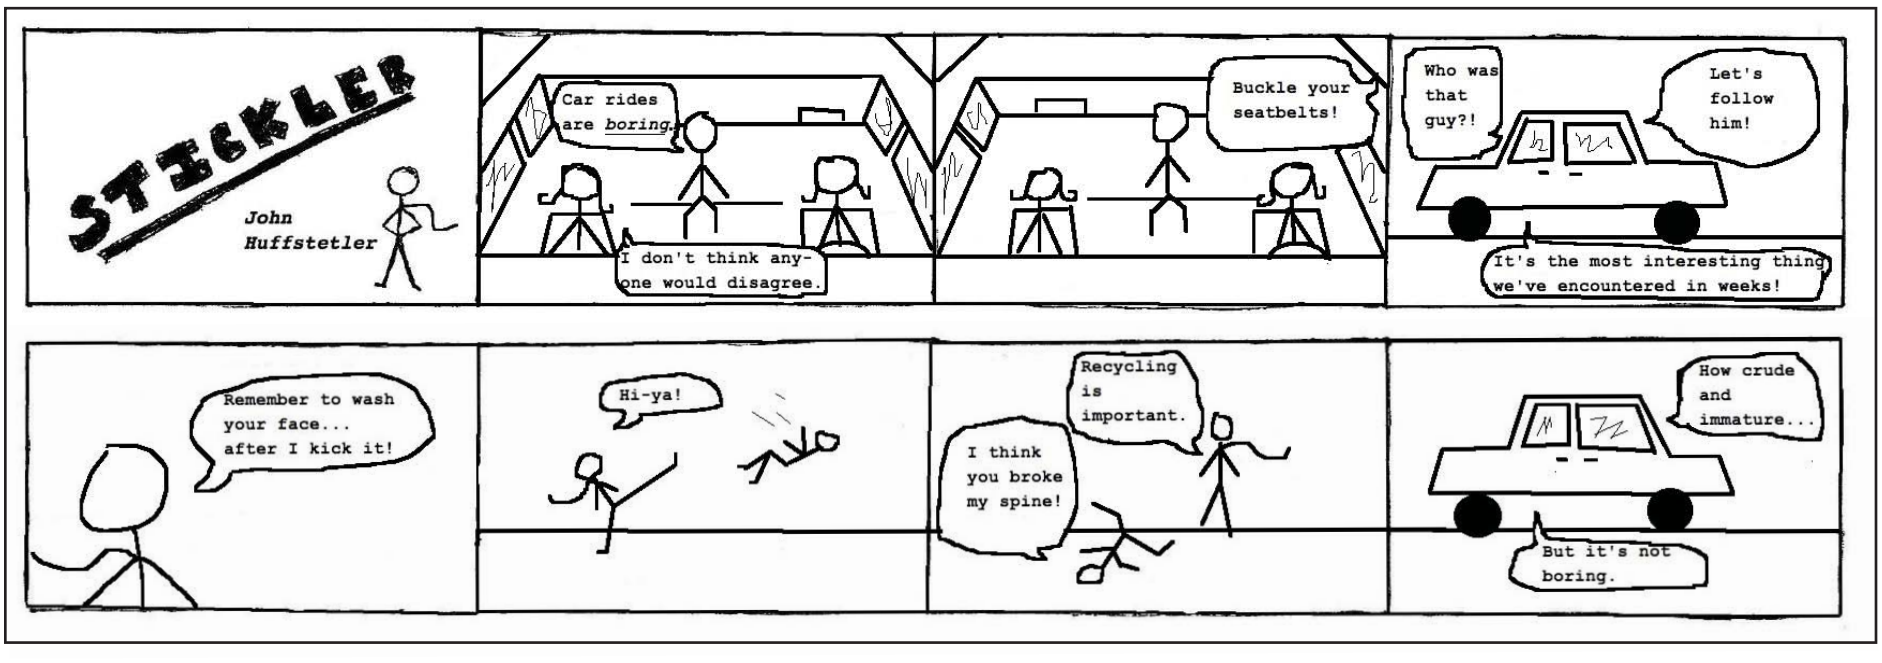
Tip #3: Sleep regularly. This is another tip that colleges give to people suffering from the sophomore slump. Clearly, it must be a joke.

Tip #4: Keep up with your work. Sophomores lose motivation and get quite apathetic if stricken with this slump. They just have to stay focused and not slack off. The key to remember is that if you do not do work, Juniata will kill you.

Tip #5: Take a break from your work. Sophomores are stressed and quite anxious because of all the things they must do that weigh them down. This is not the case for freshmen, juniors and seniors, who just get to lay around all day blowing bubbles. Sophomores deserve a break. The key to remember is that if you do all your work, it will kill you. You might notice that if you don't keep up with your work, Juniata will kill you, and if you do keep up with all of your work, Juniata will kill you. Yep.

I'll end by saying that the sophomore slump could very well be a real phenomenon. I'm not a doctor; I don't know. There could be some complicated graphs out there that show sophomores suck or something like that. There are none that I could find in the extensive research I did, which included the first page of results from Google's image search and absolutely nothing else. That's proof enough for me.

Guess who?



Last issue's "Guess Who?" (above) was Deb Kirchof-Glazier, professor of biology.

Juniata College, Huntingdon, PA

VOLUME 90, ISSUE 10 | WWW.JUNIATIAN.COM | THURSDAY, APRIL 30, 2009

Not a black & white issue

Complexities of campus diversity

By **MARIE BOLLER**

The College has a stated mission to promote diversity. In spite of some progress, thanks to the best efforts of the Enrollment Center and Marketing Department, the College remains predominantly Caucasian with relatively little ethnic and racial diversity.

"It's like we're having a party and no one's coming to the party. I believe that Juniata tries [to increase ethnic and racial diversity on campus]; I do. You have to work at it," said Athena Frederick, the College Registrar.

Frederick has worked at Juniata since 2000. "I'm still the only African-American administrator," she said. When she moved to Huntingdon with her family eight years ago, "I turned heads," she said. "Now, everyone waves."

Diversity comes slowly. Huntingdon is a traditionally Caucasian community, and Huntingdon County has a long history of Ku Klux Klan activity. As recently as April 9, 2006, a 15-ft cross was burned on a ridge overlooking Mount Union, just a few miles south along the Juniata River. The local community condemned the perpetrators, but could not dismiss the latent bigotry in the symbolism.

For many townspeople, Frederick said, Juniata represents an explosion of diversity.

"I believe that Juniata is an inclusive community," said Dean of Students Kris Clarkson. "No student here is mean-spirited, harassing or nasty. At least, I hope not."

The numbers

Seven years ago, less than one percent of the student body was African, Latino, Asian or Native American (ALANA). Since then, the matriculation of ALANA students has increased 400 percent. Last year, about 40 incoming students, or 12 percent, were ALANA or international students. Juniata currently rivals Swarthmore for the highest percentage of international students in a Pennsylvania college.

The Enrollment Center has worked hard for this, paying for spots at college fairs in multicultural hubs across the country.

"We tell high school students, 'This is something different,'" said Enrollment counselor Amie Park, who recruits students from the Philadelphia and Baltimore areas. "We encourage them to try new things and to consider Juniata

Is study abroad safe?

Students can avoid danger with common sense

By **KELLY O'SHEA**

This February, a student studying abroad with the Galapagos Academic Institute for the Arts and Science (GAIAS) was robbed at gunpoint while staying in Quito, Ecuador before heading to the Islands. The student was unharmed.

"[The incident] wasn't directed at Juniata students; they were just at the wrong place at the wrong time," said Interim Study Abroad Advisor Elena Hart.

Juniata will send a delegation down to Ecuador this summer to check into general health and safety concerns. "Because of the recent incidents, we still want to make sure it is a safe location and see if there are any concerns to be aware of," said Hart.

In other locations, there have been "minor incidents, but nothing serious where anyone was hurt. We do believe the programs are safe, and we don't have any concerns at this point," said Hart. "We do want to double-check. And as long as students take precautions,

Capturing the community

An inside look at Marketing's photo shoots

By **STEVEN GOEHRING**

The faces photographed for the Marketing Department appear everywhere, from the College Web site to posters and booklets mailed across the world. However, the methods and the people behind the photo shoots are less apparent.

Marketing usually holds two professional photo shoots each year, one in the spring and one in the fall. The hired photographers work with students to portray the school accurately while highlighting the College's strengths.

"We always try to portray Juniata as it truly is," said Candice Hersh, director of Marketing. But there are challenges in portraying the Juniata community.

The first of these challenges is the fact that the College is as an oasis of diversity in the midst of a predominantly Caucasian, small-town population. And, while Juniata is represented by many different ethnicities, some are still a small percentage of the student body. Thus, portraying too little or too much of any specific ethnic population in a campus advertisement or Web site banner can draw criticism.

"I would say that [Juniata's marketing publications] didn't show a lot of multiculturalism, but that's probably reflective of the school," said freshman Katerina Korch. "But unless you do show some of that, how will you get more of those

Tech concerns both real and rumor

CTS addresses students' questions about spam, shapers and U: drives

By **Kat Pearce**

The Juniatian recently sat down with David Fusco, associate vice president and chief information officer, and Anne Wood, director of campus network and security (CNS), to discuss the recent increase in spam e-mail, the school's bandwidth shaper and rumors about student U-drives filling up.

Spam

A recent advisory from Campus Technology Services stated that, "Several users have reported an increase in the amount of SPAM being delivered to their inboxes. CNS would like to confirm that the level of spam getting past our spam filtering techniques over the past couple of weeks has increased."

It went on to say that efforts to battle spam have not faltered, and it is only a matter of time before countermeasures catch up.

Students noticing big increases in their junk mail may be wondering what has caused the change.

"Spam in general is always growing," said Fusco. "Spammers are always trying to find new ways to get into your inbox."

"If it's being noticed it's probably because they've found a new way around it, and it's just a matter of time until our filters catch up with whatever method is being used," said Fusco.

In this battle, Juniata has three separate filters. Students primarily see two of these, and the filters are updated to help protect against that spam.

"All three of the mechanisms that are in place continually update to try to keep up with the spammers," said Wood.

"The first level filter basically deletes spam. It never even hits the inboxes; you never even see that level," said Wood. This filter is set low enough that the department feels sure they are only deleting spam and never normal e-mail.

"We've set it at a point that we feel confident that we are deleting spam only, and some of the spam still slips through because of that," said Wood.

The second filter tags spam. It arrives in inboxes with "[spam]" written along the subject line.

The third wall of protection is the features available in Microsoft Outlook, which most students do not use. If students were to use Outlook instead of Webmail, they would have the benefit of a built-in junk mail feature. When the program determines that something is junk mail, it will automatically move it from the inbox to the junk mail folder.

"It's a real fine line what is considered spam, because what one person considers spam another person may want to get," said Fusco

To help reduce spam, Wood advises students to "not register on sites for free stuff," or put their e-mail address into anything that they do not feel is necessary.

Students can also find directions to set up Outlook at help.juniata.edu by searching for 'outlook set-up.'

The bandwidth shaper

Students may have noticed that peer-to-peer online applications are slower than regular Web surfing. This is because of the bandwidth shaper, a device that Juniata and many other schools utilize.

"We have this thing that sits between our network and the internet. It shapes traffic based on the kinds of things that you're doing," said Fusco in regards to the bandwidth shaper.

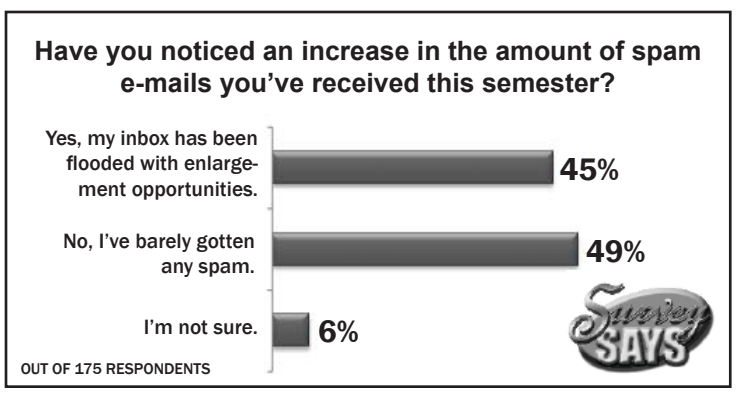
This program moderates campus Internet use. It organizes different kinds of usage and divides them like lanes on a highway. According to Fusco, different kinds of traffic receive different sized lanes. This keeps one kind of traffic from taking up the whole highway, and makes sure every type gets a certain amount of space.

"There is nothing that we block, specifically," said Wood. Instead, net activity is categorized into groups such as Web traffic, streaming traffic, gaming traffic, chatting traffic and peer-to-peer or file sharing traffic. Then each type of traffic is given a percent of the space, or a certain size lane in the overall highway.

"We guarantee a certain capacity for different kinds of uses, and then we cap it off for certain kinds of uses," said Fusco. He gave the example that a student on Lime Wire will have less priority than another student trying to get to a general Web site.

"Without the package shaper, you literally would not be able to open a Web page," said Fusco.

The rumors that the device has been acting up are true. Wood said that the shaper is five years old and is due for replacement this June. It is still functioning, but has begun to be tricked by programs that try to get around its rules. New file-sharing appliances are made to get around the limits a bandwidth shaper places on peer-to-peer trafficking, and can sometimes disguise itself as other types of traffic.



This will only be compounded by the fact that the traffic always goes way up the last month of the semester, said Fusco.

Student U: drives

According to Fusco, forum posts have started rumors that the U: drive is filling up. However, this is not true.

"I think the misconception was somebody posted something on the forums about Admin Home, which is a server that Juniata uses for

Student cars found with tires slashed

JCPD calls campus incident a 'random act of vandalism'

By **Leanna Yeager**

Over the Spring Fest weekend, six people returned to their cars parked in South parking lot to find that their tires had been slashed. So far there are no leads in the case.

Freshman Dani Gaisior was one of the affected students. Sunday afternoon she went out to her car, planning to drive to Wal-Mart. "I didn't even notice my tire at first. I just got in and started to drive away," said Gaisior.

Her car was handling oddly, so she looked into her side mirror to see what the trouble was. "I saw the way my tire looked and pulled over," she said. Upon inspection she found that there was a gash in her tire about six inches long. "I know I didn't drive over anything because the gash was on the sidewall [of the tire]," said Gaisior.

After putting on the spare tire, Gaisior took her car to a garage. She found that it would cost her about $100 to have the tire replaced. "I commute here from home. I need to have my car around and working," Gaisior said. Afterward she contacted the JCPD.

"We had six students report their tires slashed….They were all in the South parking lot," said Rocco Panosetti, patrol supervisor and head of campus investigations. "So far there haven't been any leads. We're hoping to find someone who might have seen or heard something," said Panosetti.

Aside from increasing patrols, there is not much else that can be done right now. "The Huntingdon police were here, but they haven't had any similar incidents downtown," Panosetti said. There also have not been any similar incidents this school year.

"We're going to keep looking… [but] this seems to be a random act of vandalism," said Panosetti.

Where on campus?

CHRISTOPHER SHANNON / JUNIATIAN

Saying goodbye to three familiar faces

Faculty and staff move on from Juniata, will miss strong College community

By SETH FOX

Several faculty members will not return for the 2009-2010 school year. Director of Student Activities Staci Weber, Eagle's Landing Chef Benjamin Flowers and Spanish instructor Fernando Martinez are among those leaving.

CHRISTOPHER SHANNON / JUNIATIAN

Staci Weber, director of OSA

The Office of Student Activities will be missing Weber's familiar face next year. Weber, who has worked at Juniata for five years, will be attending Syracuse University for her PhD.

Weber said, "I kind of thought I would be here closer to three years, but Juniata is a really great place to work. I then figured I would go get my doctorate from here or find a job that was a step up. But different things happened, and the way things have kind of worked out I feel that I've accomplished what I've wanted to accomplish. Obviously there is always more you can do, but I felt like now was a good time to go."

Though the move is coming later than she thought, Weber says moving on is still difficult. "While I am really excited to be going forward, it's kind of bittersweet. I will miss the people most here. If none of the people were here, if the students weren't here and the colleagues I had, this would just be a campus with buildings. This is a great community," said Weber.

The College is currently interviewing applicants for the director of student activities position. Weber said, "No replacement from within has stepped up, and they have not named anyone yet."

Weber left this piece of advice for her successor: "Listen, and just

KEVIN DUNDORE / JUNIATIAN

'Chef Ben' Flowers

really take it all in. You need to do a lot of that your first year. Ask questions and get to know the students. Don't limit yourself to any one thing."

Known on campus as Chef Ben, Flowers has worked at Juniata for one year. He decided to transfer to another Sodexo facility in the area to be closer to his family in Boothwyn, PA. "My parents are getting old, and I just want to be closer to my folks. Don't get me wrong, I love it here, but family comes first," said Flowers.

Flowers is looking into Sodexo positions at Villanova, Penn State and Temple universities. Though Flowers was a chef here, he said, "I'm not limiting myself to chef work. I could do administrative work, but cooking is my forte, and I love it. As long as they don't have me doing dishes."

Like Weber, Flowers will also miss the people at Juniata most. "What makes my day good is when I walk around and ask everybody how their meal was. Even if they tell me something is wrong, you know I try to help them. To see you guys smile after a bite of food is just the best," he said.

The world languages and cultures department will bid 'adios' to Spanish instructor Fernando Martinez. Martinez will be returning to his hometown of Oaxaca, Mexico after six years at Juniata. This was the last year of his contract, and this has always been his planned year of departure.

Martinez will still be teaching Spanish upon his return to Oaxaca. "I teach English for kids at an elementary school level and at a college level, but I also teach Spanish to international and foreign students at the university level," said Martinez.

Martinez will also miss the students, but more than that Martinez will miss the campus. "I will miss the campus the most about Juniata. The community feeling that you get. You do not get that at universities and big schools," he said.

Juniata College does not comment officially on the departure of any faculty or staff member unless it is a retirement.

Students poised for grad school

Acceptance rates high across departments

By ALISON RIHS

Each year, a large number of students pursue a graduate education. Juniata's acceptance rates are high across the board, and the College works to prepare its students for medical, Master's, Ph.D and professional programs.

According to Director of Career Services Darwin Kysor, "Typically 30 to 35 percent [of Juniata students] go directly to graduate or professional school." Many others wait a year to continue their education.

In general, graduate programs that have accepted Juniata students in the past hold the College in high regards.

The chemistry department consistently produces numerous students that are accepted to graduate and medical schools each year. Professor of chemistry David Reingold said, "I've been here 21 years, and there hasn't been one student that hasn't gotten in." He added that not all students are admitted to every program but are at least accepted to one school.

The chemistry field is competitive. According to Reingold, "Most schools our size would have one or two students, but we have five chemistry majors [who are pursuing graduate school]."

In fact, eight Juniata seniors have been accepted and received stipends to programs in chemistry or biochemistry.

Juniata's biology students experience similar success. Randy Bennett, chair of the biology department, said, "The acceptance ranges from 80 to 90 percent of the people we write letters [of recommendation] for."

There are usually 30 to 40 biology students pursuing higher education in fields like medicine, nursing and physical therapy.

Though most biology graduate programs require a 3.0 GPA, research experience is taken into consideration as well. The College offers many research opportunities to prepare students. Bennett said that this is one aspect that graduate institutions respect most about Juniata and its students.

Juniata's biology students have gained admittance to many prestigious Master's, Ph.D and professional programs at schools like Johns Hopkins University, the University of Wisconsin and the University of Michigan.

The psychology department also attracts several students to consider a Master's degree or Ph.D. David Widman, associate professor and chair of the psychology department, said that 80 to 90 percent of students who apply are accepted into a program.

The standards for obtaining a Ph.D in psychology are strict. Widman said, "If you are under a 3.3 GPA, you shouldn't apply. You should apply to a Master's program first." Clinical psychology is even more difficult; the requirement is a 3.8 GPA.

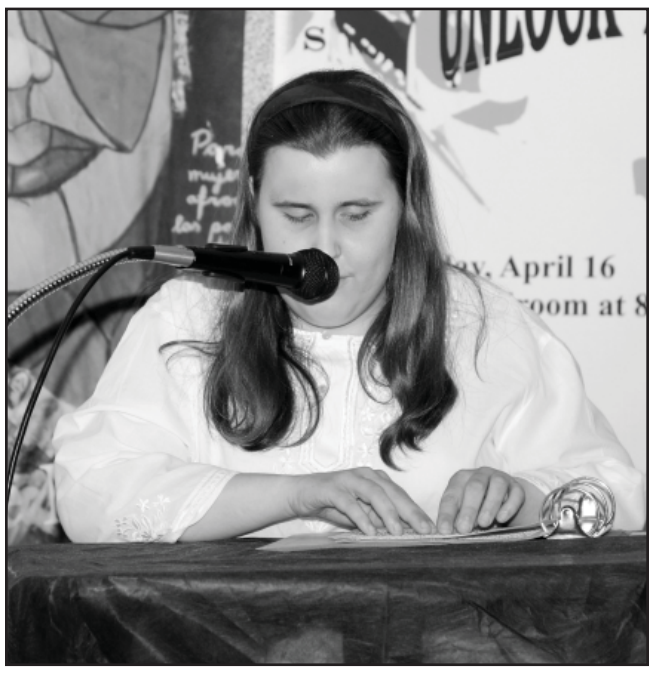
Senior Felicia Kaas, a psychology POE, said Juniata has academically prepared her for graduate school. But, because a higher degree is required for this field, Kaas suggested that the department create a class to prepare students even more for graduate school.

Traditionally, Juniata is not as strong in pre-law. Only a few students pursued law school this year.

Senior Lindsey Lanzendorfer, a politics POE with a secondary emphasis in Spanish, has been accepted to law school. She believes that Juniata's small classes prepared her to participate in similarly structured classes at law school.

Senior Kaylee Kachik, a management POE with a secondary emphasis in Spanish, also feels that her Juniata experience will help her in law school. She said, "[Juniata is] very demanding. It prepares you for what law school will entail."

Smaller humanities departments like English have a minimal number of students who pursue a graduate education. Chair of the English department Peter Goldstein said that there are usually two or three students. This year, only one student applied.



Very few students are solely English POEs. Goldstein also said that Juniata is probably not well-known to English programs nationwide.

Although there are not many Juniatians that apply for a Master's or Ph.D program in English, the acceptance rate is high. According to Goldstein, in the past, "our students have managed to get into very competitive programs."

Despite the varying number of applicants to graduate school in each department, Juniata students are almost always accepted to at least one program.

According to Kysor, "Thirty-three percent of the class of 2008 went directly to graduate school." He expects this year's seniors to be about the same.

A look behind the scenes of book buyback

Penny-pinching students frustrated by limited resale value of textbooks

By **Talia C. Valencia**

As the semester comes to a close, students are searching for ways to get rid of their used textbooks. Selling books back to the bookstore is a common method to recoup money, but some students are walking out with less money than expected.

Although students may be unsatisfied with the bookstore's buyback prices, the prices are ultimately set by the market. The Juniata College bookstore manager, Jeremy Santos, said, "The price we can offer on books is completely determined by supply and demand. If the book is needed, it's worth more money."

ANDY WAPLINGER / JUNIATIAN

A student sells her textbooks back to the Juniata College Bookstore.

A pamphlet by the National Association of College Stores (NACS) explaining book buyback reads, "The value of a used book depends on whether that particular book is going to be assigned by an instructor for the next term."

"If the bookstore receives an order from an instructor that the book will be assigned again next term on this campus, then the store will buy back copies for resale here," reads the pamphlet.

In this case, the buyback price can be as high as 50 percent of what the book was sold for. "That's our best scenario," said Santos. "We don't have to box it. We don't have to ship it. We don't have to pay for shipping. They all stay on campus. It's very green."

The amount of money students receive on buyback can vary based on institution. Some university bookstores offer flat rates on books they buy. The University of Arkansas and Purdue University give their students a flat rate of 50 percent of the purchased price if the book will be used the following semester.

Santos' goal is to give as much money back to the students as possible, but many factors go into the prices. If a professor chooses not to use a book the following semester, then the bookstore must utilize other options to remove that particular text from campus circulation. Since the book is not needed for classes anymore, the buyback price will be greatly reduced.

Students dissatisfied with selling to the bookstore have other venues they can pursue to get rid of their old books. Many choose to use online services to sell their used books.

Senior Lindsey Mellott does not sell her books back to the bookstore. "You get nothing for them," she said. "I usually sell them on half.com."

Another option is to sell the books to a wholesale book company. Santos said the campus bookstore will buy books on behalf of wholesale sellers. However, the price is generally lower because the wholesaler will need to take into account shipping and handling fees. The wholesaler will then sell the used books to other campuses. Santos said in this situation the buyback can be up to 35 percent of the original price.

Santos said that in the past students have tried starting book selling ventures on their own, but they usually are not successful. "When

▶ *see* **USED BOOKS** *page 5*

Minority students seek to balance acceptance and identity

▶ *from* **DIVERSITY** *page 1*

as an option." Boosting enrollment numbers, however, is only part of the picture.

"Getting minority students in the door is not the issue," said Rosalie Rodriguez, special assistant to the president for diversity and inclusion. "Getting them out the door—graduated, that's what is important."

"Retention has always been a particular concern with African-American males," said Clarkson. "Historically, we have not done this well." The number of African-American males in each graduating class can be counted on two hands, so it's difficult to get an accurate picture through the statistics.

Overall, retention rates are creeping up. Ten years ago, 50 percent of ALANA students and 63 percent of international students graduated, while 69 percent of Caucasian students graduated. Between 2002 and 2004, the percentage of graduating ALANA students jumped to 68 percent, while 59 percent of international students and 75 percent of white students graduated.

Enrollment holds all applicants to the same high standard. "We need students who can handle the rigorous curriculum, who can hack it here," Rodriguez said. Prospective ALANA students are often referred through alumni and are encouraged to spend time during campus visits with other minority students who can give them an accurate picture of student life.

Marketing diversity

"The administration does a good job supporting minority students and educating them well for what to expect here," said freshman Amidia Frederick. "But that education is misplaced. They should be much more focused on educating kids from rural white areas on opening up their minds."

"Nobody should be centered on enrollment statistics," said Frederick. "This is a small school in a small town. That's Juniata, straight up. There isn't much diversity because this is the middle of Pennsylvania."

It irks her that the same minority students crop up in College publications every year, including her and her sister, who has already graduated. "I don't want them to use me as a poster child," said Frederick.

Her mother, Registrar Athena Frederick, smiled when describing the inevitable association that she and her daughters have had with the image of diversity on campus. "I have been asked to have my picture taken many times, and I have never said no," she said. "But how will things ever change, without people to represent the change?" she said.

Senior Josh Beckel has also been featured in many marketing publications. "My friends tease me that it's because I look like The American Boy," Beckel said. He feels that it is important for College publications to depict a diverse student population, "to let people see that there are others like them here," he said. "If a student visiting Huntingdon sees a poster with a student who looks like them, they might feel more comfortable about coming to live here. Juniata wants everyone to feel welcome and to be supported."

The minority experience

"We are as honest as possible with minority students," said Rodriguez. "We want them to understand the realities and challenges of being one of the only students of color or non-Christian students in their classes."

"You can never prepare someone to be the only one," said sophomore Brittany Gregory. "I think they should stop telling us to be prepared. It makes students afraid and can become a self-fulfilling prophecy of marginalization."

Gregory said that she feels boxed in by a constant awareness of her skin color. "Sometimes it's like I'm so preoccupied being black I can't focus on being a student here," said Gregory. Gregory has talked to administrators and faculty and been given the advice, "'Fit in. Blend in.' But I can't blend in," she said, "I've got too much melanin in my skin. Sorry."

Senior Jojo Harris, president of the African American Student Alliance, said that she feels pressure to always represent her entire race. She has become an ambassador, albeit reluctantly. "It's like if I give a stupid answer in class, people will judge not only me, but all African-Americans," she said. "I feel like I always have to be intellectual."

Harris is often called upon to help educate her fellow students about diversity issues. "I didn't sign up to be Coretta Scott King," she said. "I represent Jojo. Nobody else."

Sophomore Camron Keshavarz, an Iranian-American, said, "Race was not important to me when I applied. I'm proud of my heritage, but I'm not going to flaunt it. I don't get a special advantage because of it. Here, academics overshadow the importance of where you came from or what you look like."

> *"The challenge is to stay away from complaining, to look for ways to change and to work for change."*

Junior Linlu Chen came to Juniata from China three years ago. She said that she makes friends on campus irrespective of race or origin. "I really don't care how much diversity there is on campus," she said. "I have too much work to do, and I just don't have time."

Eden Kassa, a freshman from Virginia and originally from Addis Ababa, Ethiopia, came to Juniata because her high school guidance counselor told her that the College was "a perfect fit. I believed her," said Kassa. "It's a good school, and the kids are nice," she said. She's been trying to shake the feeling of being "hemmed in," however.

For Kassa, a vital aspect of life has "always been all about style and dance." A few weekends ago, Kassa and some of her friends brought a DJ in from State College and held a party in Tussey and Terrace Lounge. "It was a blast," she said. "But a lot of kids stopped by and left, saying, 'There's no drink, we should go to East.'" Kassa was disappointed that less than half of the people she invited actually showed up.

Kassa is thinking about transferring."This school has it all. I might stay for the quality of education alone," she said. "I just wish it was different, that's all." For Kassa, the difficulty arises overwhelmingly from cultural differences, not racial ones. "It's not because I'm black," she said. She misses the city lifestyle, where style is appreciated on the street and nightclubs are open all night. She feels that many Juniata students do not know how to have a good time unless they are drunk.

"I wish people were more open, more willing to extend their small friend groups. We are such a small school with so many awesome people and possibilities. It could be so much fun," she said.

PA NAME Conference

The same weekend that Kassa held her party, Juniata hosted the Pennsylvania National Association of Multicultural Education (PA NAME) Conference, an annual event that brings together college administrators from across the state to discuss diversity in higher education. "This was a big deal for us," said Rodriguez. It is rare for a small college to rise to the challenge of covering the costs of hosting the conference, she said.

Amidia Frederick said that she thought the conference should have received more publicity on campus. "Many kids didn't have a clue what was going on," she said.

On the Friday night of the event, a performance group from New York City put on the show "Platanos and Collard Greens," highlighting the humor and poignancy of a relationship between a black man and a Latino woman.

"That show was one of the highlights of my time here," said Rodriguez.

"My mom is Latino, so I really related to what was going on up there, even though some of my friends here didn't get it," said freshman Dianna Lovins. "The cultural references just weren't within the realm of their experience."

International students can sometimes feel surrounded by students who "don't get it." One international student who asked to remain anonymous said, "Many Americans are not as open as they think they are. I think it is difficult for some to think outside the exclusivity of their own reference group."

Beyond tolerance

Clarkson stressed the importance of inclusion, to prevent the formation of an "us and them" concept. Diversity enhancement can be viewed as "bringing 'them' to 'us' to enlighten us and help us," he said. "I think that's a little twisted. Students should go and learn through experience: the opportunity of study abroad, urban immersion and service learning."

Brenton Mitchell, a 2006 Juniata graduate, works as the Programming Specialist for the Unity House and assists Rodriguez in the Office of Diversity and Inclusion. Mitchell said that he has seen "an incredible influx of racial diversity" since he arrived at Juniata seven years ago. He is working with a small group of students to create a "Diversity Pledge," hoping for a snowballing of student awareness and involvement. The group is "focused on diversity beyond race," said Mitchell, encompassing disparate socioeconomic and religious backgrounds, as well as sexuality and gender. Students interested in becoming involved with the Diversity Pledge should contact Mitchell.

"The challenge is to stay away from complaining," said Mitchell, "to look for ways to change and to work for change."

An increase of racial and ethnic minorities might be the most noticeable shift towards diversity. More important to Athena Frederick is "the internal switch that has to be turned on. I think it's an attitude," she said. "Acceptance is the key."

Photographing JC

▶ *from* **MARKETING** *page 1*

students to come?"

Related to equal representations of diversity, senior Joshua Beckel said, "The Marketing Department gets it pretty bad sometimes." College marketing departments across the country must walk a fine line between realism and inclusion.

Hersh's department asks for advice from the Office of Diversity and Inclusion for some photo shoots. However, no specific formula exists in the marketing field for emphasizing multiculturalism.

"We try not to over-show diversity, but we don't want to underrepresent it, too," Hersh said.

Most often, individual photographs are not arranged or adjusted to artificially alter the racial diversity. Beckel can remember a few instances where international students from the Enrollment Center or Marketing office were specifically asked to appear in a photo shoot. However, Beckel said, "I don't think they target people specifically."

There is more to a community than its racial and cultural variety, and the College's publications attempt to reflect that. Capturing candid scenes of campus life can be difficult. Photographers and student subjects work carefully to make photographs natural, despite being staged.

"It's always a wrestle if you hire a professional photographer as to how well you can show something in a real way, as opposed to staged," Hersh said. If a shoot features a particular academic discipline, Marketing tries to enhance the photo's accuracy by seeking students from those departments to appear.

"We're not just grabbing random students," Hersh said. She added that tour guides from the Enrollment Center are considered ideal candidates for general photos because "they understand about representing Juniata College."

Beckel has attended photo shoots for the past three years, and he agreed that they attempt to portray students as they would act on an ordinary day. "[The photographers] just kind of arrange us and then tell us, 'Pretend you're students. Talk! Have fun!'" he said.

Hersh has a few plans to present a more convincing image of Juniata. She wants to use more student photographers in place of professional photographers.

"We think that shows more of who Juniata College is. It's more creative; it's more our students' own work." Student photographers know Juniata better, and Hersh hopes that their work is more approachable than that of hired photographers.

In addition to student photographers earning work-study pay, Marketing is harnessing the talents of all Juniata students through the weekly Photo Contest. Sophomore Lauren Seganos and her friends took a picture of five of them splashing rainwater at the photographer. This picture is now featured on the Web site.

"It was just me and my friends having fun and taking a picture," Seganos said. She described how they took the picture to show off their colorful rain boots.

"One of my friends submitted it to the Photo Contest a few months ago, and they finally picked it out over Spring Break. We were really excited about it," Seganos said.

The Marketing Department's publications must illustrate Juniata's character and community with many different people.

Hersh noted that Juniata's sense of community is a marketable trait of the school. "So hopefully our photography is showing a sense of community."

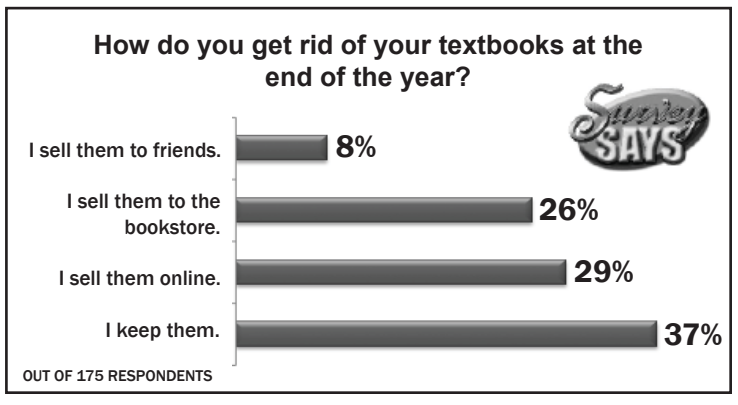
these groups start, my concept is, they think it's easy and then they find out its not. It's very easy to get stuck with books because they change edition fairly often. [The bookstore has] very good computer programs that keep an eye on that for us."

"What I don't like to see, what I think is tricky, is I'll see signs on bulletin boards that say, 'Hey, I have a book for Intro to Psychology for next semester,'" said Santos. "Well, they don't know if they are using that [particular text] for psychology next semester. If the student buys it and then finds out that isn't the book they are using, then they're out of luck."



"The best time to sell [your books] is when we know what books we're using for the next semester. …The month around finals is the best time to do it because then we know what we are using for the next, and we can offer the most money," said Santos.

If books are no longer required for courses, the bookstore can recycle the books. "We don't throw them out. We have three different places books go if they're not worth any money," said Santos. "We really try our best to have the life of these books be used as long as they can."

The books can also go towards Friends of the Library, where the library sells the books and uses the profits to better their facility.

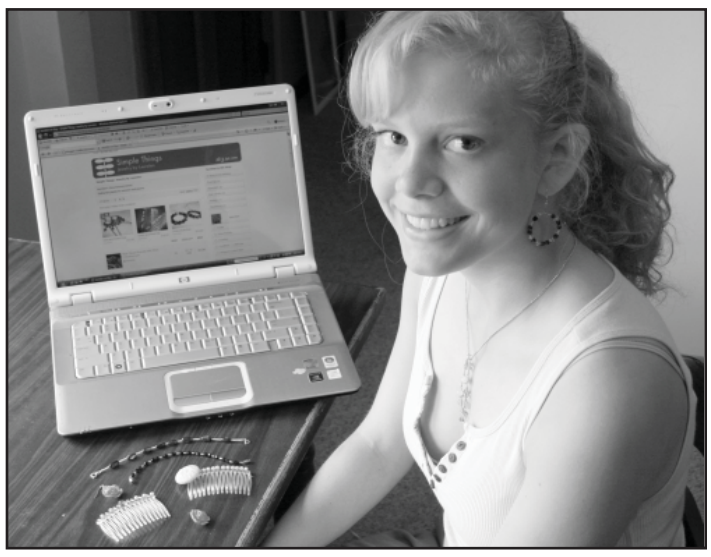
Santos also said there is an "international organization called Bridge to Asia, which sends these books to third world countries who don't have access to these books."

Lastly, the books can go to the prisons in Huntingdon. There, Santos said, "They can be surprisingly useful. [The inmates] have a lot of time on their hands."

Students run with big ideas

Personal talents bloom into successful businesses

By **Leanna Yeager**



In tough economic times, people often come up with unique solutions for generating extra money. For senior Bradlee Drawbaugh and sophomore Laura Gregory, that solution was starting their own businesses.

Drawbaugh started her own dance studio called B.A.D. Girls Dance Company when she was a sophomore in high school. Drawbaugh chose the name since B.A.D. are both her and her sister's initials.

"I danced for several years, but after a while I had gone as far as I could," Drawbaugh said. At first Drawbaugh taught a higher level class at her local community center and ended up getting many interested students. "My parents said there was a marketing potential to get more students," Drawbaugh said.

Drawbaugh funded her business with the help of her parents. Because she was starting her own studio she had to find an appropriate place to teach. "My mom's boss was a landlord, so he was able to give us a good rate…[and] my dad helped renovate the space," said Drawbaugh.

Leaving her business behind was difficult. "I like to be very involved in things, so it was hard for me to leave for college and let other people do the work…but I've learned leadership skills from all of this," Drawbaugh said. Her sister helps her run things during the week, along with other teachers. Drawbaugh returns to her Newville studio on weekends to help get ready for the upcoming lessons.

ANDREW WAPLINGER / JUNIATIAN

Sophomore Laura Gregory sits with a few pieces of jewelry that she has created and is now selling online through her new business, Simple Things. Gregory specializes in making necklaces.

After graduation Drawbaugh plans to keep her business. "It will be harder when I'm farther away…but my sister has been a huge help," said Drawbaugh.

Gregory recently started an online jewelry store, Simple Things, over the winter break. She had enjoyed her art for several years by making jewelry for her friends and family.

"One day I saw a Web site where people sell their jewelry, and I decided I could do that too." She also noticed that many people are interested in cheaper, independently made jewelry.

Funding hasn't been much of a challenge for Gregory so far. "I've only had to pay for the site and the supplies…my advertising is mostly word of mouth," said Gregory.

"Because my business is still new I haven't had too many problems keeping up with orders," said Gregory.

She does plan to go abroad next year, but doesn't foresee that being a problem since her business is online. Gregory plans to make many different pieces in advance and have her family help her distribute them as orders come in.

Tech questions answered

▶ *from* **Technology** *page 2*

non-student storage," Fusco said. "They are not student U: drives. They have nothing to do with students at all. As far as I know, there is nothing going on with student U: drives."

"Everybody on campus has a U: drive, whether you're an employee or a student," said Wood. "[The rumor was based on] an employee-focused initiative to get some space cleaned up on a server that is running low." She added that "it does not affect the students at all."

Each student has 500 megabytes on their U: drive, according to Wood.

"On average you could store roughly 500 PowerPoint files on your U: drive," said Fusco.

The school encourages students to store things on the U: drive that they want to be backed up centrally by the technology department.

"Put things on there that are important academically," said Fusco, noting that the U: drive is not the place for family pictures or music.

"We don't want people storing MP3s on their U: drives," said Wood, explaining that MP3s are very large and would take up a lot of space on the drive. She continued to say that there are "very few instances where students would have an MP3 that would be an academic need."

Fusco made the final note that for very important papers or research, students should back work up or save it multiple times. "Store it on your local machine, store it on your U: drive, and store it on an external hard drive," said Fusco. Thumb drives or jump drives work well.

"We've all seen instances of people losing data because it was stored in only one location," said Wood.

Keeping your computer updated over the summer

It is important to keep up with anti-virus and Windows updates over the summer to protect your computer from harm.

"It is our biggest concern," said Wood.

Unprotected computers can be vulnerable to malicious programs. "You could lose your password, your bank accounts information, credit card information," said Wood.

This could affect not only students' finances, but also their grades and other sensitive information.

Reliable updates can be found on computer help menus, or at windowsupdate.microsoft.com. Do not Google "antispyware," as sometimes these sites will send a user to spyware sites.

Students abroad urged to use common sense to avoid dangerous situations

▶ *from* **Safety** *page 1*

they should be fine."

When preparing to study abroad in a foreign county, student safety is a top priority for the students, parents and faculty. The issue of safety is addressed before the students leave campus at the pre-departure orientation. Students are also provided with printed materials to remind them about important precautions to take while they are abroad.

Hart said, "When it comes to safety tips, the biggest advice I can give is to have common sense."

According to Hart, the main problem study abroad advisors face is simply reminding students that living in a foreign country is much different than dorm life at Juniata College. "We have a very safe campus, but not all places are as trusty as Huntingdon County," said Hart.

Last spring, seniors Nick Reiter and junior Veronica Prush were robbed at knifepoint during their second week studying in Quito, Ecuador. The two students were robbed of over $1,000 worth of belongings.

While walking home at dusk from a nearby bus stop, a car pulled up along side the two students. Two men got out and approached them. As Reiter and Prush tried to walk away quickly, the two men stopped them, yelling for money. When the two students initially refused, one of the men held a 12-inch butcher's knife to Reiter's stomach.

After stripping the students of their belongings, the men disappeared. Fortunately, some local missionaries came to help Reiter and Prush and gave them a phone to call the police and their program advisor.

Reiter said their advisor warned students specifically to stay off the roads and avoid bus transportation after dark.

"After our incident, I can definitely appreciate the importance of advice from the people who know the lay of the land, be it locals or advisors," said Reiter.

Prush said, "I look back now and I should have known better. You have to be aware of what's going on and listen to your advisors instead of blowing them off."

For many students, coming from a safe and relaxed environment where doors are frequently unlocked and laptops are often left unattended, situations in foreign countries can be a real culture shock for students. Often it takes time for these students to get into a "situational awareness" mindset.

While most trips abroad are trouble-free, being prepared can go a long way in avoiding serious trouble. Advisors recommend students be especially cautious in, or avoid altogether, areas where they may be more easily victimized. These places include: crowded subways and train stations, tourist sites, market places and crime-ridden neighborhoods.

Safety and situational awareness is especially important for students traveling to non-Western or developing countries. Hart said, "While I think all programs should be aware, students are definitely advised to take more precautions when studying in third world countries."

Prush shared some simple advice for students planning to study abroad next year. "My suggestion for those going abroad: Makes copies of all your documents and insure everything. It's not worth the risk."

The U.S. Department of State shares some easy tips to keep in mind to avoid being targeted in a foreign country: dress wisely; do not carry a lot of money or valuables; be cautious on the street, in hotels and on public transportation; know about the country's laws; and most importantly, know who to contact and how to get help while abroad. For Juniata students, on-site directors are there to help.

Bottom line: Safety abroad is not difficult to achieve, as common sense goes a long way.

The world in our backyard

Opening our eyes to diversity issues

EDITORIAL

Would you notice a problem if it was staring you in the face? Sometimes problems become so entrenched in the fabric of our daily lives that we ignore them altogether. Like a tree in the middle of the road, for instance.

Anyone who has pounded the perimeter of Huntingdon on jogging routes is familiar with the bare-branched tree springing from the middle of the road on Africa Street, across from the Bearcat baseball stadium. Local legend has it that the tree's bony branches were used to lynch the town's troublemakers centuries ago. The pavement laps against the tree trunk now, providing a tacit memorial to a history that is perhaps best forgotten. Meanwhile, Juniata College goes about the business of building up a community of acceptance and diversity.

Diversity, that's a bit of a touchy subject. The article on page one pounds around the perimeter of the issue, but establishes the fact that we at Juniata do have a problem. Administrators and students alike confirm that the diversity touted by our brochures and surging statistics often fail to translate into ethnic diversity in the classrooms and on the playing fields.

The Periodic Review Report presented by the College on July 1, 2008 gives the strong recommendation "that the topic of diversity and expectation of inclusivity as part of the Juniata culture be vociferously mandated at each orientation and every college writing seminar lab." Our administration is truly trying hard.

The Office of Diversity and Inclusion does a fantastic job of bringing diverse students and speakers to campus. The College boasts an eclectic student body from thirty seven states and twenty nine foreign countries. The percentage of racial minority students is steadily creeping up. Unfortunately, it is harder to quantify the growth of acceptance and a diversified outlook amongst our student body.

Should it unsettle us that some minority students were afraid to be interviewed for the article about diversity? One student told our reporter, "I'm afraid that saying anything would undermine my usefulness as a happy black student."

Diversity is a buzzword on campus, but if dialogue stops when we get past the marketing, we have a problem. The question is: what are we going to do about it? Bringing in increasing numbers of diverse students from all corners of our country and the world is a great start. But we need to do more to bridge the gaps that can form between cultures, between tables in Baker, between people.

People inevitably gravitate towards people that they feel most comfortable with and form groups, alliances. But a vibrant community is built from strong connections between these alliances. Student alliances are a superb way to provide support to minorities, but we can't let our celebrations of diversity be confined within one specific alliance or club. We need students and educators who are willing to be educated in cultural and ethnic sensitivity.

Programs that partner diverse students should be revived to facilitate activities that encourage awareness and the growth of acceptance. Rural students and urban students. International students, domestic minority students and students who have never been farther west than Huntingdon. Diversity beyond race must be recognized and celebrated. Acceptance cannot be vociferously mandated, but it can be encouraged.

We need honest dialogue between students to dismantle stereotypes. We need to celebrate the steps that we have taken thus far. While acknowledging the strength of our campus community, we need to admit to the weaknesses of that community, and work to build an even stronger environment of acceptance.

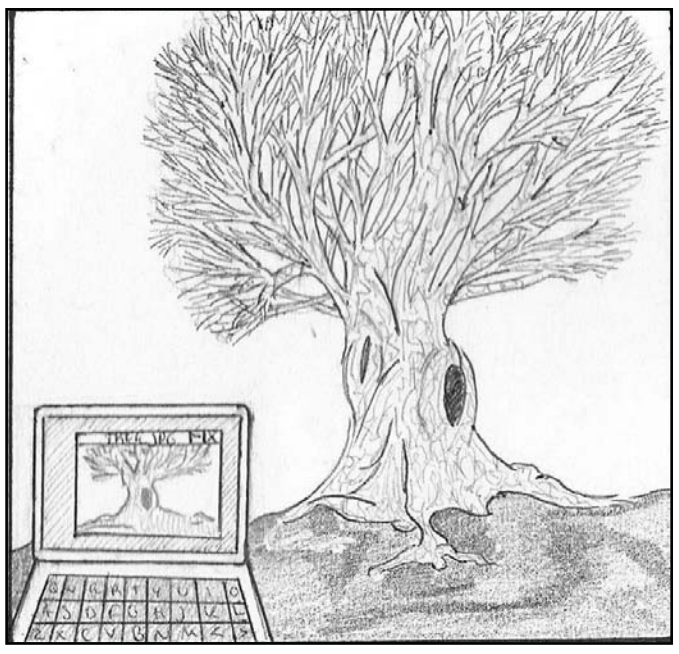
We can hope for a more diverse faculty in the future, but for right now, we need continuing training for faculty and staff that addresses the fostering of acceptance and cultural sensitivity.

Juniata brims with the kind of opportunity that exceeds imagination. Students can explore a range of classes and activities to find their niches. That is what college should be about. But if change is to come, these problems must be addressed before a transferring student's exit interview. By then, it is too late. The students who find their niche are those who address problems with clear speech and action.

Letter to the Editor

Editor:

During my time at Juniata, I have witnessed many great people striving to accomplish many great goals. Some struggled against a majority to create a better system, and others have challenged the status quo in order to raise awareness. Many students have volunteered their time to fight and work for causes that are truly noble. It is unfortunate to say, though, that many on campus do not seem to strive for such goals, and much is left only as a promise.



We all have opinions, but very few students contribute to the discussions on everything from food to student government, and all too often, we remain silent, hoping that someone else will take the initiative. Even if everybody else is thinking the same way, unless someone chimes in first, many will sit and do nothing. Nobody wants to risk their reputation by being the lone wolf, though there seems to be no risk in being a sheep.

Worse than not joining the discussion, some students portray themselves as crusaders for a cause, but in the end, there is a serious lack of action. Sometimes things don't go correctly or resources aren't available, but all too often poor excuses are made. I don't mind when people try and fail, but to not try at all is disgraceful. For example, students run for class office on promises of sustainability, but after they lose, they'll never say another word about it.

We are told to think and act, and while there are many thoughts floating around Juniata, there are few words spoken and even fewer actions. As a graduating senior, I've seen many things and been insulted many times, but let me say to anyone who will read it, if you think that something is wrong, join a committee or a club, or form a group as students have done, and actually do something about it.

-Jeremy Weaver, class of 2009

Study abroad:

A crash course in street smarts

EDITORIAL

Small town colleges will always be considered a "home away from home" to their students and alumni. Every feature of these colleges is welcoming; from their Americana atmospheres to the friendly students and faculty traversing the campus each day. As a teenager looking to take the leap into adulthood, there could be no better place to fully grow wings. However, when considering the jump into the real world, are these colleges a less-than-perfect stepping stone in some areas?

Students at Juniata College are not afraid; they are almost abnormally comfortable. They leave doors unlocked, bags in hallways, personal computers on desks and blinds open at all hours of the day and night.

When most of us leave campus and return home, we overestimate how safe we actually are. Many students are probably caught leaving car doors unlocked and wearing clothing that display their names and sports teams, without the knowledge that someone may be watching.

According to the Institution of International Education (IIE.org), students studying abroad from the United States have increased by eight percent, which is approximately 241,791 students per year. Small town colleges like Juniata must take steps to adjust how they are preparing students for a harsh world. Promoting a laid-back campus atmosphere is a great way to increase admissions, but an unrealistic way of living.

This is why Juniata is doing the right thing in promoting their study abroad programs. Many students who have gone abroad have experienced events that, had they not left, would have gone completely unnoticed until after they were on their own (see "Is study abroad safe?" page one). Learning not to wear clothes that reveal too much, or carrying a purse unzipped, exposing an Ipod, cell phone and wallet are things that cannot be taught on our campus. However, in most countries around the world, these safety precautions are obvious forms of conduct.

One of the top 10 reasons to study abroad, according to AllAbroad.US, is to gain vital life experiences. Many take this to mean viewing the Mona Lisa for the first time, giving a poor child a vaccination or tennis shoes and eating cuy (another name for roasted guinea pig).

What they do not realize is that a life changing event could also include being robbed at knife-point, or watching locals grow illegal drugs for their living. These harsh realities also change a person, and prepare them for a world that is full of dangers and mistrust. Though it is not beautiful or heartwarming, it is an epiphany that is vital to a student's survival.

Juniata knows it is not the best representation of reality. The College knows it does not reveal lifestyles that could be experienced at Temple University or the University of Miami. That is why Juniata has taken the steps to ensure that its student's will have "real-world experiences" through its many diverse study abroad programs. In fact, most recently, over 100 students are studying abroad from Juniata each year.

If you are at Juniata now, or are looking to attend, take the experience to the next level and study abroad. Go because of the regret you will feel if you do not, or because your advisors will yell at you if you choose to abstain. Most importantly, study abroad because it best prepares you for the life you will have after leaving the safety of your dorm in Huntingdon, Pennsylvania.

It is said best in the words of Mark Twain, "Twenty years from now you will be more disappointed by the things that you didn't do than by the ones you did do. So throw off the bowlines. Sail away from the safe harbor. Catch the trade winds in your sails. Explore. Dream. Discover."

Thumbs Up, Thumbs Down

to PAWS for including human babies at Pet Therapy. We knew *making* babies is a stress reliever, but the actual babies themselves?

to Pig Roast. Seven hundred drunk people eating pig and no one caught the swine flu. Call the CDC. We found the cure!

to the CBS Early Show for making an "extremely rare" mistake and mispronouncing Juniata as "Juanita." On the upside, Juniata's Latina twin helped make Huntingdon the fifth coolest small town in America.

to whomever told AWoL to bring fruit salad to the Freedom Seder. Fruit salad. Really?

Presidential Perspective

Kudos to seniors!

Congratulations to the Class of 2009 on four terrific years at Juniata!

Ask the Administration

"Juniata offers both Bachelor of Science (BS) and a Bachelor of Arts (BA) degrees. Many schools comparable to Juniata only offer a BA. What is the difference between a BS and a BA and why does Juniata offer both?"

There is no difference as far as degree requirements are concerned at Juniata, whereas, at other colleges, there is usually a set core of courses that distinguishes a BS from a BA or at least that was the way when I went to school.

This is a Juniata tradition (double advisors and double the programs). For example: you will see on your degree audit either a BS.ED or BA.ED and they are exactly the same. So we have two of everything!

This would drive my POE Lady Chris MacEachern crazy at Senior Salute, because students would arbitrarily change their degree because the student next to them was in the same major but had a BS instead of a BA. We stopped that quickly to make sure seniors declared for the last time in the fall semester before graduation.

Each department seems to have its pros and cons, and can be divided right down the middle with faculty on both sides. Politics is the only department that made the statement that their degree is a BA only. I think this is the right move, because we are a liberal arts education college.

-Athena Fredrick, Registrar

When Nature Calls

Leaves and paste

By **Brianna O'Malley**

For my last column I thought long and hard on what I would write about. Over the past two semesters, I have briefly touched on a gamut of different natural science topics, but I have neglected art. Environmental art is an interesting subject because it combines the science aspects of nature and the expression of art.

This past fall semester was the first that Environmental Art (AR299) was first offered. The course went in depth about the formation of what became the environmental art movement and how one classifies art as environmental or not.

You may be asking what I mean by environmental art. Rather than going into a boring definition, I decided to explore how we define environmental art and offer some interesting examples close to campus.

Basically, if the purpose of the art piece can be connected to the environment, then it is environmental art. This seems obvious, right?

But what about pieces like the presidential sculptures at Mount Rushmore? Is that environmental art? It uses natural raw materials and is set in beautiful natural place, but does that make it environmental? Art experts (which I am not claiming to be) would say no. Mount Rushmore is a monument that uses the natural materials to pay tribute to a decidedly non-natural topic.

I think that there are many other structures made for practical purposes that can be qualified as environmental art. In a recent issue of The Science Times an article talks about the use of "green concrete" in constructing a Minneapolis bridge. Green concrete is a mix of various concretes that reduces the structure's environmental impact.

Its construction had a lower carbon foot print compared to a regular bridge. The designers in Minneapolis made some of the bridge footings wavy making a far more dynamic looking drive. I would consider this environmental art for two reasons. For one thing, they are using eco-conscious materials that have a lower impact on the environment. Second, the structural design allows people to take note of what they are driving under.

One of the most famous contemporary environmental artists is Andy Goldsworthy. If you don't know who he is Google him because his pieces are really cool. Goldsworthy uses materials from the natural world to make statements about the environment.

It could be something as simple as stringing grass strands together and weaving them along the edge of a forest. Or it could be something more complicated like his stone wall installation at Storm King Arts Center in Mountville, New York. Often times the purpose of an environmental art piece is to draw attention to a place of beauty that the artist feels is overlooked.

If you want an example of environmental art closer to home, look to Vintondale, PA. Vintondale is about an hour and a half away, and is home to the AMD&ART park project. The park, just west of Ebensburg, is located at an Acid Mine Drainage (AMD) site. For those that don't know what AMD is, it is the product of acid water draining from abandoned mines in the area. AMD sites are classified as polluted and the waste drainage has a negative impact on wildlife in that area.

In Vintondale, they have taken this AMD site and teamed up with artists and scientists to work on the polluted area to create an art park. Along with a drainage treatment system, the park has an installation called "Mine no. 6 Portal." The piece is an etched polished black stone placed over an old mine entrance. The etching is based on a photograph of miners, so it looks like there are miners looking out at you from the mine. This piece is a memoriam of all the people whose lives were lost while mining, and reflects the hardships of a miner's life.

Unfortunately, due to lack of support, many projects at Vintondale have gone unfinished. Public support and visitation would defiantly help improve the unique park.

Even Huntingdon has its own pieces of environmental art. Consider the Peace Chapel. How many people would visit that spot if the monument was not there? What about the mosaic mural on Penn Street? I am sure many people would not even notice that corner if there wasn't colorful glass grouted on.

So, what have we learned? Art can be anything. Environmental art can be anything related to the environment. Make sure to Google Andy Goldsworthy, and support or visit Vintondale. Thanks for reading!

Pig Roast: Behind the hogs and the hops

Rugby's annual event developed from humble beginnings to a raucous affair

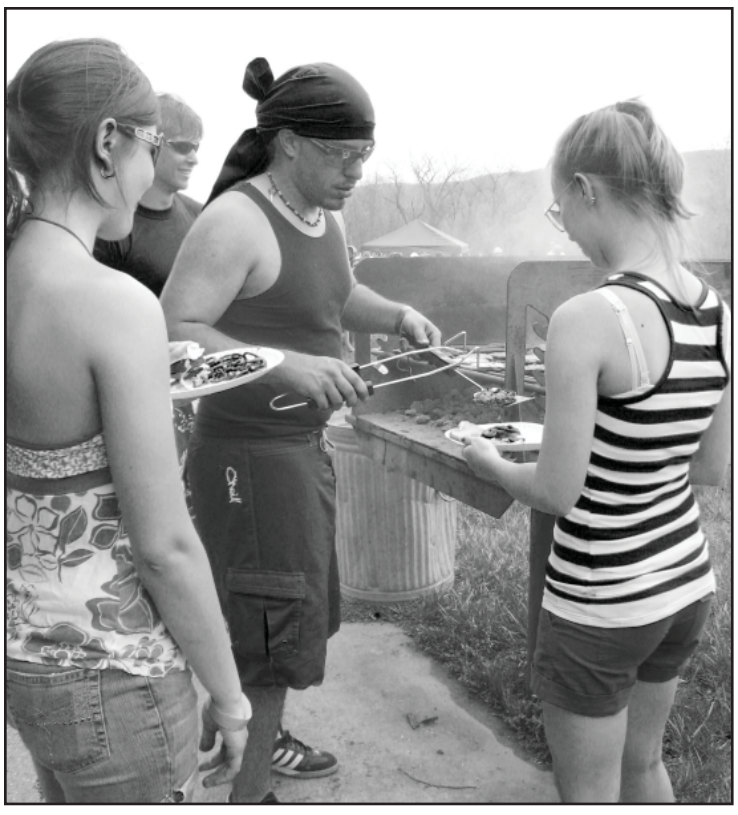
By **Amin Khoshnevisan**

Pig Roast is a tradition that takes place at Raystown Lake in the weeks leading up to final exams. Pig Roast is sponsored by the Juniata River Rats Men's Rugby Club along with the Hellbenders' Woman's Rugby Club. This event is open to the entire campus and alumni.

According to the River Rat's Web site, Pig Roast began as a Cloister C-board (Community Board) event. The need for Pig Roast arose after the school ended a long standing tradition known as the Raft Regatta where students would build rafts, one for themselves and one for their keg and they would float down the Juniata River and indulge. When this tradition was stopped due to liability issues, the Cloister C-Board, which had a few Rugby players on it, later put together what is known today as Pig Roast.

The very first event took place in 1986 and was attended by about 300 people. The 100-pound pig was roasted over a bed of wood and charcoal on a car hood. As the event grew, the team began playing actual rugby matches at the outset of the event, after which they would partake in the festivities.

Junior Cody "Papabear" Fulton, Vice President of the River Rats Rugby Club, gives credit to rugby alumni Michael Streicker '96 and Steven "Tiny" Van Mater '97 for making pig roast what it is today.



It seemed as though the tradition was going to fade away after Cloister was renovated. The type of people that lived there changed, "there weren't quite as many hippies," said Streicker. It was those 'hippies' that once lived in Cloister that kept Pig Roast alive, but after the restorations it was up in the air who would plan Pig Roast, explained Streiker.

The rugby players took it upon themselves to keep the tradition going. Streicker said that this was "because the rugby team at that point, and still today, is sort of the last batch [to maintain] the old Juniata traditions."

PHOTOGRAPHS BY KEVIN DUNDORE / JUNIATIAN

JC students enjoy the much-anticipated Pig Roast, a tradition that has been in existence since the mid 80s.

Before the rugby team was in control of Pig Roast it was only "a pig, kegs and hacky sack," said Streicker. He thought it was still a good time, but that the rugby team took it to the next level.

Van Mater said that they added a few things to Pig Roast to help make it a bigger event. The additions were more food and beverage options, the actual rugby game and live music. The team used to pay the bands "50 bucks and all the beer they could drink." Streicker also said that they worked very closely with Dean Clarkson to make pig roast happen, "he really went out on a limb for us, by basically giving us the trust and saying, alright, you guys police yourselves."

Van Mater thinks that the campus owes a lot to the rugby team for the work they put into keeping campus traditions alive.

The pig is brought by Dave "Slave" Burger, class of 1995, "Slave brings a pig every year, the myth is that he raises it and slaughters and spits it himself," said Fulton.

Also, according to Fulton, Pig Roast could be even bigger. However, athletic teams schedule events for the day of pig roast, resulting in these athletes not being able to participate.

Attendance at Pig Roast is expected to be 500 to 600 people, with most of the ticket sales coming from alumni purchasing tickets at the door. Alumni come from everywhere, said Van Mater, citing a friend who just finished a tour in Iraq and is an emergency room doctor in Texas planning on attending this year.

When asked about what he thinks of when he hears the word pig roast, Fulton replied that as a freshman he thought, "hell yea," in anticipation of a good time, but now being in a leadership role, he also thinks of it as a source of stress for everyone involved in the planning process. Fulton said, "Shmee [Keenan "Shmee" Drenning, President of the River Rats Rugby Club] is bald for a reason." Fulton goes on to explain by saying that, "it's 500 drunk people in an acre square lot and nothing can go wrong, and you have to make sure everything goes right…[but] it's a necessary hassle because it's a good time for everyone."

The Director's Chair

'Fast and Furious'

By **Jordan Yeagley**

This week I decided to give the "Fast and the Furious" franchise another try. I have never been a big fan of the films, but given the lack luster options this week at the Clifton I had no other choice. I must say that this film did nothing but solidify why I believe these movies are a waste of time and money.

"Fast and Furious" is a dream movie for someone juiced on steroids with nothing better to do with his or her time. It offers no real plot line except for driving cars quickly through the Mexican desert.

For this installment Brian O'Connor, played by Paul Walker, is on the hunt for an infamous Mexican drug trafficker who transports shipments through a series of underground tunnels between Mexico and the United States. Ex-partner Dominic Toretto (Vin Diesel) is pursuing the same trafficker to avenge his dead lover. The two end up working together to fight the Mexican drug cartel.

I believe this film could be enjoyed by someone drinking gallons of Muscle Milk while pumping iron in the theatre. They would also have to be easily entertained by the cars and flashing lights. The dialogue is enough to make you drool because it must have been written by a kindergarten class. Except for a few good special effects the plot is mind numbing. At one point in the film Toretto drives a speeding car underneath a rolling gas tank, which of course is on fire, and then he speeds off without a scratch. What were these writers thinking when they decided that would be a good idea?

For anyone who is a fan of this franchise please feel free to write me and tell me why. I think they should have made one film, seen how ludicrous it was, and then stopped. Instead, they have traveled around the world racing cars and putting themselves into unbelievable scenarios.

For anyone who enjoys film, or maintaining any brain cells, please avoid the Clifton 5 this week. Instead, pick up a book or go Netflix or do something that is worth your time. With finals right around the corner, "Fast and Furious" is not worth 10 minutes of your time.

★

OUT OF 5

"Fast and Furious" is now playing at the Clifton 5 in downtown Huntingdon.

Worth the Rent: "The Wrestler" (2008)

By **Jordan Yeagley**

As my readers know I am a huge fan of independent films, and "The Wrestler" is yet another amazing one. This film follows a washed-up professional wrestler named Randy 'The Ram' Robinson (Mickey Rourke). Robinson is struggling to pick up the shattered pieces of his life, while maintaining his true passion of wrestling. He moves from one career to the next and can never rise about the mediocrity of life. The only real joy he finds in life is when he is in the ring, where spectators revere him as a god.

Throughout the film Robinson also attempts to build stronger relationships with the women in his life. He has a young daughter who despises him for leaving and ignoring her in the past. Robinson's love interest is a younger stripper who works at the club he frequents on nights after his matches.

This film is one of the best independent films I have seen in years. Rourke does a beautiful job at bringing this character to life. The audience feels the struggle of this man who wants nothing more for his life than to have his success in the wrestling ring mimicked throughout the rest of his life.

The dialogue in the film is brilliant and gives the audience a sense of the true life struggles of the individual. This film is a must see for anyone who enjoys cinema and wants to better understand the human experience.

Fashion Forward

Juniatians love their...

By **Kelly Ferguson**

All semester, I've been telling you about my favorite styles and must-haves. Now it's Juniata's turn to tell me what clothes and accessories they love. I asked students around campus what their "must-haves" were and this is what they revealed.

Freshman Megan Gardner loves to wear her flats and flip-flops.

"There are so many colors and they match everything," said Gardner.

Comfortable flats such as flip-flops are necessities for college students. Having a pair of flat shoes ready eases the torture of waking up for a dreaded 8 a.m. class. Roll out of bed and throw on some comfy flip-flops to eliminate the stress and difficulty of picking out an outfit while half-asleep.

Junior Nina Johnson provided a more colorful response.

"I love my Victoria's Secret push-up bra. It gives me the enhancement without the surgery."

Wearing sexy unmentionables is a great way to "lift" your spirits throughout the school year. It doesn't matter that you won't be showing these pieces off to the world. The most important thing is that you feel comfortable and confident about what you're wearing.

Sophomore Kelsey Deck cannot go a day without her watch.

"I like to know what time it is and sometimes cell phones can be really inconvenient during class."

A watch is not only convenient, but it is also stylish. In fact, watches that look like bracelets are very "in" this year. A regular watch doesn't always go with an outfit, so these modified bracelet-timepieces are the perfect solution.

Sophomore Leah Cullen says she couldn't live without her black and leopard print camis. Camis, which is a fancy word for tank tops, are great to wear under low-cut shirts. They also make see-through tops possible to wear without exposing too much to the public. When it comes to what colors to choose, I would suggest one or two that are basic, such as black, white or grey and one special camis with fun colors and prints.

Sophomore Tim Conklin revealed that he "… really like[s] [his] T-shirts. They're easy and comfortable." Another essential for Juniata College students, T-shirts are extremely versatile and hassle-free. One shirt can be worn to the gym, out to a party, to sleep or all three! Think outside the box and try to incorporate your favorite tee into different ensembles. If you're a jeans-and-t-shirt person, dress up your style a little bit by wearing a t-shirt with stylish jeans, khakis or a skirt.

Sophomore Galen Spielman's favorite accessory is his cowboy belt that includes a large buckle.

"It just helps bring the outfit together," said Spielman.

Belts have become much more than just something to hold your pants up these days. They are now considered a key accessory and come in all sorts of shapes, sizes and colors.

Juniata students are not the only ones with style preferences. I also had a few Juniata professors tell me a little about their favorite must-haves.

Assistant Professor of Religious Studies Susan Prill says she likes to wear shawls because "they're cozy."

Shawls are a perfect way to keep warm when it's not quite cold enough for a jacket or sweatshirt. Shawls can also dress up an outfit while keeping you comfortable. Throw a shawl over a T-shirt or tank top to make your outfit classy, cozy and comfortable.

Professor of Business and Economics Randy Rosenberger loves his navy blue mock turtleneck. In fact, it is his favorite item because it has sentimental value.

"I won it by winning a golf tournament, and I've never won any golf tournament except this one," said Rosenberger.

Items with sentimental value can be worth more than an expensive piece of clothing. Wearing something that is special to you can boost your confidence and make you feel at ease while taking a test, playing a sport or simply socializing around campus.

My article would not be complete without my favorite piece of clothing.

I love my over-the-knee riding boots. They are extremely comfortable, and I wear them with everything. Because they are flat, I can sport them all day without worrying about the pain that is inevitable when walking across campus in high heels. They can be worn in any weather condition, so they have become my go-to boots.

Overall, comfort seems to be the fashion goal for the residents of Juniata College. Because the College has a relaxed atmosphere, it is logical that the students would translate that attitude to their style.

There is no one "must-have" that fits every personality. From cowboy belts to sexy lingerie, everyone has his or her own list they couldn't live without.

I believe Coco Chanel explained it best when she said, "In order to be irreplaceable one must always be different."

SOLOs

COURTESY OF ANDREW BELSER

During April 22-25, theater students performed solo pieces that they had been working on with actors from The Gravity Project for the past year. Performances occurred simultaneously in both the Suzanne von Liebig Theater and the movement studio in the Halbritter Center for the Performing Arts over those four days.

A piece of hair on your tongue

My life as a mutt

By **Brandon Wolfe**

If there was one thing I never needed to worry about as a child, it was zombie attacks. I always seemed to be equipped with some warning system. Whether it was a dog or just my voice, my brains always managed to stay intact.

Yet, all of us are attacked by zombies every day. The "Sarah Palin Zombie" is a pretty formidable foe. Every time I hear her speak, all I can hear is an accent—the kind that hides integrity and promotes normalcy.

Listen to what the Zombie said, "You know what they say the difference is between a hockey mom and a pit bull? Lipstick!"

You have to give a girl some credit; the Zombie effectively described the role of a politician—disguising who she is for a few votes. In fairness, I have been noticing politicians and people's lipstick for a long time.

It started when I was young. My family adopted a black lab mutt—his name was Dillon. We weren't really sure what breed he was mixed with; in fact, we did not know much about Dillon. All we knew was that he had been taken away from his previous owner because of abuse.

It took a while for Dillon to warm up to us, but eventually he became a part of our family. However, Dillon would try to loyally protect us from every perceived threat that came along. It was very difficult to have guests over.

In the end, what was dangling between their legs scared him. Since Dillon's abuser was a strange middle-aged white man, every time a white Uncle or male friend entered our house, Dillon would let everyone know that it was threat level midnight.

To most people, he was just an angry mutt—simply barking, sleeping and peeing his way towards death. People outside of our close family did not understand him.

When Dillon was 8 years old, he was diagnosed with lymphoma. The veterinarian told us it was a fairly common cancer for Labradors.

Not being able to hold any food down, Dillon was struggling to survive. There was nothing we could do other than put him down. My parents decided that, as a family, we should be there when he passed. I guess they thought it would help the mourning process.

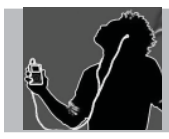
The vet came over in the late afternoon, and we began to say our goodbyes. Dillon needed to be held down while the vet administered the shot, so my family decided that I would be the designated holder.

I don't know why they chose me. We did adopt Dillon on my birthday, and I was close to him. For the first time, I had to confront death by holding it in my arms.

His eyes did not make me cry, right away. I could almost hear him telling me, "Dude, did you know that you're a mutt? Yo, I think I'm dying; it doesn't really hurt, but I really wish I could sniff your butt, one last time."

That's when I came to realize that there was no reason to fear zombie attacks. They are not real. They are a fleeting, disgusting army someone came up with in order to manipulate minds.

Politicians are the worst creators. They use these zombie accents all the time. We all use some sort of zombie accent in our lives. My life as a mutt has taught me that accents are a funny thing.



It actually brings up an interesting question.

Why does everyone hate their voice? Maybe people just want to sound different; they probably wish they were someone else. Then they create an accent.

I use accents to laugh at the absurdity. I took the pieces of the things outside of me, and I molded them together. That is what a mutt like me, like Dillon, does.

It was not about the food he used to eat, or the barking, or the licking of his crotch. Those were not the things he needed for a peaceful mind. Sure, he wanted to sniff my butt one last time, but it didn't hurt him not to have it.

I think that is the reason why Dillon said it didn't hurt.

MUSICOLOGY *So that's what the volume knob is for*

By **CAITLIN BIGELOW**

Volume Knob is my favorite music blog. It consists of five young women with a passion for Indie music, a knack for creative journalism and amazing taste in music. There are a million music blogs out there, trust me I've read a lot, but there is something unique about Volume Knob that I really enjoy. The short witty blog posts often describe concert experiences, album reviews and new songs that fit with the seasons. Recently, I had the opportunity to interview Jessica Gentile, one of Volume Knob's writers.

The VK gals, Jess, Julie, Lizzie, June and Megan, "met" through an online Internet community, Audiography. "We would always find ourselves loving each others recommendations, as we had similar interests and tastes. On several occasions I half-jokingly told June we should start our own blog since we posted so frequently on Audiography. I never really thought it would come to fruition, until June actually set up a blogger account two years ago and thus VK was born."

So in 2007 they began to spread the word by emailing their favorite music blogs and asking them to add them to their blog rolls and VK would do the same in return. "One other thing we sometimes do is post links to our reviews on fan message boards, which has helped with our fan base." Quality music and terrific journalism has prevailed. They have come a long way since then and now draw in an average of 10,000 readers a month. Not bad for a hobby.

I have begun to rely on VK to discover new artists and keep me up to date on what's what in the music world. After all, 18 credits, soccer and pining for summer doesn't leave me as much music time as I would like. But I was curious, how do they find their groovy new tunes? Jess said, "Suggestions from friends and friends of friends come first and often leave the biggest impression. Since we read a lot of blogs and press releases, most of which hype the same bands over and over again it's hard to weed through the crap."

They also have alternative music finding methods, which are riskier but perhaps twice as rewarding when fruitful. In one of Megan's posts she talks about the appeal of CD covers.

"I see CDs with cool covers and I buy them. Because they have cool covers. Have I heard of them before? Does the track listing look cool? Is it cheap? These things don't matter! I will put CDs that I have been wanting for ages back on the shelf and gleefully skip to the counter clutching the nicely artworked album close, because the cover looks cool." Often times she finds mediocre and not so phenomenal bands, but occasionally she finds a real winner like the Architecture in Helsinki album "In Case We Die."

Interested in other winners? Here are some favorites from their recommendations in the past few months:

Bon Iver, who I discovered when I bought "Dark Was the Night," which they recommended. The album is a compilation of great indie bands, and they donated the money to support AIDS. It was completely worth the $15.99.

Ra Ra Riot, The Harlem Shakes and Sin Fang Bous were also great discoveries.

Still looking for something else? Jess says she is currently obsessed with Boy Least Likely To's new album "The Law of the Playground." They combine upbeat melodies with disarmingly melancholy lyrics to brilliant effect. Also, they are very cute and British. But they haven't toured the US in three years so she's getting impatient. Plus, Casiotone for the Painfully Alone, makes depressingly beautiful lo-fi keyboard-based pop music, and I adore their new album "Vs. Children."

Anything but ordinary

Worst endings

By **CLAIRE WILLIAMS**

This issue marks the end of another year. Some of you will ride gloriously off into the sunset. Others will drive into the sunset, be blinded by the light and hit a pothole, which will ultimately snap your axle and cost you a lot of money. This column is about those kinds of books with not so happy endings. I feel that I should give some sort of spoiler warning, even though there are only a few actual spoilers.

Harry Potter by JK Rowling – JK had many readers hooked for six solid books. For the first half of the seventh book she held people as they excused a few "what?!" moments. Half way through, though, she started to lose people as more moments made the reader question her sanity. And then we hit the epilogue. While I have met some people who liked the epilogue, most people agree that it was at least a little off in left field (if not saying that it seems more like bad fan fiction than part of the book). For that, JK Rowling makes this list.

The Sound and the Fury by William Faulkner – You may have noticed that I have no love for Faulkner. This book is the main reason why. Not only does he have one bad ending here, he has 4 sections with unsatisfying endings. Since the sections aren't in chronological order, it's hard to follow what's happening from section to section and when I got to the end of the story, I felt entirely unsatisfied. I personally feel that Faulkner just needed to be on this list.

Twilight by Stephenie Meyer – I can feel some of you looking for your smite buttons. I can't say that I enjoyed the overall book, so that made the ending worse. I found it hard to get through other parts, but the final scenes really confused me. How any lead character can be so uninvolved with the climatic scene in a book astounds me. In most books even if the character is unconscious, something reasonably important is going on in their heads. Bella just sort of blacks out. For all those reasons, Meyer makes my list.

To Build a Fire by Jack London – While I typically enjoy London, this story deserves to be on this list. While the story is fairly short, it's still amazingly disappointing. For all the stories of survival and moving up in the world, I guess there has to be a counter story. I can't go into any more detail without ruining it entirely for those who've never read the book. But really London, did you have to be such a downer?

The Little Match Girl by Hans Christian Anderson – While Anderson isn't know for bringing good cheer, this story definitely isn't going to make your day brighter. I don't mind a sad ending here or there, but there are some occasions that are typically expected to by happy. Like New Years. This story deserves to be here simply for the black cloud it creates over anyone who reads it.

As finals begin and you look for something to cheer you up, I wouldn't recommend any of these books. While I love Harry Potter and think the Little Match Girl is pretty good, they're still frustrating. I hope that over the summer you will all find some good reads with good ends.

To the seniors, I hope that your life beyond college does not include any broken axles or sun blindness. Best of luck to all of you.

Springfest & Relay for Life

CHRISTOPHER SHANNON / JUNIATIAN

On April 18 students enjoyed a day in the sun while having fun or relaxing at Springfest, or raising money for cancer research during Relay for Life. While some students walked all day and into the night for Relay raising $18,636.68 for cancer research and wareness, other students enjoyed the Springfest activities such as inflatables, live music—which included a return appearance by Black Violin—and other activities, such as caricatures, balloon characters and hats made for them.

Without scholarship incentives, recruiters struggle with risks and rewards of scouting

Division III coaches devise game plans to bring new talent to their teams

By **CHAD KOHR**

With no athletic scholarships available to lure high school prospects, the process of recruiting at the Division III level presents complex challenges.

In order for sports teams to be successful, they depend on good athletes and skilled individuals to round out their rosters. College coaching staffs have more control over how their teams are constructed due to recruiting.

Each coach at Juniata approaches recruiting in a different manner. Head football Coach Carmen Felus believes recruiting is of utmost importance. He has implemented a detailed and regimented recruiting plan to attract athletes beginning in the fall.

"Recruiting is the number one responsibility in college football and retention of the recruits goes along with that. When we recruit a player, to ensure that both the player and our football team thrive, they must be the right fit academically, physically and socially.

"We determine this by evaluating each recruit live, whether that is watching a football game or observing him playing another sport. If we feel the recruit can help us and could be the right fit, we then try to bring the young man onto campus for a visit. We won't bring a young man in unless we've seen him in person," said Felus.

Other coaches see recruiting not as a detailed plan, but as a game of chance. Head women's basketball Coach Danny Young-Uhrich, whose women's basketball team recently captured the ECAC South Division Tournament Championship, understands how important recruiting players is, but she feels like the process is best described as random.

"With recruiting, you can make your team as good as you want. You don't get good players by just taking whoever comes to Juniata. As a recruiter, you have to go out and get players, but you have to understand that the seven best kids don't mean the best team. As a coaching staff, we have to find players who will fit into our system and fill roles.

"Recruiting Division III is a gamble. You can't lure players with money and there are so many different factors contributing to why recruits choose Juniata. I try to sell the school first. I always remind the recruit that there is the possibility of a season or career-ending injury, so they need to pick Juniata because of reasons other than basketball, it has to be a perfect fit," said Young-Uhrich.

Coach Young-Uhrich relies on a flexible, player dependent process of recruiting in order to find players that are the perfect fit. "We start out by assessing our returner's position-wise and try to address our immediate needs through recruiting. We go to shootouts in the spring and summer that we know a lot of quality players attend, and several tournaments even provide you with information packets including players' height, weight and academic profile.

"After these shootouts, I'll compile a list of players we're interested in and send out hand-written letters in order to propose a more intimate form of contact than an e-mail. If we receive mutual interest, we try to get them in for a visit as early as possible. I also continue to check up on recruits' stats and progress and I'll e-mail them to tell them good game so they know we're interested," said Young-Uhrich.

Coach Felus finds his football recruits in a much different way. "Each recruiting season starts in May of that class's junior year of high school. We will visit every high school in Pennsylvania, Maryland, New Jersey, the D.C. area, Virginia and selected schools in Ohio and New York. Each coach on staff has a designated area to recruit and also a secondary area where they are responsible for visiting the high schools in order to discover interested prospects and their academic profiles. We then compile a list of 1500 names, contact these players and evaluate them. By late November of their senior year that list will be down to 300-400 young men who we have seen play a sport live and we know are capable of making it academically and athletically at Juniata.

"This will signal the start of our active recruiting stage, when we go back to each recruit's high school remaining on our list and talk to principals, teachers and

Eagles 'kill' at Moltens and 'set' for EIVA tourney

With Division III championship won, men's volleyball aims to conquer conference

CHRISTOPHER SHANNON / JUNIATIAN

Junior outside hitter Zach Wanner, seen here spiking the ball during a match earlier this season, was recently named to the EIVA All-East Second Team, EIVA Division III All-Star Team, and the 2009 Molten Invitational All-Tournament Team.

By **SUZI LINDQUIST**

The men's volleyball team just won their sixth Molten DIII Invitational National Championship and have received a bye into the second round of the EIVA tournament. These accomplishments came hand in hand with All-America and EIVA honors.

The Eagles went into the Molten tournament after a disappointing season last year.

"This is my second time winning Moltens. To be honest, it's relieving. When I was a freshman, in 2006, that class had won four straight. To not win last year, you felt like you were a letdown. We were the first team to not win in found years. This year it was really nice to get it back again," said junior Evan Halteman.

Last season was the first in five that the Eagles did not win the Molten Championships.

"It felt good to bring back the championship to Juniata. Its good to get a lot of the younger guys have never won so its good to win something like this. We demolished both of the teams we played – we played really well, and it was a lot of fun. But no one thought we would win; they thought Ramapo's serving was too good, and Stevens' leadership was too good," said Dan Follett.

"We dominated. Stevens was talking trash – we beat them in three games; in fact, we didn't lose a game at Moltens. A lot of online polls said we weren't going to win. At one point we were up 29-16 against Stevens – pretty embarrassing against the second ranked team in tournament," said sophomore David Vogel.

Because of these great performances at the tournament and during the regular season, the team has been selected for numerous awards.

Coach Jeremy Price believes that his team deserves every award they get and hoped that his team would get at least five All-America awards.

A national committee nominates and decides on all of these awards. Juniata has been fortunate to have a number of All-Americas in the past, and this year three players received the honors. Senior Matt Werle was selected for the fourth year in a row, his third on the AVCA DIII First Team. Senior Dan Powers received his second career honor, and his first selection for the first team. Halteman earned his first All-America honor this year when selected for the second team.

"My first time as an All-American? It feels good. I mean, it's a great accomplishment to have in a career, and not everyone gets to do that. I agree with Coach Price, I feel like we had the talent that everyone could have been an All-American: we have people who are as good, if not better than some other All-Americans. We feel good. We just feel good. But we have more goals to attain with these upcoming matches; ultimately we're playing for something much bigger," said Halteman.

After winning Moltens for the sixth time, the Eagles feel that they deserve a bigger trophy.

The EIVA tournament is next for the Eagles, but All-East Teams were selected already. Juniata had four players named to All-East teams and one received All Star honors. Matt Werle was selected for the first team, while Dan Powers, Zach Wanner and Anthony Damiano were all named to the All-East second team. These four, along with Halteman, were all named to the DIII All Star Squad.

"It was nice that we got four team members who got EIVA honors. Individual accolades are nice, but since it's a team sport, the actual goal is winning as a team," said Wanner.

With these All-Team selections, the Eagles head into the semifinals tonight. If the Eagles win tonight, they will play Penn State in the finals of the tournament. The team hasn't been doing anything different in practice, however, to get ready for the tournament.

"We're just doing back to the basics stuff to get ready for tournament. Honestly it comes down to what we do, not what the other team does," said Vogel.

Track chases Nationals after successful season

With one athlete in, others are striving to solidify qualification in field events

By NICK TALISMAN

After working hard through both the indoor and outdoor track seasons, many of the track team's stars are in good shape to head to the NCAA Division III National Championships. With only a couple weeks left to secure their spot in the championships, final attempts to improve top marks are heavy on the stars minds.

Senior Kyle Mazur has already earned a guaranteed place for men's javelin at Nationals, but all of the other competitors still have some work to do. Some, such as Senior Kelsey Buffenmeyer, currently have provisional qualifications that would get them in, but in order to secure their spot, they still need to improve their record.

Buffenmyer said, "It is hugely important for me to make it to nationals. It's what I plan on measuring my career by, the point I've been working towards for years and years. I've had the opportunity three other times, but only made it sophomore year, so I want to go and do really well, because I've been working really hard since high school to do this well."

Buffenmeyer has a chance to compete in two events at nationals, with a long shot to reach 110 hurdles as well. She would currently qualify for the high jump and is confident she can earn a spot in the long jump.

A couple of freshman have also surprised and either provisionally qualified or come close. Dustin Drake became the second member of the team to at least provisionally qualify in the men's javelin, and while he is a long shot to make the field, it is a great sign for things to come. Kirstyn Ginter came close to qualifying as well in the women's javelin.

Senior Pat Filamor was in great shape to close out his career in the national championships. Then, at Bucknell, while competing in the long jump, he pulled his hamstring.

Filamor said, "My hammy pulled with five steps to go, and I still jumped the second farthest distance of my life."

However, despite getting such an injury at the worst possible time, Filamor remains determined to close out strong.

He said, "Even if I can't walk I'm still going to compete in the last meet of the year. The only thing that angers me is I didn't get a chance to see what I really could have done. Filamor has been rehabbing constantly and hopes to be able to improve his mark enough in the last weeks of the season to qualify for nationals. In the final meet, he is determined to compete in eight events in order to make up for the lost time.

Filamor said, "I'm competing in eight events, event at my most injured, because one of my goals for this year was to win MVP, and I don't want an injury to derail me."

The meet that Filamor will do this in happens to be the Landmark Conference Championships, and Filamor feels he owes it not only to himself but to his team to compete and do well.

After one day of the LCCs, the women's team was in second, and the men sat in third place, both currently ahead of where they were projected to finish.

Several members have already earned All-conference honors. On the men's side, Drake beat out Kyle Mazur for first team All-Landmark honors, Filamor, Mazur, and Sam Williams received second team All-Landmark honors for the men.

On the women's side Buffenmyer not only won the high jump, but also set a conference record for her jump. The team will look to maintain their current success and hopefully improve on it on the second day of competition.

The team will lose a number of seniors next year, and it may be tough to replicate this year's achievements next year. But this year has been an undeniable success, and the team plans to finish it on a high note.

CHRISTOPHER SHANNON / JUNIATIAN

Freshman Ceth Parker, seen here earlier this season handing off the baton in the 4x100 relay during Juniata's lone home meet, finished second in the 5,000m run at the Landmark Conference Championship earning him an All-Landmark Conference performance.

Softball clinches Landmark Conference berth

Following a four-year drought, seniors step up to plate for first post-season

CHRISTOPHER SHANNON / JUNIATIAN

Sophomore second baseman Callandra McCool takes a cut at a Catholic pitch during the second game of Juniata's double header sweep of the Cardinals. The Eagles defeated Catholic by scores of 12-8 and 4-1 to claim the #3 seed in this weekend's Landmark Conference Tournament at Moravian.

By ERIN L. MCGINLEY

The Juniata Women's Softball team captured a berth to the Landmark Conference playoffs for the first time in four years with an impressive 19-6 record. Although this is the second consecutive season they have won over 20 games, it will be the seniors first time in postseason play.

"It's awesome," said senior co-captain Jackie Morley. "We sat down after our freshman year with our coaches and set this goal [making playoffs]. Words can't even describe how it finally feels to get here."

Morley realized her team's potential early on in the season. "This year when we had our first conference series, we swept Drew University. After this, we finally realized that we could sweep the series."

Freshman Lindsay Darchicourt is excited for the seniors who have led the team all year. "The seniors have worked so hard; they deserve to go [to the playoffs]. They've led us in fielding and hitting all year. We want them to have this opportunity."

The Eagles' earned a spot in the Landmark Conference Playoffs after a doubleheader sweep against the United States Merchant Marine Academy. Senior Liz Schmitt had a day for the record books recording five hits, including a homerun and grand slam. Six runs were also scored by Schmitt, as well as eight runs batted in for the series.

In the second game of the doubleheader, the game was dominated by homeruns. Schmitt and freshman Pam Heinrichs each recorded single run homeruns, while sophomore Melissa Moffat, who was moved up in the batting lineup after junior Rachel Nagy's injury, recorded a three-run homerun. Nagy hopes to return for the postseason.

Heinrichs also helped pave the road to the playoffs by solidifying a sweep against Catholic University. Heinrichs finished off the first game of the double header and pitched a four-hit second game. The sweep of Catholic places the Eagles' as the third seed for the double elimination playoff tournament.

Contributing to the success of this season is junior right-handed pitcher Alyssa Erb. She currently leads in winning percentage with a record of 12-6 for this season. She also leads the team's three pitchers in strikeouts with 138.

When asked what the goal of the season is at this point, Erb said, "Win the conference. It's so exciting because I know that we've worked so hard this year. This is exciting for the seniors."

The Eagles finish their regular season by playing a double header against York College on April 27. Although York College is not in their conference, this is game is being looked at as an opportunity to prepare for the upcoming playoffs. "We'll see pitching that we need to see in order to be prepared for the playoffs," said Morley.

Through this attitude comes Morley's philosophy for the season. "Take it one game at a time. Try not to look too far ahead." In order for the Eagles to prepare for the playoffs, they must use each game individually to prepare for the bigger steps ahead of them on this unfamiliar pathway.

Flash Sports Quiz:

1. What is Alyssa Erb's record as pitcher?
2. How many minutes does Coach Felus spend recruiting each day?
3. How many Molten Division III Invitational National Championships did the mens' volley ball team win?
4. In what track event did Kyle Mazur qualify for nationals?

Answers:

1. 12-6
2. 90
3. 6
4. javelin

JC tennis matches point-for-point at season's close

Teams remain unified and confident to the end

By **Aimee Radic**

The girls are on their way to Landmark Conference Championships as seed number one or two, while the boys go into their playoff start with confidence.

The boys are known for their "silly" and unique antics before, during, and after the matches. They are also very skilled and prove that through their Landmark record of 4-2. The four seniors on the team, Casey Chew, Ryan Navarro, Aaron Rhodes and Jonathan Skoner will be saying their goodbyes after this season and all of them are vital players.

Senior Ryan Navarro said, "I think we have a great team in terms of unity and focus so I am extremely satisfied to end my senior year with this group of guys."

The only things that Navarro said he would change are the close matches throughout the season. "The close matches are the ones that stick out in my mind most clearly, and the close losses are always the hardest. I guess I would go back and win the close ones. I would have also worked more on my doubles game as our doubles has turned out to be a key factor this year," said Navarro.

The men's team is full of talent and with goals set so high in the fall; everyone knew they had to work hard. When asked how the team did overall, Navarro said, "I think we have already exceeded our expectations, and I am happy with the way everyone is playing going into the final couple of matches."

Even when the four powerhouse seniors leave, Navarro feels confident that it will not put a huge dent within the team. "Losing four starters is tough, but I think there are some promising incoming freshmen that can make our team a threat next year," he said.

Navarro also brought up a nice point in explaining the team's unity and comfort levels with each other. "Watching how the other teams we play communicate off the court, I think our team has a special bond that is rare and not visible from other teams. I think this is mostly due to our level of comfort ability with one another, even when difficult topics arise," said Navarro.

One interesting topic discusssion that has come up more than once is marriage and divorce. "I will probably end up marrying someone on the team after I graduate, though I haven't decided who yet," said a smiling Navarro.

As the boys continue to show true teamwork and determination, the girls are proving their ambition as they barrel through the rest of their 5-0 Landmark winning record. The two seniors on the team express their excitement but also share some surprising information. "I am really excited to go to the Conference Championships, but there is only a small chance that we can go to Regional's," said senior Ariel Otruba.

Even though the girls have proven that they can defeat almost any opponent that they are faced with, the team may still not go to regionals. Otruba said, "Even if we win the Championship, there is still a slight chance the NCAA will approve our credibility and let us into the NCAA."

Senior Caroline Weisser said, "It is really cool to be the best in the conference. We can gain more recognition now. We have gone through some rough times in the beginning of the season and to be number one in the end is really awesome of our girls," said Weisser. At the beginning of the season, junior Maggie Wolenter had a broken wrist, freshman Katie Healy sprained an ankle and junior Amanda Fontana had circulation problems in the colder weather.

"It turned out so much better than I ever thought it could. It didn't seem like we were coming together and with people missing and all the injuries going into the season, no one really knew what to expect. There were a lot of questions of what we could do," said Otruba. Otruba brought up the hard work of specific players and specially mentioned a possible Rookie of the Year in the conference. "Katie Healy should get 'Rookie of the Year," said Otruba. She does not let the opponents get to her and almost feeds off the anger that is in the match. The mental game never affects her and she still remains undefeated," said Otruba.

The girls' and boys' teams are showing immense success and will hopefully gain more recognition from their peers on other sports teams for their hard work. "We always start out slow, but always come out with the win," concluded Weisser.

CHRISTOPHER SHANNON / JUNIATIAN

Freshman Jenny Wang returns her opponent's shot during a match earlier this season. Wang has been a large part of Juniata's success this season posting a 4-2 doubles record and a 9-3 singles record.

CHRISTOPHER SHANNON / JUNIATIAN

Junior Jarrad Silver returns an opponent's shot during his doubles match during Juniata's match against the Merchant Marine Academy on April 18. The Eagles defeated the Mariners 9-0 to clinch a Landmark Tournament berth.

The men's season ended Tuesday in an 8-1 loss to number one seed Drew University. The team's final 11-8 record is one of the best in program history. The women's team played Goucher in a Landmark tournament semifinal yesterday, after press time. See the match's result and photos at www.juniatian.com.

Baseball comes out on wrong side of squeeze

Despite late season push from the bullpen, Juniata falls short in the playoff race

By **KEVIN J. CAMPBELL**

Despite playing some of the best baseball of the year recently, we still fell short of making the Landmark Conference playoffs. Our current record of 13-21 does not show the progress we've made over the season or the marginal games we've lost. Despite a disheartening season, we fought hard as a team to stay competitive with some of the best teams in the conference.

"I don't think we accomplished the goals we set out to accomplish at the beginning of the season," said Head Coach Tom Gibboney.

After a 2008 first place finish in the conference, our stakes were high to repeat this accomplishment. Instead, we ended conference play with a disappointing 6-12 record and sixth place finish, followed only by Drew University.

Not only did we not meet the standards set last year, but we have not had a season with more than 20 losses in over eight years. "Juniata baseball has a definite winning tradition, and it's disappointing to get away from that this year. However, our record does not do this team justice. It's been a great experience playing with this group of guys, and I hope to see the success of the program continue into the future," said senior Matt Sullivan.

Statistically, senior Adam Spadafora led the team with 39 hits, 39 runs scored, 25 walks, 19 stolen bases and a batting average of .342. Designated hitter Dane Ott also contributed great senior support at the plate, driving in 32 runs and leading the team with four homeruns.

Despite some inconsistencies and just not performing well under pressure, we were able to make progress in places where we showed inexperience at the beginning of the season. It takes many pieces of the puzzle to work efficiently for a baseball team to see success. This season, when there were positive results on the pitching mound, the rest of the game followed suit. When struggling on the mound, there was more pressure put on the hitters to perform.

"When our pitchers pitched well, we would play better both defensively and at the plate hitting the ball. However, when our pitchers didn't pitch well it put everything else back on our heels," said Gibboney.

Freshman Matt Regan pitched the full nine innings against the University of Scranton on his way to earning his first career win and helped secure the series victory. Regan struck out four batters and gave up only two hits, two runs and one earned run, earning him the complete-game win. Regan was named Landmark Conference pitcher of the week for his performance.

Another successful pitcher, sophomore John Love, captured his first career shutout against Moravian. "My teammates made me look good in the field, Greg Hoffman called a great game [behind the plate], and I was happy to get one for the seniors. We fought hard this year and we have a lot of talent to work with next year. I couldn't imagine my first two years without the awesome seniors that will finish their college careers this year. They have taught me a lot about baseball and many other things," said Love.

Although there will be no postseason play for the team, there are some young players, like freshmen Tom Eck and Will Hoffman that have stepped up this season and will be a big impact in years to come. Already looking at next season, Gibboney said, "We need to take a look at the details and focus in on the little things that will help us get more wins."

With a new baseball locker room soon to be completed and incoming freshman in the fall, new goals and high expectations are already being set for next spring in order for the Eagles to get back to the winning tradition.

CHRISTOPHER SHANNON / JUNIATIAN

Sophomore pitcher Marty Hauck delivers a pitch during game one of Juniata's double header against Pitt-Greensburg on April 17. The Eagles split the double header with the Bobcats winning the first game 10-7 before falling in the second game 25-12.

Division III recruitment driven by coaches' devotion

▶ *from* **RISKS** *page 12*

others about the young man. We will also go into every recruit's home to learn more about the recruit. From December to spring break, we invite our recruits in for visits, which is our opportunity to sell Juniata academically, athletically and socially," said Felus.

Most of the recruiting process is dependent on the student-athletes being recruited and what they want out of their college experience. The Juniata men's volleyball team, recently crowned 2009 Molten Division III National Champions, has consistently had success at a high level because of the ability to recruit standout athletes. Sophomore volleyball player Dan Follet attributes much of the reasoning behind his college choice to the team's stellar reputation.

"The real reason I was originally interested in the school was through volleyball. The coaches persistently called, e-mailed and came to watch me play in tournaments. The coaches were very consistent in talking with me every week about playing here and setting up times for visits.

"I was eventually able to limit my college choices to Juniata and another school. Both schools were great academically and would cost about the same, but the deciding factor was the volleyball team's reputation for playing the best competition, winning a lot of games overall and winning National Championships. The coaches being persistent helped a lot in my decision," said Follet.

The consistent time and energy the men's volleyball coaches have put into recruiting has helped mold a powerful winning program. Coach Felus and his staff are currently putting a lot of effort into developing another nationally successful program at Juniata through recruiting.

"Every day of the year we do something to help our recruiting efforts because we understand that it will show on the field. During the season, we arrive every day at 7a.m. and devote the first 45 minutes in office to recruiting, along with the last 45 minutes (8:15p.m.-9:00pm) of the day. Recruiting is the first and last thing we will do each day. That's how you make your livelihood," said Felus.

ON THE FLIP SIDE

By **Bennett Rea**

Well, the end of the year is near, and you know what that means: we're all tired as hell and I'm very depressed that I already wrote a column about trying to think of something to write about. I should've saved that until I was really desperate… like I am now. Damn.

Don't worry though. I eventually decided to write about end-of-the-year rituals. Yes, that stuff that everyone does at the end of the year that is completely ridiculous when you really think about it. And I really thought about it. Here are some you may find yourself doing in the next week or two, unfortunately:

1. Selling back books

Ah yes, the selling back of books to the bookstore, friends, random strangers on ebay.com or that weird Belltower Books company that failed miserably here last year. Selling back those pricey books to the bookstore is a wonderful tradition here. You go to the store with a perfectly intact Bio textbook that your parents had to mortgage their house for, and the bookstore offers you several shiny pennies for it. Neat.

So many people still sell back their books to the bookstore, it's astounding. Any other option would be much more attractive and lucrative, including simply lighting the book on fire.

2. Throwing away stuff you can't fit in your car

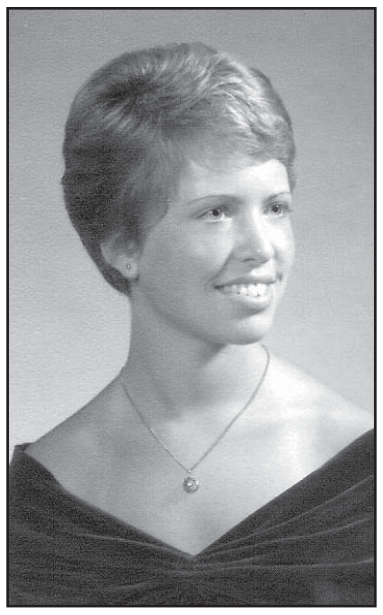
You know that rug you paid a decent amount of money for? Well, somehow, it doesn't fit in your car for the trip home even though it fit when you moved in. This, along with refrigerators, chairs, microwaves and beer pong tables mysteriously will no longer fit in your car. So, you have to chuck it or give it away to the less fortunate, who are in desperate need of beer pong tables.

3. Not sleeping

This is a given, as finals week makes you give up 25 hours a day (not a typo) for certain classes' finals. But don't be too upset; sleep does come eventually (sometimes eternally, depending on your course load). At least it's nice to know that we have a library that stays up just as late as us! (Note: This is in no way true unless you regularly go to bed before it gets dark, in which case, please share your secrets.)

4. Declaring war on bugs

This really just comes with the territory of summer weather. The bees, wasps, hornets, spiders and scarily huge versions of all of those things are now out and about. By out and about, I mean in our classrooms, dorms and frightened thoughts. Buy some Raid. Buy a gun. Get a braver roommate. Any of these solutions will do.



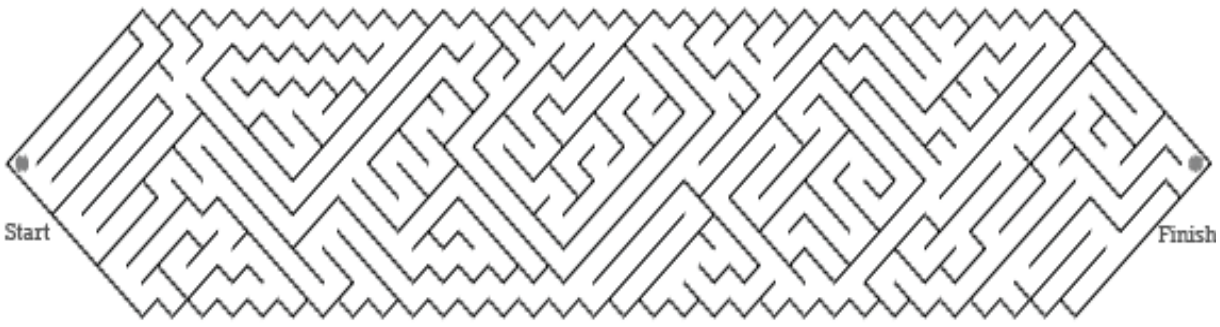
5. Avoiding/enjoying the heat

It's so great/horrible to have the weather in the mid-80s! Everyone is tanning outside or desperately trying to stay away from that burning sun; one of the two.

After what seems like 10 to 12 years of cold, rainy and snowy weather, this hot weather should be a welcome change. But we didn't ask for it to be this hot, dammit! We only wanted it to be warm and sunny, not hellishly hot! Bring back that cold weather pronto so we can complain about not having hot sunshine instead! You know, air-conditioned dorms would solve this whole problem…that is a blatant hint to the College.

Most likely, there are rituals that I have missed. Frankly, I'm already starting to partake in Ritual #3, so I could care less about the ones I'm forgetting. Forgetting stuff is probably the sixth one.

Guess who?



Can you name this Juniata professor? This campus personality will be revealed on www.juniatian.com.

Last issue's "Guess Who?" (above) was Emil Nagengast, professor of politics.

Can you find your way through this maze?

Congrats! (You don't get a prize.)
